Riots in America Hit the System

BATUK VORA

Faced with intense nationwide criticism that his administration had ignored America's domestic affairs and urban mess, President Bush sought to make his delayed visit to Los Angeles on May 7, a week after the riots in Los Angeles, a proof of his concern for problems at home.

But his attempt was pathetic, to say the least. Most residents of the riot-hit area seemed unconvinced of his sincerity. Many jeered, booed and some flashed obscene gestures at his armoured limousine when Bush tried to show his concern by waving or smiling.

As the flames rose in LA, dust from the city's ashes fell on each of the country's managers. Attempt to paint the riots as only racial in essence have failed. Racism did play its ugly role but the anger and frustration expressed through arson and looting had deeper reasons. The fires are extinguished but the destruction will take generations to fully repair. Paradoxically, it was the voice of sanity raised by the alleged criminal motorist, Rodney King, that had a sobering effect on the rioters, and not of any of those elite politicians.

The LA riots can be described as a turning point in the post-Vietnam American history. More than anything else, it became clear that America, the land of glamour and glitter, of rockets and nuclear armed missiles, of high-tech gadgetry and Hollywood special effects is, after all, a mortal creature and knows well how to destroy itself keeping its international invincibility intact.

The riots stripped some actors bare naked. The steam rolling media of this country, highly manipulated by the military-corporate complex, got it back with a rude shock. The mainstream media felt indequate for the first time. Black street gangs like Bloods and Crips, creation of the American decline, even now have no idea they have hit at the soft spot on the American belly—its urban show-window. The entire American Rightist think-tank apparatus, much more dangerous than the Stalinist machine, has been forced to sit up and review its formules.

Amidst all the sociological and political formulations thrown in the air after this event, closest to the truth comes an insightful remark made by an analyst that says: it is the Pentagon more than anything else that has been hit. Allusion here is about Pentagon's recently leaked out strategy to dominate the world-as a solo-superpower.

They never thought the situation could become so explosive and destructive at home. All their wherewithals are meant so far for a war outside their borders. They never gave a damn on what was cooking at home. A decade and a half of Reagan-Bush era has started boomeranging on them. Bush's popularity dropped down to 33 per cent from his 79 per cent during the Gulf war. Even if Bush wins the election next November, it will be by default. The people have started talking about the need for a 'second' party now—as both the Democrats and the Republicans fall in the same category, more or less.

Socially, America is falling apart. Values are losing their grip. Some problems seem intractable. Racial hatred is showing its ugly teeth. Look at just two or three of the whole anthology--full instances of the breakdown:

- Life expectancy for the young Black males in the cities is lower than for males of equivalent age in Bangladesh;
- The rate for homicide and violent crime are four to ten times higher here than in Europe and three times higher than in Canada;
- The rate of incarceration in the United States has doubled during the 1980s and is expected to double again by the year 2000

Social problems are allowed to fester for such lengths of time that both definitions and possible solutions fade from public consciousness. The only solution the Right-wing administration offers is *first*, that the market be allowed to proceed in its majestic mystery; *second*, that there be improvements in 'character', specially the character of the underprivileged and poor; and *third*, that you agree to believe in 'the limits of social policy'.

It was no surprise when the White House spokesperson, Marlin Fitzwater, came out soon after the riots with Reagan-Bush's old theory that "the cause of the riots was social welfare measures taken by the Democrats in 1960s and 1970s!" But it is not a hidden fact that the social welfare measures (unemployment, single mother allowances, food stamps, relief for the homeless, etc.) take only one per cent of the national budget... as against billions for 'national security'!

◆

THE Reagan-Bush regimes do not even pretend to have a domestic social policy. So much so that when the Bush Administration approaches a major problem like drugs, it does so without any serious examination of a complex matter. What it did was to declare a 'war' and appointed a Right-wing windbag William Bennett. He spent much of the money on Rambo-style efforts to prevent drugs from crossing the borders, rather than on education and therapy. Bennett had to resign. Nothing succeeds like failure here—it has become a new code of the American capitalism. Tough talk followed by personal gain. Drug war is made like television 'special'. For it is not only that television copies the worst of the society but the latter copies television here.

Fifty years ago, through a series of measures ranging from social security to federal deposit insurance, Franklin Roosevelt's New Deal established a modern social contract in America. The contract fixed the responsibility of the government. Reagan-Bush-Quayle have demolished that idea and Bush's 'thousand points of light' theory in practice fix the individuals responsible for themselves in every matter and not the federal state on anything.

According to the US Conference of Mayors, federal aid to state and local governments fell by $34 billion in real terms during the Reagan decade. They call it 'new federalism'! Substitution of the 'new federalism' with the old 'fiscal federalism' made states and local governments share their deficits instead of revenues! In addition, spending for key 'urban' programmes, such as community development, employment and mass transit fell by 72 per cent between 1979 and 1989. No surprise, the giant urban centres took the road to collapse.

The LA riots further revealed that the American children are more and more in peril, as they are less and less ensured of a sustained care. The entire generation is depicted as 'indifferent'. Most apathetic and alienated are eighteen to twentynine years old. More than 100,000 of them confined to correctional institutions on any given day! Murders committed by juveniles increased three times, rape two times, robberies five times. In 1989 the House Committee on Children, Youth and Families reported a 'national emergency' of growing violence by and against the youth, with homicide a leading killer of Black males aged fifteen to twentyfour. This reflects the breakdown of families, schools and other institutions.

Even when senseless violence, much of it done on television movie-style, wipes out thousands of young people each year, nearly one in every four American infants is born to an unmarried mother, six times as many as four decades ago. Almost 70 per cent of the juveniles in state reform institutions grew up in single parent or no parent families, wrote Karl Zinsmeister in a piece in *Atlantic* recently. The National Adolescent Student Health Survey indicates that "nearly two per cent of all students (338,000 students nationwide) carried a handgun to school at least once" in 1987. The Americans live in fear at home, fear in the halls, fear in the streets... ■

ZHANG XIAODONG: A Chinese View

(Continued from page 4)

exclusively for export.

The Indian Government has also accepted conditions set by the World Bank and the International Monetary Fund (IMF) on loans in order to secure funds for its economic readjustment. According to the World Bank, India's unfavourable international balance in the fiscal year 1991-92 was US$ 6.04 billion, a 39 per cent fall compared with the previous fiscal year. An international consortium has agreed to provide India with a loan of US$ 6.7 billion and the IMF has offered another US$ 2.6 billion. Now India's foreign exchange reserve has increased to US$ 5.5 billion. Exports have begun to expand.

India's economic reform had aroused concern within the Congress party. There was fear that the party might deviate from its traditional economic development strategy of independence and self-reliance, protecting national industry and helping the poor.

The fear was soon allayed. At its 79th Conference in April, the Congress party called for continuous reform to accelerate economic development and raise the living standard of the people.

Rao argued that though state-owned enterprises are symbols of self-reliance and the government will by no means give them up, to raise their efficiency and vigour is an unavoidable choice.

For all its initial and notable successes, India's economic reform will not be a smooth process. In a country with 40 per cent of population living below the poverty line and entangled in various party, religious and class contradictions, snags are everywhere. Reform requires everyone to make sacrifices, and then problems come. In addition, the Congress party is vexed with differences of opinion over reform. Some party members accused Rao of dumping its tradition while the Left-wing Opposition party labelled the reform as "anti-popular" and demanded Rao's resignation.

The Rao Government faces both economic and political challenges. Nevertheless, reform is the general trend of development and meets the aspirations of the Indian people. Rao understands that reform is imperative and he will resolve to carry to the end the "second industrial and agricultural revolution" as it is called. ■

A Landmark Visit

The visit of the Bangladesh Prime Minister, Begum Khaleda Zia, to New Delhi (May 23-28) marked the opening of a new chapter in India-Bangladesh relations. In the twenty years since Sheikh Mujibur Rahman visited India in 1972, this country got the the first opportunity to greet the head of a democratically elected government from our neighbouring Bangladesh.

Begum Zia was not only received with warmth and cordiality by both the official and non-official circles in New Delhi, but on her part she struck the right chord, when at the banquet hosted by Prime Minister Narasimha Rao, she spoke with grace and sincerity: "Today I am here on a simple mission. Yet it is one of supreme importance. I have come to deliver a message of goodwill. It is from our people to yours. The Bangladeshis hold their Indian brethren in great esteem. Our two nations are linked by bonds rooted in history. My purpose is not only to strengthen those links, but also to create new ones; not only to consolidate our bilateral relations, but also to expand them. I believe you, too, feel that this must be done. We are, therefore, united by a common purpose, aiming at a common goal."

Throughout, this was the running thread of the Bangla Prime Minister's theme—not only to consolidate, but to expand bilateral relations.

In her talks at the summit level with Narasimha Rao, the question of sharing the Ganga water and the problem of Chakmas coming over to eastern India were discussed. On the sharing of the Ganga water, while India conceded to release slightly more than what had been arranged before, both sides agreed to examine the entire question of water flow in its totality as it touches both India and Bangladesh. This would be done at the ministerial and official levels in the weeks and months to come.

What is important to note is that Begum Zia's visit has set the ball rolling towards structuring a durable arrangement for the sharing of river waters, taking into account the total availability as well as the requirements of water of both the countries. One only hopes that unlike what happened in the past, this time the question of harnessing the river waters would be taken up in right earnest and without delay.

In this context, one has to take up all the three aspects of the river

waters of the entire eastern region of the subcontinent, namely, irrigation, flood control and power generation. It is a cruel commentary on human mismanagement that while some parts of this region have to face the fury of floods, other parts are afflicted by shortage of water supply, while the vast energy potential of one of the most extensive river basin in the world—stretching from the high Himalayas to the Bay of Bengal—has so far not been tapped.

In this mighty endeavour, it is imperative to invite Nepal to participate, as it is not only the source of many of the streams coming down from the Himalayas, but faces problems of similar nature while its needs are similar to those of both Bangladesh and India. A closer understanding between the three neighbours now being ruled by democratic governments can and must be hammered out.

In fact, the structuring of an abiding arrangement for the disposal of river waters of the region, bringing immense benefits to all the three neighbours is one of the unfinished tasks of the liberation struggle of us all, and poses an urgent challenge before all the three neighbouring democracies. Because as democracies they are accountable to the people.

Begum Zia has rightly reiterated in the course of her brief visit to our country that the problem of poverty alleviation is on the top of the agenda before her. This is as is to be expected—for she faces the formidable challenge of bringing back to her country the prosperity of *Sonar Bangla* from the degradation of its being put in the category of the Least Developed Countries (LDCs).

What is of significance is her emphasis that "peace and stability in South Asia are essential pre-requisites for the success of the liberalisation programmes being pursued by each of us," as she stated during her talk with Indian editors in New Delhi. "It is equally important that this policy of economic reforms and liberalisation should foster an improved climate for our own bilateral economic cooperation. This can change the lot of our two close and friendly neighbours and can bring the two peoples still closer."

It is important to note that Bangladesh under its present government is anxious to infuse the SAARC with a new vision, breaking out of its present constricted agenda. As the next chairperson of the SAARC Summit, Begum Zia's approach to the organisation deserves to be underlined, as she observed before the New Delhi editors: "An atmosphere has also been created to work together for solving the *dal-bhat* problem and alleviation of poverty of the South Asian people under the SAARC framework." She was more explicit in her speech at the Prime Minister of India's banquet: "Together we shall transform the SAARC from a forum of cooperation into a platform to launch a new age of South Asian consciousness. South Asia must not only learn from the world, but must lead the way."

Many problems of major dimension beset her at home—the influx of refugees from Burma, the question of Chakmas, the migration across the border because of economic privation and the position of the minority community. Such problems do figure in the endeavour for close relationship between our two countries. There is, however, no sign of despair on this count, as could be sensed from Begum Khaleda Zia's approach. The point to note is that she wields power as the head of a democratically elected government in the most populous country in South Asia.

There is every reason to hope that her purposeful visit to our country will usher in a new era of friendship and close cooperation between India and Bangladesh which has the promise to surpass in its rich content even the glorious days of the liberation struggle two decades ago.

May 27 *N.C.*

Nehru for Today

The problems which India faces are to some extent common to other countries, but we have new problems for which there are no parallels or historical precedents elsewhere What has happened in the past in the industrially advanced countries has little bearing on us today. As a matter of fact, the countries that are advanced today were economically better off than India today, in terms of per capita income, before their industrialisation began. Western economics, therefore, though helpful, have little bearing on our present-day problems So also have Marxist economics which are in many ways out of date even though they throw a considerable light on economic processes. We have thus to do our own thinking, profiting by the example of others, but essentially trying to find a path for ourselves suited to our own conditions

In considering these economic aspects of our problems we have always to remember the basic approach of peaceful means, and perhaps we might also keep in view the old Vedantic ideal of the life force which is the inner base of everything that exists

Jawaharlal Nehru

(See article on page 7)

Economy: Danger Signals

N.C.

While the political scene in the next few weeks will be largely preoccupied with the excitement over the nominations for the presidential elections, the economic situation promises to be grim and critical.

Indications of the turbulence ahead are already available, and it is extremely shortsighted on the part of the government to fight shy of taking the public into confidence about the magnitude of the imminent crisis. The occasion for a candid over-view of the difficult economic situation was provided by the two-day meeting of the National Development Council, but neither the Prime Minister nor the Finance Minister cared to place before the Chief Ministers the government's assessment of the economy as it looks today, and what it proposes to do in the near future.

Instead, the Centre's pronouncements before the NDC was largely ritualistic, though there were significant hints about the hazards of total subservience to the market. On this point, the Prime Minister was more forthcoming than any of his Ministers. He made it clear that "we cannot rely on the market to fulfil the minimum needs of our people". Compare this with the last year's euphoric adulation of the market as providing the panacea for all our economic problems. Not that the bias towards the market, as the mainspring of the economy has vanished, as could be seen from the Finance Minister's intervention in the NDC. His homily to the State Governments amounted to a call for privatisation. In all his observations in the last one year, Dr Manmohan Singh has been extremely circumspect about the need to provide adequate resources for social security particularly for the deprived and distressed in the community. Rather, his clear hint to slash down, if not eliminate, Dearness Allowance is a serious warning signal for a vast section of the organised labour. Its political implication is explosive and it is doubtful, to say the least, if this government is in a position to face that formidable challenge.

This session of the NDC was marked by critical interventions by Chief Ministers—more than perhaps at any previous session. Not only the West Bengal Chief Minister who raised some important issues of a basic nature, it needs to be noted that the Chief Ministers of States ruled by non-Congress parties all insisted on consultations for formulation of the terms of reference for the Finance Commission and wanted the outlay for rural development to be transferred to the States. In short, there was a general demand for greater decentralisation of financial powers. In contrast, the very tenor of the Finance Minister's stand at the NDC was pronouncedly against any concessions to the States—in other words, maintaining an iron grip of the Centre over the economy as a whole. There was no inclination for a cooperative approach in dealing with the difficult economic problems.

Herein is the essence of today's political malaise. As the political leadership at the Centre is getting debilitated because of its own infirmities and incapacity, it tends to hold on to power as if the solution lies in over-centralisation. The maxim that more powers for the States does not weaken but strengthens the Centre, is totally lost sight of. This is the reason why the Sarkaria Report has been left unimplemented, despite the fact that it was drawn up within the framework of the existing system.

This obsession for centralism is not a sign of strength of the political leadership at the Centre. Rather it betrays a sense of insecurity on its part. A national leadership confident about its own position would have, by now, gone in for genuine shedding of Central powers in favour of the States. It is only the weak and the insecure in politics who tend to assert their leadership by stretching the constitutional provisions to the utmost, if not absurd, limits to justify their own position, while a wise leadership at the helm would not hesitate to go in for a working partnership between the Centre and the States.

Jyoti Basu's suggestion at the NDC for the Centre to take the States into confidence in the matter of mounting external debts need not have been shot down on the ground of the constitutional right of the Centre alone to contract external loans, but an innovation could have been introduced by the Central Government getting the endorsement of the States for such back-breaking liabilities. No constitutional provision stands in the way of the Prime Minister discussing such issues of vital national concern with the Chief Ministers. Calibrewise, and also in terms of national commitment, it can hardly be claimed that the present members of the Central Cabinet are superior to the Chief Ministers.

One can of course understand why the Finance Minister would be scared of making a clean breast before the State Chief Ministers about the fresh commitments about to be made to the Fund Bank authorities for securing fresh loans. Next month, there will be a fresh letter of intent with the IMF, and then on more of begging bowl approach, as the economy under Manmohanomics is now going to be thoroughly addicted to external debts. In the name of getting over the last year's balance-of-payments crisis, what the Finance Minister has neatly planned is to take the country straight into the debt trap. The promised rise in exports—the main reason for the devaluation of the rupee—has not taken place at all, while the imports have been liberalised. An excellent alibi for more loans, and yet more loans to come. Meanwhile, a bogus claim is being made about the government having built up an impressive foreign exchange reserve—which in the main is an inventory of loans secured with little of export earnings.

The insistence of the Fund-Bank authorities for a full-fledged market economy will result in fresh hike in prices of petroleum products, including LPG, a sharp cut in subsidies for fertiliser and raising of foodgrain prices even for the PDS shops. Meanwhile, the government's food procurement drive has been precariously poor, and according to some reports, it may be compelled to import about four million tonnes of wheat to manage the PDS—not a very impressive record for a government that claims to work. Add to all this, the World Bank insistence on imposing the Exit-policy, which has become a frightening spectre for the government at the political level.

More serious for the government to sell its new economic policy to the public is the scandal of the multi-crore scam which has shaken the entire banking sector of the country. With Dr Manmohan Singh's glib talk about freeing the stock exchange—which he claimed would not disturb his sleep—this disgraceful episode clearly points the accusing finger at the working of the Reserve Bank (or more appropriately, its misdoings) under its present high-profile Governor who is one of the aggressive exponents not only of the free-market economy but of dependence on large-scale foreign borrowing. Why can't there be a thorough investigation into the functioning of the Reserve Bank alongwith that of all the major banks, some of which are known to be in the red?

With all the tall talk about the virtues of the private sector and the mismanagement of the public sector that the establishment, particularly the Finance Ministry, has been ceaselessly indulging in for the last one year, it must have come as a heart-break to them that the great house of the Tatas should be the scene of an ugly civil war, in which the high and mighty are directly involved. All the talk of the rocklike stability of the corporate sector as the sheet-anchor of the Manmohanomics seems to turn out to be puerile in the face of the wars of the roses in the Tata House.

Where then is the moral strength of the new economic regime of the present government? ■

CONTROL OF GLOBAL RESOURCES

VIBODH PARTHASARATHI

The Earth Summit at Rio begins on June 2, 1992. This article is being published in that context.
—Editor

The meeting of the SAARC Environment Ministers in Delhi in early April and the G-77 conference in Kuala Lampur later in the month were seen as strategic meetings to unite potential allies from the South for the main battle at Rio this June. On the Rio agenda are the setting of time-tables to control global climate change, discussions hinged around the economics and ecology concerning bio-diversity, the adoption of the Earth Charter and action plan, the now infamous Agenda 21, as a blueprint for global environmentalism. However, these have been severely muted during the four Preparatory Committee meetings (Prepcoms) hitherto, as no sooner were deliberations initiated than it was discovered that each issue was a bone of contention between the North and the South.

In an attempt to break the impasse in the North-South dialogue the Union Environment Minister speaking in Kuala Lampur listed what India saw as the four essential ingredients to a new global partnership hopefully to emerge from the United Nations Conference on Environment and Development (UNCED). These are. no distinction to be made in Agenda 21 between environment and development, and, between global and national concerns, a massive programme of regreening rather than just the containment of pollution, a stronger role for the UN in dealing with these mechanisms, and, the economic and social issues arising out of these linkages to be made transparent and accountable.

The point concerning the Rio-born "agreements" to be strongly monitored and implemented by the UN, is causing most anxiety to those familiar with the dynamics of international politics. To understand this, it may be worthwhile to analyse the history of international politics in the twentieth century. There have been numerous instances wherein attempts have been made to give birth to an international regime, under the leadership of the North. While attempting to achieve this, many a pretext have been selected to procreate such a global super-government: the UN under the pretext of international harmony, IUCN/WWF for the conservation of natural heritage, the NPT for a nuclear-safe world, and currently the GATT for boosting international trade and finance. The essence of such transnational governments in the name of multilateral cooperation is but obviously to strengthen the North's hold over the South in all spheres—economy, trade, resources, culture, information, political institutions, leisure and so on.

◆

AS far as the architects of the UNCED are concerned, the Earth Summit at Rio is allegedly the biggest effort in the history of mankind to save the planet. The reality of the situation, however, forces one to draw an alternative inference. One would be living in a fool's paradise to believe that ecology is the subject in focus at Rio. The essence of the deliberations in the countdown towards Rio have been the control over global resources, an issue whose basis lies in global realpolitik and the economic balance of power. There is no reason to believe that the physical environment of Rio will have an effect on the content of the agenda as it stands hitherto. For anyone who has some idea of how humankind on this planet divided by nation-states behaves, Rio cannot be anything but one of the many recent venues to further formalise and elaborate the existing international balance of power—this time hinged around in the name of global environmentalism—to put it simply, a "Green" version of the GATT.

Behind the euphoria of the Earth Summit and the rhetoric of the world leaders therein, there seem to be waiting at Rio a legal and financial framework for resources to be controlled by the international regimes (read the World Bank, the UNDP, the UNEP), whose very origin and current existence is, needless to say, at the pleasure of the North. The role of Working Group III in the countdown towards Rio must be viewed in this respect This Working Group has been directed with the task of framing legal and institutional frameworks concerning the implementations of decisions arrived at in Rio. Surprisingly, the media seems to have underplayed the role of this Working Group at all the four Prepcoms.

The deliberations within the Working Group III will be the primary contributors towards arriving at the specific responsibilities of each country being actually turned into long-term, workable commitments on their part. Consequently, this Group was to discuss over 100 treaties, protocols, conventions and declarations pertaining to the environment ranging from the 1959 Antarctica Treaty to the recent Montreal protocol. Naturally, the problem arising was which of these to include and which to ignore. In the last ten months it was observed that the US rather cleverly wanted additional treaties to be included so as to not only extend the time spent on the hitherto unfruitful discussions

The author, a free-lance writer, is an environmental activist.

but also to dilute the overall nature of the deliberations—a rather subtle but sure mechanism to ensure one's own interests are not encroached upon.

Whatever little that may emerge from Working Group III to be put forward at the Earth Summit, will be nothing but a further indication of the degree of success the North has achieved in substantiating its hold over the South through the UNCED. The past record clearly shows that in the name of global environmentalism the North has done nothing but extorted guarantee from some nations of the South regarding the latter's limitation on, for example, the consumption of energy and harnessing of forest resources. As one had imagined, the North, on its part, had time and again stayed away from giving any commitments on these very issues.

The case of the so-called Tropical Forestry Action Plan (TFAP) goes to highlight the potential dangers of control by a transnational regime over natural resources. The idea of the TFAP is to provide a "neutral" international organisation with the rights of monitoring and when required, intervening in the conceptualisation as well as implementation of domestic forest policies in the signatory countries. It is pertinent to mention that throughout the South, issues related to forestry have strong implications at the quality of life of the lowest economic stratum of society at the micro-level. In addition, these issues are also pertinent to countries with economic interests like Malaysia and Brazil in the sphere of trade at the international level. Thus, such a "guiding hand" in the pretext of "greening the earth" is effectively neo-imperialism in the garb of popular environmentalism—similar to what Chakravarthi Raghavan has called "re-colonisation" by the North being attempted through the GATT.

◆

IN the light of the above realities, was the Union Environment Minister's novel gesture at Kuala Lumpur pertaining to afforestation a right move? For those who are unaware, Kamal Nath extended an invitation to the nations of the North to take up the afforestation of the wastelands in India. Did our Environment Ministry realise the essence of this magnanimity in terms of its long-term impact on our human ecology? To put the issue in a perspective, let us start from the beginning. In India, afforestation programmes have been largely, if not wholly, the domain of the state—through the Central, State or local administrative apparatus. However, recently the government has allowed the private sector into the greening of the cities—visible from the saplings planted along road dividers in cities with mini-boardings of the corporate sponsors. To add to this is this proposal of foreign institutions to sponsor afforestation programmes in the country, which is similar to the giving away of the "sick" public sector enterprises. First, such a proposal succeeds in driving into oblivion the socio-political reasons behind the emergence of 50 million hectares of wastelands in the country. This is nothing but another way, this time on the pretext of the UNCED, to divert attention from the dynamics of the genesis of a complex socio-ecological issues—deeply rooted as they are in the political institutions and economic structure of our society—by creating an euphoria in the name of foreign assistance as a "solution" to the "problem".

Secondly, this noble gesture by the Environment Minister seems to be a mere extension of the government's policy of liberalisation into the ecological arena, if one compares this with the turning over of "sick" public sector units into the hands of foreign/corporate enterprises. The fact remains that this is no different from the previous sponsored greening. This is because both the state and the corporate sector sponsored afforestation programmes, as will be the case with the foreign sector in the event of the proposal being cleared, are against the much regarded dictum of "people's participation". This notion suggests that any socio-ecological activity geared to improve the quality of life of the people inhabiting a region must be a subject centred in its mechanism. The people who are most to benefit from such afforestation—for their regular food, fodder, and fuelwood requirement at a non-commercial, usually domestic, level—must be involved at the planning and implementation stages of such efforts, as well as managing such commons on a long-term basis. If the government is genuinely interested in afforestation for the people, then the best way is to hand over the rights of wastelands to be afforested collectively to the people who are to benefit from it. But of course this is asking too much from the government!

◆

THIS leads to the emergence of a peculiar situation. On one hand, the governments of the countries in the South are battling it out against the North to freely harness natural resources within their geographical domain. On the other hand, these very governments in the South have been denying their people the right to use resources available in the micro-environment they inhabit. In other words, are the governments in the South in the name of democracy and environmentalism willing to concede the demands of their people, as voiced by the numerous socio-ecological movements, what they as sovereign governments of the South demand from the North in the same spirit.

Thus, it is likely that the Earth Summit is only the tip of the iceberg--the beginning of a long-drawn multi-pronged battle for the South to pressurise and make changes in the global politico-economic order. What is more, one can get a glimpse of this new world order concerning the planet's human ecology being given birth to in Rio in the guise of "our common future". To begin with, the definition of "our" will emerge more implicitly from this Order. Following which, the post-Rio framework will only further challenge the very basis of the sovereignty of weaker nation-states of the South in the North-South arena. Given the current functioning of democracy and the degree of Centralised control of local resources in the nations of the South, one can very well envisage the undoubtedly far-reaching impact of this Order, backed as it is by powerful international regimes, on the daily lives of the people. But the people in the South seem to have become used to their lives being governed by "agreements" resulting from closed door deliberations among select people, as is the case with the UNCED. The question is when are the people in the South going to politically assert themselves against national as well as transnational elites to take charge of "their common future"? ■

This week, on May 27, 1964, Jawaharlal Nehru passed away.

Remembering Jawaharlal Nehru Today

G. PARTHASARATHI

Jawaharlal Nehru used to say that "at the present moment there is no more exciting place to live in than India".

On one occasion, in the mid-fifties, he explained what he meant, in an address to the students of the Indian Institute of Technology at Kharagpur. He asked the audience to recall that he had used the word "excitement" and not "comfortable" or some such soothing words in talking about India as a place to live in.

Panditji explained that India faced many problems, and that much remained to be accomplished by the Indian people. India would, therefore, be a hard place to live in--and therein lay the excitement. There was not much scope for soft living in India, he said. Soft living made for a rather dull life. However, Panditji went on, "there is any amount of room in India for living a hard, exciting, creative and adventurous life."

Excitement, in the sense that Panditji used the word, is what is generated when a group connected with building an edifice, or an industry or a university--or a people set on the task of building their nation—get imbued with a lofty vision. It was such a vision that animated our people during the struggle for freedom under the leadership of Mahatma Gandhi. It remained clear enough and strong enough to enable us to get over the trauma of partition, to set significant goals, and to move forward with our heads held high.

Panditji sought to nurture a lofty vision by offering our people the excitement and adventure of a hard life. If they would involve themselves, as he put it, in "working for India, building India, creating things here...." While there were doubters and waverers, our people, by and large, were uplifted by the vision he inspired and responded to his call for faith in the country's future. For independence, for self-respect, and for self-reliance.

Nehru was well aware that it would be unrealistic to expect that the process thus begun would be automatically self-perpetuating. The obstacles and pitfalls were many and varied. He acknowledged that the life of an individual--and even more so, the course of a nation—cannot be at all time a straight line, but will be a curve with its ups and downs. Periods of steady advance may be followed by spells of difficulties and disorganisation. To prepare the people for a united effort at nation-building, Panditji called upon them to contemplate the history of India, and to reflect on factors that had contributed to great achievements in certain periods, and to backwardness and stagnation in certain others. He pointed out that our forefathers in ancient times had many great achievements to their credit because they looked on the world around them with clear eyes and positive goals. They kept "the windows of their mind" open to give and take and, thereby, reinforced their self-confidence to take on bigger tasks. In contrast, when our people, for whatever reason, tended to develop a narrow outlook, India suffered a setback, politically and culturally, Panditji emphasised.

◆

PANDITJI'S lifelong crusade for the propagation of secular values should be understood in this context. He believed that the pace of nation-building—indeed, the wellbeing and the very survival of the nation itself--would depend on the extent to which our people got imbued with secular values. We need to be clear about the meaning that Panditji himself attached to what he regarded as secular values. Panditji worried that the English word "secularism" was a rather feeble one that failed to convey adequately a truly grand conception--a way of life that, in his view, India was best equipped to exemplify to the rest of the world.

Let me cite what Panditji had written about his concept of secularism:

> We call our state a secular one. The word 'secular' perhaps is not very happy one. And yet, for want of a better, we have used it. It does not mean a state where religion as such is discouraged. It means freedom of religion and conscience, including freedom for those who may have no religion.

Panditji went on to add:

> The word 'secular', however, conveys something much more to me, although that might not be its dictionary meaning. It conveys the idea of social and political equality. Thus a caste-ridden society is not properly secular.

To move our society towards becoming truly secular by progressively weakening the stranglehold of caste, and mitigating irrational distrust and hostility between groups professing different religious faiths, was a task to which Panditji attached the highest importance.

I have long been of the view that Nehru's elevated concept of secularism as an equitable and humane social order in which persons professing different faiths live in fraternal amity, marks a significant step forward in India's intellectual heritage. Nehru's starting point was not religion, but science and rational thought. He saw poverty and ignorance as the consequence as well as the perpetuating cause of injustice, oppression and inequality. It was through education and through economic and social change that the disadvantaged masses could be rescued from vulnerability to the exploitation of religious sentiment by vested interests. I have always believed that schools have a crucial role to play in instilling constructive values in the minds of the young because socialisation at an impressionable age begins in schools.

The task is also one to which the government and political activists should give continuing attention in order to mobilise public opinion. To Nehru secular values constituted the indispensable foundation for the unity of India and surest guarantee for its progress in every field of endeavour.

Nehru who was so deeply committed to the brotherhood of man, looked beyond our planet and found solace in contemplating the universe, with everything in it forming an organic whole. In one of his *Letters to Chief Ministers* he spoke of the desirability of keeping in view the old Vedantic conception of the life force "which is the inner base of everything that exists". He went on to add:

> If we really believed in this all-pervading concept of the principle of life, it might help us to get rid of some of our narrowness of race, caste or class and make us more tolerant and understanding in our approaches to life's problems.

He was very conscious of the hurdles that beset his path, but it was not in his nature to seek any respite from his unceasing endeavour "to appeal to the better angels" in the hearts of our people, to borrow a phrase from Abraham Lincoln.

Panditji was intensely concerned with the present—the here and now. However, he invariably sought to review the issues of the present through the prism of the past, while he also pondered over the implications of any course for the unity and progress of the nation and its people. Such had also been the approach of the great sages and teachers of our antiquity.

That posture, consciously evolved and held, precludes hasty or impetuous action that may result in undesirable consequences. That postures also comes out of a deep faith in democracy that rests on a citizenry able to receive unhindred a variety of views and historical experiences, and to work its way towards a broad consensus.

It is the task of political leaders in a properly functioning democratic constituional system to sustain such educational activity, debate and discussion, as to promote the broadest possible agreement. The process will mean at some point that the consent of the citizenry has been obtained and that the country is ready to try out a suggested course.

That was Panditji's approach. He was, of course, impatient to see the nation move forward at a faster pace in several areas that he considered urgent and important. He was tireless in explaining the issues to the people with noteworthy persuasiveness and objectivity. But his commitment to democracy and to the concept of receiving the willing consent of the people, always influenced the nature and pace fo changes to be implemented through legislation.

To Nehru, democracy and the socialism he envisaged had to go together. He believed that they would be mutually reinforcing elements. He fully realised that his method took longer than a course of adopting short-cuts to bring about social change by imposition but he was convinced that the results would be more enduring and wholesome. This deep sensitiveness to democracy resting on the consent of the people was intertwined in his mind with Gandhiji's insistence on the precedence of means over ends. Such an approach he believed was not merely an ethical one, but for India a practical proposition. Ever concerned with national unity, he declared that in India "an appeal to violence is particularly dangerous because of its disruptive character". He was patient with those who expressed disappointment over his unwillingness to use his immense prestige and influence to bring about a much more radical transformation of our society and economy. His interaction with such critics, as well as with those holding the very opposite views, was always on a very civilised plane. Central to his decision-making was his profound concern not to push, before the time was ripe.

◆

IF we reflect on recent developments in other parts of the world, we may acquire a clearer understanding of the fact that his posture was profoundly wise and farsighted. In order to get a clearer perspective of Panditji's extraordinary breadth of outlook, depth of thinking, willingness to give fair consideration to varying points of view, and firmness in adhering to his convictions—in short, to savour in good measure the humanistic faith to which he anchored himself—we should read his own works—*The Autobiography* and *Discovery of India*, to start with. One may also, whenever one feels the urge to seek communion with a humane thinker, who was also a man of action and the Prime Minister of a vast nation, turn to the pages in the recently-published volumes of Panditji's *Letters to Chief Ministers*. The letters, which came to be known as the "fortnightlies", represent a unique source that will enable us to see how Nehru's mind worked in analysing and dealing with the immense problems, both domestic and external, that he faced.

I may add that Panditji himself would never, for a moment, have contended that his appraisals and suggestions should be accepted as the only valid ones for all time. He would have hoped that the present generation would objectively analyse his appraisals, revitalise them whenever necessary to meet the requirements of today, and work out solutions that would reinforce the unity of the country and the progress of its people in the years that lie ahead.

Those who go directly to his works, and reflect on his words, will encounter a remarkable openness of mind, a deep yearning for fairness and objectivity, and even self-critical introspection. They will find little narrowness, rigid dogmatism, unfair characterisations or abrasive evaluations. They will also find out how current and relevant his words sound in the context of debates that are taking place in many countries at this time. Let me offer only a few illustrative examples.

Panditji reflected on the possible negative effects of modern technological changes that might lead young people to pursue a self-indulgent hedonism. He said:

> These tendencies are present more in the developed and advanced societies than in India and other under-developed countries. But it is important to note them because similar forces are likely to affect our life too.

The great importance that Nehru gave to the development of science and technology is well-known. He pointed with pride to the people of India "rooted in the remote past", marching forward with resolute steps in science and technology. He repeatedly stressed that the progress in science and technology should be combined with the progress of the mind and spirit. He stressed the point eloquently in the Azad Memorial Lecture of 1958 "We cannot," said Nehru, "be untrue to science because that represents the basic fact of life today. Still less can we be untrue to those principles for which India has stood in the past throughout the ages."

Characteristically, Panditji anxiously reflected on the implications of a decline in the study of the humanities in various countries, including our own. What would be the result of increasingly fierce competition among industrially advanced countries to gain an edge over each other in technology, especially the technology of warfare? In one of his letters to Chief Ministers after a visit to the West, Panditji wrote:

> Everywhere there is greater demand for intensive science education. ... Education will be more and more scientific, but not in the spirit or temper of science. It will be concentrated on the development of power. There will be less and less of humanism and classical studies, and the proud culture built up through hundreds of years of cultural effort will decay. ...This is the prospect before us, and only some mighty upheaval in human thinking can change this drift.

In these words one hears the voice of a world citizen who cares deeply for the advancement of culture and civilisation to enrich the lives of human beings everywhere.

Panditji gave anxious thought to the evolution of an informed citizenry capable of evaluating the panaceas put forth by political parties and participating effectively in the electoral process. He said:

> It amazes me that some people in this age of swift transition should still cling to ideas which have no relevance today, should be attracted to communalism and provincialism; and should be powerfully influenced by caste. It is distressing that elections should turn on caste and communal aspects. ...Many of our opposition parties, and sometimes even the Congress, approached the elections in a narrow way.

Here one finds a man who does not turn his face away from reality, who agonises the deficiencies that he perceives, who does not shirk self-criticism, and who, in that process, strengthens his resolve to strive to bring about improvements.

Panditji had differed with his leader and mentor, Mahatma Gandhi, on the issue of industrialisation. He was not disposed to go along with many other distinguished associates who were ready to accept Gandhiji's emphasis on the development of rural-based handicrafts and small scale industry rather than on heavy industry.

We find Panditji, a few days after the outbreak of the Second World War, reflecting on the future of the world and of his own India, and arguing that India should not fail to take advantage of what he called "the big machine".

Nehru said:

> It cannot conceive of the world or of any progressive country doing away with the big machine. Even if this were possible, this would result in lowering production tremendously and thus in reducing standards of life greatly. For a country to do without industrialisation would lead to that country falling a prey, economically or otherwise, to other more industrialized nations, which would exploit it.

As Prime Minister he undertook the challenging task of evolving a strategy of development in a democratic and mixed-economy framework.

Several countries that chose to adopt a different framework are now in the process of moving towards that of Panditji. His framework envisaged a strong public sector to set up urgently needed new industries, a vigorous private sector to tap enterprise and resources, and an efficient small enterprise sector to stimulate entrepreneurial and technical skills, increased production, and wider employment opportunities. While he recognised the value of developing and encouraging entrepreneurial skills, he was very conscious of the negative consequences of monopolies for socialism and democracy.

Contrary to the views expressed by some commentators, Panditji reflected deeply about such issues as efficiency, productivity, acccountability, and updating of technology in government-owned enterprises. He sought to alert government officials, Parliament, plant managers, and the general public to the continuing need to find suitable ways to meet problems. From the outset he called upon executives and workers in each industry to regard it as "a big university where we can work and, while working learn, so that we may do bigger things".

He reminded Parliament in 1956 that "when one deals with a plant and an enterprise where quick decisions are necessary, which may make a difference between success and failure, the way a government functions is not sometimes suitable". "Therefore," he continued, "we have to evolve a system for working public enterprises where, on the one hand, there are adequate checks and protection, and on the other, enough freedom for that enterprise to work quickly and without delay". Panditji exhorted members of Parliament to desist from frequent sniping at even minor lapses in the performance of the enterprises and from the tendency to find scapegoats. He warned that if members did not address themselves to issues with a full sense of responsibility, the successful functioning of enterprises would be adversely affected. Managers would tend to play for safety and would be disinclined to undertake promising experimentation or initiate desirable activities that might not be proof against failure in some respects.

Panditji's views on the role of universities have a contemporary relevance. He believed that in the continuing struggle against narrow parochialism and bigotry, and in the task of nation-building, universities had a very important role. He urged teachers as well as students to set up high standards in their work and in their activities. If that consciousness was lacking or suffered erosion, a university would be a house of learning built on shifting sands, he observed.

Nehru cautioned against the lights getting dim in the universities themselves:

> But if the temple of learning itself become a home of narrow bigotry and petty objectives, how then will a nation prosper or a people grow in stature?

I have touched on only a few issues that Nehru had concerned himself with in his many-splendoured career. Next only to the Mahatma, he was the most inspiring leader of our national movement. As Prime Minister he strove to transform our ancient country, with a colonial past, into a modern state and to promote economic growth and social development. As we reflect on the historic role of Jawaharlal Nehru and the richness of his legacy, we realise more than ever before, that his message was for the world and not for India alone.

We recall what Nehru said on August 15, 1947:

> It is fitting that at this moment we take the pledge of dedication to the service of India and to the still larger cause of humanity.

This sentiment expressed the ethos of our national movement which saw the struggle for our independence as part of the quest for a democratic world order, a global view inspired by Jawaharlal Nehru himself. The objectives of our foreign policy, which were set out and implemented, were derived from a fundamental faith in peace, political independence and economic equality. This led to a policy of non-alignment with power blocs, opposition to imperialism and colonialism in all their manifestations and a struggle against racial and social discrimination to secure respect for the dignity and worth of the human person.

It is not necessary to elaborate on the profound impact that Jawaharlal Nehru made on sensitive minds throughout the world by his crusade for peace and disarmament, especially nuclear disarmament, nor on the crucial role that he played during the grim years of the Cold War in reducing tensions and bringing about constructive cooperation between the opposing sides. His sincere and passionate advocacy of peaceful coexistence has borne fruit over the years. He was respected by everyone as an outstanding world statesman.

Today we face serious difficulties and challenges. The country will be well-served if there problems are met and dealt with by us with the values that Panditji sought to inculcate and the kind of approach that he exemplified in his eventful career. The life and thought of our great leader will remain a source of inspiration to us for long years to come.■

(This is taken from the author's address at the Foundation Day of Jawaharlal Nehru University (November 20, 1990) of which he was the founder Vice-Chancellor.)

Political Economy of the Uruguay Round of Trade Negotiations–I

MUCHKUND DUBEY

This is a detailed analysis of the Uruguay Round of Trade Negotiations written by our former Foreign Secretary, who is now a Professor, South Asian Division, School of International Studies, Jawaharlal Nehru University, New Delhi. It will be carried in instalments.

—Editor

The idea of a new round of trade negotiations was mooted by the developed countries, particularly the United States, in the early 1980s. The developing countries were reluctant to get involved in another round of trade negotiations so soon after the last round, that is, the Tokyo Round of trade negotiations in 1979 from which their gains had been rather limited and of a dubious character. They believed that the GATT should concentrate on accomplishing the task remaining after the Tokyo Round, of removing the asymmetry of their position in the world trading system rather than launching a new round of trade negotiations.

They were also highly apprehensive of the efforts of the developed countries at the 1982 GATT Ministerial Meeting to bring on the GATT agenda new areas of negotiations such as Services, Trade-Related Investment Measures (TRIMs) and Trade-Related Intellectual Property Rights (TRIPs). In the Programme of Action that emerged at the end fo the Ministerial Meeting, the developing countries succeeded in substantially underplaying the new areas introduced by the developed countries and keeping the limelight focussed on the issues of interest to them.

The developed countries, while paying lip-service to the part of the 1982 programme relating to the trading problems of the developing countries, used the Programme as a launching pad for a new round of trade negotiations. The developing countries realised that this was going to be a negotiation in which they had all to lose and nothing to gain and in which they were the givers and the developed countries the demandeurs. They knew by their past experience that the negotiations would not yield any positive results in the only area of interest to them, that is, market access, including that for textiles. They, therefore, tried to resist the bandwagon of the new round as long as they could. And when they were ultimately obliged to yield in Punta del Este in 1986 when the Uruguay Round was launched, they tried to safeguard their interests by ensuring that:

(a) in Services, any regime to be established shall respect the policy objectives of national laws and regulations applying to services;

(b) in TRIPs, the negotiations shall be confined to clarifying the GATT provisions and elaborating as appropriate new rules and disciplines;

(c) in TRIMs, the purpose of the negotiations will be to examine the operation of the GATT rules related to the trade restrictive and distorting effects of investment measures and to elaborate further provisions that may be necessary to avoid such adverse effects on trade;[1]

(d) the negotiations on Goods and those on Services proceeded on two separate tracks so that the possibility of cross-retaliation (that is, retaliation by way of withdrawing or withholding concessions on trade in goods for lack of compliance with the liberalisation commitment in Services) could be avoided.

◆

THE initiative for launching the Uruguay Round was taken when the economies of major developed countries were still reeling under the severe recession of 1980 and 1981 and when all projections showed a relatively slower rate of growth for these economies in the coming years. Such a low rate of growth was not sufficient to sustain the high standard of living that the people in these countries had got used to and the social security system that had become the hallmark of the Western civilisation and enabled these countries to make the long postponed massive investment in their infrastructure. There was a decline in the productivity and competitiveness of the US economy partly due to the staggering level of its military expenditure fuelled by the Cold War and the cult of nuclear deterrence. What was at stake for the United States and some of its close allies was their way of life and their hold over the world power structure.

Due to constraints of a political and institutional nature—the compulsion to continue the arms race, unwillingness to reduce profiligate consumption, rigidity of the wage structure, power of domestic lobbies, etc.—these countries, and the United States in particular, were not in a position to bring about the structural changes in their economies which could have put them on a path of higher rates of growth. They, therefore, decided to resort to external means as a substitute for domestic structural adjustment. The Uruguay Round was thus conceived as a shot in the arm of the economies of these countries.

Just as the very low rate of savings of the United States was sought to be compensated by the massive inflow of the Japanese surplus, similarly the recurring balance-of-payments deficits and declining competitiveness of the US economy was sought to be compensated by a combination of coercive bilateral measures and the Uruguay Round of Multilateral Trade Negotiations to create expanding space for the goods and services, including capital, of the US multinational corporations in the markets of other countries. If Super and Special 301 was, to borrow a phrase from Mrs Carla Hills, a crowbar to pry open the markets of developing countries, the Uruguay Round was the sustained heavy pressure leading to the ultimate collapse of the resistance to the entry of the US goods and services in these markets.

In the early 1980s there was also a perception in the United States that while it had become less competitive in the world in trade in goods, it still had a decisive competitive edge in the field of services. That partly explained the US insistence on bringing trade in services and TRIMs within the scope of the new round of trade negotiations. However, as negotiations proceeded, the US went on slipping behind in competitiveness in the realm of services also. The US, therefore, subsequently became somewhat lukewarm about making far-reaching liberalisation commitments in at least some of the services—particularly financial and communication services.

The only area in which the US still perceives itself to be competitive and hence the scope for substantially improving its market access, is agriculture. Here its interest coincides with that of some of the other low-cost agricultural producing countries, including some developing countries. That is why agriculture became such a key issue in the negotiations, leading to a breaking of rank among the developing countries.

◆

IN forcing the Uruguay Round, with their agenda and approach for the Round, on the developing countries, the developed countries fully exploited the extreme vulnerability of the economies of these countries and the consequent disarray among them. By the time the Uruguay Round was launched, more than half the developing countries had become dependent on the developed countries and international financial institutions, that is, the IMF and the World Bank, for repeated rescheduling of their debts and the NAM and the Group of 77 had ceased to be forums for effective joint action.

The developing countries adopted very strong, eloquent and extensive statements reiterating their common position on the main aspects of the Uruguay Round through the platform of the South Commission, in the NAM Ministerial Meeting in Nicosia and the Summit in Belgrade and in the various declarations of the Group of 77. But at each critical moment of trial during the negotiations, they wilted under bilateral pressure and gave up their common position. Thus what they perceived in the moment of inspiration to be in their interest they wilfully sacrificed in the moment of desperation under bilateral pressure. Subsequently, they erected a whole edifice of rationalisation to prove how the demands of the developed countries in Services, TRIPs and TRIMs were best calculated to serve their own interest.

It was also argued by the developed countries that the multilateral trading system would collapse if the Uruguay Round was not allowed to be launched or concluded to the satisfaction of the developed countries. It was repeatedly stated that what was at stake was the very future of the liberal trading system. The threat was held out that if the negotiations were not concluded the way the developed countries wanted, the protectionist forces in the United States would become stronger and protectionist measures against the export of developing countries will be intensified.

The United States held out yet another threat and it was that if a multilateral trading system after its image did not emerge from the Uruguay Round of Negotiations, there would be multiplication of the kind of exclusive trading arrangement that the US was concluding with Canada, Mexico, etc. Consequently, the US would quit the GATT system which would become fragmented by special trading arrangements of the kind being concluded by the United States, and developing countries outside such arrangements would be the worst sufferers.

The Uruguay Round of Trade Negotiations are different from all previous rounds of trade negotiations under the GATT in several ways. First, these were the only round of trade negotiations in which the developing countries did not perceive any interest of their own, at least till recently. Secondly, these were the first GATT negotiations in which the target was, apart from seeking the liberalisation of agriculture of the European Community, the markets of a dozen or so more developed among the developing countries. Finally, these were also the first GATT negotiations whose scope covered areas not lying within the jurisdiction of the GATT.

During the course of the negotiations in their earlier phase, the developing countries undertook a damage limitation job in the new areas and sought to achieve some positive results in the traditional areas, particularly market access.

In Services, they tried to safeguard their nascent service industries and seek access in those where they had some competitive advantage. In TRIPs, they tried to keep norms and standards of the protection of intellectual property rights (IPRs) outside the negotiations. In TRIMs, they did not want to discuss investment measures *per se*, but were prepared to discuss the effect of investment measures on trade. They sought to improve the access for their textile exports. And they wanted the regimes on Services, TRIPs and TRIMs to be lodged outside the GATT so as not to permit cross-retaliation.

II

The Dunkel Draft

In Punta del Este, it was envisaged that the negotiations would be concluded by the end of 1990. However, when the negotiations dragged on for one year more and a number of important issues still remained to be resolved, Arthur Dunkel, the Director-General of the GATT, presented a Draft Final Act (DFA) embodying what he thought could be the result of the Uruguay Round. This was offered as a Single Treaty no single element of which can be considered as agreed until the total package is agreed.

This package does not enable the developing countries to attain any of the objectives which they pursued during the best part of the negotiations. The package severely militates against India's interest. It is a far cry from the brief originally given to the Indian delegation. It goes against the letter and spirit of several of our existing laws. And it may have the effect of abridging our economic sovereignty, upsetting our development priorities, particularly the programmes for the poorest, and inhibiting the pursuit of self-reliant growth. In the analysis that follows, we are examining the implications of the texts of the instruments relating to some of the major areas of negotiations, that is, the TRIPs, TRIMs, Services, Agriculture, Textiles and Multilateral Trade Organisations, to bring out their implications for India's trading and economic interest.

A. TRIPs

The text on TRIPs in the DFA totally ignores the position of the developing countries like India and is a complete let down for them. It imposes on the developing countries the most stringent norms and standards for protecting intellectual property rights prevalent in the developed countries. It calls for a total revamping of the existing laws on this subject in India.

Let it be clear right from the beginning that the protection of intellectual property rights is no part of the edifice of a liberal trading system. Instead of making a trade regime more liberal, such a protection can have the effect of rendering the trade regime more restrictive. There are instances where liberal trade regimes have coexisted with low level of protection of intellectual property and very high norms and standards for the protection of intellectual property rights have co-existed with highly restrictive trade regimes.

For example, before the enforcement of *status quo* reciprocity (that is, not to maintain existing market access) under the threat of 301, low levels of intellectual property protection were prevalent in conjunction with relatively liberal trade and industrial policies in countries like South Korea, Singapore, Indonesia, Thailand, Malaysia, Mexico, Argentina, Chile and Brazil. On the other hand, China today is providing, under the threat of 301, high level of intellectual property protection even though it is maintaining a trade regime which falls far short of being liberal.

In terms of economics, there is genuine ground to believe that the global welfare deteriorates with higher intellectual property protection. Alan V. Deardorff, in a paper prepared on this subject, has come to the conclusion that "extending patent protection to all countries of the world is unlikely to be globally optimal". He argues, on the basis of a theoretical model elaborated by him, that on extending patent protection, a society incurs costs in the form of monopoly profits paid to inventors. There is also distortion of consumer choice due to monopoly pricing. Deardorff argues that if patent protection were extended to all countries of the world, these costs would outweigh the benefits from the world point of view, so that global patent protection should be rejected on efficiency grounds. Further, since patent protection also involves a substantial transfer of welfare from the developing to the developed countries, it goes against equity consideration as well.

◆

THERE is no theoretical basis for the belief that higher patent protection provides an incentive for invention. There are in fact models which demonstrate that invention will suffer due to higher I P protection, because it is competition and not monopoly which provides spur to R and D activities. One of the economists who has studied this subject has come to the conclusion that "the *ex ante* inducement to R & D that *ex post* protection of IPR is meant to provide is largely an article of faith".

On the other hand, it is recognised that IPRs themselves can be a barrier to trade. This is recognised in the text on TRIPs in the very first paragraph of the Preamble which states:

> Desiring... to ensure that measures and procedures to enforce intellectual property rights do not themselves become barriers to legitimate trade.

This is further recognised in Article 8(2) of the Text which states:

> Appropriate measures...may be needed to prevent the abuse of intellectual property rights by right holders or the resort to practices which unreasonably restrain trade or adversely affect the international transfer of technology.

However, in spite of this eloquent recognition of the existence and nature of the problem, the text does not contain any enforceable measures to prevent such abuses.

The TRIPs text goes against the Patent Act of India, 1970, in practically all important respects. Its adoption by India will call for the scrapping of the 1970 Act and the enactment by Parliament of a new law altogether for patent protection. The following are some of the important differences:

(a) The Indian Act excludes nuclear energy, methods of agriculture and horticulture and bio-technological processes and products from patentibility. The DFA text and the TRIPs makes all those methods and products patentable.

(b) Under the Indian Act, only process patent can be granted to food, medicines, drugs and chemical products. If we accept the text on TRIPs, we will have to grant product patents in all these areas.

(c) The duration of patents according to the Indian Act is seven years for products for which only process patent is granted and 14 years for those for which product patent is granted. Under the TRIPs text, it will have to be 20 years in all cases.

(d) In the Indian Patent Act, there are draconian provisions for the compulsory working of patents and there is a provision even for the revocation of patents in the public interest. Applications for the grant of licence for compulsory working can be filed after the expiration of three years from the date of the sealing of a patent. In granting such a licence, all that the Controller has to do is to satisfy himself that "the reasonable requirements of the public with respect to the patented invention have not been satisfied or that the patented invention is not available to the public at a reasonable price". Once he is satisfied on these counts, the Controller can order a patentee to grant a licence under such terms as he deems fit. The Controller also can, on application by the government, give on a patent an endorsement of "licences of right". As regards food, medicines, drugs and chemicals, the process patent granted for them shall be deemed to be endorsed with the words "licence of right", which can be worked on the expiration of three years from the date of sealing of the patent. Finally, the Controller has the discretion to make the grant of compulsory licencing effective at any time without waiting for three years to expire.

◆

IN the text on TRIPs in the DFA, there are no specific provisions on compulsory licencing. The provision in Article 27(2) of the text that "patents shall be available and patent rights enjoyable... whether products are imported or locally produced", gives the impression that importation is as good as local production so far as the enjoyment of patent rights are concerned. In that event, the question of compulsory licensing for local production does not arise. In that context, it is not clear whether Article 31 of the Text "other Use Without Authorisation of the Right Holder" confers on a party the right of compulsory licencing. In any case, "other use without authorisation" prescribed in Article 31 is highly circumscribed.

Linking Technology to Human Values

V.S. ARUNACHALAM

The following is the convocation address by the author, the Scientific Adviser to the Defence Minister and Secretary, Department of Defence Research & Development, Ministry of Defence.

I am grateful to the Vice-Chancellor for inviting me to deliver this morning's convocation of the Institute of Technology of this famous University in the ancient and holy city of Varanasi. This city has been the cradle of human civilisation for over a few thousand years and has remained in the forefront of intellectual challenges. This is the centre for numerous religious revolutions and interpretations that have shaped and reshaped human faith and thinking. It is in this very city that many fundamental questions on the meaning of human life and the spirit which governs the intellect, have been asked by those great philosophers and thinkers, and some sought and reached their enlightenment almost as revelations. Gautama Buddha, Saint Shankara lived, meditated and preached from the banks of the holy river Ganga. It is, therefore, only appropriate that the great son of India, Pandit Madan Mohan Malaviya chose Varanasi as the site to establish a modern university for intellectual pursuits in every area of human endeavour. As universities go, Banaras Hindu University is a complete one: every discipline that forms a subset of human knowledge is represented here without any discrimination, and in many, the university due to its sheer brilliance and capability is a world leader, educating and enlightening thousands of eager students who throng to this campus from all parts of our country, and some from far off countries as well. I, therefore, consider the graduates of today's convocation to be fortunate to have had an enviable opportunity to live and study in this great university. Through centuries, millions of Indians have dreamed of performing pilgrimage to Varanasi, if not actually living and studying in these environs. You are lucky to have fulfilled the dreams of many of our ancestors by staying and studying here, that too in areas modern and relevant to the society we live in—Technology. My heartiest congratulations to you, and may I share with you the pride and happiness that you all feel today befitting the occasion.

Many of you, even by now, would have decided on what you are going to do in the near future. I expect some to study further either in this country or abroad, while many will look for a career in the government or in industries; some may even opt for the noble profession of teaching while others with initiative may stake a career of their own. Fortunately, in our country we have not felt the effects of a global recession, and the jobs for engineers and technologists are still relatively easy to come by. I wish you all the best in the coming years, and I am sure you will all do well. With all the pessimists prophysying doom, and with all its sham drudgery and broken dreams, ours is still a beautiful land with wonderful people, and please make the best use of it. For, the future belongs to you, and do not let opportunities to slip by, or challenges unanswered.

◆

WHILE talking about jobs, it is easy to forget the relevance of technology to the present-day world. In the past as we were a rural country, we were not fully aware of the potential of science and technology to alter the very structure of the society irreversibly. We were not sensitised to the opportunities of technology in generating jobs and in improving the quality of life, probably as we were not aware of the great potential within technology. This, to some extent, is due to our country not experiencing the fruits of industrial revolution first hand, and we are thus not aware of what tecchnology can do to improve the quality of life. Only now are we waking up to the realities of the marvels of technology: instant communication and availability of information to educate, entertain and enlighten; breathtaking advances in living sciences that have made human life safer and improving the quality of life of even an ordinary citizen, providing him and her with opportunities not dreamed of before. We are now ready to taste the fruits of technology.

Is technology as unlimited and enlightened as many claim, or are there sacrifices to be made on the way? This is a question I want to raise with you, not only because you are going to be the practising technologists of today and tomorrow, but also because of a hope that you will be able to make technology human. For, we should not forget that technology is our own creation and we must not allow that to overwhelm us. Slavery in any form is bad, and slavery to technology is no exception. We must, therefore, continue to be aware of the limits of technology and pattern our life accordingly.

First, let me discuss the positive side. Technology provides opportunities for the creation of work, wealth and welfare. These are important and so we must use technology to take our country up the industrial ladder. In spite of our country boasting of a large number of scientists, engineers, technologists, industrialists and entrepreneurs, we still are a very poor country almost at the bottom of the industrial league of nations. Illiteracy is rampant as also poverty. Even today, for many happiness is one square meal a day. For all practical purposes, for them the industrial revolution has not occurred. The only way for bringing all Indians to the fold of national well-being is through industrialisation: not by mindless building of smoke-stack industries imitating some country or another, but by a well-balanced industrialisation that takes into account the various strengths and weaknesses of our society. Only then, we will be able to take our country on the road to social justice and economic prosperity. We must industrialise more, we must produce and we must generate employment and create more opportunities. These, by themselves, will lead to better social justice and a more tolerant society. As you will be the prime movers of this industrialisation, there is a special responsibility vested in you to ensure that we do not stumble this time.

The American philosopher, Santayana once said, those who forget their past are condemned to relive it and we must, therefore, ask as to what was wrong, and for that matter, what was right with our industrialisation. True, since independence, we have industrialised in every area of national infrastructure we missed building in the past centuries, and these have paid off handsomely and made India industrialised. Alongwith these we build scientific and technological laboratories and educational institutions providing the country with qualified and technologic manpower. This is unique among many other developing countries, for nowhere else can one boast of such a talented manpower. In this respect we are on parity with other industrially developed countries. It is this strength which gives us the confidence in our scientific and technological programmes and also in the initiatives we have taken to enter some areas of new technology which promise handsome returns. This is how as it should be and we must be proud of these achievements. But, somehow, we seem to have lost our way in the middle. For, we have not been conscious that by its very nature technology is international, and to succeed we must compete, but fairly. We must outshine others in the quality of goods we manufacture and in their cost; we must be economical in materials we consume and treat the environment with care. If we were prepared for all these constraints, the very first industrial revolution the country experienced in the fifties and sixties would have become self-sustaining. This, the country could not do for a variety of reasons, some of which could not be helped, while some other should have been taken care of.

◆

TAKE, for instance, many of our industries which got their technology from abroad and which was adopted well for those countries, their raw materials and their work ethos. I am afraid we did not modify the imported know-how to suit local conditions, indigenous raw materials and practices. This could have been done if our industries and engineers had only spent time, money and effort to absorb the technologies in their innovation. How different are the Japanese who spend about five rupees to absorb and modify the technology bought for a rupee? India barely spends a rupee in absorption. No wonder indigenous products are inferior and costly. Our raw materials are incoherent with the processes employed and like an addict we continue to chase more and more know-hows as though they would answer many problems. Previously imported know-hows remain as sterile black boxes, unopened and un-understood. We thus lost a valuable experience for an entire generation of young engineers who could have helped the country to take-off from what was improted in the first place. This was the road the Japanese took and we could have followed this example as the country had the required qualified manpower unlike other newly industrialised countries with inadequate infrastructure.

There is yet another reason which has something to do with our education and training and the social infrastructure of the country. In engineering and technical education, there is still inadequate emphasis on practical training as also on quality and production engineering. These subjects are still considered unnecessary appendages that take the form more theoretical studies, and thus get very low priority. It is also an unfortunate fact that the Indian society is yet to value the dignity and the importance of manual labour. In the past, it was always relegated to the so-called Backward Classes and there was no pride either in manual labour or in product innovation. We thought that knowledge is only mental labour. And even engineers who should have known better, opted for the desk-jobs not realising that the technology at the shop-floor determined industrial and economic successes. Only now, the new generation of engineers, of which you are an example, are waking up to the demands of technology. Slowly, but surely, the society is rediscovering the merits of manual labour. This consciousness must spread further to transform the country to become a technologically formidable and industrially advanced nation with a combination of mental and manual strengths.

Technology thrives on competition. To perform better, we need options on products, processes and on costs. Unfortunately, the Indian industries have not until now faced serious competition except perhaps in defence. The market was a protected but a large one, insulated from external competition and thus providing a large internal one. If India had attempted to sell in international markets, she could have learnt the merits of competition. Instead, the industries chose the national market that was captive and unaccustomed to new technologies. It is this closed-door policy, which evolved first to protect the nascent indigenous industry, but later grew uncontrollably stifling innovation and competititon, that is responsible for the present poor industry performance. Only now are we waking up to the realities of technology: it is international and no amount of state support is adequate to protect archaic, irrelevant and unprofitable technologies.

◆

THERE are two areas concerning technology that I want to touch briefly. One concerns the national competence in science and technology, and the other a more philosophical one on the relevance of technology. The founding fathers of our nation, had rightfully emphasised the need to be self-reliant in science and technology and helped to build this infrastructure. This has not been easy, and could not have happened at all but for the political vision and also the commitment of thousands of engineers who opted to stay and build rather than migrate. Their lives had not been easy, with inadequate infrastructure, bureaucratic controls and often ill-informed public opinion. In spite of these they have persevered. Because of these sacrifices, our country has options in advanced technologies related to Atomic Energy, Space, and Defence. These are areas that may be vital not only to industrial growth, but even to our survival as a nation. If we had abandoned our efforts citing inter-dependence as a virtue in all areas, I fear we would have closed options in many areas including those in defence.

The right to possess technology should be a fundamental right of a country and this should not be denied. Otherwise, we may find ourselves in a position that even an indigenously cross-fertilised or genetically engineered plant is patented and thus cannot be cultivated except by a costly process of buying patents and obtaining approvals. Countries that do not possess the scientific manpower may succumb to these pressures, but a country such as ours should stand by the principle that technology is for the common weal and must, therefore, be diffused more freely unencumbered by controls and restrictions. Many developing countries look to India to provide a lead in this issue, and India must persuade those who believe in locking and controlling the diffusion of technologies to a trickle. This should be another reason for many of our engineers, technologists and universities to continue research and development pursuits. We are too big a country to live on borrowed know-how. Our selling should not remain with mere products, but should also include knowledge, expertise and know-how. This will also turn our country not only strong in defence but also in caring for other developing countries who lack the window of science and technology to solve some of their basic problems.

Is technology a panacea? Can it solve all human and societal problems? By its track-record to date, technology has been a great boon liberating humankind from ignorance, freeing it from the many ills and providing opportunities for gainful employment. Technology is mainly responsible for bringing in a consciousness that our planet is a

Mobilising Resource

Towards A New Conceptualisation

ANANTA GIRI

Mobilising resource seems to be one of the most pressing concerns of our times. All societies are now confronted with the daunting task of mobilising more and adequate resources to meet the challenge of contemporary economic transformation and economic decline. We are now in the midst of a global economic restructuring with the transition from an industrial to a post-industrial economy. The post-industrial economies are characterised by the centrality of new technologies where labourers have to be skilled, knowledgeable and innovative.

The post-industrial transition even in the most advanced societies is not without its travails. Indeed the "Great-U-Turn" that entry into a post-industrial economy symbolises is leading to deindustrialisation, locational restructuring of the industries from the "snowbelt" to the "sunbelt" and, above all, to the decline of communities not to speak of the phenomenon of displacement and 'high tech and low pay' which an anthropologist has aptly called as "falling from Grace". The communities devastated by deindustrialisation are slowly striving towards remaking themselves, making their self and sites appropriate for post-industrial capital investment. In this context, we need to broaden our purview of the problem of and appeal for capital investment.

Though global media and their uncritical national adapters blow out of proportion in showing a Mikhail Gorbachev or a P.V. Narasimha Rao appealing to the post-industrial giants for investing in their countries and providing more technologies, the need for capital formation and resource mobilisation has been crucial even for different cities, communities and states in the United States—different cities in the United States now compete with each other not only for domestic investment, but also for international investment. But those American communities which do not have adequate local resources appeal to the Japanese for investment. Besides appeal for investment, these communities prepare themselves, retrain their manpower and, above all, try to link education with work through the creation of what a Harvard Business Professor, David Osborne, calls "post-industrial university". These post-industrial universities are centres of effective collaboration between research and industry, centres of continuing education for the workers.

Institutional Transformation

It is this aspect of the contemporary American striving that has much relevance in our contemporary India. We must create an institutional infrastructure to cope with the integration of our economy with the global post-industrial economy. Until now, our effort seems to be confined to restructuring the budget, but very little attention has been given to the most important question of institutional transformation and the creation of a new ethos. We waste so much time everywhere in bureaucratic cobwebs and besides delicensing what is required is a social revolution where we inculcate the spirit of the new work, its need for creativity, flexibility and incessant innovation. We also have to educate our workforce, reskill them and, above all, create a fruitful collaboration between industries and universities where technological innovations in the laboratory can diffuse to be profitable products in the industry. For this to happen, both the universities and the industries have to change a lot for which we do not have a glorious tradition.

People's Movements

Indeed, it is education that has to be the most important asset in mobilising resource. But this education is not simply to be confined to the university, but to be a people's education where the people themselves would have a knowledge of the resources that exist around and the potentialities that exist within. People's movements of various kinds in contemporary India are helping people not only to discover the resources within and to discover that they themselves are the ultimate resource, but also to create a "resource mapping" of the local areas which would widen their imaginative universe. People's science movements in contemporary India, after their continued laudable work in the field of adult literacy and popularisation of science, have now turned their energy to create a people's "resource mapping" and a people's guide to resource utilisation —Kerala Shastra Sahitya Parishad are the pioneering example here. The KSSP is involving experts and village volunteers together in the making of the local resource map which is believed to be a great asset in the much needed decentralisation of the planning process. If people know what resources exist in their locality, then when they get developmental grant for a panchayat, they would not simply spend that money in constructing a village road or a youth club, but they would use it for the better utilisation of the unused resources.

But besides acquainting people with resources that exist, people's movements are also striving to create a larger conception of resource which is not bound to reality, but a constituent of possibility. During an anthropological conversation with a sixty year old American lady who works in a transnational housing movement in India, told me: "When I was in school, I had a very physical view of resource. Oh, the resource of India meant all the mines that they have. But now by resource of India, I mean much more: her values, her family traditions and her people."

This has implication for understanding the nature of people's movements as well. Many of our scholars work with an either/or framework in their analysis of contemporary movements: either movements strive towards creating a new identity or strive towards the mobilisation of resources. But contemporary movements embody a dialectic of resource mobilisation and identity formation in as far as the identity of the actors of the movement becomes an asset in the mobilisation of resources. There is indeed a global widening of the meaning of the resource--from the physical to the intellectual and even to the spiritual.

Hence, in coming face to face with the challenge of mobilising resources, we also have to participate in a cognitive shift and in a transformation of consciousness with the equal emphasis upon the physical and the spiritual in our conceptualisation of ourselves and the conceptualisation of our resources. ■

MUCHKUND DUBEY: Uruguay Round

(Continued from page 14)

It is provided that, first, the interested party should make effort to get authorisation from the right holder on reasonable commercial terms and conditions. If the party fails in this effort, then such authorisation will be considered only on a case-by-case basis on individual merits. When the use is authorised, it will be predominantly for the supply of the domestic market. Besides, the right holder shall be paid adequate remuneration for such use. Finally, any authorisation of use or decision relating to remuneration will be justiceable. There are thus fundamental differences between the provisions on compulsory licencing in the Indian Patent Act and those in Article 31 of the TRIPs Text. The purpose in the Indian Act is to serve public interest; that the Article 31 is basically to protect the interest of the patent holder even while allowing the use without authorisation, of the patent, under exceptional circumstances. Moreover, according to the DFA Text on the TRIPs, patents will have to be granted merely to enable the patentee to enjoy a monopoly for the importation of the patented articles.

The provisions in the TRIPs Text go much beyond the Paris Convention and at the same time imply that all parties accepting the text will be required automatically become a member of the Paris Convention. Article 2(1) of the Text provides that "in respect of Parts II, III and IV of this Agreement, Parties shall comply with Articles 1-12 and 19 of the Paris Convention (1967)". There is an implication here that in all cases where the TRIPs Text is silent, the Paris Convention will take over.

It may be recalled that the case of India acceding to the Paris Convention has been considered by the Cabinet Committee on Political Affairs (CCPA) at least twice in the recent past and on each occasion, the CCPA came to the conclusion that it would not be in India's interest to accede. And now we are being asked to accede to the Paris Convention routinely and automatically by virtue of our acceptance of the TRIPs Text!

(To be continued)

Politics of Presidential Election in India

SHIW BALAK PRASAD

After a few months we are going to elect the ninth President of India. In the fifties the question on the lips of a number of political observers and commentators was "who after Nehru?". Likewise now-a-days the same question is raised who after Venkataraman? Insofar as the ruling party at the Centre is concerned, the Congress is at the mercy of other political factions and there are non-Congress governments in many States, and, in addition, there is the threat of terrorism and secessionism.

Due to the parliamentary form of government in India the President is the constitutional head of the state, the real head being the Cabinet.[1] Yet, undoubtedly in a critical political and economic situation, the President of India may play a decisive role. Really and truly, the elite class of the ruling party knows these facts from the very beginning. So after 1967 the selection of candidates for the Presidential election has been made after many deliberations.[2]

Here our main purpose is to analyse the decision-making process by which different Presidents of the Indian Republic have been selected. If we look into the process of the selction from the first President, Dr Rajendra Prasad to Ramaswami Venkataraman, certainly it might be said that the election of the Indian President is formal, but the selction of a candidate for the President is very much important.

We all know that differences had cropped up among the stalwarts of the Congress on the issue of the first President of India itself. There were two great gentlemen for the candidature of the President, Dr. Rajendra Prasad and C. Rajagopalachari. Nehru was much influenced by Rajaji's modern vision and secularism. He thought he would get on better with the statesman from the south. Besides, as the Governor-General of the Indian Dominion, he had much experience and had also the greatest reputation of intelligence and statesmanship.[3] Nevertheless, a lot of facts went in favour of Dr Prasad who was an active participant in the freedom struggle, a steeled Gandhian; in contrast, Rajaji had not taken part in the Quit India movement. Thus, Rajaji had become unpopular, particularly in the north, because he had advocated self-determination for Muslim-majority provinces. On the other hand, Sardar Patel was very eager for Dr Prasad as the President because he did not want to give absolute power to Nehru. Keeping in view the opinion of Patel, Maulana Azad finally worked for Dr Prasad's candidature. Hence, many members resisted the candidature of Rajaji in the Congress Parliamentary Party meeting.[4] At that moment, there was no alternative but to accept Dr Prasad as the first Indian President.[5]

The author is a Reader in the Post-Graduate Department of Political Science, T P. College, Madhopura (Bihar).

After the very first general elections (1952) there appeared a changed political phenomenon regarding the Presidential election—the Congress was divided and a new party Kisan Majdoor Praja Party was formed. Apparently, all opposition parties jointly supported K.T. Shah for Presidential candidature. But a veteran statesman, Dr Rajendra Prasad had earned a fair reputation as an interim President, so his name was unanimously proposed in the joint meeting of the Congress Working Committee and the Congress Parliamentary Party.[6]

The Prime Minister, Nehru, also accepted him as a national personality and stressed that he must be in Rashtrapati Bhavan.[7] Consequently, many Independent members caste their votes in Prasad's favour.[8] Eventually he was elected by getting 61.31 per cent votes.

On the eve of the second Presidential election (1957), several differences between Nehru and Dr Prasad emerged (in choosing) the Presidential candidate by the Congress. Since Dr Rajendra Prasad was an uncompromising Gandhian and an orthodox Hindu, he could not easily give his assent to the Hindu Code Bill.

This was one of the reasons why Nehru wanted to choose Sarvepalli Radhakrishnan as the Union President and for that he publicly advised that old statesmen should abandon their posts.[9] He was more in favour of Radhakrishnan than Rajendra Prasad. Obviously, the Congress Parliamentary

Party was divided over the issue.[10] But Dr Rajendra Prasad wanted to contest for another term and was strongly backed by Maulana Azad. Azad's point of view was that Radhakrishnan did not participate in the freedom movement and had accepted knighthood from the British rulers. So, ultimately, Dr Rajendra Prasad was declared the Congress candidate and re-elected as the President of India by 99.24 per cent votes.

On the occasion of the third Presidential election in 1962, there was no problem for the ruling or opposition parties. When the Congress nominated Radhakrishnan as its candidate, he was unanimously acclaimed, for as the Vice-President and Chairman of the Rajya Sabha, he was always impartial. Therefore, there was no political complication at that time.,

The Presidential election in 1967 was an earnest problem before the Congress. This was due to the fact that many northern States had non-Congress governments and the Congress party was riddled with factionalism. The Congress was clearly divided into two groups—one led by Smt. Gandhi and her supporters and another was the so-called Syndicate members who were veterans and experienced. The Vice-President, Dr Zakir Hussain, represented the minority communities. So Smt. Gandhi wanted to choose him as the Presidential candidate but Kamaraj (then Congress President) was in favour of Dr Radhakrishnan again. Later on, the Congress Parliamentary Party authorised Smt. Gandhi and Kamaraj to choose the party's candidate. In the rapidly changing situation, Smt. Gandhi was very eager that the person nominated by her should be made the President so that he could come to her rescue if she were in a critical position in the future. Sensing the undercurrents within the Congress, Dr Radhakrishnan chose to abdicate, thus making Dr Zakir Hussain the obvious choice for the Congress. Many opposition parties, on the other hand, selected K. Subbarao as their Presidential candidate. Eventually, Dr Hussain was elected by 56.4 per cent votes.

◆

THE Presidential election of 1969 has much importance in the constitutional history of India in which the official candidate of the Congress was defeated by an Independent candidate. Though the tug-of-war within the Congress had begun after the fourth general elections, it reached its zenith on the eve of the Presidential election. As veteran politicians Kamaraj, Sanjiva Reddy, Y.B. Chavan, Morarji Desai, Atulya Ghose, S.K. Patil, etc. wanted the Presidential candidate to be chosen from amongst them, Smt. Gandhi was very afraid and careful and was backing Jagjivan Ram. Thus this issue finally went to the Congress Working Committee in which Smt. Gandhi was in minority and Neelam Sanjiva Reddy was nominated as the party's candidate. However, Smt. Gandhi suspected that if the official candidate was elected, he might try to dislodge her from power and hence she decided that in the Presidential election every member of the electoral college may be left free to vote according to his or her conscience and not be forced to vote for the official candidate. Although Smt. Gandhi filed the nomination papers of Sanjiva Reddy for the Presidential election, she later refused to issue a party whip in favour of Reddy and threw in her lot with V.V. Giri who was an Independent candidate.

There were 15 candidates in this prestigious poll and among the main contestants Reddy was backed by the Congress Syndicate, V.V. Giri was supported by the Communists, Socialists, DMK and C.D. Deshmukh was supported by the Jana Sangh, the Swantantra Party and the Lok Dal. As a result of cross-voting Giri benefited and was elected. Thus began game of "power-politics" in practice in which there was no room for scruples, parliamentary traditions, party discipline and so on. Thanks to Smt. Gandhi's manoeuvres the Congress was clearly divided into two—Congress (Organisation) and Congress (Ruling) later. Therefore, we can say that V.V. Giri was really an elected President whereas all the former Presidents of India were selected. Initially, Giri was loyal to the Prime Minister Indira Gandhi, but later on he started assuming the role of the people's President, so he propagated the view that the President was no figure-head.

On the eve of the fifth Presidential election, the Congress Parliamentary Board chose Fakhruddin Ali Ahmad as their Presidential candidate.[13] It is said that Smt. Gandhi had decided in favour of Ahmad a month before[14] the Presidential elections were to be held. The election was a mere formality.[15] Though there were two more names for the Presidential post at that time—Jagjivan Ram and Swaran Singh, but Ahmad was the favoured one because Smt. Gandhi required an obedient President. Tridev Chaudary was the candidate put up by the Opposition but was tamely defeated by Ahmad. By now it was clear that the President must be obedient to the Prime Minister and not hold any independent views and he should also be the choice of and enjoy the confidence of the Prime Minister.

Neelam Sanjiva Reddy was elected unanimously in 1977. Certainly in the constitutional history of India, he was not opposed by any opposition party. At that time it had become clear that the Janata Party's nominee would ultimately be elected, so the Congress acquiesced. Hence, for the first time, the Presidential election was completed on the basis of common consent of all the political parties. But leaders of the Janata Party had different attitudes on this issue. For instance, the Jana Sangh faction of the Janata Party was very eager for Hidayatulla, Prime Minister Morarji Desai's weakness for Rukmini Devi Arundal, Jai Prakash Narayan's proposal for Achyut Patvardhan, then Home Minister Charan Singh advised the name of Jagjivan Ram and so on. Ultimately, the then General Secretary of the Janata Party, Madhu Limaye, authentically announced the name of Neelam Sanjiva Reddy on the basis of common consent.[10] There was no contestant, so, Reddy was unanimously elected.

◆

GIANI Zail Singh became the seventh President of India in 1982. He was also the choice of Prime Minister Indira Gandhi and he complied with Smt Gandhi's wishes. It was said that Zail Singh owed his rise in politics to Smt. Gandhi and Sanjay Gandhi. At that time, Smt. Gandhi perhaps thought that his elevation to the office of the President would help her in tackling the deteriorating problem in Punjab. To repay his gratitude, Zail Singh made Rajiv Gandhi the Prime Minister soon after the assassination of Smt. Gandhi. To be precise, Zail Singh was not really an elected President, but chosen by the then Prime Minister. Though Hansraj Khanna was also in the race for Presidential election at that time, supported by ten opposition parties, he was defeated. Likewise, R. Venkataraman was also the choice of our then Prime Minister, Rajiv Gandhi. Although V.R. Krishna Iyer was also a candidate, supported by some opposition parties, he was defeated by R. Venkataraman as the Congress-I nominee in 1987.

Thus we see that there is a decisive role of the Prime Minister in the Presidential election. It is another thing that Dr Rajendra Prasad was made the President continuously for three terms despite Nehru's reservations. But after him the successive Prime Ministers persisted in holding Presidential elections. Although our Constitution provides that the President has no affiliation with any political party, yet the President's office cannot escape being politicised. Consequently, a non-political man cannot aspire to be the President of India. Hence it is not a question of who will be the President after Venkataraman, instead, the main question is that who will dare to solve the burning problems of the country. We, the Indians, are politically motivated and fail to judge rationally and act impartially. The dilemma of choosing the right man to be the President of India is a difficult task not only for the ruling Congress or Opposition but the nation as a whole. Therefore, it should be solved by common consent in the interest of the nation. ■

ARUNACHALAM: Technology & Human Values

(Continued from page 17)

small spaceship in limitless space, and only through care and understanding is it possible for us to co-exist and prosper. Technology has globalised every part of this earth, and we must be grateful for it. But technology has been a mixed blessing as well. Environmental and ecological damages have grown as also the development of weapons of mass destruction. It is, therefore, necessary to interpret technology in terms of human spirit and thinking. This link is not going to be easy as there are no well-defined laws or equations as in engineering that can quantify human values, which are so easy to comprehend, but difficult to define quantitatively. Therefore, scientific temper must be modulated and indeed become subservient to human virtues. This is going to be the challenge for the coming decades for all of us, and specially for you entering the real world after your graduation today. Let noble thoughts accompany you wherever you go, and in whatever profession you chose to enter in. ■

Punjab after Elections: Some Basic Issues

— M.S. DHAMI

The 1992 Punjab election may be characterised as a deviant election. The two preceding elections in Punjab, of 1985 and 1989, witnessed a significant change in the party support-base in favour of the Akali political formations. The Congress party in the State was relegated to the second position. And these elections may be labelled as critical elections.

As a matter of fact, the electoral support-base of the Congress party amongst the Punjab Sikh peasantry—which is predominantly Jat Sikh—has been declining ever since the late 1960s. The Sikh peasantry constitutes around 40 per cent of the total population of the State, and a bulk of this important social group now support the Akali parties. And any State Government that does not adequately represent this section of the Punjab population is unlikely to stay in power for any length of time.

Before taking up the electoral support-bases of major political formations, we provide a brief overview of the Punjab social structure in terms of community and major caste groups.

According to the 1981 census, the Sikhs are around 61 per cent, the Hindus 37 per cent, and the Muslims, Christians and others together are barely two per cent. The two major communities also differ in terms of rural-urban spread. The Sikhs are predominantly rural, 85 per cent of their total population live in rural areas and barely 15 per cent in the urban areas; the corresponding figures for the Hindus—who dominate in urban areas—are 52 and 48 per cent. Further, peasantry and artisan caste groups predominate amongst the Sikhs, while upper caste mercantile castes group is predominantly Hindus. A large majority of the Scheduled Castes, who are statistically Hindus and Sikhs (in case one follows census figures literally), as a matter of fact form a distinct group lying in the twilight zone between the Hindu and the Sikh communities. For our purposes we divide the combined Hindu and Sikh population into three groups, alongwith their proportion in the total population as under:

Non-Scheduled Caste Hindus	Non-Scheduled Caste Sikhs	Scheduled Castes
%	%	%
22	49	27

So, given the nature of the Punjab social structure, a purely secessionist demand would lack democratic mandate.

In order to study the changes in the electoral support-base of the major political parties in the State, we shall try to club these into three political groupings in terms of the similarity of the support-base and ideological affinity of the constituents of each political group. The first group comprises the Congress party and the Bharatiya Janata Party (BJP); the second includes various factions of the Akali Dal and All India Sikh Students Federation; and the third group—which is referred to as the *buffer political group*—includes the Bahujan Samaj Party (BSP), the Republican Party of India (RPI), the Communist Party of India (CPI), the Communist Party of India-Marxist (CPM), the Janata Dal, its splinter groups, and incipient groups like the Punjab Bachao Morcha. The electoral support in terms of percentage of votes polled in the last three elections (1980, 1985 and 1989) of the three political groupings is as under:

Year	*Political groupings** I Congress Party & BJP % vote	II Akali Dal and its factions % vote	III Buffer Political group % vote
1980 (Assembly elections)	52	27	15
1985 (Assembly elections)	43	38	12
1989 (Lok Sabha elections)	31	44	20

**It excludes the votes polled by the Independent candidates*

The votes polled by the three main political groups over the period 1980-89 show a steep fall in the votes polled by the Congress and the BJP. This is mainly due to the decline in the support of the Congress party

The author was formerly on the faculty of Guru Nanak Dev University, Amritsar. This paper was presented by him in a Seminar on 'Developments in Punjab after the 1992 Election' in the Panjab University Campus on March 5, 1992, organised by the Institute of Social Sciences.

amongst the Sikhs in general, particularly the Sikh peasantry, and the Scheduled Castes. The 1989 election (as also the 1992 election) shows the emergence of the BSP which enjoys a sizeable support of the Scheduled Castes.

Despite a decline in the electoral support of the two Communist Parties, the third buffer political group as a whole has improved its vote percentage from around 15 per cent to 20 per cent in this period. In view of its equidistance from the other two groups, it can play a healthy mediating role in the politics of the State.

From Coalition Politics to Anandpur Sahib Resolution

Rapid changes in the socio-economic structure since the Green Revolution in mid-1960s, growth of unplanned urbanisation, commercial penetration, and the inroad of Western life-styles and cultural values through urban-based middle classes provided a fertile ground for the rise of tradition-oriented religio-political movement.

Centralisation of power under the hegemony of the Congress regime and the limited power with the State Governments contributed in no small way to the emergence of militancy even amongst the moderate Akalis. In the reorganised Punjab, Akali Dal for the first time formed the government in the State in 1967 with the Jana Sangh as the coalition partner. Various Akali-Jana Sangh coalition governments were formed in the period 1967-1971.

However, the Akalis' experience of governance at the State level was not happy. In addition to the limited power vested with the State Government, they were humiliated by the Congress High Command under the smokescreen of Congress "secularism". Here is one instance which highlights this point. In July 1970 the Akali Government under Parkash Singh Badal was reduced to minority in the State legislature due to the withdrawal of support by the Jana Sangh, its coalition partner, on the issue of affiliation of colleges of four Punjab districts to Guru Nanak Dev University, Amritsar. In order to get support of the Congress legislators, Badal approached the Congress High Command. The Congress party laid down ten-point conditions[1] for supoort to the Akali Government. Most important of these were: (i) land reforms, (ii) secularism, (iii) place of Hindi in its language policy, and (iv) option to colleges to affiliate either to Guru Nanak Dev University or Panjab University. The second and third conditions favoured one community—the all-India majority ethnic group—and were clearly sectarian. All this was done to promote the so-called "secularism", and the Akalis ostensibly were asked to observe secularism. This illustration shows how Akalis were humiliated by the secularist whip of the hegemonic Congress party during the heydey of moderation amongst the Akalis.

Another political factor that contributed to the Akalis' alienation was the nature of representation from Punjab to the Central Council of Ministers. There is a widespread feeling amongst the Akalis that Punjab's representatives in the Union Council of Ministers do not represent Punjab's interests what to talk of the Sikh interests. Ever since the retirement of Swaran Singh in the 1970s, the representation of Punjab has not been significant. In the mid-1980s, the two Punjabis—Buta Singh and Balram Jakhar—who were in the Union Ministry, were elected from Rajasthan. These developments, incidentally, coincided with the decline in the Congress support-base amongst important segments of the Punjabi society, coupled with Centralised tendencies at the national level. The legal-bureaucratic framework of the State, manned by upper caste urban middle classes, had little empathy with the rural masses. The Akali Dal, on the one hand, was consolidating the support of the emerging rural-based middle class by espousing the economic demands of the farming community, and, on the other hand, it was being pressurised by its inbuilt ideology—nurtured by the Akalis' cultural elites,[2] representing marginal urban-based social forces and rural priestly classes—in favour of intra-community cohesion (Panthic unity).

As the Akali leaders found that they had virtually no influence in the power structure at the national level, and whatever limited power they had, at times, at the State level is shaky, they naturally would have a lesser stake in the Indian political set-up. Under the circumstances, the Akalis would naturally ask for a fundamental restructuring of the Indian federal set-up with greater autonomy for the States. From 1967 to the late 1970s, peasant-based Akali leaders followed a pragmatic and moderate stance in the matter of State autonomy demand. However, in view of the inbuilt ideology of the Akali Dal, and centripetal tilt in the federal balance, the influence of tradition-oriented cultural elites on Akali politics manifested itself in October 1973 when the Akali Dal Working Committee adopted a 'draft of the new policy programme of Shiromani Akali Dal' with religious overtures to the State autonomy demand, popularly known as the Anandpur Sahib Resolution.[3] The Resolution on autonomy was not taken seriously by the Akali Dal till the *Dharam Yudh Morcha* (agitation) in August 1982 when it became a live issue.

Rise of Ethnic Militancy

The rise of Sikh militancy is the result of rapid changes in Punjab's social structure, historically-conditioned communal stereotypes nurtured amongst the two major communities under the hegemony of their respective middle classes, and the weakening of political institutions (including political parties) since the mid-1960s.

The immediate issue that triggered religio-political mobilisation and Sikh militancy can be traced to the tragic armed clash between the orthodox Sikhs and a heretical Nirankari sect in April 1978. The fall out of this clash created a serious law and order problem for the then Akali-led coalition State Government under Parkash Singh Badal. Jarnail Singh Bhindranwale, head of an important Sikh seminary, Damdami Taksal, warned the Nirankaris that his followers would not allow the holding of the Nirankari *satsangh* (congregation) in Punjab. His call was more than reciprocated by orthodox urban Sikh middle classes and tradition-oriented rural Sikhs. It is reported that the Punjab Government under Parkash Singh Badal at one time decided to arrest Jarnail Singh Bhindranwale. And the decision was withdrawn on the assurance on behalf of Bhindranwale that he will confine his activities only to the religious domain.

Commenting on this episode one Sikh ideologue, representing a viewpoint of a vocal section of the Sikh middle class, lamented: "The man (Jarnail S. Bhindranwale) who was expected to successfully lead the community made a somersault by announcing that his *jatha* (disciplined group) was to confine itself to the propagation of religion only".[1] This stray comment and other inferential evidence relating to succession of events leading to the tragic event of the storming of the Golden Temple by the Indian army in June 1984, and the colossal human tragedy after the assassination of the Prime Minister, Mrs Indira Gandhi, in November 1984, show that movements of this dimension are not the handiwork of one man alone, they are propelled by the backing of significant social forces, alongwith appropriate situational factors or objective conditions.

It is my contention that the Sikh militant movement of the early 1980s and its escalation since mid-1980s has involved diverse social groups in the Sikh society, moved by different motives depending on the social situation of these groups. For instance, the Sikh urban middle class, living as the minority segment in the Hindu-dominated urban locale—where there is competitive communalism in matters of employment, trading opportunities and education—suffers from cultural insecurity. The Bhindranwale movement for Panthic unity provided to this segment and other marginal groups a sense of belonging in a larger Sikh community brotherhood. Here is one comment of an urban middle class professional, belonging to a marginal social group about the movement launched under the patronage of Damdami Taksal's head:

> We felt very happy when we saw people with full *Khalsa* 'rehat' (a Sikh practice relating to Khalsa symbols). This gave us immense pleasure. We immensely liked their *Amrit-Prachar* (Sikh baptism).[5]

The Sikh peasantry is a dominant group in the Punjab countryside and shows little interest in cultural identity. They take Sikh identity for granted. Even in normal times, the peasantry is generally oppressed and exploited by the State machinery, especially by the police and revenue authorities. In view of the religio-political mobilisation in recent years and reaction against the inroad of perverted modernising influences—in the form of grow-rich-quick, middle class consumerist-culture,[6]—religious tradition is reasserting itself. The socio-religious network has been activised even in the rural areas. In the confrontation between the State and the militant movement, naked oppression on the peasantry has multiplied. The rapid socio-economic changes have led not only to economic hardship but to considerable social dislocation as well. It is this objective situation which has roped in the peasantry and the rural masses in general in the Sikh militant movement.

The Scheduled Castes and the marginal social groups, for example, the smaller caste groups, the 'servicing and artisan' castes, being without power have little stake in the socio-political set-up. A small section of these groups too is actively involved in militant activities. Deeper religious identification provides to them recompense for powerlessness and their low position in the hierarchic social structure.

This brief account of the ramifications of the militant movement in diverse strata of the Sikh society suggests that the movement enjoys a sizeable potential support within the Sikh society, it needs to be tackled boldly with an open mind—piecemeal measures won't do.

In order to retrieve the present tragic situation there is need for certain immediate corrective measures on the part of the State apparatus; and an all round effort by independent public figures and civil rights bodies for the involvement of militant leadership and cadre in the open democratic process, alongwith a fundamental restructuring of an over-centralised federal set-up in the country. Here is a list of corrective measures:

In order to restore its minimal credibility and a certain degree of legitimacy amongst the Punjabi people, the State must do away with certain illegal practices with immediate effect. There should be strict instructions for total end to fake encounters and torture of militant cadre. Rather they should enforce humane conditions for all detenus, preferably on a par with political detenus. For instance, men like Prof. Rajinderpal Singh Bulara should have been given Class A status in prison. The Punjab police in this case, as in so many others, resorted to inhuman torture that resulted in a tragedy.[7]

Another reprehensible practice adopted by the law enforcing authorities is that of prizes to policemen for killing the listed category of militants. This has not only bred corrupt practices in the police force, it has also converted it into a mercenary force. The sooner this degrading practice is ended the better it would for restoring some credibility to the law-enforcing force.

Condign punishment to those indicted in the November 1984 pogrom against the Sikhs in Delhi. The Congress party, for its own sake, should suspend all the party members indicted by civil rights bodies in the November 1984 tragedy.

Secondly, there is pressing need for creating suitable conditions so that militant leaders and cadres are encouraged to participate in an open democratic process. Despite difficulties at the moment, a beginning can be made by the intervention of independent public spirited figures, non-governmental bodies such as the People's Union of Civil Liberties, People's Union of Democratic Rights, and 'concerned groups', say, social scientists and social activists. A helping hand can be provided by those political parties and party leaders who still command the respect of the militants and the Akalis. This may include a select group of leaders from the Akali Dals, the Janata Dal, its splinter groups and parties, independent Leftists and leaders of Dalit and other sympathetic political groups. This buffer group of parties, concerned citizens, and public figures can play a crucial role in bringing the militants into an open democratic struggle by playing a mediating role between the government and the Akali militant groups.

In addition to resolving the political issues with the Akalis and the militants, the government may permit an open democratic movement to the militants and the Akalis to carry their "reform programme" through open peaceful means in place of crude, self-defeating hit-and-run method of enforcing "reforms". In case the reform movement is properly directed it may prove beneficial to the rural people.

It is important to state here that an open democratic struggle on the part of the militants and the Akalis opens a vista of a better future for the battered Punjabis. The very progress of dialogue on the part of the Sikh militant groups with dissident viewpoint amongst the Sikhs, the Akalis and the Punjabis in general—including the Punjabi Scheduled Castes, rural and urban Hindus—will widen their limited horizon. This will pave the way for genuine choice in place of decisions registered through captive audiences. The democratic struggle means honest dialogue with freedom from fear on the part of all concerned parties. Buffer political forces should try to ensure end to manipulation, legal subterfuges and force by the State apparatus. In the process the exclusivist Sikh nationality movement may acquire a broad-based and humane face—not very different from the urge of the Punjabi people for an identity and this may well find a niche in a decentralised federal India, maybe with some sort of autonomous status for the Punjab State.

Lastly, alongwith the leavening of the democratic process, there is an urgent need for appointing an independent federal commission to deal exhaustively with all the aspects of autonomy for the Indian States in general and a special status for Punjab which is maximally acceptable to the important segments of the Punjabi people. The commission should be *independent* in the true sense of the term. It would naturally include representatives of the Government of India, an equal contigent of independent public figures that enjoys the goodwill of the Akalis and militants in addition to that of Punjabis in general; the third segment may be those who represent the particular interests of various concerned parties. The balancing weight be assigned to the "independent public figures".

In case the government or any other group tries to manipulate the impartiality of the commission, it would lose credibility, and the militants and the Akalis may clamour for an International Commission. This would lead to a catastrophic deadlock. With requisite statesmanship on the part of the concerned parties, the problem need not be insoluble. ■

Burbulis' Visit to India

JAYASHEKAR

India and the former Soviet Union enjoyed a high degree of stable, close and friendly relations until very recently. However, in the last days of Gorbachev's period, the relationship between the two countries somewhat declined and was faced with several difficult problems largely due to political instability and economic chaos in the former Soviet Union and political uncertainities in India.

After the abortive coup in August 1991 the relations between India and the former Soviet Union took a sharp turn for the worse. They became virtually immobilised. Several factors contributed to this immobility. Soon after the coup, the Russian Government quickly established its control over the Soviet Ministry of Foreign Affairs and subsquently took it over completely. Once the control was established, the Western-oriented new policy-makers in the Ministry gave a decisive thrust to the Russian foreign policy towards the West completely ignoring the former friends and allies in the Third World. The new foreign policy-makers in the Russian Government were immature, inexperienced and had a very narrow perception of international relations. They lacked knowledge of the world in which they lived. For instance, they did not know the nature and extent of the Indo-Soviet relations and their significance to Russia. Their approach to foreign policy was based on the limited understanding of national interest. India was viewed as one of the innumerable Third World countries living on Soviet doles. They believed that relations with such a country is only burdensome. Therefore, it deserves to be neglected.

At the same time, Indian policy-making also showed its own weaknesses in dealing with the turbulent changes in the former Soviet Union. The Indian policy-makers were unable to understand the fast changes in that country. With the result, they became excessively cautious. Given the wide-ranging relations and lack of political guidance, bureaucrats in the South Block feared that any mistake made can prove to be very costly and refused to be innovative in their approach to the changing situation in the former Soviet Union. In the absence of new initiatives, the bureaucracy clung to the tradition of putting all faith in a single leader, Gorbachev. Till the end the Indian policy-makers believed that somehow Gorbachev would miraculously regain his power or the old order would be restored. Therefore, when Gorbachev was overthrown they were shocked. It took some time for the Indian policy-makers to recover from this shock and accept the realities.

The author is Professor, Centre for Soviet and East European Studies, School of International Studies, Jawaharlal Nehru University, New Delhi.

The Indian policy-makers were also deeply prejudiced against Yeltsin; much of this prejudice was gained through the Western media. They were so prejudiced as to show their inclination towards conservative leaders in the coup of August 1991. Because of such prejudices they were slow and reluctant in dealing with Yeltsin's leadership. When Yeltsin offered to sign a treaty with India during the Foreign Minister Madhavsinh Solanki's visit to Moscow, it was quietly rejected much to the chagrin of the Yeltsin Government. The attitude of the Indian policy-makers was no doubt annoying to the Yeltsin leadership. Fortunately, by January 1992, the political leaders in Russia and India realised the high stakes—in the political, economic, military and strategic spheres—involved in their relationship. This made them agree to reconstruct their relations taking into account the new realities in the two countries and in the world situation.

◆

VIEWED in this backdrop, Burbulis' visit to India in the first week of May is the most significant and positive development in the process of restructuring of India's relations with Russia, the succesor state to the former Soviet Union. Both Russia and India have attached considerable importance to Burbulis' visit. This was well reflected in the composition of the Russian delegation and the task assigned to it. The delegation consisted of several important Russian Ministers and officials such as P.O. Aven, Minister for Foreign Economic Relations, A.A. Natchaev, Minister for Economy, V.M. Loppukhine, Minister for Fuel and Energy and M.D. Malei, State Counsellor for Conversion of Defence Industry. It was led by Gennady E. Burbulis, Secretary to the Russian Government and second most important man in Yeltsin's organisation. It was the first high-level delegation from Russia to visit India after the coup of August 1991.

The main purpose of the visit of Burbulis' delegation was to give concrete shape to an agreement between the Russian President, Boris Yeltsin, and the Indian Prime Minister, P.V. Narasimha Rao, when they met at New York during the UN Summit at the end of January. The two leaders had agreed in principle to promote a high-level relationship between their countries. Specifically, Burbulis' delegation was assigned the task of providing an institutional framework for promoting trade and economic cooperation between Russia and India and giving assurances to India on continued supplies of military goods and transfer of technology, sort out some accumulated problems in the sphere of trade and aid, resolve the difficult problem of rupee-rouble exchange rate, indicate the Russian commitment to a number of agreements entered into by India with the former Soviet Union and to establish an institutional mechanism to solve problems that still remain or which may appear in future. Above all, Burbulis came to India to assure the Indian leaders that Russia attaches considerable importance to its relations with India though on the basis of "inspired pragmatism" and "new realities".

Burbulis' visit took place in the shadow of controversy concerning transfer of cryogenic engines to India for its space programme. On the eve of the visit, the United States mounted pressure on Russia to cancel the contract to transfer rockets and threatened to impose penalties on the trading organisations like the ISRO in India and Govkosmos in Russia. Burbulis spent a considerable part of his time during the visit to assure the Indian leaders and public that Russia would honour its commitment to transfer technology under the contract. However, Burbulis surprised his Indian counterparts by declaring that Russia would honour its commitments on transfer of rocket technology on the basis of neutral international expert opinion. Bringing in a third party into the picture was not the liking of India.

In spite of the firm declaration by Burbulis on supply of cryogenic engines, the Indian policy-makers were left with some nagging doubts about Russia's ability to honour its commitments under the US pressures. Russia is too dependent on the US for economic aid to overcome its economic difficulties. Its government is divided on the question of technology transfer against the wishes of the US. The dominant group in the Russian Ministry of Foreign Affairs is too eager to seek strategic partnership with the United States at any price. Under these circumstances, how far Russia will assert its independence and defy American pressures to meet its commitment to India is difficult to say.

India, at the same time, realises the Russian compulsions to honour its commitments. If Russia fails to honour its contractual obligations under the US pressure, it would become an unreliable supplier of technology and sophisticated military goods in the international market. The stakes involved are not $250 million contract with India but also a multi-billion market for Russian technology and weapons. The fear of losing a large market may force Russia to come to some arrangement with the US or assert its independence in selling technology. Ultimately, how Russia will resolve the dilemma it is faced with is difficult to predict. Meanwhile, there is likely to be a delay in the supply of cryogenic engines to India.

◆

BURBULIS' visit was important in several other ways also. This was the first time a powerful political delegation visited New Delhi from Moscow. It provided a good opportunity for India to assess the shift in the Russian foreign policy. The discussions showed that even in the changed environment Russia is keen to have high-level relations with India. India and Russia continue to have similarity of views on many international issues. They have certain shared strategic perceptions, especially in regard to South Asia, South-East Asia and Central Asia. The two countries' economic interests also coincide. Therefore, the two have considerable space in which they can work together. However, the Indian officials were not able to get a clear idea from Burbulis' delegation as to where Russia places India in its foreign policy priorities.

From the politico-strategic point of view, the important outcome of the visit was the Russian reiteration of its commitment on the Kashmir issue. More important was Burbulis' reaffirmation on continued military supplies to sustain the combat-readiness of India's armed forces. At the press conference on May 5, Burbulis declared that "we are going to develop cooperation to exclude any pause that may affect Indian armed forces". Russia showed its readiness to offer credits for purchase of military goods. But, there was no indication on whether it is willing to sell these goods at concessional prices or that credits offered are at concessional rates of interest. These are issues to be negotiated later.

During the visit, Burbulis signed a five year agreement on trade and economic cooperation. It accorded the most-favoured nation treatment to India and Russia. It provided for change and continuity in trade. The agreement stipulated that all payments and settlements shall be effected in freely convertible currencies "unless otherwise specified by any inter-governmental agreements". Thus it establishes a dual trading system between India and Russia; one on the basis of convertible currency and the other on rupee-payment.

The five year agreement on trade and economic cooperation assumes some significance in the context of total collapse of trade between India and Russia in the first quarter of 1992. The two countries also agreed to forge cooperation in science and technology. In a separate agreement they agreed to set up a group to monitor cooperation in the field of power. However, the Russian side has not indicated whether they would provide credits for power and energy industries. Therefore, until credit is made available by Russia cooperation in power sector is unlikely to take off.

An important outcome of Burbulis' visit was the agreement to establish joint commission on trade, economic and technological cooperation. In the past, India and the Soviet Union had set up 18 working groups to monitor and sort out problems in various fields of cooperation. The collapse of such institutional mechanism was mainly responsible for persistence of difficult problems in the relationship of India and Russia. Therefore, the new agreement to set up a joint commission alongwith the agreement on trade, officials believe, would help the two countries to quickly solve all problems amicably as and when they arise and smoothen the process of cooperation.

◆

THE visit of Burbulis delegation was no doubt an important step in the direction of promoting closer relations between India and Russia, but it was only a first step. The two countries cannot rest assured that their interaction will now become smooth. For, the visit has not removed all anxieties and uncertainties in Indo-Russian relations. There are still many hurdles and problems which, if they are allowed to continue, may adversely influence the development of the relations. The Russian attitude towards American pressure on India to sign the NPT is unclear. The problem of rupee-rouble exchange rate remains unresolved. Supply of military and civilian goods from Russia is faced with uncertainty in spite of assurances. The legal and institutional framework for promoting relations between India and Russia is still to be evolved.

Therefore, the two countries will have to make a concerted effort to realise the goal of elevating their relations to higher levels. Such efforts require change in attitudes towards each other and mutual trust. It also requires that the two countries clearly enunciate policies towards each other. It is necessary for Russia to define its India policy in clearer terms indicating where it places India in its foreign policy priorities. This is imperative in view of the quick changes in Russian policies under domestic and external pressures. This will help India's responses. No useful purpose would be served by merely signing agreements unless they are supported by concrete actions. Russia has to devise methods to ensure supplies by making its military and civilian enterprises to behave in accordance with the agreements it signs. This may not be easy to achieve in the present Russian situation where the government control over enterprises are weakening. But without such a step, Indo-Russian trade and economic cooperation cannot grow.

Russia must also try to protect Indo-Russian relations from external influences. This it can do only by asserting its national interests. Switching over to convertible currency trade under the new agreement may bring down Indo-Russian trade during the period of adjustment. Therefore, it is necessary for the two countries to protect the core of their trade relations through counter-trade and prolonging rupee payment arrangement.

Even when all these things are done, Indo-Russian relations will still be faced with certain uncertainties arising from the fast changes in Russia. In Russia, this is a period of transition. During this period there is bound to be abrupt political changes and economic dislocations. Their impact will be felt by Indo-Russian relations. The impact can be minimised by frequent exchanges at high political levels and evolving appropriate institutions. These would require time. In the meantime, the interaction between India and Russia may proceed in a jerky fashion. ■

Foreign Policy Changes

Critics Unfair to the Government

P.S. JAYARAMU

A discussion on our foreign policy u as initiated in Mainstream *on July 6, 1991 and it was enriched by contributions from Partha Ghosh, R.C. Dutt, Anil Rajimwale and Ajay K. Mehra. Here are two more contributions.* — Editor

The year 1991 was truly historic, worthy of being remembered for the most undreamt of changes around us. The passing of the Cold War into the pages of history, the disintegration of the once mighty Soviet Union and the emergence of the United States as the dominant power if not as heralding the dawn of the unipolar world are too important developments to be taken lightly. As far as India is concerned, the developments were, as Prime Minister Narasimha Rao said in the Lok Sabha, mind-boggling necessitating a thorough review of the way the country was carrying out its foreign policy. What follows is a review of the changes effected by the government and the reactions of the critics to them.

To take up first the question of the official Indian responses to the changes in the former Soviet Union and the management of India's national interests in the new set-up, that is, the Commonwealth of Independent States, we need to be truly objective. Though the government had in a way mishandled the situation specially in the wake of the failed coup in August 1991, it was quick to overcome its diplomatic mistakes by fine-tuning its policy to the new power (and personality) realities in the former Soviet Union. That the government was able to get over the so-called sentimentality vis-a-vis its relations with the Central authority and Gorbachev is seen by its realisation of the need for not only recognising Boris Yelstin, but also the New Commonwealth. Earlier to that, the leadership also took the right step of recognising the Baltic States which declared themselves independent. Yeltsin was officially invited to visit India which might in all probability take place during the later part of this year. The government also took the right step of upgrading our diplomatic offices in the Baltic republics and the former republics of Ukraine and Kazakhstan. And during the visit of our Foreign Secretary, J.N. Dikshit, to Moscow the two countries are reported to have finalised the draft of a new political treaty incorporating their willingness to retain certain elements of the erstwhile Indo-Soviet Treaty and more importantly the need for recognising the new power realities.

The author is a Reader in Political Science, University of Bangalore.

The Memoranda of Understanding on Trade and Supplies of Defence and Power generation equipment has allowed for flexibility to meet the changes in the two countries' economies. Though issues like the continuity or otherwise of the rupee-rouble trade do not seem to have been resolved, the visit and the Memoranda of Understanding signifies that at the official level, efforts are being made to work out arrangements which would be to the advantage of both the parties. The prevailing and the foreseeable economic situation in Russia might well mean a certain amount of uncertainty and a possible disadvantage to India compared to the earlier years. But even the worst critics cannot deny that the government is alive to the new realities and is trying to salvage the situation to the extent possible. Simply put, the government cannot be accused of inaction as some of the analysts have been arguing. It is, however, imperative that the government maintains a steady dialogue with its Russian counterpart, as Russia and the other members of the Commonwealth are likely to be bogged down by the sheer weight of their domestic problems and quite understandably look to the

United States and Europe to help them tide over their problems.

◆

TWO other important issues for which the government has come in for unfair criticism concern its voting with the rest of the Security Council members of the United Nations on the question of terrorism by Libya and the cancellation of the resolution of Zionism.

On the Libyan issue it needs to be noted that the government was swayed not by the Western powers, but largely by considerations of its national interest. The Libyan leadership had caused great harm to India by including Kashmir alongwith the many unresolved issues in its resolution before the U N Council. Though the Libyan authorities were quick to admit their mistake and withdrew Kashmir from the resolution, the Narasimha Rao Government wanted to see the issue in the larger perspective of India's long-standing opposition to terrorism. Also, even an abstention by India during the voting in the UN Security Council would have conveyed wrong signals not only within the country but outside regarding the enormous damage caused by terrorism in Punjab and Jammu and Kashmir. Inaction by India would have weakened India's pleas to the international community, specially the United States and Britain, to denounce Pakistan for its brazen support to terrorism in India. Reportedly, Prime Minister Rao consulted several retired Foreign Secretaries like S.K.Singh and Muchkund Dubey and the former Minister of State for External Affairs, K. Natwar Singh, and all of them endorsed the consensus reached by the government on the issue.

Likewise, on the question of our voting for the cancellation of the age-old resolution on Zionism, the government has been unfairly criticised as yielding to the pressures of the US Government. As Prime Minister Narasimha Rao said, India wanted to see the entire issue in the context of the new realities in the Middle East, specially the ongoing face-to face talks between the Palestinians and the Israelis. Even the moderates among the Palestinians have stopped referring to Israel as a Zionist state and are imbued by a strong sense of realism in their attitudes and the negotiations with the Israelis over the question of finding a lasting solution to the Palestinian problem. A negative vote, or even an abstention by India over the Zionism issue, would have conveyed wrong signals in Western capitals that Indian foreign policy in the post-Cold War era was still characterised by immobilism and time-worn prejudices.

To see the Indian voting as yielding to the pressures of the United States is to misread (and even insult) the capacity of the government to adjust its policies to the fast changing international and regional environment. If the critics, be they in the press or in the Opposition parties, have any serious consideration for India's national interests they should help in the evolution of a bi-partisan foreign policy on the need for re-examining our relations with Israel without diluting our commitment to the cause of an independent Palestine. India should be able to upgrade its relationship with Israel to the level of ambassadorial relations, sooner than later. Even Yasser Arafat is on record having said (during his last visit to India) that an upgradation of India's ties with Israel will not harm the Palestinian cause. Interestingly, his pleas for Indian participation in the West Asia Peace process is, whether we like it or not, linked to how India shapes its policy towards Israel, and more so whether Israel would have no objections to India's being included in the peace process. Needless to say, the two are closely linked to one another.

India has vital stakes in West Asia geostrategically and, as the American Senator Pressler recently warned, there is a real danger of nuclear weapons strewn across the various republics of the former Soviet Union finding their way into this troublesome region. In a situation like the one feared, it may be in India's interest to take Israel seriously, even to take care of our security interests. The challenge lies in how the Indian leaders would accomplish this task without hurting the feelings of the Arab states.

◆

AS regards our growing relations with the United States, and the attitude of the critics towards it, we need to be clear in our minds that we need not oppose the United States simply for the sake of opposition. The post-Cold War and the post-Soviet Union developments have led to a definite change in the American attitude and policy towards India. They are no longer looking at India as they did during the four decades of Cold War. Pakistan has clearly outlived its strategic utility to the United States. The recent American statement that

Pakistan has nuclear weapons at its disposal suggests to the possible deterioration of the US-Pakistan relations. Our leadership should be able to introduce a strong politico-strategic context to Indo-US relations with the objective of not only strengthening the bilateral relations but also more specifically of using the American connection against any possible security threats from Pakistan. That the government of P.V.Narasimha Rao is clearly heading in such a direction is evident from the high-level negotiations going on beween our Defence Ministry officials and the US officials in this regard.

During the Cold War era our leaders used the Soviet connection to buttress our security vis-a-vis Pakistan. Now in the post-Cold War era coupled with the collapse of the Soviet Union, if they are using (and strenghtening) the American connection vis-a-vis security challenges from Pakistan, we should be appreciative of their efforts, instead of indulging in debates about the demise of non-alignment and so forth.

In sum, it seems clear that while the government is making the right attempts to bring about the necessary reorientations and adjustments in foreign policy in the post-Cold War era, the academic community and the media, with some notable exceptions, have still remained prisoners of the old mind-set and are thus unfairly critical of the government. Let us hope they too will realise the need for change and mould public opinion in the right direction. ■

India's Foreign Policy

Responding to Global Changes

SUMIT CHAKRAVARTTY

The remarkable transformation of the global scenario since the second half of 1989 is so obvious that it does not require any elaboration. Actually it was the 'new thinking' of the erstwhile Soviet President, Mikhail Gorbachev, which was instrumental in effecting the changes that resulted in the collapse of the East European regimes patterned after the Stalinist legacy of the former USSR before the breathtaking disintegration of the Soviet Union itself. However, these visible signposts of fundamental changes in international relations characterising the complete removal from the world affairs of one pole of the bibolar global structure of yesteryears must not make us blind to the basic reality of the present-day world: the end of the Cold War which had threatened mankind with nuclear annihilation only a decade ago.

If one dispassionately analyses the world situation today one would reach the definite conclusion that with the end of the Cold War the overall global environment has improved in terms of reinforcing peace and security across the planet. However, what is complicating matters is the subjective view of the Western superpower, the US, that the end of the Cold War signifies its victory in that exercise. It is doubtless emboldened by the disintegration of the USSR alongside the collapse of statist socialism in Eastern Europe as well as the former Soviet Union. Hence its feverish shortsighted approach of imposing its dictat everywhere by pressuring all states and in particular the weak and vulnerable developing countries of the Third World. This attitude, born out of political myopia which nurtures Washington's belief that it is the real power in today's "unipolar" world, gives rise to the impression in the Third World that the phenomenal changes in today's global scenario are to the detriment of the interests of the developing nations in general.

One of the greatest visionaries of the twentieth century, Mikhail Gorbachev, referred to this shortsightedness in the course of his famous speech at Westminster College, Fulton, Missouri on May 6, 1992. If Sir Winston Churchill's speech at the same spot 46 years ago constituted the launching of the Cold War, Gorbachev's address was an endeavour to analyse the charateristics of the brave new world unveiled as a result of the demise of the Cold War. He said: "In pushing forward to a new civilisation, we should under no circumstances again make the intellectual and consequently the political error of interpreting victory in the Cold War narrowly as a victory for oneself, one's own way of life, one's own values and merits." He underscored that the current changes signify the "incipient substitution of one paradigm of civilisation by another", and concluded that "this existing and intensifying integration of the world opens up a broad spectrum of favourable opportunities for the future of mankind".

Many critics of India's foreign policy are of the considered opinion that the country has been marginalised on the global plane in the wake of the transformation of the international scene. These critics need to comprehend the significance of the call given by Gorbachev, in the same Fulton speech on May 6, to include that "great country India" among the permanent members of the UN Security Council. This is indeed a tribute to the foreign policy pursued by South Block. This policy has, by and large, retained the original perspective and thrust imparted by Jawaharlal Nehru, another outstanding visionary of the twentieth century.

The cardinal features of this policy, based on Nehru's pronouncements, are: (a) friendship and cooperation with all states, big or small; (b) no alignment with any military pact or alliance as an instrument of peace and reflecting independence of judgement; and (c) not remaining neutral when peace is endangered, freedom menaced, justice threatened or aggression committed. The importance of this policy in today's world situation cannot be overestimated since the Western superpower, in stark contrast to Gorbachev's objective long-term assessment, is adopting a myopic approach and exerting pressures on countries like India through such unilateral actions as the one under Special 301 and the threat of penalty in case of India's acquistion of cryogenic rocket engines and related technology from Russia.

At the same time while preserving, the original strategy our foreign policy must respond to the changing environment bereft of the Cold War confrontation. That New Delhi has already moved in that direction is no secret.Hence its decisions to upgrade diplomatic ties with Israel; build closer relations with countries of the new united Europe with special reference to Germany; enhance interaction at all levels with the US and carve out new avenues of cooperation with Japan. But these must not be taken to the detriment of our national interests–primarily our traditional ties with the Arab world and our self-dignity as a Third World state. The fast changing developments must take into account both the end of the Cold War and the exceedingly overbearing attitude of the US Administration in the new situation characterised not only by the disappearance of the USSR but also the "success" of the Pentagon against Iraq in the Gulf war (although the real success of liquidating Saddam Hussain, one of the major objectives of the US authorities, still remains a far cry).

Similarly, we are duty-bound to develop relations of goodwill with the interim *mujahideen* administration in Kabul headed by Prof Sibgatollah Mojaddidi whose Indian connection is not peripheral. But for this neither should any quarter be given to the fundamentalists nor should the links with the secular elements (like the erstwhile Afghan President, Dr. Najibullah) whom India had all along backed, be severed.

◆

THE changed situation also underlines that our responses should be different from those in the past on such issues as the nuclear non-proliferation treaty (NPT). Guided by our ardent desire to ensure full and complete disarmanent, we were the first to expose and oppose the discrimination inherent in the call for horizontal non-proliferation of nuclear weapons when vertical non-proliferation was not being effected as a token of generosity towards the nuclear haves, that is, those fortunate few who had gained the status of nuclear powers. But now that tangible steps to eliminate the strategic nuclear armaments have made the element of discrimination in the NPT regime less pronounced than before, our attitude to the NPT should undergo some flexibility. While there is no question of India abandoning the nuclear option, there is also no reason why we should fight shy of discussing all proposals on the subject, including the Pakistani proposal for a five power meet for a regional NPT in South Asia, with all--that is, Pakistan, China and Russia in particular—and not just with the US. Our flexibility on this count would also prevent our adversaries from misinterpreting our position.

What is imperative is that our foreign policy should be geared such as to enable us to play a more active role as a Third World leader within the NAM, G-77 and G-15 for ensuring a better deal for the developing states. Those who underscore the "irrelevance" of the NAM following the burial of the Cold War must realise that the movement has always played a crucial role in building Third World solidarity which is more vital today than in the Cold War days. Of late, economic diplomacy has found prominence in Indian foreign policy.

This must not be isolated from the overall approach of Third World unity for a new international economic order.

Simultaneously, we must dynamically evolve magnanimous postures towards our South Asian neighbours striking an absolutely new path so as to help in the early resolution of outstanding disputes hanging fire for long and assist the forum of the South Asian Association of Regional Cooperation (SAARC) acquire an economic dimension as the ASEAN in South-East Asia based on mutually beneficial economic interaction among the constituent members so essential in the light of the deteriorating economic climate punctuated by the growing protectionist barriers in the West. This scenario also calls for closer Indian cooperation with China overcoming past prejudice, and obstacles like the persisting border problem. India's ties with the constituent units of the Commonwealth of Independent States, notably the Central Asian republics, too must be strengthened under the compulsions of the prevailing reality.

As the architect of modern India and the proponent of independent India's foreign policy, Jawaharlal Nehru pointed out in a speech at the US House of Representatives and the Senate on October 13, 1949 that the "objectives of our foreign policy are the preservation of world peace and enlargement of human freedom". These objectives remain as valid today as they were 43 years ago.

Indeed, Nehru had the capacity to foresee the shape of things to come. Speaking at Beijing on October 23, 1954 he predicted: "There can be no East and West ranged against each other in the future. There could be only one world devoting itself in friendly cooperation between the different parts to the advancement of humanity." This is precisely what has happened today. With such a perspective the foreign policy fashioned by the first Prime Minister of independent India has not been of temporary value.

Within the parameters of the holistic approach of such a durable foreign policy tested by time can measures be worked out in tune with the changes in the world arena. But such measures must not undermine, for short-term gains, our national interests or the principles that guided India's foreign policy in the last 45 years since independence, the principles of peace, freedom and democracy which have been vested with new meaning and content in the present global context as we strive today for a better and brighter tomorrow. ■

The Book Review Vol XVI No 2

The Man Who Know Infinity – By Robert Kanigel
"While there is an element of mystery, there is nowhere a feeling that Ramanuja was some unexpected strange being, who had come suddenly from out of the blue."

– Raja Ramanna

Andrews As Thinker – By Daniel O'Connor
"It is one of the merits of O'Connor's study that he focuses on Andrew's life and ideas before he became intimate with Tagore and Gandhi."

– Ramachandra Guha

The Analyst and the Mystic – Sudhir Kakar
"Ramakrishna's language lends itself from time to time to the favoured sexual themes of the analyst. It may be grist to the analyst's mill, but sexual analogies have no place in the context of his journeys into elevated, non-dualistic awareness."

– Radha Burnier

Beastly Tales From Here and There – By Vikram Seth
"Twice upon a time there was a book with two kinds of lovable lines, lines to hum and lines to look at and that book is this. And if poetry is that which makes your toenails twinkle, that poetry is this."

– H.Y. Sharada Prasad

Freedom From Fear and Other Writings – By Aung San Suu Kyi
"Written with exceptional objectivity in an unadorned style, crystalline and clear, these essays throw much light on the social, cultural and political background of Burma's modern history and also, obliquely, on the inner workings of the mind of a reluctant heroine.

– K.R. Narayanan

In Gandhiji's Mirror – By Pyarelal and Sushila Nayar
"These sketches contain a rich fare for the general reader who wants to get an intimate glimpse of the Mahatma's inner circle. Pyarelal's proximity to the subjects of these short biographies was his strength; it was also his weakness."

– B.R Nanda

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea. The country produces from the ordinary to the best teas, yet the Indian consumer does not get to drink the best. That is why APEEJAY, which is the 4th largest tea producer in the country, has decided to introduce its selectively picked high quality pure Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens. Make it the way you normally make your tea and it will give you a superb flavour and liquor. Drink this tea for 3 months and you will never want your old brand again.

Guilty at the Top

So, the fat is at last in the fire. The concern over the blatant speculation in the share-market which has shaken the country had to come over our Finance Minister only in driblets and that too after tremendous pressure in Parliament.

Our Finance Minister did know that the Bombay Stock Exchange Sensex began to shoot up instantly with his Budget, to the great applause of the brokers and their colluding bankers. That was the time when the Chairman of the National Housing Bank, Pherwani, had hailed that "the present boom in the market is the beginning of an economic miracle". It was the same Pherwani who earlier had to quit the Unit Trust stewardship because of his record of irregularities, to put it mildly, but was brought back by the present dispensation to head the National Housing Bank, whose corrupt practices have now come to light, and Pherwani had to be sacked. In a few days, the poor thing collapsed and died, overburdened he obviously was with the dimension of the scandal.

Our Finance Minister is made of sterner stuff. He was excited at having liberated the stock market and exclaimed that "the market had to be freed from too much policing and a daddy-knows-best attitude". So, he proudly took the credit for having liberated the market from "too much policing". He seemed to take the credit that the stock market was looking up because of his economic reforms, knowing fully well that this was largely the outcome of unrestrained speculation in which the nationalised banks under the government's control actively colluded. But the Finance Minister seemed to be innocent of that great deception.

On May 4, the Finance Minister coyly said: "I do not franky know what determines the share prices. I also do not lose my sleep because of the fluctuations in the market." Of course, he did not lose his sleep even when Harshad Mehta was hitting the headlines as the big bull of the scam. He turned down the demand for an instant CBI probe, saying that the Reserve Bank was good enough for the job. Presumably, he had hopes of saving friends in high places.

Within two days, the stink rose to high heavens, as it became known that the National Housing Bank was involved neck-deep in the scandal. That led to the downfall and end of Pherwani. By May 11, the Finance Minister had no option but to let the CBI join the probe. What is interesting is that even at that stage, Manmohan Singh had a word of praise for the Chairman of the State Bank of India, who is now forced to step down for his involvement in the

scandal. The Finance Minister tried to give the impression that there was really no scandal but just "a systems failure"—as he put it.

The Members of Parliament wanted a Joint Parliamentary Committee probe, but the Finance Minister was ready with his reply—no, such a probe would come in the way of the CBI enquiry. He defended the Governor of the Reserve Bank with all his might. And this he repeated right uptil the eve of the arrival of the CBI report, claiming that the RBI Governor enjoyed his confidence. Obviously.

On June 2, the bubble burst. The interim report of the Jankiraman Committee—the RBI panel to which the CBI had been included—found that there was fraud exceeding Rs 3000 crores, and open collusion between bankers and brokers. This is just the tip of the iceberg, as this is only the interim report.

Since then has followed arrests of some of those directly involved like Harshad Mehta and his gang apart from some of the culprits from the State Bank of India and the National Housing Bank—and their assets attached. Maybe a few more will be nabbed in the process. And it is quite possible that the probe panel documents would bring to light the dirty nexus between some political figures and the stock exchange brokers.

Many more skeletons are tumbling out of the cupboard. For instance, it is now disclosed that in the last six months a huge amount of over Rs 10,000 crores raised by public sector undertakings through bonds and debentures had been diverted to manipulate the capital market by a handful of brokers, through the much-publicised portfolio management scheme. The brokers and some of the top banks including some foreign ones have made good money.

◆

WHAT was the role of the Reserve Bank in this shocking scandal? The Reserve Bank is supposed to be the monitor-cum-guardian of the banking system in the country. It is not that the Reserve Bank bosses were taken unawares by this racket. It is now disclosed that the Reserve Bank Deputy Governor, Amitava Ghosh, had sent a circular as early as July 26, 1991 in which he had alerted the Chairmen of all banks about certain irregular transactions "which they should not be undertaking". And yet there was no stopping such reckless and illegal acts committed by a direct subsidiary of the RBI itself, namely, the National Housing Bank apart from the other banks, big and small. Even when the Sensex figures were shooting up, the Reserve Bank bosses appeared to be unconcerned.

It is important to pinpoint the responsibility for the Reserve Bank's lapses on its Governor, Venkitaramanan. With a record by no means overloaded with integrity, he got the plum post under the Manmohan dispensation, as he had already earned his reputation as a high-level quick-fixer when he was the Finance Secretary. Venkitaramanan seemed to have turned the Nelson's eye to the dirty dealings under his very nose. Would it not be proper to demand—as it has already been done by a number of political leaders—that he should have stepped down, or been sent off on leave, during the course of the investigation? There was good reason why the media reported on the possibility of Venkitaramanan's resignation which Manmohan Singh promptly scotched—making it all the more apparent that the Finance Minister is yet holding out the fond of hope of saving his trusted RBI Governor.

And what about Dr Manmohan Singh himself? He cannot get away by his prattle of a mere "systems failure". Our parliamentary system has no doubt many infirmities. But even within its constraints and shortcomings, accountability is still a watchword. More than thirty years ago, there was the scandal of a deal that a businessman of dubious character pulled off with the LIC; for that a probe was ordered by the government and on the ground that the Finance Minister was found to have orally winked at it he quit his post, though it was known that he personally made no money out of it. Times have changed, and certainly Manmohan Singh would vehemently disown any resemblance of his ethical standards with those of T.T. Krishnamachari. TTK had rebuffed a World Bank diktat, Manmohan Singh has been slavishly carrying out a whole lot of them. And yet, there is good ground for a parliamentary probe into this scandal as has been demanded and the government would be well advised to order it if it does not want to lower itself in the public eye.

Dr Manmohan Singh can hardly claim that he had not been warned. The entire parliamentary proceedings of the last two months bear out the warnings of the scam scandal he had received from all sections of both Houses of Parliament. Even some of his party members wanted him to quit office on this count. Today as thousands of innocent small-income share-holders have lost their savings, would not this at least disturb the Finance Minister's sleep? One can leave this to be sorted out by him with his conscience.

But the parliamentary system insists on ministerial accountability. Can the Narasimha Rao Government afford to flout public opinion on this score? The coming weeks will decide.

June 9 *N.C.*

Is Non-alignment Dead?

N.C.

The demise of the non-aligned movement is the theme of many learned discourses nowadays. One comes across commentators advising the Prime Minister of India to perform the funeral rites of the NAM since it has already expired and only needs to be ceremonially cremated.

This latest fashion in foreign-affairs cliché is based on the argument that the NAM was the product of the Cold War and since the Cold War has blown over and the Soviet Union has ceased to exist, it would be prudent to be in the bandwagon of the supreme superpower of the day, that is, the United States of America. In short, line up behind Washington. This thesis is of course presented with a lot of garnishing and claims to be pragmatic wisdom.

No doubt, the world has vastly changed and the two formidable military alliances, locked in Cold-War confrontation, have disappeared. In fact long before the formal dissolution of the military alliances, many of those who had joined them were coming over to the NAM. Pakistan was a case in point. Obviously, when the Cold War is over, the NAM's original charter has become out of date.

At the same time, it is worth recalling the real motive force behind the non-aligned movement. Immediately after the Second World War, when the two military alliances—the NATO and the Warsaw Pact—had bagged a number of countries to join them, those which stood out and refused to be aligned to the military blocs, were known as the non-aligned. In fact, the NAM as a movement came to be formed more than a decade after India had openly stood out against joining either of the two military alliances led by Washington and Moscow. In those early days, it was as much out of fashion for a country to demarcate itself from those two giant military alliances as it is today to refuse to kowtow to the only superpower of the day that the USA claims to be.

It was not easy in those days for the leaders of a newly-independent country like India, bereft of resources, to stand out of the power-bloc game. In those days too, globalisation was taken to mean signing up with one or the other of the two military alliances and not left out of the company of the high and mighty in international politics. Many a statesman, scholar and media commentator of those days attacked or made fun of India staying away from bloc politics. John Foster Dulles branded non-alignment as sin because it refused to join the crusade against the evil of communism. In those early days, Moscow also was suspicious of non-alignment because with the full blast of the Cold War, the polarisation was so sharp that the maxim was: those who are not with us, must be counted as being against us.

Non-alignment did not have a christening ceremony. As is well-known, the term itself came into usage almost by chance. Nehru and Krishna Menon had to take a lot of pains to clarify that non-alignment was not neutrality, but an assertion of independence in foreign affairs—the refusal to be herded into one military alliance or the other. This independence of action has throughout been the essence of non-alignment. A non-aligned country would exercise its own judgement—and not be guided by nor tied down to the compulsion of any particular military bloc. It might side with the stand of one or the other of the blocs on a specific issue, as guided by its own independent judgement. This principle remains valid today—perhaps more emphatically—when instead of two superpowers to choose from, one superpower is claiming to impose its order on the entire world.

Apart from the principle, what is the reality of today in which that principle has to be applied? In the new world after the Cold War, in this brief spell of just about a year, the US diktat—political, military and economic—is sought to be enforced over the rest of the world. The type of internal political system a country must have and the pattern of economy it must follow—these traits of a sovereign state are being dictated to by the West, mainly by the US. The United Nations, for all practical purposes, is virtually sought to be transformed into a rubber-stamp of the US Administration. The nuclear weapon has to be in effect a monopoly of Washington: it may be kept by a few others among its allies only by its consent, and on no other account. If independence of stand in international affairs was in the past the guiding principle of non-alignment in a world dominated by two giant military alliances, doesn't it become more relevant today in a world in which one supreme power is trying to establish its hegemony?

The design of the world economy that is sought to be imposed also makes it abundantly clear that a handful of countries have been trying to control and corner all the resources of the technological era. While the developing nations are being ordered to open up their economies for the more powerful to penetrate, they themselves are putting up protection walls, debarring the entry of the others. This is the message of the Dunkel Draft and Carla Hills' *fatwas*

All this makes it abundantly clear that while the East-West confrontation has disappeared, a more fearsome confrontation is fast emerging between the affluent North and the impoverished South. This is spreading to every field, as could be seen in the tension that marks the current Earth Summit at Rio. While technology is fast getting a global dimension, the world's wealth and power are sought to be grabbed by a handful of powers with Washington in the lead.

In such a grim scenario, the relevance of non-alignment becomes all the more emphatic. The countries which cherish to retain their right to independence, have to stand together here and now. It is extremely significant that China which twenty years ago used to look down upon the NAM with condescension, has today formally joined it, and has been stressing the urgency of the developing countries standing together, lest they would be bullied by the developed group.

No doubt there has to be serious in-depth thinking as to how the South—where the overwhelming majority of humankind lives and where the natural wealth and the renewable sources of energy are in abundance—should design its platform. The emergence of G-15, for instance, is no accident. It is the response of an urgent necessity.

If freedom, in the ultimate analysis, is the recognition of a necessity, then there is no question of the need for the South to build up a sustained, organised movement. No matter whatever name such as movement gives unto itself the message that the non-aligned conveyed, remains as valid as it was four decades ago. All the claptrap of non-alignment being dead is but the spit and splutter of the ideology of the lords and masters of the North. ■

VIEW FROM THE OTHER SIDE

India-Pakistan in Perspective

NASIM ZEHRA

India's decision to expel two Pakistani diplomats in response to the Mittal episode came as no surprise. This despite Nawaz Sharif calling up Prime Minister Narasimha Rao within hours after the incident and stressing upon the need to work out ways to avoid ugly diplomatic events.

The overreaction can perhaps be better understood in the perspective of New Delhi's attitude towards the Foreign Secretaries' talks.

India has been less than enthusiastic about these talks which Islamabad views as a "negotiating forum". India, on the other hand, finds itself hopelessly cornered at the negotiating table, on the question of Kashmir.

Also, on most other bilateral problems South Block must know that its position is legally untenable. Besides Kashmir, disagreements exist over the Siachen Glacier, the Wuller Barrage, the Sir Creek and the Jinnah House. For instance, over the Siachen Glacier, where the Indian army moved into the disputed territory in April 1984, the June 1989 Indo-Pak Agreement called for redeployment of troops at the pre-1984 boundaries. Now in 1992 instead of military officers meeting to merely decide where to redeploy, Indians claim "technical talks have broken down and there is need to infuse new political blood".

Similarly, in the case of the Jinnah House, New Delhi went back on its earlier commitment. In 1978 the present Prime Minister Narasimha Rao personally announced in the Lok Sabha, India's decision to lease Jinnah House to Pakistan at a monthly rent of Rs 37,000. Now, 14 years later, the House in Bombay is decaying. New Delhi has not only backed off from its 1978 commitment but has even disallowed the Quaid-i-Azam's grandson from appointing a gardener to look after his family house!

New Delhi is under pressure from the Maharashtra Lok Sabha members of Shiv Sena, which claims leasing Jinnah House to Pakistan will make it become "a symbol of Pakistan". On the Wuller Barrage issue too India has gone ahead with its planning and construction in direct violation of the 1964 Indus Water Treaty.

Against this backdrop, New Delhi would naturally vote against substantive dialogue with Islamabad. Instead, it would rather engage in aggressive propaganda against Islamabad invoking the "terrorist" and the "Islamic fundamentalist" themes. This enables India to feed into the Western paranoia of "terrorism" and "Islamic fundamentalism", sideline the question of Kashmiri self-determination and deflect world attention from gross violation of human rights in the Valley.

Undoubtedly, the Mittal incident does not qualitatively change the texture of Indo-Pak relations. It merely reinforces the deeper problems, listed above, that have haunted the Indo-Pak relationship. Ultimately only enlightened political forces in both countries can deal with these problems. And given the nature of bilateral problems the onus is more on Indian politicians.

In Indian polity today, extremist political forces are steering the discourse towards a self-destructive path. On issues like Kashmir, a debate is being conducted along religious and cultural lines. At a recent New Delhi seminar on the Kashmir crisis, BJP's Murli Manohar Joshi, in the name of the "ancient Indian civilisation", advocated exercising of "hard options" including "full scale army action against the Pakistani aided terrorists in Kashmir".

The Shape of Things to Come

ACHIN VANAIK

Never has the need for a socialist alternative to capitalism been greater, never have the prospects for it been bleaker.

With capitalism at this point in history globally triumphant, warnings about the pyrrhic nature of its victory must seem unduly alarmist if not absurd. But the belief that capitalism is the answer to the development needs of the Second and Third Worlds is based not on its positive achievements but on the negative failures of its principal rival. It is not the success of South Korean capitalism that has made the notion of capitalism as the guaranteed route to prosperity so popular.

Precisely because the notion has no solid foundations of its own that it will not survive disillusionment. The logic of profit-seeking private accumulation of capital cannot resolve the twin dilemmas of our times—growing polarisation of wealth, prosperity and control over resources and deepening ecological degradation. If the 75-year history of actually existing communism has a way of reducing the range of viable excuses for its performance, does not the 150-year or more history of actually existing industrial capitalism have a way of doing the same? How long will people buy the excuse that the poverty of the poorer two-thirds of the globe or of its population is its own fault, remediable in principle via neo-liberal economic solutions?

If it is clear that communism cannot match the productive efficiency of capitalism in its most advanced outposts, is it not also clear that the *sine qua non* of capitalist prosperity is its confinement to a permanent minority, even if that minority can within limits expand.

Between 1965 and 1990 the difference between living standards in Europe on one hand and India and China on the other rose from 40-to-1 to 70-to-1. In the eighties 800 million people (more than the combined population of the USA, EEC and Japan) became destitutes, while one out of three children go hungry. If every human being had an equal share of food at a diet having less than half the US consumption of animal-based calories, and there was no redistribution of any other goods whatsoever, the globe could not sustain its current population of five billion. With a totally vegetarian diet and equal food distribution, the upper limit for the world's sustainable population is six billion, a figure that should be reached by the year 2000. If the current US food production (and nothing else) were to be generalised, we would have to kill off half the world's population. One has not so far even mentioned the ecological devastation that would accompany such efforts at generalising the OECD living standards throughout the world—depleting ozone layer, decimated forests, accumulating nuclear waste, gene pools/myriad species dying out at an accelerating rate, etc.

The author is a Senior Fellow, Nehru Memorial Museum and Library, New Delhi

Forget the fantasies of our neo-liberals who think that if only the tiger of Indian capitalism is unchained can we enter an era of unprecedented mass prosperity for all. China, the boom economy of the eighties, can never hope to emulate the OECD no matter how capitalist it becomes. The idea that India can follow the same route when it has not even equalled the level of mass welfarism that China achieved precisely because it did not pursue for decades a capitalist pattern of growth, is an even more dangerous self-delusion.

The possiblity of a decent, humane existence for all Indians is real enough and achievable; the possibility of India joining the ranks of the OECD countries is zero.

What the new economic policy will do then is polarise Indian society as never before. Two kinds of border patrols will be set up: one organised on a global scale with the US as the head; the other kind located within the Third World countries. The purpose of both kinds will be the same—to protect the Haves and what they have from the Have-nots and their desperations. Since the two most important issues of the next half century will be ecology and population growth we can fully expect the elaboration of ruthless new policies which will aim to keep control of the world's resources in the hands of the well-off across and within countries. The world's population has doubled in the last fifty years. It will come close to doubling in the next 50 years.

Despite the fact that poverty eradication is well known to be the best form of birth control and precisely because poverty eradication on the scale required will not come about, the pressure for utterly callous forms of birth contol/prevention will grow enormously. Today, the Morris King type of 'solution' of not giving primary health care to infants of poor families in the Third World is still seen as obscene. It will seem less so in the coming years. It and similar policies will be advocated not only by an OECD bloc determined not to give up in any significant way its levels of prosperity, it will also be advocated by the better off in the poor countries themselves. Yes, they will say, poverty

Office of Laser

D. BANDYOPADHYAY

I reached Delhi early in the morning from Mussoorie. My return flight was booked on the next morning. I had the whole day in Delhi.

Lazily, I started flipping through my old notebook names and telephone numbers of my friends in Delhi. I decided to avoid those friends of mine who were lodged in the mighty Bhavans and who were engaged in the arduous and tortuous task of dismantling the bureaucratic apparatus under the new liberalisation policy in a manner that after total debureaucratisation the bureaucracy remained as powerful as before. A tricky job indeed, under any regime. Hence, they should be allowed to pursue their noble objective with single-minded devotion unhindered by any friend or foe.

I chose a friend who was the head of a peripheral autonomous organisation and whose office was located near a famous canteen which served delectable South Indian delicacies during the lunch hour. I rang him up in his residence. His response was prompt and warm. He agreed to spend sometime with me late in the forenoon. I was delighted because that would be nearer the lunch time. Knowing the ways about in Delhi, I requested him to inform his reception desk.

Obviously, the message had reached. Instead of the frown and the frozen stare, I found a flicker of friendly smile when I announced my name to the receptionist. He promptly pushed the register towards me to fill in the empty columns to enable him to write out the entry pass. This was the usual and often irritating ritual a casual visitor had to undergo in every office in Delhi. This register, however, looked slightly unfamiliar. I could not make out whether the office was using an old and discarded register under the present economy drive, or it adopted an altered format to proclaim its autonomy. After the name the next column in the ordinary register was for designation and address. For a retired officer it was easy to fill up this column by putting 'ex' before the last post held. I noticed that it always impressed the receptionist to make out the pass quickly. But in this register in the relevant column it wanted to know the occupation. It put me in a spot. I did not have any occupation after my retirement. I could have put in anything, but being an ex-civil servant of three and a half decades' vintage I could not knowingly write anything incorrect in a government document. Truthfully I recorded "enjoyment of leisure". Receptionists in Delhi were trained to read from the wrong side. So as soon I completed my writing he asked me under which Ministry "leisure" would come. I was not prepared for this question. But as I enjoyed my leisure mostly in my home, I involuntarily mumbled: 'home'. I thought he did not hear it. But he not only heard it, he advised me to write after 'leisure' Ministry of Home Affairs.

The author is a former Executive Director, Asian Development Bank and now the Chairman, Indian Institute of Management, Calcutta.

That put me in a fix. I knew that truthfulness often created problems. But I did not anticipate that my impulse to tell the truth would put me in this predicament. Though he misunderstood me, I could not retract. If I did so, he would have formed a bad impression about me and also about his boss who kept such lowly company. I could not let that happen, come what may.

I started thinking furiously to find an escape route from this impasse. I had never worked under the Home Ministry. Hence, I could not directly mention the MHA anywhere. Since my enjoyment of leisure depended at least partly on the pension I received, as a pensioner, I thought, I could claim a dubious and tenuous relationship with the Department of Personnel, Public Grievance and Pension.

This Department had the unique reputation of promptly responding to any written grievance in a printed card advising the correspondent that all his problems had been referred to the appropriate authority for proper redressal. A serious petititoner then could have the rare opportunity of research to find out which one of the half a million legal, quasi-legal and local authorities in India would have the privilege of dealing with his case. It being a life-time research work, the petitioner would be busy for the rest of his life and his pursuit of truth and justice might also give him some happiness which was denied to him when his grievance arose.

But my problem was that this Department did not function under the MHA. Suddenly in a flash I remembered that the mighty Establishment Officer, one of whose minions had signed my appointment letter thirtyseven years ago, then functioned under the Home Ministry. Thereafter, due to the operation of the inexorable law of mutation of governmental gene, it had flowered into an independent and powerful department.

As I had been thinking furiously, I faltered in writing. The receptionist noticed it. He offered his ball pen thinking that mine had dried up in the Delhi heat. I took his pen and wrote down in an illegible hand "Department of Personnel, Public Grievance and Pension formerly under MHA". Only 'MHA' was written in bold letters.

The receptionist was a knowledgeable person. He remarked almost to himself that all governments always announced economy and always opened new offices. An earlier government created the Department of Computer. And this government while thinking about giving the golden handshake to its old employees, established the new office of leisure. Well, while the old employees stagnated and languished, if someone got a new job, in these hard days, it was not altogether bad. Why grudge him?

After this soliloquy, he handed over the pass to me with a smile. I looked at the pass. It showed below my name: "Office of Laser, Ministry of Home Affairs".

His genuine broad smile conveyed a message of congratulation to me being a beneficiary of the newly created occupation of enjoyment of leisure. ■

Why Socialism?

ALBERT EINSTEIN

Is it advisable for one who is not an expert on economic and social issues to express views on the subject of socialism? I believe for a number of reasons that it is.

Let us first consider the question from the point of view of scientific knowledge. It might appear that there are no essential methodological differences between astronomy and economics: scientists in both fields attempt to discover laws of general acceptability for a circumscribed group of phenomena in order to make the interconnection of these phenomena as clearly understandable as possible. But in reality such methodological differences do exist. The discovery of general laws in the field of economics is made difficult by the circumstance that observed economic phenomena are often affected by many factors which are very hard to evaluate separately. In addition, the experience which has accumulated since the beginning of the so-called civilized period of human history has—as is well known—been largely influenced and limited by causes which are by no means exclusively economic in nature. For example, most of the major states of history owed their existence to conquest. The conquering people established themselves, legally and economically, as the privileged class of the conquered country. They seized for themselves a monopoly of the land ownership and appointed a priesthood from among their own ranks. The priests, in control of education, made the class division of society into a permanent institution and created a system of values by which the people were thenceforth, to a large extent unconsciously, guided in their social behavior.

But historic tradition is, so to speak, of yesterday; nowhere have we really overcome what Thorstein Veblen called the "predatory phase" of human development. The observable economic facts belong to that phase and even such laws as we can derive from them are not applicable to other phases. Since the real purpose of socialism is precisely to overcome and advance beyond the predatory phase of human development, economic science in its present state can throw little light on the socialist society of the future.

Second, socialism is directed towards a social-ethical end. Science, however, cannot create ends and, even less, instill them in human beings; science, at most, can supply the means by which to attain certain ends. But the ends themselves are conceived by personalities with lofty ethical ideals and—if these ends are not stillborn, but vital and vigorous—are adopted and carried forward by those many human beings who, half unconsciously, determine the slow evolution of society.

This article by Einstein was first published in the well-known American Marxist journal, Monthly Review, *in its inaugural issue (May 1949).*

For these reasons, we should be on guard not to overestimate science and scientific methods when it is a question of human problems; and we should not assume that experts are the only ones who have a right to express themselves on questions affecting the organization of society.

Innumerable voices have been asserting for some time now that human society is passing through a crisis, that its stability has been gravely shattered. It is characteristic of such a situation that individuals feel indifferent or even hostile towards the group, small or large, to which they belong. In order to illustrate my meaning, let me record here a personal experience. I recently discussed with an intelligent and well-disposed man the threat of another war, which in my opinion would seriously endanger the existence of mankind, and I remarked that only a supra-natural organization would offer protection from that danger. Thereupon my visitor, very calmly and coolly, said to me: "Why are you so deeply opposed to the disappearance of the human race?"

I am sure that as little as a century ago no one would have so lightly made a statement of this kind. It is the statement of a man who has striven in vain to attain an equilibrium within himself and has more or less lost hope of succeeding. It is the expression of a painful solitude and isolation from which so many people are suffering these days. What is the cause? Is there a way out?

It is easy to raise such questions, but difficult to answer them with any degree of assurance. I must try, however, as best I can, although I am very conscious of the fact that our feelings and strivings are often contradictory and obscure and that they cannot be expressed in easy and simple formulas.

Man is, at one and the same time, a solitary being and a social being. As a solitary being, he attempts to protect his own existence and that of those who are closest to him, to satisfy his personal desires, and to develop his innate abilities. As a social being, he seeks to gain the recognition and affection of his fellow human beings, to share in their pleasures, to comfort them in their sorrows, and to improve their conditions of life. Only the existence of these varied, frequently conflicting, strivings accounts for the special character of a man, and their specific combination determines the extent to which an individual can achieve an inner equilibrium and can contribute to the well-being of society. It is quite possible that the relative strength of these two drives is, in the main, fixed by inheritance. But the personality that finally emerges is largely formed by the environment in which a man happens to find himself during his development, by the structure of the society in which he grows up, by the tradition of that society, and by its appraisal of particular types of behaviour. The abstract concept "society" means to the individual human being the sum total of his direct and indirect relations to his contemporaries and to all the people of earlier generations. The individual is able to think, feel, strive, and work by himself; but he depends so much upon society—in his physical, intellectual, and emotional existence—that it is impossible to think of him, or to understand him, outside the framework of society. It is "society" which provides man with food, clothing, a home, the tools of work, language, the forms of thought, and most of the content of thought; his life is made possible through the labor and the accomplishments of the many millions past and present who are all hidden behind the small word "society".

It is evident, therefore, that the dependence of the individual upon society is a fact of nature which cannot be abolished—just as in the case of ants and bees. However, while the whole life process of ants and bees is fixed down to the smallest detail by rigid, hereditary instincts, the social patterns and interrelationships of human beings are very variable and susceptible to change. Memory, the capacity to make new combinations, the gift of oral communication have made possible developments among human beings which are not dictated by biological necessities. Such developments manifest themselves in traditions, institutions, and organizations; in literature; in scientific and engineering accomplishments; in works of art. This explains how it happens that, in a certain sense, man can influence his life through his own conduct, and that in this process conscious thinking and wanting can play a part.

Man acquires at birth, through heredity, a biological constitution which we must consider fixed and unalterable, including the natural urges which are characteristic of the human species. In addition, during his lifetime, he acquires a cultural constitution which he adopts from society through communication and through many other types of influences. It is this cultural constitution which, with the passage of time, is subject to change and which determines to a very large extent the relationship between the individual and society. Modern anthropology has taught us, through comparative investigation of so-called primitive cultures, that the social behaviour of human beings may differ greatly, depending upon prevailing cultural patterns and the types of organization which predominate in society. It is on this that those who are striving to improve the lot of man may ground their hopes: human beings are *not* condemned, because of their biological constitution, to annihilate each other or to be at the mercy of a cruel, self-inflicted fate.

If we ask ourselves how the structure of society and the cultural attitude of man should be changed in order to make human life as satisfying as possible, we should constantly be conscious of the fact that there are certain conditions which we are unable to modify. As mentioned before, the biological nature of man is, for all practical purposes, not subject to change. Furthermore, technological and demographic developments of the last few centuries have created conditions which are here to stay. In relatively densely settled populations with the goods which are indispensable to their continued existence, an extreme division of labor and a highly-centralised productive apparatus are absolutely necessary. The time—which, looking back, seems so idyllic—is gone forever when individuals or relatively small groups could be completely self-sufficient. It is only a slight exaggeration to say that mankind constitutes even now a planetary community of production and consumption.

I have now reached the point where I may indicate briefly what to me constitutes the essence of the crisis of our time. It concerns the relationship of the individual to society. The individual has become more conscious than ever of his dependence upon society. But he does not experience this dependence as a positive asset, as an organic tie, as a protective force, but rather as a threat to the natural rights, or even to his economic existence. Moreover, his position in society is such that the egotistical drives of his make-up are constantly being accentuated, while his social drives, which are by nature weaker, progressively deteriorate. All human beings, whatever their position in society, are suffering from this process of deterioration. Unknowingly prisoners of their own egotism, they feel insecure, lonely, and deprived of the naive, simple, and unsophisticated enjoyment of life. Man can find meaning in life, short and perilous as it is, only through devoting himself to society.

The economic anarchy of capitalist society as it exists today is, in my opinion, the real source of the evil. We see before us a huge community of producers the members of which are unceasingly striving to deprive each other of the fruits of their collective labor—not by force, but on the whole in faithful compliance with legally established rules. In this respect, it is important to realize that the means of production—that is to say, the entire productive capacity that is needed for producing consumer goods as well as additional capital goods—may legally be, and for the most part are, the private property of individuals.

For the sake of simplicity, in the discussion that follows I shall call "workers" of those who do not share in the ownership of the means of production—although this does not quite correspond to the customary use of the term. The owner of the means of production is in a position to purchase the labour power of the worker. By using the means of production, the worker produces new goods which become the property of the capitalist. The essential point about this process is the relation between what the worker produces and what he is paid, both measured in terms of real value. Insofar as the labor contract is "free", what the worker receives is determined not by the real value of the goods he produces, but by his minimum needs and by the capitalists' requirements for labor power in relation to the number of workers competing for jobs. It is important to understand that even in theory the payment of the worker is not determined by the value of his product.

Private capital tends to become concentrated in few hands, partly because of competition among the capitalists, and partly because technological development and the increasing division of labor encourage the formation of larger units of production at the expense of the smaller ones. The result of these developments is an oligarchy of private capital the enormous power of which cannot be effectively checked even by a democratically organized political society. This is true since the members of legislative bodies are selected by political parties, largely financed or otherwise influenced by private capitalists who, for all practical purposes, separate the electorate from the legislature. The consequence is that the representatives of the people do not in fact sufficiently protect the interests of the underprivileged sections of the population. Moreover, under existing conditions, private capitalists inevitably control, directly or indirectly, the main sources of information (press, radio, education). It is thus extremely difficult, and indeed in most cases quite impossible, for the individual citizen to come to objective conclusions and to make intelligent use of his political rights.

The situation prevailing in an economy based on the private ownership of capital is thus characterized by two main principles: first, means of production (capital) are privately owned and the owners dispose of them as they see fit; second, the labor contract is free. Of course, there is no such thing as a *pure* capitalist society in this sense. In particular, it should be noted that the workers, through long and bitter political struggles, have succeeded in securing a somewhat improved form of the "free labor contract" for certain categories of workers. But taken as a whole, the present day economy does not differ much from "pure" capitalism.

Production is carried on for profit, not for use. There is no provision that all those able and willing to work will always be in a position to find employment; an "army of unemployed" almost always exists. The worker is constantly in fear of losing his job. Since unemployed and poorly paid workers do not provide a profitable market, the production of consumers' goods is restricted, and great hardship is the consequence. Technological progress frequently results in more unemployment rather than in an easing of the burden of work for all. The profit motive, in conjunction with competition among capitalists, is responsible for an instability in the accumulation and utilization of capital which leads to increasingly severe depression. Unlimited competition leads to a huge waste of labor, and to that crippling of the social consciousness of individuals which I mentioned before.

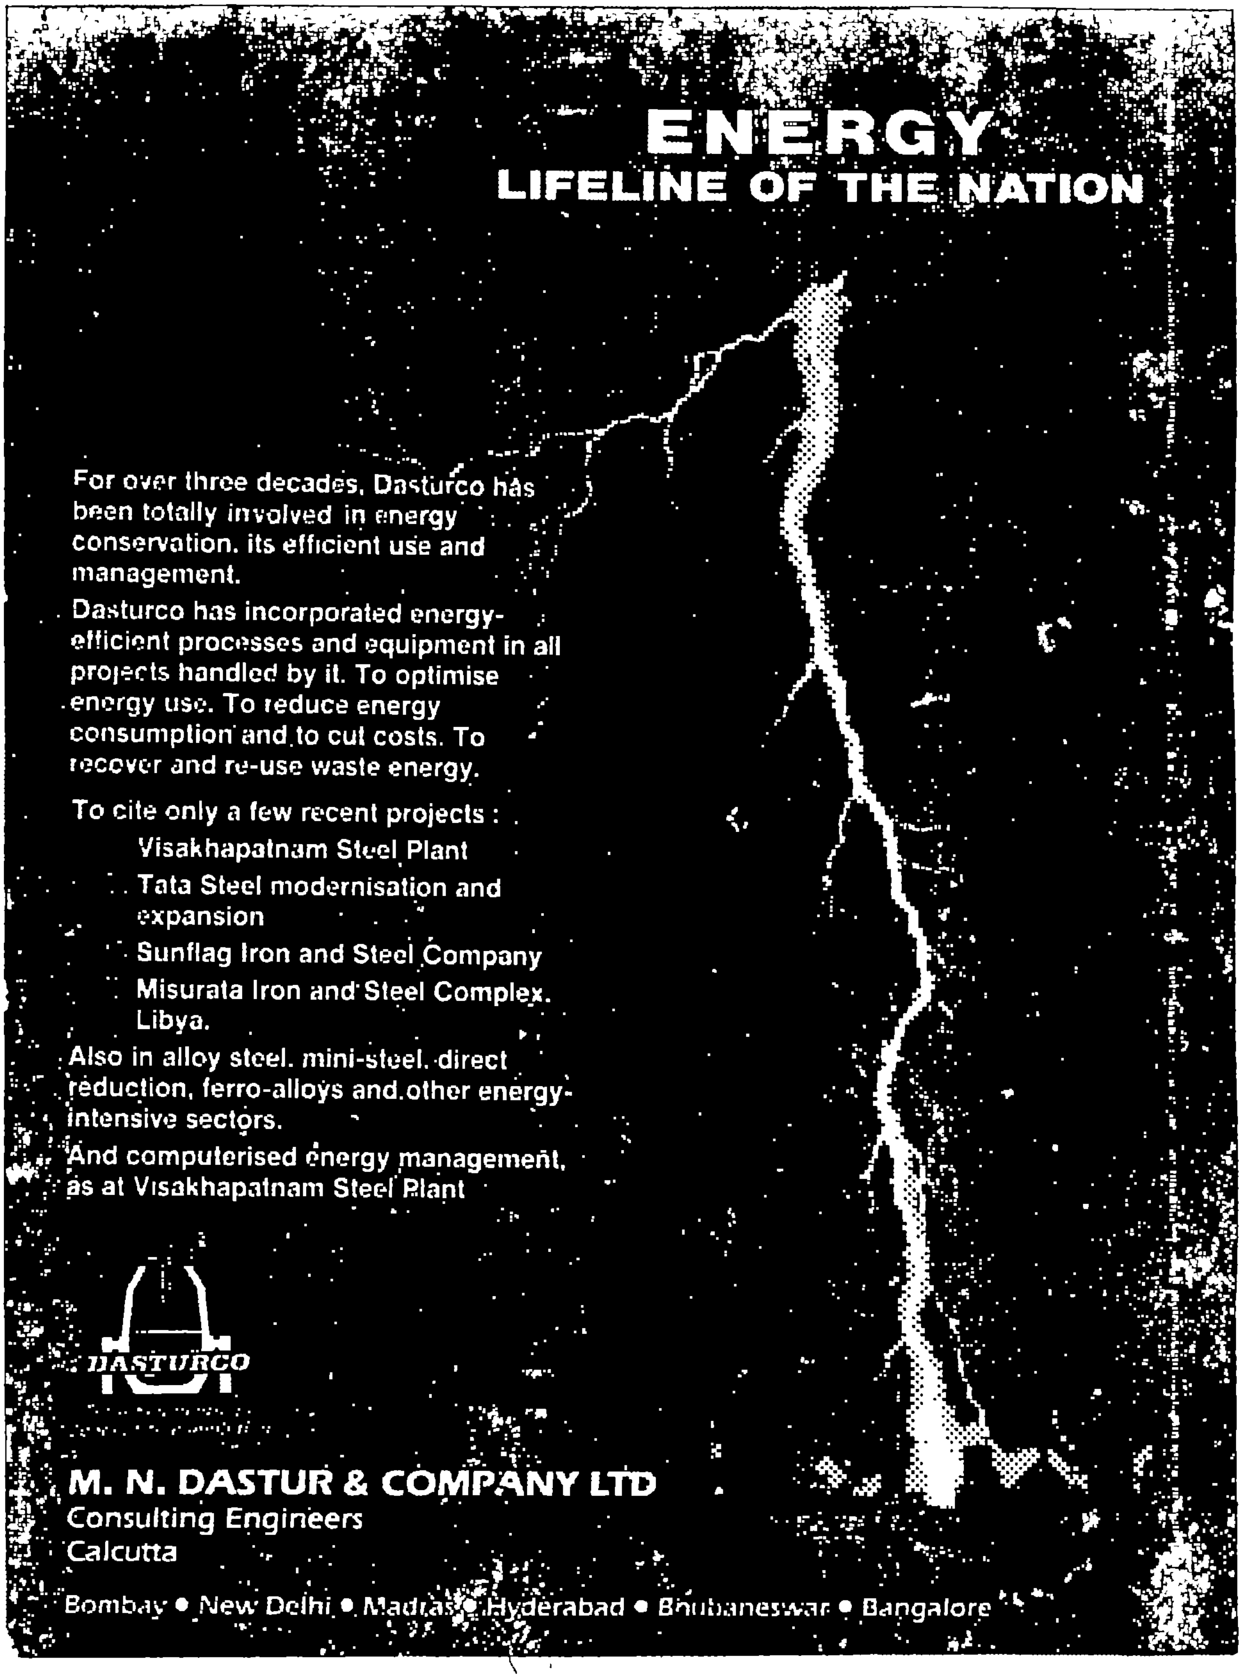
This crippling of individuals I consider the worst evil of capitalism. Our whole educational system suffers from this evil. An exaggerated competitive attitude is inculcated into the student, who is trained to worship acquisitive success as a preparation for his future career.

I am convinced there is only *one* way to eliminate these grave evils, namely through the establishment of a socialist economy, accompanied by an educational system which would be oriented toward social goals. In such an economy, the means of production are owned by society itself and are utilized in a planned fashion. A planned economy, which adjusts production to the needs of the community, would distribute the work to be done among all those able to work and would guarantee a livelihood to every man, woman, and child. The education of the individual, in addition to promoting his own innate abilities, would attempt to develop in him a sense of responsibility for his fellow men in place of the glorification of power and success in our present society.

Nevertheless, it is necessary to remember that a planned economy is not yet socialism. A planned economy as such may be accompanied by the complete enslavement of the individual. The achievement of socialism requires the solution of some extremely difficult socio-political problems: how is it possible, in view of the far-reaching centralization of political and economic power, to prevent bureaucracy from becoming all-powerful and overweening? How can the rights of the individual be protected and therewith a democratic counter-weight to the power of bureaucracy be assured?

Clarity about the aims and problems of socialism is of greatest significance in our age of transition. Since, under present circumstances, free and unhindered discussion of these problems has come under a powerful taboo, I consider the foundation of this magazine to be an important public service.

■



ENERGY
LIFELINE OF THE NATION

For over three decades, Dasturco has been totally involved in energy conservation, its efficient use and management.

Dasturco has incorporated energy-efficient processes and equipment in all projects handled by it. To optimise energy use. To reduce energy consumption and to cut costs. To recover and re-use waste energy.

To cite only a few recent projects :
- Visakhapatnam Steel Plant
- Tata Steel modernisation and expansion
- Sunflag Iron and Steel Company
- Misurata Iron and Steel Complex, Libya.

Also in alloy steel, mini-steel, direct reduction, ferro-alloys and other energy-intensive sectors.

And computerised energy management, as at Visakhapatnam Steel Plant

Capitalism and Colonialism

Global Historical Context

RAJNI KOTHARI

In order to properly perceive the world setting in which the Third World countries like India and, in particular, the poorer sections of these countries are likely to be further exploited and colonised, it is necessary to understand the emerging structure of global power in the coming years.

Politically, in respect of the relations between states, there has taken place a dramatic change in the system of power relations that has prevailed almost ever since the end of the Second World War. What we had was at once a bipolar and a tripolar world. It was a mistake to have described it as a bipolar world in which it was assumed that only the two superpowers mattered and between themselves decided the fate of the world. It was no doubt predominantly bipolar in the military-strategic sphere and because of the dangers inherent in an increasingly escalating arms race, including the possibility of annihilation of the human race, attention was focussed so exclusively on the superpower rivalry and, hence, domination of the world. But outside this militarised view of the world there existed a wider political structure of both power relations and other issues on the agenda of the world which went far beyond the bipolar definition of "world order" The large majority of the states that constituted the world, among thesmelves representing the bulk of the human population, which may have been individually weak and vulnerable but which together could not be wished away, nor was it possible to co-opt most of them in military alliance and security blocs, lay outside the bipolar definition of world affairs. Many of them also acted collectively—the non aligned movement, the G-77, the OPEC challenge to the world status quo and, following the OPEC challenge, the search for a New International Economic Order (NIEO).

More importantly, it was the existence of a Third Pole and its claim to represent such a large part of human aspirations and to engage in the task of redefining the human agenda, which also produced a body of truly global public opinion in which citizens, intellectuals and activists from all parts of the world participated. In course of time (with the deepening of the global crisis) these latter engaged themselves in a variety of new social movements, and a new spurge of consciousness. Through all this the inherent instability of the bipolar military and strategic balance was held in check. What now appears to be coming to an end, then, is not just the balance and mutual deterrence provided by bipolarity but also the more dynamic initiatives and mediating roles for moving towards a more just and equitable and hence more stable and sustainable world order in which a larger arena of states and peoples was involved.

Institutionally too, there was the moderating role of the United Nations, moderating the results of the arms race and the race for global hegemony as between two competing ideologies but also overtime providing for forum of opinions as well as action for the marginalised and the weak, the remaining vestiges of imperialism and, of course the more basic human entities such as the children of the world, the women, the millions of refugees around the world, the tribals and indigenous peoples, the regional cultures and civilisations, above all the poor of the world in the service of whom such a large part of the United Nations network of institutions and the non-governmental network of activists have been devoted. What made all this possible, institutionally and politically, economically and culturally, was the broad acceptance by the nations of the world of the "development agenda". Today one faces the prospect of this going under as well. For, almost overnight, the United Nations has found itself reeling under the hegemonic clout of Western capitalist powers and, among them, despite the broader spectrum of economic power, the predominant role of the United States. It may sound paradoxical, even ironic that just at a time when the world was supposed to be moving towards increasing the scales of disarmament and was becoming one in which military power was declining as a factor to reckon with, it is precisely because of its military

This contribution by the author was presented at the National Seminar in Defence of Sovereignty held in New Delhi (June 5-6, 1992).

preponderance and capacity to indulge in bloody adventures like the Gulf war and the ongoing or impending wars against Libya, Cuba and the like that the United States has been able to continue as the "Number One" power of the world. It may be the most indebted country of the world, facing a recession at home, in the grp of growing poverty, unemployment and lack of shelter and ordinary means of livelihood for millions of its people, as also facing the most serious racial and class wars in its history, and yet it manages to continue to be the "Number One" that is able to call the shots and move round the world like a big bully and tyrant.

With the dramatic erosion of the socialist world and the near collapse of the Third World—as well as the idea of a Third World which would have offered a (third) alternative—alongside the socialist alternative—there has emerged a wide vacuum, an unnerving and frightening vacuum that poses the prospect of returning to the "law of the jungle", at least in the conduct of international affairs but perhaps also, as a consequence thereof, in the conduct of the governments and vested interests domestically as well. The imposition of the market model and the ideology of privatisation on such a de-institutionalised and disembodied structure of reality may well be imagined. But more on this shortly. For the moment it is enough to note that in the emerging vacuum that is likely to unfold in the coming years--vacuum both in the power structure of the world and in the institutional domain--the only recourse and stratagem left to the governments and other centres of power will be that of *realpolitik*. And this time round (unlike in the long transition after the Napoleonic wars and the Vienna Congress) it is going to be realpolitik without a framework of norms and conventions and an overriding liberal international set of values and limits, giving rise to growing normlessness, insensibility to the human condition, and an increasing resort to bullying and to not just threats but, off and on, carrying out those threats so that no one dare any more challenge the omnipresence of a so-called "unipolar" world order. (Logically, of course, there cannot be a unipolar world; polarity assumes more than one poles. But, then, we are fast moving into a world that will have neither logic nor rationality to it. What is more, the American dream has all along consisted of casting the whole world after its image, of constantly moving frontiers, of a dynamic integration and homogenisation of the human race which can, under its aegis, be made a wonderful thing to live in.)

In the new realpolitik that is likely to be played out through its various combinations of actors and initiatives, as different from the earlier periods of instability and transition, there will be much more than the normal play of economic, financial and technological power. This is largely because the relative autonomy of both the states and the state system from the world corporate capitalist structure is fast coming to an end. So that, for instance, the role of diplomacy in the conduct of foreign relations, or of professionals working on the problems of poverty or of bridging the large gaps between societies and regions are likely to be overshadowed by the logic of world capitalism and the need to integrate diverse economies and markets (including various social systems underlying production relations at different levels) are integrated into one large world market and the global system of finance and management. Not only do we face a fast changing world scenario of power relations, we also face a fast changing nature of capitalism, both in the extent of its global reach and in its defining characteristics.

First, the relations of production are going to be much more induced by technology, and hi-tech at that. In the past too technological changes mattered a lot in defining both the means and the relations of production but the latter were also determined by many other factors, particularly the nature of property relations and the distribution of land and other productive assets, the role of the state in this respect, and the conditions shaping monopoly formations in different societies. Furthermore, there did exist the socialist alternative and, though in a much less clear-cut manner, certain Third World alternatives. Now and in the coming years these legal and political (as well as social) diversities within the capitalist model and beyond it are all likely to be influenced and driven forward by technology fixes dictated by the advance guard of capitalist development. The model of capitalism that seeks to penetrate and integrate the whole world is fundamentally a technological model.

Second, there has taken place a major transformation in the institutional domain within which world capitalism has been advancing. The emergence of multinational corporations as dominant structures within which technological development, scientific R&D as well as capital accumulation and fiscal modelling of the economy are taking place has changed so many of the "rules of the game" under capitalism. The MNC represents a major mutation in the evolution of human institutions and macro social and economic structures, also influencing the nature of the state in diverse settings.

Third, and this follows from the first two dimensions, capitalism is both itself becoming and rendering other structures of trade and commerce integrationist, undermining or co-opting hitherto unintegrated economic and social structures. That such an integrative thrust will leave out large sections of different societies and particularly the poor as well as peripheral communities (tribal, forest-based, nomadic and others) is of course true. But when one talks of the world capitalist system one is not talking of the world as a whole but only that part of it which has access to the modern state, the modern market and modern technology. Those who cannot join this powerful drive towards restructuring human arrangements will have to fend for themsevles as in any case they are not only marginal but for most purposes redundant and unwanted.

Fourth, central to the drive towards integrating diverse societies into a world market is the single most powerful engine of homogenising the globe: consumerism and its enormous spread across societies and across classes. By making everyone, irrespective of social background or demographic characteristics, want the same things and catch up with those who have already had them, consumerism has become the dominant engine of growth of modern capitalism.

Fifth, such a model of capitalism depends very much on the revolution in communications and information technology that is also penetrating diverse societies and reducing them all to a few common denominators.

And sixth, as part of the new economic and political imperialism known as "globalisation" there is taking place a growing colonisation of rural hinterlands and land masses. For a long time these had been left out of the global capitalist thrust as they were thought of as too backward or unavailable to industrial and commercial penetration. But with the growing importance of consumer goods of the upper and middle class variety in the overall scheme of things, there has taken place quite a change in the attitude towards rural farmlands, wastelands, social forestry areas and even deserts, as well as, of course, riverbeds and oceans. The global capitalist class is also becoming the global land grabber. (Pepsi is only a forerunner of a lot more to come.) And the global merchant in the produce and loot of natural resources and the environment of the Third World (despite the great showmanship of the UNCED). No wonder then that slogans like land reforms are making no headway anywhere anymore. Also, no wonder that more and more proposals for investments and collaborations from abroad are directed to consumer needs of the elite classes and less and less for infrastructure and other projects of industrialisation.

Such an economic and technological undergirding of the new world order necessarily calls for a changed institutional structuring of the world. First, the nation-state as the basic constituent unit of the world will be increasingly overpowered (if not sidelined) by the MNCs supplemented by global financial institutions like the World Bank, IMF, GATT and a series of emerging Conventions (the MEGA Convention being only the first of that), together concentrating massive power, resources and instrumentalities. With this, even at the world level, there is already taking place (as already indicated earlier) a marginalisation of the United Nations and its various socio-economic and cultural agencies (like the UNCTAD, UNDP, UNICEF, ILO and UNESCO) by the growing influence and power of the World Bank, IMF, and cognate institutions (like the Asian Development Bank). To the extent the United Nations (particularly through the Security Council) can be made use of, it will be given due importance, even increased importance than was the case before the Gulf war. But in other ways and for all other purposes what will matter will be the at once economic and political restructuring of the world by the Brettonwoods institutions, greatly facilitated by the almost worldwide acceptance of privatisation and globalisation as ways out of the so-called "economic crisis" facing the Third World countries like India. This basic shift in the institutional superstructure of world capitalism and its integrative drive is crucial to the "new world order" that was announced by the US President and has been by and large accepted by both the erstwhile socialist and current Third World elites.

II

SUCH a texturing of global power and resources need not be accepted as something determined and irreversible. There is considerable flux in the current historical process, one that is inherently unstable and likely to give rise to growing class and ethnic conflicts. Already, the bullying methods employed by the US and the US dominated agencies are producing countervailing forces and strengthening the voices of dissent that were there from the very beginning but were not heeded by national elites and bureaucrats and all but a few of the economists and social scientists who were far too convinced of the dominant paradigm of development. These dissenting voices are no longer that marginal or considered too "idealistic" or motivated by ideological fixes that had become out of date.

Even the "pragmatists" among policy-makers, public figures, writers and commentators in the mass media and other opinion-makers are expressing doubts about the new package and getting alarmed at the price to be paid in respect of the autonomy and stability of the state that they were earlier willing to sacrifice at the altar of the Market. Meanwhile, the very regions that looked like having "collapsed" before the march of the MNCs—Russia, Eastern Europe, China on the one hand and leading nations of the Third World on the other—are likely to face domestic pressures and unforeseen consequences of the new policies as well as nationalist protest against *Pax Americana*. This too will reinforce the forces of dissent and lend new legitimacy to those who had all along argued for an alternative model of development.

The basic assumption of the new policy package—more and more investment of capital from abroad and wide welcome to India as a part of the global marketplace—is already being questioned as, in the meanwhile, it has dealt serious damage to what had been a well thought out set of institutions and practices following the broad acceptance of the state as a pivot around which they had been structured. It was also a pivot around which international economic relations had evolved. The precipitate dismantling of so many bulwarks of accountability at home and immunity from external influences is going to make us highly vulnerable to the latter and increasingly fragile and destabilised internally. With all this, restlessness and public protest will be on the increase and there will take place a climactic crash of the so-called "radical alternative" of structural adjustment and globalisation.

The same state or rather the government is also being subjected to other pressures—the GATT, 301, Rocket Deal, NPT, falling in line in voting at the United Nations, making us move away from the non-aligned movement and G-77 and soliciting our mediation with radical regimes in the Third World on behalf of the world status quo. Such a turnaround in positions and postures is going to be too much to take, even by the corrupt consumer middle class that had provided solid support to the new policies to begin with. And as far as the poorer classes and the unemployed youth are concerned, the response is likely to be more than one of mere discontent and disenchantment. While on the social plane it will be increasingly confrontationist, class based or violent, on the regional plane it will strengthen separatist forces and human rights movements arising among minority, tribal and nationality groupings. Both of these can also play into the hands of fundamentalist and chauvinist tendencies.

Meanwhile, as the "new" hegemonic world order will become more and more unstable, it will compel political and professional elites in countries like ours feel even more insecure and entrapped in the global financial and commercial structure of dependency. Squeezed between internal revolt and external commitments the institutions of the state will become more and more fragile and unable to hold things together. Then only will the futility of the old order (of which the so-called "new policy package" is an integral part) dawn on those who had somehow, despite all indicators to the contrary, kept believing in the virtues of the world capitalism.

Whether the mainstream democratic process will be able to provide relevant alternatives within the established institutional order by throwing up new political formations and class alignments remains to be seen. There is quite a large constituency available both at the grassroots and at the macro and intermediate levels for this to take off but it is still a highly fragmented terrain. It (that is, the alternatives movement) faces the further task of either once again partially de-linking from the global market and other structures of world governance or transforming the latter on the basis of a new ideological and institutional framework. Unfortunately, despite a whole spate of theorising over twenty years for an alternative vision and an alternative set of institutions, even the beginnings of a new ideological consensus for the same have yet to take place. The global institutions of finance capital, its technological underpinning and political support structure *do* have an ideological consensus, and a strong confidence in spreading it across the world. That it cannot provide an enduring basis for peace and justice and hence cannot survive for long is, of course, clear. But when it all begins to shake and even seems like moving towards a crash, are we ready with a well thought out blueprint for an alternative, a political and communications strategy to make it sound both right and workable, and a policy framework for translating it into agendas of action?

The alternative to being prepared with such a blueprint for an alternative will only be widespread chaos, uncontrollable violence and growing trade and commerce in such violence. Needless to say, the worst sufferers of such a collapse of civil society will be the poor, and among the poor, the women, the children and the aged and the handicapped. Working toward an intellectual framework for an alternative is by no means a luxury. It is needed above all by the victims of history. ■

Political Economy of the Uruguay Round of Trade Negotiations–III

MUCHKUND DUBEY

This is the concluding part of the detailed article on the Uruguay Round of Trade Negotiations. The first and second parts appeared in Mainstream, *May 30, 1992 and June 6, 1992 respectively. The author, a former Foreign Secretary, is currently a Professor, South Asian Division, School of International Studies, Jawaharlal Nehru University, New Delhi.* –Editor

Because of the domination of transnational corporations in the realm of services, curbing restrictive business practices becomes very important in the context of liberalisation of trade in services. As we know, the restrictive business practices of the TNCs take the form of transfer pricing, exercise of monopoly power over sale and purchase, abuses of their superior resources power, etc.

The problem is recognised in Article IX but there is no provision by way of specific commitment to deal with the problem. The only provision is that "each party shall at the request of another party, enter into consultations with a view to eliminating restrictive business practices".

The party addressed will only "accord full and sympathetic consideration to such a request". There was in fact no need for such an inane provision. The fact is that the issues of the RBPs of the TNCs is cleverly skirted in the GATS.

What will be included in the schedule of the GATS will depend upon the outcome of the negotiations in specific sectors and sub-sectors. But there are annexes which contain guidelines and understanding for negotiations in selected service sectors. The only two service sectors in which India has some competitive advantage, that is, consultancy and construction services, are not even mentioned in the Annex. Perhaps, the Indian negotiators could not bring the developed countries to talk about the problems in these sectors. In the Annex on "movement of natural persons providing services under the Agreement". It is provided that the Agreement shall not apply to measures affecting natural persons seeking access to the employment market of a party, nor shall it apply to measures regarding citizenship, employment or residence on a permanent basis.

Thus the Indian effort to seek liberalisation of labour migration has not been successful. Movement of semi-skilled and unskilled workers for providing services through residence also appears to have been kept outside the scope of the negotiations.

D. Agriculture

In the negotiations on agriculture, the brief of the Indian delegation was to ensure that considering the special position of agriculture in our economy, we were not required to accept the same to liberalisation commitments as the developed countries and that we were able to maintain intact our policy to promote agricultural growth, provide inputs at subsidised rates to our farmers and continue our public distribution system for food.

The Text on Agriculture in the DFA does not go as far towards removing agricultural subsidies as the United States and other countries interested in liberalisation in agriculture would have liked it to go. The commitment to be undertaken according to the Text is to:

(a) reduce domestic support measured in terms of AMS (Aggregate Measurement of Support) by 20 per cent;
(b) reduce barriers to trade by 36 per cent;
(c) reduce export subsidies specified in the Text, by 36 per cent of the budget outlays and 24 per cent in quantity;
(d) if there is no import, then it will be necessary to open the market up to three per cent of total domestic consumption in the base period, going up to five per cent by the end of 1999.

These measures will have to be implemented between 1933 and 1999.

The following are the special dispensations for the developing countries:

(a) Their commitment to liberalise will be only two-thirds of that undertaken by the developed countries. This will mean they will be required to reduce domestic support by 13 per cent; export subsidies by 24 per cent of outlay and 16 per cent in quantity and customs tariffs and other barriers after tariffication by 24 per cent.

(b) For them, the period of implementation will be 10 years as against seven years for the developed countries.

(c) They will not be required to reduce domestic support as long as it does not exceed 10 per cent of the total value of production of a basic agricultural product. This threshold percentage for developed countries is five (Article 6(4)).

(d) The following item will be excluded for them from the list of domestic support measures subject to reduction:
  (i) Investment subsidies generally available to agriculture in developing countries;
  (ii) Agricultural import subsidies generally available to low income or resource poor producers in developing countries. (Article 6(2))

(e) They can continue the following export subsidies which are included in the list of export subsidies subject to reduction:
  (i) Subsidies to reduce the cost of marketing export of agricultural products including handling, upgrading, other processing costs and the costs of international transport and freight.
  (ii) Internal transport and freight charges on export shipments provided or mandated by the government, on terms more favourable than for domestic shipment.

The following are the implications of these measures for India:

(a) For the first time we have agreed to take the first steps towards integrating our agriculture with the agricultural regimes of advanced countries. Its implications which can be really far-reaching, do not seem to have been analysed fully. There is a commitment to keep five per cent of domestic consumption of agricultural products open for imports from abroad.

(b) We did not succeed in our effort not to accept any commitment to reduce domestic support and export subsidies. We will have to reduce by 13 per cent all domestic support measures listed in the Text except the two for which exceptions have been made. Similarly, we will have to reduce all export subsidies listed in the list except the two which developing countries can maintain without any reduction.

(c) It will not be possible to continue agricultural input subsidies which are meant for all farmers and not necessarily targetted at low-income and resource-poor producers Thus availability of fertilisers, water, power and diesel to farmers in general at subsidised rates will no longer be possible.

(d) Subsidies for providing food aid to the needy section of the population will be exempted from the commitment to reduce domestic support. But this will be possible only if clearly defined criteria related to nutritional objectives will be fulfilled. This will affect our public distribution system. This will be subjected to international scrutiny in order to ensure that (a) it caters to the requirement of those who are needy (b) that in doing so it fulfills clearly defined criteria related to nutritional objective and (c) that the government purchases are at current market prices and not at prices fixed by the government.

It is unlikely that our agricultural exports will become competitive with the implementation of the Text on Agriculture. The reductions in domestic and export subsidies as well as in import restrictions stipulated in the Text are not more than 30 per cent on an average. This means that 70 per cent of the present subsidies will still remain intact, making it still difficult for us to compete with the subsidised prices of the developed countries. Besides, for a number of exportable agricultural products, India is not one of the low-cost producers.

III

IN the above section, we have analysed the implications of the Text of the DFA relating to those areas where our goal was damage limitation. It has been demonstrated that we have singularly failed in achieving this objective and that our interests in these areas are going to be grievously harmed with the implementation of the relevant texts in the DFA. In this section we are going to analyse the implications of the DFA Text relating to one area in which we were in the position of demandeurs and hence we expected to gain through these negotiations. This area is Textiles and Clothing.

Textiles and Clothing

The ostensible achievement in the Text on Textiles and Clothing is that it has been agreed to integrate the Multi-Fibre Agreement (MFA) into the GATT by phasing out the MFA during the 10-year period 1993-2002. However, the phasing out proposed is such as to permit only marginal liberalisation until the end of 1996, only some liberalisation until the end of 2000 and expect to achieve almost 50 per cent liberalisation at one stroke at the end of the stipulated period for integration, that is, the year 2002.

Sixteen per cent of the trade in textiles covered under the MFA will be liberalised in 1993. This may involve no liberalisation at all for India because in any case the global imports of textiles not covered by restraint in the Indo-US bilateral agreement is 25 per cent. It is 27 per cent in the agreement with the EC. Both the USA and the EC are likely to claim credit for the imports not covered by restraint and thus introduce no liberalisation at all.

An additional 17 per cent of the trade in textiles covered under the MFA will be liberalised in 1996 so that the cumulative liberalisation at the end of 1996 will be 33 per cent. If the USA and the EC decide to take credit for imports from India not covered by restraint, the liberalisation that they need to introduce at the end of 1996 will be only eight per cent and six per cent respectively of the imports under restraint.

By the same token, nominal cumulative liberalisation at the end of 2000 should be 51 per cent but the real liberalisation that need be introduced will be only 26 per cent and 24 per cent respectively.

Thus the USA and the EC will have to liberalise 74 per cent and 76 per cent of the imports currently under restraint at one stroke in 2003. This sounds incredible. Going by the experience of the Short-term Textiles Agreement (STA) and the Long-term Textile Agreement (LTA), it may very well happen that this large dose of liberalisation may not be acceptable in 2003 and the MFA may be continued under some excuse or the other.

The results of the negotiations on Textiles are disappointing for the developing countries. They cannot expect more than marginal improvement in the access to the markets of developed countries, of their textile exports until the year 2000. This is hardly calculated to inspire confidence about the integration of the MFA with the GATT.

IV

Multilateral Trade Organisation

The proposed Multilateral Trade Organisation (MTO) will have far-reaching implications for the developing countries and for the structure and character of international economic and trade relations.

According to the text of the Agreement establishing the MTO, contained in the DFA, the MTO will be "GATT plus" in that it will "encompass the GATT as modified, all Agreements and arrangements concluded under its auspices and the complete results of the Uruguay Round multilateral trade negotiations." The GATT members will automatically be entitled to become members of the MTO. Very soon after the launching of the MTO, the GATT will cease to have its *raison d'etre*, as it will be realised that a fully modernised and revamped GATT already constituted an integral part of the MTO. Instead of invoking Articles XXII and XXIII of GATT, members of the MTO would take recourse to the new Dispute Settlement Mechanism administered by the MTO.

In due course, all major trading countries will complete the formality by withdrawing from the GATT after giving 60 days notice according to the Protocol of Provisional Application. Any country which decides not to join the MTO will in due course lose its rights under the GATT because, the GATT itself will disappear. This means that not joining the MTO will amount to remaining outside the multilateral trading system.

The MTO will administer the Integrated Dispute Settlement System (IDSS) the text of which is also included in the DFA. Among others, the IDSS will permit cross-retaliation. The relevant clause in the text on IDSS provides that "the general principle is that the complaining party should first seek to suspend concessions or other obligations in the same sector as that in which the Panel or Appellate body has found a violation or other nullification or impairment".

However, shift in retaliation in other sector or sectors is permissible if the sanctions within the same sector are not "practical or effective". This offers sufficient flexibility for cross-retaliation. In fact when it concerns retaliation against non-compliance with liberalisation obligation in services, by withdrawing or suspending concessions in trade in goods, the flexibility provided in the text can be deemed to be almost *a priori* exhausted.

Since concessions given in the field of services by the developed countries will have very limited operational significance for developing countries because of their inability to compete, the developed countries instead of going through the formality of suspending concessions in the field of services, will proceed directly to suspend concessions in the field of goods.

Through its provision of cross-retaliation, the MTO will legalise and multilateralise Section 301 of the US Trade and Competitiveness Act. Given the cross-retaliation provision of the MTO, there will simply be no need for 301 unless, of course, it is amended to include retaliation in economic fields other than trade and in non-economic fields.

It is futile to entertain the hope that the developing countries like India can also use the cross-retaliation provision. Because of the low level of their economic growth, their need to import from the developed countries in order to carry out their development projects and programmes and their weak bargaining position, the developing countries were seldom able to retaliate under Article XXIII of the GATT. It is indeed wishful thinking to believe that they will now be able to retaliate simply because trade in services has been brought into the picture and that there is now more than one area of retaliation.

The MTO will also administer the Trade Policy Review Mechanism (TPRM) which will be established according to the Draft Decision under the Functioning of the GATT System (FOGS) included in the DFA. Under the TPRM, both individual country reviews as well as an annual review of developments in international trading environment will be undertaken. The IMF and World Bank will be closely associated with these reviews.

It is stated in the Text of the FOGS:

> The GATT should, therefore, pursue and develop its cooperation with the international organisations responsible for monetary and financial matters while... avoiding the imposition on government of cross-conditionality or additional conditions." In forging such cooperation with the IMF and World Bank, it is not certain that imposition of cross-conditionality would be avoided. Whatever the intention or objective articulated in the text, the very fact that the IMF and World Bank will be associated with the regular periodic reviews of the trade policies of individual member-countries, will keep the prospect of cross-conditionality hanging over the heads of the vulnerable countries, like the Damocles' Sword. In order fully to institutionalise the trilateral cooperation between the GATT, the IMF and World Bank, the Director-General of the GATT is going "to review, with the Managing Director of the IMF and the President of the World Bank, the implications of the GATT's future responsibilities for its cooperation with the Brettonwoods institutions, as well as the forms such cooperation might take, with a view to achieving greater coherence in *global economic policy-making*".

◆

ONE may ask: Why this emphasis on cooperation with only the IMF and World Bank and not the UNCTAD, UNIDO, ECOSOC and the Second Committee of the UN General Assembly? What is the global economic policy that is going to be fashioned? Who will play the decisive role in this 'global economic policy-making'? Whose interest is this global economic policy going to serve? On whom is it going to be imposed?

There is no doubt that the role and significance of the UNCTAD and the WIPO—the two organisations with which the GATTshould be most closely associated—will be considerably eroded with the establishment of the MTO. In a sense one of the purposes of the Uruguay Round of Negotiations and the very purpose of the MTO is to bypass the WIPO and the UNCTAD. The WIPO was bypassed because the Paris Convention that it was administering did not prescribe as high norms and standards for the IPR protection as now prevalent in the developed countries. Besides, the WIPO functioned on the basis of sovereign equality of states and had no mechanism to enforce compliance on behalf of the developed countries except through reconciliation and arbitration. This has now been achieved by the device of cross-retaliation built into the MTO. Thus the basic purpose of bypassing the WIPO has been served.

The UNCTAD has emerged from the Eighth Conference, for example, emasculated and as a pale shadow of what it was conceived to be at the time of its establishment in 1964 and what it was till recently. It will be too much to say that this is the direct result of the Uruguay Round or was inevitable following the decision to establish the MTO. The erosion of the role of the UNCTAD has been an autonomous process influenced by a variety of political and economic factors operating at the international level. But there is certainly a link between whittling down the role of the more democratic and universal bodies like the UNCTAD, ECOSOC and the General Assembly, the strengthening of the role of bodies like the IMF and World Bank where decisions are taken on the basis of weighted voting, the building of the device of cross-retaliation in the GATT and the establishment of the MTO. It could even be argued that all these are a part of a grand design to perpetuate the stranglehold of the existing major economic powers over the multilateral economic and trading system.

The MTO has not been equipped with the authority to play the concommitant role to facilitate the transfer of resources and technology to the developing countries for building and upgrading the competitiveness of service industries. Nor has it been able to impose any commitment on the developed countries to curb the restrictive business practices of their TNCs. This should really have been done by the UNCTAD and UNIDO. But now with the establishment of the MTO and progressive erosion of the role and authority of these bodies, the responsibility for transfer of resources and technology will be left to the IMF and World Bank, and nobody will dare the TNCs to curb their restrictive business practices.

The MTO is all embracing. It will, among others, administer all the Agreements and Arrangements listed in Annex I of the Text on the MTO. This includes the revamped GATT, all instruments administered by the GATT and as elaborated in the Uruguay Round, the GATT and the Agreement on TRIPS. This is practically all inclusive. Not signing the MTO will amount to staying out of the multilateral trading system. No reservations are permitted to any of the Agreements/Arrangements/Draft Decisions, etc. included in Annex I. They are all offered on a take-it-or-leave-it basis.

In a sense, the MTO is a violation of the decision taken at Punta del Este to keep the negotiations on goods and services in two separate tracks and take a decision on international implementation of the results of the negotiations at a meeting of Ministers to be held on the occasion of a Special Session of the Contracting Parties. The developing countries agreed to their arrangement in order to keep the issue of cross-retaliation pending till the very end and to get a decision on this issue taken only at a meeting of Ministers. One of the presumptions was that the Minister could very well decide to make separate institutional arrangement for administering the Agreement on Services, thus avoiding cross-retaliation. The text on the MTO pre-empts that decision by already providing for a single institutional arrangement to administer all the agreements and also providing for cross-retaliation within the framework of this institutional arrangement.

It may be argued that the MTO Text is merely a draft presented to the participants in the negotiations and that a meeting of Ministers is still stipulated to take place to decide on the international implementation of the results (paragraph 3 of the Draft Final Act). However, this is merely a formality. Decision at the meeting of the Ministers is clearly pre-empted by the proposed text on the MTO.

An important aspect of the institutional arrangement suggested in the Text on FOGS is the elaborate procedure of notification established under the arrangement. A Central Registry of Notifications is going to be established in the GATT (and later in the MTO) Secretariat. This would develop into an instrument of continuing surveillance of trade and other economic policies of member-countries.

V

THE Government of India has been justifying, even though implicitly, our acceding to the Single Treaty, basically for two reasons. Firstly, it is stated that keeping out of the Draft Final Treaty would amount to staying out of the international trading system. It is stated that this is a situation we cannot afford to be in. For, if we remain outside the Treaty, we will lose our rights and obligations in respect of trade in goods. We will no longer be able to utilise the GATT dispute settlement mechanism. We would lose our MFN privilege in our traditional markets. We will be obliged to renegotiate these rights and privileges bilaterally with each country. We will be going to these bilateral negotiations with the same weak bargaining position as we have had in multilateral negotiations. In the bilateral negotiations, we will be required to make the same concessions as are now coming in the way of our acceding to the Draft Final Act.

Our developed country trade partners may use the bilateral negotiations not only to force us to concede what we are refusing to do in the Uruguay Round, but also to pressurise us to make concessions on non-economic issues like nuclear non-proliferation, reduction in arms expenditure, Kashmir, human rights, etc.

The issues raised above are valid and need to be answered. It is not really difficult to find answers. After all, a moment comes in every nation's life when it has to judge what sacrifices it is prepared to make to safeguard its national interest, its sovereignty and its dignity. There may very well be occasions when it may be imperative to make all the sacrifices necessary to safeguard our interest and independence of action and judgement. Besides, India will never go to a bilateral negotiation naked. It will always have, by virtue of its size, population, strategic location, highly skilled pool of manpower and its industrial and technological base, some bargaining counters in any negotiation.

Other countries also have interest in India just as we have interests in them. And finally if the only way in which we can pursue a development strategy suited to our needs is by withdrawing ourselves from the world economic and trading system, we need not rule out such a possibility either.

And even if we keep out of the multilateral trading system, it will not be a free liberal trading system we would be keeping out of. The multilateral trading system that we will be staying away from, will be a system tailored to serve the interest of industrialised countries. After all, what is liberal about propitiating the monopoly interest of the industrialised countries by prescribing higher norms and standards for IPR protection under the threat of cross-retaliation? What is liberal about cleverly skirting the issue of restrictive business practices? What is liberal about keeping the restraint on the import of textiles more or less intact till the end of the century?

◆

IN any case, we are still at the negotiating stage now. Therefore, the question of withdrawing ourselves from the multilateral trading system does not arise at this stage. Our effort should be to identify the minimum must which we would like to be renegotiated, demand renegotiations on these points and mobilise the support of other like-minded countries, including the developing countries, in the process of the renegotiation.

It is indeed tragic that in spite of such a demand voiced in the Indian Parliament and by a large section of public opinion in the country, the government has not so far stated publicly as to what are the basic minimum number of issues which it would like to be renegotiated. Nor has the government given any indication to the public and Parliament that a set of issues of crucial importance to India have in fact been taken up for renegotiation or at least they have been raised with the GATT Secretariat and the major developed countries.

This mystifying reticence and inaction of the Government of India stands in sharp contrast to the stand taken by other major negotiating partners. For example, a senior official of the Japanese Government said in Tokyo on February 20 that Japan had requested an urgent meeting to modify the DFA in order to retain import control on agricultural products. Japan also said that it was opposed to the tariffication system. (*Economic Times*, February 21, 1992.)

In January, the EC Trade and Farm Ministers agreed that the DFA was a "reference document for the final phase of the negotiations" and that "insofar as the Dunkel paper calls into question the foundations of the Community's agricultural policy, it is not acceptable and, therefore, has to be modified". (*Economic Times*, February 21, 1992)

The United States has also indicated that it would like some of the issues of interest to it to be renegotiated. In this connection reference has been made to the Transition Period permitted to developing countries to implement the TRIPs Text, which the United States considers too long.

It is not clear in this context why the Government of India has been keeping silent for more than four months since the Dunkel Draft has been debated in the country.

The other reason advanced by the Government of India, for our acceding to the Single Treaty and not asking for renegotiation is that if we oppose the Treaty, we would be the only country opposing it. In other words, the treaty is acceptable to all and by opposing it we will get totally isolated.

If this is indeed true then one may legitimately ask as to how this isolation has come about. The fact is that we got isolated because we decided not to take the lead. This spectre of isolation has been deliberately created as a self-fulfilling prophecy. The fear of isolation has been a rationalisation for a deliberately supine policy. Right from the time of the launching of the negotiations, we have been afraid of mobilising the support of other developing countries. We took to heart the US indignation at seeing India engaged in any act of ganging up against the United States. Proposals for convening in Delhi a meeting of the Trade Ministers of selected developing countries were repeatedly vetoed at the political level.

The last opportunity of our taking the initiative to convene such a meeting was in Montreal at the Ministerial Meeting for the mid-term review of the Uruguay Round in December 1988. But this opportunity was also spurned for fear of being seen as ganging up against the United States. This was in spite of the fact that such meetings were held regularly in Punta del Este where the Uruguay Round was launched. It was also our experience until April 1989, the date of our total surrender on TRIPs, that whenever India took the lead, other developing countries were quick to come on board. There was a feeling at least among some delegates and observers at the time of the Geneva meeting in April 1989 that many developing countries expected India to take a lead and they felt helpless when India too surrendered.

It is possible that because of the recent world situation and the extreme vulnerability of the developing countries, we would have had the same outcome as in the DFA in spite of all the efforts that we could have made. But this is an approach of cynical abdication of diplomacy, if not, as already pointed out, a self-fulfilling prophecy.

◆

THE Draft Final Act has been presented on a take-it-or-leave-it basis as a single treaty to be accepted in toto without making reservations on any part of the Treaty. Paragraph 5 of the Text of the DFA states that "the instruments shall be open for acceptance as a whole...."

There is a difference between the procedure for accession to the Final Act and its constituent parts and the exact status of the Draft Final Act. The fact is that the Final Act presented by Dunkel is still a draft and hence subject to negotiation and amendments. This is borne out by the fact that some countries have asked for the renegotiation on parts of the document.

Even the proposition of accepting the documents *in toto* and not being able to keep away from one without staying away from all, is still in the nature of a suggestion. It is for member-countries to accept or reject this suggestion. We should not accept this suggestion because it is both unreasonable and extraordinary. What the participating countries have been presented with is not really a single treaty but a treaty of treaties. This is unprecedented in the history of international law. Each of these treaties fundamentally affects the economic and trading interests of the countries participating in the negotiations. These treaties together are going to regulate a whole gamut of international economic relations. They are going to govern mostly fundamental aspects of these relations.

It is, therefore, unreasonable to accept all member-countries to accede to all these treaties without reservations. This was not done at the conclusion of

(Continued on page 24)

Modernisation and Social Justice

ARUN GHOSH

The book is a collection of ten essays, written by Dr. Kurien between March 1983 and January 1989, and re-arranged under three topics: one defining the problem of growth and justice; the second reviewing India's economic growth performance; and the third, a theoretical foray into the nature of the market process and marketisation and the role of the state therein. There is also a brief introduction for each of the three sections, written in 1991, without any substantial modification of the earlier pieces (except to add a few footnotes here and there).

One had, of course, read *some* of the pieces earlier, as and when they had appeared, though the present writer has to regretfully confess that some of the articles had not been seen by him earlier. To read all the articles together is not only a treat, it is an education even for an old hand who has dealt with the subject somewhat extensively. In fact, if one were asked to assess the volume, one would have to briefly say that Dr. Kurien's book is of seminal importance not only at the present juncture but in the literature on development economics.

Growth and Justice: Aspects of India's Development Experience by C.T. Kurien, Oxford University Press, 1992; pp. 295; Price: Rs 275.

Admittedly, being a collection of essays written (or lectures delivered) over a period of time, there are occasional repetitions of the same idea, or of the same points. But these points need to be reiterated; they need to sink into the consciousness of all students and professors of development economics. There is need for a reminder today, not only to theoreticians but also to policy-makers that the distribution of *ownership of resources* in a community plays a crucial role in determining the *pattern of development* that the community is likely to attain, no matter what homilies are paid to goals such as the attainment of a "socialistic pattern of society".

The book is also prophetic. For example, an article written as far back as March 1983, entitled "Indian Society: Past Trends and Future Prospects", chalks out the likely developments in the Indian economy during the eighties in vivid detail, every single one of the forecasts then made having come out correctly, not only in the matter of the pattern of internal development but also in the matter of external developments and the balance-of-payments problems that we face today. Some of us could foresee these problems from 1987, and some others from 1988, but to foresee the present developments in early 1983 speaks volumes of Dr. Kurien's prescience and understanding of economic processes and their inevitable denouement.

The first section seeks to focus on the diagnosis of a major socio-economic problem. To put it in Dr. Kurien's words: "Why is it that when economies grow, the benefits go to a few and the many are left practically untouched?" Despite the pronounced official endeavour in India to attain "a socialistic pattern of society"; despite successive Plan programmes emphasising the need for distributive justice and egalitarian growth; despite the Chapter IV of the Indian Constitution laying down, in the Directive Principles of State Policy, a charter for the welfare of all the people of this country, the number and percentage of people below the poverty line has remained abysmal. Even as late as in the eighties, the Sixth Plan (1980-85) was forced to reiterate that "public policies will have to acquire a sharper redistribution focus in raising the share of the poorer sections in national income, consumption and in the utilisation of public services". And yet, as per the National Sample Survey, as late as 1987-88, fully 43 per cent of the Indian population—45 per cent in the rural areas and 39 per cent in the urban area—was below the poverty line. (See B.S. Minhas, L.R. Jain and S.D. Tendulkar: *Economic and Political Weekly*, Bombay; July 6-13, 1991.)

As Dr. Kurien points out, the problem is a global one; he cites a report prepared under the aegis of the World Bank (*vide*, Hollis Chenery: *Redistribution with Growth*, Oxford, OUP, 1974) to indicate "that more than a decade of growth in underdeveloped countries has been of little or no benefit to perhaps a third of their population". At the sub-continental level, Dr. Kurien digs back into history and finds for Bangladesh that "from the 1830s to the late 1930s....

wage rates for agricultural workers in rice units ranged between five and six kilograms. Around 1950 it was three kilograms. In the 1970s it fell below two-and-a-half kilograms" (*vide* A.R. Khan, "Real Wages of Agricultural Workers in Bangladesh", *Economic and Political Weekly*, Bombay, January 28, 1984). A similar development is found by S. Guhan and J.P. Mencher, in the village Iruvelpattu in South Arcot district of Tamil Nadu, where village studies had been conducted in 1916, in 1937, in 1961 and again in1981 (*vide*, *EPW*, June 4 and 11, 1983), where the benefits of development and of modern cultivation techniques accrue entirely to the big landlord of the village. It is not as if Iruvelpattu can be stated to have been denied "growth"; situated only 12 kilometres away from the market town of Villupuram, and now served by an all-weather road, the village has tractors, trucks, a car, electricity, a Primary Health Centre, a primary school (which existed even in 1937). In 1937, only three of the 32 wells in the village were used for irrigation; in 1981, there were 78 wells in private ownership, of which 65 were equipped with electric pumpsets and 13 with oil engines. Consequently, paddy cultivation has been extended to 87 per cent of the cultivated area, and millet growing is down from 10 per cent to two per cent of the cropped area.

As a result of the use of high-yielding seed varieties, and the use of fertilisers and water, paddy output has increased from 1110 kilograms per acre to 2330 kilograms. And yet, in 1981, Guhan and Menscher report: "To hover just above the poverty line, a rural household would need to generate an annual income of Rs 2738. But in Iruvelpattu, the ***highest*** annual earnings by an agricultural labouring household was only Rs 1645; the *average* figure was just Rs 1350 or less than half of the required minimum.....altogether, some 200 agricultural labour and marginal cultivator households, or 62 per cent of the total number of 323 households in Iruvelpattu, can be considered to be absolutely poor."

If such a long quotation has been given from just one isolated village study—pertaining to a village which has benefited from many of the developments ushered in by the Plan programme—it is because the scenario gets repeated in most areas of the country, where economic development has led to the enrichment of a few and to the impoverishment of the many. The study by Minhas *et al.*, which indicates that 45 per cent of the rural population in India in 1987-88 was below the poverty line gives the all-India average. When one goes into details, the percentage goes up significantly in many of the regions.

It is this maldistribution of the benefits of development which should alert us to the wrong direction in which our development effort has taken the country, and the roots of the problem by way of ownership of resources: land and access to water in the rural areas. As far back as 1964, the Committee on Distribution of Income and Levels of Living, headed by P.C. Mahalanobis—himself the architect of the Second Five Year Plan which laid down the pattern of development to be pursued in India—concluded: "Despite all the countervailing measures taken.... concentration of economic power in the private sector is more than what could be justified as necessary on functional groups, and as it exists both in generalised and in specific forms." Later, in 1969, the Industrial Licensing Policy Inquiry Committee (or the Dutt Committee as it has come to be known) stated, in respect of the industrial sector, that the very system of licensing, and of institutional funding of private sector projects, had led to the "pre-emption" of capacity by a few Large Houses, and had led to the appropriation of the bulk of institutional finance available, by these Large Houses, leading yet again to "increased concentration" of economic power in a few hands, and to lopsided growth.

◆

THE findings of the Dutt Committee relate essentially to the industrial economy. As Dr. Kurien has found, the process has been essentially similar, and in many ways more extensive, in the rural areas. With the introduction of the new agricultural strategy—the Green Revolution—in the mid-sixties, the benefits of growth have accrued "primarily, if not exclusively, to the larger and richer farmers". Even in the prosperous and agriculturally advanced State of Punjab, G.S. Bhalla and C.K. Chadha have found that about a third of the marginal farmers (tilling between 2.5 and 5.0 acres of land) "are living below the poverty line....Their production efficiency notwithstanding, these farmers are unable to earn adequate per capita income from crop production because of their small land base". (*vide*, G.S. Bhalla and C.K. Chadha, "Green Revolution and the Small Peasant: A Study of Income Distribution in Punjab Agriculture"; *EPW*, May 15 and May 22, 1982). If this is the situation of land-holdings between 2.5 and 5.0 acres in Punjab, with the present distribution of landholdings in the rest of the country, one can easily see how the process of change has adversely affected large masses of the rural population.

Dr. Kurien has a very specific answer to the problem. The distribution of the benefits of development accrue essentially in proportion to the *command over resources* that different sections of the population have *ab initio*. Where the only resource is labour power, the owner has no bargaining capacity; even with a small holding of less than one hectare—which is what the vast majority of the cultivating farmers now own—the farming population is not able to invest adequately in agriculture; more particularly, he usually lacks access to irrigation water and therefore parts with a large part of his produce (or income) to buy water; and his life hovers precariously below the subsistence level. This is the fate of both landless labourers and marginal farmers.

The traditional access to village commons, to grazing land, to other community owned facilities, has also been denied to a majority of the villagers, with steady growth of the market system.

It is in this context that Dr. Kurien's foray into the theory of the market, of the implications of "marketisation" of the economy—in a situation of highly skewed distribution of the ownership of resources—becomes extremely pertinent.

◆

THERE are few works in economic literature on the *evolution* of the market, John Hicks' being one of them, but Hicks emphasises only the congruence aspect of the market, not its conflict aspect. Arrow and Hahn have emphasised, as have Amartya Sen and quite a few others, the limitations of the market system. After analysing the available literature on the subject, Dr. Kurien gets on to the fundamental issue of the "economic power balance of different individuals and groups" (mentioned by Amartya Sen), and the question of "social conditions and market functioning". Dr. Kurien points out that "the subjective freedom of choice that the market economy purports to offer is....heavily circumscribed by the objective conditions underlying distribution of economic power....the logic of the system dictates that the goods actually produced and made available for exchange are determined by the exercise of the economic power that arises from the initial situation".

Dr. Kurien's brief analysis of the theoretical foundations of the theory of the market is a classic in itself, and deserves wide publicity and discussion. He has demonstrated that the state and the market are not two independent entities, that the latter cannot exist without the former, that there are some rules of the game that must be followed for the functioning of the market system; that the rules of the game are not just "competition" as the neo-classical economists have made out but are related to a variety of other issues (quite apart from the information system and effective communication between the buyers and sellers) including, sovereignty, the exercise of power, "representation"—which do not appear to be directly connected with the market—which shape the broad patterning of economic forces which ultimately shape the market, which in turn has a profound impact on economic processes.

Amartya Sen has, of course, dealt with the issue from a somewhat different angle; apart from "self-interest", he has cited "sympathy" and "commitment" as two of the motivating factors that negate the process of market-determined choices. However, as Dr. Kurien points out, "in any social situation there exists the possibility both of congruence and of conflict; the analysis of market mechanisms, however, confine attention to the former, to the total exclusion of the latter". Dr. Kurien relates market functioning to the basic question of social conditions, which in turn depends on the underlying distribution of economic power in a society.

Dr. Kurien has neatly punctured the neo-classicist view of the market. "It is an illusion", he states, "to imagine that, beyond the simplest of cases, economic activity can take place without money"; and it is this factor, and the influence of money—of capital accumulation through appropriation of the surplus—which negates some of the assumptions regarding the *neutrality* of the market system as between different economic agents.

Even neo-classical economists recognise the importance of 'externalities' and of 'indivisibilities'—and, therefore, of social cost-benefit criteria—as superceding individual interests and preferences, as emerging from the market. But the major flaw in the current theory of the market is the assumption of a liberal (democratic) state upholding the rules of the game in regard to the free functioning of the market. Unfortunately, even in the Bentham-Mill ideal of a liberal state, there exist (as Marx and Engels had pointed out) two "factors which constitute the fabric of society and of social relationships: material forces that underlie the division of labour and the class division of society, and interests related to matters of flesh and blood". Market transactions also reflect—in the same manner as the division of labour—"initial endowments" by way of property rights and ownership of resources, of a "bundle of claims" (in primitive Communist societies, associated with a bundle of obligations, which are gradually replaced by the marketisation process); as well as the need for state intervention which is never truly neutral but reflects in itself a power equation derived from its social base. As Dr. Kurien has succinctly pointed out, "markets evolve and function within definite socio-economic structures and relationships".

It is not possible to do justice to Dr. Kurien's book in a brief review; in fact, each of his articles deserves a separate review; each is full of insight and has a strong analytical base. What is remarkable about this collection of essays is the unifying logical strand that permeates all the essays, be they on the very concept of development, or the working of the development experience in India, or purely theoretical issues concerning some of the basic assumptions of neo-classical economics, especially in regard to the nature and evolution of the "market", the characteristics of a "liberal" (democratic) state as outlined by Jeremy Bentham and John Stuart Mill, and the close nexus between the market and the state and, therefore, of the roots of power within each state.

This collection of ten essays by Dr. Kurien is essential reading not only for all students of development economics but also for all those who are concerned with the evolution of India from a traditional to a modern society, so that, in our hurry to modernise, we do not obliterate the society we are endeavouring to modernise. ■

MUCHKUND DUBEY: Uruguay Round

(Continued from page 20)

the Tokyo Round when the areas covered by the negotiations were very limited as compared to the vast scope of the Uruguay Round. The governments were free to accede to or opt out of the particular code or codes negotiated during the Tokyo Round.

The argument that if all the countries do not accede to all the treaties included in the DFA, the balance of gains and losses achieved during the negotiations will be disturbed is invalid and, in any case, highly exaggerated. How can we talk about balance in an intrinsically unbalanced package? There can be no balance for the developing countries so long as the questions of transfer of resources and technology and broad developmental aspects are not brought in.

Perhaps the government is hoping that it will get off the hook because of the controversy on agriculture raging between the United States and the EC—a controversy which has thrown the Uruguay Round in a state of suspended animation for more than four months now. It is believed in some quarters that if this controversy is not resolved very soon, developed countries will lose interest in the Uruguay Round and the whole exercise will fall by the wayside. Preoccuaption of major negotiating partners with their domestic political problems such as the forthcoming US Presidential elections, is cited as additional factors detracting attention from the Uruguay Round and leading to the sidelining if not aborting the entire process of the negotiations.

This expectation of the inevitable derailment of the Uruguay Round is going to turn out to be wishful thinking. On all the issues, such as the TRIPs, TRIMs, Services, and the MTO on which the major industrialised countries had common interest, they have got in the Dunkel Draft, texts which almost fully meet their requirements. The purpose for which they jointly and assiduously worked for these texts over a period of nearly a decade, still remains valid. They are not, therefore, going to wilfully jettison these gains.

The world in which the Uruguay Round is going to be concluded is very different from that in which it was launched. With the collapse of the Soviet system and the decisive, almost surgical, victory of the United States and its allies in the Gulf war, these countries have acquired greater confidence and are displaying greater arrogance of power. They are now out to establish a "new world order" which will be the best framework of safeguarding their interest and over which they would have complete hegemony.

The results of the Uruguay Round as contained in the Dunkel Draft is going to prove an invaluable instrument for maintaining and strengthening their hold over the global economic power structure. They will use this instrument alongwith the others they have devised recently to achieve the same purpose. These include disarmament conditionalities for providing aid and trade concessions, human rights conditionalities, forcing non-proliferation of weapons of mass destruction, creation and maintenance of ad hoc discriminatory regimes for controlling the transfer for dual-purpose technology, equipment and material and intervention in the domestic affairs of the developing countries on humanitarian grounds.

In this context, the gains of the Uruguay Round are unlikely to be squandered away by these countries. The most that can happen is for them to keep these gains up their sleeve until they resolve their *inter se* differences on agriculture, and to legalise and institutionalise these gains immediately thereafter. Even if they decide to wait till the end of the US elections, the deluge will be deferred for the developing countries only until February/March 1993 which is, after all, not that far away. (Concluded) ■

Exploring Anti-Mandal Suicides

DINESH MOHAN

On March 11, 1987, four teenagers, two boys two girls, from a suburban New Jersey, USA community committed suicide by locking themselves inside a 13-car garage and sitting in a car with a running engine. Both males had been friends of an 18-year old youth who had died after falling from a cliff six months earlier.

Within days of these suicides, the community responded with a number of efforts, coordinated mainly by the municipal government, to prevent other suicides. School officials identified students they thought might be at high risk and provided counsellors for these students. A local suicide hotline was started and a walk-in suicide prevention and counselling centre was opened and operated 24 hours a day. The local police also assisted in locating anyone reported to have threatened suicide or who was thought to be at imminent risk of suicide. The garage where the suicides occurred was locked and 'put' under periodic police surveillance.[1]

Despite these measures, a 20-year-old female and a 17-year-old male attempted suicide together by the same means six days later in the same community.

The New Jersey community responded with so many coordinated measures to prevent further suicides because it is known that once a dramatic suicide is publicised, other vulnerable individuals in the community are likely to indulge in *imitative* suicides which spread by *contagion*. According to Madelyn S. Gould, "suicide *contagion* is the process by which one suicide facilitates the occurrence of a subsequent suicide. Contagion assumes either direct or indirect awareness of the prior suicide. *Imitation*, the process by which one suicide becomes a compelling model for successive suicides, is one underlying theory to explain the occurrence of contagion.[2] The New Jersey experience shows how difficult it is to control imitative suicides even under the best of circumstances.

Though these facts have been known for a long time the press and the social science community in India are either ignorant of these findings or they choose to ignore them. Otherwise, one cannot explain their behaviour in response to self-immolations as a part of the anti-Mandal agitations in 1990. In an amazing show of ignorance, callousness and even political opportunism the press gave maximum publicity to the suicides and attempted suicides following anti-Mandal agitations and glorified these acts. The community and political leaders behaved similarly: they either publicised the suicides to score points against the leadership of the then ruling party or they made appeals to young people to use means other than suicide to fight for their "just cause". These appeals also directly or indirectly portrayed the victims as martyrs. This is precisely what should *not* have been done.

Dr Mohan teaches at the Centre for Biomedical Engineering, Indian Institute of Technology, Delhi.

The idea that publicity of suicides can encourage more suicides is not a new one. As far back as 1845 the founder editor of the *American Journal of Insanity* claimed: "No fact is better established in science than that suicide is often committed from imitation. Some particulars of the act, or expressions, seize the imagination, and the disposition to repeat it, in a moment of morbid excitement, proves irresistible.[3]

Fifty years later, in 1894 the *New York Times* charged that the *New York World* had precipitated an unprecedented number of suicides by publishing an article on the relationship of suicide to sin. The controversy has continued ever since. The American Academy of Medicine devoted a section of its annual meeting in 1911 to this matter and the participants labelled the press as "incendiary literature", "vile and pernicious", and "an accomplice in crimes against the person" for publicising suicide cases and associated details.[4] Even the National Association of Retail Druggists protested newspaper accounts giving details of poisons used in suicides because they were "inducing morbid people and criminals to use these poisons".[5] In England, the British Medical Association moved in 1948 to prohibit press reports of inquests in cases of suicide, observing that the publicity might lead to imitative suicides.[6] Summarising this experience, Louis Dublin wrote in 1963 that "if the press would refrain from exploiting suicide by disclosing all the gruesome details and would publish only a casual death notice, a very definite reform would be achieved".[7]

Since then much more rigorous work has been done in the area of *copy-cat* or *imitative* suicides and the phenomenon of suicide *clusters*. Though there are few dissenters who would not like to blame the press, the majority of researchers agree that the phenomenon of *imitation* does exist.

Dr. Philips and Carstensen of the University of

California at San Diego examined the relation between 38 nationally televised news or feature stories about suicide from 1973-1979 in the USA and the fluctuation of the rate of suicide among teenagers before and after these stories. They found that "the national rate of suicide among teenagers rises significantly just after television news or feature stories about suicide".[8] Dr. Gould of the Columbia University College of Physicians and Surgeons has even studied the impact of suicide in television movies and concludes that "evidence from the present study suggests that television broadcasts of fictional stories featuring suicidal behaviour may in some cases lead to imitative suicidal behaviour among teenagers".[9]

Though there are contending theories regarding the details of factors involved in imitation suicides some general points can be made based on the work done by Madelyn S. Gould and David P. Philips.[2,8-10]

Media Influence

(1) Television or news stories about suicide trigger additional suicides by teenagers.

(2) The more highly publicised the suicide the greater the number of imitative suicides.

(3) Prominent newspaper coverage of a suicide has the effect of increasing suicide behaviour within the readership area of the newspaper.

(4) The magnitude of increase in suicides after media publicity is also related to the "attractiveness" of the individual whose death is being reported.

(5) Wide publicity of suicides may produce a familiarity and acceptance of the *idea* of suicide by removing the "taboo" of suicide, lower the threshold at which point the behaviour is manifested, and introduced suicide as an acceptable alternative response or option to life stresses.

Characteristics of Limitation Suicides

(1) Imitation suicides and clustering seem to be concentrated among teenagers.

(2) Clustering appears more strongly among females than males in the USA.

(3) Models who possess engaging qualities, who have high status or are depicted as martyrs are more likely to prompt imitation. Behaviours depicted as resulting in gains, including notoriety are more likely to cause imitation.

(4) Imitation suicides also depend on : knowledge of how to perform the suicide; preexisting mental health problems, family history of suicidal behaviour, "pathological" identification with the victim.

(5) Persons whose social support is weak may be specially vulnerable : students who have joined their schools recently, students who come from a troubled family, persons who have recently experienced death of someone close to them or who have recently lost their jobs.

If one goes by the details of self-immolations and other suicides which were attempted in the wake of anti-Mandal agitations we find that they fit in neatly with the characteristics outlined above:

- most self-immolations involved teenagers;
- details of how to perform suicides were publicized in the press reports;
- a large number of those who committed suicide had weak social support mechanisms, some came from troubled families, some had pre-existing mental health problems and some had lost their jobs or not been able to obtain any;
- suicides were given prominent coverage;
- victims were portrayed as martyrs;
- it was widely reported that the agitation could bring about the fall of the ruling party.

Prevention of Imitative Suicides

The knowledge regarding imitative suicides outlined above has been taken seriously by many societies. A workshop for developing recommendations for a community plan for the prevention and containment of suicide clusters was jointly sponsored by the Centres for Disease Control in the USA and the New Jersey State Department of Health in 1987. A summary of these recommendations is given below and the details can be obtained from the original publications.[11,12]

Summary of Recommendations

i. A community should review these recommendations and develop its own response before the onset of a suicide cluster.

ii. The response to the crisis should involve all concerned sectors of the community and should be coordinated by:
   A. Coordinating Committee, which manages the day-to-day response to the crisis, and
   B. Host Agency, whose responsibilities would include "housing" the plan, monitoring the incidence of suicide, and calling meetings of the Coordinating Committee when necessary.

iii. The relevant community resources should be identified.

iv. The response plan should be implemented under either of the following two conditions:
   A. When a suicide cluster occurs in the community, or
   B. When one or more deaths from trauma occur in the community, especially among adolescents or young adults, which may potentially influence others to attempt or contemplate suicide.

v. If the response plan is to be implemented, the first step should be to contact and prepare those groups who will play key roles in the first days of the response.

vi. The response should be conducted in a manner that avoids glorification of the suicide victims and minimises sensationalism.

vii. Persons who may be at high risk of suicide should be identified and have at least one screening interview with a trained counsellor; these persons should be referred for further counselling or other services as needed.

viii. A timely flow of accurate, appropriate information should be provided to the media.

ix. Elements in the environment that might increase the likelihood of further suicides or suicide attempts should be identified and changed.

x. Long-term issues suggested by the nature of the suicide cluster should be addressed.

The Association of State and Territorial Health officials and the New Jersey Department of Health of the USA have also evolved a set of guidelines on the phenomenon of contagion and the reporting of suicide. These are outlined below:

Things to Encourage

Encourage explanation by health officials to new professionals of the nature of and the scientific basis for concern about contagion.

Encourage coverage which describes available helping resources.

Encourage coverage which explains how to identify persons at high risk of suicide.

Encourage coverage which presents factual information about risk factors for suicide.

Encourage news interviews with *local* experts, whenever possible.

Encourage ongoing, open dialogue between local health officials and news media representatives.

Things to Avoid

Avoid presenting a simplistic explanation for suicide, for example, "he committed suicide because he received low grades in school".

Avoid repetitive, ongoing, or excessive coverage of suicide.

Avoid sensational coverage of suicide.

> Sensational news coverage represents an effort to whip up public interest in the story via lurid healines and sometimes grotesque details about the suicide (Example of former: "Romeo and Juliet Commit Suicide" headline.) Sensationalism can be minimised by avoiding such lurid headlines, by decreasing the prominence of the news article (for example, by placing it further back in the newspaper), by avoiding dramatic photographs of funerals, the victim's bedroom, the site of the suicide, etc

Avoid coverage that amounts to a "how-to" manual for those who might wish to imitate the suicide.

Avoid coverage that legitimises suicide as a reasonable alternative among a range of reasonable alternatives, rather than a rare act of a troubled or severely depressed individual.

(Next two are highly related--the group did not come to consensus as to whether or not to combine them. I'd recommend combining them because (a) they are conceptually hard to distinguish, even for those of us who were at the meeting, and (b) for the sake of being as concise as possible.)

Avoid news coverage that glorifies the victim or glamourises suicide. Examples would include headlines such as "Hundreds Mourn Teenager's Untimely Suicide."

Avoid coverage which presents the "All-American suicide victim"--this is the natural consequence of a shallow investigation.

People naturally wish to be kind to the grieving survivors, which tendency often expresses itself in statements that a given suicide victim was "a regular guy", "had no problems", "had a great future", etc. This is what reporters tend to be told; when it is reported that way, it is hardly the reporter's sole fault. Deeper investigation almost always reveals deeper problems.

Avoid coverage that presents suicide as a tool by which things are accomplished. If suicide is seen as accomplishing specific ends, it may seem a more attractive alternative to a disturbed, potentially suicidal person. Public eulogising can promote suicide as an effective tool, if the suicidal act is seen as the first or only effective thing the victim did which attracted positive public attention. Reporting that the victim committed suicide to "get even with his parents", or to "end his suffering" might also do this.

Indian Response to "Mandal"-related Suicides

It is somewhat frightening that none of the newspapers or well-known psychologists interviewed in the press mentioned details of the guidelines outlined above. It is not surprising therefore that none of the activities mentioned under the section "things to encourage" were carried out.

If one goes through the list of "things to avoid" we find that the press and most politicians did exactly what we are advised *not* to do as the following sampling indicates.

Avoid presenting a simplistic explanation

> "The government is responsible for these deaths". Arun Shourie, *Indian Express.*
>
> ".... a student, Sunil Kumar, committed suicide on Friday protesting against the government decision to implement the Mandal Commission Report..." *Indian Express,* editorial, September 25, 1990.
>
> "Quota claims six more lives", *The Times of India*, October 6, 1990.
>
> "...young men and women are killing themselves in protest against a policy which they see as u[illegible]st..." *The Illustrated Weekly*, October 7, 199[illegible]

Avoid repetitive, ongoing or excessive coverage of suicide

All newspapers and magazines carried the news prominently everyday--TV newsmagazines like *Newstrack* gave it prominent coverage.

Avoid sensational coverage of suicide

All newspapers published pictures of suicide victims including pictures of victims on fire. Pictures of a self-immolator on fire were published on covers by national magazines including *India Today*, and *The Illustrated Weekly*. Headlines were no less sensational:

-- "Chetan Dead", box item, *The Times of India*, page 1, October 30, 1990.

-- "Mass Immolation Threat in Rajasthan" *The Times of India*, page 1, September 21, 1990.

-- "Eye witness said, while ablaze, Akhilesh was shouting anti-reservation slogans", *The Times of India*, page 1, September 24, 1990.

Avoid coverage that amounts to a "how-to" manual

Most media reports gave details of how and where the suicide was committed, for example, "Savita Gupta (18) of the Guru Nanak Higher Secondary School, sneaked out of the prayer hall and poured kerosene over her body and set herself ablaze", *The Hindu*, November 28, 1990.

Avoid news coverage that glorifies the victim

> "... the most seriously injured among the three, Akhilesh Pande, was flown to Bombay for treatment in the Chief Minister, Mr Sunderlal Patwa's plane", editorial, *Indian Express*, September 25, 1990.
>
> "... the blend of intense idealism and fury which seems to motivate large sections of youth and which, along with an intense feeling of desperation, have led to suicide attempts", editorial, *Indian Express*, September 29, 1990.
>
> "The cause the students have taken up is the country's cause", Arun Shourie, *Indian Express*.

Glorification was further encouraged by politicians making statements on behalf of the students, publicised visits to victims in hospitals and students erecting memorials for those committing suicide.

Avoid coverage that presents suicide as a tool by which things are accomplished

> "Students are using their own bodies as the ultimate weapon against the state", Ananta Giri, *Indian Express*, October, 10, 1990.
>
> "The task of protecting Indian identity has now fallen substantially on the students", Girilal Jain, *Sunday Mail*, September 30, 1990.
>
> "Backlash! Can the government survive the Mandal Commission?" Cover page with photograph of student in flames, *The Illustrated Weekly*, October 1-13, 1990.

(Note: Examples from only a few newspapers have been used. However, no other publication behaved any differently)

It is quite clear that the blame for the phenomenon of students' suicides spreading over large parts of North India and continuing for a long time must be shared between the press, the social scientists and politicians of India. In an era when knowledge and information are supposedly easy to obtain they can't be allowed to pretend ignorance of well-known phenomena. In retrospect it appears obvious that most editorial writers, reporters and politicians were more interested in using the suicides as a tool to score points against the politicians in power than in actually limiting damage.

Ironically, one of the few persons who acted according to the suggested guidelines for controlling imitation suicides, knowingly, unknowingly or for selfish motives, was the then Prime Minister V.P. Singh! He didn't give simplistic explanations, didn't dwell on them day after day, didn't glamourise the victims and didn't present the suicides as a tool by which things would eventually get accomplished. ■

Concept of Indian Nation

In the background of the collapse of the Soviet Union and the emergence of the European Community, questions about India's future as a nation are being raised. Here are two contributions on the subject the first by Dr Behera who is a member of the Indian Foreign Service, and the second by Professor Bipan Chandra, the noted historian on the staff of Jawaharlal Nehru University, New Delhi -Editor

A Nation-State Connotation

SUBHAKANTA BEHERA

In the wake of the dismantling of the Soviet Union, a need has arisen to re-examine the viability of multinational nation-states.

A multinational nation-state in contrast to an uni-national nation-state contains distinct nationalities but with a proviso for forging a common identity, and by logic this proviso denotes a post-facto situation. A nation or nationality comes into existence by the transformation of an ethnic group into a self-conscious political entity, or by amalgamation of diverse ethnic groups and the formation of an inter-ethnic, composite or homogenous national culture. In either of the cases of nation-formation, the ultimate is the creation of a country of one's own which is not always a feasible proposition.

However, when a single nation carves out its own sovereign state, it becomes an uni-national nation-state, but amalgamation of diverse ethnic groups into an inter-ethnic composite culture results in a multi-national nation-state like India. In the latter case, the constituent ethnic groups are identified with the new composite culture. Take the case of India where constituent ethnic groups like the Biharis, Oriyas, Bengalis, Punjabis, Telugus, Tamils and others are known first by their identity as Indians (*Bharatiya*) which is indicative of a composite culture. The Indian is thus a genus-nationality. These ethnic communities, according to Indologist Paul R. Brass, are nationalities because they are politicised, with recognised group rights in a political system. All of them have distinct ethnic identity which may also be termed as nationality-identity. In a multinational state, it is always safer to keep a distinction between nationality-identity and nationalism, the latter being state-centred.

Nationalism provides the foundation on which the edifice of a nation-state is erected. But a nation-state does not come into existence all of a sudden; the gestation period for it is a long one having the legacy of state conceptions and institutions. In a well-documented study, two Indologists Rudolph and Rudolph have pointed out two different historical processes, that is, the transformation of a sub-continental empire into a modern multinational state like India, and the transformation of regional kingdoms into nation-states of Western Europe via absolute monarchies. Thus, a nation-state can be either multinational or uni-national, depending on the historical pattern of transformation of 'many into one' or 'one into one'. In the former case, since a composite national culture needs to be developed, a method of absorption and assimilation with reference to a common culture has to be pursued. When and where this does not succeed, tension has mounted in inter-nationality relations and 'part-whole' relations as well.

This argument can be substantiated by a comparative analysis of India and the erstwhile Soviet Union. Indian or *Bharatiya* connotes identity of a people living within the territory of India or *Bharatvarsha*. The Indian identity cuts across all other identities like Bengali, Oriya, Punjabi or Telugu. Moreover, the Indian refers to a pre-determined socio-cultural identity which is distinct and exclusive. From this identity has developed nationalism of all Indians which is pan-Indian to all intents and purposes. But in the erstwhile Soviet Union there was nothing called Soviet nationalism, in the absence of which constituent nationalities developed individual ethnic nationalism. It was ultimately articulated in terms of separate states which became a reality after seventy five years of dialectical relationship with the Centre.

In a multinational state, the agency of state needs to follow a policy of absorption and assimilation as prerequisite for nation-building; otherwise, constituent nationalities would demand a major say for the group in the political system as a whole; or, the control over a piece of territory within the country; or, they demand a country of their own with full sovereignty. In all these cases, the viability of the nation-state is challenged and compromised. Given the history of multinational states, this danger can be warded off by a judicious policy of absorption and assimilation which may be implemented as a necessary complement to a consociational approach overcoming the differences among nationalities.

India as a multinational state has developed a unique system of absorption and assimilation over its long historical past. Right from the days of the Indus Valley civilisation, there has always been fruitful intermixture of foreigners and natives. The Aryans came to India from outside and, in course of time, got rooted in the Indian soil. What we call today the Vedic civilisation was not exclusively Aryan, but enriched and contributed by the Indus civilisational elements. In the early centuries of the Christian era, India experienced successive phases of invasion and the rule of foreign tribes such as the Bactrian Greeks, Shakas and Kushanas whose cultural and political legacies became a part of the pan-Indian culture.

The most visible period of assimilation and absorption was during the Muslim rule in India. In all walks of life, a synthesis took place between the Muslim patterns, and the indigenous Indian patterns in the direction of evolving a common, composite Indian culture. The *mansabadari* system and the *Din-i-Illahi* introduced by the Mughal emperor, Akbar, were really a part of the grand imperial vision of creating a common, composite Indian culture cutting across all religions and languages. In recent times, India has incorporated into its system a lot of Western ideas, values and models that are now the very essentials of the Indian system, and also contributory to the evolving of a composite culture and heritage.

Thus, India from the very beginning, possesses the unique mechanism of absorption and assimilation which has now been inbuilt in the Indian system. Development of this mechanism is a long historical process which is also dependent on circumstances, necessity and expediency of the situation. Given all these considerations, it is too idealistic and utopian to

expect the erstwhile Soviet Union to have developed this mechanism within a short span of seventyfive years of its life. Moreover, the term 'Soviet' connotes an objective condition which is establishment- and ideology-oriented. Unlike 'Indian', it does not presuppose multi-symbol congruence of nationalities which is a 'must' for consociation, absorption and assimilation.

The concept and institution of the nation-state might be comparatively new in world history, but the groundwork for it in India had started even in the early period of History. The Mauryan empire in the pre-Christian era and the Gupta empire in the early Christian era had the elements of a subcontinental state. These empires had established hegemony over diverse regional kingdoms which were controlled by effective administrative mechanism, well-organised bureaucracy, and means of penetration and control. Later on, the Mughal empire perfected and strengthened the imperial state-structure through the creation of a centralised military-revenue arrangement, the *mansabdari* system, and a well-knit administrative organisation. The British empire in India was modelled largely on the Mughal system.

Although throughout the Indian history the subjugated regional kingdoms have stood in tension with the imperial authority, the regional needs, aspirations and demands have always been accommodated. The strategy propounded in the *Arthasastra* was 'that subordinate rulers shall be preserved and respected in their customs and territorial jurisdiction if they acknowledge via respect and tribute, the superior authority of a ruler of rulers'. This principle guided the statecraft of subcontinental empires. This strategy was instrumental in forging a synthesis of customs, systems and cultures. The historical legacies of imperial states thus provided models and precedents for the multinational state of modern India. Rudolph and Rudolph have pointed out that the Indian empire became a multinational state whereas in Western Europe, regional kingdoms were transformed into absolute monarchies and then into nation-states.

The nation-state of India is multinational in composition, but its common, composite culture speaks for all the nationalities. All the people of India address to a common sentiment, that is, 'Indian'. Recently, some scholars have tried to interpret India in terms of civilisational entity. India is, no doubt, a great ancient civilisation, but the civilisational approach most often, encourages communal interpretation of history and does not speak anything about independent political statehood. On the other hand, India in terms of a nation-state, reiterates a common identity of the people living in the territory called India, and indicates an objective, discernible condition which is independence, sovereignty and exclusiveness. ■

Basis of India's Nationhood

BIPAN CHANDRA

The break-up of the Soviet Union has led many to question the viability of the Indian Union and the Indian nation. Others tend to compare India with West European nations and come to a similar dismal conclusion.

This questioning is, however, based on a gross historical misunderstanding, for the historical processes through which West European nations came into being or the Soviet Union was formed were very different from those which formed the Indian nation.

A nation is the product of a concrete historical process Its formation can be studied only by examining its concrete historical development and not through a static definition, as is usually done by political scientists or as was done by Stalin.

Tsarist Russia was a "prison-house of nationalities" where one nationality, Russia, dominated and oppressed the other nationalities culturally, economically and politically. The success of the Russian Revolution of 1917 and the Bolshevik success in the Civil War was, in part, because of the revolts of the suppressed nationalities. But the latter did not struggle together as a part of a national or socialist liberation movement. The ensuing union of socialist states was also the result not of a prolonged organic historical process but of the gradual imposition of a union upon the liberated nationalities.

Undoubtedly, the union resulted in the cultural and economic development of the erstwhile oppressed and exploited areas, but the psychological union obviously did not go far, especially as the Great Russian chauvinism continued. Moreover, the different nationality-republics functioned together less as a result of mutual interaction and more as a result of the common Russian umbrella.

In Western Europe, nation and nationalism were largely, though not wholly, the result of common language and culture (neither France nor Britain were ethnically or linguistically homogeneous till the nineteenth century and are not fully so even today) as also the bourgeoisie's struggle against feudal domination and for the creation of a unified market and state. In the late nineteenth century and the twentieth century nationalism in European countries took the form of chauvinism and jingoism around imperialism and the effort to maintain their dominant economic position in the modern world system.

In India, on the other hand, nation and nationalism were not the results of ethnicity or common language or of a dominant position acquired by any one ethnic group or region. They were basically the products of the struggle for freedom of the entire Indian people from British rule.

This difference also enables us to define the nation in the Indian context. The Indian nation means the coming into being of the Indian people as a historical entity. The Chinese, for example, do not use the words, "Chinese nation" but the "Chinese people" as a unity.

The nation or the people were formed in India, not because their society or culture became homogeneous but because their economic and political interests and the interests of their social and cultural development became one, even when they continued to be differentiated by language and ethnicity.

Consequently, the question whether India is a nation or a federation of nationalities loses much of its relevance. What we have to do is to recognise that the Indian people have historically developed both common economic, political, social and cultural interests as well as cultural and linguistic heterogeneity.

◆

NATION-FORMATION is both an objective and a subjective process. For a nation to be formed, its economy and polity and—to some extent—its culture have to increasingly get integrated. Though that is necessary it is not sufficient, for the process of nation-formation can be interrupted and disrupted by subjective political, ideological and emotional factors. In other words, it all depends on concrete historical development.

Pre-colonial India had already acquired some elements of common existence and common consciousness. Despite its immense diversity, certain strands of a common cultural heritage had also developed. Both at the level of the upper classes and the working masses, elements of a common, composite culture including values had grown. The politics of the rulers—of kingdoms and empires—also cut across regions. The territorial reach of the more ambitious engulfed the sub-continent. The concepts of *Bharatvarsha* and Hindustan were realities of Indian history.

True, India was invaded and conquered on several occasions. But the successive waves of invaders invariably settled down here and became assimilated. The new ruling classes merged with the older ones. The Mughals in North India, for example, relied on the earlier zamindars, often Rajputs, and the scribal castes, such as the Kayasths, to collect revenue and administer the empire. Neither the earlier ruling classes nor the common people identified the new rulers as foreigners, except perhaps in the first generation.

There was, of course, resistance from the top and, especially during the seventeenth and eighteenth centuries, from popular rebellions, but neither involved ethnic grounds. The colonial and communal historians later invented the tradition for ethnic or religious resistance against the Mughals. Interestingly, even though many regional chieftains fought against the Mughal rulers and succeeded in setting up independent kingdoms, they continued to work within the framework of the Mughal revenue and administrative system.

Also, despite backward means of transport and communication, great deal of India-wide trade, specialisation for production and credit networks developed, especially during the late medieval period.

The colonisation of Indian economy, society and polity further strengthened the process of India's unification. The process of Indians developing into a unified "people" was very much quickened from about the middle of the nineteenth century. Growth of internal and external trade, destruction of the relative self-sufficiency of the rural economy and of different regions, creation of an all-India market, introduction of modern trade industries, banking and means of communication on an all-India scale, and a uniform system of law, administration and education increasingly unified the country and created a single economic, administrative and political entity.

Colonialism did, of course, produce regional economic imbalances but despite the disparity, the economic linkage between the regions was more important. Moreover, regional imbalances were the result of the capitalist and colonial character of the unification of the Indian economy.

Above all, however, it was the common enemy in the form of colonialism and the struggle against it which provided new uniting bonds to the Indian people. The very existence of foreign rule that oppressed all the Indian people irrespective of their social class, caste, region, religion, or language acted as a unifying factor. This aspect was clearly seen by John Seeley, the Oxford Professor, who had denied that India was a nation and was the first to describe it as a "geographical expression", but who also wrote that the British might bring the Indian nation into being by providing a common target to its people. Consequently, the anti-imperialist struggle and the feeling of solidarity in its course, contributed powerfully to the making of the Indian nation.

Moreover, as the Indian nation was being formed, the identity of Indians being one 'people' was coming into existence as a result of the conscious ideological and political practices of the national movement. Social reality is seldom given directly to our senses; we cannot grasp it empirically. Contradictions with colonialism or even the character of colonialism were not directly visible to the Indian people. Both anti-colonialism and the Indian nation were, therefore, in part the result of the political and ideological struggle by the national movement. It was during this movement that the Indian people acquired the necessary collective self-consciousness and identity of being one nation. Looked at from this point of view, "nation" was not a datum prior to the national movement or provided to it. Perhaps, without this movement, Indians would have remained merely the inhabitants of a geographical region on the map.

It may also be noted that this is where the political scientists and Stalin make a major error. They both presuppose a static society. They assume that first a nation is formed and then the struggle for its emancipation or consolidation takes place. The conservative nationalists and the communalists are, of course, even more extreme in their belief. For them, to quote Raphael Samuel, "nationality is something unproblematic and pre-given, a unity which defies time and space and links past and present in a mystic union".

In fact, to repeat, there is no such thing as a nation in abstract. Nation is a process of becoming, and a rather recent phenomenon to boot the world over. In India's case, the formation of the nation and the struggle for its emancipation are simultaneous. They are interdependent; their relationship is dialectical. National consciousness motivates struggle and struggle spurs consciousness.

It is also important to note that the Indian national movement was not initiated as a federation of regional or linguistic-area based national movements which joined together to form the national movement. The movement was founded as an all-India movement which later acquired regional and language-based units or branches. Neither Europe nor the Soviet Union ever went through this experience. In Western Europe, the only similar experience could have been that of resistance against Nazi occupation. But this was not so: the resistance movements remained separate with British and American high commands providing the only linkages. Nor was there a Russia-wide revolution in 1917. The revolution of 1917 remained essentially a Russian Revolution.

Because the making of the Indian nation was and is a prolonged and continuous historical process and not an event, there was nothing inevitable or pre-ordained about it; it faced and still faces continuous challenges; it was and still is constantly open to interruption, disruption and even reversal. One such disruption occurred in 1947. The process has, therefore, to be carefully sustained, promoted and nurtured.

Part of this nurturing has to be constant remaking and redefinition of nation and nationalism as the common people, who really constitute the nation, become more active and more conscious agents of history. The debate should be on what is the agenda of the nation and nationalism and how the process of naiton-making and of national liberation struggle which created the nation are to be taught to the young and not on whether it was a good or a bad "thing" that India became a nation and the Indian people organised a national liberation struggle. After all, we can only study and learn from history and not remake it to suit our views.

It is then also clear that I do not agree with the view which regards nationalism as an inherently negative ideology because it is a "bourgeois class ideology", and which, therefore, has to be opposed from the people's point of view, or—at least—ignored as being relevant only to the ruling classes. Without arguing at length against this view, I may only suggest that the way India was formed into a nation by the people and the way they organised the national liberation struggle effectively negates this view.

Nor can universalism be used to counter loyalty to the nation-patriotism. It is being said that Europe's coming together and formation of an economic and political union is a proof that we in India do not need nationalism and should not promote one. But this is an entirely wrong reading of the historical and political processes in Europe or in India.

Europe is trying to reach today where we started from in 1947. After bitter lessons of the last four hundred years, it is trying to unite into an economic and political union to fare better and on a stronger footing in the world of political and economic giants, even while maintaining the culture and lingusitic autonomy of its different units. It is also trying to replace the existing narrower territorial nationalisms with a European nationalism. It is opening its doors to European citizens but not to the Africans or Asians. Vis-a-vis non-Europeans, including the USA and Japan, it is trying to emerge as a stronger unit—and that is why its constituents are uniting.

This is exactly what we have already accomplished in India, India's linguistic units are united economically and politically even while culturally autonomous. For the foreseeable future this is how we have to develop further. Indian nationalism will become irrelevant not by its negation or by destruction of Indian unity but only when the rest of the world will also no longer be formed into territorial, political-economic units, that is, nations. ■

(Courtesy, *The Statesman*)

Subhas Mukhopadhyay—"Subhas-da" to all of us belonging to the younger generation of Bengali poets and writers influenced by his poetry—is the recipient of the twenty-seventh Jnanpith Award for 1991 for his "outstanding contribution to the enrichment of Indian literature through creative writing in Bengali from 1971 to 1985".

One of the most striking poets of post-Tagore Bengal, Subhas-da is a man of deep commitment. A Marxist by conviction, he has, however, severed connections with the Communist establishments having seen through the hypocrisy of mouthing slogans of democracy while discarding in practice the democratic essence of functioning of the party or the administration. An outspoken supporter of Khrushchev's policies, he was the first to translate Solzhenitsyn in Bengali. His other translations include Nazim Hikmet's poems and the Rosenbergs' Diary. Naturally drawn towards the Gorbachevian revolution, he was the first Leftist poet to openly denounce last year's August coup in erstwhile USSR even before it was crushed by mass resistance. Wedded to nationalist values and committed to the welfare of the depressed and the disprivileged, his reportages on the Great Bengal Famine of 1943—subsequently compiled in Amar Bangla *(My Bengal)—exerted a powerful influence on a whole generation of Bengali writers.*

Since the late fifties Subhas-da's poetry took a new turn, his expressions acquiring greater depth and appeal with the frequent use of the colloquial language and metaphors. He won the Sahitya Akademi Award for 1965 for his Juto Durei Jai *(Far As I May Wander). In 1977 he received the Afro-Asian Lotus Prize and in 1982 he was honoured with the Kumaran Asan Award (of Kerala). Always reflecting the voice of the nation and oppressed humanity, he has been devastatingly sarcastic of the party apparatchiks even while agonising over the massacre of innocents propelled by ultra-Leftism in the seventies.*

His prose is as exquisite as his poetry. He edited the foremost literary journal of Bengal, Parichay, *and later was the joint editor of the popular children's magazine,* Sandesh, *with the late Satyajit Ray revealing in the process his calibre as a storyteller for children.*

In September 1971 was published his Ei Bhai *(Hey Brother). The book contains a poem, "In Our Hands", excerpts from which appear most appropriate today:*

> The more our eyes open up,
> the more the fists gain strength.
>
> They wanted to sell it in dollars,
> we have bought it
> with our life-blood.
>
> They had thrown it away,
> we have picked it up.
>
> Look, the banner of freedom is
> now
> in our hands.

Subhas-da, now 73, has traversed a long distance. But his love for India, Bengal, the Bengali language, the people of this majestic country—one of his poems, "Proclamation", written at the height of the freedom struggle, remains one of the best expositions of the patriotic radicalism of the forties steeped as it is in profound admiration for our death-defying toiling multitudes—has not in the least diminished with the passage of time. So also his love for Calcutta, the city of his creativity. The following lines provide a glimpse of that love and with it, a measure of Subhas-da's artistry.

Sumit Chakravartty

My Calcutta

SUBHAS MUKHOPADHYAY

It happened on a wet day. As I was trudging down the lane on my way home, I was all of a sudden wonder-struck. The sky overladen with clouds fell flat before my feet, in a puddle.

Since then, I was inclined to make peace with the city.

The wan, lacklustre city slowly won over my heart. Daily I roamed the streets, ever enlarging my area of circumspection. Burning with curiousity I would often go too far and get lost. But in that process I also learnt a thing or two.

At noon, when the streets were empty, a kaleidoscopic spectacle would burst forth with colourful sarees fluttering, up and down in the air. I feasted my eyes on the sight and stood entranced. On some of the neighbouring streets one could run into a double dyed riot of colour in front of a *shaalkar*—a dyer and cleaner of shawls.

At dawn in semi-darkness some faceless but familiar voice would chant the *ramdhoon*, while pedalling towards the Ganges for a holy dip. There was something in it that cast a spell on me.

During the rains the spate of water dashing down the sewers would give me the impression of a faraway cascade that I had dreamt of, but never seen....

It was in our tea-shop sessions that I was initiated into the world of modern poetry by my knowing friends. Till then I had been steeped in Tagore's poems and songs. But I had felt something wanting. In that frame of mind, I had ventured to write a letter-inverse addressing Tagore simply as "Rabibabu". I had complained that though his poetry captivated me by its creation of a dream world, this city's harsh reality gave me a rude shock. In the end, I had implored that either he withdrew his poetry, or changed the veritable world. This was subsequently published in the weekly *Vishan*.

In Samar Sen's romantically inclined urban poetry I found the verisimilitude of our everyday existence animated by a new spirit. I was enthralled when I met him for the first time. Knowing my active participation in mass demonstrations, he gifted me his *Handbook of Marxism*. Calcutta's air seemed to pulsate with new ideas and new forms. But its trend-setters and hair-splitters went hand in hand.

The quarterly *Parichay*, edited by Sudhindranath Datta, was instrumental in bringing together the best minds not only in its pages but also in the weekly get-together at the editor's home.

We, young writers, felt more at home in Buddhadeva Bose's Kavita-Bhavan. Jibanananda Das used to show up occasionally during his visits to Calcutta.

The pressing need of the time kept a few writers of promise from creative pursuits. It happened when the Second World War followed in the wake of the Spanish Civil War, which had already set an example before the writers of all nations of laying down one's life for freedom, democracy and human dignity.

But Calcutta refused to give up poetry under any circumstances. When the people demonstrated and shouted slogans, the streets vibrated with marching footsteps.

As air-raid precautions, slit-trenches had been dug in open spaces, baffle-walls were erected to withstand bomb-blasts and street-lights were masked. Often, with the sounding of all-clear sirens, Calcutta was agog, discovering subversive and fiery posters put up on walls under the cover of air-raid signals.

Here ends the story of my teenage love for Calcutta. Our city has since then been overriden with crises, one after another. The war was dogged by the famine. The people who fed Calcutta perished with hunger on its pavements. The eve of Independence was defiled by fratricide. The uprooted humanity of eastern Bengal filled all the empty space of the city.

We have a saying in Bengali—"If you are a good man, then on a tamarind leaf you can accommodate nine."

Calcutta has a golden heart. It lends its hands to everybody who needs it. It is a city where Mammon yields the palm to the muses.

Do not curse the city. Thunder against its ills. Its heartbeat will never stop. ■

NASIM ZEHRA: India-Pakistan

(Continued from page 4)

At the same seminar, veteran journalist Girilal Jain commenting on Indo-Pak ties called it a "people's illusion" that "we can live with Pakistan in peace and amity...what we can have is a truce". Jain further invoked the Islamic fundamentalism bogey. India's survival, he claimed, would be affected to a great extent by the forces of "Islamic fundamentalism". He equated the global Islamic community with "a stinking corpse" which had not experienced any change over the last thousand years.

Such mindless rhetoric is lethal. People living in subhuman conditions of hunger, anger, lack of dignity and underdeveloped thought processes are often easily swayed by such rhetoric. Such rhetoric drowns wise words of brave peaceniks like V.P. Singh and I.K. Gujral.

Pakistan too may have its share of those wanting to "fly the Pakistani flag on the Red Fort". It does not, however, have an equivalent of Hindu extremist forces occupying the centre-stage of Pakistani politics. Today, few political parties are opposed to normalising relations with India provided outstanding bilateral problems, starting with Kashmir, are resolved. Yet, the Indian rejectionist posture on all bilateral problems have produced growing cynicism vis-a-vis Indian liberal, secular and democratic culture among even those Pakistani intellectuals who until recently blamed the Pakistani establishment of turning Pakistanis into "India haters".

No breakthrough in Indo-Pak relations will occur unless outstanding bilateral problems are resolved. Insane levels of defence spending, the launching of Agni and Prithvi missiles, and the pursuit of nuclear programmes, for now, are the realities of Indo-Pak relations. Even Washington's tutoring in peace-making via confidence building measures is unlikely to work. Meanwhile, given their institutional proclivities, the intelligence agencies of both countries will deepen the distrust and divide...through Sindh and Khalistan. Competent diplomats, at best, will work at damage limitation. Without enlightened nationalism this will not change. India will have to take the first step. ■

ACHIN VANAIK: Shape of Things to Come

(Continued from page 6)

eradication is the best answer but it is not happening fast enough and we must still do something about curbing population growth. Collusion between the global elite of the OECD countries and the social elites of the Second and Third Worlds will be the order of the day.

As for the global ecological system, a similar pattern of thinking as on population control will emerge. The OECD will avoid any major sacrifice on its part yet demand that in the interests of the global environment the poor countries forsake a large part of their aspirations to development. It is a strange mix. The OECD ideologues will say capitalism is the only answer to the riddle of economic development on any fast-paced and mass cumulative scale must be avoided. Large enclaves of prosperity within a generally impoverished Third World and collusion once again between social elites outside the OECD and the OECD countries themselves is the way to satisfy all.

The Montreal Pact to which India is acceding is a sign of things to come and the arguments for collusion will be the same. Yes, there is environmental colonialism and there should be proportionately greater sacrifice by the OECD countries but they won't do it; meanwhile, we must still do something about halting environmental degradation. This is the real face of the New World Order to which we are heading. ■

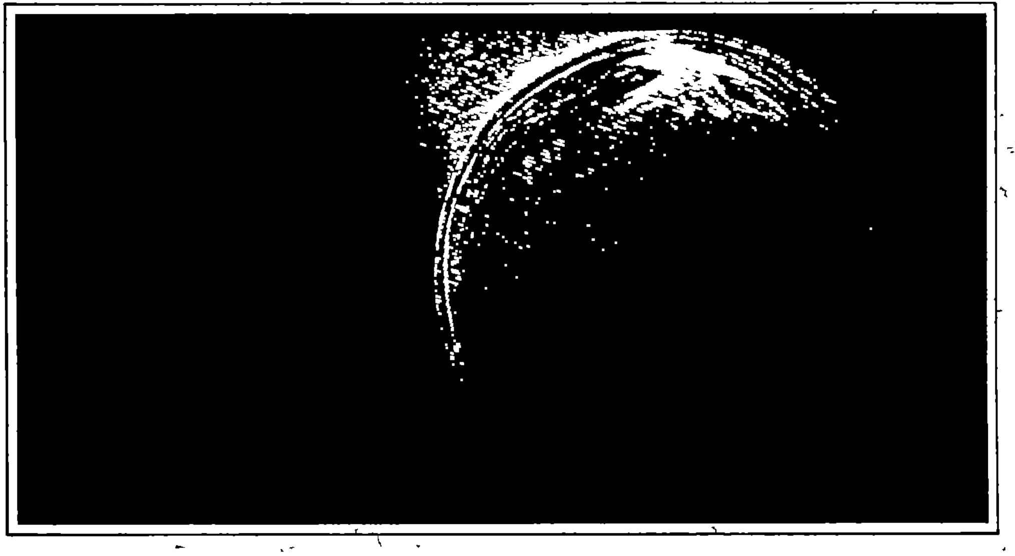
The marketplace.
As seen by ITC, India's largest exporter.



ITC is one of India's leading private-sector companies. Its annual group turnover, in excess of Rs. 3000 crores, is drawn from several businesses: tobacco, cigarettes, hotels, edible oils, packaging and printing, paper, board, computer software and financial services.

Eighty-two years of operating throughout India and access across the world make ITC the ideal trading partner. And, as the country's largest exporter, it offers a variety of value-added products and services.

From branded vegetable seeds, tea, coffee, spices, oilseed extractions, tobacco products and marine foods to mouth-watering Indian cuisine at Bukhara restaurants abroad. From exquisite handicrafts, carpets, garments and leather goods to paper, board and printed packaging. From tailor-made computer systems and software to contemporary comforts at the Sheraton-affiliated Welcomgroup hotels in India.

With offices stationed around the world, ITC's International Business Division is always at hand to procure and deliver quality merchandise.

So, if you wish to do business with India, talk to us. We've made the world our marketplace.

Bush-Yeltsin Accord ● Earth Summit Outcome ● Burma

VOL XXX NO 36 SATURDAY JUNE 27, 1992 Rs 5

POLITICAL NOTEBOOK

Electing the President

The process of electing the country's next President has been set in motion with the Congress and sections of the Opposition filing the nominations of Dr S.D. Sharma and Prof G.G. Swell respectively for the country's highest office.

The developments relating to the choice of Presidential candidates have revealed the failure of the consensus approach by means of which a commonly agreed personality could have been projected for occupying the post. This happened primarily due to the Congress' inability or reluctance to simultaneously come out with the names of the nominees for the posts of both the President and the Vice-President, as had been suggested by certain Opposition leaders and tacitly accepted by Prime Minister Narasimha Rao. Dr Sharma is a person who is by and large non-controversial like our outgoing President, R. Venkataraman. However, even if the Prime Minister had held consultations with the Opposition leaders on his nomination (and secured public support from the CPI-M to his candidature) various factors including problems within the Congress prevented him from coming out with the name of the Vice-Presidential nominee. This has evoked criticism from the CPI-M leaders who had already voiced their decision to back Dr Sharma and did not deem it necessary to change their stance subsequently.

The BJP too was not averse to Dr Sharma but was insisting on the Vice-Presidential post going to a figure from the Opposition. Having failed to elicit a favourable response from the Prime Minister on this demand they decided to sponsor Dr Swell whose candidature for Presidentship was first mooted by none other than the Socialist firebrand, George Fernandes.

The CPI-M's decision to back Dr Sharma injects a new element in our polity. The party's Polit-Bureau has described him as a man of stature and underscored his "progressive" credentials. Nevertheless, this support to a candidate sponsored by the Congress is bound to fuel speculation of a Congress-CPI-M understanding (if not a "deal" between the two parties) on the national plane that could have far-reaching implications. Actually the CPI-M is more keen on getting an eminent and disinguished personality from the South—a member of the Scheduled Castes—elected as the Vice-President. Hence its decision to back Dr Sharma as part of a package deal the Prime Minister had reportedly promised to the Marxist leaders but eventually could not come out with due to compulsions within the ruling party.

One fall-out of these developments has been the divergent positions of the National Front and the Left on the Presidential nominee. With V.P. Singh stressing the need to have a candidate from the SC/ST category for the post of the President, the Janata Dal had practically no option but to back the candidature of Prof Swell, a Scheduled Tribe (Khasi) from Meghalaya. Thus caste

became the real factor in the choice of the candidate. This is not to belittle the strength of the argument that an SC/ST as the President would have a symbolic effect on the lowest sections of our society. But excessive stress on the SC/ST criterion created a confusing situation, reference to which was made by several leaders at the stormy session of the National Front on June 23 that ended with the Front's eventual decision to back Prof Swell. On the other hand, the public statements of the CPI-M leaders—notably Jyoti Basu, the West Bengal Chief Minister, and Harkishan Singh Surjeet, the party General Secretary—in support of Dr Sharma before consulting the National Front leaders with whom they have a special relationship, also added to the confusion. In sharp contrast the CPI General Secretary, Indrajit Gupta, took a balanced position upholding the Left's principled approach to the problem that was reminiscent of the manner in which the CPI/CPI-M had sponsored such an eminent figure as V.R. Krishna Iyer as the Presidential candidate in 1987 when efforts were afoot in the Opposition ranks to evolve an opportunist alliance to ensure a second term for the person already occupying the office of the head of state, Giani Zail Singh.

One only hopes that the prevailing hazy scenario would be shortlived and issues of substance would come to the fore before long, that is, by the time the Presidential poll actually takes place.

June 24 *S.C.*

COMMENTARY

India and US

K. ELANGOVAN

The official level talks between India and the US to discuss the regional and global approaches in tackling the vexed issue of nuclear proliferation as well as to exchange views on the set of confidence building meausres that have been taken or are being contemplated, have failed to bridge the wide gulf which exists between New Delhi and Washington on the question of India signing the nuclear Non-Proliferation Treaty. Contrary to assertions in sections of the Indian media that Washington was not pressurising New Delhi to conclude the NPT, the fact is that the talks—led by Ms Teresita Schaffer, the US Deputy Assistant Secretary for South Asian Affairs, and Chandrashekhar Dasgupta, Additional Secretary in the External Affairs Ministry—only helped to bring out in bold relief the divergent standpoints of the two countries: Washington's long-term objective is to finally get New Delhi to sign the NPT while India's long-term perspective is to resist any such move that would strengthen the current advantage which the nuclear haves possess to the detriment of the others thereby striking at the roots of both disarmament and equal security for all states.

The talks also revealed the US opposition to global non-proliferation on the alibi that such an approach was impractical as it was unworkable. Hence pragmatism demanded a regional approach to the problem spelt out in the proposal for the so-called five nation conference aimed at making South Asia a nuclear weapons-free zone. This proposal has been mooted by Pakistan but its copyright belongs to the US. Thus Washington was keen to enlist New Delhi's support to the move.

The Indian side forcefully conveyed its reservations to the proposal in the wake of the steady Chinese nuclear build-up and Pakistan's feverish activity to acquire nuclear weapons capability. It is learnt that the tenability of the Indian concern on these two counts has been grudgingly recognised by the US side. This is being tom-tomed as a great "victory" for South Block by the Indian proponents of closer ties with the US even at the cost of our self-respect. Of course, we should be grateful for small mercies without for once being oblivious of what the US is doing against our sovereignty.

While there is nothing objectionable in holding such talks as those that took place in New Delhi on June 18 and 19 between the officials of the two sides, one is entitled to take serious exception to the manner in which our Finance Minister, the distinguished Dr Manmohan Singh, went out of his way to officially meet Ms Schaffer, who is just a Deputy Assistant Secretary in the US State Department. It is well known that Dr Manmohan Singh's credentials as a champion of Indo-US bonhomie have of late acquired a new dimension with his piloting of our new economic policies in collaboration with the World Bank and the IMF officials. But such actions as his meeting with Ms Schaffer only amount to devaluing the august office he currently holds, not to speak of erosion of India's prestige and authority. (In fact the Ministry of External Affairs was kept completely in the dark on such a meeting between Dr Singh and Ms Schaffer.)

And this at a time when the US President has reportedly decided to place India, alongwith four other countries, in the list of the Third World states to come under increased surveillance of the world's premier intelligence agency headquartered in Washington—the notorious CIA! Notwithstanding Dr Singh's eagerness to raise Indo-US friendship to a higher level in the company of even junior US officials, the self-dignity of the people of this great country would never countenance such moves in the light of President Bush's arms-twisting and blackmailing tactics. ■

Meaning of Washington Summit

SUMIT CHAKRAVARTTY

Regardless of the compulsions on the part of the Russian President, Boris Yeltsin, that were instrumental in effecting drastic cuts in the Russian strategic nuclear arsenal it inherited as the real successor of the erstwhile USSR, the historic nature of the Bush-Yeltsin accord on elimination of nuclear armaments can barely be overestimated by any serious observer of nuclear disarmament. Indeed the process of nuclear disarmament itself has acquired a "dramatic impetus" as a result of this accord, a point highlighted in influential sections of the Indian media as well.

Let us take a closer look at the accord. The Strategic Arms Reduction Treaty (START), signed by the US President, George Bush, and the former Soviet President, Mikhail Gorbachev, at their last meeting exactly a year ago in the summer of 1991 in Moscow, visualised a marked reduction in the number of nuclear warheads—from over 22,000 to about 8500 by 2000 AD, something the Washington summit between the two leaders in May-June 1990 had failed to achieve even though the summiteers had met for the first time not as political adversaries. At Moscow the next year it was more than clear that with its burgeoning economic crisis the Soviet Union under Gorbachev was seeking a new kind of relationship with the US, one whose content would emphasise its inequality. Yet even in Moscow last year with Gorbachev at the helm the Soviet Union's superpower status was not in the least in question. Nor was Moscow's strategic parity with Washington in terms of nuclear weapons. The August coup later that year and the events it triggered thereafter, leading to the disintegration of the Soviet state itself, changed the entire scenario even on this score.

The Washington summit between the US and Russia—Bush and Yeltsin—has gone much beyond what the Moscow summit between the US and the USSR—Bush and Gorbachev—achieved last year. Thus it has been agreed that the nuclear warheads on both sides would be slashed to a total of 6500 by 2003 AD. For weeks there was speculation in the media as to whether such a drastic cut in nuclear weapons was at all possible as it would strip Russia of its strategic parity with the US in the nuclear field, the basis of its superpower status. In fact the key issue was the largescale reduction of the SS-18 and SS-24 intercontinental ballistic missiles (ICBMs) whose destruction the Russian experts had made conditional on the US scrapping of its sea-launched ballistic missiles (SLBMs). The final agreement shows that US concerns on the preservation of the SLBMs have been by and large accepted whereas the Soviet land-based ICBMs, the SS-18s in particular, are to be substantially curtailed.

The unequal status of the Russian state in its dealings with the US had become transparent even during the Gorbachev period. The tyrannical Stalinist regimentation—a variant of fascism—that curbed democracy and individual initiative since the twenties as well as the thoroughly unplanned expenditures incurred on defence during the Brezhnev rule (also a consequence of the lack of democratic accountability) were primarily responsible for such a state of affairs. Hence there was not much point in Russia clinging on to its concept of "strategic parity" (which, incidentally, was perhaps the sole achievement of the Brezhnev era–a point spelt out in Gorbachev's report to the Twentyseventh Congress of the Communist Party of the Soviet Union in 1985). However,

Double Standard

One spoilsport journalist at the Yeltsin-Bush press conference just could not resist firing the question at President Bush: "Would you explain .. why friends (Russia and the US) who trust each other and do not plan to attack would still need 7000 nuclear warheads?" After beating rather long about the proverbial bush, the US President is reported to have said: "Who knows what lies out ahead?"

There lies the catch. The US and Russia quite understandably want to keep some of their powder dry and in reserve for unforeseen eventualities. Yet, paradoxically enough, the US does not want the same national precaution to be observed by any other nation. Without batting an eyelid only a day earlier the US President and his Administration had slapped fresh missile control sanctions against India, China, Iraq, North Korea and 17 other countries. The new sanctions as listed by the US Commerce Department provide for tighter controls on people and materials likely to be useful to these countries in building missiles or launch vehicles for war or peace. India's satellite launch vehicles are specifically included in the US hit list, as if the Indian space programme is geared to war and not peace. Replace the word war with defence, as the US does for itself, and India's or any other country's democratic choice for its own destiny becomes all too apparent. But as the lone superpower in today's world, the US simply cannot see any other country exercising the choice. One law for the US and another for the rest of the world.

(Editorial in *National Herald,* June 20, 1992) that in today's context such a development would give a further fillip to the hegemonic ambitions of the US adding a new dimension to the pronounced drift towards unipolarity in a broadly multipolar arrangement following the collapse of the bipolar global structure synchronising with the demise of the Cold War is a fact of life that cannot be ignored. While Yeltsin and his aide, the Russian Foreign Minister, Andrei Kozyrev (a well known pro-Bush "cowboy" whose appeasement of the occupants of the White House has won him derision from even the noted radicals still aligned to Yeltsin), are apparently responsible for acceptance of such a situation of inequality, the roots of such a development can be traced to the days of Stalin. For the statist socialism built under Stalin's orders without even a semblance of democracy could not have been sustained for any length of time. It could survive for such a long period only because of the Soviet, primarily Russian, people's extraordinary resilience and stoicism to withstand adversities and endure hardships that cannot but startle and evoke a sense of deep admiration for them in the minds of close observers, as this writer.

◆

BE that as it may, in the overall global perspective the Bush-Yeltsin accord's unique significance cannot be missed by any dispassionate analyst. Indeed most of the serious commentaries have brought out this fact in sharp focus. They have underscored that the highly positive element of such a development cannot be glossed over. At the same time any realistic assessment of the Washington summit must take into account the fundamental reality: the last pillar of the countervailing force constituting the erstwhile Soviet Union has been demolished. As Jim Hoagland writes in *The Washington Post*:

> By dropping Moscow's insistence that arms control agreements result in "parity", or equal levels of residual forces, Mr Yeltsin has acknowledged that Russia may continue to be a great military power in the world, but not more—not the accepted or aspiring equal of the United States
>
> That is the symbol Mr Yeltsin discarded In giving up by the turn of the century all his country's SS-18 missiles—multiple-warhead ICBMs that put the US nuclear strike force at risk—he loses his military's most threatening weapon

Yeltsin's predecessor Gorbachev had a comprehensive global vision—indeed a true measure of his contribution to world civilisation would be available much after his demise, contrary to what the one-track Stalinists in the erstwhile Soviet Union or countries like India might say—which both Yeltsin and Bush lack.

So, in a command performance in the US Congress Yeltsin underlined that he was doing all this to secure enhanced economic aid from the US. He bent over backwards to pledge that he would "personally return 'to his family' any missing GI still in Russia"—a statement that has provoked a bitter controversy inside Russia. No doubt his speech was well received and he won a standing ovation in the Congress. Now it is to be seen how much time the Congress would spend before passing the Bush Administration's Freedom Support Act authorising a $12 billion increase in the US commitment to the International Monetary Fund—an essential component of the $24 billion package to bail out Russia from its current economic crisis that Bush has proposed.

Interestingly, Yeltsin's move on arms cut will not be received kindly in Russia for varied reasons. As Vladimir Radyuhin writes in *The Hindu*:

> The resounding success of Mr Yeltsin's visit to the United States may help him win the sympathies of the American people and get Western credits but it is unlikely to raise his popularity at home. For one thing, the Opposition will try to capitalise on Mr Yeltsin's rejection of the principle of strategic parity with the United States, which for 30 years formed the basis of relations between the two superpowers. Opposition leaders have already accused Mr Yeltsin of surrendering Russia's sovereignty and succumbing to US dictat.
>
> These arguments, however, have long ceased to carry weight with common people in Russia who are more concerned with earning their daily bread They do not mind giving up military parity, or any other attribute of a superpower for that matter, if it helps ease their hardships. But the problem with the latest strategic arms accord is that its realisation will cost billions of roubles and may create new threats to the environment and even to human lives.

◆

MEANWHILE, public opinion in the US is demanding an end to US allies rearming themselves even after the Bush-Yeltsin summit. This is quite noteworthy and striking. Thus *The New York Times* writes:

> The world has barely absorbed the stirring summit news that the superpowers have agreed to drastic cuts in their fearsome nuclear arsenals. The West can now truly look to the ex-evil empire with hope instead of horror. So what are America's allies France and Britain doing? Increasing their nuclear arsenals With US help.
>
> The British and French decided to modernise their nuclear weapons starting years ago, long before Mikhail Gorbachev resigned and the Soviet Union dissolved Unless both countries move quickly to reconsider and retrench, they will remain the captives of dangerous, mindless momentum. The Bush-Yeltsin summit talks provide a simple, dramatic starting principle Reduce nuclear warheads.

On the eve of the Washington summit in May-June 1990, Gorbachev had in an interview to *Time* said:

> As we approach the end of the twentieth century, we must recognise that we are one civilisation. This simple but important truth should tell us a great deal about international politics and international relations. There must be a balance of interests; otherwise new upheavals await us. To accept the idea of mutual security means abandoning the idea of 'world leadership', which implies supremacy over others.

This voice of reason, based on Gorbachev's own new political thinking, is being sought to be drowned by the drumbeats signifying the US' shortsighted hegemonic designs following the end of the Cold War.

(Continued on page 33)

Balance-sheet of Rio Conference

NIRMALA LAKSHMAN

When the Earth Summit came to an end in Rio de Janeiro last week, it saw the largest gathering of world leaders ever in history chalking out with impassioned rhetoric a blueprint for the survival of the planet. However, for the Summit to become a defining moment in human history, the grand phrases and lengthy documents that emerged from the 12 days of intensive inter-governmental negotiation have to translate into forceful and meaningful action. And indeed, if the earth's sustainability has to be guaranteed for future generations, the followup to the Earth Summit is in many ways more important than the Summit itself.

As the meeting of governments wound up in Rio de Janeiro final approval was given to new principles of environmental stewardship but the Summit failed to obtain specific financial resources urgently needed to contain global environmental degradation. In assessing the outcome, opinion was sharply divided. There were some who felt that as the beginning of a new political process in a post-Cold War world of global cooperation, the Summit was a landmark event and there were others who expressed bitter disappointment that at the end of it all the world continued to be divided as sharply as ever between the rich and the poor, the powerful and the powerless, between the world's structured mechanisms and great bureaucracies and those that are its perpetual victims. Both the UN Secretary-General, Boutros Ghali, and Maurice Strong, the organiser of the United Nations Conference on Environment and Development, have warned in their concluding remarks that the current level of commitment is not comparable to the size and gravity of the problems.

However, the historic communion of nations in Rio de Janeiro did acknowledge that the world has radically to change its approach to economic growth and the problems of underdevelopment in the South. The basis of this new perception is not a sudden vision or charity from the nations of the North but their realisation that unless they radically alter their self-centred consumptive and profiteering lifestyles their own futures are gravely imperilled. Cuba's President, Fidel Castro, succinctly summed it up at the Rio conference by reminding the participants that what has to be paid to the earth is the ecological debt of the rich nations and not the foreign debt of impoverished countries who are the victims of economic colonialism as much as they were of the old political imperialism. As a result of all this the positive consequence is that the voices of the developing world were heard as never before. For instance, India and Malaysia doggedly opposed the move towards an international forest convention and after intense debate managed to reorient some crucial clauses in the statement on forest principles that would keep local community interests firmly tied in with programmes to protect forests. And yet it was a question of running to stay in place, "to not lose what we already have", as one Indian participant observed.

◆

AMONG the tangible achievements of the Rio conference was the signing of two conventions, one on Biological Diversity and another on Climate Change by 153 nations. The delegates also approved by consensus three non-binding documents: a statement on forestry principles, a declaration of principles on environmental policy and development initiatives, and Agenda 21, a programme of action into the next century in areas like poverty, population and pollution.

The environmental linkage gave Third World countries a new bargaining power at the conference and although funding and funding commitments fell far short of expectation, many Northern nations increased their specific contributions. Japan, for instance, has agreed to an increase of $ 1.4 billion a year in environmental assistance, doubling its past funding. The US has similarly doubled its aid next year by committing $ 750 million. The setting up of the new Commission on Environment and Sustainable Development will be an important first step if the Summit's work is to see results. It is expected to monitor and oversee the promises made in Agenda 21. Secondly, the contribution of non-governmental organisations both in the Preparatory Committee meetings leading up to the Rio conference and in the conference itself has substantially altered the contents of Agenda 21 to deal with concerns that may have never been identified or voiced without their participation.

Throughout the Rio conference, NGO pressure groups kept up their inputs either as members of their country's official delegations or from the Global Forum which was a parallel summit of NGOs where some of the deepest concerns of the ordinary citizens of the world were voiced.

However, the vague mapping out of future course for the earth is simply not enough. Even 20 years ago at the first environment conference in Stockholm, the UN called for a 0.7 per cent of GNP from the developed world as a target of ODA assistance for environmental programmes. The scandalous reluctance of the US to be drawn into a commitment for aid provided a bad example for some European nations like Great Britain and Germany who made statements committing themselves to an ultimate 0.7 per cent of GNP but refused to target a date for their aid despite pressures from France and the Scandinavian countries to be more generous and specific. A torrent of criticism of the US role in the conference was inevitable as the Bush Administration appeared sharply divided in terms of political perceptions and ideology. Its preoccupation with domestic problems in an election year left it isolated and utterly marginalised. There was no question then of even any pretext of environmental leadership from the US, in the global context. It refused to sign the treaty on biological diversity saying that it did not protect the biotechnology interests of private research laboratories in the North, and it insisted on a watered down convention on climate change by saying that "jobs at home" had to be protected above global environmental concerns.

The disappointment over targets and time-tables was a matter of deep concern to many who had hoped for much more from the Summit. The eminent scientist, Dr M.S. Swaminathan, said that the conventions are disappointing in that they postpone firm decisions. In an interview with *The Hindu*, Dr Swaminathan pointed out that the conference of parties who will effect the final binding process of the conventions is to be convened within a year which, in his view, is very late. The text of the treaties also talks about 'mutually agreed' terms, said Dr Swaminathan who fears that there will be scope for pressure when it comes to bilateral agreements in areas such as Intellectual Property Rights. 'The unspecified financial resources are also unlikely to take the programmes very far,' said Dr Swaminathan. He argued that Agenda 21 is too much like a big shopping list and had not focussed enough on the five major issues—poverty (only referred to in chapter 3 without prioritisation of action), population stabilisation, pollution and public policy for action. Although the Rio conference was an important exercise in global public awakening, it is not specific and integrated enough in its programme, said Dr Swaminathan. The richest 20 per cent of the world enjoy 82.7 per cent of the income and the poorest 20 per cent have only 1.4 per cent of the global income and these are the odds that we have to contend against, he added.

The other serious drawback to forging a new partnership among nations is the inherent failure at the UNCED to address the basic issues of power structure and international relations, especially in economic terms. At a panel discussion in the NGO global Forum on "Who controls the world after UNCED: the World Bank and the IMF, a restructured UN or the people?" during the Rio conference, participants agreed that much of what was done or agreed to in the UNCED will be negated by the Uruguay Round of the GATT. Anil Aggarwal, Director of the Centre for Science and Environment, New Delhi, who was also a member of the Indian delegation to the Summit, said that the World Bank and the IMF were operating in the Third World in such a way that these countries were forced to open their markets to the transnational corporations and 'enormous destabilisation' was occurring through their structural adjustment policies and the devaluation of currencies in these countries. Aggarwal said that the developing countries were in effect becoming the bonded labour of the North. Walden Bellow of the Philippines pointed out that some 70 countries of the South were under the Bank's influence through its structural adjustment loans. In India the interest of transnationals in the food industry is, for example, a worrying trend. And the main areas of interest for the North are drugs, pharmaceuticals, agriculture (including seeds and gene banks), GATT and IPR, and the Earth Summit did not focus enough on these matters.

Further, the Global Environment Facility which is to be the organisation that will disburse funds for environment projects worldwide is to be jointly administered by the UNDP, UNEP and the World Bank. Although at Rio promises were made about the early restructuring of the GEF (following its Washington meeting two months ago) and for democratic decision-making, there remains a great deal of scepticism about its potential role in financial disbursement to the Third World nations. The connections between unfair international trade practices, protectionism in the North, aid packages and loans are only too obvious but did not merit adequate attention at the Summit.

Food security and poverty were not also specifically addressed by the Summit although rhetoric on these abounded in documents and speeches. The issue of consumption patterns was also given the go-by and the same broad-principle treatment at the Summit. Although the Kuala Lumpur meeting of the South

Rio and New Order

NIKHIL CHAKRAVARTTY

What is the message that has come from Rio? The massive gathering at the Earth Summit with the unprecedented turnout of various denominations of activists from all parts of the world, gave it a truly global character which no other international gathering of the past could claim.

This was really the occasion for designing at least the contours of any new world order. And it was precisely on this occasion that the President of the United States emergedas a pathetic figure, standing in icy-cold isolation before the entire comity of nations. President Bush talked of the leadership role of his country in the world of today, and yet he could command neither moral respect nor political authority in the biggest worldwide gathering of the century.

It would be a mistake to look upon the Rio Summit as a demonstration of North-South polarisation. One has to take into account the tremendous role played in the struggle in defence of global environment and against pollution by millions upon millions of activists and scientists and a host of concerned citizens in the developed countries of the North. In fact, it is their unrelenting pressure which contributed in considerable measure towards getting their governments respond to the challenges that the rest of humankind posed at Rio. Even in the USA, a very large body of informed opinion has been asserting more and more against the fearsome consequences of unbridled consumerism which pollutes environment with utter profiligacy.

The isolation of President Bush at the Earth Summit was, therefore, not just a question of his country's imperious-veto on the needs of the Third World or even its failure to carry along with it the allied governments of the North. President Bush stood like a symbol of a bygone world order that has no future, it represents the empty narcissism of today which shall not last tomorrow. One is reminded of the vainglory, the arrogance and the venality that gripped the Roman Empire before its decline and fall. The glory of the sunset is the precursor of the darkness of the night.

It would be juvenile to have expected that at Rio all the resources for protecting the planet would be readily forthcoming, that the polluter would pay without a murmur, that the Bush Administration would readily open its purse-strings and undertake to compensate for cornering the largest chunk of natural resources that the USA consumes to keep up its unsustainable growth. What President Mahatir of Malaysia had demanded no doubt set the tone at Rio, but nobody with a sense of realism would claim that the war could be won by one single battle. The fight has to go on, bitter, protracted fight for the protection of the globe as a whole. To expect a predator to emerge overnight as the protector amounts to infantile day-dreaming.

What has been achieved at Rio is that the problem of environment has come to be recognised as central to saving this earth—not just the warning of a distant apocalyapse, but inscribed on the agenda of this day and age. Chernobyl and Bhopal stand as symbols of mass destruction in our times, and they must not happen again anywhere.

◆

THIS brings us face to face with a basic question of this century. Advance in the field of science and technology poses a challenge of contraries—on the one hand, it marks triumph of the human genius, and on the other, threat to the human species itself. If the splitting of the atom was a revolutionary achievement of human ingenuity, Hiroshima appeared as the symbol of ultimate annihilation. Here is the interface of *Shiva* and *Rudra*, what Marx would have called the interplay of dialectics. Technology can certainly be a good servant but a bad master for humanity.

The experience of the nuclear threat brings out this dilemma. What Hiroshima signified is the arrival of a weapon in human hand which threatens the very person or country that uses it. All other weapons of war in the past could destroy a target, the enemy, but the nuclear bomb has shown that it threatens to destroy its user as well. And yet two powerful establishments in the twentieth century went on stockpiling this weapon, the more advanced, the more lethal varieties of it, for full four decades, until they both had to declare, as Gorbachev and Reagan did at the superpower summit in Geneva in 1983, that the nuclear war cannot be won and must not be fought.

If the nuclear war cannot be won, then why go on spending billions on it? Why President Bush who could not underwrite his country's financial obligation for saving the planet at Rio, should go on sanctioning much larger spending on nuclear weapons armoury for his country and its allies? Because, the mystique of nuclear weapon is kept up as a symbol of military power—not its use, but the threat to use it to browbeat others. That is why there is such strenuous pressure by big powers on India and Pakistan not to have the bomb, while there is no move to destroy their own stockpiles of the same nuclear weapons. Here is a case of a twentieth century voodoo while the gifts of science and technology perfected in the laboratories and factories of these very countries offer the promise of a pollution-free planet, endowed with an environment that shall sustain the full flowering of the humankind.

Precisely in this context one has to place Indira Gandhi's warning at Stockholm in 1972 that poveerty poses the greatest threat to environment. To keep the majority of humankind in a state of poverty and deprivation so that the developed countries of the North can corner all the gifts of natural resources and indulge in reckless pollution of the earth and the atmosphere above, is the road to certain extermination of the human race. The ghastly imbalance between the Have and the Have-not, between the affluent North and the deprived South, militates against the very law of nature apart from the sheer immorality of it.

What is more important is that such a grotesque design of human society even if it is sought to be established, is by no means realisable in today's world in which the downtrodden are no longer the dumb driven cattle but have awakened and are becoming more and more articulate. Herein lies a byproduct of the advance of productive forces. A serf with the plough could be kept in a state of utter ignorance, but a skilled worker in a factory has to be a literate; and today in the technological age, the person at the computer has to be educated. With each advance in the productive forces, knowledge has to be imparted in growing measure, and with knowledge comes the awakening of the human spirit which in the final analysis can never be enchained.

This is not just emotional wishful thinking, but is borne out by the inexorable march of history. The angry outburst at Rio at the vulgar demonstration of the affluence of the developed North can only act as a spur for the South to assert and secure its freedom from impoverishment. The urge for social justice cannot be smothered by the lords of the North celebrating the demise of Soviet communism.

◆

RIO imposes a tremendous responsibility on a country like ours. Our Prime Minister was right in pointing out at the Earth Summit the linkage between development and environment. There can never be sustained development by destroying the environment, nor can the environment be protected with the world's majority kept in a state of penury and underdevelopment.

We have to go deeper and point to the fact that the model of development that the North has adopted—insatiable grabbing of the world's resources and ever increasing consumption of energy, is not only resulting in the frightening depletion of the natural resources but is directly vitiating the environment and leading the humankind towards its very extinction. Science has discerned the evil effects of this model of development pursued since the Industrial Revolution.

Here comes our specific responsibility. The model of development we adopted after independence was the one set by the Industrial Revolution—industrialisation based on the building of heavy industry. The Nehru-Mahalanobis model was precisely that. Many have attacked it as being based on the Soviet model because it provided for a public sector. But public sector as such has nothing to do with socialism. In a developing economy, when there is scarcity of capital accumulation in private hands, the state has had to intervene. The British built the railways and the postal system in a state sector in India as part of the colonial economy—not that they were laying the foundations of socialism.

In the conventional sense, the Nehru model enabled the Indian economy to overcome the devastation left behind by the colonial raj and to get on to the road of rapid development. Where it really failed was on the question of eliminating, at least minimising, poverty. Growth of the economy has been accompanied by the widening of the gap between the affluent and the impoverished, and not the other way round. And poverty does not mean only the question of hunger: with it is linked illiteracy, malnutrition and social inequity in the wider sense. All these contribute to environmental degradation which is writ large over the map of India.

The fight for environment is thus linked up with the striving for a new model of development. In fact, the entire concept of development pursued since the Industrial Revolution is under fire on a worldwide scale, and there is absolutely no reason for us to hold on to that model. When Manmohan Singh and his company of learned economists talk of globalising the

Indian economy, they think in terms of that old model of development. In our planning process, in the thinking of the leadership of our political parties, the same worn-out concept of development persists: for them all, environment is just a side issue, not central to development.

It is here, on this crucial issue, that our economists, our social scientists, our engineers and planners have to rethink and rethink hard, to develop our own model which will combine the absorption of technology with the imperatives of social justice and protection of environment. Technology, if wisely harnessed, can protect environment and not destroy it, and can go a long way towards ensuring social justice. Narasimha Rao's repeated emphasis on harnessing solar energy is an example of such a possibility. But it is no longer a question of executing a solitary technology. The entire vista of a new regime of development has to be worked out. That would not only save our motherland but inspire the Third World as well.

Here is the path that Rio beckons for our nation—for our government as also for all those who are tirelessly striving for a better India in a better world. ■

EARTH SUMMIT

Rio blazes a New Trail

O.P. SABHERWAL

Important as the road to Rio has been, what matters more is the road from Rio. This observation of President Bush at the Earth Summit lends itself to diverse interpretations about the American role in preparation of the Summit and during the UNCED itself. The fact is that the road to Rio was pretty bumpy; the road from Rio should provide a more hopeful vista.

When the Earth Summit commenced on June 3, predictions about its outcome differed widely. This, the greatest Summit of nations, could change the world, could save the Earth, or be a disaster of global proportions. Such widely differing assessments emerged from the nature of the challenge itself, a challenge on the environmental front related to the interaction of man with nature over the last 150 years, which questioned the modern industrial-technological impact on the Earth's ecosystem.

On the other hand, the eve-of-Summit posture of North-South confrontation lent a new dimension to the problems that this great gathering of nations was faced with. And yet the Earth Summit has witnessed a forward thrust by the participating nations. Instead of confrontation and breakdown, the UNCED has witnessed the emergence of North-South cooperation and a programme of joint action though nations maintain reservations and their singular point of view in many instances, and gaps remain in the environment programme, Agenda 21.

The balance-sheet of the Rio Summit, participated in by as many as 115 heads of state and government, is positive all along the line notwithstanding the acrimony and debate packed in 12 days' intensive deliberations. The instruments and documentation emerging from the UNCED have clearer, better defined objectives and perspectives, backed by a plan of action, such as no international summit of this magnitude has produced.,

At the same time, there is no use glossing over the issues on which the North and South clashed and their interests and viewpoint were sharply at variance. The point is what are the processes that brought about the change? And what is the panoramic view of national positions on key issues that has emerged?

During the preparatory stage of the Summit the issues on which the North-South cleavage was projecting itself could clearly by seen. Forestry and funding appeared to be on top. The plan of action was being pulled and pushed by the two sides to suit their respective interests. And as regards the two conventions—or treaties as the Americans describe them—the Convention on Climatic Change and Convention on Biological Diversity, there were key points on which the North and South differed. The North avoided a deadline being placed in the action plan on cutting down of carbon dioxide and other pollutants' emissions in their countries causing the maximum damage to the ecoystem. But compromise and mutual accommodation prevailed and a broadly

The author, who is the Chief Editor of India Press Agency covered the Earth Summit at Rio de Janeiro.

acceptable draft of the Convention on Climatic Change emerged on the eve of the Summit. But as for the Convention on Biodiversity, the US maintained a posture of insulation. However, on the eve of the UNCED's commencement a proposal emerged to avoid any mishap and serious deadlock by adopting a 27-point Rio Declaration largely based on principles acceptable to all.

◆

WHEN the conference commenced on June 3, at the outset what came to the fore is the Convention on Biological Diversity on which countries of the North were lukewarm and the United States categoric in its refusal to sign the Convention. Simultaneously, other differences projected themselves: on forestry and funding, for instance.

In retaliation to the US refusal to sign the Biodiversity Convention, countries of the G-77 group posed the weakness of the Convention on Climatic Change. The Malaysian Prime Minister, Mahatir Mohammad, said there was no use signing a document which put no deadline on its operative action, namely, cutting down of emission of CO_2 and other pollutants in industrial countries of the North. These initial postures of confrontation however witnessed a great turnaround with the leading developed countries parting company with the United States on the Biodiversity Convention.

On by one, all the leading industrial nations—Germany and Japan being the foremost followed by France and Britain—lined up to sign the Convention on Biological Diversity creating an atmosphere of US isolation at the Earth Summit. What is more, all these leading countries of the North elevated their decision by ensuring that the document was signed personally by the heads of government or state—Chancellor Kohl, President Mitterand and Prime Minister John Major. The Japanese Prime Minister, Kiichi Miyazawa, though he could not come over to the Earth Summit, nevertheless signed the Convention by a special satellite relay.

This was a signal for change in the Conference leading to a mellowing down of confrontationist postures and paving the way for compromise on key issues.

It was the forestry question that flared up next despite the changed atmosphere in the Conference. The initial American position was to have a convention or treaty which in effect would globalise the forest wealth of the South, their main resource and asset. In lieu, the Americans offered money for upkeep of forests in India, Brazil, Malaysia, etc. and other countries of the South. The American woodlands in Texas and other states were, however, to kept out of the treaty's purview on the plea of these being private assets, as against tropical forests being government-owned.

However, the South put up determined opposition to the US move which had backing from other the countries of the North. "The US finds it more profitable to have forests in India than in Texas," India's Environment and Forestry Minister, Kamal Nath, told this correspondent. It was Kamal Nath's dogged fight with support from the entire G-77 group that turned the tables. The upshot was the adoption of Principles on Forestry unanimously by the Conference. These golden principles on Forestry unanimously by the Conference.

The mood of give and take found its expression in the matter of funding. The important thing is that the South won its principled stand unreservedly, namely, that pollution is mainly the upshot of the North's actions and it is the North that must pay for the clean-up. Secondly, that environment protection has to go hand in hand with the South's development plans. They are co-related. On this score it is Japan and Germany who have led the movement for a change of stance in the North. This occasioned a banter from President Bush who complained that while his Western partners were lavish in making promises, America believed in action.

However, Japan and Germany have not lagged behind in 'action' either and have stolen a march over US. The Japanese Prime Minister has already announced an ODA commitment of 7.7 billion dollars for Agenda 21 programme implementation. It is true, however, that Japan has maintained a low-profile in the conference deliberations, taking only constructive postures, and especially avoiding Bush baiting, which directly or indirectly had at one stage in the conference become a sort of fashion. It is this that won great applause for President Castro when he took his seat in the heads of state deliberations.

Consequently, the United States has to an extent wilted under the many-sided pressures on its leadership on the environmental front. Though President Bush has yet refused to sign the Biodiversity Convention, he has nevertheless called the Earth Summit a "truly historic gathering" and promised to step up American funding in environmental programmes by 66 per cent. However, while the US went to the UNCED asserting its leadership role in the world today, the US President has emerged from Rio visibly reduced in stature and height.

The Conference should be seen as having altered the global lay-out in the North-South configuration. While overall, the Summit represents a signal upswing for the South, if not a victory, the major countries of the North, with Germany and Japan playing the leadership role, have changed the pattern of North-South interaction. Is this an indication of shape of things to come in the comity of industrialised nations? Viewed thus, Prime Minister Li Peng's remark that the UNCED "will turn a new page in the world history of environmental protection and development" may not be over-optimistic.

◆

TAKING an overview, some notable facets of the Rio Summit have already emerged, while its long-range impact will crystallise over a period of time.

First and foremost, the major environmental problems, hitherto ignored, have been pushed to the top of the world agenda. Alongwith issues of economics of the nations and their security concerns, environment now ranks as a top global issue.

As Dr Swaminathan, the noted agro-scientist, told this writer, after Rio the consciousness of the world had been roused over environmental issues. That is an attainment of the Rio Summit.

Two: In a sense, UNCED has set in motion new pressures on the rich, which even the mighty US cannot afford to ignore. The compromises which the American stand on crucial issues—from biodiversity to forestry and funding—had to undergo at Rio in the course of the 12 days of gruelling debate is a testimony. In its concluding phase, the Summit threw up a rising crescendo of accords on all but three issues. These were forestry, funding of Agenda 21 and atmospheric pollution, all of which were tackled on the penultimate day of the Conference in a spirit of give and take.

If the developing nations realised the need for rapport with developed nations on the quantum of funds which the rich could muster, the rich nations on their part accepted the vital fact that the industrialised nations have through the past century and a half of industrialisation made most of the pollution and environmental degradation now threatening the planet. And it is the rich who have to pay for the action programme evolved by UNCED.

Germany, Japan, the Netherlands, among others, accepted this point explicity, while even the United States did not deny this basic reality.

The third vital lesson was that development and poverty alleviation had to go hand in hand with environmental cleaning. There was realisation that interdependence and interaction of nations of the North and the South needed compromise to accommodate each other's concerns.

It was in this spirit that the contentious issue of forestry development was resolved. While the US had set out by asking for a treaty on forestry, it had to rest content with a set of Principles on Forestry which incorporated the viewpoint of the developing nations as well. Forests are now not seen as merely carbon dioxide sinks—to absorb the pollution largely created by the North—but are recognised as resources and assets of the nations possessing them. The veiled bid to limit the sovereign rights of the nations of the South over forests has been defeated.

The issue of funding was similarly resolved. The Indian point of view was that the big developed nations should not merely accept the principle of funding but should commit themselves over the quantums within specific time-frames, As Environment Minister Kamal Nath said, hitherto what the rich had accepted was only a "statement of intent", not a specific plan of committed funding. He expected the increment in ODA funding to be raised from 50 billion dollars to 75 billion dollars. The Third World nations represented by the Group of 77 were able to ensure that aid administered by the Global Environmental Facility (GEF) would have no new conditionalities.

The fourth important upshot at Rio was that the developing nations found the confidence and strength to project their point of view effectively. The Rio Summit has been unique in this sense. The consensus of the developing nations at Rio was the force—India, China, Brazil and Malaysia were its storm-troopers—which changed the complexion of the UNCED. In a way, the India-China commonality of approach provided the core. India by its dogged and persistent work on behalf of the developing nations enhanced its stature during the Conference.

Finally, the package of Conventions, Rio Declaration and Agenda 21 emerging from the Summit lays a good basis for advance in the environmental field, both as path-setting documents and an action plan. The sceptics feel that that these bulky documents—Agenda 21 is a 400-page compendium of four volumes—lack the bite and sharp thrust. However, it would be wrong to oversimplify the environmental problems of the planet and the practical way forward that the nations have to evolve. As one specialist said, these instruments will over a period of time develop teeth that will bite.

Prime Minister Narasimha Rao made the point forcefully when he said in his inaugural speech that the environment issues pose not a one-time task, but a process which has been launched at Rio. ■

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea. The country produces from the ordinary to the best teas, yet the Indian consumer does not get to drink the best. That is why APEEJAY, which is the 4th largest tea producer in the country, has decided to introduce its selectively picked high quality pure Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens. Make it the way you normally make your tea and it will give you a superb flavour and liquor. Drink this tea for 3 months and you will never want your old brand again.

Assam Frontier Tea Ltd.
Empire Plantations (India) Ltd.
Singlo (India) Tea Co Ltd.

Current Political Situation

SOE MYINT

Ever since it took over power on September 18, 1988, the military government (SLORC) has committed, without any let-up, political represssion, human rights violations and has shown callous disregard of the wishes of the Burmese people. Not only did it not transfer power to the National League for Democracy (NLD) which won the elections held on May 27, 1990; on the contrary, it unleashed political repression such as detention of the Opposition political leaders including the NLD General Secretary, Daw Aung San Suu Kyi, arrest of many members of parliment on trumped-up charges and revocation of their MP status as well as abolition of the officially registered political parties. In addition, the SLORC heightened its military offensive against the ethnic minority rebels leading to the expansion of the on-going civil war in the country. This resulted in the exodus of lakhs of refugees into countries bordering on Burma, namely, Thailand, India, Bangladesh and China.

Internally the SLORC's abuse of human rights include total curtailment of freedom of expression and political activity. Such SLORC behaviour has increasingly worsened with each passing day and has reached a stage where international organisations, human rights groups and foreign governments have also raised the level of their criticism and censure. On February 27, 1992 the United Nations Social and Economic Council adopted a resolution which condemned the SLORC and called for punitive action. The European Parliment as well as the Australian Parliament have strongly condemned violations of human rights and political repression by the SLORC. The United Nations also sent independent experts to inquire into the allegation of human rights abuses in Burma. The ASEAN countries too have hardened their attitude towards the SLORC in the wake of the forcible exodus of Muslim refugees to Bangladesh. Lastly, the governments of Norway and Switzerland have officially recognised the Burmese pro-democracy forces and have given their support and assistance to the latter.

The author is one of the two Burmese students who hijacked a Thai plane to Calcutta on November 10, 1990 in a bid to draw international attention to the cause of restoration of democracy in Burma.

Thus, in order to distract from this heightened condemnation and censure by international organisations and foreign governments and also to preempt any possible sanction by the United Nations Security Council, the SLORC has embarked on a course of deceiving and hoodwinking the Burmese people and the international community.

To recount some of the more significant actions of the SLORC from among the political initiatives it had undertaken since April 23, 1992, it would be necessary to mention the selective release of a few political prisoners including the former Prime Minister, U Nu, the SLORC's stated intention to enter into talks with Opposition political parties within two months and to hold a national convention within six months; and its declaration of a unilateral, temporary ceasefire in its military offensive against Karen rebels in the border areas.

To the casual observer, it would seem that these activities of the SLORC are geared towards the re-flowering of democracy in the country and cessation of the civil war, and therefore, positive moves. People who do not have a deep knowledge of the country or who have not personally experienced the methods employed by the army to keep the country under their control for thirty years would tend to adopt an optimistic attitude.

We need to study the SLORC's recent political moves very carefully. For instance, in the matter of release of political prisoners, it is a selective one involving a few persons. If we have to go by past experience, it is most likely that the releases were made after the SLORC got the assurances it wanted from them either through coercion or material inducements. If the SLORC is really sincere in its intentions then Burma's national leader, Daw Aung San Sui Kyi, and all other political and student leaders should be released without exception and without any precondition. As Daw Aung San Sui Kyi, winner of the 1991 Nobel Peace Prize, is esteemed as their national leader by the people of Burma, the very fact that her release has not been ordered by the SLORC means that the regime, which has always ignored the wishes of the people, is also not sincere in its intentions in this particular instance from among its many insincere actions.

◆

IN the matter of talking with the Opposition political parties within two months, it would most likely turn out to be discussions with the parties which support the SLORC, including the National Unity Party (NUP), and with those parties which the SLORC can control and browbeat into submission. Prior to the 1990 elections, there were 235 officially registered political parties in the country. Out of them, only 93 parties were allowed to contest the elections. Even these parties were subsequently either requested to withdraw their registration or forcibly abolished till, at present, only ten officially registered parties are left. These ten parties include the NUP (formerly the BSPP) and three other parties allied to it. Another party still remaining as an officially registered party is the rudderless NLD whose whole leadership is in jail for criticising the SLORC. Therefore, one can conclude that the SLORC's intention is to talk only with the parties which it can manipulate at will.

Regarding the national convention proposed by the SLORC and which is to be held within six months, it is nothing more than a ploy. The SLORC, through inducements and offer of ceasefire, made peace with drug traffickers (like the "Wa" insurgents) and some elements of the traitorous, self-centred ethnic minority rebels and intends to send them to attend the proposed national convention as ethnic minority leaders. Also, the selection of delegates to the aforementioned national convention is entirely in the hands of the SLORC and it proposes to eliminate the pro-democracy forces outside the country as well as those of the internal opposition as possible delegates. In addition, a national convention, according to its nature, should be openly debated and reflect the wishes of the people. The SLORC, however, negates both these aspects by still adhering to its policy of curbing all political activities and also prohibiting freedom of expression, and filtering all publication through the censorship of the still-in-force martial law. The SLORC's real reason for holding a national convention is the realisation of its untenable position by the verdict of the May 1990 polls. Subsequently, it began talking again about holding a national convention in order to gain time to consolidate itself and achieve a position of control over events. This ploy also serves to beguile the Burmese and international public.

The SLORC's declaration of a unilateral ceasefire against the Karen rebels is nothing more than an insincere and hypocritical measure. The SLORC previously had plans to overrun the Manerplaw headquarters of the Karens at the latest by March 27, 1992. But, after making determined assaults, the SLORC had to concede defeat. The possible fallouts from this crushing humiliation are decline in the morale within the army, insurbordination, largescale desertion, and cracks in the army leadership. To prevent these, the SLORC declared a unilateral ceasefire. The SLORC's present willingness to accept back the Muslim refugees who fled to Bangladesh is also designed to neutralise the criticism and condemnation from the ASEAN countries, previously the SLORC's main supporters, concerning the treatment and plight of these Muslim refugees.

If the SLORC leaders are really sincere at heart and would like to honour and respect the wishes of the people and work for the good of the country, they could simply hand over power to the members of parliament who won in the elections of May 27, 1990. Then, a government formed with these members of parliament could subsequently tackle the tasks of bringing to an end the civil war and forging peace in the country, holding of a national convention and drafting of a new constitution. As long as the SLORC refrains from taking this desireable course of action, which also accords with the earnest wishes of the people, its other actions are merely moves to hoodwink the Burmese people and the international community while consolidating its hold on power. Therefore, in conclusion, I would like to appeal to the people of the world, international organisations and foreign governments not to lessen, in any way, the momentum of their support and assistance to the Burmese pro-democracy forces, and I would also like to call upon the latter to maintain the present momentum in their struggle for democracy. ■

Foreign Investor and TU Bashing

JAYSHREE SENGUPTA

As India liberalises its economic policy and undertakes social reforms, it places hopes on foreign investors coming in droves to a land which we view as ideally suited for foreign investment. We have cheap labour and local raw materials and skilled personnel.

But today the happening in industrial countries, specially in Western Europe, are such that the likely investors are looking for certain types of host countries rather than just cheap and skilled labour. They want no more trouble from trade unions because despite the fact that in most European countries the union membership has declined over the past decade, trade unions have become active again. Crippling strikes have been paralysing countries like Germany and despite the decline in socialism, trade unions are playing havoc.

Recently due to the strike by the public services workers, mountains of garbage accumulated in the streets of western Germany inviting rats in the otherwise impeccable streets. The public services may have lost one billion Deutschmark (DM) or more because of the strike and the private industry also lost because employees were unable to reach work on account of transit disruptions. Trains, buses and planes at airport came to a half. The governemnt was forced to agree to a 5.4 per cent wage increase up from previous offer of 4.7 per cent. It also agreed to make one-time payments to compensate for the time that has elapsed since the previous contracts expired at the end of last year. The higher wages take effect retroactively from May 1 for low-paid jobs and from June 1 for higher-paid workers. The government has already had to pay 16 billion DM to OEVT Union (public sector employees) before they agreed to end the strike.

◆

UNLIKE the other European countries, Germany's trade union penetration of the labour force has not changed much over the last 20 years and remains at 40 per cent. Trade unions appear to be strong enough to continue agitating and during the 1980s the powerful I. G. Metall, (metal workers' union) managed to get for its members the highest wages and shortest working week in the world which also accounts for Germany's highest unit labour cost. Seeing the success of the public sector strike the I.G. Metall, which is the largest union, decided to go on strike asking for 9.5 per cent rise in wages. They argue that their claim has to be higher than that of the public sector workers who, according to their standards, are unproductive. The success of such claims will soon determine the fate of Germany's economic prosperity.

On the other hand, Germany's model of labour co-determination in boardroom decisions has helped to make German plants more efficient through close cooperation between workers and management.

Germany's private sector today faces the risk of higher taxes at a time when the costs of reunification between eastern and western Germany are already burdening its economy. The feat is that now the other strong trade unions in the country will also stage strikes in the next few weeks.

All over Europe, strikes are taking place demanding higher wages or protesting against budget cuts. In Netherlands, the metal workers' union went on strike against management plans to reduce sick pay and, in Belgium, in the town of Liege, policemen went on a hunger strike against budget cuts. Spanish labour unions had set a series of work stoppages beginning with a half day general strike to protest cuts in unemployment benefits which are part of Spain's efforts to converge with European Community (EC) and is one of the criteria for the proposed monetary union. France has experienced a 22-day strike last October from the public sector's Renault car factory workers and in Italy, around the same time, three big trade unions staged a general strike lasting several hours to protest budget cuts. They are now gearing up for another strike to demand higher wage scales.

European unions have more statutory entitlements than their brethren in the United Kingdom or the United States because European unions are supported within Europe's social market economics by big social welfare nets, job protection laws and labour co-determination. The Forum of European Trade Unions met in Prague recently where about 130 union leaders gathered and declared, "The message that should emerge from this conference is that an economic and industrial policy without a social and environmental dimension is bound to fail even as regards economy and industry.”

But now with an expanding EC, will trade unions wield as much clout? Unless the unions can unify policies in time for a single European market at the end of 1992, union aggression will become increasingly self-defeating. It may be good news for the neighbouring East European countries where many industires from Germany and France are already moving out at the rate of 10,000 jobs a year. Only the UK, under Mrs Thatcher, was successful in bashing the unions by ending their monopolies or closed shops. Membership also declined when non-union member wages were higher than the union-scale wages. Also in Britain, without Labour government in power for so many years, unions have lost their influence over national policies and have been reduced to cutting separate deals with individual plants.

Britain has insisted on an opt-out clause on the Maastricht Treaty for the European Monetary Union primarily due to its objections social convergence which would lay down rules for labour's working conditions, minimum wages etc. Britain still remains one of the lowest labour cost countries in Europe and has been able to attract American and Japanese investments. Britain will lose its attractiveness if it harmonised with the rest of the EC.

◆

IT is true that European industrialists are looking for places to relocate their industry in countries which have highly skilled but union-free labour. And they are going to East European countries, China, Mexico and even Russia. In their times, European and American capital sought and found similar trouble-free settings in Indonesia and South Korea where unions were much under control and not allowed to make demands. For many potential investors, it is important not only to offer tax incentives and higher rates of earning on foreign equity capital but it is equally important to assure them that the labour is disciplined and under control.

Foreign investors do not wish to encounter the same problems in India which they are facing at home. In spite of all the strikes and unrest, the highly productive labour of Germany and technically advanced labour in other countries of Europe will remain attractive to high-tech industries. To attract the investors to India, we have to compete with the Europeans, not just in profitability and productivity but also by assuring them of more amenable and strife-free atmosphre by successfully bashing trade unions? Is this even possible in the present state of our politics? Is it even desirable in our democracy, committed to social justice? ■

Mainstream *(August 10, 1991) carried an article by Girilal Jain ("The Past and the Future") and invited readers to a discussion on its contents. Some contributions have been carried in the* Mainstream *issues of September 28, 1991 and December 21, 1991. Here the author, who is involved in work among the landless in the Banda district of UP, presents an essay on nation-building while participating in the debate and offers several thought-provoking observations. It is being carried in two instalments on account of its length. The first part appeared in* Mainstream *(June 20, 1992) This is the concluding part.* —Editor

Is BJP the Party of the Future? — II

An Essay on Nation-building

LALIT UNIYAL

The real difficulty with the BJP is that it is not a product of the Renaissance and reform movements, nor of the Freedom Struggle. It is an outgrowth of an emotional and irrationalist tendency first manifested in the RSS. Whenever it speaks of any of the Renaissance figures, this is done for emotional appeal rather than for logical compatibility with the BJP's own philosophy.

It is shocking and alarming to see a universal sage like Vivekananda being sought to be reduced to *Hindutva* proportions by the RSS and BJP. He was one of our great modernisers who strove to reconcile the Indian religious tradition with secular and socialist humanism. His great Guru, Ramakrishna, had practised and experienced the truth of all religions, and the insistence on the truth of each and every religion is a central and unwavering message of Vivekananda. He wished to see the triumph of truth in all religions, and not the victory of one religion over another And his social teaching is succintly expressed in the words he uttered towards the end of Nivedita. "Remember", he had said, "the message is: Women and the Masses."

Gandhiji had clearly indicated that for him swaraj meant not so much Independent India as liberated Indians. Vivekananda, whom I have quoted in the early part of this essay, had said that the first step to be a patriot was to be restless and concerned for the poor and he held every man to be a traitor who did not pay heed to them. It is this humanistic patriotism that the BJP lacks but seeks to conceal behind its mysticism of Mother India. And it is this absence of compassion that makes it relatively indifferent to the poor, and unsympathetic to the whole tradition of socialist thought. The collapse of communism is being rather facilely treated by it as a victory of capitalism. It is in fact a defeat of authoritarianism and a victory of the open-ended but difficult search for a better society. Communism was only the most immediately successful but not the best nor most idealistic representative of socialism. For there is also a socialism that is less concerned with the capture of state power and more truly rooted in moral and cultural transformations, one for which the critical activity of the masses is the centre and the institutional structure the periphery—and not the other way round as it has been with communism.

◆

BUT the criticism of the BJP does not end here. Because it is not a product of the Indian Renaissance but is an outgrowth of an irrationalist tendency (that is, fears and hatreds), it is not even properly representative of the indigenous culture of the country. It goes by the letter and the forms, and its conceptions have an unmistakeable woodenness about them. This is because it does not grasp and has nothing to do with the spiritual essence of the religious and philosophical traditions of India. The spiritual is not something mysterious or imaginary, it is the sense of oneness pervading all. Its natural effect and expression

Note : The quotations in the first part of this article, carried on pages 19 and 22 in Mainstream (June 20, 1982), are from Rebuild India by Swami Vivekananda.

is to make one rise above self-centredness and to see and seek the union and brotherhood of man. It is the one source of all that tends towards universality in our culture and it alone accounts for the large sympathies and the recurrent synthetical tendency of Indian civilisation. Universality is not the imposition of a single idea or belief upon all but the tendency of a culture to produce men who can sympathetically enter into other traditions, return enriched and help enlarge their own. Those who cannot see the entire human enterprise as one interconnected whole tend towards narrow exclusiveness and petty conflicts. This is the character of Muslim fundamentalism, and his is the character that the BJP seeks to give to those whom it calls Hindu.

It is of course all to the good that problems which were hypocritically suppressed so far should have come out into the open. For, as in psycho-analysis integration of the personality becomes possible only when repressed problems are consciously acknowledged, so also in social life acknowledging repressed problems is a necessary step towards their resolution. Indeed the gravity of these problems of identity is less alarming than the absence of serious and fair-minded reflection upon them. What really is cause for alarm is the mechanical habit of our intellectuals of resorting to partisan polemics according to a set and entirely predictable pattern, just as the cuckoo in the old clock calls out thrice at three o'clock and goes back and remains silent until the hour strikes again. It is here that the real weakness of our society is manifested. I see it every other day in the village that, whenever there is a problem, various individuals and groups immediately take up positions to settle their old scores with each other, but no one thinks of the interests of the village as a whole. This drama of uneducated villagers is witnessed on the grand national stage too where, to the drum-beats of newspapers, the farce of the village is re-enacted as the tragedy of the nation.

The BJP has successfully posed the problem of Muslim fundamentalism in India, but in doing so it may also have succeeded in posing the problem of its own narrowness. It is too obsessively and negatively concerned with the Muslims and does not appear to be seeking a modern identity for the country, except in the purely external sense that it wants India to be a powerful nation respected by the world at large. But strength comes from the satisfaction experienced by the individuals and groups constituting the nation and from the social cohesion resulting from this fact. The BJP, on the other hand, insists that individuals and groups should in the first place be willing to sacrifice themselves for the greatness of the nation and be happy merely to be able to partake in that greatness. It is the consciousness of this patently illiberal and authoritarian tendency that underlies the fear of liberals that it may eventually turn out to be a fascist party.

A nation can be built only upon the foundation of a felt spiritual unity in its members. Such unity cannot be attained by force, nor by the mysticism of Mother India. The violence and artificiality of such unity will make it crumble at the first opportunity. The old Indian method was to work deeper, more slowly and solidly, in the hearts and minds of the people; and whatever civilisational unity we possess today is due to our religious reformers and thinkers, *sants* and *pirs*, poets and wandering minstrels. To these time-tested methods we should no doubt add what the modern world provides us—economic integration, federal political union, and education and constructive use of media. But obviously we ought to do nothing to impair the civilisational unity of India. Breaking down mosques can by no stretch of imagination form part of an agenda for unity and nation-building. The the BJP should have seriously taken up such a programme constitutes the severest indictment of its cultural and political thinking.

We have never been nationally and politically homogeneous and one in the sense that the BJP wants us to be. We have always known semi-autonomous families, castes, guilds, villages, towns, religious communities, regional units. The ancient Indian idea of empire, of *cakravartin*, was "a uniting rule that respected every existing regional and communal liberty, that unnecessarily crushed out no living autonomy, that effected a synthesis of her life and not a mechanical oneness".[1] These are not the words of some Leftist historian but of Sri Aurobindo.

Diversities are a part of the problem that we face, and we cannot wish them away. How to find a legitimate place for each of these diversities is a central problem of nation-building in India. Creation, said Tagore, is the harmony of contrary forces. When they join hands all the fire and fight are changed into the smile of flowers and the songs of birds. When, said he, there is only one of them triumphant and the other defeated, then either there is the death of cold rigidity or that of suicidal explosion.[2]

Therefore, rebuilding India is not merely a question of who caputres power and of what he is able to impose. It is essentially a question of building upon and strengthening the roots of our slender civilisational unity. This can be done through the employment of such modern methods as do not go against the grain of our civilisational experience of always seeking synthesis, never suppression.

◆

NOW as to the specific problem of Muslim fundamentalism posed by the BJP, we need first to ask whether the popular Islam of the masses is fundamentalist. The existence of castes of a sort, saint worship, devotional music, belief in an aura of divinity around Prophet Muhammad, none of these is acceptable to the fundamentalists. However, even if we acknowledge the intellectual dominance of fundamentalism and the consequent possibility of its generating a trend among the Muslim masses, it would only justify our being alert to oppose fundamentalism ideologically and politically. It would not justify ignoring the rights and deeper needs of Muslims. On the contrary, I feel that some sympathy for and understanding of the Muslim predicament is necessary.

Islam embodies two great religious ideas, that of divine governance, and of human equality and brotherhood. Taken in this general form there would be no tension for Islam in the modern world, for it could then be indefinitely supple. But to be a Muslim means the acceptance of the special and unique Prophethood of Muhammad and of the Quran as the Word of God. If you do not accept these latter two, you cannot be a Muslim. *La ilaha illa Muhammadun Rasulu 'Llah.*

I may accept the idea of divine governance and of human brotherhood and equality and yet not be a Muslim because I do not fully and unequivocally accept the Shahadah. But if I had been born into the Muslim tradition, I would have unequivocally accepted the Shahadah and striven constantly to be a true Muslim. How could I have been anything else, and how can a Muslim be any other than a Muslim? I would surely want to be a true Muslim. Why should I be a fake?

But I am also born into the modern age, and I have to live in it and cannot live in any other. I find various peculiar features in the modern world. Everywhere there seems to be current a belief that society can be remodelled or reorganised on the basis of ideas furnished by the growth of human knowledge. This reorganisation is sought not to fulfil the prescriptions of any religion but to satisfy individuals who seek external freedom for themselves for the purpose of eventual inner direction of their lives. And it is not merely men but women too who, seeking equality with men, take this stand. All these changes are sought to be brought into being through the freedom to propagate ideas and to win over a majority whose decisions prevail in the last resort. Moreover, this takes place in a society where we Muslims are in a minority, and we are expected to uphold the interests of that society over and above that of the Islamic brotherhood because of the rights granted to us by that society.

As against these modern tendencies, traditional Islam teaches me that the true community (Islamic) comes into being only with the acceptance of the sovereignty of Allah and that this community cannot be artificially divided by national or geographic boundaries. This community, furthermore, has been provided with a complete and perfect code, the Shariat, for the regulation of the details of individual and social life. This code, and indeed the Quran itself, plainly accords a relatively lower status to women and does not accept their equality with men. From the traditional Islamic point of view, therefore, the task appears to be not to encourage ideas of individual freedom and inner direction, nor of democracy and majority rule, but to implement the Shariat and ensure submission to the will of God.

Modern ideas pull me in one direction, traditional conceptions of Islam in an exactly opposite direction. This is the tension, the problem that Islam faces (and I as an individual Muslim face) in the contemporary world. I can reject the modern world and be Muslim in the traditional sense. Or I can reject Islam and be modern in the non-religious sense. But can I really reject the modern world? Can I really reject Islam? I cannot, I find both rejections impossible. So what do I do? The problem before me is this: how to reconcile an authentic commitment to Islam with secular concerns and genuine secular activism. How to be truly Muslim and yet fully modern? This is the problem.

◆

THE problem is not unique to Islam. Other religions have faced and, in different ways and to different degrees, resolved this problem. Canonical Law no longer governs Christian society, and Hindu Smritis are not taken seriously by most educated Hindus, revivalists apart. Yet both Hindus and Christians feel that they are able to practice their religions and exist as Hindus and Christians in the contemporary world. This is because a gradual but decisive change has taken place in the conception of religion *within these religious traditions*. The essence of that change is the new and correct understanding that religion is not and does not demand standardised external activities of a religious sort. That indeed is what we should call religionism. Religion, on the other hand, is an opening and a softening of the inner man, a call and a cry for the Divine.

This does not mean that a man's religion gets locked in some secret compartment of his heart and fails to find expression in the outer world. It means, on the contrary, that the external expression of his religion cannot be prescribed in advance but must largely be discovered and determined by the individual himself as being best suited to his authentic inner growth. However, guidance in regard to the inner spirit that he is to maintain in all his activities, and to develop when he is not outwardly active, will come to him chiefly from his particular religion. This implies much greater flexibility in the outer forms of religion. The one thing that, in the modern conception, is definitely not religion is relgionism, the authoritative imposition of external relgious duties upon man; for that frequently sets up tremendous barriers to authentic inner growth and crushes the very spirit that religion is intended to liberate.

The present situation in Islam is that Islamic liberalism is intellectually very weak and Islamic fundamentalism very powerful. The process of secularisation is undeniably in a rudimentary and early stage. What the fundamentalists say is that traditional Islam is sufficient unto itself and that there shall be no secularisation. Paradoxically, this ahistorical view is accepted at face value by the BJP, which believes that secularisation can never be initiated in Islam except by force, as in Turkey. This lack of compassion, and faith in force, is part of the medieval ethos of the BJP. In the contemporary world we witness almost daily the limitations of force and its failure to resolve real problems, especially where masses of people are involved. I do not say that force has no role at all. It does, especially when mass consent is already available and residuary or peripheral resistance is to be set aside. But force is not the instrument for creating consent itself.

The Muslim fundamentalist, too, is in a sense applying force upon his soceity by seeking to ban the modern age. His action is akin to the declaration of Emergency, and the banning of all opposition, by Indira Gandhi. It is the clearest proof of the existence of a deep crisis within Islam, the presence of profoundly disturbing and unresolved problems in its soul. Therefore, the spread of fundamentalism is not a sign of the strength of Islam in the modern age but of its tremendous inner weakness. The inability to come to terms with modern ideas of freedom and democracy and secularism, with pluralism in Muslim majority societies and with minority status in non-Muslim majority societies, is an indication of the loss of flexibility and broad sympathy of mind and of the falling back upon rigid and narrow notions. This is plainly a condition of decline, for Islam was not always such. Says Gibb:

> Many times already, "Muslim religious leaders, confronted by the insistent demand of new modes of thought, have set themselves to the task of re-stating in their terms the eternal principles of Koranic interpretation of the universe. We can, without exaggeration, speak of a Muslim Stoicism, a Muslim Aristotelianism, a Muslim Pantheism, all within the four corners of the orthodox community. The puritan reaction can never actually reverse this tendency and restore the primitive formulation and outlook.[3]

It is my firm conviction that, just as Indira Gandhi's Emergency led to eventual disaster, so also this fundamentalist emergency can only lead to disastrous consequences. The example of communism, and the sudden collapse of a monolith, has shown that whoever insists on being a possessor of final truth, and seeks to impose that truth upon society, will end up in the dustbin of history. For, truth can never be a possession. We are always at best seekers of the truth, always in a state of becoming, always interacting with the external environment of other cultures and growing or diminishing by the manner of our interaction. Whoever believes himself to possess the whole truth, as the fundamentalist does, will automatically cut himself off from healthy interaction with other cultures, will see such interaction as a menace, and will be unable to deal with and will indeed avoid dealing with the governing ideas and central problems of the contemporary world. With his shrunken, undernourished "truth", he will eventually perish.

◆

IN earlier ages each culture could exist in relative isolation and grow largely as a result of internal interactions. Today, isolation is impossible and no culture can just *be*. It has to *become*, it has to exist as *continually becoming*. This is the inherent complexity in the problem of retaining one's identity. Whereas a static identity is self-destructive, dynamism is feared as possibly leaving intact no identifiable entity. That is why Reform and Assertion have to go hand in hand. One has to *seek to be oneself* while constantly striving to *become universal*. A culture has to grow from the foundation of its essential truths by enriching itself through the absorption and assimilation of external influences, and by striving to solve in its own way the world problems of this age. To shrink from enlargement and change, and to seek a static of being, is impossible. It cannot work and is a sure invitation to disaster.

I have no doubt that, like other great religious traditions, Islam too, after deep inner struggles, will find a way out and avert the disaster of fundamentalism.

It seems to me, if I may be permitted to express my opinions in the matter, that it is the traditional concepts of God and of revelation that are centrally responsible for the authoritarian tendency in traditional Islam and the demand that it makes upon man to distrust himself and submit to external authority. The conception of the Divine traditionally most emphasised in Islam is the overwhelming sense of God's majesty and terrifying power. There is an inherent "otherness" about God, a stark contrast between man and God. And revelation consists of commandments of God sent through an Angel (Gabriel) to the Prophet. They are not the incomplete discoveries of a Prophet in states of communion with the Divine. The nature of God is such that, though he is indeed merciful, he expects obedience and knows how to exact it. Therefore, submission becomes the duty of man. It is this authoritarian tendency that fundamentalism seeks to build upon.

In the Christian religious tradition, it is the figure of Christ, the son of God, who mediates between man and God and takes away the terrifying aspect of the Divine Indeed, wherever there is a belief in incarnation, or God manifest in man, the terrifying aspect of the Divine is automatically taken away. The overwhelming force of the mystic tradition, of the belief in an immanent God, and the example of popular saints like Meera with her Beloved, have swept aside the terror of God from the Hindu religious tradition as a whole. For this reason some Muslim fundamentalists imagine that the Hindus don't take religion and morality seriously and need to be converted to Islam! They forget that, even if their logic be granted that fear is the basis of morality, the Hindus believe in the law of *karma* and for them morality does not require the fear of God, or even belief in God.

Among Hindu conceptions of the Divine, Kali alone is Terrible, but She is eventually a Mother and Protector. The only parallel to the traditional Islamic conception that I can think of in the Hindu tradition is an episode in the Gita in the 11th Canto when, on Arjuna's request, Krishna reveals his Divine form to him. Arjuna is awestruck and terrified, and he prostrates himself and seeks Krishna's forgiveness for treating him as a friend. But the tension passes and Krishna resumes his role of friend and adviser. If, however, that tension had persisted, the character of the Gita would have been completely changed. It would have taken the form of imperious commandments, whereas the whole charm of the poem in its present form lies in its advisory character, its friendly tone and the number of alternatives it offers to the seeker.

But if God is essentially an external Other, then what issues from him can be perceived only as a command. This is the traditional position emphasised by Muslim fundamentalists. It is, therefore, instructive to see Umar, who was a dear Companion of the Prophet, disagreeing with the Prophet on several occasions and as Caliph definitely refusing on at least one proven occasion to implement the clear and categorical Quranic injunction to cut off the hands of a thief, male or female. This exercise of discretion was possible for the great Caliph because he was close to the Prophet and to the Divine and understood the true spirit of the Quran. Fear and rigidity are often a product of remoteness.

◆

SUFISM was a great wave of love within Islam, and without Sufism Islam could not have spread far and wide. The Divine lost its terrors and became the Beloved. "I love Thee with two loves," begins a moving poem of the woman saint, Rabia. Islam ceases to be a collection of external rituals and prescribed practices and becomes instead an outpouring of the aspiring soul. At first the Sufi movement with its immanentist conception of God was sought to be repressed; but repression proved futile. Eventually a compromise had to be worked out, and even today Sufi influences seem to predominate among the Muslim masses, even though fundamentalism is at the moment intellecutally ascendant. It is indeed a pity that an adequate effort has not been made to meet modern needs by building upon Sufi traditions.

It must of course be understood that Sufism was not concerned with social problems *per se*, that is, with the realm in which the contemporary crisis of Islam has most powerfully manifested itself. In earlier ages it was possible to have a relatively static society, and the Sufis were not thinking centrally about the position of women or other such social questions. They had opposed Islamic legalism (a variant of fundamentalism) because they saw that it was stifling religion. Theirs was an authentic religious upsurge that spontaneously spoke out against social and religious authoritarianism. It is the *attitude* of the Sufis, their large and generous interpretations, that

Over 60,000 housing loans sanctioned by LIC Housing Finance Ltd in three years

42,280
in
1991-92

18,245
in
1990 91

1,484
in
1989-90

In just three years, LIC Housing Finance has sanctioned over 60,000 housing loans. In 1991-92 alone, we sanctioned 42,280 housing loans worth over Rs.500 crore.

All this was possible because of your warm response. We heartily thank you.

We now have 43 Area Offices and 16 more will be added this year to serve more and more people.

Celebrating our third anniversary.

LIC HOUSING FINANCE LIMITED
Helping people realise their dreams

may still prove fruitful in today's crisis. For example, despite the statement of the Quran that "God will not forgive idolatry. He will forgive whom He will all other sins,"[5] the Sufis declared that God can be present not only in churches and synagogues but also in the temples of idolators.[6] It is this interpretative generosity that fundamentalism seeks to abolish and which contemporary Islam certainly needs.

Today social conditions have changed dramatically, and so too have social conceptions. I am required to live in peace in a plural society, and I may be put in intimate contact with people of other religions. Suppose I am a Muslim, and as a child, during school and after, I had formed those intimate childhood friendships that never die—with a Jew, a Christian, a Hindu, and a fourth with no religion. I have now grown up, but I am still very close to them and always will be. But I read in the Quran:

> Believers, do not choose the infidels rather than the faithful for your friends Would you give God a clear proof against yourselves?[7]
>
> Believers, take neither Jews nor Christians for your friends. Whoever of you seeks their friendship shall become one of their number.[8]

What do I do? They are genuine friends, I can find no fault with them. But I believe in the Quran as the word of God. Shall I put the claims of Islamic brotherhood above those of human brotherhood? What should I do?

Or suppose I am a Muslim woman, and through my intimate contact with just one man, I have understood what fakes men are, how hollow their pretence of superiority is, and how weak and dependent they really are. But I read in the Quran:

> Men have authority over women because God has made the one superior to the other.. Good women are obedient ..As for those from whom you fear disobedience, admonish them and send them to beds apart and beat them. Then if they obey you, take no further action against them.[9]

And again:

> Women are your fields: go, then, into your fields whence you please [10]

My instincts recoil at such statements, and it is my direct personal experince that men are not superior to women. But I genuinely accept the Quran as the Word of God, and I want to believe in every word of it. In certain moods, the mere thought of the Quran fills me with deep religious emotion and tears well up in my eyes. I want to believe every word, and yet how can I just set aside what I deeply feel to be true? What should I do?

It is such contradictions that the modern world is forcing upon individual Muslims and upon Muslim society at large. One alternative is to be a non-modern Muslim denying one's own authentic being, the other is to be a non-Muslim modern denying one's own roots. It is an impossible choice. A third alternative has to be worked out, which can combine commitment to Islam with the affirmation of one's authentic being. A liberal viewpoint, and interpretative generosity, are unavoidable.

Fundamentalism is a device for concealing these contradctions, for shutting out doubts and discontents. But real problems demand real solutions. They cannot be permanently repressed, they just will not fade away. Fundamentalism is merely storing trouble for the future. Can Islam really hope to flourish in the contemporary world without a modern conscience?

What is the nature of the Divine? Is it the transcendent and the Other, or is it also immanent in all? What is the meaning of revelation, and of a revealed Book? Is the Prophet's theory of revelation itself revealed, or does it carry traces of the age in which he lived? What do we mean by the inerrancy of a scripture? Is ever word literally true, or is there an inner spirit, or basic structure of truth, that the Book embodies? The Quran itself says in one place that "some of its verses are precise in meaning—they are the foundation of the Book—and others ambiguous" [11] And in another place it says: "God speaks in metaphors oto men."[12] Which verses are precise and which ambiguous, and where are the metaphors? These questions have to be asked for arriving at a correct understanding of the Quran. But to ask such questions is to raise the issue of interpretation and the further questions: Who is to interpret the Quran for me? Why must an authority interpret the Book for me? May I not seek to understand it myself?

And what is meant by the statement that the Quran is the final revelation? Does it mean that the Quran suffices and is complete in itself for religious purposes, or does it mean that whatever comes after it is false or misleading, even if it issues from such spiritual giants as Guru Nanak Dev and Ramakrishna Paramhansa?

It is such basic issues that Muslim thinkers will have to concern themselves with, if they are serious about tackling the problem of fundamentalism. Focussing on the narrower question of a dynamic *shariat* leaves the foundations of fundamentalism intact.

◆

LET us now return to our national perspective.

The problem is and has been—how to achieve a national goal, namely, secularism, without violating the sense of integrity of the Muslims. The BJP has pointed to the existence and spread of Muslim fundamentalism and posed the question whether we are serious about secularism, and if not, it suggests a *Hindu Rashtra* instead of a fragile and opportunistic compromise with fundamentalist Muslims. This is the essence of the situation today.

One way to meet this situation is to persist in the traditional *mayavad* and to merely launch into abuse of the BJP for seeking to give life to an illusion. No one seriously believes that this can work any longer. Another way is that suggested by Madhu Limaye: let the State go ahead with amendments to Muslim Personal Law, with or without the consent of the Muslim community. That so respected a secularist should feel constrained to make so startling a suggestion is indicative of two things: first, the emergence of a serious new situation, and secondly, the desirability of some kind of change in the attitude of the Muslims. However, it is in this requirement of change in the Muslims that the real difficulty lies. For the Muslims themselves are in a state of chronic tension and sincerely, strongly and deeply feel that their way of life is being threatened. And they appear willing to fight it out if need be.

Upholding a Supreme Court judgement, which came in the normal course at the end of a long process of litigation, would have been a different thing altogether; but for the State to actively intervene and take the initiative in amending the Personal Law of the Muslims would today be a serious provocation. So I cannot agree with Madhu Limaye's suggestion.

What can and should be done is to create *a liberal environment* in which the right of the Muslims to be themselves is fully assured, but at the same time the right to frankly criticise Muslim fundamentalism is freely exercised. This in turn requires that the Hindus themselves be firmly and securely in possession of a modern conscience.

It would be best of course if Muslim leaders could openly accept secularism in principle as the eventual goal of their community but retain the right to secularise their community under their own control and at their own pace. If such a declaration is not possible in the present circumstances, the next best thing would be for all secular parties to repudiate what I have called Option 4 above and to express themselves in favour of the universal application of secularism *in principle*—while at the same time assuring the Muslims of (and ensuring in practice) their right to be themselves and therefore to secularise under their own control and at their own pace.

Only a complex response of this kind, combining firmness in principle with flexibility in practice, will meet the challenge of the present situation. It demands great integrity and political skill to carry it through. Whether our political system can rise to the challenge will decide the destiny of this nation.

Post Script: I hope the above analysis will have made it clear that the BJP has arisen primarily to foreclose Option 4, that it is not inspired by any great idealistic dream, that its perception of the problem of Muslim fundamentalism is far too simplistic and plainly partisan, and that it sees the problem almost as one to be resolved at the level of street fights. That is why the BJP, as it is presently constituted, cannot resolve the problem of identities.

As to the other great problem of the country, that of change and of reordering society, it is evident that the BJP is thinking of it primarily in terms of abstract national greatness and not in concrete human terms as freedom, dignity and social justice for the poor and the deprived. The BJP is apparently a disciplined party, and it does have thinking and committed people in its midst, but it is inspired centrally by a collectivist vision of an India made strong by the devotion and sacrifice of its citizens. What it does not see is the tragedy of the mutilated and sub-human lives of the millions who are daily oppressed and in constant anxiety for mere existence. The BJP's collectivist vision is meaningless for those millions and merely mocks at their condition. The only meaningful vision for those millions is that of security, social justice, freedom from oppression and the assertion of human dignity. And if we put this vision at the centre, then the mysticism of Mother India automatically fades into the background, but the image of India made strong by the devotion of its citizens stands out with a fresh meaning and in new colours.

The BJP, then, does not deal rightly with the problem of reordering society, and though in some respects it is more aware than other parties of the problem of identity, does not deal rightly with that problem either, since it lacks the broad and generous spirit of Indian civilisation.

Journalists are notoriously short-sighted; so when an eminent journalist[11] declares that the BJP is the party of the future, he may mean no more than that the BJP will trumph in the next general elections. But if by "party of the future" we mean a party that will take us beyond the present crises that have become chronically part of our way of life, if we refer to a future that begins a new epoch in India's history, in which she is at last at peace with herself, then it is evident, and more than evident, that the BJP is not that party. Like most of the rest today, it is very much a party of our current confusions, of the blind leading the blind—into the ditch. ■

BOOK REVIEW

Dimensions of Violence in South Asia

PARTHA S. GHOSH

Violence has a record going beyond the creation of the state. But political violence as a collective human action, whether explicit or implicit, has a history, explicably enough, not older than the state. It is in the socio-political system that man's genius has contrived, that group interests are peaceably articulated only so long as dividends are ensured through compromises. But as soon as doubts are raised about the compromise formulae societal adjustments teeter and ultimately crumble giving rise to violence of one form or the other. Sometimes it is the state versus one group or more while sometimes it is between and among groups themselves with the state playing the role of an arbiter.

Mirrors of Violences: Communities, Riots and Survivors in South Asia, edited by Veena Das; Oxford University Press, 1990; pp. 407; Price: Rs 225.

In the post-colonial societies where nation-building processes are under pressure to deliver the goods in a record time, violence has become endemic because inter-group interests have not yet been reciprocally compromised and bargained for within the composite structure of the state. In many parts of the European continent the notions of a modern state and that of a nation emerged virtually simultaneously but in the Third World in general it is invariably the case that the state came into existence without the nation being formed. That this anachronism would not be without its problems, is expected.

In South Asia the problem found one of its worst expressions. Accounting for about one-third of the humanity, it is one of the most heterogeneous regions of the world in terms of ethnicity and religious beliefs. To add to the complexity is the peculiar geographical terrain which prevents the regional states from confining their policies and pronouncements strictly within their political boundaries even with the best of their efforts. In the given situation violence becomes inherent in the circumstances. It is this theme which the present book under review addresses in several of its dimensions and, as such, is most welcome.

Edited by noted sociologist Veena Das, the volume comprises 14 chapters including the introductory and the concluding ones contributed by the editor. In the introductory chapter Das has given some indications of the way she views the problem. Some of her remarks warrant reflection.

> The violence against the Sikhs in 1984 in Delhi or against the Tamils in 1983 was a traumatic experience for the entire Sikh and Tamil communities because the violence penetrated into spaces that had been considered relatively immune. In contrast, the Hindu-Muslim riot in 1987 in Delhi remained confined to the walled city, a traditional area in which riots have occurred with some regularity. These were ignored by the wider populace of the city, which went about its tasks in the spirit of 'business as usual' (p 11)

Dr Ghosh is the Director, Indian Council of Social Science Research, New Delhi.

Similarly,

> the violence against Sikhs left both communities uncertain as to whether the conflict was over religion or politics. One indication of this uncertainty was that significant religious festivals such as Holi, Diwali or the birthday of Guru Nanak Dev were viewed with apprehension of fresh or retaliatory violence, but so were occasions of national importance such as the Republic Day or Independence Day. (p 19)

In the concluding chapter Das touches upon one of the themes which often does not get the academic attention it deserves for it is always considered to be the forte of social and human rights activists. What kind of psycho-sociological trauma the survivors of a riot undergo has been graphically presented by the author with a rare compassion. Concentrating primarily upon the experience of a Sikh widow who lost her husband and three male children in the 1984 riots, Das has probed into several dimensions of societal tension—gender, economic, familial, communal and so on. This widow, whose name ironically was Shanti (meaning 'peace'), could never get over the tragedy that had befallen her and ultimately committed suicide. Das writes:

> The entire dialogical relation between Shanti and myself was concentrated on the day of the riots. Her entire present was now nothing more than a slow unfolding and mental replaying of the decisions and events of the riots. Unlike Freud's analogy of the recall of the past as the 'looking' at a passing landscape from a running train, Shanti had no means by which she could distance herself enough from the past so that the present could be made 'present' in her consciousness. The traveller in the train, looking at his past as a passing landscape, can describe it from a vantage point of distance. Shanti, on the other hand, could not move from that particular day. (p 339)

Shanti's case, however, was not representative of the experience of all the bereaved families. Generally they tried to deal with the problem in a collective manner and looked for relief and resettlement benefits.

◆

ABOUT the survivors two more studies have been devoted: one by Amrit Srinivasan which again focuses on the 1984 riots and the other by Valli Kanapathipillai which deals with the anti-Tamil riots of 1983 in Colombo. The latter is based on detailed interviews of four Tamils who had different experiences to narrate. The fact which stands out is that while a particular community may be emotionally charged to inflict physical injuries on the other community many a time it is a personal vendetta that is served by taking advantage of a larger phenomenon. Still, the author concludes:

> It is particularly useful to think of the concept of totalisation of such situations, for violence homogenises people and renders them indistinct: Kamala [one of the interviewees] found that, regardless of her political ideology [she was a critic of the LTTE], she was identified as a Tamil. Conversely, the violence was seen to be perpetrated on behalf of the whole Sinhala community, even though the crowds consisted only of 'thugs' and 'hoodlums', and even though many Sinhala neighbours and friends risked their lives to provide help. (p 341)

Psychoanalytical perspectives on violence have been presented by India's two leading political psychologists, Ashis Nandy and Sudhir Kakar. Like his earlier studies on Indian culture and politics, for example, those contained in his *At the Edge of Psychology: Essays in Politics and Culture* (OUP, 1980), Nandy's paper expectedly is replete with fresh interpretations. Some of his arguments of course may not be accepted by all. For example, the argument that the Indian society is increasingly becoming modern and these modernities have posed a threat to the so-called traditionalists and hence "much of the fanaticism and violence associated with religion comes today from the sense of defeat of the believers, from their feelings of impotence, and from their free-floating anger and self-hatred while facing a world which is increasingly secular and desacralised" (p. 79) is indeed debatable. Empirical research tends to suggest that Hindu fundamentalism and the BJP's influence have substantially grown among the middle-classes, the very people Nandy considers have little to do with the religion.

These are, however, matters of emphasis. On the central question as to why secularism has failed in India, Nandy's logic is unassailable. The point that he makes most succintly is that Nehru's championing of the cause when he himself was an agnostic probably did the greatest damage to the application of the idea. Indeed one does not listen to an agnostic about the virtues of secularism. Writes Nandy:

> Though we are not told, with a great deal of embarrassment, that he believed in astrology and *tantra*, Nehru rightfully belongs to this rung ["believers neither in public nor in private"] because he always made modern Indians a little ashamed of their religious beliefs and ethnic origins, convincing them that he himself had the courage and rationality to neither believe in private nor in public. By the common consent of the Indian middle classes, Nehru provided a perfect role model for twentieth century citizens of the flawed cultural reality called India. (p 75)

Kakar's study, like that of Nandy, makes an intersting point that upper class Hindu society suffers from some kind of narcissism in which the other groups, notably the Muslims, are looked down upon as inferiors. Drawing his inference from a large number of possession cases in which the victims were possessed by Muslim *bhutas* and also from the analyses of dreams Kakar is of the view that

> the family and extended group of a Hindu upper-caste child.. .not only provides him with its myths and rituals

> which increase his sense of group cohesion and of narcissism in belonging to such an exalted entity, but also help him in elaborating and fleshing out his demonology of other ethnic and religious groups. The *purana* of the Muslim demon, for instance, as elaborated by many Hindu groups, has nothing to do with Sufi saints, the Prophet's sayings or the more profound sentiments of Islam. Instead, its stories are of rape and pillage by the legions of Ghazni and Timur as well as other more local accounts of Muslim mayhem. (p. 138)

About the recent phenomenon of an increasing schism between the Hindus and the Sikhs, Kakar ascribes it primarily to the Bluestar Operation.

> The damage done to the Akal Takht—as much a symbol of corporate militancy as of religious piety—reinforced the two M's—militancy and martyrdom—the inner counterparts of the well-known five K's which constitute the outer markers of the Khalsa warrior identity. The exaggerated value placed on martyrdom is hard to understand for the Hindus since oppressors in their mythology.... tended to be destroyed by divine intervention rather than by the sacrifice of martyrs. The army action was then a hurt to the Sikh religious sentiments in a very different way from the sense in which a Hindu understands the term. It was an affront to group narcissism, to a shared grandiose self. The consequent feelings were of narcissistic hurt and rage. This was brought home to me again and again as I listened to groups of anguished men and women in front of the ruins of the Akal Takht. Most men stood in attitudes of sullen defeat, scorned and derided by the women with such sentences as 'where is the starch in your moustache now?' (p. 140)

◆

TWO chapters in the book—Gyanedra Pandey's "Colonial Construction of 'Communalism': British Writings on Banaras in the Nineteenth Century" and Michael Roberts' "Noise as Cultural Struggle: Tom-Tom Beating the British, and Communal Disturbances in Sri Lanka, 1880s-1930s"—provide insights into the colonial contributions to the making of inter-communal cleavages in the subcontinent. Pandey's point which has now been elaborated in his book, *The Construction of Communalism in Colonial North India,* focuses upon how both the British official and non-official interpretations of 1809 Banaras riots were "constructed out of the prejudices, biases and 'common sense' of the writers". As a result even "bare facts" were distorted and given a particular colour.

> Thus, 'fanatical and clannish' entities, 'disorderly sectors or the population', communities 'prone to dacoity and rioting', 'fires of religious animosity', 'indiscriminate affrays'—these are the phrases that make for the history of Mubarakpur or Banaras or Shahabad in the nineteenth century as told by colonialist writers at the beginning of the twentieth. (pp. 131-132)

Michael Roberts' paper makes an interesting reading in several respects. It not only highlights the inherent British insensitivity to deeper socio-religious consciousness of the Sinhalas which was reflected in the 1965 police ordinance banning tom-tom beating at the Buddhist festivities; it also explodes the myth that in colonial days laws were uniformly enforced. While the ordinance was strictly enforced in prominent towns, it had virtually no impact in small towns and villages. What is, however, more important to note is that the application of the ordinance led in due course of time to intercommunal riots, both Buddhist-Catholic and Buddhist-Muslim, particularly because of the fact that while noise had a definite place in the Buddhist (also Hindu) culture it was conspicuous by its absence in Judeo-Christian and Islamic traditions. Ultimately the Sinhalese resistance to Western interference with their cultural lives culminated in the growth of Sinhala nationalism based on religion, language and ethnicity.

Roberts' diatribe, however, suffers from a few inadequacies. His paper hardly leaves any scope for the explanation of the Sinhala-Tamil ethnic conflict which also had its origin during the same period. In his model Tamils have not been identified as "they". It would have been better had the author clarified this point at least in a footnote.

From the paper it is not clear whether the British policy in question was a piece of malafide intention or an error of judgement. The tenor of Roberts' argument tends to suggest that it was the latter but at times it signals otherwise. It may be noted that many well-meaning people in India advocate a ban against religious processions in front of shrines of the other communities. In an ICSSR-sponsored seminar held in 1989 the noted physicist, Raja Ramanna, even asked for a ban on hymns and sermons chanted through loudspeakers from mandirs and masjids for they unnecessarily created-noise. Does Raja Ramanna suffer from the same kind of insensitivity as the Britishers did?, one may ask Roberts.

Dipesh Chakrabarty's article "Communal Riots and Labour: Bengal's Jute Mill-hands in the 1890s" focuses upon the indigenous socio-economic factors that led to the growth of communalism in Bengal which were intensified by colonial economic and industrial policies. The central argument here is that the communal venom was injected in Bengal's body politic by two migrant communities—the Urdu speaking Bihari Muslims and the non-Bengali speaking Marwari Hindus. The class conflict between these two groups further widened the cleavage which eventually contributed to the partition of India, a theme elaborated by Kenneth McPherson in his study, *The Muslim Microcosm: Calcutta 1918 to 1935.* (Wiesbaden: Franz Steiner, 1974)

◆

THE economic variable in the analysis of riots has also received attention in Sunil Bastian's "Political Economy of Ethnic Violence in Sri Lanka: The July 1983 Riots". Supplementing Kalechki's model of "intermediate regimes" with the ethnic varible, Bastian tries to provide a political economic interpretation of the growth of Sinhala-Tamil conflict. Starting from the premise that international financial agencies such as the IMF and the World Bank have a stranglehold over the Sri Lankan economy, Bastian argues that the policies adopted by the UNP Government after 1977 have made this dependence more structural. Since this dependence has an in-built compulsion for political stability, efforts are ever on to "manage" the ethnic conflict through the policies of accommodation which in effect irk the Sinhala chauvinists. This logic, however, is of a dubious nature. Does it not imply then that the state should not venture even to "manage" an inter-ethnic problem however acute it is? The author has not only left this question unanswered, he has made little effort to apply his own model to explain the July 1983 riots.

The variable of day-to-day politics contributing to communalism in India has been brilliantly addressed by Ashish Banerji. The essence of his thesis is actually capsuled in the title phrase of his paper itself: "Comparative Curfew", an expression he has borrowed from one of his police interviewees in UP. It suggests that in the existing communal milieu of UP as well as elsewhere, the law enforcing authorities often take a partisan view of the situation during the riots and even while enforcing the curfew regulations they tend to be "lenient with the Hindus and inordinately strict with the Muslims". Banerji has convincingly argued that the communal question in the post-independence India is structurally linked to the stability factor of politics. So long as the Congress party was able to provide a stable government at the Centre (as well as in the States), say in the fifties and sixties, riots were relatively less in number. But as politics became increasingly competitive, minorities became victims of political manipulation. As a result riots were routinised. In this context the author is particularly critical of the role played by the Congress party which showed little hesitation even to align with the RSS although its public posture was avowedly anit-RSS. Banerji of course has put the blame also upon bureaucracy and the police for aggravating the situation. He, however, would have completed the story had he also taken into account the role of the press, particularly the local language press, the negative contribution of which in building communal frenzy cannot be over-emphasised.

The theme of Upendra Baxi's "Reflections on the Reservations Crisis in Gujarat" is also politics. Exploding the myth that Gandhi's Gujarat is non-violent and socially progressive, Baxi argues that the Gujarati society, like those in several other parts of the country, is quite violent and that its social stratifications are equally retrograde—"68 per cent of the untouchables are denied access to potable water from high-caste Hindu wells". (p. 215) Against this backdrop the question of reservation for the OBCs and how it got entangled into the politics of the State has been analysed. Baxi makes a strong case to suggest that the ruling Congress party manipulated to blur the distinction between 'class' and 'cestes' for its political advantage. There is, however, one major avoidable weakness in the paper. Although about one-third of it is devoted to communal riots in the State there is hardly any effort to logically link them to the anti-reservation stir leaving the two sections mutually exclusive.

Pakistani perspectives on riots have been provided by Akmal Hussain and Farida Shaheed in their papers, the focus of both being the inter-ethnic riots that rocked Hyderabad and Karachi in 1985-86. Attributing the riots to the crisis of the Pakistani state Hussain writes:

> ...the fragmentation of civil society along various groups on religious, ethnic, *biradari* and sub-regional lines, and the rapid arming of conflicting groups weakened the basic function of the state, which is the protection of citizens.... In these circumstances, it is not surprising that an increasing number of people are seeking alternative support mechanisms in their communities to seek redress against injustice as well as to secure themselves against a physical threat to their persons and families.... Thus, the crisis of state power has engendered a crisis in civil society in which the polity is polarised along various vertical lines. (pp. 192-93)

To this ethnic interpretation Shaheed adds a class variable by arguing that

> where state benefits only discriminate between classes, it is to be expected that class contradictions will be foremost. Where there is an additional layer of provincial or ethnic discrimination, local elites who mediate between the state and the individual can easily manipulate the resentments of a people along ethnic lines and provide the necessary backing for a movement. (p. 211)

On the whole the book under review is extemely readable and should receive attention of both the champions of state power and their critics, the champions of *Hindutva* and their opponents, and the liberals and the reactionaries. Since the debate between these two sets is unending so is also violence.

Sigmund Freud's penetrating remark sounds as relevant today as it sounded six decades ago when it was made. At the suggestion of the International Institute for Cultural Cooperation, Freud wrote to Albert Einstein in September 1932:

> We may define 'right' (that is law) as the right of a community. Yet, it, too, is nothing else than violence. It is the communal, not individual, violence that has its way.

■

Symbol of Cultural Domination

SUSHANT KUMAR MISHRA

The recent riots in America which flashed from Los Angeles and spread to many other parts of the country left at least 58 dead and 2300 injured just in Los Angeles. Besides, property worth $717 million was damaged. These riots soon spread to several American cities. Trouble erupted even in Toronto in Canada. Behind all this was a California court verdict—delivered on April 29, 1992—that acquitted four White policemen charged for using excessive force against Rodney King, a Black motorist, while he offended the traffic rules in March last year. The court judgement was seen to be tainted with racial feelings. This led to widespread protests which eventually deteriorated into a riotous situation. Even now parts of Los Angeles and other American cities remain tense though calm, according to the official version.

This is not an isolated case when the Black-White gulf has created social tensions thereby unleashing a series of general sporadic violent incidents. In fact, the looting and violence only concretise the already existing social tension in almost all the countries where the Whites have to live with their Black brethren. Be it South Africa, Britain or France the colour of the skin does matter. The recent rise in the number of the supporters of the Rightist Le Pen in France also shows that even the more liberal societies like the one in France tend to fall into the trap of racist sentiments. The political dialogue in France today is dominated by racist feelings against the immigrants. After the recent riots in America, it is sure that the Black question is going to be an important issue in the forthcoming US Presidential elections. And South Africa is definitely the worst example of racial hatred. No humanitarian plea could have ever had any impact on the South African regime.

This racial hatred has a long history. Its nastiest chapter in modern times is perhaps the anti-Semitism of Hitler. Since then till today there has existed a constant opposition to all forms of racism. South Africa was politically and, to a great extent, economically isolated. Ethnic resurgence, xenophobic sentiments and racial feelings have almost always been criticised. Still the anti-racist dialogue fails to check the spread of racism, as is illustrated by the examples enumerated above. What is worse, a kind of fatalistic pessimism is growing regarding the nature of man. Many intellectuals even argue that anarchy and violence are there to stay as dialectically opposed tendencies of man's social instincts. This implies that the violence is justified and thus even racism seeks a justification. So man becomes a wolf for the other man.

Man is a convivial beast endowed with reason and can very well understand the contradictions between his social instincts and racial violence. As social animals, men all over the world are the same, but as political animals they tend to group themselves according to different categories—some being progressive and others being retrogressive. When we see racism as a crime of attempted social suicide, we definitely consider racism as an extremely degenerate form of social scourge. And if we consider anti-racism to be an anti-thesis of racism, we wonder as to what could be the possible synthesis that the future has in store for us. And we may doubt that the possible synthesis would make the world better.

◆

WHAT is intriguing is the existence of racism as a form of organised hatred. Racism hardly holds any scientific ground in today's world. The geneticians today have proved beyond doubt that any notion of racial superiority based on the biological constitution of man is false. Yet we see a gradual spread of racism despite anti-racist campaigns.

The anti-racist campaigners in today's Western world have to go for an introspection if they really want to understand the causes of their failure. Anti-racist campaigners reject racism as a vestige of the past based on erroneous scientific theories and false explanations of history. On the other hand, the racists have shifted their argument from "racial purity" to a question of an "authentic cultural identity". It is on this basis that clubs like the Ku Klux Klan in America and Rightist leaders like Carl Lang or Jean Marie Le Pen survive in France. It is this notion of "authentic cultural identity" that keeps Southhall separate from other parts of London.

Once a paradigm of the cultural segmentation starts defining races, the derisive attitude for an "inferior race" is replaced by the fear of being identified as an integral part of a "decadent" culture. This mentality generates a Rightist dialogue which identifies races as "assimilable" or "non-assimilable" entities.

This heterophobic attitude may help us in understanding the anatomy of the current form of racism in the Western world. In Britain it is always the anti-British feeling that is supposed to characterise the "stinking" Asians. On the question of South Africa, Britain has evaded taking a concrete stance for long. In France, Le Pen always appeals to guard against "*le racism anti-francais*", that is, "anti-French racism". Can racism be against a nation? Yes, if a naton is seen as a politico-geographical entity predominantly defined by its cultural identity and at the same time if that racism is based on the notion of a cultural superiority.

In America and South Africa the situation is a bit different. Since the racists in South Africa cannot define their nation as solely comprising of Whites, so they have developed a phobia for the Blacks participating in the national process. So, Nelson Mandela was imprisoned for twentyseven long years just for having cherished "the ideal of a democratic and free society". And even his release from the prison on February 11, 1990 led many to appeal to their White brothers to collect a "million guns" for the "coming civil war" to be fought against the Blacks. America is yet different. There, the feelings of cultural superiority had got more or less economic basis as well. In 1990, the average weekly earning of a Black man was about $325 whereas the same for a White man was about $425. Obviously, there is a big difference in the average life standard of the Blacks when compared to that of the Whites. This difference gets translated into a racist and perverted cultural ideology which treats Blacks as subhuman animals living in society. They are seen to be aesthetically bankrupt and habitually beastlike. So a Black man can be beaten like an animal and the policemen who beat him can get a clean chit even from the court.

In such a situation, nothing else but a random violence against all that comes in the way, can be expected. And hence this sporadic violence by Blacks, which is a consequence of frustration because of their meek position against the strong state authority. But this violence may be seen by the White racists as a proof of the Black bestiality thus strengthening their belief in the erroneous understanding of their own racial superiority. But this attitude will lead only to the destruction of valuable lives and public property. It should be the foremost concern of the American nation to avoid the fragmentation of its social fabric on racial lines. If not, resentments will grow against the Americans who claim to champion the cause of human rights all over the world. ■

AN APPEAL

C. Achyutha Menon Foundation

Dear friend,

C. Achyutha Menon is no more; a matchless statesman, a humanist of impeccable integrity, a champion of the poor and the downtrodden, a writer of repute, he will be remembered for all time.

We propose that a suitable memorial be instituted to cherish the message of his multi-splendoured life.

We request you to actively associate with the endeavour in this behalf and donate liberally to the fund being raised by the C. Achyutha Menon Foundation in furtherance of the above objective.

22-11-1991

Yours sincerely,

K. Karunakaran, E.M.S. Namboodiripad, G. Ramachandran, A.K. Antony, E.K. Nayanar, V.R. Krishna Iyer, Indrajit Gupta, P.P. Thankachan, Benedict Mar Gregoriose, Dr K.N. Pal, Dr K.N. Raj, Laurie Baker, P.K. Vasudevan Nair, Jyoti Basu, Mulk Raj Anand, Aruna Asaf Ali, C Rajeswara Rao, P.N. Haksar, Thakazhi Sivasankara Pillai, Dr M.S. Swaminathan, Prof M.G.K. Menon, G Parthasarathi, I.K. Gujral, Nikhil Chakravartty, K.R. Narayanan, A.K. Damodaran, K.P. Unnikrishnan, Chitta Basu, P.M. Sayeed, N.E. Balaram, Dr Poulose Mar Gregoriose, Poulose Mar Poulose, V.K. Madhavan Kutty, Dr I.S. Gulati, Dr Sukumar Azhikode, Dr M.S. Valiyathan, Dr P. Basak, Vaikom Muhamad Basheer, Vijaya Kumar (Hind Samachar), Ali Sardar Jafri, Malcolm Adisheshaiya, Dr C.T. Kurien, Khushwant Singh, Asghar Ali Engineer, S G. Sardesai, Satyapal Dang, Mohit Sen, Shashi Bhushan, Ghulam Rabbani Taban, R.L. Bhatia, Prof K.N. Panikkar, Adoor Gopalakrishnan.

Germany and Unipolar Uneasiness

SARAL PATRA

Helmut Kohl has once again done it. Notwithstanding the US President's totally negative approach to the basic objectives of the Earth Summit in Rio de Janeiro, Kohl got up to say that his country would have no hesitation to participate in the prime task of saving the planet, and make due contribution towards the achievement of that goal.

Needless to say, policy-makers in Washington who have so far been backing the weird postures of the "unipolar supremo", have found this to be another example of defiance by the recalcitrant German Chancellor and his relentless effort to demarcate his country's position from that of the United States.

This, however, was not the first time that in recent months Germany took steps clearly contrary to those expected and advised by the United States. The formation of a Franco-German security force "in addition" to the NATO, is a move against which the US official and officially inspired agencies have been carrying on a campaign since mid-1991.

The earlier bouts of unsuccessful GATT negotiations, with the Europeans in unison rejecting the US pressure to do away altogether with farm subsidies, had annoyed Washington in no small measure. Persuasion, even American style, has failed because the Europeans turned round to point out that the US itself had taken no such step in regard to its own farm products.

The Europeans fear is that the withdrawal of the subsidies would immediately render their farm produce and the products manufactured from them, uncompetitive in world markets. This would enable the US to dump its own subsidised farm products in Europe to the detriment of the farmers of the European community.

Of course, Germany took the lead in warding off any US move that could jeopardise the Community's internal economic equilibrium. It had taken the present-day European Community over forty years since the signing of the European Coal and Steel Community Treaty (1951) under the Schuman Plan, to harmonise the economic activities of the member-states to proceed towards the ultimate economic and political integration.

The Community's policy covering the common agricultural market enjoins free movement of goods within its geographical limits and ensures total protection to intra-Community trade against imports from third countries. It also calls for selective cropping and price-freezing in response to market demands. Obviously, the Community does not want to upset its well-conceived and long-pursued delicate balance by letting in the burgeoning US hunger for markets like the bull in a China shop.

◆

IT will, however, be necessary to remember that the European Community has yet to travel a long way to complete its tasks of political and economic integration by the turn of the century. And in this, the role of unified Germany, with its 79 million people, its powerful economy and strong military presence on the continent, becomes crucial. The German Deutschmark is not only a stable currency but quite effectively meets the challenge of dollar which has been rather feeble in the international money market for quite some time now. In the midst of constant contrary pulls, even within the European Community—the United Kingdom's efforts to constantly obstruct the other eleven from going at a faster pace towards the goal—Germany has succeeded in ensuring the stability of its economy and political institutions.

An assessment of the Deutschmark, in early April 1992, shows that it maintained a prominent position among the European currencies, gaining against all of them except the French Franc. The analysts ascribed it to a run on the Finnish Markka and also the surprise entry of the Portuguese Escudo into the fixed exchange-rate mechanism of the European Monetary System.

In the matter of the German economy as a whole, the picture is now not so bright as it appeared before the unification of the two Germanys. The unification—call it a take-over, if you will—has, of course, given the country a political strength unmatched by any other member-state of the European Community. This is its plus point, but also turns negative when the past is held up to frighten its neighbours.

Germany has stretched its economic manoeuvrability to the utmost. The 1989 revolutions in the East European countries, did call on Germany to bail them out of an economic chaos. But the reality of unification proved to be much harsher. For the people in the western part of the country, it meant ever larger doses of taxes, cuts in certain social benefits and, above all, falling real incomes of the people. The recent strike in the public enterprises and services has been the direct outcome of the financial losses suffered by the people in the wake of "liberating" the people in the eastern part of the country.

The peak of its economic advance was reached in 1990, just before the unification came through, when the country's GDP of $1480 billion was well ahead of $1183 billion of France, $1089 billion of Italy, and $970 billion of the United Kingdom.

But, at the same time, the enormous material effort and support required to attain the goal set by the country's Basic Law—creation of uniform standard of living in the entire country—has not been achieved. In fact, it will take a good many years more to reach that goal. The tragic part of it all is that productivity in the eastern part of the country measures up to only one-third of what is obtained in the western part. To raise productivity in what is a totally new environment of work culture, requires time and, hence, the disparity in living standards is bound to continue. Under the new dispensation, there is no guaranteed employment, nor any assurance of "no work plus social benefits". But the Bonn authorities claim, these are but temporary difficulties—nothing that cannot be resolved within a short lapse of time. The programme of socio-economic "uplifting" the eastern part of the country is still on course, and efforts are on to bring it to its anticipated conclusion.

◆

DESPITE all these obstacles and handicaps, the new Germany has the potential of emerging rapidly as the main lever to guide the future of the European Community. In today's international economic ranking, Germany occupies the front row along with the United States and Japan. If the US is unable to set its house in order within the next two years, it is quite possible that Germany will stand a step ahead and close behind or even alongside Japan.

But the German leaders quite consciously avoid being categorised as the main lever of operation in the European Community. They are taking extraordinary care to discard any impression that would recall the past of a nation too cruel, too oppressive, too intolerant, a nation that had collected the unqualified hatred of all its neighbours and also of the world.

The regeneration of xenophobia, the attacks and the maltreatment of foreigners working in the different parts of the country, has again raised fears in the minds of the Europeans who could even now vividly recall the nightmare under Nazi domination. At various stages of its development and socio-economic progress since then, conscious efforts were made by the West German authorities to eradicate the memory of that despicable system, when East Germany (GDR) could claim, with a degree of conviction, of having fought to annihilate that anti-human ideology. History has not been on its side, to begin with; Germany has still to live down its Nazi past. The stigma persists because of the periodic reappearance of the cult, particularly in the region of its origin—the province of Bavaria—which has as its capital Munich, of the "Beer Hall" fame.

◆

THE fear of a rejuvenated Germany, displacing the United States from its self-selected pre-eminent position in the international political arena, does exist in a very acute form now. Several US officials and analysts have given vent to their apprehensions of an emerging colossus in Europe that would go berserk if not reined in time. A major US suspicion—and a valid one—is that the European Community headed by Germany in course of time would snuff out Washington's predominance and even presence in the continent.

The US complaint is not merely about ingratitude—having nurtured West Europe and particularly war-torn Germany back to life with heavy doses of Marshall Aid—the accusation is that both West Europe and Germany were now trying to get rid of the benefactor. The German and, thus, the European Community's economic strength would outstrip the US in no time if the new trend after the Maastricht Treaty to usher in a single market, continued unhindered. Thoroughly shaken by its own economic slide down and mounting debts, the US fears it would be pushed back to a position much behind that of Europe and Japan and its ability to manage the "new order" of its choice would be simultaneously and correspondingly curbed. (Some analysts assert that the worsening of the US economy was the price of "winning" the Gulf war.)

The European Community's trade with the US has suffered in 1991 compared to that in 1990. Its executive Commission said in a report in early April that the US commitment to free trade clashed with its "reluctance to recognise that the United States has its own trade impediments". The Commission's eighth annual report on US trade and investment barriers cited examples of protectionism such as high tariffs and taxes, export subsidies and other discriminatory treatment of European companies.

The report said the Community's 1991 exports to the United States totalled $86.5 billion, 5.9 per cent less than in 1990, while imports rose by 5.3 per cent to $103.2 billion. John Richardson, the Community's head of relations with the US, objected also to indirect US trade curbs designed to mould the trade policy of the European Community for political or environmental purposes, such as the law to punish the countries which trade with Cuba.

The US Vice-President, Dan Quayle, during a visit to Brussels in early February 1992, threatened that the failure to bring the GATT negotiations between the European Community and the US to a successful conclusion, that is, the former to agree to deep cuts in its farm subsidies, could harm the continent's relations with the latter—a trans-Atlantic problem of very severe proportions". The US Ambassador, James Woolsey an arms control negotiator, paraphrased to assert that if the European Community did not "deal with the American concern" (submit to its demands on subsidies), "you will find us inevitably beginning to move away, and in ways that you will not like".

"It is blackmail," said Dominique Moisi, the Deputy Director of the French Institute of International Relations in Paris.

In pressuring the European Community in respect of trade exchanges, the US is actually trying to isolate Germany from its smaller partners who might not be very sure of their ability to withstand US blandishments, and eventually blame Bonn's policies for their predicament. The objective is the same—stall as long as possible the emergence of Germany as a challenger to the supremo, and, in the process, make it once again accept the position of a junior partner.

There is another way also to curb Germany's politico-economic influence within the European Community and beyond—stir up an agitation by the erstwhile socialist countries of Eastern Europe to secure an early entry into the Community. Ms Jeane J. Kirkpatrick, a former US representative in the UN Security Council, gave an idea of such thinking while addressing the 40th anniversary conference of the *Problems of Communism* (Washington, October 22-23, 1991). She said:

> However desirable it might seem to some members and leaders of the European Community to "deepen" rather than to "widen", I believe that insistent demands from Eastern Europe will ultimately overwhelm them, and that the manifest need of Eastern Europe for closer association with the West will force the EC to adopt an inclusive policy. The desire for a common European home grows stronger, not weaker, in the wake of the collapse of communism and the overcoming of the division of Europe.

But Henry Kissinger has almost touched the core of the problems that appear to the US to be pushing it away from the position it had held in Europe ever since the end of the Second World War. In an article in early April this year, he wrote:

> Twice in a generation, America went to war because American leaders were convinced by Europeans themselves that Europe dominated by a single hostile power would constitute a threat to its security and economy. That reality has not changed. Though there are no powers ostensibly hostile to America in Europe today, the onset of any hegemonical pattern would rapidly be perceived as hostile...

The great achievement of the postwar generation of Western leaders was to recognise that, unless America was engaged early in preserving stability, it would be obliged to restore equilibrium under disastrous circumstances. ■

SUMIT: Washington Summit

(Continued from page 4)

However, if *The New York Times* editorial is any indication it shows that the US public opinion does not want to "remain captives of dangerous, mindless momentum"—a phrase which is also applicable to the Bush Administration with its myopic vision strengthened by Yeltsin's pronouncements.

Herein lies the hope of the triumph of Gorbachevian ideas on the world plane in the near or distant future. Despite all the negative prospects underlying the Bush-Yeltsin summit, its positive features, as evident in *The New York Times'* understanding, have reinforced that hope in no small measure.

As far as India is concerned, reinforcement that hope is of special value from the Third World perspective, that is, the perspective of the nuclear have-nots. However, for that hope to become a reality a concerted struggle must be carried out to its logical end. (The battle against imposition of the patently discriminatory nuclear Non-Proliferation Treaty is an integral part of that struggle.) Such a struggle would have to necessarily draw sustenance from the Western public opinion which is becoming increasingly critical of the Bush Administration's hegemonic designs that are directed against India's vital interests as well.

The latest Washington summit with its negative and positive results is bound to impart a substantive impetus to that struggle.

■

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

COMMUNICATION

On Tin Bigha Transfer

If one were to go only by the contents of the bilateral agreements and the Supreme Court judgement on the transfer of Tin Bigha to Bangladesh one would perhaps find oneself broadly in agreement with Raju Ramachandran ("Tin Bigha: No Legal Impediment", *Mainstream*, June 6). For the uninitiated, leasing of an area measuring 178 metres × 85 metres to a neighbouring country to honour international agreements and a Supreme Court judgement may appear a non-issue.

Why are, not only the BJP, several prominent Forward Block leaders of Cooch Behar and, most importantly, all such residents who will be immediately and directly affected by the proposed transfer and who know their neighbours across the border better, opposing it tooth and nail? The BJP is a late-entrant into the scene. But it has reached the forefront, thanks to the Governments in New Delhi and Calcutta for turning a deaf ear to widespread and organised protests of the local people. If a plebiscite were to take place today in Cooch Behar, one is fairly certain that the 'anti-changers' would win by a thumping margin.

What is normally played down is that mass-infiltration, smuggling and other illegal activities along the border have so frustrated the residents of Cooch Behar that they fear nothing short of 'forcible extradition' in the treaty. Partly irrational no doubt, but the power that be has done very little to allay such feelings.

What is becoming of a responsible and unbiased commentator is to appreciate such feelings and do his bit so that those do not go unnoticed and unheeded.

NIRMALA LAKSHMAN: Rio Balance-sheet

(Continued from page 6)

countries a few months ago and other earlier meetings have sharply attacked the gross disproportion of consumption to population levels, the Summit did not really go into this question at all. For instance, the US refusal to even target the long term lowering of CO_2 levels underlines its oft-repeated rhetoric that it would do nothing to compromise American lifestyles.

◆

IF the Earth Summit did not really succeed in bridging North-South tensions as it set out to do, it at least set out in urgent terms that nations and communities have to get down seriously and urgently to the business of redefining priorities and setting goals and targets for immediate action. It is fairly obvious that though governments and non-governmental organisations in many developing countries may have found common voice on some issues at Rio, at home they are nearly always on opposite sides of the fence as far as environmental protection and the rights of the people and communities are concerned. It may be too hopeful to assume that the Rio Summit will be a tangible turning point in Indian environmental planning and development priorities but there is no doubt at all that the path we are currently on contravenes the basic goal of sustainable development for our impoverished millions.

Writing in *The Hindu*'s *Survey of the Environment 1992*, L.C. Jain, a former member of the Planning Commission, points out that the real culprit of environmental degradation is "the character of development which has concentrated on heaping prosperity on a small proportion of the population by indiscreet and inequitable use and command of resources for its lifestyle". The poor, he says, have no part in shaping development policies which continue to be centralised and top down in its approach. He points out that it is the 'vibrant power' of grassroots institutions that have to be allowed to flourish, for ecology and development have to be defended on a 'scale and depth and by the masses of people themselves'. He backs the Centre for Science and Environment's report, *Towards Green Villages*, which does not see environmentally sound rural development as one of only trees and watershed but "more of village institutions, laws, financial frameworks and planning processes, the key elements of not only state policy but also a national framework for people's action for environmental management and regeneration in rural areas". It is also essential that our planners keep in focus the most economicaly disadvantaged and ecologically devasted segment of the population such as rural women for example, whose strenuous lives are already stretched beyond their fragile "carrying capacities".

Ultimately it all comes down to the reality of micro planning prioritised above all other considerations and vested interests so that the road from Rio may have at least averted the tragedy of economic and ecological devastation that constantly looms over this fragile, overburdened planet. ■

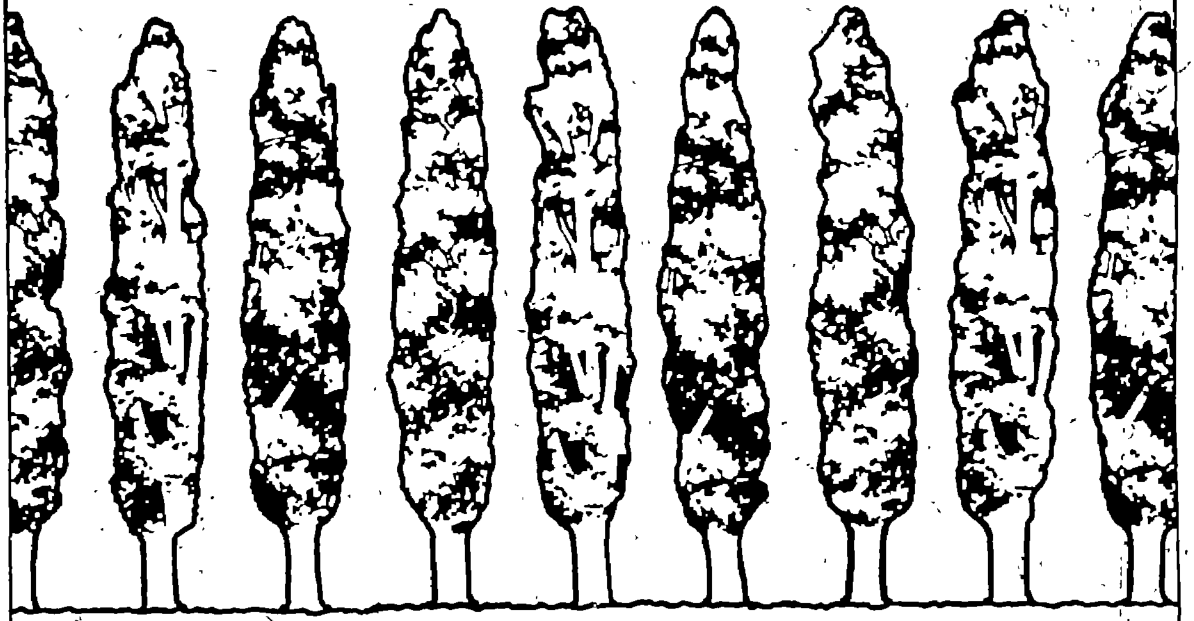
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!

SAIL continues to play an even more crucial role in the restoration and preservation of the environment.

By employing the latest technology.

By developing specialised expertise in environmental management.

By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.

By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.

Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

POLITICAL NOTEBOOK

New Agenda for NAM

Less than ten years ago, in March 1983, while inaugurating the Seventh Non-Aligned Summit in New Delhi, Indira Gandhi had characterised the non-aligned movement as the largest movement for peace in the world. This she had done in the course of dilating on the measures to be undertaken to raise the struggle for nuclear disarmament and peace to new heights. That was the perspective then dictated as it was by the threat of a nuclear catastrophe in the backdrop of the renewed Cold War that began with the Soviet Union's armed intervention in Afghanistan.

Today after a decade one can justifiably claim that the NAM's call for peace and disarmament at the Seventh Non-Aligned Summit in the voice of not only Indira Gandhi but other stalwarts of the movement like Fidel Castro has borne rich fruits. The Cold War has been buried. Superpower confrontation has ended. The bipolar global structure has disappeared.

These are exceptionally positive developments. The collapse of the Soviet Union in the process (due to a variety of factors starting with the dehumanising legacy of Joseph Stalin) has no doubt removed the countervailing force which had by and large stood by the side of the Third World states on questions involving imperialist aggressions, neo-colonial depredations and fight against apartheid. But that is a different matter.

Nevertheless, while acknowledging the highly positive feature of the end of the Cold War and the consequent reinforcement of global peace, the question one needs to address at this juncture is whether the trend towards unipolarity replacing the bipolar set-up of the recent past has strengthened the security of the Third World states. Whatever the view from the North devoid of the earlier East-West divisions, the fact is that in the perception of the South, that is, the NAM states, this trend has made the world more difficult and insecure. This has been brought out in bold relief by President Suharto of Indonesia, the current Chairman of the NAM, in his speech at the inaugural ceremony of the Tenth Non-Aligned Summit at Jakarta.

What he has sought to imply is that the diminishing prospects of a nuclear holocaust following the termination of superpower confrontation have not automatically strengthened the security of the Third World. The inability of today's sole military superpower, the US, to change with the changing times and discard its time-worn tactics of blackmail has once again made the developing NAM states vulnerable; at the same time, due to the adoption of such policies Washington has become increasingly suspect in the eyes of the Third World. That is precisely one of the basic reasons for the NAM's continuance and validity. For, as a united entity of the developing world refusing to kowtow to foreign directives aimed at curtailing, mortgaging and surrendering the sovereignty of the independent states that emerged from the debris of the colonial empires, the NAM's relevance is

indisputable precisely now when the US' urge for establishing its hegemony stands exposed from the moves of the Western powers against Iraq in particular.

It was most appropriate indeed for the Indonesian head of state to unambiguously declare: "We must....ensure that the new world order to which leaders of the industrialised countries often refer does not turn out to be a new version of the same old pattern of domination of the strong over the weak and the rich over the poor." He was equally forthright in spelling out the NAM's approach to the issue of conditionalities: "Industrialised countries unilaterally set these conditionalities and often expand their scope to cover questions of democracy and human rights applying only their own criteria which may not be appropriate. The same is true in the case of defence spending. On this form of unilateralism, I sincerely believe that the non-aligned movement must take a firm stand."

Dr Suharto's proposal for a high level NAM working group to suggest specific measures for restructuring the United Nations is noteworthy inasmuch as it seeks to make the movement action-oriented.

The tone of the Tenth Summit having thus been set, the summiteers have to work out a new agenda for maintaining and promoting non-aligned unity in the face of Western machinations to divide individual member-states on ethnic lines (as are to be seen in the disturbing and tragic events in Yugoslavia and Afghanistan as well as the feverish activities against Iraq), and ensure enhancement of neo-colonial exploitation of the NAM constituents through the multilateral financial institutions. Notwithstanding its domestic policies especially in the economic sphere that seek to weaken its independence and sovereignty, India under Prime Minister P.V. Narasimha Rao is publicly committed to play a vital role in this entire exercise. In his speech the Prime Minister himself pointed to the danger and untenability of the multilateral agencies attaching non-economic strings to the credit to developing countries. Such a statement and effective interventions with the purpose of making the summit declaration shed its defensive stance and acquire an assertive character are doubtless welcome in the wake of Western pressures. However, these need to be followed up in a sustained manner in multifarious ways in the years to come. This is imperative in the realm of building South-South cooperation as well.

Whatever may be the necessity to counter the Pakistani strategy of raising the Kashmir issue at this summit, India should not allow itself to be deflected from pursuing its main objectives in the non-aligned movement. These objectives are intimately related to the new agenda the NAM members are striving to unfold at Jakarta.

September 2 S.C.

Mainstream Thirty Years Old

Thirty years ago, on September 1,1962, Mainstream *made its quiet debut without any fanfare.*

It was not just an impetuous initiative taken on the spur of a moment. It was the product of years of consultation and interaction among like-minded friends, all concerned at the progressive corrosion of our politics since independence Whatever might have been the political or ideological inclinations of individual friends involved in the project, the journal has throughout been sought to be kept as a national forum unattached to any political formation

The twin guiding principles that Mainstream *has endeavoured to follow are the imperatives of national interests and the upholding of national self-respect National interests, in our conviction, constitute the interests of the overwhelming majority of the nation, and not just the interests of the well-placed minority at the top And the sense of national self-respect, in our perception, amounts to safeguarding the proud heritage of our freedom struggle.*

Today as we look back at these thirty years of silent but unwavering efforts to keep up Mainstream *without interruption, we are overwhelmed by the wide range of support from the entire spectrum of our national life, in which have participated persons of national eminence alongwith a very large number of those in distant corners engaged in pursuits for bettering the life and living of the deprived millions of our country. With all its drawbacks and shortcomings,* Mainstream *has steadfastly held on to its integrity, never having wavered by threats or blandishments.*

The journey ahead for Mainstream *is no less onerous and daunting, demanding fresh resources—both material and human—not only to keep up the traditions it has so long tried to sustain but to enrich them as well. There has, therefore, to be a fresh endeavour at making the journal more purposeful so that it may in its own way be able to make its modest contribution towards the building of a better future for our great nation.*

On the occasion of this journal's thirtieth birthday, we salute all friends and well-wishers who in various ways have helped to sustain Mainstream *and, we are confident, will come forward to carry it towards a Better Tomorrow.*

Kashmir Crisis

NIKHIL CHAKRAVARTTY

For long it has been fashionable to talk about the Kashmir crisis as the most intractable challenge before the country and yet do pretty little to deal with it and thereby let the blood-letting go on. Recently, however, one notices some stir in diverse circles both at home and abroad to tackle the Kashmir problem. A feeling appears to have crept in both within the government and in the Opposition that Kashmir can no longer be kept on the back-burner. This sense of urgency has to a large measure been accelerated by Pakistan's mounting pressure on both the diplomatic and political fronts.

The Prime Minister himself publicly mentioned in his August 15 address from the Red Fort about his "keenness to hold free and fair elections within the framework of the Indian Constitution and to instal a popular government" in the trouble-tossed State. The Union Home Minister on his part too has been talking about the possibility of holding elections in Jammu and Kashmir within the next six months. It needs to be noted that the President's rule in Kashmir cannot be continued indefinitely: it has to end by September next year.

Of late there has been quite a lot of activity in the Opposition camp too about what's to be done in Kashmir. Recently the National Conference leader, Dr Farooq Abdullah, and the Janata Dal leader, Mufti Mohammad Sayeed, spent sometime in Srinagar, and on their return, a meeting was held at Mufti's place to discuss the critical situation of the Kashmir Valley which was attended by most of the top leaders who included V.P. Singh and Bommai, Surjeet and Indrajit Gupta and Murasoli Maran from the DMK. Also present was Iftikar Ansari, the Congress leader in the now-defunct Assembly, who is an influential Shia leader of the Valley. The assessment at the meeting was that the militants practically run the show in the Valley while the Army and the para-military forces are only holding on to the terrain but have practically lost the populace. The consensus among these Opposition leaders was that no election would be possible in the Kashmir Valley unless it is preceded by some thaw in the situation, some opening of political activity which, in its turn, could be possible only if the government could indicate about the extent of autonomy it would be prepared to grant to the State. The Opposition leaders are reported to have apprised the Prime Minister about their assessment and have left the matter in his court.

It is generally conceded in the official circles that while the Army and the para-military forces can indefinitely hold on to the Valley, no matter how much it costs in terms of resources and manpower it is not possible to dislodge the armed militants except by means of the political process.

It needs to be acknowledged that the Kashmir crisis has four facets each of which has a distinct angle, and it is only through the management of these four can there be a viable solution of the Kashmir problem. These are: the situation in the Kashmir Valley itself; the international facet, particularly with relation to the US and the UK; the Pakistani facet and its impact on the Indo-Pak relations; and lastly, its bearing on the home front, that is, on the Indian politics as a whole.

The actual situation in the Kashmir Valley is that all civic activities are controlled by militants—in some area by one militant group, in another area by another militant group. The Indian Army guards the frontier along Pakistan, but the terrain is mostly mountainous and it becomes almost impossible to prevent continuous infiltration of militants from the Pakistani side. Inside the Valley, the Indian police and para-military forces have to clash most of the time with the militants, and the administration is practically at a standstill. There are reports of local administration having been infiltrated by the militant agents. Many people sympathise with militants, giving them shelter. Even those in the villages and towns who do not want any armed clashes, do not condemn the militants. Propaganda among the public in the Valley is mostly hostile to the Indian Government.

The clashes between militant groups and Indian forces were a little lower in the period of May and June this year. But they have grown more in August, and it was difficult for the Indian authorities to hold any function to mark the Indian Independence Day on August 15. Only a flag hoisting could be managed under tight military security.

The militants in the Kashmir Valley are broadly of three groups:

The Hizbe Islami which is the most fanatic group and is affiliated to the Jamaat-e-Islami of Pakistan. They want that the Kashmir Valley must be merged into Pakistan. They get direct support in arms and training from Pakistan.

The second group is the Al-Jehad which is also obscurantist. However, they are not openly campaigning for annexation to Pakistan, but take an ambivalent position, though fiercely against Delhi.

The third group is the JKLF (Jammu-Kashmir Liberation Front) which wants that the entire State of Jammu and Kashmir (including the portion of Kashmir now occupied by Pakistan) must become an independent State, and be attached to neither India nor Pakistan.

Of these three groups, the JKLF is the most popular among the Muslim population in the Kashmir Valley, and the Hizbe Islami is the least popular in the Valley. But the the Hizbe Islami has the largest stock of weapons and the JKLF has the smallest stock of weapons. The Pakistan Government gives weapons and training to all the militant groups so that the Indian Government forces are harrassed to the maximum possible extent, but actually the Pakistan Government gives the maximum possible support and weapons to Hizbe Islami, most of whose militant cadres actually come from Pakistan. The Pakistan Government does not fully trust the JKLF leaders, but because the JKLF is popular in Kashmir, it gives them limited quantity of weapons to combat the Indian forces. It is to be noted that in the area of Kashmir now under Pakistan's occupation, the JKLF faces persecution on many occasions from the Pakistani authorities, because the Pakistan Government, particularly the ISI, does not permit the JKLF to campaign for independence of Kashmir from both India and Pakistan. It is worth noting that unlike the other two militant formations, the JKLF acknowledges that the Hindu population who had to leave the Valley in large numbers three years ago should be brought back and their houses restored to them.

In the present situation, none of the major parties function in the Valley. All their leaders are out of the Kashmir Valley—either in Jammu or in Delhi. The cadres of these major parties are inactive though they have not left the Valley. They on their own cannot resist the militants. They want their leaders to come and then they may risk holding a mass campaign. At present, it is impossible for any leader to attack or criticise the militants. But it is possible to appeal to the militants that instead of killing people, let there be discussion about the future of Kashmir.

It is in this context that one has to take into account Dr Farooq Abdullah's recent interview to the BBC in which he clearly distanced himself from New Delhi and said that any discussion on the future of Kashmir has to include besides India and Pakistan, the Kashmiri leaders too. Broadly, this is perhaps meant to evoke a positive response from the JKLF and thereby undermine the base of the fanatical Hizbe Islami.

◆

WHILE this is roughly the situation on the ground, the international facet of the Kashmir crisis can hardly be ignored. The British public, including the Labour Party, at one stage echoed the viewpoint of the militants, laying particular stress on the violation of human rights in the Valley by the Indian armed forces. This was sought to be countered by the official Indian stand which pointed to the violence indulged in by the militants. This approach by New Delhi had a marginal impact on the Western public.

On the part of the US, Washington has clarified that it disapproved of Pakistan's interference in the affairs of Kashmir. At the same time, it has been pressing for a settlement between India and Pakistan over the Kashmir issue. Though no specific proposals for such a settlement has so far officially emanated from Washington, it appears that the ground is sought to be prepared through non-official overtures. It is in this context that the recent thesis by a Carnegic Fellow, James Clad, has attracted a lot of attention. It wants the present line of control to be recognised as the international frontier thereby sanctifying the partition of Kashmir, with some area being ceded by Pakistan on the southern side, while India reciprocating by ceding claim on the north, that is, legitimising the present Sino-Pak deal. One can only say that the James Clad proposal is in the nature of a trial balloon, but it does indicate the likelihood of prodding from the West for a settlement of Kashmir. One more pressure point for New Delhi.

The Pakistan angle was spelt out by its Foreign Secretary during his recent talks with his counterpart in New Delhi, when he said Kashmir is "the core issue" of dissonance between the two countries. By the very tenets of the so-called two-nation theory—which forms the ideological platform for the existence of Pakistan—Kashmir with its Muslim majority population contiguously located must belong to the state of Pakistan. This is precisely the reason why the Pakistan authorities are dead set against the JKLF which wants independence for Kashmir, because, any acquiescence to the demand for independence of Kashmir would be a body-blow on the two-nation theory. Further, the right of Kashmiris as a distinct ethnic group to independence, is a matter of utmost threat for the very integrity of Pakistan. Once the Kashmiri people are allowed to be independent because of a distinct ethnic identity, how could the claims of the Baluchis, the Sindhis and the Pakhtoons be denied? And if that is permitted to happen, Pakistan will be reduced to a bloated Punjabi Suba, and nothing more.

Viewed from this angle, BJP leader Dr Murli Manohar Joshi's suggestion for isolating the Muslim majority Kashmir Valley from Jammu and Ladakh—however rational it may appear—unwittingly helps to strengthen Pakistan's ideological stand behind its Kashmir policy.

Lastly comes the impact of the Kashmir crisis on the Indian political scene. The Congress, the Janata Dal and the Left feel that there should be more autonomy for Kashmir without which militants cannot be controlled. There is, however, no clear view yet as to the degree of autonomy to be given. The Congress feels that if too much autonomy is given to Kashmir, the same demand will come from other parts of India.

The BJP is opposed to granting any autonomy to Kashmir. It wants to cancel even Article 370 of the Indian Constitution which gives a very limited degree of autonomy to Kashmir. The BJP's view in the main is that the Muslim population in Kashmir is unreliable and acts as the agent of Pakistan, and they must not be pampered. It needs to be noted that of all the political parties, the BJP commands preponderant support among the large body of Hindu refugees. From the Valley—numbering early three lakhs—who have been living in miserable plight, and whose return has become essential for establishing normalcy in the State of Jammu & Kashmir.

Prime Minister Narasimha Rao is, therefore, faced with the dilemma that even if all other parties agree to concede autonomy to Kashmir, the BJP can whip up campaign against it all over India and say that the Rao Government is surrendering territory to a Muslim population which is anti-Indian. All this may lead to a heightening of communal tension.

It is thus imperative that the building of a national consensus on Kashmir acceptable to all parties in the country becomes the crucial responsibility of all concerned, not only of the Prime Minister but all parties including the BJP. The alternative may be disastrous for the nation as a whole, because the present blood-letting can only end up in the disintegration of not only the picturesque Valley but a blow to India's unity as well. We, all of us, have to bestir ourselves before the grandeur of autumn in the Valley yields to the rigours of a snow-bound winter in three months from now. ■

Inflation: Illusion and Reality

SATYA NARAIN

Containment of inflation is an important conditionality attached to the loan facility the International Monetary Fund has provided to the government to enable it to pursue its economic reforms programme. Specifically, the target set is a single digit rate of inflation for the current financial year as against the double digit rate, exceeding 13 per cent, in 1991-92.

The "fall" in this rate to 9.1 per cent in the week ending August 1 and further to 8.7 in the following week will seem to suggest that the target is not only within reach but has, in fact, been already achieved. The Finance Ministry's Chief Economic Consultant, Dr Ashok Desai, has even boldly predicted that the inflation rate will be below eight per cent by next month. However, the appearence is sometimes deceptive and it may be so in this case as well. There is, in any case, more than a reasonable doubt about the price situation indeed being as reassuring as Dr Desai or other official spokesmen claim it to be. Not only does one swallow not make a summer, the basis on which the claim is made is fragile and methodologically unsound.

◆

THE single digit rates of inflation in the two weeks ending August 8 have been calculated on a point-to-point basis, that is, by the increase in the index of the wholesale prices in the period has registered over the figures for the corresponding weeks last year. This, to say the least, is an unscientific method to measure the inflation rate since it takes into account positions at only two points which could represent an exceptional situation or elements. The fact that the lower figures thus arrived at are lower only because of a much higher rate in the corresponding periods last year makes them an inadequate barometer to measure the inflationary pressures ravaging the economy at present. They are also only provisional and hence sure to be revised upwards, as provisional price indices invariably are, and this is another reason for not overrating their significance.

A more rational method to measure price inflation is to compare the price index in a particular week with that in the previous week or even month which can provide a better insight into the situation on this front—whether the price curve is moving up or showing a downward trend. Viewed in this light, the position becomes totally different. The week ending August 1, which is supposed to have shown the inflation rate at below 10 per cent, also witnessed the higher price spurt for a single week in the first seven months of the current calendar year. This spurt was as high as 0.6 per cent which, by any standard, is an alarming figure for one week. If the price level continues to rise at this rate the monthly spurt will be about 2.4 per cent and the inflation rate for the full year, a highly disconcerting 28.8 per cent.

Even more disquieting than this continued upward trend of the prices in general is their steeper rise in the case of articles of mass consumption like foodgrains, including pulses and oilseeds, vegetables and fruits with the group comprising these items, as also eggs and other essential products, registering an increase of 0.8 per cent in a single week. The rise in the case of even manufactured products was a substantial 0.6 per cent which, again, is not a minor increase.

It is only in the case of fuel, power, light and lubricants that the index for the week had remained unchanged, but with most of these articles having administered prices, this is not surprising. The stability in their case was attained at the cost of the exchequer which has traditionally been subsidising their prices for economic and often political reasons. The projected full convertibility of the rupee on trade account may not permit this indulgence by the state because of the upward push it will give to the cost of imports, especially of petroleum products, showing how precarious and even deceptive is this partial stability of the prices noticeable in some areas.

◆

ANOTHER significant factor cautioning against overblowing the so-called single digit rate of inflation is its being the rate of the rise in the wholesale price index. The consumer price index, which really is relevant for the people, has continued to move upward at a double digit rate with the increase in June, the latest month, for which data are available, being as high as 12.9 per cent. That it was two percentage points lower than its level in the beginning of the year offers no consolation when the base on which it has been rising was already high. With the recent increase in procurement prices of foodgrains and their inevitable follow-up in the spurt in market prices, this rate of price rise is bound to scale new heights making nonsense of the government's claim that it has been able to stem the tide of inflation.

Even if the government's claim about last year's galloping inflation having been bridled is accepted at its face value, how does the government hope to sustain the fall?

As already pointed out, both the foodgrains and oil products are bound to register increases in their prices in the wake of the rupee's convertibility and the reduction of subsidies for fertilisers and other inputs as part of the restructuring programme. Also, the prospects on the food front, although not as bleak as they had appeared to be till recently, are by no means bright. The depletion of the food stock with the offical agencies and shortfall in procurement of staples like wheat and rice too will not make things easier for the government.

There is, in any case, a limit beyond which restraints on demand, which have been the main plank of the Government's policy to contain inflation, cannot be imposed without affecting production all round. The alternative of taking care of these adverse consequences through increase in state spending will also not be available to the government because of an inadequacy of resources and, in case it wants to augment them through new taxes, the inflationary impact of the indirect ones among them.

Viewed in this perpective, the government's attempt to pass off a slight downturn in the rate of inflation—and that too when measured on a point-to-point basis—as a significant achievement, is an exercise in self-delusion. The government has no justification whatsoever to gloat over what essentially is a statistical mirage and has no relevance insofar as the situation on the ground is concerned. What is more, there is no firm indication as yet of this situation turning better, nor even a hint of a policy framework to improve it.

A spurt in prices is inherent in the economic restructuring of which the guiding principle is "free marketism" and it is meaningless to expect it to be even contained, let alone eliminated, without keeping the economy, both in its production and distribution aspects, under a degree of social discipline. ■

COMMUNICATION

Devaluation of President's Awards

The President's Awards like Bharat Ratna, Padma Bhushan and so on have been devalued completely. These awards are given to all and sundry, including crooks and criminals, although such awards are given to a few decent deserving ones too as a concession or perhaps to soften the blow.

It may be recalled that V. Krishnamurthy, now involved in Harshad Mehta's mega-scam, was awarded 'Padma Bhushan' by our last President, R. Venkataraman, who often protested against being called a 'Rubber Stamp'. Had this mega-scam not been exposed, our 'Rubber Stamp' President Venkataraman would have awarded even 'Bharat Ratna' to Harshad Mehta this year!

All decent and deserving persons who have received the President's Awards over these years should return them, if they want to save their dignity and self-respect and would not like to be bracketed with crooks and criminals who have also been the recipients of such honours.

Baseless

I am sorry to have to defend myself against Achyut Patwardhan who, in his last article reprinted in your issue of August 15, has identified me with Muslim communalism and accused me of inciting Muslim students of the Jamia Millia Islamia in the Mushirul Hasan controversy. All I can say about my role in the Jamia crisis, which is well documented, is that the charge of 'incitement' is totally baseless and unjustified.

As for Achyut Patwardhan's perception of Muslim communalism, he appears to share a mind-set which sees no contradiction between *Hindutva* and secularism, believes that only Hindus are, or can be, secular and in fact defines secularism in terms of homogenisation, assimilation and Hinduisation.

Rooted on the Banks of the Rubicon

ANAND SHARMA

South Africa is once again at the crossroads in its quest for a humane and equitable order. The forward march of its transition into a non-racial and democratic society has come to a abrupt halt.

When the democratic forces were awaiting an agreement for an Interim Government the signal which emerged from the CODESA was one of paralysis and the resolve of the present government to preserve White privileges and power. This impasse and the ongoing carnage has led to a virtual collapse of the negotiations causing widespread disappointment and concern. Hope of yesterday is replaced by anxiety and the prevailing situation can only be termed as complex and volatile.

Only six years ago, the Commonwealth Eminent Persons Group on South Africa had warned that failure to arrive at negotiated settlement will engulf South Africa in a racial conflagration with frightening implications. Today this threat is looming large over the South African horizon.

The horrendous massacre at Boipatong has finally buried the fragile understanding between the government and the ANC and the country is slowly drifting towards an abyss. During my two week stay in South Africa I witnessed a strong wave of anger and resentment sweeping the country. President de Klerk's image of a great reformer has taken a severe battering. Earlier doubts persisted over the Pretoria regime's sincerity and commitment to democratic change. Now there is a growing convocation about the existence of a double agenda to delay transition and the governments calculated adherence to it.

The developments primarily responsible for this slide are: the unabated cycle of violence, the divergent positions on the guiding principles for a future Constitution and the modalities for the adoption of a democratic Constitution. It is essential to analyse these:

Negotiations

Contrary to expectations that the outcome of the March referendum will accelerate the transition process, it led to a hardening of attitude of the ruling National Party. That the government had moved consciously away from meaningful negotiations is reflected in its proposals at the CODESA. The present impasse in the negotiations is due mainly to:

(i) The refusal of the government to abide by its commitment to democracy indicated in the signing of the declaration of intent at the CODESA Convention for a Democratic South Africa.

(ii) An intricate strategy devised by the government to secure a minority veto which would subvert a genuine democracy.

The deadlock has been given the appearance of a minor difference of a few percentage points but the real reason is the National Party's insistence on minority veto disguised as:

a) Difference on the percentage required in the Constituent Assembly to adopt the Constitution 66 per cent to 70 per cent (ANC position) and the insistence of NP on 75 per cent linked to

b) Veto role for a Second house or Senate constituting a manner which would allow NP allies to exercise the veto.

This would mean that the losers in a popular election will exercise veto over the decisions of the victors.

It may be observed that notwithstanding the internationally accepted norm of 66 per cent majority (Namibia being a recent example) the ANC accepted a majority of 70 per cent for the adoption of a Constitution.

The government had tricked all by cleverly identifying the middle ground, that is, dividing the interim phase in two parts. An agreement on the interim Government in phase I without any agreement on the Constituent Assembly, would have eternally locked the country in phase 1 under an Interim Constitution of the CODESA.

Much is said about the future and rights of the minorities. The NP is raising fears of Black domination and its proposals according to analysts are aimed at perpetuating the status quo. The ANC is for a justiceable Bill of Rights enshrined in the Constitution. Considering the background of exploitation, discrimination and denial under the apartheid regime, a political change unaccompanied by social and economic change will result in discontent and disorder.

The question, therefore, arises whether the government is at all prepared to accept the concept of majority rule. The government's acceptance of the principle of 'one man one vote' has been erroneously interpreted as concurrence to majority rule. The government's proposal is for 'power-sharing' without surrendering overall White control. Its position remains unchanged considering the fact that the government had made the same proposal to the Commonwealth EPG. This stark reality has escaped the attention of the international community.

The central issue is thus of the very acceptance of democratic majority by a government which remains rooted on the banks of the Rubicon.

The author, a former Congress MP, has all along played a highly active role in cementing India's ties with the South African populace's fight against apartheid. He has just returned after a fruitful trip to South Africa

Violence

The country is reeling under violence which has assumed alarming proportions. Conflict is inherent in the apartheid society where massacres have become a way of life. The Boipatong massacre on June 17 claimed 47 lives with pregnant women and babies as victims. Boipatong is a part of the chain of serialised killings and symbolises violence that has brutalised and desensitised an entire society. It is natural that when the lid is taken off after decades of oppression, the process of change throws up conflicting interest groups striving to carve and consolidate separate spheres of influence. The current violence can be attributed to various factors, that is, tribal rivalry, economic hardship and political divisions. It is being portrayed as internecine conflict emanating from Inkatha-ANC rivalry leading to a Zulu-Khosa divide. There is present an element of political rivalry and reprisal killings. However, to term it as ' Block on Black' violence will be oversimplification and a grave error of judgement.

Lurking behind this facade is the dark truth of police apathy and connivance. The meticulous planning behind every massacre and the organised nature of the violence reveals the presence of a third force. The pattern reveals that violence is a potent weapon available to forces bent upon sabotaging the peace process.

There have been consistent and widespread accusations of the active involvement of the police and security forces in the killings—a charge contested by the government but largely substantiated by circumstantial evidence and available facts.

It is ironic that the violence dramatically escalated at the very onset of negotiations, that is, in March 1990 and has systematically spread from Natal deep into Transvaal—the scene of recent massacres. The killings have coincided with a selective lifting of ban on carrying dangerous weapons by Inkatha supporters in the name of cultural weapons. A majority of the killings have been carried out by these weapons yet the ban has not been reimposed.

In most cases the marauders have come from hostels belonging to corporate/public sector or managed by government, where Inkatha supporters were specially accommodated. Killings in the Reef and Vaal triangle including Sebokeng, Sharpville and Boipatong are linked to 30 identified hostels from which 261 attacks have emanated during April 1990 to June 1992 claiming 4000 lives. The Statutory Commission headed by Justice Goldstone enquiring into the violence in its interim report urgently recommended fencing of the hostel and seizure of all weapons. This was ignored by the government resulting in a public expression of distress by the Commission. Invariably the perpetrators have gone scot free. Few who were arrested after public outcry were acquitted for lack of evidence with the Courts recording non-cooperation of the police. The police-Inkatha nexus is now universally known after the proof of police funding of Inkatha.

It is pertinent to mention the case of Kwamadala hostel linked to much violence in the Vaal area. Proof exists of repeated memorandums by the Council of churches to the authorities and police as well as of complaints by township residents, yet for unexplained reasons the police chose not to act till two weeks after the Boipatong tragedy.

Equally significant is the presence of dreaded mercenary units which are centrally controlled. These include the Portugese-speaking Battalion 32 used earlier in Angola, the Renamo elements of Mozambique, the Koevoet of Namibia and the Seles Scouts of erstwhile Rhodesia. Interestingly, most of the attackers in the train killings spoke dialects alien to South Africa and elements from within the police have charged the mercenary units of the crime. The Goldstone Commission has severely indicted the police and called for the immediate withdrawal of special units from the townships. The Commission's recommendation has been rejected by the Commissioner of Police, General Van de Merwe.

Reports of various observer groups and the International Commission of Jurists on direct police involvement have been rejected by Pretoria as partisan. The recent report of the Human Rights Commission is most damning on police complicity in massacres. It lists the following similar characteristics and objectives of massacres: Inkatha's drive to establish political territory and influence, extreme terror tactics employed to disorganise and paralyse township communities. Hostels were the launching pads and eye witnesses claim involvement of security forces and involvement of unidentified Whites in the violence.

The only reasonable inference which may be drawn from the aforesaid facts and reports is of the involvement of security forces. The failure of the government to act against the guilty police officers and refusal to disband mercenary units tantamount to tacit approval. It also exposes President de Klerk to the charge of connivance which must be dispelled for the sake of South Africa's future.

President de Klerk must realise the futility of defending a police whose credibility is zero. This government must not delude itself. Denials and defence of security forces will only discredit the government. What is needed today is a resolute and sincere action to overhaul the police. To gain the respect of its citizens the government must have a demonstrated control of the security forces which are able to protect the lives of the people.

Contrary to the prevailing impression, the fundamental question of reversibility or irreversibility of the process is not yet decided. The legislation passed by Parliament in the last week of May, authorising detention without trial, solitary confinement and unrestricted bugging of the phones/houses make the government intention suspect. The lingering threat of the reimposition of Emergency remains intact.

Mass Action

Responding to the prevailing mood in the country the

(Continued on page 26)

After Fortyfive Years

Hope turns to Despair

H.K. DUA

Fortyfive years ago India woke to freedom. Hope and idealism filled the air. The people, proud of their heritage and their dreams, took the vow to build a new India. Independence meant something to them as Jawaharlal Nehru spoke about India's tryst with destiny.

Fortyfive years later despair has replaced hope and cynicism has overtaken the dreams. The nation is passing through a period of uncertainty and drift which, if not halted, can lead to dangerous consequences, possibly chaos.

What can freedom mean to those who even now do not get two meals a day; or to those who have bonded their children in slavery to weave carpets in Mirzapur; or to the landless who continue to work on other peoples' lands for the right to live a bony existence? What can freedom mean to those who have to sleep under the flyovers in big cities or stand in endless queues at employment exchanges where promise of a job is punched on the card year after year.

Some promised Ram Rajya, others socialism. '*Garibi Hatao*' was the name of another game that was played on the people. But the fact is that despite 45 years of independence our people are one of the poorest in the world. We still have the largest number of illiterates in the world. People still die because of lack of healthcare or because of their inability to buy a handful of grain. Poverty line is subject of trendy seminars and workshops organised by those who do not know what it means to be poor.

At the time of independence our leaders dreamt the right dreams. They wanted to build a strong united India where no one would have to beg for food, where no one would suffer because of accident of birth, where no one would kill another simply because he speaks another language or believes in another God. That was another day, distant and perhaps on a different time-scale.

What we see now is an India worried whether it can survive as one nation. The accident of birth still decides the rest of a citizen's life, and of his children. People continue to kill others for passions that ought to have been spent on building a life of harmony and peace.

And it is not only at Barcelona the world is laughing at this nation of 850 million people and its incapacity to stand up and be counted among others.

One does not know whom to blame for the mess the country is caught in—the people or the leaders. Maybe we get the rulers we deserve. But that is the argument of those who believe in fatalism or have the tendency to meekly accept or rationalise what they cannot cure. The Law of Karma is always handy for a vast number of our people to accept what ought to have been rejected by them. Maybe it is the men who rule us are responsible for the messy situation India is placed in. They say they are servants of the people and our people, gullible as ever, believe them. Many promises have turned out to be false and those who have held these out are merely seekers of pelf and power.

What is happening in Punjab and Kashmir? To believe that there is no threat to the nation's unity would be suicidal. Yet what we get is pronouncements of the government's resolve: "We will protect the nation's unity and territorial integrity." The people do not know whether to laugh at the vacuity of such statements or to cry for those who have lost their kith and kin.

The people, as full of vigour and patriotism as of Punjab were famous for, are caught in the crossfire of the terrorists who have made a business of their daily killings and the men in uniform who have for eight long years been unable to stop them from giving up the guns. Fear stalks the roads, the knock on the door leads to worried whispers in the house. The government salves its conscience by replacing one Governor with another, transferring the local police chief, or if someone's brainwave works, putting on a convenient serial on Doordarshan.

Our leaders—whether in the Congress party or in the Opposition—left Punjab free for the wielders of gun long back. The space vacated by the political parties has been filled by the terrorists on the one side and the security forces on the other. The result: absence of the boisterous Punjabi laughter.

The story is no different in Kashmir. The threat to the country's integrity is perhaps more serious there than elsewhere.

The situation is not on the boil in the North-East, but you have to visit the North-East for a few days to feel the intensity of alienation among the people there. For them, Delhi is a distant, far away spot on the map. The question is not just the tackling of insurgency in Manipur or Nagaland; perhaps our security forces have the confidence to live up to their vow that they will deal with any threat to the nation's territorial integrity. But does anyone in Delhi think what breeds insurgency in the North-East?

Who cares? It does not occur to our leaders in the government or those adorning the Opposition benches, that Punjab and Kashmir are national problems and require not the pointing of finger at each other but the pooling of heads so that a solution may be found.

Leaving it to the Army or the security forces is too often found an easy way out. No one feels ashamed of the implicit failure of the political or the civil authority in tackling a local situation that ought to have been anticipated and handled well in time. The Army is handling tasks in Punjab and Kashmir and in the North-East for a long time now. But only the other day it was supposed to be on the alert at as quiet a place as Shimla or at Thiruvananthapuram which had not seen communal strife earlier. During the Mandal agitation days, town after town was given to the Army to control. The colonels did restore calm but you have to listen to what they say afterwards about our politicians. The outpouring of their cynicism is generally not complimentary to the men who have come to rule by the mandate of the people.

◆

DOES it occur to our Ministers why they have to live behind barbed wire or to go to the inaugural functions with black cats surrounding them? Yes, security has to be ensured for them. But why should this state of-affairs arise at all when representatives of the people cannot move around among the people without escorts armed with stenguns? Why does it not occur to our leaders that fences they have built—or have had to build—around themselves have cut them away from the people they are supposed to lead? The barbed wire may be providing some protection to the men behind it but they do not realise that they have in a way become prisoners who are afraid of freedom. The barriers between the rulers and the ruled are more than symbolic. Perhaps it does not occur to our leaders why the same people who would respond to their calls before independence now laugh at their antics or the self-indulgent indifference they are wallowing in. The leaders' greed, pettiness, ambitions and obsessions with power can match the size of the scandals that are flourishing at various levels of public life.

What about the institutions? Parliament is no longer as effective as it used to be. It is unable to check the misuse of power for personal ends or become the voice of the people. The judiciary no longer enjoys the prestige it used to. Its contribution to dispensing justice apart, it does not know how it should tackle the simple case of one of its brother judges who allegedly made no distinction between what is meant for his office use and what is for his personal benefit. The executive is often getting away with the arbitrary use of power, often unchecked by Parliament or the judiciary. The Press, which is perhaps more vigilant than the vital organs of the state meant for sustaining democracy, is developing tendencies that could cost it its credibility and some day its independence.

Now the scholar researching on India need not shuffle through thousands of volumes of British Parliamentary Papers as our new publication

BRITISH PARLIAMENTARY PAPERS
RELATING TO INDIA 1662-1947

Compiled by ADRIAN SEVER

Lists all British Parliamentary Papers, both alphabetically and chronologically. Command Papers listing Acts of Parliament appear separately.

Yet only a few are bothered about all this. As a nation, we are a smug people. We don't anticipate dangers and often we react when it is too late. This nation always rises to the occasion, unmindful of the risks that improvised responses entail. One of the beliefs is that having achieved independence, democracy is for ever safe in this country. We are not perhaps able to grasp the dangers our democratic set-up is fast running into.

Terrorism is posing a threat to not only the unity of the country, it has also brought to the fore dangers for a democratic way of life in Punjab and Kashmir. Those who are going about in Punjab and Kashmir gun in hand striking fear are taking away the citizens' right to live.

Violence negates democracy and there is more of it now and is fairly widespread. What makes a tolerant people kill each other needs to be pondered. But some things are clear. You cannot have a over 400 million people illiterate, ignorant, underemployed and underfed believe in democracy for too long. Somewhere there is a link between poverty and violence. And you cannot ask a man without a job not to feel angry simply because Mahatma Gandhi said anger and violence are bad for the country and the people.

The creative energy of the youth could have been used for building a better India, but the underlying presumption is that our political parties are led by creative leaders. Do we have leaders who can inspire our young men and women to join the adventure of building a new India?

More boys and girls are certainly becoming doctors, engineers, scientists. But isn't it a fact many a youngman is joining local mafia leaders who are out to use muscle power to capture polling booths for the local *netas* in State after State? The youth can build a nation, creatively used, but in a state where idealism has given way to naked pursuit of money and power, young men and women will become liable to be exploited by fundamentalists, secessionists, communalists, gun wielders and leaders of criminal groups who are all out to destroy one of the greatest experiments in building a nation through democratic means.

But who cares? We can always celeberate something or the other. We have just begun the yearlong celebrations of the 'Quit India' movement's golden jubilee. We have celebrated our fortysixth Independence Day. History is often the refuge of those who have not done much themselves to celebrate. Recalling past achievements comes handy to the generations which want to obscure present failures. Are we not the generation that failed? ■

Total Literacy Campaign

Still an Unwritten Chapter in Indian History

LAKSHMIDHAR MISHRA

September 8 being the International Literacy Day we are publishing the following article in instalments to mark the occasion.

—Editor

The National Literacy Mission (NLM) was launched on May 5, 1988 by the former Prime Minister, the late Rajiv Gandhi, at a formal function held at Vigyan Bhawan, New Delhi. The National Literacy Mission Authority (NLMA), having two wings, namely a Council and an Executive Committee, was formed in June 1988. Two months later in a meeting in August 1988, K.R. Rajan, the then Collector and District Magistrate, Ernakulam, exuded lot of confidence that a Total Literacy Campaign (TLC) was possible, feasible and achievable in India and that beginning could be made in Ernakulam. Despite initial reservations, the proposal was supported by the NLMA and the State Government and a campaign for total literacy in Ernakulam was launched on January 26, 1989. The campaign, which was implemented by the Kerala Shastra Sahitya Parishad, was a collaborative effort between the District Administration and non-governmental organisations and was successfully concluded in December 1989. On February 4, 1990, Ernakulam was declared as the first fully literate district in the country, making 1.35 lakh potential learners out of 1.85 lakh reach the NLM levels of literacy and numeracy and raising the rate of literacy of Ernakulam from 77 per cent to 98 per cent. It is on this day that a campaign for total literacy was also launched for the entire Kerala State by the then Prime Minister of India, V.P. Singh, who had earlier launched the International Literacy year (ILY) on January 22, 1990 reinforcing the solidarity and support of the government to the NLM.

Successful accomplishment of the TLC in Ernakulam and taking up the TLC venture for the entire Kerala State with so much of political will and commitment acted as a powerful springboard and spurred several State Governments, District Administrations and voluntary organisations to launch similar initiatives in the direction of total literacy. The whole process was facilitated by the formation of a non-governmental organisation called the "Bharat Gyan Vigyan Samiti" in August 1989 and reinforced by a countrywide caravan for literacy in the period spanning October 2, 1990 and November 14, 1990 known as the Bharat Gyan Vigyan Jatha sponsored and executed by the Bharat Gyan Vigyan Samiti and another caravan for literacy in the five States of Assam, Bihar, MP, Orissa and UP sponsored and executed by the Gandhian and Sarvodaya organisations. The two caravans taken out at one of the most difficult periods of Indian history had succeeded to a large extent to spread the message of literacy and science for self-reliance, to create the desired churning in favour of literacy and lifelong continuing education and to inculcate a rational, secular and scientific temper alongwith values of national concern such as national integration, small family norm, women's equality and conservation of environment. These will remain as two important milestones in the history of literacy and adult education in India and the world.

The author, a Joint Secretary in the Department of Education under the Union Ministry of Human Resource Development, is the Director-General of the National Literacy Mission. The views expressed in this paper are entirely those of the author and not those of the Ministry.

Ernakulam had an infective effect on other districts and TLCs in Bijapur and Dakshina Kannada in Karnataka, Burdwan and Midnapur in West Bengal, Karaikal, Mahe, Yanam and Pondicherry in the UT of Pondicherry and the State of Goa followed in quick succession. During the last three and a half years since the launching of the TLC Ernakulam, the number of TLC projects and TLC districts has grown progressively and as on August 1, 1992, as many as 106 projects involving 165 districts have been approved by the Executive Committee of the NLMA for being covered under the TLC, which is an impressive indication by any account. While the State of Kerala and the UT of Pondicherry were declared as fully literate on April 18, 1991 and November 30, 1991 respectively raising the rates of literacy to 93.5 per cent and 89.5 per cent respectively, the districts of Bijapur and Dakshin Kannada in Karnataka; Chittor and Nellore in Andhra Pradesh; Burdwan, Midnapore, Hooghly, Virbhum, North 24-Parganas and Bankura in West Bengal, Sindhudurg and Wardha in Maharashtra, Gandhinagar and Bhavnagar in Gujarat, Pasumpon and Pudukottai in Tamil Nadu; and Narsingpur in Madhya Pradesh have also concluded the first phase of their total literacy campaign, some successfully and some not so successfully. While some have declared themselves as fully literate in a formal ceremonial function, some have simply closed the first phase of the TLC and have started the post-literacy and continuing education phase after having shared the outcome of the first phase of the campaign with the people on whose mandate they had launched the campaign. In all, 17 projects in 33 districts have been approved for post-literacy and continuing education, while about 10 proposals for basic literacy and post-literacy (five each) are awaiting the approval of the EC, NLMA. There have been several interesting and inspiring fall-outs of these campaigns (both the TLC and the PLC) which will be enumerated at a later stage.

What has been listed above is just not a catalogue of dates and events nor a calendar of months and years when certain events were launched and certain activities took place. Each one of them represents an important milestone in the history of development of adult literacy and education in India and will continue to stand erect, evoking powerful memories, generating new hopes, faith, conviction and optimism and spurring millions to action in a new direction. Historians and politicians alike, social scientists and economists as well as media and communication experts could study these events and activities and could record them as important chronicles in the history of mankind out of the distilled wisdom which they might derive out of the TLC experiment. Regretfully, the TLCs on the whole have not found their way into the corridors of history in the same manner in which comparatively less important and rather insignificant events centering round the lives of emperors and kings, generals and ambassadors, zamindars and middlemen, courtesans and concubines have found place. What could be the reason?

II

THE question is complex and there could be no straight and simplistic answer thereto. It is well known that education is not an autonomous system; it is a sub-system of the total socio-economic and political system. To the extent, it is able to influence the structure and operations of the total system, it can be a tool of liberation of men, women and children who are often prisoners of the system. This is how lot of faith and hope has been reposed in education from time to time as an agent of bringing about a qualitative change in the lives of millions.

Education is one which liberates. Thus goes the ancient adage.

In reality, however, education has been the victim of the total system and is hardly in a position to influence the former in order to channelise it in a positive and reformative direction. The sectarian, divisive and disruptive forces which affect the total system do not spare the education system; the same fads, taboos, mercenary interests, diehard obscurantist ideas and practices which blur the vision of the total system and rob it of its elan vital also devitalise the education system and are responsible for its degeneration.

Instead of bemoaning the progressive deterioration in educational standards and its total devitalisation, it may be worthwhile to ponder over ways and means of restoring the centrality of education and according it its rightful place so that it can ensure the dignity of the individual and the unity of the nation. In countries like Myanmar, Cuba, Nicaragua, Vietnam and Ethiopia an attempt was made to restore the primacy of literacy and education through rather unconventional and unorthodox means. In these countries there was a revolution which put an end to the tyranny of the prevailing dictatorial system and which, in turn, brought about a radical change in the social, economic and political system. Education and literacy were the offshoots of that historic change. They were prompted and facilitated by the change and they came to occupy the centre-stage. In the immediate wake of change of government it was thought, and rightly so, that these countries which had been groaning under the wheels of colonialism and imperialism and had been economically ruined by years of misrule, can be put back on the rails of progress and development only if the pride and patriotism of the people could be evoked; it was also thought that there could not be a better weapon to do so than through mass education and literacy. Mass education and literacy were to be imparted in a campaign mode which involved democratisation of the entire educational process through establishment of a common school system for all races and classes, backed by a common curriculum and common medium of instruction.

This implied injection of a new awareness and consciousness based on political liberty and social and economic equality. It meant that one who knew could share with the other and particularly the women and other disadvantaged groups who have been deprived of the access to educational opportunity due to forces and circumstances beyond their control. It also implied imparting skills of economic production to the masses to prepare them to build the foundations of individual and collective self-reliance. As history has documented it, in Vietnam, backs of buffalos and brick-kilns became slates and blackboards as also shade of the trees and harvesting yards where the peasants and agricultural labourers thresh the rice. The juice extracted from the plants and the trees became the ink. In Vietnam rains and floods, in Nicaragua volcanic eruptions and red hot lava, contaminated water and gushing streams did not deter scores of learners and volunteers from plunging into the campaign for total literacy which was also a campaign for social regeneration and national reconstruction. It restored the national pride which was badly mauled by years of colonialism; it created a new society which values and prizes literacy and education as tools of social action. It reinforced the faith and belief that you can do it and you have to do it for your sheer survival and for the survival of your dear nation and countrymen.

III

BEFORE proceeding to analyse the relevance of total literacy in a campaign mode which was successfully carried out in countries like Myanmar, Cuba, Nicaragua, Vietnam and Ethiopia and drawing a worthwhile parallel, as may be appropriate to our requirement, it may be useful to examine the nomenclatural identity of literacy and adult education and whether they should be treated as co-terminus or parts of a larger system or independent entities. To state it rather firmly and without any ambiguity, *literacy and education are not co-terminus;* they may be parts of a larger system but certainly they have a uniqueness and identity of their own. To state it with further precision and clarity, literacy is a minimal even though very important entry point; it provides a gateway to the world of information, communication, modernisation, innovations and skills—life-skills, vocational-entrepreneurial skills, communication-skills, survival-skills, etc. It is essentially a tool for communication and learning, for acquiring and sharing of knowledge and information and a pre-condition for individuals' evolution and growth.

Research studies and human cognitive development have established beyond doubt that literacy enhances our 'critical consciousness' and enables us to think, analyse and reflect the existential reality of the situation in which we have been placed. It enhances our cognitive faculties. It promotes objectivity, capacity for clear perception, clear thinking and logical and coherent analysis. It promotes a sense of history and helps to combine individuality with universalisation of education. Literacy certainly includes reading, writing and arithmetic skills but it goes beyond alphabetisation. It is something deeper than mere mechanical skills of reading and writing. Understood in its broadest perspective, literacy could free us from the narrow confines of our individual pride and prejudice, ignorance, fads and taboos and direct our creative energies to flow unhindered towards a search for and discovery of the true meaning of our existence. It is a kind of open sesame which enables men and women to transcend the barriers of their restricted lives and establish an easy outreach with the wider world of information, communication, modernisation, innovations and skills.

If literacy is a sub-structure, adult education could be a super-structure. If literacy is an entry point, adult education is not the terminal point but a continuum in the direction of lifelong learning. Adults in the 15-35 age-group, who constitute the most productive segments of the society and whose acquisition of a literate status is crucial to the survival of our nascent democracy, are certainly not fools or goofs; they are intelligent, mature, sensible and often sensitive. They have a world of information and wisdom with them which may not be adequate or foolproof but could certainly be tapped for many a productive endeavour and could be profitably used to our advantage.

The education of such an adult has to be viewed somewhat differently from the education of a child who is in one of the most formative years of a human being and has, therefore, to be based on certain guiding principles. The first and the most important guiding principle is that every adult, who is not literate, is first a human being and then a learner, having the same hopes and aspirations, weaknesses and failings as any other human being. He/she operates in an environment which is not amenable to any precise regulation and which generally has not been very positive and supportive of his/ her education. Remaining illiterate is not a matter of his/her discretion of volition but due to circumstances (social, economic and cultural) often beyond his/her control. It is only when we bring ourselves down to the level of a potential learner and speak to him/her in an intelligible language, the gap separating the teacher and the learner could disappear and the urge and motivation to learn could acquire a new form.

The second guiding principle rests on understanding and internalising the nexus between the demand and the supply syndrome. No worthwhile programme of literacy can be launched without generating a demand for literacy and without creating a climate which will be positive, supportive and appreciative of literacy. Demand generation must precede delivery and demand should be generated in as simple and natural a manner as possible. Harnessing folk culture and tradition could be one of the ways which the potential learners could be aroused and awakened and an emotive bond established with literacy.

The third important guiding principle is based on an objective understanding of the interface of literacy, adult education and development. They are undoubtedly dialectically inter-related. Paulo Friere, the Brazilian revolutionary and adult educator, had as a matter of fact, redefined development and redirected the efforts of many adult educators working for social change. Being highly critical of most development efforts, he had proposed an alternative paradigm based on the development of 'critical consciousness' as different from the state of 'naive consciousness'. Julius Nyrere, yet another outstanding adult educator and the former President of Tanzania, had also perceived this nexus between literacy, adult education and development with great deal of clarity, imagination and vision. It is quite true that literacy *per se*, and even adult education at a fairly advanced stage, may not lead to a radical or qualitative change in the lives of individual learners. It may not lead to an end of the status of landlessness, assetlessness and bondage; but they can certainly be a tool of " critical conscienceness' and in that sense can be an important tool to induce or stimulate change—social, economic, cultural and even political.

The fourth guiding principle is related to the level of literacy and the stage at which post-literacy and continuing education should begin. According to a statement made by Madam Helen Butt, the level of literacy is as important or even more important than the content of literacy. We need a level which is reachable, which can be precisely and scientifically defined and which is sufficiently high to ensure retention and application. Such a level can also be described as a switch-over from the syndrome of guided-learning to that of a self-reliant learning. Post-literacy and continuing education can begin only at that stage when the fragile level of literacy has been replaced by a self-reliant level, that is one where the need for guided-learning has been fully dispensed with. It is important that there is a simultancity in planning both basic literacy and post-literacy programmes so that there is no avoidable interregnum and the latter commences quickly at the close of the former with of course adequate preparations.

Yet another principle which is important in our context is related to the issue of language. Unlike most other countries, we are in a multi-lingual situation where in addition to 15 languages listed in the Eighth Schedule of the Constitution, we have as many as 1642 dialects, many of whom are spoken by large groups of people. No literacy or adult education strategy can be meaningful if it does not take cognisance of this multi-lingual situation and does not proceed to respect the linguistic identity and preferences of the adult learners. It is in this context that bilingualism becomes an important principle in any teaching-learning process, both for children as well as for adults. Bilingualism implies learning literacy in the dialect spoken by large groups of people at the initial or incipient stage of literacy and providing a bridge at an appropriate stage for switch-over from the spoken dialect to the state standard language.

Yet another important aspect of this principle is that since all spoken dialects may not have a script of their own, the script of the state standard language be adopted so that the process of learning literacy through that script also becomes easier for every basic learner.

IV

IT is in this perspective of a correct understanding of the inter-relationship between literacy, adult education and development that we may proceed further to critically analyse the rationale and efficacy of the campaign approach. It may be stated straightaway that there is nothing new or innovative in this approach; it is a continuation and renewal of the approach which obtained even in the pre-independence era. In the twenties, thirties and forties when the country was reeling under the weight of an oppressive colonial era, the rate of literacy was barely five per cent and in terms of absolute number, the country had millions of illiterates, who were also victims of social discrimination and economic deprivation. How could they unite and fight the colonial regime and obtain freedom for the country when they themselves were not free from the shackles and fetters of ignorance, illiteracy and bondage? It is this predicament of millions of people which had haunted the conscience of the Father of the Nation and which had made him utter those historic words with lot of anguish:

> It is a matter of sin and shame that millions in India continue to be illiterate; they have to be liberated.

Popular Ministries which were formed in the provinces in 1937, under the Act of 1935, responded to the call of the Father of the Nation and had launched mass campaigns for total literacy as well adult education programmes. These were small, isolated and scattered efforts with a limited coverage. There were, however, several silver linings. Illustratively, in Bihar a campaign, which in the words of Dr Frank Laubach can be said to be the "most impressive government campaign conducted in India in that time", was launched under the inspiring leadership of Dr Syed Mahmud. In the city of Bombay, the literacy movement was launched under the chairmanship of B.G. Kher, the Premier and Education Minister. The Mysore University unit launched a literacy campaign in 1940 and the Mysore State Literacy Council was born in 1941. Dr Frank Laubach inspired a large number of teachers in Moga in Punjab and launched a campaign "Each One Teach One" which gave rise to literacy leagues in almost all the districts of the State. The campaign-oriented movement for basic literacy during this period also gathered momentum due to the Granthshala Movement in Kerala and the Village Library Movement in several parts of the country that provided the much needed spurt for post-literacy and continuing education.

It is interesting to note that Chakravarty Rajagopalachari (popularly known as Rajaji), the then Chief Minister of Tamil Nadu, had, in clear recognition of the need for post-literacy and continuing education, wrote a primer for neo-literates known as *Theambeeva* as also short stories for neo-literates *Kuttikiaagal*. People of stature like Harisarvotham Rao and Smt Durgabai Deshmukh in Andhra Pradesh, Dr Syed Mahmud in Bihar, Morarjibhai Desai, B.G. Kher and J.P. Naik in Bombay, Dr Frank Laubach in Punjab, Sir M. Visvesvaraya in Mysore, Dr Wealthy Fisher in UP and Dr Mohan Singh Mehta in Rajasthan (popularly known as Bhai Sahib), had acted as pioneers in the field of adult education and are known for their monumental contributions.

In its range and ambit, the programme has grown over the years at a remarkably rapid pace and there have been experiments with one model after another in quick succession, such as, the Gram Shikshan Mohim in Maharashtra in the late fifties, the Farmers' Functional Literacy in the late sixties, the Functional Literacy for Adult Women (FLAW) and Non-Formal Education Programme for the Youth in the early seventies, Polyvalent education for the urban slum dwellers, industrial workers and their family members under the caption of "Shramik Vidyapeeth" in the sixties and seventies, the National Adult Education Programme in the late seventies and now the National Literacy Mission in the late eighties and nineties.

Alike in the field of institutionalisation of and experimentation with one model after another, there have been changes in the content and process of literacy and adult education programmes from year to year. Each one had its own peculiarities of strategy and methodology and strengths and weaknesses in operationalisation. Illustratively, the Gram Shikshan Mohim was one of the first experiments to take literacy to the masses by way of a movement. Launched in the district of Satara in Maharashtra in 1959, it had covered as many as 25 districts of the State during the period 1961-63. In Satara where it was launched, the annual average figure of persons becoming literate increased from

3000 in 1959 to 1,00,000 in 1961. In the State as a whole, a total of 10,08,000 persons in the 14-50 years age-group in 1109 villages were made fully literate. The Mohim had aimed at total eradication of literacy, provision of library services and other materials for retention of literacy and allround development of villagers through social education centres. Even the Kothari Commission (1964-66) had acknowledged the achievements of the Mohim which harnessed the local village patriotism to eliminate literacy from the village and required the teachers and all educated men and women to work for literacy.

The enthusiasm and the tempo generated by the Mohim could not, however, be sustained due to want of adequate back-up support and services, particularly in the field of post-literacy and continuing education and there was large scale relapse of neo-literates to the old world of illiteracy. Notwithstanding this major weakness, the Mohim continues to be an important silver-lining in the history of adult education in India.

The Farmers' Functional Literacy, Functional Literacy for Adult Women and Non-Formal Education for the Youth in the sixties and seventies were essentially sectoral or departmental programmes confined to few Ministries of Education, Agriculture, Information and Broadcasting. Their scope and ambit was limited in as much as no serious effort to achieve nationwide coverage and promotion of literacy on a universal scale was either conceptualised or accomplished through these programmes.

The National Adult Education Programme launched on October 2, 1978 undoubtedly represented a major initiative in the field and a radical departure from the sectoral and departmental approaches in the past. It was intended to be a mass programme involving all sections of the society with a view to making 100 million illiterate adults literate over a period of five years, that is, 1978-83. The NAEP document was crystal clear in its perception and insight. It said:

> No country perhaps, with the exception of China, faced the problem of illiteracy of the magnitude we are facing and hardly any country has had such a long tradition of respect for learning and knowledge or the vast resources which we have.

It proceeded to add:

> The aim then would be to strive for a learning society in which life-long education is a cherished goal, a goal which is enunciated in our scriptures.

Intended to be a mass programme, the NAEP, however, remained a traditional Centre-based programme (which was also honorarium-based, hierarchical and government-funded and government-controlled). Undoubtedly it imparted a national and holistic dimension to the adult education programme (which has been later recognised in the Kothari Review Committee Report submitted to the government in April 1980), and created an infrastructural base for adult education. Given, however, the magnitude of the problem of illiteracy, its intensity and spread were limited, and given the dangers of too much of centralisation in a governmental and hierarchical mode, it failed to evoke any positive initiative and interest in the minds of numerous government functionaries and least succeeded in stirring the imagination and critical consciousness of the unlettered masses to come forward and participate in the literacy programme. The programme became a victim of its own hierarchy and outmoded rules and procedures and failed to inspire the policy formulators, opinion-moulders, representatives of the people, etc. It did attempt degovernmentalisation by encouraging involvement of voluntary agencies in implementation of the programme on a large scale but a target-oriented approach without an effective screening mechanism to screen and certify the credentials of implementing agencies brought discredit to the programme and became its major casualty. It was also shortlived inasmuch as the programme was subjected to a review even before it could barely complete one year of its existence in October 1979. Even though the review brought out several positive aspects of the programme and made several positive recommendations to impart it a new strength and resilience, it could not retrieve the same euphoria with which it was launched on October 2, 1978. The critical consciousness about the limitations of a traditional government-funded and government-controlled programme like the NAEP (which was also honorarium-based) was reinforced with submission of as many as 56 Evaluation Study Reports which had a catalogue of debits and very few credits to the programme on the one hand and also due to the projections made by the World Bank and UNESCO about the magnitude of problem of illiteracy of the country in terms of percentage as also in absolute number on the other.

◆

THE Radio broadcast of the late Rajiv Gandhi on January 5, 1985, putting women's education at the centre-stage, conceptualisation and formulation of the National Policy of Education and according a very high priority to literacy and adult education as an area of national concern therein and a detailed Programme of Action laying down the strategy of implementation of the NPE were all positive indicators of the direction in which the new government wanted to go and stimulants to the future course of action. The NLM is partly a by-product of the NPE, 1986 but largely the outcome of an evaluation of the strength and weaknesses of the NAEP by the Institutes of Social Science Research and Management; it derived its inspiration and strength from the new urge for application of the findings of scientific and technological research to improvement of the environment and pedagogy of literacy learning. In terms of content, it tried to imbibe and assimilate values of national concern which were reflected in the National Policy of Education and in terms of process, it tried to impart a new sense of urgency and seriousness by adopting the mission mode of implementation of a hitherto government programme. Soon after the Mission was launched by the late Rajiv

Gandhi on May 5, 1988, all of us, including S.G. Pitroda, who was then the Adviser to the PM (Incharge of all Technology Missions) and who continues to be so now, started, in all earnestness, the exercise to translate the laudable objective of the Mission into a reality. We did lot of introspection and asked questions to ourselves as to how a programme which was traditional in character for nearly three decades could be converted into a people's movement.

It is not as if nothing happened after the launching of the Mission. The Adviser to the PM on Technology Missions, S.G. Pitroda, had indeed assumed the gauntlet on his shoulders immediately after the formal launching. He used to take the Mission Directors to the State capitals, to the district and block headquarters to have a direct inter-personal communication with the political leaders, the administrative bureaucracy, media and the people in a climate of total openness and critical reflection. There was a lot of learning through sharing to search for a workable strategy in the direction of a goal which we had set for ourselves.

In the immediate wake of the launching of the Mission, National Literacy Mission Authority was constituted with two wings, namely, the Council and the Executive Committee, the former headed by the Minister of HRD and the latter by the Education Secretary. State Literacy Mission Authorities were also formed simultaneously and State Mission Directors were appointed. All the ongoing conventional programmes were given a critical look, reviewed and revised. A number of joint study teams went round different States and Union Territories, districts, blocks and villages to gauge the mood of the people, to spread the message of the Mission with clarity and conviction and to create a climate for a people's movement for literacy. Some of the significant developments which had taken place both before and after in the wake of the launching of the NLM could be chronicled in a historical perspective as follows:

- Launching of "Sampoorna Saksharata Abhiyan" by Gujarat Vidyapeeth on May 1, 1988.
- Launching of a campaign for total literacy for Coimbatore by Adviser, Technology Missions to the PM on May 11, 1988.
- Launching of mass campaigns for total literacy in 20 talukas at the rate of one taluka per district in Karnataka in a massive convention of VAs and NGOs at Nanjangoud (Mysore) on November 7, 1988.
- Initiative taken by Dr (Miss) Bengalee, Vice-Chancellor, Bombay University for a mass programme of functional literacy with the help of teachers and students of the Bombay University on August 15, 1988.
- Initiative taken by the Committee of Resource Organisations (CORO) for launching a mass campaign for total literacy with the help of student and non-student youth volunteers in the Dharavi-BARC belt on November 15, 1989.
- Literacy as a Movement of the People (LAMP), a convention organised by Dr B V Parameshwara Rao of Bhagavatula Charitable Trust, Yellamanchilli in Bangalore from July 1 to 3, 1989.

A lot of communication with the States, UTs, districts, etc. took place, a lot of solidarity, rapport and bonhomie was established but the government-funded and government-controlled programme did not become a people's movement. Despite the best possible intentions and efforts, literacy continued to be the stereotyped conventional Centre-based programme. Voluntarism and mass mobilisation remained a far cry. Outcome-oriented results, which are also measurable and deliverable within a prescribed time span, were elusive.

The first opportunity came in April 1989 when the efficacy of the campaign approach was demonstrated for the first time in Kottayam city of Kerala. It was also demonstrated that small is beautiful. The district and the city had the highest rate of literacy in the country (81 per cent and 97 per cent respectively). There were only 2000 persons in the 6-60 age-group to be made literate. The Collector and DM, Kottayam succeeded in mobilising 200 volunteers from the NSS unit of the Mahatma Gandhi University for forging a link with the 2000 potential learners to make them fully literate within a period of three months (April-June, 1989). The city was declared fully literate on June 25, 1989 and the story of this first great experiment in total literacy has been encapsuled in the shape of a book, *How We Did It in 100 days*, written by A.J. Alphonso, the Collector of Kottayam.

What started as a time-bound one-shot affair, though on a modest scale in Kottayam, soon grew into a massive movement, first in the district of Ernakulam, then in the entire Kerala State, Gujarat, Pondicherry and now in 106 projects involving 165 districts. The methodology which was adopted in Ernakulam and later in the whole of the Kerala State was unique in many respects, which need to be listed. These are:

- Massive approach—entire district taken in one go.
- Total coverage to the point of saturation—one member of the society, literate or illiterate, could escape from the impact of the campaign for total literacy.
- Transformation of literacy work from avenues of employment to a duty/obligation tinged with pride and patriotism.
- Meticulous spatial and temporal planning as in a war for mobilisation and deployment of human and material resources.
- Integration of people's enthusiasm with administrative machinery on the one hand and a professional project structure on the other.
- Delinking the implementing machinery from governmental bureaucracy to increase dynamism and flexibility and at the same time ensuring accountability by stringent monitoring by the people themselves.

The total literacy plan for Ernakulam was launched on January 26, 1989 with the following prophetic words:

> There are no prospects for a literate Kerala within an illiterate India Kerala has to play a leading role in making the whole of India literate. This is imperative for the progress of Kerala. Only by eradicating illiteracy from its own soil and sharing the experiences and excitement there from that Kerala can play this role.

(To be continued)

Chemical Weapons Convention Safeguards North's Interests

CHAKRAVARTHI RAGHAVAN

This article, written in mid-August, and sent from Geneva reached us late. However, it is bring published now in view of its abiding importance.

—Editor

If things go according to the plans of the Western countries and major industrial powers, the UN General Assembly at its forthcoming session beginning September will approve a draft convention on chemical weapons and it will be opened up for signature at Paris after the US elections.

Dates in December or early January are being contemplated.

The 39-nation Committee on Disarmament (CD) is set to wind up at the end of August the more than a decade-old negotiations on chemical weapons and forward to the UN General Assembly for its consideration and adoption the draft treaty: "Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction".

The Chairman of the Ad Hoc Committee on Chemical Weapons of the CD, Germany's Ambassador, Adolf Ritter von Wagner, is to present a new revised version of his earlier text and this will come up before the CD on August 26. But there will be no further negotiations.

The Convention is aimed at prohibiting the development, production, stockpiling and use of chemical weapons and ensure destruction of the chemical weapons and production facilities within a ten-year period from date of entry into force.

Towards this end, it has provisions (and lists some of the chemicals usable as weapons in schedules) for their being declared and destroyed, prohibiting further development of such weapons, and provides for a multilateral regime and a secretariat to administer the convention and a verification regime, and ancillary matters including technology development and trade.

But the Convention will not end use of 'riot control agents' and herbicides against guerillas—the US used these extensively in the Vietnam War—and may even legitimise their use.

In drawing up the convention, the industrial nations have reconciled their own differences and tabled a text whose main thrust (of so-called verification and challenge verification) is and will be against the developing world—not merely in terms of ensuring no "poor man's nuclear bomb" comes up to threaten the West's security, but also to ensure that the South's chemical industries do not develop independently of the Transnational industry and become a future competitor.

The author is the Chief Editor of SUNS, South-North Development Monitor *and Editor of the* Third World Economics.

They hope to get the draft out of the CD by end of August, and take it to the General Assembly to get its imprimatur and cajole and pressure the few remaining Third World holdouts to join.

The negotiations were practically concluded on August 7, when the Ad Hoc Committee of the CD on chemical weapons completed its consideration of a draft text of a convention put forward by von Wagner, and some amendments to the text that he put forward on that day, taking into account a large number of amendments to his text proposed by a group of 14 developing countries and the comments on these from the other members, particularly leading industrial nations.

The group of developing countries comprised: Algeria, China, Cuba, Egypt, Ethiopia, India, Indonesia, Iran, Kenya, Mexico, Myanmar, Pakistan, Sri Lanka, and Zaire.

Some like India were concerned over the provisions on technology and trade and the continuance of parallel discriminatory regimes that would still deny them the technology and products.

Others like Pakistan or Iran or China may have been concerned over the distinct possibility that the verification processes could be used against them to pry into their other activities, including perhaps some clandestine nuclear weapons activities.

And others might have been concerned over the prospect of use of herbicides and tear gas in war or war-like operations.

The group, nevertheless, joined together and put forward amendments and negotiated jointly. But it seems unlikely that they will continue to stand together.

When the CD meets on August 26 to 'consider' the new revised draft text, it will be clear whether the text will go to the General Assembly as a consensus document or whether a few of the developing countries will block the consensus and force the Western nations to take it to the General Assembly as their own text (but with a wide cosponsorship). It will also be clear at that stage how many of the other developing countries will support the consensus or for the moment remain muted.

Several of them will be weighing the pros and cons in terms of regional political and security interests and tensions, their own domestic public opinion and interests of their chemical industries, the prospects of using their adhesion to the convention to get some technologies (which are now being denied to them under export controls for alleged security reasons), and being on the 'good books' of the major Western powers and the IMF and the World Bank in the New World Order.

Some of the other developing nations in the CD—notably Argentina, Brazil and Peru (in Latin America) and Nigeria and Morocco in Africa—have not joined the Group of 14. Though a few of them take some moralistic tones in justifying their support to the draft, the various situations that their governments face domestically, and needing US support on them, is weighing with these countries.

Chemical weapons are abnoxious and condemnatory and a proper convention to outlaw them would thus deserve support.

But, some of the provisions of the Convention could, in the long-term, have some adverse effects on the Third World.

Coupled with the like outcome of the Uruguay Round in the area of intellectual property rights, the convention could cast another shadow over indigenous industrialisation and developmment of technology in the South and give another push to the transnational sectors.

As some of the amendments of the Group of 14, and explanations given by them (during discussions) show, even the requirement that any "plant" producing annually more than 30 tonnes of "unscheduled (under the convention) discrete organic chemical containing the elements phosphorous, sulphur or fluorine" would have to keep extensive records and provide them. All such plants too could easily be the target of "verification".

In several of the large Third World countries like India, there are any number of very small-scale plants, either producing fertilisers and pesticides as final products and based on petro-chemical inputs, or as producing intermediates for final products by others; and all of them will be caught in this net. Any major TIC suspecting an enterprise of infringing its "patent" could easily manipulate a challenge verification to find out the situation and gain knowledge of its 'secrets'. Even though verification is technically in terms of the obligations of the convention even international inspectors are not above board, and quite often are intelligence agents too.

When concluded and (universally) accepted, the CW Convention will be a major precedent setting treaty on disarmament and multilateral verification, involving the reconciling of the international community's interests in verification and the issues of sovereignty of nations. It will also be "most expensive" of the disarmament treaties in terms of monitoring, verification and enforcement.

But whether it will ultimately be accepted by some of the key developing countries seems to be an open question.

Given the views expressed in Delhi by Eduardo Falciro, the Minister of State for External Affairs in a press briefing in Delhi (though subsequently explained away, at the instance of Indian officials in Geneva who were still negotiating on the text at that time and felt embarrassed), as also the views about pros and cons expressed by negotiators here, it appears to be reasonably certain that India will agree to the text and support it and sign it. The issue is reportedly before the Political Affairs Committee of the Cabinet.

Perhaps, some portions of the proposed convention—particularly provisions for verification and "challenge verification"—may be seen by India vis a vis Pakistan and China as beneficial and useful to its security interests. It may enable the US or one of its allies to mount some "challenge verifications" of plants allegedly in use for clandestinely developing or producing chemical weapons. The inspection demand could be on plants suspected to be part of the complex of nuclear weaons programme in Pakistan. Some part of any nuclear weapons programme, whether of plutonium separation or of uranium enrichment are "chemical" processes.

However, some of the provisions of the Convention as they stand could, in the long-term, have some adverse effects on India too.

◆

THE issue of chemical weapons and banning them has been on the international agenda since the mid-60s, though negotiations gathered some momentum only in the late seventies and early eighties.

Chemical weapons, in the more popular terminology of 'poison gas' has met with universal oprobrium. And despite considerable investments and experimentation by the military establishments of the major military powers, and their attempts to find uses for such weapons, they have been found to be not useful or usable in battle conditions—since use against the enemy cannot be done in ways that will guarantee no-adverse-use against one's own troops.

Like nuclear weapons, their possession and possible use can only serve the purpose of a terror weapon against adversaries and more as a threat rather than a real end use.

Much before the Second World War, in the aftermath of World War I and use of "poison gas" (mustard gas was used) in that war, the 1925 Geneva protocols banning use of "Asphyxiating, Poisonous or *other gases* (emphasis added), and of Bacteriological Methods of warfare" were signed.

In the light of subsequent claims (by the US) or attempts at justification (by its allies), the words 'other gases' in the Geneva protocol is noteworthy.

Despite subsequent technological changes between the two wars, and more so after the World War II when there was production and development of the so-called 'nerve gas' and 'binary' weapons (stretching the letter of the protocols), it was always understood that the spirit of the protocols banned such warfare and that this was "the law of civilised nation" and thus international law.

Subsequent evidence (much after World War II) has shown that Japan, which had used poison gas in its war in China during World War II, did contemplate and prepare for use of such weapons. If it did not, it was the difficulties of their use in conditions where its own troops would not be hurt. The Americans gained the 'secrets' of these technological developments during their military occupation of Japan, quickly took them away to the United States and used them to try and develop such weapons further.

But the first challenge to the law of civilised nations came in the 1960s and the international community was found wanting.

The United States, which had not acceded to these protocols, used the so-called "riot control agents"—a more virulent form of the normal tear gases used by police in domestic law enforcement -and "herbicides" in the Vietnam War.

Perhaps in other times such a use would have been justified on the basis that the international law did not apply outside Europe and North America—an argument used by the Portuguese to justify the piracy of Vasco de Gama in the Arabian Sea and the Indian Ocean or by the British when they waged their opium wars against China (for the right to sell opium) and burnt the summer palace in Beijing.

The US took varying positions in the 1960s. It first argued that it was not a party to the Geneva protocols and, when this produced protests that whether the US had signed it or not, the Geneva Conventions had become the accepted law of civilised nations in warfare, the US took the position that the existing conventions did not cover such substances (that tear gas was not 'poison gas', and herbicides was not 'gas') and that the US was ready to negotiate and sign a comprehensive one.

In the meanwhile it continued their use in Vietnam.

The European NATO allies of the US, who were signatories to the Geneva protocols and ought to have condemned, made noises but did not go beyond that. They were not fighting the Vietnam war, though they, as Japan too, benefited financially by supplying the US forces.

Nevertheless, there was a public outcry, and critical comments including from the then UN Secretary-General U Thant, who viewed his office as the "conscience of mankind" and repeatedly spoke out against the Vietnam war and its horrors.

The anti-Vietnam War movement inside the United States also raised an outcry.

All this forced the US to slightly back off and international disarmament negotiations began to focus on chemical and biological weapons—with the US claiming that the protocol against "bacteriological weapons" did not cover the new types of 'biological weapons'.

The US dragged its feet in the negotiations raising some impossible conditions; on one or two occasions, when the Soviets seemed about ready to accept it, the US changed its position and resiled from its own proposals.

Nevertheless, pressure of world public opinion resulted in the Convention on "Development, Production and Stockpiling of Bacteriological (Biological) and Toxic weapons and on their Destruction" being concluded and signed in 1972.

Despite it, as late as the seventies even after the 1972 Convention, the US conducted some clandestine research activities in field testing of biological agents and their delivery 'systems'.[1]

The Convention though still left a vast gap in the area of the chemical weapons which by then had become very sophisticated. In the Iraq-Iran Gulf war, there were charges, some of them found to be correct, of the use of chemical weapons by Iraq against Iran. But the US and others who were supporting Iraq in that war, made protests and noises but allowed it to go on.

Intense efforts to ban the chemical weapons however ran into two problems: one the issue of inspection and verification, not only of chemical weapons production plants but of the advanced chemical industry—since for those who had mastery over the technology conversion of dual use chemicals to weapons was easy.

The negotiations also ran into the snag of the US insistence on what used to be described as the "two per cent option", which would have enabled it to develop some weapons and keep a residuary arsenal for use or threat of use in some contingencies.

The collapse of the Soviet power and the more recent Gulf war over the Iraqi occupation of Kuwait (during which there was much fear on the side of the US allies that their ground troops could face Iraqi chemical weapons) gave a push for international efforts to ban such weapons. The US too joined though reluctantly.

In the New World Order, where doctrines for use of nuclear weapons and threat of use in the Third World are being developed, chemical weapons were seen as the "poor man's nuclear bomb" to be banned and guarded against.

Intense negotiations followed on the gut issues of definitions, what should be banned and what would be permitted, the question of verification, etc. All these were carried on through the CD's Ad Hoc Committee on Chemical Weapons.

These negotiations focused on the interests of the major powers with vast chemical industries. The Group of developing countries also put forward their concerns, but these appear to have been largely ignored.

As soon as the major powers, particularly the US, Western Europe and Japan were able to resolve their differences, the Chairman of the Ad Hoc Committee tabled the text, suggesting in his explanatory note that its provisions, including some pharaseology supplied by them, represented "large amount of consensus".

The scheme of the Conventionhas articles setting out the general obligations, "never under any circumstances": to develop, produce, otherwise acquire, stockpile or retain chemical weapons, or transfer, directly or indirectly chemical weapons to anyone; to use chemical weapons; to engage in any military preparations to use chemical weapons; to assist, encourage or induce anyone to engage in any activity prohibited by the Convention.

Each state party is obliged to destroy all chemical weapons it possesses, or abandoned in territory of another state, and destroy all chemical weapons production facilities.

There is an elaborate definition of various expressions used.

There are requirements for declaration, within 30 days of entry into force, of whether a state possess chemical weapons, production facilities; on transfers of such weapons made since January 1, 1946; and provide a general plan for destruction. Declaration with full information and detail are also to be provided for old or abandoned chemical weapons on its territory or whether any has been abandoned by it in other's territory, and about chemical weapon production facilities it has and a general plan for its destruction.

Chemical weapons and weapons production facilities are to be eliminated and destroyed over a ten year period, according to a phased programme. Full access is to be provided for verification and monitoring of all existing weapons and facilities for production.

Another article sets out activities not prohibited under the Convention.

Other provisions include those for establishment of an Organisation for Prohibition of Chemical Weapons with a Technical Secretariat headed by a Director-General, with teams of technically qualified inspectors, for a Conference of Parties and a 41-member Executive Council with some balanced regional representation and for including within each region a specified number of countries with "the most significant national chemical industry in the region". From Asia there are nine states on the Council, four of them in the "most significant" category. India would thus be assured of a seat on the Council.

There are provisions for consulation, cooperation and fact-finding, provisions for inspections and "challenge inspections", with elaborate procedures for these set out in an Annex; for settlement of disputes; and another Annex with schedules of chemicals and guidelines for including chemicals in particular schedules.

The Convention when it is signed and enters into force (and it will when 65 nations sign and ratify it), is supposed to ban the development, production, stockpiling and use of chemical weapons and provide for the elimination of all existing stocks of weapons over a 10-year period.

Despite any claims that might be made, through oral declarations or interpretative statements, the use of so-called "riot control agents" beyond one's borders for "law enforcement" or the use of herbicides as a weapon will not be banned by the Convention.

"Riot control agents" have been defined as any chemical not listed in a schedule to the Convention "which can produce rapidly human sensory irritation or disabling physical effects which disappear within a short time following termination of exposure".

◆

THE general obligation contains a provision by which each state party undertakes "not to use riot control agents as a method of warfare". The definition clause, under purposes not prohibited under this Convention, stipulates in Art II:9 (d) "Law enforcement including domestic riot control purposes".

The formulation in an earlier version of the draft "Domestic law enforcement including riot control purposes" was changed into its present language, at the insistence of the United States, and would mean not only domestic, but non-domestic or foreign.

The United States used some virulent forms of "tear gas" during the Vietnam War, with some long-term serious effects on those exposed.

The "tear gas" was not used to control or disperse demonstrators (peaceful or violent) against civilian authority, but to 'flush out' guerillas from their secret, underground hideouts, who had survived the US carpet bombing of remote jungle areas.

In international law the US never "declared a state of war" in Vietnam, but characterised it as military operations to assist the US-recognised legal government in Saigon which was sought to be overthrown by guerillas aided by the North.

Nevertheless, it was a "war" and the use of "tear gas" was a violation of the 1925 Geneva protocols against use of "asphyxiating, poisonous or other gases" which the US was bound to observe as the law of civilised nations —since the protocol had been accepted by all the nations of the world (except the US), even if the US non-signature meant no legal obligation.

But if the draft convention had been in force then, the US use of the "tear gas" would have been "legitimate"—a measure of "law enforcement including domestic riot control" permitted by the Convention.

The Convention will legitimise such use in the future, and "riot control agents" would be used in future "peace-keeping" operations of the US-manipulated UN Security Council which increasingly will be intervening in the Third World countries for "humanitarian" purposes.

And explanations and comments of some CD negotiators, including from the Third World, leave little doubt that such a use in a UN authorised operation is envisaged.

Only those who have never been exposed to the 'riot control agents'—can glibly talk of their 'non-lethal' character. Any serious side-effects could always be attributed to other reasons, particularly when it involves browns and blacks. Perhaps in a future international "law enforcement action" in the Third World CNN or other TV programmes could even speak of their laser-guided precision delivery and "humane use", just as they went lyrical over the 'smart bombs' over Iraq.

The US used herbicides extensively in the Vietnam war, causing serious ecological damage to the forests and vegetation in the entire Indo-China peninsula. It has been using herbicides in its so-called war against drugs in some Latin American countries to destroy crops in areas suspected to be used by peasants to grow cocoa. These remote jungle regions and areas, coincidentally, are also the strongholds of some of the guerilla movements, like the Shining Path in Peru.

The use of herbicides as a weapon of war is not specifically prohibited under the Convention.

The US was stoutly opposed to any language that would clearly outlaw the use of herbicides like other chemical weapons as a method of warfare, or limit the use of 'riot control agents' to strictly "domestic law enforcement and riot control purposes" (as one of the amendments of the Group of 14 suggested).

The US view prevailed, and critics are to be fobbed off by the Preamble. This is a transparent figleaf that does not hide the nakedness of the international community and its surrender to the US.

The Preamble to the Convention says: "Recognising the prohibition, embodied in the pertinent agreements and relevant principles of international law, of the use of herbicides as a method of warfare."

It is not insignificant that while other parts of the Preamble, in citing other international agreements, specifies them, on herbicides it is left vague.

The German Chairman of the Ad Hoc Committee has sought to underline in his explanatory memorandum that under the Vienna Law of Treaties, a preamble is an integral part of the treaty, leading the unwary perhaps to think that use of hebicides as a method of warfare is banned. But it is not. A preamble is of use in interpreting some ambiguously worded provision or when introducing amendments at a future date to show it is within the objective. But a preamble does not create a specific obligation and, given the history of the Convention and amendments proposed to include herbicides specifically, but not accepted, the conclusion is clear.

In the beginning, the industrial nations tried to ridicule and reject the viewpoints of the developing countries and their proposed amendments, with the British delegate in one private meeting, for example, reportedly describing one of the proposals (for change) presented and explained by Pakistan (on behalf of the 14) as "stupid". When such undiplomatic language was protested by Nigeria, the British delegate defended himself by saying it was "under instructions".

There were also attempts at dividing the group as when Western diplomats asked some of the Asians and Africans what they thought of the growing relations between India and China.

But soon the ICs discovered that these tactics would not pay and they were forced to discuss the amendments of the 14 in detail in the Ad Hoc Committee and at least go through the motions of negotiations. And on August 6, some of the amendments, in a modified form, were accepted and presented as the Chairman's amendments. These were mostly minor, but did contain some improvement on the issue of technology cooperation and trade, though ultimately it may prove to be less than what it says.

One of the major concerns of India and some others was the provision in the draft in Article XI dealing with "Economic and Technological Development".

Article XI of the von Wagner's original draft, provides:

> 1. The provisions of the Convention shall be implemented in a manner which avoids hampering the economic or technological development of states and international cooperation in the field of chemical activities for purposes not prohibited by the Convention including the international exchange of scientific and technical information and chemicals and equipment for the production, processing or use of chemicals for purposes not prohibited under this Convention.
> 2. Subject to the provisions of this Convention and without prejudice to the principles and applicable rules of international law, states parties shall:
>   (a) Have the right, individually or collectively, to conduct research with, to develop, produce, acquire, retain, transfer and use chemicals;
>   (b) undertake to facilitate, and have the right to participate in, the fullest possible exchange of chemicals, equipment and scientific and technological information relating to the development and application of chemistry for purposes not prohibited under this Convention;
>   (c) not maintain among themselves any restrictions, including those in any international agreements, inconsistent with the objects and purpose of this Convention, which would restrict or impede trade and the development and promotion of scientific and technological knowledge in the field of chemistry for industries, agricultural, research, medical, pharmaceutical or other peaceful purposes;
>   (d) not use this Convention as grounds for applying any measures other than those provided for, or permitted, under this Convention nor use any other international agreement for pursuing an objective inconsistent with the objects and purposes of this Convention;
>   (d) undertake to review its existing national regulations in the field of trade in chemicals in order to render them consistent with the object and purpose of this convention.

◆

IN their reactions and amendments to this draft, the Group of 14 found the use of "avoids" in Article XI:1 not sufficient and wanted language to the effect that the Convention's provisions "shall" be implemented in a manner that "does not hamper" economic and technological development or international cooperation.

Another amendment of theirs sought deletion of the words "inconsistent with the object and purposes of the convention" in XI:2 (C), and instead adding at the end (after 'peaceful purposes') the words "not prohibited under this Convention".

And finally, in respect of XI: 2(e), in the provision requiring review of national legislations, they wanted states to undertake to review "their" (instead of 'its') existing national regulations.

This last could indirectly cast an obligation on the Australia Group or the EC to review their collective harmonised decisions and the national regulations flowing from them.

Behind the amendments was the demand of the 14 that, once the Convention comes into force and countries become parties, the Australia Group and its parallel regime be disbanded in relation to parties to the Convention.

The Australia group members coordinate and harmonize thier exports to the Third World and decide what products and technologies could be made available. Ostensibly, a regime to prevent proliferation of chemical weapons, by its very nature it is a discriminatory regime that has enabled the North to maintain its dominance in this industrial sector and ensure that no new competition arises in the South.

In an attempt to meet this, in a statement on August 6 at the meeting of CD, Australian Disarmament Ambassador Paul O'Sullivan formally identified the Group's members as Australia, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, the UK and the USA.

In a statement on their behalf, O'Sullivan said:

> They (member-states of the group) undertake to review, in the light of the implementation of the Convention, the measures that they take to prevent the spread of chemical substances and equipment for purposes contrary to the objectives of the Convention, with the aim of removing

> such measures for the benefit of states parties to the Convention acting in full compliance with their obligations under the Convention. They intend thus to contribute actively to an increase in commercial and technological exchanges between states and to the universal and full implementation of the Convention on the prohibition of chemical weapons.

The Indian delegate, Ambassador Prakash Shah, in an intervention, said that it was "heartening" that the Australia group for the first time had indicated its willingness to consider removing these measures.

> Even though there are some conditions attached to it, we consider this as indicative of acceptance of our concerns and it goes some way in addressing this problem... However, it is our belief that the intention behind this statement should be adequately reflected in the language of Article XI, as and when negotiations based on WP/Rev 1 (the Chairman draft) are concluded.

The next day, the Chairman put forward some amendments to Article XI.

In XI:2 (C), the new text proposed the replacement of the words "inconsistent with the objects and purposes of this Convention" with the words "incompatible with the obligations undertaken under this Convention". This is perhaps marginally an improvement, but weaker than the G-14 amendment " not prohibited under the Convention". What is "prohibited" has to be found from the texts of the Convention while "incompatible with obligations" is a matter of opinion and argumentation.

But the changes proposed do not really address the substance of the concerns, namely, that once the Convention comes into force, it should be illegal and illegitimate for governments of groups of countries acting together as in the 'Australia Group' to maintain discriminatory export restrictions and deny in a discriminatory and unilateral way technology and chemical products to others (mostly developing countries).

Assurances of Australia that the group would undertake to review, in the light of the implementation of the Convention, the measures that they take to prevent the spread of chemical substances and equipment for purposes contrary to the objectives of the Convention, with the aim of removing such measures for the benefit of states parties to the Convention acting in full compliance with their obligations under the Convention is full of conditions and ifs and buts. The shadow regime outside the Convention will remain for quite some time, and will be used to block the rise of competition—given the dual use to which most processes and products could be put to.

Under the Convention, elimination of chemical weapons should begin no later than two years after entry into force and should be completed no later than ten years. An annex provides for elimination of one per cent of weapons no later than three years of entry into force, 20 per cent no later than five years and 45 per cent no later than seven years, and all weapons no later than 10 years.

Put another way, those who have chemical weapons, will retain 55 per cent—and it is reasonably clear they will be the most deadly—for seven years after entry into force, and then will destroy them in a three-year period.

The Group of 14 had sought an accelerated schedule with each party eliminating five per cent of its Class I chemical weapons in the first three years of entry into force, 30 per cent within five years of entry into force and 60 per cent within seven years.

But the US and others did not agree. They have large arsenals and know that elimination will be a very costly process—and militaries do not like to give up any weapon so easily. Their view prevailed.

Any state unable to complete the destruction during an intermediate stage, has to seek and obtain the authorisation for extension from the Conference of Parties. All the costs of destruction and verification in this event will be borne fully by the party concerned.

The Convention also enables, though described as exceptional circumstances, the conversion of a chemical weapons plant to other uses not prohibited. The 14 sought to hedge in these provisions by requiring the consent of the Conference of Parties, and the plant converted or being converted brought under verification for full ten years after the conversion is certified (by the Director-General, the chief executive of the CW Convention regime).

A role for the Conference of Parties has been conceded in the final version.

The Convention has some extensive provisions for verification of compliance with its provisions by Parties, including some very detailed verification procedures set out in an Annex.

Among others it enables each state party to request a "challenge inspection" of any facility or locality in the territory or any other place under the jurisdiction or control of any other state party for the sole purpose of clarifying or resolving any questions concerning the possible non-compliance with the provisions of the Convention and have the inspection conducted without delay. The inspection is virtually automatic.

The inspection by the inspectors of the organisation can take place, with just 13 hours notice to the state concerned "prior to the planned arrival of the inspection team at the point of entry". The Executive Council of the Convention of Parties "may" by a three-fourths majority of its membership decide against the challenge inspection, but given the composition, the industrial powers will have a blocking fourth to prevent any challenge being blocked by the Council.

The Council will have 41 members-nine from Africa, nine from Asia, five from Eastern Europe, seven from Latin America, ten from West European and other states, and one seat to rotate amongst Africa, Asia and Latin America. While all members are to be elected for two-year terms, three from Africa, four from Asia, one from Eastern Europe and five from West Europe and others are to be countries with significant national chemical industries.

The costs of the organisation and verification are likely to be considerable, and some estimates say it could be as high as that of the International Atomic Energy Agency. It is to be apportioned according to the UN scale. The costs of destruction and elimination of weapons and weapons production facilities are to be borne by the parties. In the case of old and abandoned weapons in the territories of other parties, the states that abandoned them will have to bear the costs of their destruction. ■

Primitive Accumulation and Kleptocratic Rule

GRIGORI KOTOVSKY

It is perhaps not so surprising that both the Western and the Soviet media have been concentrating on the tactics of individuals in their attempt to grapple with and make sense of the accelerating sequence of events leading to the collapse of the Soviet Union. After all, the General Secretary of the CPSU has always been an unconstitutional monarch and Gorbachev was no exception. But instead of concentrating on the role of political leaders alone in the dissolution of the USSR, I wish in this article to examine the class forces behind these events.

Perestroika can then be seen as the natural historical outcome of a general social, economic and political crisis which had already become evident by the mid-sixties. The transition to a new economic system based on markets, to political and ideological plurality, the restoration of human rights and the development of civil society based on parliamentary democracy were all unavoidable compulsions for the then Soviet society. And no one will contest the historical role of Gorbachev and his close followers who grasped the necessity for changes and who set *perestroika* in motion. The means by which these transformations are being achieved, however, leaves no room to doubt that their principal objective has been to safeguard the interests of the Soviet ruling class.

It has to be recognised that, despite its egalitarian ideology, Soviet communism had long allowed the development of class society. What was the nature of the class which controlled both political power and the means of production in the public sector? This class consisted of the upper structures of the Communist Party, the military, the civil service and went down to embrace directors of productive industrial enterprises and chairmen of collective and state farms. *Perestroika* was initiated by this very class, in its own interest, and not by a constituency from below.

It is well known that *perestroika* started with basic changes in Soviet foreign policy. The foreign policy of the USSR was forced to change for two kinds of reasons. First, the economy could no longer support the cost of nuclear defences and the arms race. Second, and related to the first, the Soviet society as a whole had lost faith in the legitimacy of this race. As a result there emerged a consensus among the ruling class about the new trends in foreign policy.

The author, a Professor of the Russian Academy of Sciences, is a noted Indologist and was the head the Indian section of the Institute of Oriental Studies Moscow.

To secure the support of the major part of the Soviet establishment, Gorbachev initiated at the early stage of *perestroika* a substantial increase in the salaries of the higher echelons of the administration, or party *apparatchiks* and the trade union elite. These were unambiguous signals that the reforms were in their basic interest. But the rapid shift to political and ideological pluralism resulted, *inter alia,* in mounting an open criticism of the party, its ideology and past performance. The decisive success of opposition forces under open anti-Communist banners in the Baltic Republics combined with substantial challenges elsewhere and added to uncertainties for the administration and the party apparatus to bring about a series of unforeseen splits in the ruling class.

At the early stage of *perestroika* (about 1985-88), the Soviet establishment, seeking to consolidate its power, split into two groups. On the one hand was a conservative group desiring reforms with safeguards that the basic economic and social structures of Soviet society would remain intact. Secondly, there was Gorbachev's entourage who stood for pluralistic democracy, decentralisation of power and decision-making and markets.

By the end of 1988, when it had become obvious that no political and economic structures would escape change, two further types of split occurred. On the one hand the old Soviet ruling class, both in Russia and in the republics inside and outside Russia, with neither the imagination nor the material interest to envisage or push through alternatives to old Communist structures, fomented and battened on to extreme nationalism, ethnic nationalism and sectarianism as a means of saving their skins. Look at the Baltic States, Armenia, Georgia, Moldavia and even the Ukraine, They are now being ruled not so much by anti-Communists as by opportunistic former Communists, with a new political base.

On the other hand, a new 'entrepreneurial' class has emerged from the nomenclature and united in a shotgun marriage with commercial speculative elements of society. As the mismatch between supplies and effective demand had intensified, the public sector itself had successfully nurtured a powerful mafia, if not a class, of blackmarketeers, hoarders and speculators.

This pseudo middle class is rapidly enriching itself in three main ways. One is through the so-called cooperatives. Early reforms encouraged cooperatives in both production and circulation in order, on the face of it, to increase competition with the public sector in the interests of general efficiency. The results could not have been more different. By about October 1991 there were over 2500 cooperatives. Only 20 per cent were in production. The rest are in pure commerce: I must emphasise, in buy and sell operations. Furthermore, these coops are actually small joint stock enterprises. And who accumulated the capital to invest this way and to accumulate further at unprecedented rates? These people are mainly ex-high party officials, top level administrators, underground speculators and even real criminals. Many production and service cooperatives have been set up as extensions of factories and institutes of applied technology. They are selling exactly the same goods and services as are produced by their parent organisations, but at exorbitant prices!

The second means of enrichment is via the import-export sector. Since 1987 exports have been entirely liberalised. Whereas before 1987 foreign trade was in the charge of a state monopoly and factory and farm managers had no direct links with overseas markets, since that date any unit of production can sell its goods abroad. And does. Following the example of these large trading companies, tens of thousands of individual, small scale traders are speculating in import-export operations. Their consumer goods ride out on the backs of wholesale trading organisations and are sold abroad at lower than average prices. In return, goods of Petticoat Lane standards are brought to Moscow and other big cities and sold at sky high prices in small boutiques.

The third route to *nouveau richesse* is through joint enterprises with foreign capital. By the end of 1991 about 80 per cent of these were in commerce, not in production.

◆

ALL these new forms of 'entrepreneurship' are real steps towards the market economy. What was their impact on the economy? Over the last three years, we have watched a steady decline in flows of goods and services between domestic enterprises, a growing famine of raw materials, components and parts, and a steadily growing scarcity of a wide spectrum of consumer goods and foodstuffs.

Why is there currently such awful economic chaos? The breaking of the state monopoly in foreign trade has at least three main consequences. First, it has not only reduced the state to bankruptcy, forcing it to crawl on all fours to the G-7 countries for aid, it has also led to a massive decentralisation of foreign exchange holdings into the very linings of the pockets of directors of enterprises and ministry officials (especially those with power over licences). Instead of being concentrated and used in some kind of a planned way in either the public sector or the emerging private one for purposes of investment, hard currency is now privatised, scattered to the four winds and used for consumption or hoarded abroad.

Second, literally thousands of enterprises now export instead of delivering produce to their old partners inside the country. The consequences? The old linkages between enterprises within the domestic economy have been destroyed and Soviet society has been deprived not only of foreign exchange but also of consumer goods.

Third, unregulated exports led to the disappearance from the shops of goods in which the country was previously self-sufficient. One example is of TV sets (the production of which has been on a slow but steady expansion path). On the domestic market TV sets are now to all intents and purposes unavailable. They are all destined for foreign climes, South East Asia for instance, where they are being sold at discount prices. Another more serious deficit has been in bottles for wine and mineral water in Moscow and elsewhere. It was recently discovered that a group of young 'new entrepreneurs' had cornered the market, broken these bottles and exported glass to the West as a raw material! Even some essential foodstuffs are being exported!

A further body blow to production has taken the form of the rapidly expanding sector of commodity markets (*burses*), currently far surpassing their parent organisations in terms of numbers. These have replaced the state wholesale and distributive organisations (*gossnab*). The state enterprises, deprived of commercial information, have to use these firms as intermediaries and are robbed by them both as buyers and sellers. Commercial managers and brokers are making millions from thin air. The President of the most important commodity exchange in the Russian Federation, ex-Marxist economist, Borovoy, is heading the list of new Soviet multimillionaires, who have made their fortunes in the last two or three years. These commercial empires have been signal contributors to our inflation.

In short, the main cause of the deepening scarcity of consumer goods and of the decay of Soviet industry, is to be found in the economic processes initiated and supported by the state. Its objective can be nothing other than the formation of a new comprador bourgeoisie by means of this accelerated process of primary accumulation of capital. The picture is completed with the rupture of economic relations with eastern Europe, the shutting of basic chemicals industries under pressure from 'greens' and the disruptive fall-out of the miners' strikes...

Neither the Gorbachev-Ryzhkov-Pavlov combine nor Yeltsin's political group has ever tried to regulate or check these processes, though they appear to be ruinous to the economy in transition. On the contrary, public scandals involving in 1989-90 the so-called ANT state cooperative which exported 1990-91 'the affair of the 140 billion roubles', an import-export operation in which a member of the Russian Government, Felshin, was implicated, both reveal direct connections between top Soviet politicians and these import-export concerns. Both judicial cases were shelved!

Neither the official representatives nor the ideologues of political groups holding power have been able to present convincing analyses of economic development after about 1985. Their explanations for the economic chaos have the virtue of simplicity: 'results of the past Communist regime', 'the inevitable phase of transition', 'the result of inaction by the Centre' (this from the

Yeltsin group). To the extent that such explanations have been taken seriously at home and abroad, they have merely succeeded in exploiting a widespread credulity.

Of one thing we can be sure. We will now see the fractured elite competing for survival with different stategies of primitive accumulation, often basted in honeyed language welcome to audiences abroad. Meanwhile the mass of people is growing aware of the tragedy of *perestroika*, namely, that the reforms they originally supported (because of the obvious appeal and legitimacy of the declared goals of the reformers: *glasnost*, human rights, parliamentary democracy, improvements in consumption) are being constrained and limited by the original proponents of reform: by the ruling class itself.

The *coup d'etat* of August 1991 struck Soviet intellectuals as suspiciously idiotic. It smacked of theatre. After all the putchists had formidable means of oppression in their hands. Yet they were unable to overcome a Russian resistance that was far better publicised than it was organised. Whoever or whatever was behind this coup, it has had the effect of consolidating the fighting factions of the ruling class.

The economic base of this consolidation is the prospective privatisation of public property by the Yeltsin Government. Such plans open up enormous possibilities to grab public resources both for private sector *nouveaux riches* and for top bureaucrats including directors of enterprises. Already we hear of cases of so-called 'wild privatisation'. The nationalisation and redistribution of CPSU properties has also shown how the law can be violated on a mass scale. At the All-Russia conference of directors of public enterprises and private entrepreneurs, held in Moscow in January 1992, a demand was advanced to issue free of cost five per cent of shares of privatised public units to their directors. The tendency is obvious.

Yeltsin came to power overwhelmingly on a negative vote, a vote against the CPSU. What kind of economy and society was to replace the old one was shrouded in question marks. Only after his election did he clarify that he would go for a full-fledged market economy of the Western type. For this a bourgeoisie has to be created, or, as Yakovlev and other formerly Marxist-Leninist dogmatists have coyly euphemised, a 'middle class'. However, this 'middle class' is already creating itself at the speed of light. Semi-criminal and criminal elements and erstwhile high party members and foreign investors are being aided and abetted by a plethora of legal acts facilitating privatisation. A struggle will intensify between these people on the one hand and those on the other who favour the creation of markets but the reform of enterprise ownership by means of distribution of shares among those who work in them.

The watershed between Gorbachev and Yeltsin turns essentially on concepts of nationhood, between those who desire confederation and those who want the full disintegration of the USSR. We should be careful to note that the interests served by disintegration, ironically, are those of semi-Communist Russian chauvinism. For it is by means of full disintegration rather than by confederation that Russia will best be able to dominate other republics. The republics meanwhile are trapped between the interests of their own elites, often former Communist Party careerists exploiting subnationalisms, and Yeltsin's elite which expands its control over the levers of so much of the economic space on which the republics have been developed to depend. For the time being the army is loyal to Yeltsin, though splits are starting to become evident.

The socio-political situation in the CIS in the post-*perestroika* (since August 1991) grows increasingly complex. Three political camps have now emerged inside the Russian Federation: (i) conservatives, led by ex-party *apparatchiks* and bureaucrats marginalised in the process of enrichment. Though these people have no mass support, they are numerically strong and rather active in the republics and at local levels; (ii) political forces supporting the Yeltsin group, which directly represent the interests of both the *nouveaux riches* and a substantial segment of the old dominant class ready and waiting to transform itself into a new comprador bourgeoisie; (iii) the new Left, led by intellectuals, trade unionists and to some extent junior members of the ex-CPSU apparatus. In my view this latter group represents the interests of the majority of the population. It supports the transition to a market economy, but one mainly based on decentralised and collective forms of ownership of the means of production, restricting private property to services and retail trades. This group stands for a reinstallation of some kind of federal structure in the CIS.

It is not surprising that the West has rendered full support to Yeltsin's political group. The massive deliveries of food to save Gaidar's economic reforms speak for themselves. But we need to take note of three factors. First, it is doubtful that the Soviet *nonveaux riches* have material interests in economic stability. Quite the reverse. Russian plans to create markets for land and for immovable property will attract accumulated capital into non-productive investments. In the current conditions, markets in the CIS will be attractive to foreign investors only provided the rouble becomes fully convertible. But this demands a speedy reversal of current economic trends and the sustained growth of the GNP. Second, any further disintegration of the ex-Soviet Union will create collossal obstacles to economic recovery in the CIS states. The choice is clear: either accept President Nazarbayev's recent model of a CIS along the lines of the European Community or accept the full economic disintegration of the Asian Republics from Russia and their reintegration in a Middle Eastern economic organisation—a 'Caspian Common Market' and so on. Third, large masses of our population, attracted by Western levels of living, support plans for transition to some kind of capitalism, sold to them as a 'market economy'. But most have naively believed that such a transition could be implemented without mass impoverishment and unemployment, while safeguarding all the achievements of socialism in the social and cultural spheres. They were not braced for massive inequality of incomes between a small elite and the majority of the workforce. Now citizens of the CIS, especially of

Russia, are absorbed in the struggle for day to day survival. And this includes the major part of the intelligentsia. For the time being they have lost a sense of national self-dignity. But tomorrow they will discover that their ex-great power has been converted, with Western connivance, into a second rate country of the so-called Third World. There will be no chance of recovery as the 'brain drain' (which has already nearly destroyed Soviet fundamental science) will be joined by a 'brawn drain' (if plans for the selective outmigration of skilled man-power actually materialise). Their beloved armed forces are being converted into the police force guarding the interests of the North in the inevitable confrontation with the South in the twentyfirst century. They will become fiercely anti-Western. And a new nationalist upsurge on such a basis will not be propitious for global stability.

Tragically and ironically, it will be the West which will soon have to choose between the 'wild capitalism' of the so called Russian democrats, and the 'contained managerial capitalism' of the new Left. ■

ANAND SHARMA: South African Crisis

(Continued from page 8)

ANC leadership, sandwiched between an intransigent regime and militant supporters frustrated by laborious negotiations, went in for a Rolling Mass Action. The objective of this mass action was to accelerate the pace of change and force the government to make room for a representative Interim Government.

The mass action from August 3 to 6 received overwhelming response and paralysed the country. It culminated in an unprecedented rally at Pretoria led by Nelson Mandela and unequivocally demonstrated his emotional appeal. The peaceful conduct of the mass action is creditable and has proved false the earlier accusations linking the current violence to ANC's call for mass action.

The mass action has provided the much needed momentum to the democratic forces. For the ANC it has been an organisational success and has narrowed the gap between the leadership and restive grassroot activists.

Conflicting signals have since emerged and the situation continues to be fluid. Initially the mass action lifted hopes of an early resumption of negotiations. This impression was reinforced by both the sides with de Klerk stating that process towards installation of an Interim Government will be speeded up and Nelson Mandela listing three demands as against the 14 contained in the ANC memorandum. However, the ANC demands, that is, installation of Interim Government, practical steps to curb violence, and early elections to Constituent Assembly embody its earlier conditions.

The government has again made a characteristic U-turn. Its actions and utterances have widened the schism. The UN called for the release of political prisoners to which Pretoria had earlier agreed but failed to implement. The government has now responded with a clever proposal for general amnesty linking with it the release of detainees. This would guarantee pardon for all guilty security and police officials indicted for their connivance in violence. Expectedly, the ANC has rejected the Amnesty Plan. In order to pressurise or lure the ANC towards unconditional negotiations, the government first announced talks with the PAC—which had earlier rejected the CODESA and has now threatened to go ahead with negotiations with the CODESA parties without the ANC. It needs no emphasis that any such move will be farcical and suicidal. de Klerk appears more keen to outsmart and upstage the ANC than to resume negotiations. The strategy of the government is to exhaust and frustrate the ANC without conceding its demands. It has to realise that the ANC cannot possibly return to the negotiations without acceptance of its now basic conditions.

The possibility of a forward movement still remains as a conciliatory element is present in response to both the government and the ANC. The prospects have brightened with the meeting between the Constitutional Affairs Minister, Raelf Meyers, and the ANC Secretary-General Cyril Ramaphosa. It is, however, difficult to speculate about the outcome.

It is clear that when the negotiations resume, the mechanism will have to be different from the CODESA to include both extremes of the political spectrum, that is, the PAC/AZAPO and the Conservative Party.

The international community, which has reacted to the killings of innocent and defenceless people with shock and horror, has a critical role to play. The sharp worldwide reaction to the peaceful developments in South Africa has definitely rattled the Pretoria regime smug over its increasing recognition. President de Klerk is conscious of past isolation and is keen to avoid repetition of the same.

The mood of the government is not to defy the world opinion but to placate it so as to salvage the process of economic recovery. This consideration has made the government embark on a major public relation exercise. This is evident from its decision to allow the UN observers to monitor violence in the townships. The special session of the UN Security Council and the mission of Cyrus Vance has made some impact. The mindset of the government allows room for efforts by the world body to mount persuasive pressure for early resumption of talks. The situation demands sustained and renewed efforts. This is an acid test for the UN to extricate South Africa from mayhem and anarchy.

There is no room for delay and no alternative to a negotiated settlement. Time is running out for moderates in both the camps. All efforts have to be focussed to put the transition process back on track and to ensure its movement in only one direction—towards a non-racial and democratic South Africa. The road ahead is difficult and strewn with potential minefields. The international community has a historic responsibility at this critical juncture. It must remain alert to prevent South Africa from going over the precipice. ■

Architect of Friendship Movement

SUBRATA BANERJEE

Mahatma Gandhi had defined politics as service to the people. In this sense it is possible to be in politics without being a politician. An honest and good professional who serves the people can also be considered a good political activist. The distinction between a professional politician and a political being in the service of the people might appear to be thin, but is nevertheless very real. Dr A.V. Baliga was the embodiment of this distinction, as Dr Ravi M. Bakaya brings out so well in his biography of this great surgeon and patriot.

Dr Baliga was one of the most eminent surgeons of his time, with an international reputation. This did not stand in the way of his participation in the national movement for freedom and actively supporting many popular causes which had wider social, cultural and even political implications. Among these the most important were his active leadership of the Indo-Soviet friendship movement and close association with the print media, particularly, *Link*, *Patriot* and the *Free Press Journal*.

A.V. Baliga: Surgeon and Patriot by Ravi M. Bakaya; Patriot Publishers; New Delhi, 1991; pp. 183, Price: Rs. 45

Dr Bakaya is well-equipped to author the biography of Dr Baliga He was one of the pioneers of the Indo-Soviet friendship movement in this country and later a close associate of his hero. He traces the roots of the combination of surgeon and patriot in Dr Baliga to the cosmopolitan cultural and religious environment of his childhood; his participation in the non-cooperation movement; and to his early days of struggle in preparing for his profession.

It was his experiences that moulded his attitude towards life and his world view. His active association with the socialists during the 'Quit India' movement and with the Communists later on, as the founder President of the Indo-Soviet Cultural Society (ISCUS), contributed to his socialist convictions, without being dogmatic. No wonder he did not join any political party. Dr Bakaya's story of Dr Baliga's life brings out these aspects very clearly and at times even pointedly.

As a surgeon Dr Baliga rose to the peak of his profession and was deeply respected by his colleagues, both for his masterly diagnosis and his constant concern about their welfare. He was popular as a teacher. His patients included the tallest among his countrymen and he commanded the highest fees. Yet he treated every patient equally. He could have become a surgeon accessible only to the rich. He could have chosen a successful political career, like a few others in the medical profession, spurred by his deep political convictions. He chose to serve his people instead through his profession and active participation in selected political and other activities that served the interest of his people and his country. Dr Bakaya ably traces this aspect.

◆

A little less than half the book is devoted to the Indo-Soviet friendship movement and specifically to the ISCUS, which Dr Baliga had helped to found and was its life and soul from 1951 up to his last breath. His visit to the then Soviet Union in 1951 at the head of a cultural delegation from India had indeed been a turning point in his life.

Dr Bakya, in this context, rightly provides a critical review of the Indo-Soviet friendship movement, from its early days of spontaneity, triggered by the Nazi aggression against what was then considered the bastion of socialism, to the formation of the Friends of the Soviet Union. The defence of the land of socialism had been the central slogan of this movement. Dr Bakaya fairly objectively assesses the role of the Communists in bringing together on one platform people with sharply differing political views, as also the final takeover of the organisation in the traumatic sectarian period of the CPI, shortly after independence. The earlier phase of the FSU is a very good example of the Communist ideology of combining national and international interests in a given situation. Circumstances rather than consciousness helped such a success.

Dr Bakaya shows how the formation of the ISCUS was a conscious decision to meet the specific requirements of the time. It was the formation of an all-India organisation first that initiated the spread of the movement to the other States. The emphasis had changed from defence of the Soviet Union to friendship in mutual national interest in the changed correlation of international forces. A more chastened CPI dissolved the FSU and provided the core cadres for the movement in its new form. Thus a continuity was also maintained.

Building the ISCUS was no easy task. The two years of sectarianism had strengthened the prejudices against Indian Communists. The government under the leadership of Jawaharlal Nehru was in the process of formulating the foreign policy of India, based on the principle of freedom from bloc pressures. The prevalent understanding of the leadership of the erstwhile Soviet Union at that time of the character of the Indian Government only helped alienate the Indian leadership.

In this context, Dr Bakaya seems to ignore the inherent hesitation of the Nehru leadership, at this stage, in building close cultural, economic and political leadership with the then Soviet Union. Dr Baliga's contribution to the removal of this mutual misunderstanding was quite considerable, as is evident from Dr Bakaya's book. Dr Baliga insisted on confining the activities of the ISCUS to cultural activities in their widest sense and refused to let it be converted into a non-official mouthpiece of the Soviet foreign policy. Dr Bakaya refers to a number of telling situations which Dr Baliga handled firmly, but diplomatically. He kept the organisation strictly independent of political parties and discouraged the ISCUS office-bearers from direct involvement with a political party.

The glorious chapter of the Indo-Soviet friendship movement seems to appear today to have been an exercise in futility. Much of the character that Dr Baliga had given to the ISCUS has virtually withered away during the last two decades, since his death. Strong ideological overtones have found expression in organisational behaviour patterns. This factor is one of the reasons for the failure of the ISCUS to react to the new situations in a positive manner, as it had been possible, when the change-over from the FSU to the ISCUS had taken place, in the early fifties, under Dr Baliga's leadership.

It is in the national interest of both India and the newly independent states that have emerged out of the erstwhile Soviet Union, that the friendship movement should continue. Its nature and organisational forms must necessarily change. This demands bold and dynamic thinking and action on the part of the leadership of both the ISCUS and the FSU (re-established on the initiative of the late Mrs Indira Gandhi as a parallel organisation, as part of her effort to establish her personal hold over every institution).

Dr Baliga's way of guiding the ISCUS might have many lessons for us today. In this context Dr Bakaya has done full justice to his subject, but for a surfeit of quotations from writings of other contemporaries of Dr Baliga, as these often repeat what has already been established. ■

NEW INDIAN BOOKS RELEASED DURING 21-27 JULY

ENVIRONMENT
Air and Atmospheric Pollutants Environmental, Pollution & Hazards Series: 007/S G Misra & S D Tiwari (Ed.) 180
Critical Issues in Environmental Management, Global Environment Series-5/C V Rajasekhara (Ed.) 450
Environment and Development Conundrum/Kumar B Das (Ed.) 250
Environment Policy and Development Issues, Global Environment Series-1/C V Rajasekhara 400
Environmental Administration and Pollution Control, Global Environment Series-2/C V Rajasekhara 450
Environmental Air Pollution, Encyclopaedia of Environmental Sciences-4/P R Trivedi & Gurdeep Raj (Ed) 350
Environmental Biology, Encyclopaedia of Environmental Sciences-5/P R Trivedi & Gurdeep Raj (Ed) 450
Environmental Ecology, Encyclopaedia of Environmental Sciences-6/P R Trivedi & gurdeep Raj (Ed.) 625
Environmental Factors in Economic and Industrial Management, Global Environment Series-4/C V Rajasekhara (Ed.) 350
Environmental Pollution: Thermal, Environmental Pollution & Hazards series: 008/S G Misra & D Prasad (Ed.) 175
Environmental Pollution. Water, Environmental Pollution & Hazards Series/D Prasad & H S Gaur (Ed.) 375
Indian Environment (Proceeding of National Conference Organised by Institute of Environmental Sciences)/Pramod Singh (Ed.) 400
International Dimensions of Industrial Pollution, Global Environment Series-3/C V Rajasekhara 350
Topics and Terms in Environmental Sciences in 2 Vols./Gurcharan Singh & Inderjeet Kaur Sethi (Ed.) (Set) 750
GEOGRAPHY: HIMALAYAN STUDY
Himalayan Ecology and Environment/A S Chauhan 500

Dilemmas of Democracy

RANJANA SUBBERWAL

A mad euphoria has gripped the world today—the euphoria of democracy. Those who have already achieved it are wildly canvassing for it. Those who have not, are rushing to embrace it. In the eyes of the world, democracy stands for all that is good, desirable, wonderful. Such consensus is unprecedented in the history of mankind. So is the intensity and scale of the euphoria. In this mad race, a predictable fall-out has been an unrealistic exaggerated version of the positive aspects of democracy. In euologising it, the world has overlooked the fact that democracy is a system in contradiction with itself. It has a way of tiring, wasting, stifling itself. It nurtures those very forces which destroy it. History is a witness to this.

Over the years, democracies the world over have gone through turbulent times. European democracies like Italy and Germany had fascist experience after World War I. A number of Lation American nations have constantly alternated between democratic governments and dictatorships. Many Middle East, Asian and African nations had nurtured the dream of democracy and had brief interludes of it to finally slip into totalitarianism. Indian democracy is constantly hopping from one crisis situation to another.

This perennial turmoil of democratic nations is due to a host of factors like pluralism, weak nationalism, poverty, illiteracy and the like. However, it has to do above all with the value-base of democracy which is fragile to the point of easy destruction.

Liberty, equality and fraternity are the three pillars of democracy, the trinity capable of creating a heaven on earth or hell. The democratic world view perceives that man is basically good, rational, sensitive—capable of self-restraint. Reason is the hallmark of his thinking, not tyranny nor demagoguery.

Given this perception, it follows that man deserves freedom. There is no need to control him. Democracy thus offers to man the right to live the way he likes to live. It offers a wide spectrum of constitutionally guaranteed liberties to him—the liberty to dissent, to profess one's religion, to social mobility, to select rulers.

Intertwined with liberty is the value of equality. The right to live the way one wants to live extends to everyone equally. It is conceded that all persons may not be equal but they have equal opportunities in education and employment.

Liberty and equality would merely be empty words without an assumption of fraternity. That man is capable of harmonious togetherness is an essential condition of democracy. This then, in essence, is the value base of democracy. It is the ultimate dream of mankind The reality, however, is far from the dream.

As a value, liberty is the pride of the democratic system. It has the mystical awe inspiring quality about it which has fascinated man for ages. Men have fought, died, sacrificed for liberty. But they have rarely been prepared for or understood the consequences of liberty. They have often correlated a liberal order with a prosperous, peaceful organised order, not realising that often it is just the opposite of this.

Freedom of expression which is the hallmark of a liberal order often increases tension and creates disorder. Thousands of innocent people may be dying in Saddam Hussain's Iraq and nobody knows. In fact despotic regimes often give an impression that all is orderly and peaceful. In free societies, on the other hand, a small miscarriage of justice is widely reported and could create riots. It is ironical that smaller crimes of liberal societies loom large and large-scale crimes of totalitarian states go unnoticed. Liberty thus, sharpens the desire to revolt to curb injustices.

◆

STALIN 'S Soviet Union was an organised, more cohesive state, so was Akbar's India. Their contemporary democratic faces are torn by turmoil, secessionist movements, revolts. A liberal order gives basic autonomy to men and institutions which often makes cohesive orderly living difficult. How automomy gets translated as secession it is difficult to say. But soon enough, groups, sub-groups and then ever smaller groups start striving for independence. The baffling question is—where should these sub-divisions end? It is true that as soon as the erstwhile Soviet Union gave basic liberty to her people, each state wanted to be independent of the Soviet Union. As a result, a number of independent nations emerged. Russia, the largest among them, is still struggling to settle as a nation but already there are rumblings among the Muslim population of Russia for independence. The situation is more like onion peels. You remove one and the next one is beckoning you to remove it too. If every group wants secede how can any group life be possible? And then, if there is no group, what sense can liberty make?

It is ironical that liberal democracy knows best how to dig its own death-knell. It not only encourages but even pampers dissent. And then, it cannot use force to curtail it without having guilt pangs. Frequent use of force amounts to demolishing democracy. If, on the other hand, force is not used on certain occasions, it may be suicidal for a nation. A number of Third World countries have had to snatch stability from the jaws of democracy.

History tells us that leaders who shouted loudest for liberty and led aggressive movements for it themselves became despotic rulers and produced worst tyrannies. Cromwell was worse than Charles I, Henri Christophe than the French colonial rulers. It is because a realisation soon comes that the liberty of the leaders gets curtailed by the liberty of the masses. Thus, successful movements for liberty have often led to despotic rulers specially in societies where there were no strong groups to counter such a move.

As a part of their liberalisation programme, the countries of the erstwhile Soviet Union need to implement severe reforms like getting rid of unnecessary bureaucrats, closing down inefficient plants, removing subsidies, allowing prices to shoot up to the market level. These cannot be easily implemented in any political set-up, least of all in a democracy where people have the basic freedom to put impediments in its way. Boris Yeltsin, the popular leader of the Russian people, is no longer so popular. While he is regularly mobbed by people with complaints of price rise, his own Cabinet has started calling his reforms 'draconian'. That time is not far away when one will hear the man on the street eulogising communism. Under these circumstances one need a crystal-ball to predict that if Yeltsin does not want to go into political obscurity, he will have to perform an about face, reverse the process of reforms (at least partly) and indulge in populism to remain in power.

In fact a democracy can never be an unbiased, objective system. There are pressures and counter-pressures intertwined with the interests of the politicians to create a politics of populism, a dreadful disease of a democracy.

Human rights are an intergral part of a liberal order. These, however, often become its shackles. There is no doubt that resistance of oppression is a right of every man but this does not call for undisciplined trade unionism. Rights are essentially intertwined with discipline and duties. How can A's right to certain welfare scheme be fulfilled if B does not fulfill his duty of paying tax to the state? Duties and rights are correlative concepts. By neglecting duties, we actually weaken the very system that gives us the rights.

Liberty makes little sense without equality, equality without liberty is raw tyranny. But equality and liberty are like the opposite shores of a river. It is impossible to make them meet in reality. By offering liberty to the people, the society offers them the right to go in different directions, to expand, to acquire. This can only be achieved by eliminating all differences and blocking the efforts of those who want to move in different directions. This is only possible if a powerful group stops any such attempts on the part of the people, thus giving a death blow to liberty. Democracies often react to this inbuilt contradiction by indulging in complex jugglery like sprinkling reservations here and creating monopolies there.

Winstion Churchill had once called democracy the "least unsatisfactory of all forms of government". He was probably right. It is, however, a bitter sweet pill which the world is falling over each other to eat not realising that it is a beckoning goal, not a safe harbour. An appropriate postscript to democracy would be 'fragile, handle with care'. ■

Godrej Storwel – the gift of a lifetime

The Godrej Storwel is the ideal gift for any occasion. Elegant and functional, it offers greater durability and more security compared to conventional cupboards, steel or wood. Adding to its elegance is the superior scratch-resistant finish and a full-length 137 cm imported plate glass mirror. Other unique features – unpickable locks, concealed hinges, a 3-way interlocking bolting device and adjustable shelves!
All this makes the Godrej Storwel a memorable gift, to be appreciated for a lifetime.

Godrej ®

Products of superior technology... lasting value.

Indigenous and Tribal Peoples, Global Hegemonies and Government of India

B.K. ROY BURMAN

Currently there are two international instruments exclusively related to the tribal and analogous peoples: the ILO Convention 107 of 1957 concerning the protection and integration of indigenous and other tribal and semi-tribal populations in independent countries and the ILO Convention 169 of 1989 concerning indigenous and tribal peoples in independent countries. Another international instrument, namely, the Universal Declaration of the Rights of Indigenous Peoples is in the process of being finalised for the consideration of the UN General Assembly in 1993. The impetus for these international instruments have mainly come from the historical and ongoing processes of genocide and ethnocide in the Latin American countries. Not that other parts of the world are free from these processes; but conditions differ and the validity of any international instrument depends on its ramifications in specific contexts.

While the first Convention considers the tribal and indigenous populations as representing a socially and economically less developed stage than that of the general population of the country in a unilinear schema of human evolution, the later Convention emphasises viability and distinctiveness of tribal and indigenous social entities. In the era of the global quest for being rooted in its surroundings, for restoration of ecological ethics, for liberation from dehumanising elitist sophistry, for primacy of moral compact of the community over the coercive power of the state, the Convention of 1989 is certainly an improvement over the Convention of 1957. Both the Conventions, however, recognise the tribal and indigenous as distinct, though analogous, social historical categories. 'Tribe' is used in both in a generalised wider sense which also subsumes the indigenous who are descendents of the inhabitants of a country or a geographical region to which the country belongs, at the time of conquest or colonisation. The records of international exchanges which took place at the time of formulation of both the Conventions make it clear that the term 'indigenous' referred to the Amerindians, the original inhabitants of Australia, and the islanders of the Pacific Ocean.

While the Convention of 1989 shows more sensitivity to the dignity and aspirations of human social formations of diverse types it also compromises with powerful political interests almost unabashedly.

In respect of the tribals, it rightly and consistently uses the term 'people', implying thereby recognisable legal, political and social entities; but in case of the indigenous it uses the term 'population' in their pre-invasion stage. This is patently wrong. In many cases the invaders had to enter into formal treaties with the indigenous political authorities; this itself is an evidence that they were peoples. It is not fortuitous that even then the ILO Convention does not consider them as peoples at that stage. The Convention itself mentions that in addition to the agencies it is required by statute to consult, it has formally consulted only one outside technical body, namely, Inter-America Indigenous Institute—an outfit of the Organisation of American states (OAS). Besides, before the finalisation of the Convention several ILO supported seminars had taken place, all in America, even though the Amerindians constitute hardly one per cent of the indigenous and tribal peoples of the world. The composition of the 18 member expert group set up by the ILO was also strange. India with the largest tribal population in the world (about 30 per cent) was represented by a representative of the employers. He may be an expert on many things, but certainly his name has never been heard in matters concerning the tribals. There is no dearth of talent among the tribals of India; and there are certainly many among the academics of the country with international standing. It is not known what role the Government of India played in the selection of the experts.

In any case, with its humanist face, the Convention of 1989 has protected the interests of the European invaders, in the countries where the indigenous peoples have been reduced to numerically small ethnoses, and at the same time it will create complications for Asia and parts of Africa. European settlers invoke the concept of *terra nullius* for asserting their rights over the territories in respect of which they did not enter into any treaty with the indigenous political authorities. But if indigenous inhabitants are recognised as peoples, the doctrine of *terra nullius* will not stand and wholesale rights over all territories even outside the reserves and the already delineated territories (which were reduced under duress) will have to be renegotiated. This has been cleverly evaded. In the meantime in most of the American countries as well as in Australia and New Zealand, an accommodative political and legal process has been

The author, a retired Professor of the Visva-Bharati University, Santiniketan, is currently a Visiting Senior Fellow of the Centre for the Study of Developing Societies, New Delhi.

initiated and has made considerable progress during the last two decades. Besides, multinational corporations mostly based in America or functioning in close collaboration with organisations like the World Bank, GEF have established almost complete grip over the resources of the indigenous peoples in those countries, so that the formal right of self-management or even self-determination has little practical meaning. Even the governments, including that of the USA, are operating like executive committees of the multinational enterprises. The role of the USA at Rio bears testimony to such a development. Moreover, the minuscule size of the indigenous peoples, land-man ratio, the level of skill formation to manage modern technology are also relevant factors which make accommodative politics feasible in those countries.

But in Asia and parts of Africa the situation is different. The terms 'territory', 'ownership rights', etc. have many nuances, and have been complicated by colonial legacies. While the Convention does not attend to these conceptual nebulae, the governments in many of these countries have been fighting a grim battle against international hegemonies. By and large tribal peoples in these countries are also partners in this struggle against the emerging hegemonic world order, because of the very nature of their modes of production. At the same time their legitimate political, economic and cultural rights are yet to be adequately satisfied in the state processes of many of the countries. Progressive forces in Asia are, therefore, to fight on two fronts: first, to resist the ruthless onslaught of global hegemony, which may be hydra-headed but is really a single entity; simultaneously the fight to ensure the satisfaction of democratic and human rights of tribal and analogous social formations requires relentless action to expose the ugly face of global hegemony under the humanist cover of the ILO Convention; it also requires real dialogue with the tribal and other marginalised peoples in all the concerned countries of Asia and Africa.

◆

MENTION has been made earlier of the Universal Declaration of the Rights of the Indigenous Peoples which is under the process of finalisation under the aegies of the UN. This is to be seen in two contexts: the global anti-colonial heritage and the global game-plan of the hegemonic interests.

Let us first consider the global anti-colonial heritage. During the UN General Assembly session in 1982, Spain together with some European and all the American states proposed that 1992 be designated by the UN as the Year of Columbus to celebrate the 500th year of his landing on American soil. This was opposed by the countries of Africa and many others joined their rank on the ground that this event really marked the beginning of colonialism. Instead, 1993 has been designated as the Year of the Indigenous Peoples. Irrespective of whether some peoples in a country are indigenous or not, all progressive forces in the world should observe the year. India particularly should do it to reaffirm her anti-colonial heritage.

The game-plan of the hegemonic interests is revealed in the apparently cogent succession of events with all the elements of surprise befitting the tinsel world.

In 1972 the UN Sub-Commission on the Prevention of Discrimination and Protection of Minorities appointed Martinez Cobo as a Special Rapporteur to conduct a broad study of the problem of discrimination against the indigenous peoples. As already mentioned, this was in the context of the restless assertion of the Amerindians. There is no universally accepted definition of indigenous people. But as reported in 1987 by the Independent Commission on International Humanitarian Issues (ICIHI)—a body close to the UN, whose reports are mandatorily presented to the General Assembly by the Secretary-General—the UN uses a working definition provided by the Special Rapporteur, which states that "indigenous populations are composed of the existing descendants of the peoples who inhabited the present territory of a country wholly or partially at the time when persons of a different culture or ethnic origin arrived there from other parts of the world, overcame them and by conquest, settlement or other means reduced them to a non-dominant or colonial situation". There was a general understanding that this working definition applied to the descendants of the pre-invasion peoples of the countries mentioned earlier.

In the seventies at the initiative of the Amerindians, particularly Canada, a World Council of Indigenous Peoples (WCIP) was formed; it agitated on a number of human rights issues including cultural, economic and political rights. The UN accorded observer status to the WCIP. In May 1982 the Economic and Social Council (ECOSOC) of the UN authorised the Human Rights Commission for the establishment anually of a Working Group on Indigenous Populations to review the developments, promotion and protection of human rights and fundamental freedoms of indigenous populations and to give special attention to the evolution of standards concerning the rights of indigenous populations. When this authorisation was made, it obviously related to the countries which were subjected to invasion and colonisation by populations coming from other parts of the world.

It may not be fortuitous that after the proposal of some of the European and all American governments to celebrate 1992 as the Columbus Year under the aegies of the UN was rejected by the anti-colonial forces throughout the world, the Special Rapporteur submitted a report after a lapse of 11 years in 1983 expanding the scope of the concept 'indigenous' to cover isolated and marginal populations in other parts of the world. It is on record that though the report is in the name of Cobo—a Cuban national—the actual work was done by a UN staff member, A.D. Diaz, a Guatemalan national. Another development that took place shortly after this is also worth noting. In 1985, the UN General Assembly authorised the creation of a voluntary fund to be administered by a Board of

Trustees, to assist the spokesmen of the indigenous populations, to attend the meetings convened by the Working Group.

A few words about the composition of the Working Group, the Board of Trustees and the sources of the voluntary fund would be pertinent here.

The Working Group consists of one representative each from Africa, Asia, Eastern Europe, Latin America and Western Europe and others (that is, the USA, Canada, Australia and New Zealand). Thus, while according to UN sources about 80 per cent of the indigenous and tribal peoples belong to Asia, only one person represents this continent. Asia was first represented by a Chinese, now by a Japanese—none of them is an indigenous or a tribal. Actually the Working Group is dominated by persons of European origin. The five-member Board of Trustees is expected to have at least one indigenous member, but he is not an Indian. As regards the source of the voluntary fund, the present writer has some information only for 1990-91. The contributors were the governments of Canada, Cyprus, Finland, Japan, Netherlands, New Zealand, Norway, Philippines, Sweden, Switzerland and Tunisia and also the Shimin Gaikai Centre of Japan, the Liberal Democratic Party of Japan, the Association of Constructing Companies in Hokkaido, the Association of Paving Companies of Hokkaido, and the Association of Chambers of Commerce, Japan. It is interesting to note that while Japan is so concerned about the indigenous peoples outside, it does not treat the Ainus, who bear similarity to the Todas of India and have a distinct way of life, as indigenous.

With the assistance received from the 'voluntary fund', the spokesmen of the indigenous peoples are participating in the open meetings convened by the Working Group at Geneva (except for one at Nuu in Greenland).

It is not known how the spokesmen are selected. The chance factor seems to have played a crucial role in the selection of the spokesman of the tribals of India. He hails from West Bengal and belongs to a Scheduled Tribe community. He was a Deputy Minister at the Centre for sometime. As claimed by him in several publications, he was travelling in Europe in 1985 and by chance came to know of the meeting. He attended it and since then he is functioning as the spokesman of the 70 million tribal peoples of India. On his initiative an Indian Council of Indigenous and Tribal Peoples (ICITP) has been established, the effective membership of which is confined to a few significant personalities of the Chhotanagpur region. Apart from the gentleman mentioned, two or three others have also attended some of the meetings convened by the Working Group. But in most cases they were sponsored by other agencies and had no relation to the ICITP.

In these meetings, the Government of India's representatives also participated as observers. The performances of the representatives of the ICITP and the Government of India have been not only dismal but amateurish. They hardly show an awareness of the fact that the UN Working Group was, through the Universal Declaration of the Rights of the Indigenous Peoples, evolving an operative framework of far-reaching implications for the international economic and political order. The spokesman of the ICITP has year after year used these meetings like a mofussil court to make informed and uninformed charges against the Government of India. When one goes through his statements one is amazed how little he knows about the tribal peoples outside Chhotanagpur. Some of the charges he makes are actually the aspirations of the concerned tribal peoples and had the Government of India really done these, they would have been happy. The representatives of the Government of India, while taking a position that it is difficult to say who are and who are not indigenous in the country, mainly confined their role to refuting the charges made by the ICITP representative recognised by the UN Working Group. On one or two occasions they made observations on some minor matters included in the Draft Declaration of the Working Group. The unconcern about the wider system which is being evolved and which ultimately will go to the UN General Assembly is a manifestation of the inane manner in which the foreign policy-planners are functioning in India.

◆

NOW let us come to the Draft Declaration. One draft was circulated in 1988. It was substantially modified in 1991 and is currently under discussion for further modifications. The salient points of the 1991 Draft Declaration are as follows: (a) it does not formally define the term, 'indigenous'; though, as mentioned earlier, there is a working definition in the UN, it has not been expressly stated here; (b) though the current chairperson of the Working Group, who has been holding the position since 1984, has in a different forum ruled out the right of secession and has differentiated between internal self-determination and external self-determination, the Declaration speaks of the indigenous peoples' right of self-determination under international law which is contrary to her statement; (c) the right to pursue freely their own economic, social and cultural development through international cooperation has been incorporated; (d) the right to maintain their distinctive relationship with their lands, territories and resources, and entitlement to intellectual property rights have been envisaged.

The issues that arise out of these salient clauses in the Draft Declaration will be briefly considered. Though the Declaration does not define the term 'indigenous', it has been treating as indigenous peoples certain formal organisations (like the International Organisation of Indigenous Resource Development, World Council of Indigenous Peoples) and has been treating certain others (like the Hamong People, the Indian Council of indigenous and Tribal Peoples) as the indigenous peoples' nations and organisations. If there is no other hidden meaning in such a classification, the Working Group has obviously functioned arbitrarily. But there is a more serious incongruity. The ICIHI has reported that in Europe, except for the peoples in the circumpolar region (the Samis and the Inuits, the unique peoples like the Basques, the Catalans, the Romany Gypsies) are not to be treated as indigenous on the plea that Europe was not under colonial rule; but at the same time the tribal peoples of Thailand, the national minorities of China are considered as indigenous even though these countries were not under colonial rule. The Tamils in Sri Lanka have been categorised as indigenous presumably because of their political marginalisation, but not the similarly marginalised Wales of the UK or the Brittons of France.

Similarly in Africa the Bushmen, the Pastoralists and a few selected peoples are indigenous to the exclusion of others. Such double standard is bound to cause suspicion among the Asian and African countries. As regards the right of self-determination, the silence about the actual import of the term is not the problem; the problem lies in the conflicting indirect projections in different paras of the operative part of the Declaration.

In 1991, some young tribals from Asia demanded the right of secession to be clearly mentioned in the Declaration. One need not be too much perturbed by such statements; one should take these as expressions of understandable angry mood of the youth. One must also envisage a considerable change in the international boundaries in the twentyfirst century as a natural process. At the same time it should be firmly stated that outside manoeuvres will not be tolerated. So long as hegemonic power centres exist, either directly operating by a caucus of state institutions (G-7, for instance) or indirectly operating through international agencies, the right of self-determination, for the purpose of the present declaration, should mean nothing more or nothing less than internal self-determination. This certainly includes the right to maintain a distinctive *relationship* with lands, territories and resources and entitlement to intellectual property rights conceptualised in specific historical normative contexts. But in this while the records of almost all the states all over the world are questionable, the records of the international agencies are also equally, if not more, despicable.

The ICHIC has charged the World Bank of duplicity. In 1986 the World Bank's legal expert had to publicly admit that the Bank's publication does not describe the Bank's policy about the tribals and indigenous peoples. The real policy is contained in a confidential document which was not made public. A report published in the *Cultural Survival Quarterly* in Winter 1992 charges the Global Environmental Facility (GEF), an ancillary of the UN system, to have destroyed the hunting ground of the pygmies in Africa. The report also indirectly alludes to the World Bank's complicity. In the contemporary world the rights of the tribals and indigenous peoples is enormously affected by the international agencies. Until and unless the Universal Declaration specifically defines the roles of these agencies and lays down universally acceptable procedures for monitoring their operations, the right of the indigenous peoples to obtain international aid will at best promote green capitalism and cause damage to the physical environment and at worst will destroy the internal self-regulatory mechanism of the concerned communities and make the right of self-determination a ghost structure without content.

The need for surveillance over the activities of the international agencies comes out poignantly in the Draft Declaration itself. Though the original draft of the Declaration speaks of intellectual property rights of the indigenous peoples, the World Intellectual Property Organisation(WIPO), again an ancillary of the UN, has informed the Human Rights Commission in 1991 that it does not recognise the entitlement of the indigenous peoples as such to intellectual property rights. The justification given by the WIPO is an ideological one, rooted in the positivistic philosophy of law. It seems that the chairperson of the UN Working Group has failed to overcome this ideological roadblock. One wonders whether an alternative draft, much diluting the intellectual property rights of the indigenous peoples, now presented by her, is not really capitulation to the international vested interests operating through a UN forum.

Books of Substance

1. STRUCTURAL ADJUSTMENT: WHO REALLY PAYS?

A popular booklet on the structural adjustment programme (SAP) in India. Taking experiences of the effects of the SAP on many countries, this booklet deals with the impact of the SAP on social welfare, living conditions, women, agriculture, environment, industry and sovereignty of India.

Price: Rs 15 or $ 5
(Add Rs.5 or $ 1 for postage)

2. THE GREAT SURRENDER
(September 1991)

◆

WITH this record of cynical operation, the international agencies have started to parade their fangs even before the Draft Declaration has been considered and adopted by the UN General Assembly. Though the Government of India has taken a formal stand in the UN forum about the difficulty of exclusively identifying any group of people as indigenous in India, the World Bank in its Operational Manual has on its own decided to term the Scheduled Tribes as indigenous peoples. Clearly, this is a case of misdemeanour on the part of the World Bank for which it should be made to apologise and which should be formally denounced by the UN.

The criticism against the unilateral action of the World Bank transgressing the soverignty of India does not, however, mean that none of the tribal peoples in India can be called indigenous. Whatever the definition of indigenous, the Jarawa, the Sentinelese, the Great Andamanese, the Onges, the Nicobarese and the Sompens of the Andaman and Nicobar Group of Islands are certainly indigenous peoples. Without foreclosing the rights of others, many of the other tribal communities in India can also be considered as indigenous in the sense of their being relatively more committed to ecological ethics, more guided by historicalethical sanctions in their social relations than by the coercive power of the state, more sensitive to the muse of nature than to the guiles of Mammon, more in harmony with their social self than is the case with the atomised individuals of the sophisticated societies. To start with, for operative purposes, the Government of India could have accepted the Scheduled Tribes as a special category of indigenous peoples in India. This would have invested them with the political and moral authority to seek the cooperation of the tribal and the other indigenous leaders not only of India but also of other countries, to decide whether there should be one Universal Declaration of the Rights of Indigenous Peoples at this stage or whether there should be a transitional phase with history and ecology-specific declarations of rights; whether and how the single or the multiple declarations should cover the international agencies also; and whether the composition of the Working Group could be more democratic and participatory by giving weightage to the proportion of the indigenous and tribal peoples to the total numerical strength of this category of peoples globally.

As it is the Working Group projects an image of the classical "White man's burden" and the Draft Declaration tends to divert to a considerable extent history's inevitable explosion on the countries of Asia and Africa, after taking care that Europe remains practically untouched by it, and after building up conflict management strategies in favour of the power elite of European origin in America and Oceania. Even then the Draft Declaration has not completely succeeded in its cover-up game. The Grand Council of the Maoris of New Zealand charged that it will divide the authentic indigenous peoples of the world. Others have criticised that though in the meetings convened by the Working Group the status of treaties and agreements that the invaders entered into with the indigenous peoples were discussed, these have not been incorporated in the Declaration. This of course cannot be expected under the dispensation of the "White man's burden". Again, a careful scrutiny of the documents show that the nature of the mandate communicated to the Working Group has not been included in the Declaration. It seems that some UN officials have exceeded their brief. The statement made by the ILO's official representative at the ninth meeting of the UN Working Group also requires to be examined from the point of propriety.

This state of affairs has became possible because of the unimaginative uninformed and passive role played by the Government of India and the less-than-responsible behaviour of some of the tribal leaders. But it goes to the credit of the latter that when the real nature of the functioning of the UN Working Group and the ancilliary agencies was explained to them with documentary evidence, they responded positively and issued a statement pointing out the incongruities of the Draft Declaration; they also requested the General Secretary of the Working Group to clarify certain positions to the chairperson of a Committee set up in the valedictory session of a seminar organised by the ICITP. When some of the facts were brought to the notice of the Prime Minister, he immediately responded but the bureaucracy operated in a manner which, while covering up their earlier amateurish activity, will only lead to capitulation to the manipulative politics of the international vested interests.

The bureaucracy of the External Affairs Ministry should also be held responsible for creating a condition which made the tribal leaders ineffective in the international fora of the tribal and analogous peoples. One of the measures of the proper functioning of a government is the extent to which it can ensure that due respect and dignity are accorded to the different social categories of its citizens in the international fora of the peoples of the same social category. In this the Governement of India in general, and the External Affairs Ministry in particular, has much to explain.

It is necessary that not only the government and the tribal leaders of India should move together to thwart the international hegemonic game-plan but also that all the SAARC and ASEAN countries and the now moribund Afro-Asian forum should be involved in the rapidly gathering historic confrontaion with the West with its saintly garb. There is a danger that the combined action of these fora rather than being directed against world hegemonies may be directed against the tribal and analogous peoples themselves. Perhaps this the international hegemonics want. But prudence and the humanist heritage of these countries require that the SAARC and ASEAN countries, even in their self-interest and transcending the same, go for composite partnership with the tribal and-analogous peoples of this part of the world, so that the internal right of self-determination of these peoples strengthens the basis of the external right of self-determination for the region as a whole in the emerging world economic, technological and political order.

As it is, many African and Asian countries, including India, have unedifying skeletons in their cupboards. While resisting global hegemonic designs, they should devote the International Year of the Indigenous Peoples to deep self-introspection, to cleanse the debrises of the much outmoded thought, and build up edifices of authentic partnership among all sections of their peoples. ■

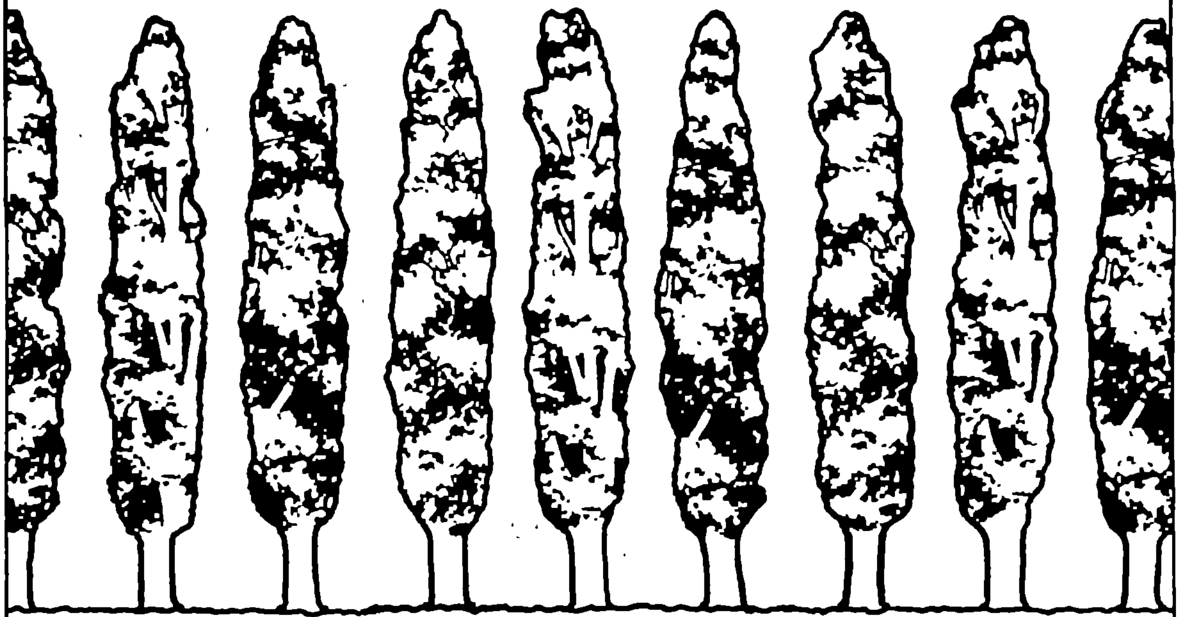
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!
SAIL continues to play an even more crucial role in the restoration and preservation of the environment.
By employing the latest technology.
By developing specialised expertise in environmental management.
By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.
By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.
Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

STEEL AUTHORITY OF INDIA LIMITED
Steelmakers to the nation.

PM's Speech at NAM Summit ● Ayodhya in Indus Valley

Mainstream

VOL XXX NO 47 SATURDAY SEPTEMBER 12, 1992 Rs 5

POLITICAL NOTEBOOK

Mandate from Jakarta

Since the inception of the non-aligned movement it has been the butt of hostile attacks from all sides but more particularly the ultra-Right Western leaders beginning with John Foster Dulles who had denounced the concept of non-alignment as "immoral". Indeed by such a characterisation Dulles had not only unconsciously brought into focus the moral force of the NAM as a movement for global peace and abjuration of confrontation based on military power blocs, he had also unwittingly highlighted the potentiality of the NAM to emerge as a tribune of the developing nations' resistance to neo-colonial pressures aimed at subverting their independence and sovereignty.

The Tenth Non-Aligned Summit's success lies in the feverish attempts among interested quarters both in the developing states and the Western countries to deride the movement throughout the Jakarta meet. The publicity given to the movement through such endeavours speaks volumes of its importance and relevance as a vibrant body of the developing countries intensely interested in ensuring their independent self-reliant advance thwarting the dictates of the Western powers who have tasted blood after the systemic collapse in Eastern Europe and the former USSR.

The NAM has all along been a highly democratic movement where differences of opinions on contentious issues have been voiced in the open without let or hindrance. Only those with short memory would seek to ridicule the divergent views publicly articulated on such questions as the conflict in Bosnia-Herzegovina and the US-enforced "no-fly zone" on Iraq.

At the Seventh Non-Aligned Summit in New Delhi in March 1983 similar divergent views were expressed at the closing ceremony by the delegations of Afghanistan (on the consensus document's formulation on the Afghan developments) as well as Iran (on the stand taken by the Summit with regard to the Iraq-Iran war). Both the delegations were allowed to place on record their reservations to the consensus document thereby testifying to the essentially democratic character of the NAM's functioning that distinguishes it from monolithic organisations.

These differences notwithstanding, the Jakarta Message is a clear evidence of the biggest Third World forum's determination to unitedly resist Western moves to impose a world order that would guarantee the hegemony of the West in general and the US in particular. Hence the Summit's call for shaping a new international order through the "irreplaceable" role of the UN and the institution of a high-level NAM working group entrusted with the task of concretising proposals for restructuring and democratising the UN system. Only those suffering from political myopia would fail to grasp the value of such steps.

Similarly, it was of no mean significance that there was no mincing words in rebuffing Western machinations against the developing states:

> No country... should use its power to dictate its concept of democracy and

human rights or to impose conditionalities on others.

Likewise, while placing on record its dismay over the failure to continue the Uruguay Round of multilateral trade negotiations, the Jakarta Message urgently called upon the developed states "to ensure without further delay a balanced, equitable and satisfactory conclusion of the Round which takes into account the interests of all parties, especially the development needs and concerns of the developing countries".

The Summit's plea for a binding international instrument to end "reprehensible trade practices" was also as much noteworthy as its decision to set up a joint committee to coordinate efforts and strategies with the Group of 77. According to the Jakarta Message:

> We see South-South cooperation as vital for promoting our own development and for reducing undue dependence on the North

Acceptance of the Indian amendments to the draft of the Message on the sections relating to terrorism and non-proliferation of nuclear weapons enriched the final document and undoubtedly made it all-comprehensive. Of no less importance were the doucment's emphatic support for the Palestinian cause and the direct attack on the US for its activities against Cuba for over three decades.

What do all these signify? They underline the fact that after three years of uncertainty the NAM has demonstrated its vitality to survive the heavy odds confronting it and its capacity to reinforce its unity to protect, safeguard and promote the interests of the Third World in the altered global landscape of 1992.

Pakistan's failure to draw maximum mileage by raising the Kashmir question at the Summit has been prominently projected in our media. But what has not been brought into focus is the fact that while India's overall performance at Jakarta was unexceptionable, its low-keyed response to crucial issues revealed the constraints and limitations of our government due to a variety of factors including its submission to the US-dominated multilateral financial institutions (that are currently dictating terms even with regard to the dismantling of our public sector). At a time when Yugoslavia is dismembered and Egypt incapacitated on account of its total subservience to the West, India as the remaining founder of the non-aligned movement was expected to play a more active role at Jakarta in keeping with its anti-imperialist heritage. Its inability to do so has exposed a serious weakness which it has to overcome in no time.

That indeed is the mandate from Jakarta.

Where is the World Going?

S.G. SARDESAI

On one and the same day, August 21, *The Times of India* published three separate reports on the present-day conditions in California, Russia and Moscow city. They were so graphic that they made me shudder and wonder whether the journey of mankind on this planet was nearing its end. Following is but a skeleton summary of the alarming picture presented by the reports.

I will begin with California as most people already consider Russia as lost. Illusions about the USA are growing, nurtured systematically by interested parties though the day of reckoning is not far off.

California has long been famous as the paradise of the USA, a virtual El Dorado and land of great promise, opportunity and achievement even for dish washers in hotels.

Traditionally, 3500 immigrants have been coming to California per week to seek their fortunes. Four out of ten of them have now to be given welfare doles within a few months after their arrival. Besides, families on welfare are growing four times faster than the State's population. There are proposals to cut the doles drastically and also the expenditures on education and health. Educationists apprehend that university campuses will not open after summer.

Worse still, the number of those fleeing from California is growing. Why? A hotel worker said: "Crime, racial violence, smog and an economy that stinks."

An engineer agreed and added: "The worse economic crisis since the Great Depression." In the last two years 600,000 workers have been retrenched (about a third of the American total). Defence, aerospace industries and banks have thrown out workers in tens of thousands.

California is famous for its sun-beaches and beach swimmers. A record number of beach clubs have closed down due to pollution and criminal gangs formed by the workers and houseless.

The Government of America's wealthiest State is bankrupt. It has a budget deficit of six billion dollars. Not being able to pay its employees for months it started

The author, a veteran CPI leader and Marxist ideologue now in his eighties, is one of the founders of the communist movement in India.

issuing IOUs to them with an arrangement with banks to encash them as a loan to the government. But the Bank of America, the biggest in the State, has stopped honouring them and nineteen others have followed suit.

California has always been a reliable base of the Republican Party. In this century no Republican candidate has been elected as the President of the USA without firm support from California. Recently Bush visited the State for campaigning and even the party workers and his close friends were reluctant to meet him.

◆

NOW Russia. A year ago when Yeltsin was at the top of his popularity his reforms were welcomed. Democracy and free-market economy were expected to work wonders.

All the illusions now stand shattered. Everything has gone from bad to worse.

People say that democracy is there and they can criticise and even curse the government. But no one in authority listens. So what is the use?

As regards the economic reforms, they are in a mess. Rampant inflation has led to skyrocketing prices. Wages have been raised but prices have risen to far greater heights. So the trickle of essential commodities which has come to the shops remains unsold, purchased only by those who have made money in the black market. Enterprises have accumulated enormous debts, lay-offs and forced vacations without pay are common. A small percentage has become rich and over 80 per cent have gone below the poverty line.

People are getting frustrated and sullen. "It has never been so bad and I am working as a part-time maid to be able to feed my daughter and myself," said an engineer, Rita. A recent poll by a leading newspaper revealed that only 24 per cent of the people trust Yeltsin.

A new danger has recently raised its head in Moscow causing great anxiety to the older generation. Growing unemployment among youth, university students and graduates is leading them to crime, including murders as a regular occupation. Sixtytwo such murders took place between January and July 1992. In the beginning they recoiled from offers to kill persons on payment of big sums of money. Now they are getting reconciled to it justifying themselves as having no other means of livelihood. Said one: "How else shall I repay my debts?"

Who engages the youth? Mafia gangs have developed and compete among themselves for control over new areas of the free market. They do not stop short of murdering their rivals and employ youth and students for the purpose. The inefficiency and unconcern of the police have become an object of ridicule and contempt.

Such is the state of affairs in the two superpowers of the world of yester years.

◆

WE will cast running glance at a few other countries as an illustration.

The former Yugoslav Federation is broken but Serbia is not prepared to give up its domination over some of the Republics. They are bleeding one another and want to fight each other to a finish. The end is not in sight. The Balkan question seems to dog Europe which is an old tradition.

The Caucasian Republics are at logger heads, it seems for no other reason than that God made them so since their birth.

It will not be long before not a single civilian citizen or civilian activity will be left in Kabul. Its only "citizens" will be murderous gangs claiming to represent Sunnis, Shias, Pakhtoons, various tribals, etc. aided and abetted by Iran, Saudi Arabia and Pakistan. Each will be in occupation of a certain part of the city. The condition in Kabul is far worse than that of Beirut when it was sliced up in a similar manner.

In Africa the Western powers have discovered an easy solution to the population problem. They simply allow tens of millions of people to die of starvation and disease.

Coming to our God forsaken country, our North-East has become a boiling cauldron of strife between nationalities, religions, tribes and linguistic groups, practically each against the rest. Before long it will be difficult to locate Assam on the map of India.

Within one year of the launching of the government's new economic policy it is already adding chaos to mass misery. The sky seems to be the limit for our rising prices. Confidential lists of lakhs of workers in government and private services have already been prepared for retrenchment.

Privatisation and globalisation have already created a ghastly problem unprecedented in Indian history. What has come out as regards the activities of the swindlers gang of Harshad Mehta and company is only the tip of the iceberg. But it has already exposed a new nexus between big business, bankers, high government officials and dark figures among ruling politicians for the embezzlement of public and private money. The tentacles of this octopus have spread to the nooks and corners of the country. The transactions made are not in crores but thousands of crores.

The selling of public sector shares for a song and then reselling them in the stock market at a price ten times higher is sheer robbery. No wonder there is a competition between five-star hotels and slums as to which is growing faster.

I will not elaborate all the policies and their effects which are already known.

Dog does not eat dog. But it seems that man, the highest creation of nature, is advancing to devouring his own species. Atomic war and some ecological disaster are considered the greatest danger to life on earth. They have become redundant.

So much is spoken and written about the great prospects of the twentyfirst century. But shall we live to witness its dawn? ■

Reflections on Scam Politics

HARISH KHARE

At first, the otherwise combative Congress spokesmen were remarkably circumspect in reacting to the Minister of State, Rameshwar Thakur's attempt to stonewall the Joint Parliamentary Committee probe into the securities scam. Even the Finance Minister, Dr Manmohan Singh, was reported by his well-wishers in the media to have been surprised at the obvious indiscretion of his Minister of State. There were predicable calls for Thakur's resignation. But now Dr Manmohan Singh has given a clean chit to Thakur. And, after the Finance Minister's unequivocal defence of his junior, the Prime Minister can hardly be expected to find anything wrong with Thakur's conduct. (Unless, of course, the Speaker finds Thakur guilty of a breach of privilege.)

However, irrespective of whatever punitive action, if any, is taken against Thakur, the larger question that needs to be answered is: from where in the Indian system do the impulses and reflexes to shield and protect wrong-doers come? Why do seemingly honest and honourable men and women end up behaving in a manner that invites an inference that they are willing to subvert the system in order to safeguard the interests (and skin) of a few people?

These questions may appear to be rather simplistic and in any case can easily and cynically be dismissed/answered by a sweeping generalisation about how the corrupt and corruptible have come to acquire a stranglehold on the institutions of the Indian state. Yes, the evidence of such a strangIehold is overwhelming. Yet the system as a whole continues to pretend to be outraged by the Jaffar Shariefs and the M.K. Chawlas and their acts of omisssion and commission. Also, the system goes about in elaborate fashion wanting to catch the guilty. At the same time sober and responsible people loathe, and rightly so, any kind of witch-hunt that a Bofors scandal or a securities scam may provoke, producing remedies and prescriptions far more disagreeable than the original disease.

The Rameshwar Thakur phenomenon, then, becomes all the more baffling because in India we do not have what can be described as "the establishment" whose interests, right or wrong, ought to be protected, whatever the cost. Once the old ICS generation gradually disappeared, those who came to man the ramparts of the Indian state cannot be said to be characterised by any degree of cultural, class, caste or regional cohesiveness. We have not had an equivalent of the WASP network that obtains in the US. If at all, the only pan-Indian glue and orientation came from a commitment to a welfare state. We never had a ruling *nomenklatura*; only a governing elite.

After 1969, the elites' elan was gone; the demands that the Congress split made on every institution took a heavy toll of the elites' *esprit de corps*. The lumpenisation that was represented by the Sanjay Gandhi phenomenon and later the fashionable disdain for conventions during the Rajiv Gandhi era ensured that even a few surviving establishmentarian instincts were gradually given a decent burial. Not surprisingly, a former close confidant of Rajiv Gandhi would then brashly commit the solecism of questioning a former Army chief's credentials to worry about national honour. Not only do our rulers lack the morals, they also lack the manners becoming of an establishment.

◆

WE do not have today a ruling family whose excesses and failures need to be protected and explained away at all costs. For long the political dominance of the Gandhi family induced a comforting assumption that crooks flourish in the Indian system because somehow the family's singleminded presumption to rule the country had made it turn a Nelson's eye to those who were bent upon subverting the institutions and/or lining their pockets. This indeed was the only reason why the Bofors controversy became such a passionate and divisive obsession.

Nor fortunately do we have—not yet—a mafia running the country, though the symptoms are quite discernible in a number of States. Had we had a General Noriega or the generals-drug barons alliance that calls the shots in Pakistan, the Rameshwar Thakur phenomenon would have at least made sense. The country also has not yet seen the emergence of industrial houses usurping the state, as in Japan.

On the contrary we have a Prime Minister whose greatest asset is that he is not Rajiv Gandhi and who has been taking pains to assert that crooks would not be tolerated in his Cabinet. Chidambaram has been forced to resign; V. Krishnamurthy even jailed. And notwithstanding Narasimha Rao's far from honourable role in the St. Kitts forgery affair (on an assumption that he had little choice but to go along with the Rajiv Gandhi cabal), the Prime Minister continues to inspire a hope that swindlers and criminals would at least not get the benefit of the doubt from him. Indeed the most striking difference between the Bofors scandal that eventually paralysed the Rajiv Government and the securities scam is the perception that the Prime Minister's Office is not interested in shielding the guilty.

It is also reassuring that in the bureaucracy, judiciary and investigative agencies we still have men and women, though perhaps in a minorty, committed to probity in public life. This is no small blessing. It is also comforting that years of self-abuse have robbed the system of its own hauteur. The relative openness, ensured by a vigilant Parliament and a not always docile press, makes the swindler's task somewhat difficult.

Why, then, do the scoundrels still feel confident that they can have the run of the place? If the securities scam was a systems failure, as Dr Manmohan Singh is never tired of reminding us, someone has benefited unfairly and ought to be punished. A regime keen on its agenda of economic reform should be keen to be seen that it will not give any quarters to anyone wanting to take the system for a ride. Instead, there is a palpable collective urge to protect the guilty. Even if no single individual or a clique can be held to be orchestrating the whole sordid show of commissions, and kick-backs and "extraneous considerations", conditioned reflexes of so many players converge to produce evasive responses when confronted with evidence of wrong-doing. Even before unmarked khaki envelopes were selectively distributed to JPC members, Thakur's arguments were already being bandied about in whispers in New Delhi's salons.

It may well be that the Ramashwar Thakurs have correctly gauged the collapse of central authority in the Congress and, by extension, in the country and are, therefore, quite willing to tell the Prime Minister to forget all this humbug about probity and cleanliness in public life. The Congress—and for that matter any party—has come to attract mostly unemployable men and women who seek public office only because it is the easiest route to instant prosperity. Temptations of the political class have become infectious.

Common political sense would enjoin the Prime Minister to follow the old adage that if the shoe hurts, take it off. But Narasimha Rao will have to summon unusual political courage to wrest the initiative from the manipulators. Whatever stand he takes now will determine how and in what shape the democratic polity survives. ■

ECONOMY

The Bravado of 'Single Digit Desai'

SANJAYA BARU

The Budget deficit continues to hover in the monetary stratosphere, even if it has managed to come down from the July 24 peak of Rs 14,949 crores to Rs 11,792 crores on August 21. Since September is the last month of the second quarter of this financial year, the Finance Ministry will ensure deficit reduction to meet the IMF's quarterly target. Come October, the deficit might regain height. More creditably, though, the net Reserve Bank of India credit to the Central Government has been kept in check and has come down to Rs 5675 crores as of August 21. This from a peak of Rs 9153 crores on July 17. The explanation for this has already been provided. What the Finance Ministry and the RBI have done is to issue 182-day and 364-day treasury bills to commercial banks, thereby immobilising a part of the liquidity injected into the system by the burgeoning Budget deficit.

However, on the fiscal front it is not the deficit's magnitude which continues to cause concern as much as the rate of inflation, notwithstanding all that brave talk of single digit inflation. Enthusiastic professionals in government are being a bit overly self-congratulatory on that score. They would profit to recall the episode of a Finance Ministry economist estimating the inflationary impact of budgetary proposals to be not more than one per cent. This won the gentleman concerned the sobriquet of 'One Per Cent Singh'! We now have the redoubtable 'Single Digit Desai'! Compliment his bravado, if nothing else, for despite being warned by his more conservative colleagues to go easy on the projections, he has stuck his neck out.

"The rate of inflation is one statistic about which the people think they know better than the government. So don't mess around with it, play straight," advised a seasoned and sober civil servant. "You can claim anything you like, single-digit half a decimal point or what have you, but its my wife's word against yours, and my wife knows better." Give the devil his due, implore the *sarkari* economists, we said it would be single digit and it is here, so why crib? On a point-to-point basis, yes, the wholesale price index, yes. But not yet on an annualised basis and not yet the consumer price index.

It is still an achievement, we have not moved into hyper-inflation despite all that imaginative accounting on the fiscal deficit, so be more charitable, say the single-digit-wallahs. Fair enough, but get the facts right. The rate of inflation, as defined by the wholesale price index, on a point-to-point basis, has come down from 16.7 per cent in August 1991 to 8.34 per cent by mid-August 1992. Throughout August-September 1992 it will remain at such low levels because during the corresponding period last year there was a steep increase. An escalating denominator has reduced the value of the ratio, because the numerator has not gone up at the same rate.

But that's an achievement in itself, grant it to us, says the young World-Bank-economist-turned-*sarkari-babu*. It is not just an increase in the denominator that did it, there has also been a tapering off of the numerator, and that's what made this single digit possible. Granted. Also conceded is that this is quite an achievement considering that from the demand side the government has only administered a mildly deflationary policy.

But why is no one talking about the annualised rate of inflation? Where has that statistic been banished to? According to knowledgeable sources, and that ought to sound impressive to those who refuse to simply take the housewife's word for it, the annualised rate of inflation for 1992-93 is provisionally projected to remain almost exactly at the same level as in 1991-92, that is, 12.5 per cent. When the actual figures are in the housewives will win their bets.

What will add to their cup of woe will be this week's hike in the minimum support price for foodgrains, the proposed hike in petroleum goods' prices and the continuing devaluation of the rupee. In the absence of a strong social security system persistent inflation even at "moderate" levels of 10 to 12 per cent can have a socially insidious and politically debilitating effect. So good luck to Single Digit Desai and may he earn that name! ■

India at NAM

PRIME MINISTER'S ADDRESS BEFORE JAKARTA SUMMIT

Prime Minister Narasimha Rao in his address before the NAM Summit at Jakarta on September 2, 1992, spelt out in clear terms India's evaluation of the relevance and perspective before the Non-Aligned Movement. He also pointed to the specific issues which need to be part of the agenda before the Movement. Mainstream *reproduces the text of the Prime Minister's statement in full for reference and further deliberation.* —Editor

I congratulate President Suharto on assuming the Chairmanship of the Non-Aligned Movement. Indonesia is one of the founding members of our Movement, a nation whose independence was, in Jawaharlal Nehru's words, a "reminder that freedom must be won and cannot come as a gift". It is in the fitness of things, therefore, that Your Excellency should be at the helm of affairs of our Movement at this juncture in the international situation. Besides, the age-old multifaceted relations between our two countries have made us in India particularly happy at your taking over the leadership of the Movement.

That the Tenth Non-Aligned Summit is being held in Indonesia at this moment in time when the world around us is again in transformation, is significant. It was in Bandung, thirtyseven years ago, that the seeds of African, Asian and Latin American political consciousness germinated, and later transformed themselves into the sapling of non-alignment in Belgrade in 1961. We pay tribute, in the words of Indonesia's gifted poet, Djoko Damono, as "we edge along the narrow path in bare feet: pilgrims to the memory of those who gave us birth".

That memory endures, as do more recent memories. On behalf of the people and Government of India, I acknowledge with pride and gratitude the tribute this assembly has paid to Shri Rajiv Gandhi. We cherish our memory of the youthful verve and vision he brought to our deliberations. He lived a life true to some of our most vital ideals— selflessness, self-reliance and compassion. He died martyr to another precious ideal, that of peace and harmony between peoples.

◆

THIRTY years ago we were at a turning point of history. The world seemed to teeter at the edge of a nuclear catastrophe. Jawaharlal Nehru spoke at Belgrade about the need for the non-aligned countries to be sensitive to the new world forces and to the inescapable issue of freedom and democracy within their own societies. His exact words at that time bear a compelling relevance today:

> The most fundamental fact of the world today is the development of new and mighty forces. We have to think in terms of the new world. There is no doubt that imperialism and old-style colonialism will vanish. Yet the new forces may help others to dominate in other ways over us and certainly over the underdeveloped and backward. We have to build in our own countries societies where freedom is real. Freedom is essential because freedom will give us strength and enable us to build prosperous societies

Imperialism and old-style colonialism have vanished. So also has vanished the bloc-confrontation era in which merit was almost invariably measured by bloc identity. Freedom from colonialism has now been coupled with freedom from the bloc syndrome. More and more societies will now discover real freedom, freedom in which one's effort is free, subject to its own inherent strengths and limitations. And yet, we cannot take anything for granted. We have to learn to scrutinise every advice, realising the fact that every advice is bound to contain an element of the adviser's national interest. And we must insist on fashioning our own destiny with our own hands. This is the real bottom line.

To men like Sukarno, Nasser, Tito and Nehru, non-alignment was an inevitable national policy for any self-respecting sovereign state. It meant total freedom in decision-making which gave us a synergistic strength of our own. As a combination of several nations, of varying power and potential, we saw in the Movement a strength derived from solidarity. Three decades later, some palpable dangers have been removed. There are, however, other dangers lurking in the shadows, dangers to which developing societies are particularly prone. That is why the Movement is equally relevant today.

If we go back into history we will see that the Non-Aligned Movement has had several missions at several times. In the beginning it was the mission of decolonisation when many countries were still colonies. Once blocs appeared on the world scene, the Movement's second mission started in that context. It became non-alignment between blocs. Today, the blocs are gone. But there is this great disparity between the rich and the poor nations, the North and the South. Then there are great problems of environment. The new problems that have arisen have to carve out a new role for the Movement. That role will be defined at the Jakarta Summit. The Non-Aligned Movement is a Movement of more than one hundred countries. A majority of humankind is represented in it. The voice of this huge chunk of humanity will have to be listened to. Indeed, in the emerging situation, one can see the steadily growing interest of the developed countries in the Non-Aligned Movement. It is only a question of time before this interest deepens into some kind of involvement. Meanwhile, the Movement must endure.

Talking of the blocs, the need for maintaining independence continues whether there are two blocs or three or none. Taking the essence of non-alignment as the assertion of independence, in that view, non-alignment does not become irrelevant at any time. What is perhaps

Need to Replace 'First-Past-The-Post' System

SANDEEP SHASTRI

The pressing need for electoral reforms has been recognised by various political parties, academicians and even the Election Commission. Several suggestions have been put forward from time to time with a view to strengthen the electoral process and mirror more effectively the voters' mandate. Unfortunately, precious little has been done in the form of concrete action in this regard. Several Private Members' Bills, which were introduced in the two Houses of Parliament to effect major changes in the electoral process, failed to crystallise as formal legislation due to the lukewarm reaction of the government and the ruling party. The Report of the Committee on Electoral Reforms (popularly known as the Tarkunde Committee Report), appointed by Jaya Prakash Narayan on behalf of the Citizens for Democracy in February 1975, has made several far-reaching recommendations which, if implemented, would go a long way in cleansing the electoral process and help in restoring the credibility of the political system.

It needs also to be emphasised that if the process of electoral reforms is to be meaningful, it must involve a comprehensive overhaul of the multi-track dimensions of the electoral system. These reforms should, among other things, take a second look at the electoral proccess itself and examine alternative systems of representation, restructure the Election Commission and redefine its powers, overhaul the election machinery and formulate a comprehensive election code. An attempt is made here to focus attention on the need to develop alternatives to the 'first-past-the-post' election system.

A major lacunae in our electoral system has been that the electoral verdict is not effectively mirrored in the composition of the legislature. The 'first-past-the-post' system, which is presently followed for the election to the Lok Sabha and the Legislative Assemblies, is largely responsible for this. The first-past-the-post system permits a candidate to win an election from a constituency merely because he/she polls the highest number of votes. The fact that the winning candidate may have secured a very small percentage of the total votes polled in the constituency is of marginal electoral significance. As a result, the present electoral system has resulted in an alarming and disproportionate gap between the percentage of votes polled and the percentage of seats won by the various political parties. In all the ten general elections held so far, on no occasion has the party that assumed power after the elections polled more than 48 per cent of the votes. The percentage of seats won by the ruling party was significantly much higher. The following statistics strikingly portray the discrepancy between the percentage of seats won and that of the votes polled (in box) by the party which came to power after the general elections:

Year of Elections	*Percentage of Seats won*	*Percentage of Votes polled*
1952	74	45
1957	75	48
1962	73	45
1967	54	41
1971	68	44
1977	54	41
1980	67	43
1984	77	48
1989	26	18
1991	45	37

When viewed from the angle of individual candidates elected, a significant number of victors have secured less than 50 per cent of the valid votes polled. In successive general elections the percentage of winners who secured less than 50 per cent of the total valid votes polled is given below:

Year of Elections	*Percentage*	*Year of Elections*	*Percentage*
1952	61	1957	52
1962	56	1967	58
1971	31	1977	12
1980	46	1984	31
1989	45	1991	53

This votes polled-seats won distortion and the fact that a large number of the electoral victors polled less than 50 per cent of the total votes cast is primarily due to the multi-cornered contests witnessed in most of the constituencies. These multi-cornered contests are caused by the sharp increase in the number of contestants—both party sponsored and independents. If in the 1952 general elections, there were 1874 contestants—1341 party sponsored and 533 Independents; in the 1989 general elections there were 5956 candidates—2438 party sponsored and 3518 Independents. The number of candidates rose to a record 9107 in the 1991 general elections. Of these more than 5600 were Independents.

◆

IN view of the glaring anomalies that have arisen as a result of the first-past-the-post system, there is a pressing

Engineering cleaner environment

Cleaner environment

Making industrial plants healthier and pleasanter to work in. Mitigating the undesirable impact of industrialisation. Preserving the ecological balance. Dasturco is committed to these objectives and provides a wide range of environmental engineering (EE) services.

Impressive track record

For more than three decades, Dasturco has built extensive pollution abatement systems in various projects handled by it. In India and abroad. Complying with stringent national/international standards.

Global recognition

Dasturco's EE expertise is internationally acclaimed. Its services have been called in by UNIDO for a study on pollution control in Brazil's integrated steel plants. Also by UNEP to assist in preparing the guidelines for environmental pollution control in the iron and steel industry.

Indian Foreign Policy: Dilemmas and Challenges

I.K. GUJRAL

The author, the National Front Government's distinguished External Affairs Minister (1989-90) and a former Indian Ambassador in Moscow (1976-80), delivered a lecture on August 10, 1992 at Colombo under the auspices of the Bandaranaike Centre for International Studies. The following article is based on that lecture.
—Editor

In this era of global change old alignments are yielding to new arrangements—that may not be always pallatable but their appraisal and understanding has to be the first task for any foreign policy.

The Cold War was fought by two mutually antagonistic 'international cultures' with all their mite and resources. A systematic global change has ended these agonising cofrontations. With the receding of the two mutually antagonistic power blocks we now witness an emerging pattern of cooperation-cum-competition between their individual members.

If non-alignment looks like a scattered force during this transition, it is because it is yet to recast itself for a new international role.

It was in this context that I had proposed to my Yugoslav counterpart, Budimir Loncar, way back in 1990 to convene an informal meeting of some Foreign Ministers of the leading NAM countries to meet without any formal agenda to collectively apply their mind to the emerging challenges. He agreed and had actually fixed August 10, 1990 for such a seminar but the Gulf crisis intervened and later a deep nemesis in his own country came in the way.

I hope when the much delayed NAM Summit meets at Jakarta, it will evolve new strategy to meet the challenging situations that it faces. Naturally economic cooperation amongst countries of the South should occupy its maximum attention.

The G-15 has met twice at the summit levels but not much has as yet emerged. If the Jakarta meet could agree and set up a Common Development Fund to help and assist development of the least developed amongst its members it would go a long way to acquire relevance and credibility. The Fund should, at least initially, be funded by member-countries committing one per cent of their GNPs to it. This need not be in hard currencies. Commodities and raw materials too could be contributed.

The CDF could also act as a Clearing House for inter-transfer of technologies and scientific manpower.

You will recall that the NAM had, often in the past, intervened to safeguard peace and to push back the colonial and colour-biased regimes. Contemporary situation demands that we collectively work out regimes to release ourselves from the debt traps and economic degenerations. The IMF and World Bank prescriptions are further tightening the noose. Breathers, if at all, provide only a short-lived relief.

The crisis in which we find ourselves entrapped was not inevitable. It is *not* a product of forces beyond our control. Faulty and gross mismanagement of economies on one hand, and myopic security perceptions on the other have caused it.

I also feel that the NAM—in a spirit of trust and cooperation—should initiate a process to evolve systems and attitudes to end regional wars and tensions amongst the neighbours. Of course, without third party interventions.

This may seem a gigantic and impossible task but some countries of Europe have already shown the way by burying their old and time-worn hatches. Why can't we do it? The NAM should also address itself to the task of the changing role and structure of the UN that is being increasingly used—or may one say, mis-used?—by the powerful ones to advance their own interests.

Secretary-General Ghali, I must say, is putting up a brave fight. His recent proposals of an "Agenda for Peace, Peace-Keeping and Peace-Building" deserve full support and active backing.

Any 'New Vision of Future' has to inevitably spell out—as was done by Nehru in the fifties—the anatomy of a '*Just* New World Order' that would inevitably require democratisation of the world bodies: the UN; the Security Council, the World Bank, the IMF, GATT, etc Today the *Security of All Nations*—big or small—inevitably implies *Economic Development of All Nations.*

Before I proceed further I must draw your attention to the emergence of two new villians that have entered the world scene: I am referring to Terrorism and Drug Trafficking. The two are acting in nexus and sometimes they acquire state support and even state sponsorship. An open arms bazar facilitates their activity.

Unless these are curbed by collective action they are bound to destabilise all societies. Even those who may be deriving temporary benefit from their nefarious activities.

Evolving of an equitable environmental regime is another issue of vital interest to all countries of the South. As at present, the dice is loaded in favour of the powerful industrialised nation. Unless we act in unison we may be denied access to the latest technology and left to languish in the dark dungeons of backwardness.

A while ago I had mentioned about my proposal to Loncar—the then Yogoslav Foreign Minister. Isn't it time that we in the SAARC undertake such an exercise to collectively co-relate ourselves with the changing world? I was encouraged to see a recent statement that Pakistan's

Minister of State for Foreign Affairs, Kanju, made here in Colombo to the SAARC Ministers. He had spelt out principles that should form the foundation of relations between and among South Asian countries. India is, I am sure, in broad agreement with all the principles outlined by the Minister. Differences in interpretation of some of these could be cleared by bilateral and multi-lateral discussions.

While Kanju had rightly mentioned sovereign equality, political independence, non-interference in the internal affairs, peaceful settlement of disputes, respect for human rights and exercise of self-determination of peoples. I must add at least one more basic principle that would go a long way in strengthening good neighbourly relations: that 'no South Asian country should allow use of its territory against interest of another.'

As a Foreign Minister I had espoused this principle and had further promised that India would abide by this and also never commit its forces outside its territory except in self-defence.

Kanju has also included the principle of self-determination in his proposal. I view it positively since in all developing countries the polity is over-centralised and there is a heavy deficit of self-determination even when the political systems are democratic. Self-determination or participation in self-government must begin at the grassroot level through democratically elected Village Councils and cover the entire political society upwards. Elections must, of course, be free and fair and to establish their credibility a SAARC team of eminent persons should, as a practice, be invited to monitor. A welcome beginning has already been made in Bangladesh and Nepal. This needs to be built into our systems.

Self-determination, however, must not disturb national boundaries as this would engage neighbours in prolonged and agonising mutual hostility, bloodshed and resource drainage.

We see the mushrooming of regional, sub-national and even communal identities all over the world including Europe. Today "Nations are becoming people and peoples are becoming nations." This trend is imposing heavy burdens on governments everywhere, especially in South Asia, where ethnic overflows and other disputes strain inter-state relations and inhibit regional cooperation for peace, security and development.

It is time, may I suggest, that South Asian leaders and opinion-makers engage themselves in free, open-minded discussions to build a regional consensus on the stated basic principles that must govern South Asian relationships.

The framework of such a consensus must keep in mind that South Asia has been slow in imbibing the post-Cold War chemistry of cooperation. Our obsolete mind-sets and faulty security concepts do not permit us to take a holistic view of security.

Deeply ingrained suspicions of the neighbours result in ever-increasing expense on military hardware that in turn intensifies economic distress, internal disturbances and enhance the need for outside help and support.

I believe that the first priority for India's foreign policy is to consolidate and update its cooperative relations with the neighbours, not only in South Asia but also in Central, South-East and West Asia. In all these regions important changes are taking place, and that is where imaginative initiatives are called for.

On a bilateral basis, India has been able to impressively upgrade its relations with its South Asian neighbours. Although, and I say this with deep regret, Indo-Pak relations still remain acrimoniously involved, India's relations with Nepal, Bangladesh and Sri Lanka has taken a turn for the better.

Let me, in all humility, claim some credit for espounding a doctrine of 'asymmetry' while sorting out the outstanding issues with Nepal. Though credit for it in a much larger part is due to the first democratic head of Nepal—Bhattarai. He appreciated India's security sensitivities and saw the futility in acquiring mini-arms dumps when the world was moving in other direction and India, in no way, posed any threat.

With the transfer of the Teen Bigha, an outstanding issue has been sorted out—thanks mainly due to the Chief Minister of West Bengal, Jyoti Basu. India is striving, as it must, to amicably resolve the water dispute also with the democratic regime in Bangladesh.

I would very much like to delve at some length and refer to positive changes in Indo-Sri Lankan relations. Since I am going to speak on this subject later this week, I would only say that since the withdrawal of the IPKF in particular both of us are travelling on a friendship trail.

◆

MAY I now divert to another neighbourhood of this subcontinent—Central Asia, where pronounced uncertainties prevail?

Unfortunately, thanks to the legacy of the past, our diplomacy has not devoted much time and attention to this large and diverse region that extends from Mongolia and Kazakhstan to Trans-Caucasia. Its past is wrapped in mystery while its present is uncertain.

There is a sudden explosion of unfamiliar ideas, alliances and conflicts. Almost every new state there is embroiled in a shooting war with the neighbour or is busy in putting down secessionist eruptions.

The idea of a Pan-Turkic bloc threatens the territorial integrities of many countries ranging from the Arabic states to China.

Violent conflicts between nationalisms, ethnic loyalties and religious faiths are already taking a heavy toll. Wars are being fought between Armenia and Azerbaijan and also within Georgia. Tajikistan is fluid and unstable while several federating units of the Russian Federation are up in revolt.

Over-riding all these are the destabilising dynamics of fundamentalism and sectarianism. While an overwhelming majority of the Central Asian people are ethnically Turkic, they are sharply divided as Sunnis, Shias, and Sufis. Sufiism, we might recall, had originated in this region and then there is a vast support for 'Jadidism' or reformism.

None of these states is uni-ethnic. Apart from the presence of other fellow-Turkics, the Russian ethnic component is sizeable. They are mostly skilled workers whose elimination could further intensify the economic crisis. None of these states has been able to sort out the agonising problems of citizenship too.

Constraints of time do not permit me to delve at length and talk about pulls and pressures—both internal and external—that are splitting the societies and arraying them against the neighbours. Azerbaijan is an example worth studying to understand as to what could happen elsewhere in Central Asia and Caucasia. Nationalist upsurge there poses very difficult implications for neighbouring Iran. Ethnically Turkic, the Azerbaijanians do not accept the Iranian model of a fundamentalist state. While they prefer Turkish secular model there is a movement to create a "Greater Azerbaijan" by including 20 million Azeris living in North Iran.

Iran is countering these moves by cultivating the rivals of Azerbaijan, the Christian Armenian and Georgian States. The Azeris also fear that the USA at some stage might support Christian Armenia. Unless the Russian-ed CIS or Russia itself intervenes to end such mini-wars, regional instability could flow out in several directions ncluding ours.

While talking of Central Asia one cannot ignore Uzbeki nationalism that is trying to have its way in Kirghizia. It has already fought a war with the Mesket Turks in Farghana and Tashkent.

Conflicts between various Turkic sub-nationalities are destroying the pipe dream of a greater Turkistan.

I am deliberately not speaking at length about the Persian-speaking Tajik nationalism that is asserting in Afghanistan and is also at war with itself.

These events in the northern neighbourhood of the South Asian subcontinent have serious implications for countries of this subcontinent, particularly, when new ypes of regional groupings are being hawked around.

You will recall that in February of this year the newly ndependent Central Asian states—with the exception of Kazakhstan that preferred an observer status—joined he ECO (Economic Cooperation Council) comprising of ran, Turkey and Pakistan. The ECO summit promised o create a powerful "Islamic Market", and it hoped that Afghanistan too would soon join. Bangladesh has already pplied for its membership. Some scribes are talking of a 'powerful Islamic state' wherein two of its members, Pakistan and Kazakhstan, are already nuclear-weapon tates and several others possess sizeable heaps of fission materials and unaccounted tactical nuclear weapons of he former Soviet state.

But it would be erroneous to go by all that is being laimed. All former members of the Soviet state are very much linked with the CIS and the economy of the Russian tate. Their adverse economic situations make them ulnerable. None of the outside members of the new ECO njoys such affluence as to underwrite their needs for conomic stabilisation and development. Iran can help, ut only marginally.

Iran and Turkey have their own rival regional interests oo. Tehran has spearheaded a Caspian Sea Cooperation Zone to bring in Russia, Kazakhstan besides Azerbaijan and Turkmenistan.

Turkey, on the other hand, is launching a rival Black Sea Cooperation Council to include Turkey, Azerbaijan, Bulgaria, Romania, Ukraine, Georgia, Moldov and Russia.

If all this is not enough to confuse you, please know that a recently held summit meeting of the Central Asians at Bishkek, the capital of Kirghizia, was averse to setting up of any organisation that would weaken the CIS.

In the last analysis, the policy-makers in Delhi have to keep in mind the future role of Russia in this region and the impulses registered in Chinese Turkistan, Tibet and Afghanistan. The Communist regime of seventy years had succeeded in modernising social attitudes and transformed institutions in the region. Even when religion comes back to them, it is likely to adopt a secular milieu.

While reacting to these happenings India keeps in mind the fact that it enjoys a high prestige in the region. Its relationships with Russia can now be on a more firm footing since it does not contradict any of the American interests. It must be said to the credit of Indian diplomacy that it is not acting in any hasty panic nor trying to transfer the Indo-Pak acrimony to this area.

◆

INDIAN foreign policy cannot be and is not a captive of the situation in the North. It has to pay due, and even slightly more than due, attention to the Oceans around. That is where commonality of interests betwen India and Sri Lanka gets pronounced. In saying this I do not mean, in any way, to understate interests of Maldives, Bangladesh and Pakistan and also the land-locked members of the SAARC—Nepal and Bhutan.

In the Cold War era all of us in the sub-continent alongwith several other nations in the NAM have made gigantic but unsuccessful efforts to transform the Indian Ocean into a Zone of Peace.

With the end of the Cold War, the superpower confrontation in these waters has ended. Then why this mounting expense and ever-increasing military presence?

As far as the countries of the Indian Ocean are concerned, they may sometimes clash with a neighbour but neither individually nor jointly can they pose any threat to US interests.

Sustained blockade and punitive actions against Iraq has unveiled the new US strategy for the Ocean. It is now evolving a security system in the north-western part of the Indian Ocean. It was inducing countries of the Gulf, alongwith Syria and Egypt, to let its troops stay in this region. So far this has not been accepted. But the USA has by-passed their intransigence and has signed a Treaty with Kuwait to achieve the purpose.

You would have seen that exercising the ghost of Saddam Hussain has a purpose for the US strategists: they benefit a great deal from regional rivalries and faulty security doctrines that invite extra-territorial presence and intervention.

It is now clear, if there was ever any doubt, that a subtle US strategy first built Iraq's military machine and then destroyed it.

A myopic Saddam facilitated this task. The war aims of the UN Security Council and the USA did not coincide. Whereas the world opinion was all for the liberation of Kuwait, Washington was more keen to destroy Iraq and eliminate any autonomous power in the Gulf.

James Baker (Jr) had reminded me in those windy days of the Gulf crisis that sources of energy were of vital interest to their security and economy, and the USA could not permit any "demon" to sit on it.

In strategic terms the Russian threat has disappeared from the scene and may not come back for quite sometime. But the US now apprehends threat to her interests from the Third World countries, particularly those which are rushing to develop nuclear weapons. This fear has been aggravated by the prevailing turmoil in the ex-Soviet states and by efforts of Iran and Pakistan to lay their hand on available fission materials there.

◆

INDIAN diplomacy has its own dilemmas regarding the NPT. Constraint of time does not permit me to examine its pros and cons.

But I do wish to take a couple of minutes to look at the contours of Indo-US relations that are presently a hub of India's foreign policy that is faced with complex strategic, political and economic situations.

Dissolution of the Soviet Union has placed the US-India relationship in a new framework. In the contemporary phase, Washington's strategic needs and requirements in South Asia have undergone a change. Eclipse of the Soviet Union is enabling both India and the United States to explore areas of fruitful cooperation. The White House has appreciated the Indian concern and policies regarding Punjab and Kashmir, and it has seen the validity in India's charge regarding Pakistani support to terrorism.

It is an evidence of the changed times and relations that Washington appreciated India's policies during the Gulf crisis and did not press it to join the war symbolically even when Pakistan had lent its troops.

Similarly, Washington is lending its supporting hand to India in the World Bank and IMF fora. This has rescued Delhi from a very trying situation.

The two countries have stepped up interaction among their armed forces but building a cooperative and mutually beneficial relationship is still uneven and time-consuming.

Unilateral invocation of Super 301 and the US reaction to the Indo-Russia agreement for acquisition of cryogenic engines are two such examples that have caused deep concern to India. Research and Development of the Indian space programme occupies a position of importance in India's vision of the future.

In the overall context, it is important for both India and the US to sustain an upswing in bilateral relations and both must continue to discover wider pastures of cooperation avoiding to tread on each other's sensitivities.

This is a sketchy and selective presentation of the issues and situations that face Indian diplomacy which is also, at the same time, confronted with militancies in some of its States. These militancies are aided and abetted from abroad, causing severe strains on our foreign relationships. ■

— An indispensable book for
- Students of population
- Politicians
- Planners
- Policy makers
- and those who are concerned with development programme at the District Level.

Demographic Diversity of India: 1991 Census State and District Level Data - A Reference Book

This reference book is the first of its kind, based on the latest official data released by the Census Commissioner and Registrar of India. The focus is on individual districts of all the 25 States (except Jammu & Kashmir) and 7 Union Territories. Professor Ashish Bose, eminent Demographer, currently Jawaharlal Nehru Fellow attached to the Population Research Centre had the privilege of getting a full set of the 1991 Census Reports.

Lord Sri Ram of Indus Valley

BHARAT JHUNJHUNWALA

In the early part of this century the remains of a great civilisation were discovered along the Indus river. Many more sites have been discovered since then, and now we can say with certainty that a great civilisation existed in the Indus valley between 2500 and 2000 BC which extended from Rajasthan to Sind. It is our submission that Lord Sri Ram had set his foot on earth in that great civilisation.

The excavation of Indus sites is still continuing and more sites may be discovered. Thus, perhaps no definite "proof" is ever possible. Therefore, our submissions must be treated simply as proposals until better alternatives are proposed.

An important archeological site has been discovered at Kalibangan in Rajasthan. It is located on the southern bank of the Ghaggar river in Ganganagar district. We propose that Kalibangan was Ayodhya of Lord Sri Ram and the Ghaggar was the Sarayu. The site of Mohanjo-daro is located on the west bank of the Indus. We propose that it was Lanka.

Ayodhya

Ayodhya is described as follows in the *Valmiki Ramayan*:

> There is a large district famous by the name Kosala on the banks of the Sarayu. In that district there is a town by the name of Ayodhya which is famous in all lands. That town was built and established by Lord Manu himself. (*Bal Kanda*, 5.4-6)

Kalibangan is located on the southern bank of the Ghaggar river like Ayodhya's location on the bank of the Sarayu.

Ayodhya's having been established by Lord Manu indicates its antiquity. From the chronological horizon of major Indus sites it is apparent that the earliest date yet established for Kalibangan is about 2400 BC, while the earliest town dated so far is Mohanjo-daro at about 2500 BC. (Lal, 6) It is clear that Kalibangan is one of the oldest towns of the Indus civilisation confirming the antiquity of Ayodhya as mentioned in the *Ramayan*.

Kalibangan was finally abandoned at about 1800 BC. Thus the abandonment of Ayodhya by Sri Ram as narrated in *Uttara Kanda* (109.22) may have taken place around that time. On this consideration we may place the events of the *Ramayan* at around 1800 BC.

The structure of Ayodhya is described as follows in the *Ramayan*:

> That metropolis was 12 *yojana* long and 3 *yojana* broad. The raj-marga leading to other districts from there had trees on both ends and therefore appeared distinct from other roads. King Dasarath had populated that Ayodhya on a larger scale than before. (*Bal Kanda*, 5.5-9)

We propose that the *'yojana'* is approximately 80 metres long. Elsewhere in the *Ramayan* the vision of the eagle is mentioned to be 100 *yojana*. (*Kishkinda Kanda*, 58.32) At 80 m per *yojana* this would be 8 km, a plausible distance.

Kalibangan had two sections. Archaeologists have named the smaller western section as the 'citadel' and bigger eastern section as the 'lower town'. The lower town is reported to be 240 m wide. That would be equal to about three *yojana* as per the *Ramayan*. The length of Kalibangan is uncertain:

> Since the southern part has been considerably eroded, it is difficult to be exact about the north-south spread: but it is unlikely to have been less than 360m—the present available stretch of the mound. (Lal, 59)

Relying upon the *Ramayan* description we may postulate that the original length of Kalibangan may have been about 1 kilometre (12 *yojana* = 960 metres). Since the land south of the Kalibangan mound is flat this is quite possible. Even if a fortification wall is located at about 360 m, the town as described in the *Ramayan* may have overflowed its walled boundaries and may have been long.

At Kalibangan four streets have been located in the north-south direction measuring "approximately 1.8m, 3.6m, 5.4m and 7.2m". (Lal, 60) The street having the largest width may have been the "raja-marga" referred to in the *Ramayan*. The significance is that all the streets that have been discovered are not of equal breadth and one does stand out.

We accept that Ayodhya, as described in the *Ramayan*, does not have two separate sections of the town as have been discovered at Kalibangan. However, it is narrated that "King Dasaratha entered the town on the completion of his *yajna*." (*Bal Kanda*, 18.2) This implies that there was a separate place for undertaking the *yajna*. It appears that the citadel may have been this place. The remains of what may have been a *"yajna-shala"* have been discovered in the citadel. Archaeologists report that the southern rhomb of the citadel

> contained primarily a series of mud-brick platforms... access to the top of these platforms was by means of a flight of steps or ramp...atop one of the platforms was located a series of what have been termed as 'fire-altars' in the absence of a more suitable name... the altars were in fact clay-lined pits... within each pit were noted ash and charcoal... on this very platform, a short distance away from these altars, were a well and the remains of a few bath-pavements with attached drains. This kind of lay-out clearly suggests that ceremonial bathing constituted a part of the ritual. (Lal, 57)

No wonder the *Ramayan* narrates how Lord Ram and Sita were bathed or sprinkled with holy water before their coronation. (*Yuddha Kanda,* 128.61) It appears that the citadel was used for the ceremonial function described in the *Ramayan.*

The structure of Ayodhya is described as follows in the *Ramayan*:

> That town had huge gates and doors. There were tall towers. There was a deep moat around it. It was so densely populated that even a small vacant space could not be seen. It was settled on flat land. (*Bal Kanda,* 5.10-15)

Corroborating the description of huge gates and doors, large gateways have been discovered at Kalibangan:

> These gateways were exposed in the northern half of the 'citadel' ... they were controlled by a bastion ... in the southern half of the citadel, two gateways have been located. In the lower city ... two gateways have been found, one on the north and other on the west. The latter was flanked by a simple guard room. The fortification walls at the citadel had towers on their ends. The land around (Kalibangan) is flat, with low sand dunes not very far away. However, in the hey day of the ... settlement when the river flowed past it, the land must have been full of lush fields. (Lal, 55, 56, 67)

These discoveries are in accordance with the *Ramayan* descriptions.

Turning to the economy of Ayodhya, it is described as follows:

> (That town) had different markets. All types of machines and weapons were stocked there. All types of craftsmen lived there. It was full of missiles. Tax paying kings from surrounding countries were always present there. Traders from various countries were coming there. That town was full of early rice. Its water was as sweet as sugarcane juice. (*Bal Kanda,* 5.6-16)

Kalibangan too appears to have had a thriving economy. Archaeologists write that the northern gate

> provided access to the river front. The river, then full of water, must have witnessed boats plying up and down, bringing in surplus foodgrains from the neighbouring villages and carrying back manufactured commodities from Kalibangan ... (the inhabitants of the lower town) were indeed prosperous peasants enjoying all the amenities of the day. An agricultural field with criss-cross furrow marks found associated with the pre-Harappan levels at Kalibangan shows that even from that early times people had taken steps to augment production by growing two kinds of crops simultaneously, in the same field. Besides agriculture, various craftsmanships, trade and commerce were their other occupations, as clearly evidenced by the kinds of finds from these houses ... metallic objects, seals, weights, etc. (Lal, 59-61)

That the inhabitants of Kalibangan had large hoards of weapons is also borne out by archaeological evidence:

> The richness of copper artefacts at Kalibangan is all the more evident in the form of about 1200 copper objects from the Harappan levels. They include arrow-heads, chisels, spear-heads, celts, knives, axes, drills, daggers, etc. (Lal, 160)

It is clear that Kalibangan had a developed armoury as described in the *Ramayan.*

Although rice has not been reported yet from Kalibangan, both wheat and barley have been found. At Lothal and Rangpur rice husks and spikelets were found embedded in clay and pottery. (Allchin, 191) Since Lothal is located far south and Rangpur is located far north, we may presume that rice was known to Kalibangan also.

The ground water around Kalibangan is brackish today. This runs contrary to the description of sweet water given in the *Ramayan.* The first thing to note in this context is that the rainfall in the Indus valley during its heyday was much more than at present. From the study of vegetation in various periods, archaeologists have concluded that during the period 3000-1800 BC the annual average rainfall was probably at least 50 cm more than the present rainfall in the arid belt. (Lal, 462) This higher rainfall may have meant greater percolation of upper ground water and the same may have been sweet at that time. It is noteworthy that remains of a well have been located at Kalibangan. Obviously the water at that time must have been sweet; otherwise a well would not have been dug right in the middle of the town. It would be clear that the description of Ayodhya as given in the *Ramayan* fits Kalibangan reasonably well.

Lanka

In order to identify Lanka first we have to consider various references giving description of its environs:

> After crossing the sea, at the end of 100 *yojanas,* (Sri Hanuman) saw a green mountain range. He saw the island named Lanka decorated with many types of trees. Like the northern bank, there was a mountain on the southern bank also. He saw the sea, countries located on the seashore and the river mouths. (*Sundara Kanda,* 1.203)
>
> (Lanka) is located on the south bank of the sea spread out for a long distance. There is no route for the boats to reach there because it is not possible to keep track of the destination in the sea.
>
> (Starting from Kishkinda) Sri Ram along with Sugriv and Lakshman soon reached the forest on the seashore. On reaching that vast *bank of Sindhu,* Sri Ram said, "Sugriv, now we have reached the seashore, now ahead is the sea of which the other side is not visible." (*Yuddha Kanda,* 3.2, 4.95-98)

On the basis of above, the following facts stand out regarding the environs of Lanka: (i) it is located on south bank of the sea of 100 *yojanas*; (ii) there are mountains on both shores of the sea; (iii) it is an island; (iv) the north sea shore is referred as '*Sindhu-tata*'; (v) the sea water around it was salty; (vi) it was 10 *yojana* wide and 20 *yojana* long (*Yudha Kanda* 49.20); and (vii) it was very rich from the earliest times and is described as the abode of *Kuber,* the Lord of Wealth. (*Sundara Kanda,* 2.24)

The site of Mohanjo-daro seems to fulfill the descriptions of Lanka given above:

(i) The flood plains of the Indus around Mohanjo-daro during the last 7000 years show that the flood plains extended to many kilometres north and west of Mohanjo-daro during those times. The 'sea' of 8 Kilometres (100 *yojanas*) may have been the flood waters north of Mohanjo-daro.

(ii) The reference to mountains on both sides of this 'sea' may have been a reference to the erosion of the silt around Mohanjo-daro by the Indus leaving almost vertical banks. It has been reported that the earliest civilisation at Mohanjo-daro was established at a relatively low level of 31m msl. Then silting occurred at a rapid pace and as the level of the silt rose, those people kept building newer structures on the debris of the old upto 27m height such that the uppermost layer of Mohanjo-daro habitation is built at 58m msl. Then out of this silt, much was eroded leaving the city on a mound about 19m high. (Lal, 460) This mound on both sides of the flood plains may have been referred to as the mountain on both sides of the sea.

(iii) The flood waters of the Indus were spread on all four sides of Mohanjo-daro; hence it was an island.

(iv) The reference to Ram having reached the *Sindhutata* may obviously have been a reference to the Sindhu river, also referred to as a 'sea' because of its vastness being comparable to the ocean. Similar references to the sea by the name of 'Sindhu' are found in *Aranya Kanda* (35 11, 13) and *Yuddha Kanda* (21.31).

(v) There is a clear reference to the sea around Lanka having had salty waters. At only about 125 km south of Mohanjo daro, archaeologists have noted "a change from predominantly marine snails to predominantly fresh water species". (Lal, 459) Amri is about 400 km from the present limits of the Arabian Sea. Clearly there must have occurred some peculiar geological activity which may have led to the Indus waters having become brackish. This brackishness may have been referred to as the '*khara*', of the Lanka waters.

(vi) Mohanjo-daro's spread at 10 x 20 *yojanas* would be about 800 × 1600 m, which is indeed the approximate measurement of the lower town of Mohanjo-daro. (Lal, 76)

(vii) The richness of Mohanjo-daro is well established by archaeologists:

> Lothal, Chanu-daro and Harappa were some of the major industrial towns of the Harapans. Mohanjo-daro may not fall in this category although it has been the richest town of the Harappans in every sense of the term (Lal, 118)

The environs of Lanka are, therefore, in general in conformity with those of Mohanjo-daro.

Let us now turn to the structure of Lanka:

> There is a high parapet of gold around that city There are lines of houses built on that parapet That city was decorated with gates as high as the clouds That city had broad roads built separately
>
> There was a temple with hundred pillars which appeared like a mountain peak That city was full of strange metals and many gardens enhanced its beauty
>
> Like the sky full of monsoon clouds, Lanka was full of houses and transports That city was decorated with various strange metals Rakshasas of different forms lived there Ram and Lakshman saw that prosperous city of Ravan full of all desirable things Ram was astonished to see that heavenly city densely built with huge palaces (*Yuddha Kanda*, 3 11, 39 20-28, 19 22-21, *Sundra Kanda*, 2 50)

Like Lanka, Mohanjo-daro also had a parapet with gates:

> Two of the rectangular bastions of the south-eastern corner seem originally to have flanked a postern gate which was subsequently blocked and replaced by a platform with a parapet

Likewise a main street has been found at Mohanjo-daro:

> by the central street one can reach the heart of the city from the western gate and this central street seems to have been the chief entrance to the city through a north-west gate (Lal, 65)

Remains of what appears to have been a temple have also been found:

> One building in the lower city of Mohanjo-daro which comprised a monumental entrance and double stairway, leading to a raised platform on which was found one of the rare stone sculptures of a seated figure . may be identified as a temple (Allchin, 180)

The houses at Mohanjo-daro had courtyards which may have been described as the many gardens of Lanka.

> the ground plan of this complex is characterised by a series of so-called 'courtyards' (larger compartments of unknown function which may or may not, have been covered over) generally enclosed by a single rows of smaller compartments (Lal, 81)

Archaeologists have found that the houses of Mohanjo-daro had more than one story, private wells, courtyards and bathrooms. the larger dwellings consist of

> several dozen rooms and several courtyards Nearly all the larger houses had private wells. In many cases brick stairways led upto what must have been upper storeys or flat roofs In some cases there is evidence of bathrooms on the first floor (Allchin, 177)

There is much evidence of a thriving economy at Mohanjo-daro:

> The lower town must also have contained a wide range of shops and craft workshops Among these, potter's kilns, dyer's vats, metal worker's, shell-ornament maker's and bead maker's shops have been recognised (Allchin, 179)

The 'astonishment' of Sri Ram on seeing Lanka indicates that the grandeur of Lanka was extraordinary in comparison with the other cities of that time. This is well established by the fact that Mohanjo-daro is bigger than Kalibangan many times over. Therefore, Mohanjo-daro seems to fit the descriptions of Lanka as given in the *Ramayan*.

Sarayu

Before trying to identify the ancient rivers around Ayodhya we may outline the general topography of the area during the *Ramayan* period. The present Ghaggar river emerges near Ropar and flows via Patiala, Sirsa and Kalibangan to Suratgarh and goes on westward. At present the river becomes dry before reaching the Pakistan border near Anupgarh. However, its dry bed has been located to extend westward for some more distance. Beyond that it may have either joined the Indus or flowed separately to the Arabian Sea on an eastern course parallel to it. There is a second ancient river emanating east of Ambala. This river is now dry. It used to flow via Jind and Hissar to meet the Ghaggar near Suratgarh. This has been named as Channel-Y1 by the archaeologists. There is a third river which emanates further east of Ambala and flows south-east of Jind and Hissar and is traceable only upto Mitathal. This river is named as Channel-Y2 by the archaeologists. It is our proposal that these three rivers were the ancient Sarayu, Ganga and

Yamuna respectively.

We may now turn to the descriptions of various travels given in the *Ramayan* for the corroboration of the identifications of these rivers. When Sri Ram is sent with Rishi Viswamitra by King Dasarath, they leave the banks of the Sarayu near Ayodhya in the morning and reach the confluence of Sarayu and Ganga by the evening. (*Bal Kanda*, 23.5, 24.10) At a distance of about 30 km from Kalibangan near Suratgarh the Ghaggar is joined by Channel-Y1, the ancient Ganga. This distance of 30 km can be traversed in one day easily and appears to have been the route taken by Sri Ram and Viswamitra.

Later when Sri Ram is expelled from Ayodhya, he traverses this same route to the Ganga-Sarayu confluence. At that time he is said to have crossed the rivers Tamasa, Vedasruti, Gomati and Syandika on the way. (*Ayodhya Kanda*, 46.28, 49.10-12) However, these rivers are crossed on the chariot itself. Hence, it appears that they may have been seasonal rainfed rivers which were dry at the time of Sri Ram's expulsion from Ayodhya.

Channel-Y1, or the Ganga, was a mighty river in its heyday and is upto 4 km broad at places such as Hissar. During Sri Ram's time this may have been a perennial river because a well-established system of boats and rafts to cross it has been described in the *Ramayan*. When Bharat follows Sri Ram to Chitrakut, a flotilla of 500 boats carries his army across. The chariots are also loaded on to larger vessels for the crossing:

> On the orders of Guha, all the sailors soon got up and brought 500 boats from all directions.
>
> In addition there were some boats famous by the name of Swastika. These were recognised by the Swastika sign decorated upon them. There were huge sails on them from which large bells had been hung. All those boats were very strong.
>
> Guha himself brought a boat in which white carpets were spread out. The priests, Bharat and the queens boarded that boat. Carts and other trade goods were loaded on separate boats.
>
> Many men sat on the boats and many sat on rafts made of bamboos.
>
> In this way that army crossed the Ganga with the help of the boatsmen. (*Ayodhya Kanda*, 79.10-20)

Sri Ram started from the Ganga-Sarayu confluence in the morning and reached the Ganga-Yamuna confluence in the evening covering the distance on foot. (*Ayodhya Kanda*, 54.8) Taking the distance covered during a day on foot to be about 20-30 km, we may conclude that the Yamuna joined the Ganga at about this distance away from Suratgarh. Thus we may surmise that Channel-Y2 joined the Ghaggar at about this distance from Suratgarh.

It seems that at that time the flow of Channel-Y2 had already turned eastward to the Bay of Bengal and there was a break in its waters between Mitathal and the Ghaggar confluence. This conclusion is based upon some of the episodes mentioned in the *Ramayan*. When Sri Ram and Lakshman reached the banks of the Yamuna, they made a raft of dry bamboos and crossed the Yamuna upon it. (*Ayodhya Kanda*, 55.14) However, when Bharat reached the Yamuna, he did not cross it by boat; instead he appears to have taken a different route circuiting around the dead waters of the Yamuna:

> Bharadwaj Muni said, "At 10 *kosa* distance from here there is Chitrakut Hill in the middle of the forests. River Mandakini flows on the northern edge of that forest. You will see Sri Ram's hut between that river and the hill. Commander, you first take your army full of horses and elephants on the path running on the south banks of the Yamuna. Soon you will find two paths. You take the left path going towards the south and soon you will see Sri Ram."
>
> That huge army *moved ahead on the other side of the Ganga*, crossing the hills and the forests full of deer and birds along the banks of the rivers. After covering a long distance, when Bharat's army had gotten very tired, then Bharat said, "It appears that this is the Chitrakut Hill."
> (*Ayodhya Kanda*, 92.10-13, 39; 93.6-8)

Clearly there is no reference to Bharat's army having had to cross the Yamuna. On the contrary there is reference to the army getting 'very' tired traversing the other side of the Ganga. This indicates that for Sri Ram it was convenient to make a raft and cross the dead waters of Channel-Y2 rather than take a long circuitous route; but for Bharat's army the land route around the dead waters was more practical.

There are two further indirect references in the *Ramayan* to the change in the flow of the Yamuna. At one place the Yamuna waters are said to flow in the reverse direction:

> Bharadwaj Mahamuni said, "You brothers proceed towards the Yamuna from the confluence of Ganga and Yamuna where Ganga flows westward. *The Yamuna has turned backwards there* due to the velocity of waters of the Ganga." (*Ayodhya Kanda*, 55.4-5)

The backward turning of the waters of the Yamuna appears possible only if there was no flow from upstream. Also we must note the reference to the westward flow of the Ganga mentioned above which is in conformity with the flow of Channel-Y1.

Elsewhere, Kumbhakarna laments the loss of the waters of the Yamuna:

> When Yamuna wanted to descend upon the earth then only she had filled the tanks of the Yamunotri mountains. (After descending, when her waters have flowed into the sea and become quiet then she cannot refill those tanks.)
> (*Yuddha Kanda*, 12.28)

The wish that the Yamuna waters may return is expressed quite clearly. The importance of the Yamuna waters lay in the fact that the level of Indus would go up significantly if it flowed westward. That would make Indus navigable. This supports the view that the Yamuna had started flowing eastward to the Bay of Bengal during Sri Ram's time; hence Kumbhakarna's lamentation.

Archaeological studies have shown that the Yamuna has changed its course many times between the westward and eastward flow.

> Basing his arguments on calculations for the rates of sedimentation, location of archaeological sites of early cultures in the Ghaggar valley, and the thickness of deposits at these sites, Raikes has postulated alternate captures of the channel by the Indus and the Ganga systems. Raikes has correlated these episodes with archaeological cultures in the following manner:

1. Westward diversion to Indus	2500-1750 BC
2. Eastward diversion to Ganga	1750-1100 BC
3. Westward diversion to Indus	1100-500 BC
4. Eastward diversion to Ganga	500-100 BC
5. Westward diversion to Indus	100 BC-500 AD
6. Eastward diversion to Ganga	AD 500+. (Lal, 180)

The vacillation of the Channel-Y2 waters is, therefore, well-established. We must particularly note the shift from west to east at about 1750 BC. The shift may have occurred around the time of Sri Ram and has left its impression upon the *Ramayan*.

Kishkinda

The most significant reference which gives away the location of Kishkinda comes while Sugriv is sending his soldiers in the four directions in search of Sita. While describing the eastern direction among others, the river Sindhu is mentioned. (*Kishkinda Kanda*, 40.20) This would place Kishkinda to the west of Sindhu. And if our identification of Mohanjo-daro as Lanka is correct, then Kishkinda has to be north of Mohanjo-daro. Thus, we may postulate that Kishkinda may have been the terai of Bugti on the western banks of the Indus. Now, we may read the geography of the four directions as narrated by Sugriv with Bugti terai as the centre:

> (East:) Search for the quarters of Sita and Ravan on the banks of Bhagirathi Ganga, beautiful Sarayu, Kaushiki, Kalindnandani Yamuna, Mount Yamun, River Saraswati, *Sindhu*, Sonbhadra of quiet waters, Mahi and Kalmahi and other rivers and the hills and forests near them.
>
> (South:) Across the (Southern) sea there is an island 100 *yojana* broad. That is the abode of Ravan. Beyond Lanka, in the 100 *yojana* broad sea, there is a mountain named Rishpitak. Beyond that you will find Suryavan, Vaidyut, Kunjara and Rishabha mountains located in the middle of the sea.
>
> (West:) In the western direction generally there are deserts high cold peaks and difficult terrains At *the junction of the Sindhu river and the sea* there is a mountain named Somagiri. Beyond that you will see Paryatra, Vajranabha, Chaitravan, Varaha, Meghagiri and Meru mountains amidst the sea
>
> (North:) After searching in various cities and countries look in the Himalayas. Then go to Mountains named Kala, Sudarshan, Devasakhu, Kailasa, Kaunchangiri and Mainak. Then you will reach Shailoda river. Thereafter you will find Mount Somagiri in the middle of the northern sea. You cannot go farther and I know nothing of the lands beyond Somagiri. (*Kishkinda Kanda*, 11-13)

The picture of the world as seen from Kishkinda has the river valleys in the east, the sea in the south, deserts and mountains in the west and cities followed by mountains in the north. The rivers Ghaggar and Luni with their tributaries are to the east; Mohanjo-daro and the Indus floodplains are to the south, the Baluchistan mountains are to the west and the northern Indus civilisation followed by the Himalaya mountains are to the north of Bugti in conformity with the descriptions given in the *Ramayan*. Most noteworthy is that while Sindhu is said to flow to the east of Kishkinda yet, it is supposed to join the sea to the west of Kishkinda. Indeed, Indus flows to the east of Bugti and joins the sea south-west of Bugti.

The Bridge

The crossing of the salt sea by building a bridge constitutes one of the most heroic deeds of Sri Ram. If Lanka was Mohanjo-daro then where was the bridge built? Travelling south from Bugti on the western banks of the Indus, Sri Hanuman and Sri Ram would have first confronted these broad floodwaters. For Sri Hanuman, travelling alone, the only recourse was to swim across. Let us look at the description of Hanuman's crossing of the sea in this background:

> (Sri Hanuman) contracted his limbs such that they came within the waist and he joined his feet. Then he contracted his neck and both hands. He looked upward to take a look at his long route and looking upwards he held his breath. Then he jumped upwards.
>
> Sri Hanuman's body was moving above the sea and his shadow appeared to be drowned in the sea. In this way he appeared like a boat in the sea of which the upper portion was in the air and the lower portion was touching the sea water In whichever part of the sea he went there arose huge waves due to the speed of his limbs. *He moved ahead breaking the waves with his breast*. (*Sundara Kanda*, 1.67-69)

While Sri Hanuman could swim across, Sri Ram had a much more difficult problem as he had to take a whole army across those waters. The strategy adopted by Sri Ram appears to have been as follows: First, he shot long arrows into the sea to find out where the waters were shallow. Next, two of his swimmers swam across the deep waters and stood on the submerged ground in the shallow waters holding a thread to give correct indication of the direction. The soldiers uprooted trees and threw them into the waters along that thread. They tied stones to the trees as anchors to prevent that floating away, Assisted by these floating trees his army swam across the deep on to the shallow waters of Lanka:

> Then Sri Ram became angry on the sea. He strung his bow and shot fearful arrows into the sea. Those great, fast and best of the arrows penetrated the sea waters. Out of fear, *the sea gave away its depth to Sri Ram*. Then the Vanars entered the huge forests and broke the mountain tops and trees and pulled them to the sea. They started filling the sea with various trees. The Vanars brought stones as big as elephants to the seashore with the help of machines. The sea water would jump out of the sea due to the throwing of the stones Other Vanars were holding a thread 100 *yojana* long.
>
> In this way Vishwakarma's son Nala built a 100 *yojana* long bridge in the sea.
>
> Then Sugriv said to Sri Ram, please climb upon the shoulders of Hanuman and Lakshman may climb on the back of Angad because this ocean is very large and broad. In this way Sri Ram, Lakshman and Sugriv led the army. Other Vanars went in the middle and sides of the army. Many would jump into the sea and would swim. Others would go along the bridge route. (*Yuddha Kanda*, 21.13, 26; 22.50, 51-62, 73, 81-85)

There are two other references to the shallow and broad waters of the salt sea. When Hanuman was swimming towards Lanka, the sea said to Mainak mountain hid within itself:

> Indra has established you here as a perimeter to obstruct the exit route of the Patal based Asuras. They want to

> come up again from the Patal, therefore, you are standing here at the gates of the limitless Patal (*Sundara Kanda,* 1 92-93)

This appears to be a reference to a ridge submerged within the waters around Lanka which prevented the ocean living seafarers from taking their boats upcountry.

The second reference arises when Vibhishan leaves Ravan to join Sri Ram. The main difficulty around Lanka seems to have been navigational. It was apparently difficult to keep the coordinates and to avoid running aground:

> Lanka is located on the southern bank of the sea spread afar There is no route to go there by a boat because it is not possible to keep track of the destination within it (*Yuddha Kanda,* 3 21)

Despite such navigational difficulties, Vibhishan crossed the waters easily.

> Having spoken so to Ravan, his younger brother Vibhishan reached the place where Sri Ram was camping *within two moments.*
> Vibhishan stood still in the *akash* on the northern banks of the seashore
> Then Sri Ram came forward to meet Vibhishan.
> Then Vibhishan looked toward the earth with an intent to climb down He came down happily from the *akash* to the earth (*Yuddha Kanda,* 17.1,10, 18 39, 19.1-2)

This crossing of the sea by Vibhishan was possible because he knew how to navigate a small boat in that expanse.

Pushpak

The word '*viman*' is used for Pushpak in the *Ramayan.* '*Viman*', according to Bhargawa's dictionary, means "a celestial car moving in the air, an aeroplane, a balloon, a bier, a chariot, a carriage, a horse". It is clear that '*viman*', in a larger sense, means a conveyance including land based vehicles. Now the question is whether Pushpak was a ship or it was an aeroplane of some sort. Pushpak is described as follows.

> Each part of the Viman was gilt with gold. There were secret rooms here and there *It was decorated with white and yellow flags and masts There were bridges in it* decorated with golden lotuses. It was full of *strings of small bells* There were windows of pearls and jewels. Bells were tied on all sides from which sweet music used to come That Viman was as high as mount Meru and had big rooms decorated with silver and pearls. There were thrones made of sapphire in it and expensive beds were spread out on them. (*Yuddha Kanda,* 121 24-28)

The descriptions of rooms, flags, masts, bridges and bells are in conformity with the construction of large boats plying on the rivers even today.

The people of Mohanjo-daro were quite familiar with boats. A terracota amulet depicting a boat has been discovered at Mohanjo-daro. A terracota model of a ship, with a stick-impressed socket for the mast and eyeholes for fixing rigging has been found at Lothal near Ahmedabad, where also a tank which appears to have been a dockyard has been found. (Allchin, 175,188) Thus it is clear that the peoples of the Indus civilisation were quite familiar with the building of the ships and this substantiates that the Pushpak may have been a ship. The peculiar speciality of Pushpak may have been its ability to navigate in shallow waters.

The return journey of Ram from Lanka to Ayodhya on the Pushpak may now be traced. While returning Sri Ram describes the places enroute to Sita in the following sequence (*Yuddha Kanda,* 123):

Ramayan Description	*Proposed Geographical Location*
Lanka	- Mohanjo-daro.
Kishkinda	- Northward along the Indus, the area to the west known as Bugti country.
Pampa	- Further north-east where Sri Ram crossed the Indus while making his downward journey.
Janasthan	- The abode of Marici, somewhere near Bahawalpur. Probably this is the place where the Ghaggar met the Indus. This would be a critical location to control maritime trade.
Godavari	- Perhaps a name of the Ghaggar near its confluence with the Indus, or may be some small river flowing into the Ghaggar.
Chitrakut	- The area south of the Ghaggar somewhere between Bahawalpur and Anupgarh.
Yamuna	- The confluence of Channel-Y2 with the Ghaggar between Anupgarh and Suratgarh.
Ganga	- The confluence of Channel-Y1 with the Ghaggar near Suratgarh.
Ayodhya	- Kalibangan on the Ghaggar .

All we wish to point out is that there does exist a water route from Mohanjo-daro to Kalibangan which may have been utilised by Sri Ram for his return journey on the Pushpak.

Conclusion

In order to appreciate the importance of Sri Ram's achievements it may be helpful to outline the general economic situation of his times. The Indus civilisation arose around 3000 BC. It was spread across Saurashtra and Sind in the south and Punjab and Rajasthan in the north. These two zones were connected by the Indus river. The Indus formed an artery at Mohanjo-daro with the Baluchistan mountains on the west and the Thar desert on the east. Thus, any king who could control this area could dominate the economy of the entire civilisation.

The Indus people were tradesmen. They used to export manufactured goods—beads, shells, cloth, jaggery, etc. not only to Saurashtra but also to Iraq and Egypt. In return they probably imported scarce metals such as tin and gold. This thriving economy was apparently divided between the seafarers-cum-tradesmen along the Indus and the manufacturers-agriculturists spread across Punjab and Rajasthan.

It is reported that the rainfall declined around 1800 BC. Thus the flow of waters in the Ghaggar, Channel-Y1 and Channel-Y2 would automatically decline. On top of it there were apparently some tectonic changes causing a shift of Yamuna waters from westward Indus to eastward Bay of Bengal. This would have two consequences. Firstly, Punjab and Rajasthan based agricultural communities like Ayodhya would have been under severe pressure to adjust to low rainfall. Secondly, the reduced flow in the Indus would mean navigational difficulties for the seafarers. These changes may have been the underpinnings of the conflict between the agriculturists and seafarers. In this background the great contribution of Sri Ram may have been to break this stranglehold of the seafarers on the agricultural communities of the north.

A question arises as to why the *Ramayan* itself claims to have been based in the Ganges valley? There is no malafide Common folklore has it that Ayodhya had been lost and was rediscovered by King Vikramaditya in the early part of the Christian era. The versions of the *Valmiki Ramayan* available to us also date from the Christian era. Now, in the Christian era if one tried to search for the last Ayodhya where would one look? The Indus civilisation, like Ayodhya, had been lost and was discovered only in the present century. Thus, in absence of the Indus history, King Vikramaditya did his best and identified Ayodhya in the Ganges valley. Had King Vikramaditya known of the Indus civilisation, he too may have reached a different conclusion. ■

SHASTRI: Electoral Reforms

(Continued from page 7)

need to replace the system with a more suitable one. Several suggestions have been mooted in this regard Ways and means of discouraging Independents from entering the electoral contest have been put forward from time to time. Independents are considered largely responsible for the alleged "inflation" in numbers in the electoral contest The Election Commission has frequently drawn the attention of the government (in its Reports) to the fact that the 'undue multiplicity of candidates' is both 'undesirable and confusing' In its Report on the Third General Elections in India, 1962, the Commission emphatically stressed that if "a clear verdict is to be obtained (in a constituency) it is essential that the contest should be limited to a *few worthy candidates,* and light hearted participation by individuals who do not have any substantial electoral support must be checked". However the desirability of discouraging Independents from contesting needs to be viewed with caution as every citizen enjoys the fundamental right to offer himself/herself as a candidate in an election

The Tarkunde Committee in its report spoke of the possibility of adopting the 'Partial List System'. As per this system, only candidates securing more than 50 per cent of the votes polled are declared elected For those seats where no candidates secures 50 per cent of the votes polled, a different principle is followed. All seats not filled through direct election will be distributed among the various parties in such a manner that the total seats the parties secure in the concerned legislature are in proportion to the valid votes polled by them This would be done by declaring elected as many members from each party list (well before polling day each recognised party will be asked to submit a list of candidates in order of preference) as will result in the total strength of each party (directly elected + elected from the list) being roughly proportionate to the votes polled by the party However, the committee also acknowledged the weaknesses of the system and called for a widespread public debate for a consensus to emerge.

Recently, the Governor of Andhra Pradesh, Krishna Kant, has suggested that a system of negative voting should be introudced A negative vote provision, he believes, would be a legal channel for the expression of dissent. The negative vote suggestion may, at the most, only serve as a 'negative solution' to the problem and will in no way positively contribute to strengthening the electoral system.

An alternative suggestion that appears to be more meaningful and practical, is the system of second run-off or second ballot. Under the provisions of such a system, if no candidate secures more than 50 per cent of the votes polled in the first round of elections in a constituency, a second run-off is held between the top two contestants within a week. As a result the candidate who wins the election from the constituency secures a majority of the total votes polled. By adopting this system, the election process can safely permit any citizen who wishes to offer himself/herself as a candidate, to contest an election, (with the eligibility conditions as they presently exist continuing) without in any way having a detrimental or negative impact on the electoral system. Adopting the second run-off or second ballot system appears to be the most effective manner of overcoming the limitations that have been experienced in the working of the 'first-past-the-post' system in the last four decades. This system would permit only those who have clearly secured the mandate of the voters to enter the legislature Candidates would then have to take their election campaign more seriously and electoral victories would not merely be caused by dividing the opponents' votes or concentrating on securing the votes of one segment of the voters.

The second ballot system cannot be considered in isolation and its success would considerably depend upon the corresponding electoral reforms initiated in the other spheres. The second ballot system could form part of the comprehensive package of electoral reforms that the system today needs. ■

Total Literacy Campaign—II

Still an Unwritten Chapter in Indian History

LAKSHMIDHAR MISHRA

September 8 was the International Literacy Day. This article is being carried in two instalments to mark the occasion. The first part of the article appeared in Mainstream *(September 5, 1992).*

—Editor

V

Why are people indifferent to literacy? Why is there so much of cynicism and scepticism towards literacy? Why is it that after so many silver-linings on the horizon, people are still indulging in endless debates and disputes on literacy: "Is it necessary? Is it desirable? Can literacy not wait? Can't the resources meant for literacy be diverted towards elementary education?" Such endless debates go on in the outside world to the total exclusion of millions of learners and volunteers participating in the literacy programmes with boundless enthusiasm and commitment.

It is quite natural that these and many other questions should agitate those who are actively engaged in conceptualisation, planning and actual implementation of the Mission at the national, State and district level as also at the grassroots. Before we squarely address ourselves to these questions, it may be interesting to understand some of the doubts, disputes, misgivings and reservations in somewhat greater detail so that we can also simultaneously counter them with all the force at our command, not so much with a view to silencing the critics, cynics and sceptics but to restore the primacy and centrality of literacy and to put the Mission and its objectives, strategy and methodology in a proper perspective.

To start with, both before and after the Mission was launched by the former Prime Minister, the late Rajiv Gandhi, questions were raised about the status of the Mission in a manner which is a sad reflection of our thinking and ethos. The Mission was being linked by many to the handiwork of a particular political party in power, even though the late Prime Minister had stated in so many clear and unambiguous words:

> This is not the Mission of any particular Ministry or Department or Agency; this is the concern of the whole nation. Literacy should be viewed by the people as important as drinking water and immunisation.

The author, a Joint Secretary in the Department of Education under the Union Ministry of Human Resource Development, is the Director-General of the National Literacy Mission. The views expressed in this paper are entirely those of the author and not those of the Ministry.

After sometime when the Adviser to the PM on Technology Missions started playing the role of a nodal institution to intensively monitor and coordinate the activities in all the National Technology Missions, similar confusing and disturbing questions continued to be raised characterising the Mission as the handiwork of an individual. It was repeatedly clarified that a national mission cannot be the handiwork of a particular individual or even groups of individuals. A mission is a national endeavour and time-bound search for a new identity of literacy, a new expression of the cultural energy and creativity of the people and the outcome of accumulated research and wisdom and, therefore, cannot be equated with just one individual or one political party or one political personality.

When the Total Literacy Campaign (TLC) proposal was received from Ernakulam, this was straightaway dismissed as an attempt to carry coal to Newcastle. It was clarified that even though the rate of literacy in Ernakulam was high (as high as 77 per cent, according to the 1981 Census), the Ernakulam model, if successful, could have a very good spin-off effect inasmuch as it would inspire and motivate several other districts that total literacy is not something which is utopian, but something which is possible and achievable. After the Ernakulam experiment was successfully concluded, it started acting as a powerful stimulant for several other districts, both in the North as well as in the South. In other words, one K.R. Rajan could nucleate many potential Rajans who came forward to assume the leadership for similar experiments with lot of enthusiasm and self-confidence that they can also do it as well as Rajan. The fact that all districts are not uniformly placed and endowed and that there is a great deal of geographical, topographical, socio-economic and cultural diversity obtaining in different regions, in different districts and even within the same district, did not undermine their enthusiasm to go ahead with the idea of the TLC.

It is true that it was comparatively easier to launch the campaign experiment in Ernakulam than in other districts but this, by itself, did not imply exclusion of other districts nor did it imply exclusion of the poor, the deprived and the disadvantaged people of less endowed regions. All that was simply intended was (a) the concept of total literacy in a campaign mode *treating the district as a unit* was comparatively new; (b) a countrywide awareness of all the parameters of success of a campaign cannot be straightaway generated; and (c) we should try it out, therefore, in an area where it was likely to succeed better than elsewhere. By now, it is a matter of history that Ernakulam did succeed admirably well and in the wake of that success, TLCs for the whole State of Kerala, for the UT of Pondicherry, Goa and several districts of Karnataka, Andhra Pradesh, West Bengal, Orissa, Assam, Maharashtra, Madhya Pradesh, Uttar Pradesh, Bihar and Rajasthan were taken up in quick succession. All of them cannot be said to be the exact replication of the Ernakulam model even though they have derived lot of inspiration and strength from the latter adapting the essence of the Ernakulam experiment profitably to their advantage.

◆

WHAT exactly is the essence of that experiment? It means that despite social heterogeneity, caste and stratification factor and despite numerous divisive and disruptive forces, there are a number of good, well-meaning, conscientious and progressive minded people in society who can be mobilised and whose support can be harnessed for literacy work. It means that like-minded people can come together, think together, plan together and act together for a common cause like literacy. It also means that notwithstanding the euphoria of the stock market, notwithstanding the call of the God of Mammon and numerous corrupting mercenery forces obtaining in society, there are still people who have retained the spark of altruism, the impulse of voluntarism and who are willing to work for others without any expectation of award or reward or incentive as teachers, as trainers, as evaluators and as environment builders. They are willing to part with a portion of their energy, ingenuity and skill in favour of those who do not have them, who have been deprived of them for no fault of theirs and yet who are in need of the same. Once this innate goodness in human beings is recognised and the basic premise established that voluntary work for literacy is possible and feasible with the help of a number of good samaritans, it is not difficult to build a super-structure on the sub-structure.

This super-structure, however, need not be a skyscrapper; it needs to be a structure which is simple, inexpensive, with few layers, credible and accountable, open and accessible to all The importance of the structure, however, remains inasmuch as a campaign for total literacy is essentially a short-duration endeavour and if the results are to be achieved in a process which is extremely difficult and complex, the entire effort has to be planned, coordinated, systematic and well-structured. There must be close monitoring, supervision and coordination so that we get to know that the right things are happening at the right time in the right manner and that if anything has gone wrong, the correctives need to be applied instantaneously so that there can be no let up or slip-off. It also means that the results sought to be achieved are not only deliverable but also measurable in clear, precise and scientific terms.

After the new approach, that is, the TLC, started gathering momentum, every increase in the number of TLC districts was accompanied by a near increase in the number of cynics and sceptics. The first attack came from those who are the protagonists of elementary education. Their guns were targeted against so much of concentrated attention to adult literacy, to the exclusion of elementary education in the formal system. Some of them were undoubtedly well-meaning and had years of track record of dedicated service in the field of basic education. In a sense, therefore, they were justified in discouraging efforts to sweep the floor when the tap was on. Some of their attacks were also equally ill-conceived and ill-designed. Universalisation of elementary education, non-formal education for non-school goers and school dropouts in the 9-14 age-group and adult literacy are inextricably intertwined; one is as important as the other. They are, as a matter of fact, mutually supportive and inter-dependent programmes, one supporting and reinforcing the other. This nexus has been recognised in reports of successive Education Commissions, the Kothari Review Committee on Adult Education (1980), the NPE Review Committee headed by Acharya Ramamurthi, the NPE Review Committee headed by Janardan Reddy, the NPE (1986) as modified in 1992 and the POA (1986) as modified in 1992 and is otherwise known as the 'dual track' approach.

In the districts where the TLCs are being taken up, there has been a planned and systematic effort to carry children in the 9-14 age-group alongwith adults in the first phase of the campaign while creating better conditions in the formal school system for enrolment of children in the 5-8 age-group. In a majority of the TLC districts, there is a realisation that children who are enrolled in the first phase of the campaign alongwith adults would be in need of a more stringent and systematic non-formal education spanning over a period of one and a half years in the minimum to reach minimum levels of literacy. This consciousness is reflected in the Action Plan for the TLC as also in the actual implementation at the basic literacy and post-literacy stages in several districts and, therefore, the criticism levelled against the TLC that ignores and belittles the early childhood and elementary education with over-riding preference for adult education is rather unfair and unfounded.

In our scheme of development, the family is treated as the lowest unit and a family comprises of parents, adolescents and children. There can be three types of situations in a family in relation to literacy. In the first category both parents, adolescents and children are illiterate. In such a situation no worthwhile interaction can take place amongst the family members. In the second category, the parents are illiterate, but the children are literate. The latter in such a situation cannot communicate to the former on the same wavelength. In the third category, the parents may be literate but due to peculiar circumstances the children may have been deprived of the access to educational opportunity. Such a situation may be more an exception than the rule. In the dual track approach which we have adopted for ourselves in the National Policy of Education and the Programme of Action formulated thereunder, what we are saying is that parental illiteracy and child illiteracy go together and no learning society can be created in any household by sending children to school while parents remain illiterate or by imparting functional literacy to adult parents and not sending children to school. Creation of a learning society is essentially the outcome of constant inter-activity between parents and children which ensures learning by sharing and, therefore, there is no question of permitting one at the cost of the other or to the exclusion of the other, but promoting both together with the same urgency, same seriousness, same emphasis and same thrust. If as a result of the cultural campaign, as an integral part of the campaign for total literacy, parental demand for enrolment and retention of the children in the formal school system has been generated, the demand has to be met regardless of the financial implications, otherwise the entire experiment will be counter-productive and the gap between parental illiteracy and child illiteracy will get widened.

The Collector and District Magistrate in most of the TLC districts occupies a pivotal position. As chairperson of the Zilla Saksharata Samiti, he/she acts as the principal mobiliser and coordinator of the campaign and provides the leadership and overall direction to the pace, tempo and rythm of the campaign. This is quite natural as every campaign is a short duration affair where both the process and outcome are important and where it is imperative to unite and coordinate a number of defused and uncoordinated elements and forces who would otherwise tend to act at cross-purposes. Who else is better placed to unite and coordinate these inchoate and uncoordinated elements than the head of the district administration? We are, however, not looking at the Collector and DM in a TLC as one who will be the regulator of a mechanism or the controller of the destiny of others but as one who will be the first amongst the equals, who will be able to carry a number of discordant elements and make them think together, plan together and act together so that there is some symmetry and harmony in an otherwise highly heterogeneous society. This calls for lot of modesty and humility, lot of respect for the dignity and equality of all beings, lot of catholicity and tolerance. It may not be uniformly forthcoming from all district Collectors but wherever these characteristics are present, they will contribute most towards the success of the campaign and where the style of functioning is highly personalised, arbitrary and authoritarian , it is bound to be counter-productive.

◆

CRITICISMS have been levelled that Collectors and DMs are the principal instruments of maintenance of law and order, peace and tranquility; they also constitute the focal point of coordination of all development efforts in a district. Excessive preoccupation of the Collector and DM with the total literacy efforts in a district could result in a situation where other components of development may get sidelined or neglected and, therefore, according to them, it is doubtful whether such over-riding priority to literacy promotion efforts on the part of the Collector and DM augurs well for the district. Such criticisms are as unfair and unfounded as they are in the case of earlier ones. In whatever manner we may look at it, literacy creates motivation and awareness which result in acquisition of skills necessary for development. Literacy also creates conditions for acquisition of a critical consciousness of the ironies and contradictions of the society in which we live. Literacy provides certain competencies to the youth required for productive participation in the affairs of the family, of the society and the larger affairs of the nation. Access to literacy stimulates the desire for training in diverse skills and motivates the poor and the deprived to intensify their efforts to break-out of the poverty cycle to adopt more effective modes of production and distribution. Access to literacy heightens political awareness and would enable people to participate more effectively in civic affairs and affairs of the body politic—both local and national. It would promote democratisation of the working of the government and the NGOs, local self-governing bodies, voluntary agencies and would improve the quality and content of conducting the entire democratic process through Parliament, Legislative Assemblies, Corporations, Municipalities, Notified Area Councils, Panchayats, etc. More than anything else, access to literacy would also ensure access to the development parameters such as access to credit, access to seeds, fertilisers, pesticides, access to water both for irrigation purposes as well as drinking, and access to a world of information of direct interest and relevance to the learners (health, family welfare, immunisation, nutrition, maternity protection, child care, small family norm, etc.).

Viewed in this perspective, literacy becomes the key to the entire development effort, not merely by expanding the flow of information but by way of promoting awareness, empowerment and eventually leading to formation of organisation of the unorganised and strengthening of the entire collective bargaining process. It is important that access to information in matters of public policy in the areas of age of marriage, age of employment, prohibition, untouchability, dowry, etc. is viewed as important as access to acquisition of vocational skills. Literacy being an important tool of acquisition in both, it assumes paramount importance for all development departments and development functionaries. They need to regard literacy as their own programme and as the key to the success of their porgrammes. Attention to literacy promotion efforts cannot, therefore, be wished away in the name of maintenance of law and order, peace and tranquility nor in the name of departmentalism. There have been two principal banes of our entire development effort—(a) targetitis, that is, fixing artificial targets in terms of number and making the entire planning process revolve round the game of numbers; and (b) viewing development in terms of water-tight compartments such as health, hygiene, sanitation, agriculture, animal husbandry, veterinary, etc. Since a human being is one and indivisible, we cannot afford to divide a human being in the name of different development departments and functionaries which will not only amount to compartmentalisation but dissection of a living being. As a matter of fact, literacy can be an important uniting factor to forge a practical and useful link between different development departments and human beings who are the beneficiaries as well as participants of the entire development process.

Several doubts have been raised in the past and even now that literacy can ill-afford to level or unite divergent elements and forces in a society which is hierarchical, stratified and caste-based. It has also been observed that illiteracy is synonymous with poverty, deprivation and economic backwardness while literacy is synonymous with affluence, rank and status in society. Nothing can be farther from the truth. It is true that those who are high up in society generally come from the landed aristocracy and by virtue of their power and position and capacity to garner resources, they may look down upon the need for and relevance of literacy as an important entry point for the poor, the deprived and the disadvantaged. They may even dissociate themselves from literacy promotion effort and demonstrate their hostility to it. While launching a campaign for total literacy, one cannot wish away the harsh socio-economic realities obtaining in an inequitable system surrounded by all-pervasive poverty and deprivation. The campaign may not put an end to the state of landlessness or assetlessness or bondage. The campaign can, however, unleash several good, positive and progressive elements of the society and bring them together to work for literacy as a movement of the people and, in that process, may appeal to their good conscience that they owe in no uncertain terms an obligation to those who are less fortunate but whose sacrifice has in no small measure contributed to the total evolution, advancement and growth of the society.

It may so happen that as a result of social churning, which may be caused by the cultural campaign for literacy, there may be an attitudinal change even in the minds of those who are otherwise averse or indifferent to literacy. Such a process may be a slow and gradual one but judging by the trend of development taking place in some of the TLC districts, it is quite likely that the campaign could act as a powerful tool to induce certain changes which are healthy and in the larger social interest. Undoubtedly, all such efforts will have to be backed-up by simultaneous measures for land reforms, for asset distribution and reduction of economic disparity and for creation of certain outlets which will promote democratic participation of all sections of the society.

This brings to our mind certain mistaken notions related to people's empowerment. This is an important concept which has been laid down in the NLM document and is an object to be cherished and achieved through total literacy efforts. Empowerment of the people basically means that people are enabled to understand and internalise the causes and factors of social discrimination and economic deprivation; they are also enabled to perceive their strength and weaknesses vis-a-vis the strength and weaknesses of the diverse elements of the society which surround their day-to-day lives. Efforts which go to promote empowerment of the people cannot, therefore, be treated as subversive or sign of belligerence. If that is so, all that is being done in the NLM will have to be negatived or given a go-bye.

People's empowerment becomes all the more important in the context of women, who have been for successive generations sidelined or marginalised and who remain at the mercy of the menfolk despite their enormous capability for hard work, ingenuity and their contribution to the development of the family, the community and the nation as a whole. The moment they are enabled to think, reflect, critically analyse and question the aura of false consciousness surrounding their lives, it will unfold vistas of a new vision for them. Once they are aroused and awakened and perceive the importance of organisation, they will come together and constitute a cohesive force which will be a formidable one. This unity and solidarity will make possible the liberation of the womenfolk from the numerous fads, taboos and diehard conservative ideas which have confined their lives to a cocoon-like existence and reduced them to commodities. This way of conscientising women to organise themselves has been attempted through the WDP in Rajasthan and is being tried out, though selectively, through Mahila Samakhya, a Dutch assisted project in 10 districts of UP, Karnataka and Gujarat with many positive fall-outs.

VI

HAVING made an attempt to respond to some of the oft-repeated criticisms or rather misgivings about the NLM and the new campaign approach for total literacy, it will be appropriate now to turn our attention to the latest status of the Mission and share with the readers some of the ground level achievements.

The most important strength of the campaign lies in the fact that it has provided an ambience for political parties, representatives of the people and cross-sections of the society to come together, plan and work together in a common direction despite internal contradictions or ideological differences. The campaign has also proved that learners, despite age and disability, despite social and cultural heterogeneity, despite caste, class and gender divide, can learn and today nearly 55 million learners are learning with the help of about five million volunteers with a lot of zest and self-confidence. They can see for themselves the pace and progress of learning. They can retain and apply the benefits of learning to real life situations.

It is a most satisfying experience to see people belonging to multiple strata of the society—such as small and marginal farmers, landless agricultural labourers, sharecroppers, rural artisans, fishermen and women, beedi workers, leather workers, tribal collectors of minor forest produce—are learning together, sharing the same concern, the same excitement and joy of learning. A widow of 65 years in Mehbubnagar district finds in the slate and pencil a silent companion in a dark and lonely corner of her existence, deriving a lot of solace and comfort from reading and writing. Campaigns in this sense have promoted social and emotional integration. They have also promoted linguistic integration and communal harmony. Learners, who are domiciled in a State and who have assimilated the history, geography and culture of that State, are willing to learn in the State's standard language (in preference to learning through their mother tongue) so that they can identify themselves better with the mainstream.

About five million volunteers, about 2.5 to three lakh master trainers, about 15 to 20,000 resource persons and and about 1000 key resource persons are rendering voluntary service of a scale and quality which was not witnessed before. The majority of them are student volunteers (around 60 per cent) while about 40 per cent of the volunteers come from the non-student youth belonging to a varied strata of the society, such as tailors, carpenters, mechanics, primary school teachers (serving and retired), ex-servicemen, bank employees, employees of public sector undertakings, government employees, employees of cooperatives and elders—all imbued with a new pride and patriotism, a new spirit of service and sacrifice. A leprosy afflicted middle aged person in the district of Midnapore, who at one time was ex-communicated from the society (for being a victim of leprosy), now discovers in teaching a new elixir of life. Such stories can be recounted in good number.

Several volunteers have succeeded in mobolising Scheduled Caste and minorities women to break the barriers of *purdah* and transcend the shackles and fetters of a conservative society to join the literacy classes; many others have succeeded in motivating the learners addicted to alcohol to give up drinking. There are numerous instances (in Midnapore and Burdwan TLCs in West Bengal) where th wife is the volunteer teacher (VT) while the husband is the learner and vice-versa. Hindu volunteers have been teaching Muslim learners and vice-versa; there are volunteers belonging to SC and ST while learners belong to the upper caste, the former representing one of the finest specimens of dedication. The campaign has converted *nishidhapalli* (red-light areas) to *pavitrapalli* (decent and civilised colony).

The activity in a learning centre itself remained unaffected by the fury of communal riots affecting the whole village and eventually helped in defusing the communal situation. In several villages of AP, where the campaign has been successfully conducted, untouchability and feuds on account of caste and stratification bedevilling day-to-day existence are issues of the past. The teaching-learning process has created and reinforced an awareness of the needs, rights and obligations. This awareness has manifested itself in terms of enrolment and retention of children in the school system, immunisation of pregnant mothers and their children, health, hygiene, environmental sanitation, children, ORT and small family norm.

Yet another strength of the campaign is that women are participating in the teaching-learning process in much larger numbers (about 70 per cent) and with much greater enthusiasm than men. They are more vocal, more articulate and more assertive than before. Through literacy they have been able to perceive the generative sources of their disadvantage and are guarding up their loins to fight these sources. Hundreds of women's groups in Andhra Pradesh and Karnataka have been made aware of the evils of bootlegging and have been raising their voice against alcoholism.

A number of grassroot level institutions, such as village and panchayat level committees, are emerging. Through these the learners can transform themselves from the status of passive beneficiaries to that of active participants of the process of development and manage their own affairs with strength, courage and confidence. Some of these institutions have struck deep roots and have acquired the capability of managing the formal school system, the NEF and AE programmes.

As more and more districts get covered by the TLC, the governmental bureaucracy gets closer to the people; it becomes more positive, sensitive and empathetic. As Poromesh Acharya, a distinguished historian and management expert and member of the Executive Committee of the NLMA, writes:

> The strongest point of the West Bengal programme, as we have observed, is the perfect coordination between the administration and the panchayat. In every district that we have visited, we noticed that the District Collector and the *sabhadhipati* of the Zilla Parishad were working in unison. The District Collector and his team became whole-time workers It is, for the first time, that the entire district administration went to the people instead of the people coming to them. It was a unique exposure for them and they enjoyed it. I saw District Collectors walking through the muddy road, their hair greyed with the dust. There was hardly any difference between a political worker, a volunteer and an administrator. All the barriers got broken This was no mean achievement.

The campaigns have also produced a unique confluence of creative forces and energies. Creative writers, thinkers, artists, environmentalists and women activists have come together to write songs, slogans, *nukkad nataks*, role-plays and simulation exercises and to render them soulfully in myriad forms in different parts of the country. Every activity in the campaign in general and in the learning centres in particular acquires the shape of a festival. Whether it is Independence Day or Republic Day or Ganesh Chaturthi or Saraswati Puja or Onam or Pongal or Durga Puja or Diwali or World Literacy Day (September 8) or World Population Day (July 16) or World Environmental Day (June 5) or World Women's Day (March 8), every activity is converted into a mass festival and every mass festival is celebrated in such a manner that the celebration is harnessed to the advantage of literacy. They arouse and awaken the whole community for literacy work. A good number of songs, slogans, drama, elocution, essay and poster competitions on literacy are being held on these occasions which bring out the ingenuity, creativity, innovativeness and resourcefulness of individuals and groups.

VII

THE narration in the preceding paragraphs is only a minuscule of numerous positive indicators on the impact of the TLCs on attitudes, approaches and consciousness of individuals as also on the overall quality of their day-to-day life. We have been generally speaking of two types of evaluation in relation to a TLC district, that is, (a) evaluation of learning outcome, and (b) programme evaluation or impact evaluation. Successive evaluation studies of the TLCs which have been conducted so far, like in Ernakulam (Kerala), Burdwan, Birbhum, Bankura, Hooghly, Midnapore and North 24-Parganas (West Bengal), Sindhudurg and Wardha (Maharashtra), Chittoor and Nellore (Andhra Pradesh), Durg and Narsingpur (Madhya Pradesh), Muzaffarpur (Bihar), and Bijapur and Dakshin Kannada (Karnataka) have primarily concentrated on the number of persons actually made literate and numerate in terms of the levels laid down in the NLM document. Some of them have thrown some light on the bridge or partnership built between the government departments and functionaries, representatives of the people, social and educational activists, media and communication channels, etc.

Two reports prepared so far have provided some idea of the sociological impact of the total literacy campaign. These are (a) "Sociological Impact of Total Literacy Campaign: The Case of Midnapore" conducted by Chandan Dasgupta of the Tata Institute of Social Sciences; and (b) "Towards Developing a Conceptual Framework for Sustaining Literacy based on Some Field Experiences" by Ms Nitya Rao of the National Institute of Adult Education. There is also a third study captioned "Total Literacy Campaign in West Bengal: A Study of Midnapore, Hooghly and Birbhum" by Poromesh Acharya and his associates of the Indian Institute of Management, Calcutta, which is primarily a study on the soundness, adequacy and effectiveness of planning, preparations and execution of the TLC though it does throw some light on the impact of the campaign on the level of general awareness of the people, their motivation and participation in the campaign.

It would be useful to critically examine the findings of these studies with reference to the objectives of the NLM. People's empowerment is the most important objective of the Mission in qualitative terms. The objective has thus been stated:

> Functional Literacy implies becoming aware of the causes of their derivation and moving towards amelioration of their condition through organistion and participation in the process of development.
>
> Functional Literacy implies acquiring skills to improve the economic status and general well-being.

Who are the people and what is people's empowerment? In ordinary parlance, people would mean all categories of persons working and living in an area who would be the beneficiaries of all development programmes. For our purpose and the context in which functional literacy has been used in the NLM document, the word 'people' refers to persons or certain target groups who constitute the rural poor, the deprived and the disadvantaged. They constitute the small and marginal farmers, the landless agricultural labourers, the sharecroppers, the rural artisans, the fishermen and women, the leather workers, the building and construction workers, the forest labourers, the salt workers; the contract labourers, the migrant workers. They are not uniformly placed in terms of employment and wages, but there are two common threads running through their predicament. These are: (a) they are victims of malfunctional and dysfunctional middlemen and work in a situation which is akin to bondage for all practical purposes; and (b) they are not aware of the viciousness of the phonemenon. They do not know what they do not know.

If 'critical consciousness' is an important index of true development according to Paulo Friere, they lack that critical consciousness which can enable them to understand their strength and weakness vis-a-vis the strength and weaknesses of their adversary (ies) and which can also enable them to acquire the wherewithal to grapple with the hostile forces and eventually overcome them. Let us analyse the extent to which the TLCs have fostered this critical consciousness and to what extent this is being used as a tool of people's empowerment.

Two examples may be taken from Ms Nitya Rao's study of the TLCs in Pondicherry and Pudukottai. To quote from the study on the TLC Pondicherry:

> The response from women was tremendous at all levels during the campaign. There is widespread almost universal male alcoholism in the State, making men's contribution to household income almost negligible. Women work very hard to support their families and, therefore, aspire for better employment opportunities and earnings. Development programmes specifically for women, like the DWACRA, do exist in the State but no purposive effort to integrate it with the literacy movement has been made whether in terms of identifying the most needy beneficiaries or even in terms of developing the DWACRA groups around learning groups which could facilitate the growth of a common group purpose.

Analysing the present sorry state of affairs in Puduvai Arivoli Iyakkam and the factors contributing thereto, she writes:

> The inability to address local problems on the spot and work out solutions for the same has led to a decline in enthusiasm over the months. To take an example, twice there were floods in a fishing hamlet whereby three rows of houses got washed away. The people wanted financial assistance for housing but this issue was not taken up. Similarly, the fisherwomen take the catch to the fish market in the morning and again return there to work for contractors in the afternoon as their earnings are very low. An attempt to introduce the Fish Aggregation Device to increase collection/production was made. However,

> privately owned launches came and smashed these devices. The other method of increasing earnings by plugging the holes at the marketing end through organisation of marketing collectives was not discussed or attempted.

The above example is indicative of the vicelike grip of middlemen (contractors) which drive the people—the poor, the weak and the disadvantaged—to a state of penury and desperation. The middlemen act as agents of the principal employer in matters of recruitment of migrant labour, in matters of payment of nominal advances (more as a tool of allurement than as a positive incentive), in matters of supply of raw materials, often of poor quality, collection of the finished product, rejection (*chat*) on the ground of poor finish, sale of those finished products of alleged poor quality and appropriation of the sale proceeds to their full advantage (as in the case of beedi workers), denial of remunerative price to the workers for their hard labour and product of their labour (both by way of cheating in weighment and calculation, particularly in piece rates relevant in brick kilns and stone quarries, taking full advantage of ignorance and illiteracy of the workers) so on and so forth. They virtually rule the roost. The fishermen and women who receive the advances from these middlemen for purchase of boat and net for deep sea fishing do so often at a discount and are forced to part with a major share of their produce (catch) to the middlemen—a practice which is akin to the theory of unequal exchange in Economics or bonded labour system under Section 2(g) of the Bonded Labour System Act. The same is true of all other categories and sub-categories of unorganised rural labour masses. They lack the power to individually bargain for their irreducible barest minimum (for sheer biological survival) against organised onslaughts and vested interests which are too powerful for them. As the wily middlemen thrive and prosper by manipulation and cheating at the expense of the poor, the latter sunk in loans, debts and advances slide lower and lower on the scale of humanity.

◆

IS there a way out? Organisation of the unorganised rural poor into aggregations, informal groups, formal formations like cooperatives is certainly a way out but it can be meaningful if the following two conditions are fulfilled, that is, (a) the entire process of organisation must be preceded by meticulous planning and systematic execution, by orientation, conscientisation and awareness building through literacy; (b) the government cannot bring about the organisation of the rural poor but can certainly act as a catalytic agent to enable and facilitate the entire process with empathy and sensitivity and not view the process as a threat to the status quo.

In the context of Puduvai Arivoli Iyakkam, Ms Nitya Rao cites two case studies on the process of organisation of the rural poor, one very encouraging and the other not so encouraging. To recount the first:

> Father Anthonisamy of the Holy Redeemers and also on the Executive Committee of the Arivoli Iyakkam believes in learning by doing. He conducted a debt survey amongst an Arivoli group and found that 85 per cent of the learners were in debt. Through the Holy Redeemers, those paying more than 10 per cent interest per month were redeemed immediately. The same amount apportioned into principal, interest and savings is deposited in the group that was organised. In one area, this thrift and credit group has even taken a space and employed the volunteer to maintain their records and accounts. Almost all the money collected is being revolved amongst the members in the form of small loans. Such an initiative, by actively involving the people in finding solution to their problems, has not only generated discussion and awareness about the whole issue of debt, interest rates, savings but has also motivated the group members to explore the various alternatives available to them, made them realise the importance of maintaining records and hence desirous of strengthening their own cognitive skills.

The example of the second category which is not so encouraging is narrated by Ms Rao as below:

> An attempt has been to develop village level committees. As a part of this, women's sub-committees have been formed. Women are more forthcoming as this gives them an opportunity to interact in society and gradually bring about changes in social and, more particularly, gender relations. They, however, desire some financial assistance in terms of seed money for progressing towards a situation of economic independence as well. This aspect has, however, not yet been worked out, leading to some frustration. The women, therefore, have also not gained the confidence to take up social issues like alcoholism and face social conflicts due to their position of economic dependence.

It is evident that the objective of the NLM in terms of promoting 'participation' through organisations of the 'people' has not been fulfilled in any worthwhile extent even though sincere efforts have been made in that direction. Let us turn to Pudukottai, the second case study of Ms Rao to see if there is any concrete answer to this dilemma of people's empowerment.

Pudukottai, which a year ago was a small and comparatively unknown, comparatively underdeveloped district, is today something more than a geographical expression. It is vibrant with a new spirit, a new ethos, a new identity. Pudukottai along with the Pasumpon Muthuramalingam Thevar (PMT) district has earned the unique distinction of being the first fully literate district in Tamil Nadu. It was declared so on August 11, 1992 at 6 PM by the Governor of Tamil Nadu, Dr Bhishmanarain Singh, at a special function held at the Pudukottai parade ground.

There are a host of exciting, soul-stirring and inimitable features in Arivoli Iyakkam, Pudukottai. They transcend the limited frontiers of mechanical reading, writing and arithmatic and encompass the process of making a complete man or woman or child. It is impossible to recount them. In terms of forming organisations or collectivities of the people, using the literacy campaign as a tool to forge the solidarity of the people in general and women in particular and promote their empowerment, however, it has few parallels. Whether it is training 60,000 women to learn cycling while learning to read and write or it is organisation of women quarry workers or women gem cutters and gem polishers or women potters or women palm basket weavers, each has its unique innovativeness. Behind the entire effort to organise the unorganised, the less privileged and deprived sections of society lies the imagination and ingenuity of many committed activists and organisers but one person stands out clear and distinct. She is Sheila Rani Chunkath, the energetic, articulate and dynamic Collector of Pudukottai and also the Chairperson of Arivoli Iyakkam. Almost anything and everything which centred round Arivoli bears the indelible stamp of her personality, transparent sincerity and total commitment to Arivoli. To quote a small fraction of her initiative to organise the women quarry members of Pudukottai as recorded by Ms Rao:

> The district has about 450 quarries and 4500 women quarry workers Last year when the quarries were brought in for auction, the contractors refused to bid at the offset price as they wanted to depress the price further. The Collector, however, organised the workers into groups of 20 women each and gave them the quarrying rights at nominal rates for a period of three years. Currently, there are about 150 such women's groups. They were provided loans of Rs 1000 each from Indian Bank for purchase of tool kits, uniforms and initial working capital. They take a daily wage of between Rs 20 to 30 and then share the profits every week. Men can also work in these quarries on daily wages The workers, mostly women, have gradually learnt to write out their own bills and receipts and maintain their production accounts. Two of the group leaders, Vasantha and Sholai, showed us their accounts. They were totally illiterate and have learnt this only through attending the Arivoli classes. They also collect all the members of their groups for the classes. Some are not too interested still, as they feel exhausted after their hard day's work and prefer to go to sleep. Gradually, however, more are getting motivated. They want to understand their production accounts, in order to avoid conflicts over distribution of wages and profits, to read their loan and savings pass books and so on By knowing to read and write, the contractors and transporters can also not cheat them

One can draw several interesting and useful lessons from the two examples of Pondicherry and Pudukottai. In Pondicherry, the campaign was sponsored and supported fully by the government at the initial stage. It is as a result of this support that the first phase of the campaign in the basic literacy stage could be brought to its logical and successful conclusion. Puduvai Arivoli Iyakkam became the symbol of hope, pride and resurgence for many other States/UTs. As, however, the campaign acquired the character of a mass movement and became a tool of empowerment of the masses, it was perceived as a threat to the sacrosanctity and constitutional inviolability of private property rights and the status quo. It is at this crucial stage that the campaign has almost lost its momentum as a movement of the people and has got into a jam. It could have matured into one of the finest movements of Indian history but sadly these lofty expectations have been belied.

The Pudukottai TLC experiment stands out on its own and in sharp contrast to that of Puduvai Arivoli Iyakkam. Every campaign is primarily a movement and secondarily a programme but it has to be conceptualised, planned, initiated and implemented in a well-structured and well-coordinated manner so that the desired results are achieved in a short time. It is here that the government functionaries have a major role to play, not so much as a control mechanism but as a catalytic force, enabling and facilitating mechanism. Such a role was played admirably by the District Administration, Pudukottai and more particularly by the Collector and Chairperson of Arivoli Iyakkam. Organisation of 3000 out of 4500 women quarry workers into cooperatives and giving the quarries on lease to them is a case in point. This was an unusual, unconventional and extraordinary step. This required a lot of grit, courage and determination which the energetic Collector, Pudukottai had possessed in abundant measure. Once it was made known that she was empathetic and sensitive to the genuine needs of the poor and her commitment to alleviation of their plight through organisation became public, others followed suit. This is how the Assistant Director (Mines) at the district headquarters, who would have ordinarily followed the conventional approach in matters of grant of lease, was found sensitive to the women's need at every step. As Ms Rao writes:

> Seeing poor, rural women struggling hard to break out of their social barriers and overcome economic hurdles, seems to bring out the goodness and desire to help in government officials and ordinary people as well.

It was, however, not all a smooth sail. As the contractors felt deprived of their quarry rights and hence profits, they refused to allow trucks entry into the area. The threat continues and help from law and order authorities has to be sought time and again. But the problem arising out of the threat is not intractable or unresolvable as the sympathy of an empathetic administration lies with the quarry workers, the poor SC women who deserve help.

Conclusion

IN a pluralistic, multi-lingual and multi-cultural country like ours where conditions vary widely from region to region, from district to district and even within the same district, it will be a travesty of truth to say that only one approach, far less the campaign approach, should be adopted and implemented for uniform results. Those of us who have been with the Mission since its inception, have accepted the limitations of a uniform social policy being valid for the whole country at one point of time. Instead of advocating the inflexibility and sacrosanctity of any policy or any approach, we have all along made ourselves amenable to new ideas and suggestions and have advocated a policy of learning by sharing in a climate of total openness and flexibility.

It is acknowledged that neither the spread nor the impact of the campaign strategy is uniform, being far less dramatic. Like any other social policy, the campaign is also the product of a particular point of time or milieu or setting and it has to weather all the storms and vicissitudes of that time. It cannot get away from it. Having said this, however, we will not be doing justice to the campaign approach if we do not acknowledge its rationale and force. It needs to be told and retold with full conviction that, after having experimented with successive and alternative models of literacy and education over a timeframe of more than four decades (1950-92), we have now settled down to a model—the campaign mode of total literacy which has given us lot of hope, faith and conviction that this is one model which can assure us of the right results in the right time in the right manner in the most participative, democratic and cost-effective way. The freedom and spontaneity with which people have taken to this mode, the cultural renaissance which it has generated, the literacy-friendly environment which it has created and sustained and the glitter of hope, excitement and joy which it has left in the face of millions of learners and volunteers, are all factors which have renewed and reinforced our commitment to this mode.

It has, however, to be remembered that the campaign is a mode and not the goal. Total literacy is our goal, our polestar, the cinosure of all eyes. The paths may be more than one but all of them must lead to the primacy or centrally of that goal. There cannot be any compromise with this supreme truth. Even if we have suffered some reverses due to extraneous factors or circumstances beyond our control, our faith in the efficacy of the approach which is now fairly well-proven and well-tested must remain unshaken. Since success in areas of social policy and their execution is rather elusive and not uniform and is also shortlived, it was also throughout being contended that stories of such success which are also stories of absorbing human interest must be documented for history, failing which posterity will not forgive us for not telling the strategy we chose for ourselves and the direction in which we have moved so far.

We have certainly not achieved any miracles through the campaign approach and we have to traverse a rather long and thorny path to reach the ultimate goal but every single milestone (be it Kerala or Burdwan or Pudukottai) must remind us of the hurdles crossed and the trials and tribulations awaiting ahead. There is no question of giving up or surrendering in the midst of this long journey to eternity. To conclude in the words of the Kattopanishads:

उत्तिष्ठत जाग्रत प्राप्यवरान् निबोधत
क्षुरस्य धारा निशिता दुरत्यया
दुर्गम् पथस्तत् कवयो वदन्ति

Arise, aware (O Man)! Realise (that atman*) having approached the excellent (teachers). Like the sharp edge of a razor is that path, difficult to cross and hard to tread—so say the poets (the wise).* ■

Conditions in West Bengal: Problems, Prospects

PULAK NARAYAN DHAR

The following article is based on a paper presented to the authorities in West Bengal entrusted with improving the state of education in the State. It was presented on behalf of the All Bengal State Government College Teachers' Association. The author is the Joint Secretary of the organisation.

—Editor

Though much thought has been devoted to reconstruction of education on broad lines since independence we have been hardly able to evolve a scientific education system and curricula in India. West Bengal is no exception.

The journey from the Radhakrishnan Commission to the Bhabatosh Datta Commission of West Bengal in search of a proper scientific education policy has yielded little results due to the non-implementation of their recommendations.

It was observed by the Kothari Commission in 1966 that the situation in higher education during the academic year "broadly alternates betwen slackness and strain— slackness during the session and strain at the time of examination". The situation has not improved by any standard since then. This is also admitted in the controversial "Challenge of Education" document, which says:

> The internal efficiency of the higher education system is extremely low. Neither Colleges nor even Universities are started after due consideration of academic need.

The West Bengal Government showed some interest in removing some major defects of or reforming the education system when it initiated the Bhabatosh Datta Commission in 1986. But unfortunately the report of the Commission has been kept in cold storage.

Our view is that the major recommendations of the Commission, especially about the Government Colleges, are still valid and deserve due consideration.

About the problems obtaining at present and the suggestions to remove them, our views are stated as follows:

Decline in Standard of Higher Education

The standard of higher education, especially at the undergraduate level, has markedly fallen because of the poor standards of education at the secondary and higher secondary levels.

The reasons have been enumerated below:

a) Adequately equipped teachers are not always recruited for political and partisan interests.

b) Classes are overcrowded and proper attention cannot be given by the teachers to the students. The teacher-student ratio is also far from being satisfactory. Excessive load of work falls upon the teachers of the schools which is bound to affect the quality of teaching.

c) The language policy of the government is defective. Abolition of English at the primary stage has been proved counter-productive. Teaching of English from Class VI is hardly adequate under the present system to enable the students acquire sufficient vocabulary even to understand unseen passages given to them in the secondary examination, and when they scramble through to the higher secondary level they face stiff language problems. They remain perpetually weak. There is a carry-forward of this weakness at the higher undergraduate level when the students have to follow class lectures or textbooks mostly in English by foreign authors.

It has promotced a dual system of education and caused the proliferation of the so-called English medium institutions and neglect of good Bengali medium schools.

Our suggestion is that English should be taught at the primary level preferably from Class III, as was done before. English and Bengali are regarded as *compulsory additional* subjects at the undergraduate level at present. It is made compulsory for the undergraduate students to appear for examinations of these subjects but their marks are not counted towards success or failure. The result: students do not bother to attend classes or learn anything. Our suggestion is that this system should be scrapped and English/Bengali should be made compulsory at the college level as in the past.

d) There is a gap between the secondary and higher secondary curricula. The syllabi of both the secondary and higher secondary are also very burdensome. There is enough scope to teach the students the fundamentals of science and there is need to prune the details which they should learn at the higher level.

It is also our view that the syllabus should be graded to the all-India level so that there is a parity and our students do not suffer in several competitive examinations in comparison with students from other States. The all-India syllabi drawn up under the aegis of the University Grants Commission may serve as models.

e) To improve the standard of language learing Sanskrit/Persian should be introduced as a compulsory subject in schools as was the case till the late 1970s. The learning of Bengali will be strengthened if Sanskrit is taught from Class VI as was the case before the 1970s.

Regarding the methodology of language teaching, especially that of teaching English and Sanskrit, there should be proper thinking in consultation with the language teachers, because it is not the stiffness of the language as erroneously presumed by many, but the stale method of teaching that saps the interest of the students and kills the subject.

Move Away from Exam-Oriented Teaching

We are not in favour of examination-oriented teaching. The basic objective or educationis largely frustrated with too frequent examinations. Frequent examinations in the colleges disturb the regular class routine and the syllabus cannot be completed. The class rooms are often requisitioned for outside examinations such as Public Service Commission Examinations, Central Government Officers' Examinations, etc.

Examinations may be conducted in other government buildings in the cities/districts without hampering classes.

During the time of elections colleges are taken over by the authorities to provide accommodation for the police personnel for a long period of time. This practice should be done away with.

Our suggestion is that the government should have separate buildings for these purposes as examinations and elections of different categories are held more often than not.

Different departments of colleges are not sufficiently equipped with teaching staff. The attitude of the government in appointing teachers in the vacant posts or in creating new posts wherever necessary runs counter to the evolution of an ideal situation. As a result, justice cannot be done to all the Honours papers in many colleges. A decline in the standards of teaching has been a natural consequence.

There is some truth in the allegation that examination scripts beginning from the secondary down to the post-graduate level are not properly evaluated.

A proper time-frame for examining the scripts should be set not with a view to publishing results in record time but for thorough and objective evaluation of them. Quite often an examiner is required to evaluate too many scripts in too short a period, which he finds difficult to do. A proper selection procedure for examiners is also necessary while distributing scripts. Political or personal considerations should not be allowed to influence decisions in this regard.

Recruitment and Posting of Teachers

Another issue that aggravates the problems of higher education in West Bengal is the recruitment and posting of teachers in different colleges. While the recruitments through the PSC are fairly impartial in cases of lecturers (though not always so for higher posts), they are not fair and just through the College Service Commission (CSC). The impartiality of the CSC in this regard is not above suspicion.

Cases of appointment and good postings of inferior candidates are galore. This has generated a deep sense of frustration among the candidates appearing for interviews before the CSC.

The role of the experts in the selection board of the CSC is negligible as they have very small percentage of marks in their hands to be given to the candidates. It falls far short of determining the final selection. The heavy load of marks vested in the hands of other members (non-teaching experts) can upset the recommendation of the subject experts. This system should be reviewed and changed in the interest of having superior teachers in the colleges.

Lack of Standard Bengali Texts

While introduction of the system of instruction in Bengali at the Honours as well as the post-graduate level is a welcome measure, sufficient attention should be given to the writing of standard textbooks in Bengali.

It is noted with dismay that students follow the ordinary substandard books written in Bengali and do not even see the prescribed textbooks written in English, not to speak of consulting necessary reference books or doing library work.

This is largely due to their ignorance of English which is systematically ignored at both the school and college levels. For the Honours and post-graduate students adequate emphasis should be laid on the study of the English language for the proper comprehension of the contents of higher level books.

Moreover, authorship for writing textbooks in Bengali should be widely and more judiciously distributed so that a good number of quality books can be made available to the students.

The cooperation of the different teachers' organisations can be sought in this regard. A more vigorous initiative should be taken by the government in this regard.

Library

We like to draw attention to the library—the most vital academic wing of the college. The librarians should be given the status of teachers. Most of the college libraries suffer from a dearth of space and staff.

Immediate steps should be taken to upgrade the standards of the libraries by improving the infrastructural facilities.

Transfer of Teachers

In the State there are Government and Non-government Colleges. The government bears the burden of the exchequer for running both. While the teachers of the Non-Government Colleges are not controlled by the West Bengal Service Rules and are not transferable, the Government College teachers are directly controlled by the WBSSR which is a legacy of the colonial administration.

Transfers of teachers in the Government Colleges pose a great problem both to teachers and students. It has become a routine administrative work of the Education Department to transfer the teachers of Government Colleges at an interval of 3/4 years from one of the four Zones (A, B, C, D).

Needless to say, for the lack of a government order (policy regarding transfer issue) a great deal of political machination and administrative fiat is exercised to favour some teachers and humble others. In its present form, it does not serve any academic objective and only eats into the exchequer of the government by way of transfer expenditure. It is high time that a rational transfer policy was formulated in consultation with the teachers' organisations.

Lack of proper application of mind to the subjects and their specialised branches while transferring teachers from one college to another is detrimental to the interests of the students.

Frequent transfers from one zone to another make it difficult for the teachers to get settled and devote entirely to the academic development of their institutions.

Mechanical transfers should, therefore, be avoided and a rational transfer policy evolved.

There is a mechanical logic reared in certain quarters that teachers of outstanding calibre should also be transferred, irrespective of their reputation, from premier institutions like the Presidency College to the colleges of far-off districts as 'public servants' because the students in those colleges also deserve to be taught by them.

What they cannot understand is that neither the colonical nor the post-colonial governments were guided by this academic motive while transferring teachers (public servants) from one place to another. Moreover it is a mechanical bureaucratic way of looking at the matter that results in wastage of talents. Talented students in greater numbers used to get the service of talented teachers in the institutions where they were posted.

It is our firm belief that Prof Tarak Nath Sen or Prof Bhabatosh Datta or Prof Amal Bhattacharya or Prof U.N. Ghoshal would not have served the interests of the students better than they did from their own stations.

It may be mentioned in this connection that teachers of different universities are not transferred from one university to another. This is also true in the case of the teachers of Non-Government Colleges. The number of Government Colleges is a tiny drop in the ocean of the vast multitude of Non-Government Colleges in the State. So, the logic of carrying better education to the districts by physically lifting one or two outstanding teachers from Calcutta or otherwise is unscientific.

Expansion of Higher Education

The expansion of higher education has been of a unilateral nature. The observations of the Education Commission of 1964-66 are worth mentioning in this regard:

> There is a general feeling in India that the situation in higher education is not satisfactory and even alarming in some ways, that the average standards have been falling, and that rapid expansion has resulted in lowering quality.

The enrolment of students in the universities has registered a rise from one million in 1965-66 to more than four million at present. In West Bengal there was only one university in 1950-51 and 90 colleges of general education. At present there are seven universitites and nearly 330 colleges of general education. About 30 per cent of the annual budget of the State is spent on education in total.

It is lamentable that in the context of the present socio-economic conditions the centres of higher education are being treated as huge waiting rooms accommodating a vast multitude of literate and educated unemployed youths. The norms of admission to different courses of higher education too should not be downgraded just to popularise education among the masses at the cost of the basic purpose of education.

While we feel that the education system should be broadbased and primary and secondary education should be made universal, we also feel that at the higher levels of education the goal of excellence must always be kept in mind. Higher education at the post-graduate level should be decentralised to lessen the burden of the universities and maintain excellence. In this connection proper infrastructural facilities need also be taken into consideration. In some Government Colleges PG courses are taught (Presidency College, Hooghly Mohsin College). Their preformances can be assessed and PG courses can be opened in other colleges too.

University Statutes

Under the present statutes of the universities in West Bengal undue weightage is being given to the opinions of the non-teaching members of different university bodies who far outnumber the teacher members. This compromises the vital academic interests of the universities and and becomes eventually detrimental to the interests of its constituent and affiliated colleges as well.

This preponderance of non-academic leverage is often used to reap political dividends, and the true academic interests are seldom met in this vitiated atmosphere. So this statute should be scrapped and replaced by one which could envisage greater participation of teacher members in the different university bodies while purely academic issues are taken up for discussion.

The boards of studies in different faculties are not constituted on academic considerations alone. Those bodies are, more often than not, constituted on political considerations. As a result, they are seldom able to perform properly their academic duties like selection of paper setters, examiners, framing of syllabi. It is not only seniority in service but also academic records and performances of the teachers that should be valued while forming such bodies.

A broadbased discussion on important academic issues should be held throughout the State before taking decisions on them to elicit scientific opinion.

The system of election of the representatives for the reserved seats of the Government College teachers in the Senate is highly defective. The selection of the representatives of Government College teachers is determined solely by the votes of the non-Government college teachers. A person from the Government Colleges can be elected by getting the support from the Non-Government College teachers in the universities.

Autonomy of Colleges

During the past few years the autonomy of the different universities has been eroded to a considerable extent in the wake of tensions between the Chancellor and the government regarding the appointments of Vice-Chancellors of the Calcutta and Burdwan Universities. The excessive zeal of the government to see its chosen men posted in the responsible posts of the universities has definitely lowered the autonomy of the universities and made them the hotbeds of party politics. The present statute of the University of Calcutta has reduced it to an appendage of Writers' Buildings.

The government seems to be suffering from a negative sense about the question of autonomy in regard to the colleges. While the UGC is in favour of granting autonomy to some colleges in West Bengal, the government is still averse to this scheme. The government ignores the academic aspects of the issue in the name of curbing the so-called 'elitist' bias in the education system.

We think that the issue of autonomy cannot be dismissed so cursorily. Granting of autonomy to some colleges would lessen the burden of the universities.

The issue of autonomy should be placed before the educated people of West Bengal and an extensive discussion should be immediately initiated by the government or the universities to elicit considered opinion. It should not be treated as a closed issue. Autonomy is a step towards decentralisation which is greatly needed for the smooth conduct of the university examinations and other academic activities. The Bhabatosh Datta Commission has given serious thought to it and its recommendations cannot be ignored.

Government Colleges

Regarding the Government Colleges we may quote from the Bhabatosh Datta Commission:

> The basic justification for Government Colleges is that they are quality colleges. The Commission recommends that the Government Colleges should continue, subject to the condition that every effort should be made to maintain and improve their standard of service. This will involve substantial capital grants for buildings, equipments, hostels and staff quarters and large revenue grants for libraries and laboratories and also for sports, etc. (pp. 126-7)

But recently there has been a devaluation of the Government Colleges and their services since the introduction of the UGC Scales of Pay in 1973. It has been further devalued after the new UGC Pay Scales in 1986. The government has by its executive fiat reduced the attraction of service in the Government Colleges. It has kept the recruitment qualifications higher and lowered the pay in comparison with the previous standard vis-a-vis University and Private Colleges.

There are other factors bringing down the standards of the Government Colleges:

a) The strength of students since the introduction of plus two courses in Government Colleges has increased by more than 30 per cent. The government yielded to local political pressure and introduced morning sections in almost all Government Colleges. This has been done in total disregard of the staff pattern and the normal student-teacher ratio.

b) Morning sections in Government Colleges are run by hiring the services of part-time teachers (especially in the Humanities stream). Many of them are outsiders and some are drafted from among the insiders. For the services rendered by the part-time teachers a paltry sum of Rs 100 or Rs 150 is offered to them. There is, therefore, a dearth of good teachers and the students suffer.

c) Disparity in distribution of posts in different Government Colleges is another point worth mentioning. In the Department of English in Chandernagore College, for example, there are 12 sanctioned posts, whereas in Jhargram Raj College there are five posts. The number of sanctioned posts in Zoology and Botany, taken together in Darjeeling Government College alone, constitute almost 50 per cent of the total sanctioned posts in Government Colleges in these subjects.

Just a couple of years ago admission to the Government Colleges was strictly on the basis of merit and the college authorities were very particular in restricting the number of students to a reasonable limit. Now, in most colleges, especially in colleges outside Calcutta, pressure is built up by outsiders (political persons, DPI) to cross the desired limit of the student strength. Almost one thousand students were enrolled in only one class in the Darjeeling Government College last year.

Political interference in the internal administrative and academic matters has become an impediment to the smooth functioning of the colleges. Neither the Minister for Higher Education nor the DPI can provide any safeguard against this and generate confidence among the teachers. This should be stopped immediately and we believe that given the political will, the Government can put a stop to this.

Education should be free from political bias. There should be sufficient flexibility in the education system to help grow a free and open minded generation of youths. Educational institutions should be regarded not as centres of political recruits but as workshops for the development of mind and character of the youths. ■

'Helping Children Learn'

VINOO HORA

The mushrooming of pre-primary schools as stepping stones to admission in recognised schools has led to many a speculation whether children between the age-group of three to five should at all be sent to school. More often than not it is felt that sending children to school at an early age cramps the individuality of the child. The many do's and don'ts, the enforced learning, restrictions on his movements, play, could harm rather than aid his physical as well as mental development.

Prominent educationists, non-governmental social organisations such as Child Relief and You (CRY), Centre for Learning Resources, Pune etc., while accepting the necessity of pre-primary schools, have applied themselves in thinking out ways and means of making learning fun and part of play for young children. Rote learning has definitely been ruled out. On the contrary, it is felt that like primary teachers, pre-primary teachers too should undergo special training which will help them to create certain activities for children to keep them absorbed, make them curious so that instead of the teacher asking questions and the child answering, it will be the other way round. The teacher will be there to guide the child on to the right path and leave the child to seek solutions to problems with just a little prompting.

It is universally acknowledged that at no time does a human being imbibe so much knowledge in his entire life as he does during the first five years of his life. Therefore, it is important that the child be exposed to stimulating experiences which promote mental growth and personality development. It becomes imperative than to understand the intellectual needs of the young child and to define mental stimulation. Zakiya Kurrien (Joint Director of the Centre for Learning Resources, Pune), deeply involved in developing inservice training for teachers and in designing learning materials for schools and non-formal educational programmes at the pre-primary and elementary levels, feels that every child must be given the opportunity to:

- communicate and express themselves freely,
- have many experiences involving all their senses,
- explore and experiment,
- observe and question,
- solve problems,
- create.

Play, emphasises Zakiya, is an indispensable avenue for learning. Play is work for a child. If one observes children at play, one can see the seriousness or rather the earnestness that a child brings to play. Play, explains Zakiya, clarifies concepts and gives children opportunities to explore, to imagine and to translate experience into something meaningful to them. Unfortunately, we adults have a puritanical streak in us and we fail to appreciate the value of play in the child's mental development.

However, mere paly activities and materials alone cannot lead to effective learning. Here comes the crucial role of a caring adult—a parent or a teacher.

◆

IN order to set guidelines for pre-primary school teachers, *anganwadi* or *balwadi* workers, Zakiya Kurrien has written a book titled *Helping Children Learn*, alongwith a picture supplement, with useful illustrations by Jeyanthi Manokaran. To promote the concepts, abilities and skills of young children, the chapters are classified as under:

Thinking Things Out: involving the skills of matching, understanding relationships, perceiving patterns and problem solving;

Developing Spoken Language: getting ready to read and write, beginning to count and calculate.

Many schools in Maharashtra — in Bombay, Pune and small towns and villages— have accepted the novel method of teaching pre-primary schoolchildren and have sent their teachers for training to the Centre for Learning Resources, Pune. The course is intensive but not of long duration, mainly of 10 days. Most *anganwadi* or *balwadi* workers use the low cost teaching kit provided by the Centre for Learning Resources, Pune—an innovation of Zakiya Kurrien and her colleagues.

But the teaching and learning process is a continuous one. It cannot be limited to the method professed in one book. The teachers must think of devising new materials or variations and widen the horizon of learning to sustain a lively interest in children. A basic thing parents and teachers ought to keep in mind is not to become over anxious about a young child's learning prowess. They tend to project their tension on to the children; it takes the joy out of learning and becomes counter-productive.

To popularise their novel mode of teaching and teaching materials, the Centre for Learning Resources, Pune held an exhibition from September 1-11, 1992 in New Delhi ably organised by CRY and well attended by the media and teachers. The exhibition was impressive and it appeared from overheard snatches of conversation that we may not hear the chant of "A for Apple" for long. ■

PM's Speech at NAM Summit

(Continued from page 6)

being objected to is the name. What is being asked is: Now that there are no blocs, why do you still say you are non-aligned? But if you are not non-aligned, are you aligned? No one among us would favour alignment with one bloc even if it is the only bloc. We may agree with it on issues on merit, but we are not aligned with it. So, how can you escape the concept of non-alignment?

There is a feeling that the non-aligned are today faced with a power structure which allows them little room for manoeuvre. I disagree with this assessment. When our Movement was relatively young, we had even less room for manoeuvre. Our economies were weak and our trade, cultural and even intellectual dependence on the metropolitan powers, was stronger than today. Over the past three decades, we have developed our own economic, technological and, above all, human resources. Our experience in international diplomacy is certainly richer. We are better placed than before in many respects. What is needed, I believe, is the over-arching solidarity and adherence to a shared vision which gave our Movement its original strength and mission.

The Non-Aligned Movement is uniquely placed to forge a global consensus on issues of global concern. The first and foremost concern is human survival, which obviously cannot be assured as long as weapons of mass destruction exist on our planet. We can never ignore this stark reality. The world has to become nuclear weapon-free and then go on to complete disarmament, adopting non-violence as its creed and credo.

We welcome the successful conclusion of the Chemical Weapons Convention at Geneva because it is a multilateral instrument with all State Parties assuming equal obligations and responsibilities, a pattern we would like to adopt to all weapons of mass destruction. As an immediate step, India envisages a Convention on the non-use of usable weapons, a verifiable freeze on the production of fissionable material for weapons purposes, a suspension of nuclear weapon tests and negotiations on general and complete disarmament, which should be undertaken through appropriate mechanisms between countries. Let our Movement put forward an attainable agenda for a world beyond deterrence, a world we can bring into being within this century.

Democratisation of the international order will have little meaning unless it encompasses economic as well as political aspects of inter-state realtions. Even at the risk of sounding old-fashioned, I may submit that a non-confrontationist, yet decisive North-South dialogue is needed today. This need is obvious because the major concerns of the South are no closer to a solution today than they were over a decade ago. There is no need to impute motives to anyone. It is sufficient to realise the approaches of the North and the South to economic problems, the fact of the interdependence and the indispensability of viable solutions. Besides, the dialogue should not be confined to Governments alone. It should become a dialogue between the peoples—particularly the youth—of the developed and the developing countries. This aspect is extremely important, since proper realisation on the part of the developed peoples will alone create conditions for a fruitful North-South dialogue.

◆

WE meet at a time when most developing countries have adopted policies that provide greater scope for enterprise, innovation and the operation of market forces. Their fortunes are now linked more directly to the external economic environment embracing the crucial issue of debt service, capital flows, access to technology, market access and commodity prices. These have now become more important than ever before.

The decline of multilateralism is indeed a matter of concern. If we are to halt this slide into a world of persistent monologue, it will be necessary for us to reactivate our consultative mechanisms at all multilateral fora, so that our voice does not get muffled. Economic and technological resources have become more widely dispersed than before. It is possible to build a coalition that advances our legitimate interests on different issues and enables our Movement to play the role of an effective interlocutor. The manner in which the developing countries managed to sustain their own agenda at the UNCED Conference in Rio is a pointer to what is possible if we function purposefully.

We are particularly concerned by the growing tendency to attach non-economic conditionalities to grant of bilateral and even multilateral assistance, and the increasingly stringent restrictions being imposed on transfers of technology to the developing countries. The ever-growing list of items subjected to the so-called dual-use restrictions effectively threatens to deprive the developing countries of the fruits of technological progress in many key areas. Such restrictions have come to cover everything from computers to machine tools to specialised alloys to chemicals and even to medical equipment. They are imposed in the name of preventing proliferation, even though the major responsibility for proliferation often rests with the very countries that are imposing the restrictions. This is extremely unfair.

The imperatives of ecological balance are closely related to the depletion, restoration and increase of resources. Surviving in harmony with Nature and the environment is necessary for sustained development and durable peace. Rajiv Gandhi had proposed the creation of a Planet Protection Fund which placed upon all countries, except the least developed, an obligation for assessing and developing environment-friendly technologies. I suggest that our Movement establish a mechanism to make concrete recommendations for the establishment of such a Fund. This will have to be a collective effort. A whole new range of environment-friendly technologies need to be developed and existing technologies based on disastrous over-exploitation of natural resources abandoned. A large number of our own countries have much to offer in this collective endeavour. Our peoples often have close affinity and kinship with Nature and have a long tradition of using their resources in traditional areas like herbal medicine, water-harvesting and management. We must adapt our traditions to our current needs, translate our know-how into know-why. This means that the developing countries should consciously embark on a massive and meaningful programme of Research and Development in several priority areas of concern to themselves. Whatever the impediments, this should be done by ourselves so that commercialisation of the fruits of the programme could be obviated and benefits could become available to all developing countries on a no-profit basis.

Empires once clamed that the sun never set on them. Today, it is we who can claim that the sun shall not set upon this far-flung Movement, spread across the continents. We must, therefore, dedicate ourselves to harness, with the help of innovative technology, the energy gifted to us by the sun for the benefit of this large chunk of humanity toiling in the sun. That will be a real day of deliverance on which we could fully utilise the energy potential of the sun and winds and waves that our countries are endowed with in plentiful measure. On that day, sustainable development will come to stay all over the globe.

Such self-reliance will enable us to harness the immense resources of talent and skill inherent in our people, and to conserve our limited financial resources. The G-15 was born out of this compelling realisation at the Belgrade Summit, and has now established itself as a core around which the Movement can promote South-South cooperation. Several practical projects of benefit to all countries are under implementation. India is proud to be the coordinator in two key areas of great promise to the future—Solar Energy applications and the establishment of Gene Banks. I have little doubt that there are many areas where our collective resources and talents can be harnessed for the benefit of humanity as a whole.

There is, however, one crucial aspect that deserves mention in the context of South-South Cooperation. Developing countries must themselves learn to recognise their own capacities and come out of the spell of the glamour of the developed countries. The South must respect the South, as a first step towards South-South cooperation. There is no need to elaborate further, since the phenomenon is known, though not always admitted.

Our Movement, collectively, has to ensure that the New World Order currently being discussed is not based on inherent inequality, intrusive politics or discriminatory regimes. Despite the inevitable diversities among us and sometimes among our individual interests, we share many common objectives and aspirations in respect of the future world. Our approach, therefore, has to be inclusive, coordinated and harmonised. It should seek to consolidate the areas of agreement and eschew those of disagreement with a conscious and determined effort, allowing growing cooperation between nations in various ways.

◆

WE recognise that the objectives of peace and development are inextricably linked to the cause of the rights and dignity of man. While there is much in common in the content and nature of human rights, there is inevitably a considerable area determined by the social, traditional and cultural mores of different societies. Norms of some societies cannot be unilaterally prescribed as absolute postulates for relations between States and societies. Many amongst us face a predicament where human rights are emphatically urged only for practitioners of terrorism or secessionism, while governments dealing with this menace are accused of violation of human rights. This blatant distortion cannot be countenanced. Freedom from fear, from any quarter whatever, must inform any meaninfgul definition of human rights.

Some long-standing issues of vital concern to the world still persist. In South Africa, the progress being made towards the elimination of racial discrimination and the establishment of a truly democratic government seems to have floundered on the rocks of violence together with inhibitions on the part of the South African regime. Our efforts should be directed at preventing any loss of momentum in the political and democratic activities that have been initiated for South Africa's national reconciliation, and international integration, as a democratic, non-racial state. The negotiations for resolving the Palestinian question within the framework of the Middle-East Peace Conference should be strengthened and supported so as to fulfil the legitimate aspirations and inalienable rights of the Palestinian people. There should be no dilution of the efforts to fulfil the just expectations of the Palestinians.

Peace in Cambodia is yet ot be realised. We appeal to all concerned to join hands to restore harmony and stability to the Cambodian people. We mourn the tragedy and trauma which the former Republics of Yugoslavia have gone through in the last eighteen months and urge that the leaders return to paths of adjustment, reconciliation and peace. We are deeply anguished at the situation in Afghanistan, whose people have undergone immense hardship and deprivation in the long years of conflict. We hope and pray that they will resolve their differences peacefully.

The tragedy that has scourged Somalia is a scar on the conscience of man. Civil war has intensified the ravages of nature. It is stark horrors such as this that compels one to consider if we cannot think of a stand-by force of NAM volunteers, non-military in nature, ready to assist member-states of the Movement with willing and dedicated manpower in situations of crisis, where the humanitarian dimension transcends any other.

◆

WE are happy to note that the United Nations, at last, is coming into its own in the fifth decade of its existence. While even today there is a tendency to subordinate the global agenda to narrow national concerns, we are happy to note that the UN is more effective than ever before. The question now is how to make it even more effective. Democratisation is the first priority. The Security Council is functioning according to the ideas of the founders. It can be strengthened by enlarging it. The General Assembly has to be made more powerful not merely to represent the changes in its membership but the significant character of its universal composition. The actions of the Security Council should be more responsive to the voice of the majority, so that the United Nations comes up to the expectations of the changing world.

The Secretary-General of the United Nations has also become a much more critical link between the policies laid down by the different organs of the world body and their immediate and effective implementation. Mr Boutros Boutros-Ghali has addressed this mandate with vision and vigour, and we wish him well. We may still have to wait for decades before we realise the fruits of peace in its positive sense of development, prosperity and affulence for all, but we are convinced that the United Nations can contribute to this in abundant measure.

I recall, Mr Chairman, your observation in your work on the "Fundamentals of Javanese Culture" that "a family is good when its members are good; a family cannot be good when its members are bad". Certainly, within the fraternity of our Movement there may be differences between individual members. But above it all, and through it all, the good has endured: the good of a Movement sustained by a vision which History has made more attainable: the good of a Movement strengthened by the concerns of millions for a complete and happy life. So the Movement moves on, mainly because it concentrates on global issues and raises the combined voice of humankind, rather than frittering away its energies in bilateral disputes within itself which would have spelt disaster to its very existence long ago.

Is it possible then, for this family to agree to unleash the full force and vigour of its energy to the pervasive problems that beset us all? Can we agree to put aside vexed and contentious issues while we attend to first things first? If each one of us were to make a resolve to this effect, the resources and energy so conserved could bring us much nearer to the fulfilment of our Movement's true mission and mandate, that of assuring each individual within its fold a life that is free, worthwhile and productive, a true celebration of joy and dignity. ■

Unit Trust will repay it for you.*
Get a loan from HDFC— 3 times your investment, after 4 years.
Invest in the Housing Unit Scheme today.
HOUSING UNIT SCHEME

Three steps to your dream house.

Now, a distinctive housing scheme from Unit Trust.

How will the scheme work?

Unit Trust has tied up with HDFC, who will give you a loan three times your investment after four years or four times after seven years. Funds collected from the scheme will be invested in a diversified portfolio by UTI.

*Unit Trust will endeavour to repay the loan and interest out of capital appreciation. If there is a shortfall, the investor will be required to pay the difference. Should there be a surplus, it will be paid to the investor

Highlights of the scheme

- Open to all individuals and NRIs
- Minimum investment is Rs.2000 (20 Units of face value Rs 100) and multiples of Rs 1000 thereafter. There is no maximum.
- Sale and repurchase prices of Units based on Net Asset Value.
- No repurchase for a period of five years, except under special circumstances
- Housing loans subject to a ceiling of Rs.5 lakhs. The loan period is ten years
- No dividend will be declared. Income earned will be ploughed back for capital appreciation to repay loan and interest.

For free brochure contact any Unit Trust office, Chief Representative, Agent or HDFC office

UNIT TRUST OF INDIA

At the service of over 22 million Unit holders

A scheme brought to you by UTI and H·D·F·C together.

All securities investments carry market risk. For details see the brochure and consult your investment advisor or agent before investing

POLITICAL NOTEBOOK

The New Burden

The latest 18 per cent hike in the prices of all petroleum products, barring kerosene for domestic use, might raise an additional resource of Rs 1200 crores as part of the government's effort to meet the deficit in the oil pool account; but it is bound to substantially add to the heavy burden the consumers are already experiencing as a result of the allround price rise in the last few months.

Among the compulsions for the hike—this is the fourth time the government has resorted to such a hefty increase in the prices of petroleum products in less than three years since 1989—is the pressure on the Finance Minister to go in for full convertibility of the rupee on the trade account at the earliest. The Rangarajan Committee reviewing this issue had pointed out that full convertibility was not possible without introducing free pricing of petroleum products and fertilisers.

Furthermore, the breakdown of oil supplies from Russia prompted the government to announce the hike at this juncture.

What cannot, however, be overlooked is the significance that is being attached to the fact that this announcement came shortly after the Finance Minister's departure for Washington for the final round of negotiations with the IMF for a 2.2 billion dollar additional tranche of aid in view of the prevailing condition of our economy. None can be oblivious of the persisting, and quite open, pressure the IMF exerted on the government to bring about allout increase in prices of petroleum products as well as the abolition of subsidies on not only fertilisers but petroleum products like liquefied petroleum gas (LPG) and kerosene as well.

Indeed, one cannot but link the latest hike to the new economic strategy of the government based on the Fund-Bank directives. The 1992 Annual Report of the IMF is a clear evidence of the Fund's wanton imposition of the Structural Adjustment Programme without any concern for the debilitating effects it would have on the developing economies in the medium term in particular. The heartlessness and insensitivity of the Fund approach to the plight of the poor is so blatant that even a person like Boris Yeltsin, the Russian head of state, who is enamoured of anything coming from the West—and in particular the US—was only the other day constrained to demarcate his economic course from that suggested by the IMF (for the purpose of preserving, in some form or the other, the social protection system in erstwhile USSR).

Nevertheless, the latest government announcement of hike in the prices of petroleum products should not come as any surprise especially when the economic whizz-kids in charge of the North Block—with the benign indulgence of the South Block administrators—have decided that the Fund-Bank prescription alone is the answer to the country's economic malaise and any endeavour to search for a viable alternative to it is an exercise in futility.

The step, therefore, is on expected lines and its long-term consequences too should not be difficult to predict.

COMMENTARY

Broadening Ties

India and Vietnam have always enjoyed a warm and cordial bilateral relationship. This relationship has not been one of convenience but is based on shared values and commitment to peace and independence of all nations.

Hostile imperialists and unfriendly neighbours left their pugmarks on the soil of Vietnam adding to its woes. Yet despite its economic underdevelopment Vietnam stood firm as a rock, fought valiantly and safeguarded its honour and self-respect by not bowing to the colonial and imperialist powers.

India stood by Vietnam in all its trials and tribulations. During the savage US assaults on the tiny Indo-Chinese country's sovereignty it did not hesitate to call a spade a spade. When the beautiful land of the Khmers, Cambodia, was ravaged and turned into killing fields, Vietnam sent its troops to liberate the populace there from the Pol Pot yoke. The Cold War parameters prevailing then resulted in attempts to ostracise Vietnam and Cambodia (that had its rebirth after the Khmer Rouge fled Phnom Penh). But the Government of India did not have any ambiguity in embracing both the countries in the name of justice, stability and peace.

The recent six-day visit of Do Muoi, General Secretary of the Communist Party of Vietnam, has further cemented Indo-Vietnamese ties. In fact the indepth talks between the Vietnamese leader and Prime Minster P.V. Narasimha Rao led to the decision to promote economic cooperation in wider areas. Significantly, both countries while noting the progress already achieved the economic, trade, scientific, technical and cultur cooperation have decided to shortly finalise an air servic agreement, an agreement on avoidance of double taxation an a memorandum of understanding for cooperation in agricultur research and training. What is more, India agreed to earmark th interest accruing on the old credit to Vietnam—about Rs 3 crores—for payment of Hanoi's exports to India. Rice happen to be one of the principal export items from Vietnam.

No less important are the shared perceptions on the politic front. On Cambodia both expressed concern over the late Khmer Rouge activities to sabotage the Paris Agreement. O Kashmir and Afghanistan too the two sides' views found strikin similarity of approach. This was evident in the attitude to nucle non-proliferation and disarmament with Vietnam commendin the Indian Action Plan, tabled at the special UN session on disarm ment in 1988, for a nuclear weapons-free world by the year 201

Also noteworthy was the fact that while conveying kee ness to improve their ties with China, the Vietnamese leade were realistic enough to rule out the restoration of the Sino-Vie namese alliance relationship of the bygone days. Beijing's move to occupy the Spratley islands were clear evidence of the absenc of any such possibility. However, the Vietnamese leaders' cand admission of the reality reflected once more Vietnam's fier independence of judgement and action which has earne worldwide respect in general and that of Indians in particular

Need for a New States' Reorganisation Commissio

NIKHIL CHAKRAVARTTY

Was S.B. Chavan really at fault? His off-the-cuff observations at Pune that the Jharkhand problem might require the granting of Statehood or the Union Territory status to the region, has drawn a lot of flak from the leaders of all major political parties including his own.

Perhaps the Home Minister of India is not permitted to think aloud. He has to reconcile himself to the straitjacket of his exalted office. But anybody who cares to look beyond the compulsions of day-to-day politics will have to concede that what Chavan said is indicative of what has ultimately to be done in dealing with the Jharkhand question.

Everybody has reacted along expected lines. Everyone of the party leaders is concerned about keeping his flock together because it is an open secret that there are sharp differences of opinion in every party over the issue—some may have come out in the open as could be seen in the case of the Congress in Bihar; others may have been able to manage so far to keep their differences away from the public.

The Jharkhand region, the central homeland of the adiva tribal people, acknowledged to be the oldest inhabitants of th ancient land, is spread across the boundaries of four States- Bihar, Madhya Pradesh, Orissa and Bengal. It is not, ther fore, a Bihar problem as such, though one has to concede th the main base of the movement for the adivasi homeland, th is, Jharkhand, is situated in Bihar with the epicentre at Ranc Both in Madhya Pradesh and Orissa, the map of the futu Jharkhand cuts into substantial chunks of territory of th existing States; the portion claimed from West Bengal is com paratively less, though it is important in terms of the natur wealth drawn from that area.

It is worth recalling that after the first general elections i 1952, the Congress had to depend on the support of fi Jharkhand MLAs to ensure a majority for itself in the Oris Assembly to retain office in the State, and the deal that it ha to strike with the then leader of the Jharkhand Party, Jaip Singh, was quite unconventional by the standards of flo management prevailing in those adolescent days of our parliamentary politics. The Bihar Chief Minister, Laloo Prasad Yadav, may check up with profit how his Orissa predecessor in office managed this issue forty years ago. He may tell his Congress critics that he has been drawing inspiration from the precedent left behind by his Congress predecessor in Orissa.

This adivasi belt presents perhaps the most striking anomaly of India's political map. Here is a sprawling population left in the most primitive condition of tribal economy, while the rich natural wealth of the region is being exploited for the benefit of the entire country. The land is endowed with coal, iron ore, manganese, copper, mica, apart from the dense forest wealth, one of the richest in the entire subcontinent. One has to reflect upon the shattering psychological impact that the super-imposition of modern industrial economy and culture on the population living in primordial conditions. It is no accident that the political awakening for a Jharkhand identity should gather momentum in step with the mushrooming of industrial centres in the region in the last three decades. Obviously, the Jharkhand movement has sprouted outside the catchment area of mainstream politics of our country. This to a large measure accounts for its unacceptability uptil now in the conventional spectrum of Indian politics today.

●

APART from this lack of rapport between the Jharkhand movement and the major political parties, there are two other reasons why the very idea of a separate State or Union Territory for the Jharkhand region is being stubbornly opposed by the Chief Ministers of all the concerned States. For one thing, the leadership of no State of the Indian Union is today prepared to part with a single square kilometre of territory, and the Jharkhand involves the cessation of a fairly huge mass of territory from all the four neighboring States: it becomes an almost superhuman task for any Chief Minister to voluntarily agree to do so; they may be feeling with good reason that such an operation would be exploited by their opponents as a surrender.

The second reason for their resistance—and this is the more important one—is that the adivasi belt fetches handsome revenue for the exchequer of these States by way of royalty on the mineral extraction including coal, also from timber from the forests and other items such as tenduleaf, apart from the deals struck between forest contractors and politicians of these States. All these factors linked with the current style of political functioning, come in the way of conventional political parties of the region responding to the just aspirations of the adivasis expressed through their urge for a Jharkhand State of their own.

In a sense, one gets the impression that the reluctance of these State Governments to consider the possibility of a Jharkhand State springs mainly from the fact that the adivasi belt in all of them is a thriving money-earner for them, and without this opening into the adivasi zone of the respective States they can hardly expect to balance their own budgets. Bihar, for instance, would become an economically backward State if it is confined to north Bihar where no industry has grown. The adivasi belt in Madhya Pradesh is a convenient milch-cow for the State Government. Orissa's economy depends to a significant measure on its retaining the adivasi belt. Only West Bengal can claim that the adivasi zone contributes marginally towards the State's economy. What is extraordinary is that while the economy of these States draw heavily on the adivasi belt, the State Governments concerned have done very little for the uplift of the tribal people in those areas. Which makes the case for an adivasi State all the more imperative.

The Union Home Minister's approach, however, has the touch of the run-of-the-mill politicking. His hint at Statehood or Union Territory status is directed only at South Bihar and does not touch the neighboring territories of Madhya Pradesh, Orissa and West Bengal. A principled stand to promote the interests of the adivasis and to meet their just demand enjoins upon the Central Government to acknowledge the necessity of setting up the Jharkhand State.

It could, of course, be argued that the Centre has not always adhered to any basic principle in setting up new States. Witness the creation of new States in the North-East, some of which are economically untenable. But these were set up largely because of political expediency. In contrast, a Jharkhand State, if run and properly managed, can become one of the richest States of the Indian Union. This, of course, will depend not only on the Centre taking the right approach towards the demand but on the calibre of the leadership that the adivasi movement itself will throw up in the meantime.

Judging by the furore touched off by the demand for an independent Jharkhand State, one has to take into account the political realities of the day. Placed as it is, with hardly a majority at its command in Parliament and its own party ranks divided over the issue—as also is the case with practically all other parties as well—it would be unrealistic to expect the Centre to meet the Jharkhand movement's demand without delay. What needs to be done is for the Centre to set up a fresh States' Reorganisation Commission, a move which no party can oppose. It is true that the Bihar Chief Minister has suggested this as a desperate bid to ward off the immediate demand for a separate State as raised by the Jharkhand Mukti Morcha, which has rejected the idea of such a Commission. This is because the Jharkhand leaders suspect it as a diversionary move to paralyse the mounting momentum now gathering behind the demand for a separate State. Such misgivings can be dispelled by the Centre by so framing the terms of reference for the proposed Commission as to make it clear that in principle the Centre acknowledges the validity of the claim for a Jharkhand State, but at the same time wants to explore the possibility of realising it by taking into account the interests and perceptions of the neighboring States.

There is urgent need otherwise also for a fresh look at States' reorganisation pattern worked out three-and-a-half decades ago. The setting up of a separate Uttarakhand is already part of the official platform of the ruling BJP in Uttar Pradesh. Vidarbha has a fairly strong case for a separate State and so are some of the developed regions of Madhya Pradesh. There is no earthly reason why the Centre should fight shy of setting up a new States' Reorganisation Commission. It will have to decide the issue without delay. Any dilatoriness on this score may inflict grievous injury to the nation's unity and integrity. ■

Are We Embracing Colonialism?

AMIYA RAO

IN Delhi this August has been a month of holidays, celebrations and remembrances. Those who were no more were offered *shraddhanjalies* and those who are still with us were honoured for their courageous past in the 'Quit India' movement. Interestingly, *shraddhanjalies* were offered only to ex-Prime Ministers and to select Presidents, and as a routine to Mahatma Gandhi. It was purely a Delhi show performed by the elite for the elite. Common people as such, who one should have thought are as much a part of the nation as the affluent elite, were scrupulously kept back by the security forces and were not allowed to take any part—not even as mute spectators—in the August celebrations; it looked as if this country belonged to those august few and to their invited guests. This might explain why people's men like JP or Rammanohar Lohia were not mentioned even casually. Interestingly again, there was no reference to our first President, Dr Rajendra Prasad, or to the other distinguished President, Dr Radhakrishnan, not to mention India's great men like Tagore, Lala Lajpat Rai, Subhas Chandra Bose or Satyajit Ray, to name just a few. If this is how India is going to be integrated we shall have to wait for centuries. One wonders if the President could fly to Tirupati for a thanksgiving ceremony to the deity without any visible harm to his health, could he not have flown to Bengal and to Punjab to pay homage to Tagore, Subhas Chandra Bose and to Lala Lajpat Rai?

While one is not very certain if all who were offered *shraddhanjali* and honoured really deserved the tribute, one is certain that when the present elite who offered it and the departed who received it are long forgotten, the ones who had been left out will live on and be remembered as makers of India.

●

OBSERVING these festive celebrations our mind goes back to those other forgotten ones—tens of thousands who in the early thirties in Bengal had sacrificed themselves for the people, so that all might breathe freely in an India which was free.

In the late twenties and early thirties Bengal had witnessed a fantastic struggle against the British rule; it was a youth struggle, student struggle, reckless and spontaneous, a totally fearless—maybe a romantic—struggle by thousands of young idealists; it was a movement not for name or fame, wealth or power. Disciplined and committed to the cause they believed in, they carried on their struggle. Patriotism? Misguided? Could be, as the wise men of Bengal used to feel, yet none disputed the fact that they were in the presence of love at its purest.

Though this movement was never properly highlighted—neither those days nor later when India became independent—the leaders of Congress having kept themselves at a very safe distance, it caused grave concern to the imperial power. Determined to crush the struggle which they were afraid was the beginning of revolution like the unholy one of 1857, they sent their most ruthless officer, Charles Tegart, as the Commissioner of Police in Calcutta. Tegart went about his job with unbelievable brutality; hundreds of youngsters were killed, tortured, maimed for life, hundreds just disappeared leaving no trace after they had been arrested. With almost religious fervour Tegart was exterminating the upstarts who dared stand up against their White masters. Yet in spite of such repression, the struggle continued and spread and the district of Midnapore became the storm-centre.

Seething with helpless anger, egged on with their own conception and vision of liberty, the young people of Midnapore found the District Magistrate's oppression intolerable. Arrests, merciless beatings, detentions for days on end of young college students, uninvolved in the movement, had become the order of the day; whoever was young, strong and athletic-looking began to be picked up by the police and the targets were invariably homes of the middle class. The youth of Midnapore found no solution to their problems following Gandhiji's *mantra* prevalent at that time; failing to understand the significance of the statement that "the longer the yarn, the *charkha* spins, the nearer comes *swaraj*", they rejected it and decided that the only remedy for savage terrorism was an answering terrorism equally savage. Thus before long violence broke out and took its own momentum like storm-lashed waves of a turbulent sea. And three District Magistrates of Midnapore one after the other, in quick succession, along with their living instruments of oppression—the police—began to be shot down. Hundreds of homes lost their sons and brothers, husbands and cousins.

●

THAT was the time when the unnerved British imperialists sent another of their seasoned officers, Percival Griffiths, a worthy contemporary of Charles Tegart, as the District Magistrate of Midnapore to show the might of the British rule. He descended on Midnapore with hordes of armed and mounted police. Flag march was ordered right away; villages, big and small, were raided in search of the miscreants; punitive taxes were collected even from the poor assuming that they were the harbourers of the revolutionaries; men imported from Calcutta to be trained to give false evidence swarmed the towns like flies; and falsely implicated young students died inside interrogation centres subjected to third degree treatment. Secret police kept watch over government officials and their young sons and daughters had to report themselves at the nearest police station. All activities, even cultural activities, had been forbidden; anthologies of patriotic poems and songs, too dangerous to be kept at home, were burnt; singing of *Bande Mataram* was an offence. That is how Percival Griffiths ruled over Midnapore. And true to all racists he resigned from the Indian Civil Sevice a few years later, realising that the rule of the Raj was going to end and serving Indian masters would be intolerable.

Percival Griffiths was not shot down, he died in bed at the ripe old age of 92. One of our English dailies has in a glowing obituary called him "the bravest man in Bengal"; it has mentioned his "courage and integrity" and how he "firmly dealt with crime" yet "showed his goodwill by seeking a constructive answer to disaffection". Another of our Bengali dailies "of the largest circulation" has suggested that Charles Tegart should be the model for the new Police Commissioner in Bengal. Possibly, as AM says: "We are either at the end of history or history has decided to trudge backwards" but those criminals whom Griffiths had "firmly delat with" and on whom he had showered a good measure of his "goodwill" have entered the realm of Bengal's legends becoming a part of her history. ■

Reform of Financial Sector after the Scam

ARUN GHOSH

The other day a journalist rang me up to "interview" me on the phone on the recent stock market scam. My answer to him was simple. One should draw a clear line of distinction between "fraud" and the "scam"—or the speculative, unhealthy and unrealistic increase in share prices that makes the stock exchanges in India operate (in the words of none other than John Maynard Keynes) in the manner of a "casino". Proposals for bank reform should, in fact, cover the entire financial sector, including the stock exchanges.

What is the "scam" due to? The "scam"—in terms of the purely speculative transactions in the stock market — has been building up for quite some time, as a consequence of two sets of forces: first, the desire of a few major operators — and these are some large corporate bodies — wanting to float new issues at a very high premium, not justified by the earnings potential of the proposed investment but which would become justified if the market premia on existing shares were very high; and secondly, the desire of the Indian Government to intervene and keep the bullish trend in the stock market. This point needs an explanation.

To go back to the distinction between "fraud" and the "scam" proper, the former is a matter for the police — in this instance, the CBI—to investigate and to take corrective action and should be dealt with as such. If someone issues duplicate Bankers' Receipts (BRs) without the backing of any securities, as happened on a large scale, that is a clear case of "fraud". Fraud can occur in any walk of life. In the present instance, the "fraud" prolonged the agony of the scam, but the causes of the scam were different. If investigative journalists, or for that matter the JPC want the stock exchanges in India to perform the function that they are supposed to, namely, to mediate the investment of householding savings in new equity so as to promote the healthy growth of corporate enterprise, two types of analytical effort would be required. First, one would need to go into the major weakenesses of the present system; and secondly, one would need to go into the rationale behind the "scam", and then, change the ground rules which involve better disclosure norms, greater openness, and the prevention of pure speculation from taking over the operations of the financial sector.

In the above context, one is somewhat surprised by the statement of the Finance Minister that "India's financial system will emerge stronger and healthier in the wake of the securities scam, which is an accumulated by-product of the weakening of internal control mechanism in the banks". (*The Economic Times*, New Delhi, August (24, 1992) The questions which the Finance Minister should address are : Was the boom in stock prices in 1991-92 healthy? Was it justified?

The Indian stock market has been booming since the late eighties. Let us, in this context, take a look at the role and depth of the stock exchanges. How many companies' shares are listed in the most prestigious, the most active of the stock exchanges, namely, the Bombay Stock Exchange? One is not sure of the exact number, but those actively traded are only 800. In other words, the stock exchanges are used, have been used for quite some time, by only a few corporate giants for mopping up the the savings of the community for new investments/expansion schemes.

And why have the stock exchanges been booming since the late eighties? Market confidence in the economy is the least important of the factors, for the "market" here has been dominated by the UTI, the various Mutual Funds (set up by a number of nationalised banks), the financial institutions. The government (and the financial institutions) have not been very forthcoming in the total amount of "equity" holding by these institutions; even the overall figures of institutional holding of the total equity of companies traded in say, the BSE, are

Dr Ghosh is a former Member of the Planning Commission.

not available. Not even annually, in a source like the Currency and Finance Report of the RBI. And yet, by all accounts, the "big bull" in the market has been the UTI, for quite some time.

A third factor leading to the "scam"—and I define the "scam" as unhealthy, speculative increase in stock prices without any basis or justification—has been the slow response of the government to the need for "immobilising" the cash suddenly generated by a large number of "tax-free bonds" floated by a number of public sector enterprises (PSEs). A tax-free bond of 9-10 per cent would give an effective "after tax" return of 18-20 per cent or more (if the surcharge is taken into consideration). The *Indira Vikas Patra*—introduced by N.D. Tiwari in the mid-eighties—would have become encashable bearer bonds by the late nineties. All this meant a tremendous increase in "liquidity" in the financial market from the late eighties onwards. Neither the government nor the Reserve Bank had the foresight to "immobilise" these surplus funds; for some of the PSEs issuing bonds required the funds over a period of time, not immediately. It made sense for the PSEs to entrust these funds to banks under their Portfolio Management Schemes. Naturally, this process made available enormous surplus cash to the financial institutions and the banks. *Raising of the interest rate was not the answer to this problem;* in fact, it had the effect of reducing new investments, with a large amount of cash floating around, looking for placement.

In the bleak year of 1991-92, the raising of the interest rate was thus a sure fire method of increasing speculative activity. And nothing was done by the government to regulate the functioning of the stock markets; and nothing was done by the Reserve Bank of India to "immobilise" the overhang of excess liquidity in the system. If anything, all the policies introduced with the Budget—the complete exemption of the wealth tax for wealth held in the form of financial assets, the reduction in the Capital Gains Tax, the reduction of the income tax for higher income brackets—were calculated to give a boost to the capital market.

Here was a queer scenario: there was a squeeze on industrial production through a hike in commercial bank lending rates; there was a recession in demand arising from sharp cutbacks in government investment in infrastructure; there was already an overhang of excess liquidity; and the government chose to impart a big stimulus to the holding of corporate stock. More importantly, the government issued a directive to the banks to increase their dividends by 50 per cent in 1992-93.

Note the scenario. The was *no* positive stimulus to real investment in the economy, obviously as part of the stabilisation programme. And yet, there was a positive stimulus given to the stock market, which was limited to dealing in a very few large companies' shares and debenture issues. The banks were *pushed* by none other than the GOI to speculative activity.

The "scam", therefore, leads to two questions: one, pertaining to the relationship between the "brokers" and the corporate tycoons who were about to issue new equity at high premia; and two, the nexus between the government's policies and the concerned corporate sector giants. I am not referring to the possible nexus between people in the government and the corporate sector. But note the feeling of satisfaction publicly expressed by members of the Union Council of Ministers at the buoyancy in the stock market, as a clear evidence of the success of the government's liberalisation policies. Note further that the scam involves the National Housing Bank, a wholly owned subsidiary of the Reserve Bank of India, set up to promote housing for the weaker sections of the population.

Financial Reform

As far back as June 1987, Bhabatosh Datta (Professor Emeritus of the prestigious Presidency College, Calcutta) wrote an article on "Capital Market or Casino". (See, Datta, *Indian Planning at the Crossroads,* Oxford University Press, 1992) Therein he noted the unhealthy boom in stock prices then (in the summer of 1987), and made several very perceptive remarks and recommendations. First, he recommended "a strict prohibition of sales and purchases (of corporate shares, bonds, etc.) involving time,... there must not be any post-dated commitments". Second, "a further step necessary for stopping speculation in shares will be to prescribe that no one who has acquired a share by spot purchase at the stock exchange will be allowed to sell, gift or mortgage his share within two years of acquisition". This would purport, in brief, to make the stock exchanges a place for genuine mediation of household savings for long-term corporate investment, ruling out speculative activity in shares. Finally, Datta strongly commended a proposal of the then Chairman of the State Bank of India for "across-the-counter sales of stocks, bonds and debentures" by banks, their subsidiaries and affiliates, for "many banks, including State Bank, now have either merchant banking departments or subsidiaries". According to Datta, if a 'lock-in' period for shares acquired is enforced "commercial banks can enter the field... without leaving everything to coterie managed stock exchanges ineffectively controlled by the government through a maze of conflicting notifications".

A lot of other reforms is necessary. K.T. Gosalia has written on the issue of "Tackling Insider Trading" (*The Economic Times*, New Delhi, August 24, 1992), the main issue being the frequency and scale of disclosure requirements of "listed" companies. Indeed, it is unfortunate in this context that the Company Law has of late been amended to allow the publication (annually) of "abridged" balance sheets—in the interest of economy—when the same companies are issuing balance-sheets in glossy, multicoloured paper with many irrelevant photographs and publicity, without giving detailed information as to the functioning and operations of the company. The "scam" and the muleting of the unsuspecting public can be traced to the government's economic policies. Deregulation does *not* mean that the government should dispense with the minimum requirements of "accountability" of the corporate bodies.

Finally, one should go back to Bhabatosh Datta (*op.cit.*) for a quotation from none other than John Maynard Keynes (who, incidentally, made a lot of money on the stock exchange for himself for the King's College, Cambridge, and for the insurance company the affairs of which he managed):

> Speculators may do no harm as bubbles on a steady stream of enterprise. But the position is serious when enterprise becomes the bubble or the whirlpool of speculation. When the capital development of the country becomes the byproduct of the activities of a casino, the job is likely to be ill-done.

Our monetary authorities today appear to have forgotten these basic precepts of the healthy development of capitalist enterprise; even pure speculation is now to be lauded if it makes, the ongoing policies look good. The shenanigans of an unbridled financial market need not be curbed; they are to be further stimulated.

That, in truth, is the problem today. Fraud is certainly to be prevented, but we must first remove the causes which led to the perpetration of fraud. How could the authorities be so complacent about a stock market boom which was clearly speculative? ■

Restructuring the Rajya Sabha

AMRIK SINGH

Of the various infirmities from which our Constitution now suffers, perhaps none is more crippling than the faulty balance as between the Centre and the States. Even though some people have reservations on this score, opinion has been steadily veering around to the view that unless this imbalance is corrected, we cannot be said to have learnt from experience.

While this imbalance is evident in a number of respects, perhaps no other feature of the Constitution underlines it so tellingly as the composition of the Rajya Sabha. Looking through all the documents available on the subject, what stands out sharply is that while there was a debate on almost every other issue of the composition of the Rajya Sabha, the one thing that could have ensured the right balance between the Centre and the States was not given anything more than passing attention. The only person who proposed that all States should be equally represented in the Council of States was K.T. Shah. Hardly anyone took notice of his proposal and it was killed, so to-speak, more through indifference than a decision against it.

A good deal of time was spent on other issues like whether there should be a second Chamber at all or not, how it should be constituted, whether the system of proportional representation be made applicable in this case or not, should people be nominated or not, if nominated, how many and of what kind, should there be an expert body to advise the Rajya Sabha and so on. Dozens of issues were raised but the one issue that was not raised with any degree of concern or commitment was whether the different States should have equal representation or not. There were two important reasons why this dimension of the problem was not given the attention that ought to have been given to it.

One was the absence of a historical tradition. Despite some interesting and innovative features of the Constitution, its basic structure is based on the 1935 Government of India Act. Strictly speaking, that Act had visualised a Federation, and had it been brought into existence, there would have been some kind of a precedent to build upon. Only one part of it dealing with the provinces (as the States were known then) was implemented in 1935. The other part dealing with the induction of the princely States into the Federation was kept in abeyance. Once the War started, the proposal was formally deferred and when the process of Constitution-making was first undertaken in late 1946, there was no model to follow.

The second reason which flows from the first one is the simple fact that when the transfer of power took place, there were several hundred princely states. How to deal with them in the new Constitution was a critical issue. Fairly early in the process of Constitution-making, it was suggested by N. Gopalaswamy Ayyangar that in terms of proportions, the princely states may be given 40 per cent representation. This was agreed to more or less by general consent. How the further division was to be carried out was a matter that remained fluid for the reason that the states were being merged into one another and the landscape of princely India was undergoing a rapid change. By the time the exercise of drawing up the Constitution was completed, the situation had not only been brought under control but largely rationalised.

Dr Amrik Singh is an eminent educationist and a former Vice-Chancellor of the Punjabi University, Patiala.

●

THE significance of this development is that when the Constitution was being drafted, the situation in respect of princely India was in a flux. As such it was not possible to take firm decisions. In his Memorandum on the Union Constitution prepared by Sir B.N. Rau, the issue is put in the following words:

> I have not attempted to give all the Units equal representation in the Senate (as the Rajya Sabha was then known), because under present conditions this might mean that the provincial representatives, or to use a convenient term, the British Indian representatives would be swamped by the representatives of the States. It should be remembered that there are 35 potential Indian States units in the Union and at present there are only 11 British Indian Units excluding Chief Commissioners' provinces....

This memorandum was prepared in October 1947 and speaks for itself. The heterogeneous character of the princely states and their large number together with the relatively small number of the Indian provinces at that time more or less ensured that the question of parity as between different States was, properly speaking, not on the agenda.

Equally important, however, was the historical dimension referred to already. The most successful federal country in the world is the USA. When that country drafted its Constitution, it was nine independent American States that came together. In other words, the historical circumstances were such that the federation, even when formed, could not have had that kind of a dominant position which would have led to the emasculation of the various States. In India the situation was different. To have made the Constitution truly federal in character, an extraordinary leap of imagination was required and the records available from that period go to indicate that this was not forthcoming.

On the contrary, there was an ongoing battle for supremacy between the Hindus and the Muslims and the manner in which the battle had developed and the critical situation in which the country found itself during the years 1946-47, made the existing shape of things more or less uncertain. Unavoidable in the first phase, there was an attempt to delegate more powers to the Union so that the Muslim League could be persuaded to come into the Union. When, in the second phase, the partition of the country became a *fait accompli*, there was

an emphatic movement in the opposite direction. As is widely recognised, the Constitution as it obtains now is the outcome of that cast of mind.

II

IS the notion of the parity of States with one another a feasible proposition? Quite a number of people argue that it is all very well to talk of it but it just cannot be done. Not only is there the weight of the past tradition behind the existing arrangement, meanwhile, the North-East of India has been split into half a dozen States. Some of them were not even one million strong. How is it possible for a State with such a small population to be equated with say, UP which has about one-sixth of India's population? The objection is valid to some extent. But if we accept the proposition that no change is possible or feasible, what we are really saying is that the *status quo* should continue. If the *status quo* is to continue, it is no use discussing the issue. It is sought to be discussed precisely because the *status quo* is found to be unsatisfactory.

In order to understand this issue in the right perspective, two prior issues have to be gone into. One is the working of the Constitution during the last four decades or so. The second one is what is our understanding of the Indian polity. If it becomes evident that we have misjudged the essential movement of the Indian polity during the last few decades, it would stand to reason that steps have to be devised to evolve a different constitutional structure. As a part of that new restructuring one can also take up the issue of how the Rajya Sabha is to be reconstituted.

To take up the first issue of how the Constitution has worked over the year, it would be advisable to divide the last few decades into three broadly identifiable divisions. The first phase more or less synchronised with the Nehruvian period in Indian politics. It may be described in these words: problems were there but they did not come to surface except in passing.

For instance, the first major communal riot after 1947 took place in 1961 in Jabalpore. It was in response to that riot that Nehru set up the National Integration Council. That it was a totally inadequate response to the problem has become clear over the years. It is also equally clear that the basic problems which had remained hidden from view did exist though it took them some time to find expression. The Jabalpore riot was one symptom of the deeper malaise and there were several others also which need not be dwelt upon.

The next phase synchronised more or less with the first phase of Indira Gandhi's tenure. Under her stewardship, the bias in favour of centralised control from Delhi became markedly pronounced. In her vision of India, it was the Centre which mattered. What the States had to do was to conform to that larger pattern. Simultaneously, she stabilised her hegemony in the political sphere also. Not only did she subordinate the party to her will, all decision-making in the party got personalised. Elections were done away with and the party became so subservient to her that she appointed and dismissed Chief Ministers as she pleased. No more need be said about some of the other developments in this period.

●

IN the period after her return to power in 1980, (the third phase) the strains of over-centralisation became much too visible. Though the DMK had been straining at the leash, it was the Akalis who took the first decisive step to pose a challenge. In 1973 they adopted the Anandpur Saheb Resolution. Five years later they redefined it further by advocating that the Centre should exercise only four powers—defence, foreign affairs, currency and communications and everything else should belong to the State sector. In the wake of those demands came the Akali agitation. In order to deal with the various pressures on the polity, it was in the early eighties that she appointed what came to be known as the Sarkaria Commission.

Not much came out of its recommendations. Not only did the Commission not suggest any radical break with the existing set-up, most of them have not been acted upon in a substantive way. During these years, however, the strain on the polity had become more or less intolerable. Soon after Punjab came Kashmir and then Assam.

Out of these various challenges to the federal polity, the most serious is that of Kashmir. This is for the simple reason that Pakistan is a strong contender for the incorporation of Kashmir into Pakistan. This is not acceptable to India. For over four decades, a contest has gone on between the two countries. Without going into the details of what happened, and the on-and-off character of the contest, since 1989 Kashmir has been held only by the army. The people by and large are against India.

How is that problem going to be resolved ? As anyone can see, it will not be resolved short of guaranteeing total and complete autonomy to that State. If it is conceded to Kashmir, Punjab cannot be far behind. If it is conceded to both Kashmir and Punjab, can any one say with any show of reason that the same status is denied to other States? In plain words, what is today called national integration is under severe jeopardy. While other factors are also responsible for it, perhaps the most decisive factor is the over-centralised manner in which the country has been run for over four decades.

More and more people are beginning to recognise the untenability of this arrangement. However, at the same time it must be acknowledged that the dominant political parties have not yet come around to the view that the polity be restructured. The biggest of them, the Indian National Congress, continues to function as if what is happening is of no concern to it.

This ostrich-like attitude cannot last long. Sooner or later the issue would have to be confronted. Once that happens, each political party would have to redefine its attitude. In any event a restructuring of relationships between the Centre and the States is very much on the agenda. In what precise manner a new arrangement is worked out remains to be seen. But of this there should be no doubt that a new arrangement would have to be worked out.

III

HAVING dealt with this issue, it is equally important to study the evolution of Indian polity during the last few decades. Till recently, a very large number of people had the image of the nation-state in front of them. Their model was some of the European countries as they evolved towards nationhood in the post-Reformation period. Countries like Germany, France, Italy, etc. did conform to this model though the Central European countries belong to another category and, as to Russia, it was a category by itself. Spain and Portugal conform to this pattern to some extent though there were other factors at work which left them out of count somehow.

The model of these European nation-states looms large on the horizon for those who believe in a strong centre. The notion of one-nation-one language was also a part of this political syndrome. While those who project Hindi as the national language of India felt obliged to work out a compromise in the Constituent Assembly, the cast of thinking characterising that mindset could not get away from its original hankering after a one-nation-one language State.

That was not the only unsettling factor. The ethnic urges of people in different regions of the country also gradually manifested themselves. One evidence of it was seen in the re-organisation of States in the mid-fifties. While in the case of South India the problem was sorted out in the first round, in the case of Gujarat and Maharashtra it continued to foster for a couple of years more. In the case of Punjab, it survived even into the sixties and was decided as late as 1966.

But can it be said that the problem has been settled? Anyone who makes such a claim is not in touch with the reality. In States like Maharashtra, Madhya Pradesh and UP and several others, regional problems continue to simmer. In Maharashtra, for example, there is a strong demand for a separate Konkan State as also Vidarbha. Many more things can be said in this vein in regard to Maharashtra as also a number of other States.

In respect of most of these matters, the issues are likley to come to a head within the next decade or so. The moment any attempt is made to settle Kashmir and other problems, there would be a quickening of political activity. In plain words, while the linguistic map of India was redrawn in the fifties and the sixties, the ethnic map of India is yet to be redrawn. When precisely this is done is something that cannot be anticipated.

●

WHAT would happen when such a map is redrawn? Likely enough UP would be split into several parts; so would be Madhya Pradesh, Gujarat and several other States. Even Andhra can further split. The process of re-demarcation is never a simple one. It is always messy, occasionally bloody and, to quite an extent, much more wasteful of human energy and resources than it need be. Would it not be an act of wisdom to look at this problem with a fresh mind and non-partisan eyes? But then this is not being realistic. Wisdom is a scarce commodity in politics. Things happen in politics in accordance with a rhythm of their own and more often the process is destructive rather than constructive.

While this is true, it needs to be added that the situation in Kashmir and Punjab, as also the Assam situation to some extent, are acute enough not to admit any further delay or postponement. Whatever delay has occurred already has served to escalate these problems. The right thing to do would have been to intervene in good time and not allow the situation to get aggravated. But the bankruptcy of political leadership in almost each one of the major parties is so unmitigated that we have allowed things to come to this pass.

It must be said to the credit of the BJP that it has consistently expressed itself in favour of smaller States though it must also be added that it believes in a strong Centre. In respect of small States, the BJP has not really concretised its ideas. What it has been saying is more or less in general terms.

Regarless of the BJP position, the issue of the restructuring of powers as between the Centre and the States is unavoidable. And so is the issue of the ethinic reorganisation of the States. If these two processes working side by side can be taken care of more or less simultaneously, the country would be in a position to deal with a whole range of problems. Restructuring the Rajya Sabha in that case would be one of the several things that would require to be done.

If what has been suggested above has any substance or validity, the oft-quoted argument of the possible parity of the North-East Indian States with several of the other major States will come to be seen in a different light. In other words, what looks insuperable today would not look so insuperable then.

To go on to suggest that by itself this issue would have to be taken care of once the polity is reorganised would not be to say everything. At the same time it must be acknowledged that in doing so we would have taken a major step forward in the direction we ought to have taken in the first instance. But given the circumstances of 1947-49, we could not have done so.

It is not necessary to recall what was stated above except to add that what was done during those two years of Constitution-making was more or less in terms of the situation prevailing then. The last few decades have shown convincingly that the situation has changed. And now that it has changed, it is time to recognise the nature of that change and, in consequence, move towards restructuring the polity.

IV

ONE final word in regard to the experience of two countries which are large-sized and about which we know a little more than others partly because they both are English-speaking. The US experience is too well known to be commented upon in any detail. Not only does the Senate represent all the States in an equal measure (regardless of how large they are in size or population), in its actual working the Senate wields much more power than the other House as has been widely noted. Sir B.N. Rau has quoted Loss-Smith from his book *Second Chambers* to the effect that the US Senate is "the only example in the world of a Second Chamber that is incontestably more powerful than the first."?

Apart from exercising more power than the other House, there are certain jobs which are handled only by the Senate. For example, any kind of a treaty with a foreign country has to be approved by this body. Declaration of war is also subject to ratification by this body. In regard to the selection of judges, ambassadors and several other posts the Senate has such a powerful say that the executive is quite often on the defensive. In fact some people are of the view that the Senate should not wield as much power as it wields today.

Going by the doctrine of the division of powers as between the legislature, the executive and the judiciary, there is a strong school of thought which feels that the Senate needs to be defanged somewhat. Be that as it may, the fact remains that the Senate is a very powerful body and has such a decisive share in the running of the country that it is not the House of Representatives so much as the Senate which really calls the shots. Would it be too much to say that it is this fact, more than any other fact, which has made the US into a truly federal country?

In regard to Australia, every province has the same number of members in the Senate. In terms of its reach and power, however, the Australian Senate does not wield as much power as the American Senate does. Yet the very fact that the Senate is constituted on an equal basis and wields considerable power has ensured that the country moves, on the whole, on an even keel.

While there are a couple of other models also which do not exactly conform to these two models, those are not being referred to here for the simple reason that the model of an Upper House which represents the States (as the Council of States was known then, to use the pre-1947 phraseology), which is of decisive significance as far as our country is concerned.

Ours is a multi-national, multi-lingual, multi-ethnic country. Even if some people have reservations about these various shades of description, it can be no one's contention that India is like a European nation-state. Diversity is very much a part of our ethos. That being so, it has to be given due accommodation. When one talks of restructuring the Rajya Sabha, it is in order to take account of these diversities and evolve a polity which is not subject to these unsettling pressures to which it is subjected today. ■

MUSINGS

Face of Regional Journalism

MRINAL PANDE

"You should be happy that your Hindi journalism is flourishing," a fellow English language journalist said to me recently in a playful manner. And added, with a certain envy, "Your Hindi allies are bringing out new regional editions almost each week. There has to be good money in it. And, of course, there is all that patronage from your cow-belt politicians."

Yes, there is good money in regional journalism in Hindi now. But it is there mainly for the owner editors not the average mofussil journalist. And yes, there is political patronage available, but it is only for the user-friendly journalist. The professionally objective ones, who cannot be relied upon to take sides and plant stories, soon find themselves redundant in this scene.

During a recent visit to the Uttarakhand region, I chanced to meet a small group of young and old journalists. Conversations with them revealed the real and slimy underbelly of regional journalism today, a reality that not only readers but also most metro-based journalists, like my friend above, know little about.

The backbone of regional journalism is the mofussil journalist who belongs to the region and has a fairly close access to the ground-reality there. But, as an ex-bureau chief of a major Hindi daily said, our mofussil journalist is a car that the owners expect to run without petrol. The unpaid stranger is fast becoming a steady fixture on the regional scene in Hindi journalism. These omnipresent gentlemen (none of whom can show a formal letter of appointment) can be found all the time in the DM's office, in the PRO's cabin or the local MLA car. And they don't just contribute stories regularly but are also said to undertake work to boost the circulation and take in private and governmental advertising for their papers.

The obvious question is, what do they do that for? And the obvious answer is, for the clout and all its fringe benefits that direct access to precious media space can win a small town man in the mofussils today. Such a journalist not only offers guaranteed space to small town politicians and their poet-social activist-*mahila* club relatives, but he also (and more dangerously) routinely plants stories that obfuscate the real news, about the misdeeds of the liquor and flesh-trade mafia and the police and politicians of these areas.

The journalist I met quoted the case of one such "journalist" in whose house cases of poisonous *sura* were found by the police but the matter was soon hushed up. By allowing such people access to their papers, some of the owners of regional dailies and periodicals may have solved the age-old problem of how the regional papers are to support the large band of journalist stringers who are so necessary for culling news from far-flung areas for the regional editions. But, they have also, in one stroke, mauled and scarred hopelessly the face of regional journalism.

●

FOR a young and ambitious Hindi language journalist in a mofussil town in India, the expansion of journalistic frontiers through regional editions of well-known dailies has been a mixed blessing. It gives him (very seldom her, but on that later) a chance to start communicating under conditions that are extremely favourable but also professionally somewhat unreal. Chances are that stories by a bright young man will be read and appreciated initially by major houses and eminent editors of eminent national dailies. He will also soon gain a responsive and usually vocally supportive readership but before long, he'll feel the pressure to fall in line.

The first to apprise him of his *aukat* (real status) might be the editor himself. I was shown a bunch of such letters received by some of these hapless, young correspondents from their editors, and they were all nasty without exception. Then there is the hostile news desk in the head office which his work has to pass through. If my young colleagues are to be believed the news desks today are liberally sprinkled with jealous and cynical old hands and some paid guardians of vested interes groups—the latter will never allow a damaging story agains their mentors to pass through but will hold back printing schedules to accommodate stories by their stooges.

In a period where scams and communal acts by anti-nationa groups are threatening the very fabric of our society and polity this state of affairs in a section of the print media with daily access to millions of minds, needs to be scrutinised and amended as soon as possible. This needs to be done not only so that truth may prevail but also so that young, honest and energetic voices from our mofussils may find media space to report in. Writing withou publishing, as somehow said, is like loving from far, deliciou for fantasies, but thin gruel for living. ■

The Muslim Vote

SEEMA MUSTAFA

Political perceptions have changed. And so has the Muslim vote bank. Once a formidable monolith, and the preserve of the Congress party, this vote bank can no longer be regarded as a bloc vote influenced as it is by local and regional factors. Having become resilient to populist slogans the Muslims, in any given area, have become far more discerning and as the last general elections in particular have proved, are no longer inclined to vote as a herd adhering to *fatwas* for any one party.

The Muslims' disenchantment with the Congress party began from the Emergency days, but even so when Indira Gandhi returned to power in 1980 she retained her hold over this sizeable electorate that saw no political alternative to the Congress party. Muslims supported her not as the messiah they had failed in the early 1970s but as the leader of a party wedded to their interests, at least more so, than the other Centrist configurations on the horizon. The gradual communalisation of the Congress-I under her, the communal riots during the period, the governmental apathy led to a distancing between the Muslim voter and the party that he had held to be his own since independence. After her death, the Muslim electorate, as affected as the rest of the country by the sympathy factor, voted *en bloc* for her son Rajiv Gandhi. Although an attempt was made by certain vested interests at the time to prove that Muslims had not voted for the Congress-I, this is not borne out by facts and the Rajiv Gandhi sweep reflected a consolidation of the Indian vote all over the country.

Came the historic Shah Bano judgement. And the government's decision to intervene at the instance of some 'Muslim leaders' was the turning point in the recent communal history of the country. Choosing to turn a deaf ear to the secular and liberal voice, the government sided with fundamentalists to overturn the Supreme Court judgement. The reaction set into motion a chain of events for which the country is still paying a price. The locks of the Ram Janmabhommi/Babri Masjid site were opened, *shilanyas* allowed, and the state turned into a willing partner of the obscurantist and fundamentalist forces set on wrecking the integrity and unity of India.

The final nail into Congress-I-Muslim relations was thus driven and it became clear that the Muslims had decided to severe links with the ruling party. This was again an *en bloc* decision, and transgressed regional barriers. No religious leaders were required. No *fatwas* needed to be issued. It was the independent decision of the man on the street who felt that his security was in peril as a direct result of the policies pursued by the Rajiv Gandhi Government. And this brings one to the next point, central to understanding the Muslim vote bank.

●

MUSLIMS in India have not been looking for Muslim leaders. In fact the greatest Muslim leaders since independence were all non-Muslims—Gandhi, Nehru, Indira Gandhi for a while and V.P. Singh for a briefer duration. The Syed Shahabuddins and others of his ilk have failed to cut much ice with the Muslim electorate and despite their communal posturing have had to struggle to win their own elections from Muslim-dominated constituencies. Muslim organisations like the Jamaat-e-Islami have failed to acquire a mass base, and others like the Babri Masjid Action Committee formed to exploit the Ayodhya issue have been reduced to little cliques because of the Muslim electorate's indifferent response. When it comes to the question of security the average Muslim, regardless of the local *madrasa* or Masjid's position, is looking for a national credible alternative in which the fundamentalists of his community have no place. Unfortunately, the populist politics of recent years has failed to understand this or take it into account, and today there are Centrist parties insisting upon projecting communal Muslims, masquerading as custodians of Islam, as the spokesmen of the community. This attitude—regrettably has elicited a strong reaction from the majority community which sees in it as yet another example of 'pampering' minority fundamentalism. But more of this later.

The National Front and the Janata Dal came into the picture at just the right point of time. The Muslim electorate, looking for an alternative to the Congress-I, embraced this combine wholeheartedly and with much gusto. And translated the enthusiasm into votes in the next general elections. A North-South divide in the Muslims' perceptions was evident but not sufficient to indicate any real fragmentation of what had been for decades considered a 'vote bank'. The NF Government's stand on the Ayodhya issue endeared it to the Muslims and when the government fell after the withdrawal of the BJP support, V.P. Singh became the hero of the Muslim masses. But the adulation was not, as it would have been even a few years ago, converted into votes. The Muslim villager declaring: "We will vote for anything so long as it is V.P.Singh's" did not live up to his promise at the time of voting. And while in Bihar the Muslims joined the backwards in supporting Laloo Prasad Yadav, in Uttar Pradesh their decision was influenced entirely by local considerations as it was in most other States. Finally, the Muslim voter decided to remove the blindfold and make it clear that the 'vote bank' had matured into a discerning electorate.

The process has been hastened by the collapse of the Congress-I as a committed secular party, and the appearance of other conglomerations which for one reason or the other have captured the imagination or the goodwill of the Muslim masses in their search for a new idol. The pattern of voting in Uttar Pradesh in the last parliamentary elections can be taken as a case in point. The Muslim electorate, admittedly, was passionately behind the Janata Dal. But underlying the passion was an objective understanding of the ground reality, and an overriding preoccupation with the community's own safety. The Muslim electorate throughout the State, and in fact all over the country, was agreed that the BJP was the main enemy.

In UP the general consensus was to defeat the Congress-I as well which, in its perception, had conspired to strengthen the hands of the VHP and the BJP. But even here, in some constituencies where the Congress-I candidates (Lok Sabha and Vidhan Sabha), had succeeded in winning the minorities' confidence, the results even in Muslim strongholds indicated a pattern entirely different from the rest of the State. The candidates' past and present performance, the party's organisational strength and other such local factors were seen to influence the Muslim voter in making his choice. His heart was with the Janata Dal, or so he claimed and rather vociferously at that, but he cast his vote with his mind. He might have erred but by applying his mind showed that he had come of age. So the Muslim vote in the State was split between the Congress-I (marginally) and more so between the SJP and the Janata Dal, depending on the candidate fielded and the organisational strength of the party in question.

The message is clear – that the Muslim voter values his security above everything else and will vote for any party (except the BJP) which appears more stable, is more concerned with the minorities' safety in real terms and not populist gestures, and for candidates having the determination and strength to take on the BJP. Since no one party can lay claim to this position, this fragmented political structure necessarily means a fragmented Muslim vote.

At the same time, there is resistance, at the ground level, to separatist talk. The beleaguered minority of Uttar Pradesh, for instance, is not too keen on confrontation and has shown a decided preference for rapprochement and reconciliation rather than the extremist jargon indulged in by some Muslim politicians. The Islamic Sewak Sangh that is causing concern in Kerala is not for the North Indian Muslim who does not want the support being extended by political parties to take on a confrontationist hue. The Adam Sena floated by some Muslim leaders a few years ago under the patronage of the Naib Imam Ahmed Bokhari, failed to enthuse the minorities and died a natural death.

●

IT is clear to the Muslim in the village, however illiterate he might seem, that his fate is linked to that of secularism in this country. And that the fight for secularism cannot be fought by maulanas or those speaking their language, but by political parties and individuals wedded to secularism as an ideology. Bitter experience has taught him that inflammatory speeches by 'Muslim leaders' espousing the Muslim cause generate a reaction which poses a threat to his basic security. But the same cause taken on by political parties and secularists, particularly those from the majority community, makes life more secure for him and his family.

This fact, unfortunately, has not been understood by our political leaders whose handling of the Muslim electorate is still based on conceptions of the past. One, that it is an *en bloc* vote that can be wooed by populist gestures and two, that it will respond better to the rhetoric of 'Muslim' leaders than others. And so one has a variety of individuals at large, of all political hues, claiming to enjoy the confidence of the Muslim community. Some of these self-styled Muslim leaders go a step further by claiming an exclusive right to Islam, and condemning all Muslims who disagree with them as being 'anti-religion'. Despite their zealous assertions there is not a single 'Muslim leader' today who can claim to enjoy the confidence of the Muslim electorate in his constituency. Most of them have changed their constituencies and others have opted for the Rajya Sabha as a decidedly less complicated ground to operate out of. Even so when there is a riot, or a public meeting in a Muslim area, or an issue perceived even today by our politicians as a 'Muslim issue', these gentlemen are pushed to the forefront by the Centrist parties in the mistaken belief that they enjoy more clout with the Muslim electorate than the others. This is simply not true. A V.P.Singh, or even a Paswan generates more confidence in an electorate concerned with its security and well-being than a Syed Shahabuddin spouting fire.

Populist gestures continue. And what is passed off as mass action–the odd *dharna* or demonstration–on Ayodhya, for instance, lacks substance as it lacks strategy and an understanding of what is really at stake. For the politician in the field it is a means of wooing the Muslim vote bank. "The Muslims are with us" is an oft-heard phrase in today's politics with the Centrist parties vying with each other to capture this electorate. It is true that the *dharna* and the demonstration against the BJP has a favourable impression on this minority community all over the country; it is also true that this will not be the only criterion for its vote. After all, the National Front Government fell on the Ayodhya issue and even so the Muslims all over the country scattered in accordance with their regional and local perceptions. A sustained, strategised, national effort is needed to combat communalism for a piecemeal approach will have only piecemeal results.

The dimensions of electoral politics have changed. A major vote bank that could swing political fortunes has started reacting like the rest of the electorate (except the Harijans perhaps). It is cured of the hangover from partition and independence, and the new generation of Muslims are playing for infinitely higher stakes: their future. ■

Message from Rio

J.C.KAPUR

The Rio Conference and its outcome were both conditioned by the present world environment. With the breakdown of the Soviet state, visions are being projected that the world will now be ordered by a single superpower backed by highly industrialised countries. And the present situation is being regarded as a victory for *laissez-faire* economies committed to armament based consumerism which, it is expected, will become a way of life all over the world. It is also presumed that the centralised infrastructures of human, energy and other resources will continue as at present to form the basis of future development. Obviously, in projecting such illusions the human, environmental and resources constraints are not being recognised.

Thus the Rio Conference was only the reiteration of the old positions, emphasis on old interests—all presented with a feeling for the welfare, of the planet and the future of humankind. The reality soon became obvious as most participants displayed greater concern for the fall-outs from Rio on their politico-techno-economic power structure than the purpose for which the conference was called.

And this 12-day grand affair called the Conference on Environment and Development (UNCED) was attended by more than a 100 heads of states, 2000 NGOs and over 30,000 people. It was convened to awaken our conscience and provide an inspiring vision and a focus on the issues of environment and a destructive attack on cosmic balances threatening our future. But after two years of preparation, millions of miles of travels and producing thousands of tons of paper, all that appears to come out of the conference is that "the world was not yet ready or in a mood for such an exercise".

Apart from the many broadsides such as the German Environment Minister's comment on the US position at the conference as if "it was something like communism hidden by ecology", while someone else called this event "a meeting of the Leftist establishment".

●

WE are now passing through an era of the pre-emption of the world's energy resources and this is proposed to be extended to the world's forests. It is for us to be grateful that attempts have not yet been made to pre-empt the energy of the sun which at the moment is considered "too hot to handle and too widespread to monitor". Oil traders were not yet ready for curbs on oil consumption, the US coal lobby rejected emphasis on carbon dioxide emission from coal, the African states were keen to get a convention on desertification and the countries of the South were more concerned with their minimum needs programme and other development plans and also that those who consume must pay. The United States did not want to accept development as a right. Instead of bringing recognition to the people that consumption levels beyond a point were damaging the future, a US delegate stated that "high consumption levels in the North was good for the economic well-being of the South because it provided trade and job for the poor South".

The Rio Declaration Agenda 21 which had relatively smooth sailing lacks commitment, while the Biodiversity Agreement was not signed by the United States and France. While France and a few other countries agreed to contribute the proposed around 0.71 per cent of their GDP, most others hedged and made vague promises.

The issues relating to sustainable development were played down, while the unsustainable lifestyles in many countries were eulogised. Thus an entire range of real issues which formed the basis for such a massive conference, were sidetracked.

Biodiversity, one of the most critical issues, was considered more as a commercial issue to safeguard the interest of companies and countries rather than as the life-support system of the planet. Royalties to be paid and the transfer of technology received more importance than conservation of the environment. All in all, therefore, what happened at Rio was more political than anything to do with environment and development.

Over 2000 NGOs which came to Rio included such broad diversity of people and ideas that it looked more like an Indian fair or a circus than a world conference. There were saints and scholars, Amazonians, vegetarians—all projecting and claiming their own contribution to the preservation of environment. Even the gays claimed homosexuality was ecologically a contributor to population control. The breast-feeding of children was also presented as ecologically beneficial as it saved children from the hazards of processed milk. Whatever may be the contribution of these and hundreds of other NGOs, they clearly represented a voice of protest against one aspect or the other of the armament consumerist model of development. Except for a few who were there to support the line of their country, it was largely a congregation of protest. As such the two wings of the conference—that is, the official and the NGOs—were kept physically and emotionally apart and had little to do with each other.

Bush talked about scientific uncertainty of many of the issues such as global emissions and called it a radical position which will throw a lot of people out of jobs. But no one raised issues concerning the basic processes which led to environment destruction. He raised issues on the forests. While he was not prepared to accept strong action against profligate energy consumption and uncontrolled consumerism, he supported wholeheartedly bringing the world's forests under centralised control. He also considered the right to development of the South as tantamount to the right to destroy environment.

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea.
The country produces from the ordinary to
the best teas, yet the Indian consumer does not get to
drink the best. That is why APEEJAY, which is
the 4th largest tea producer in the country, has decided
to introduce its selectively picked high quality pure
Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens.
Make it the way you normally make your tea and it will
give you a superb flavour and liquor.
Drink this tea for 3 months and you will
never want your old brand again.

Dissecting Yugoslavia's Disintegration

ROBERT M. HAYDEN

In a period of slightly less than two years, from September 1989 until June 1991, Yugoslavia went from being the most progressive socialist country in Europe and a leader of the non-aligned movement to being a "state in the process of disintegration", as the European Community put the matter. From June 1991, when the republics of Slovenia and Croatia proclaimed their independence from the Yugoslav federation, until March 1992, what had been one state disintegrated into chaos, accompanied by a civil war. With the recognition of the independence of Slovenia, Croatia and Bosnia and Herzegovina[1] and their acceptance into the United Nations, the European Community and the United States legally transformed the civil war into an international conflict. With the imposition by the UN Security Council of 'sanctions' on the so-called Federal Republic of Yugoslavia, composed of Serbia and Montenegro, and that entity's isolation from the world, the position that had obtained in 1991 was reversed: Yugoslavia had lost international legitimacy, while the new mini-states that had seceded from the federation had gained it.

This progression of diplomatic steps, of recognition and derecognition, was accompanied by the escalation of warfare within the territory of what then was, and now used to be, Yugoslavia. Following Slovenia's pronouncement of independence in June 1991, several limited military actions took place during which Slovenian forces took control of the international border. This brief, limited conflict was followed by the withdrawal of the Yugoslav army from Slovenia. In August, intensive warfare broke out in parts of the republic of Croatia which had large Serbian populations or which were strategic areas bordering on Serbia.[2] The intensity of this warfare was almost unlimited where it took place but the geographical battlefronts were very confined: most of Croatia was not involved. With the acceptance by Croatia and Serbia of a ceasefire and the placement of UN peacekeeping forces in the disputed regions in early 1992, this conflict also subsided. However, it was followed by the explosion of conflict throughout Bosnia and Herzegovina (B and H) in March 1992, when the EC and the US recognised the independence of Bosnia following a referendum in which the Muslim and Croat segments of the population voted to secede from Yugoslavia while the Serbs boycotted the referendum and proclaimed their own independence from B and H. Warfare in B and H has been unlimited in intensity or geographical area, virtually total war within that republic. The vicious bombardment of Sarajevo by an army that had until weeks earlier justified its existence on the protection of a state that included Bosnia was especially shocking to a Europe that liked to view itself as 'civilised' as was the 'ethnic cleansing' practised by the various sides. The EC, forgetting that these methods had been perfected by some of its own members 50 years earlier, preferred to view the conflict as an aberration caused by a putatively 'Balkans mentality'.[3]

Despite the international recognition of the independence of the state of Bosnia and Herzegovina and the imposition of 'sanctions' on Serbia (or the so-called Federal Republic of Yugoslavia) for aggression on that newly sovereign state, the war in B and H is a civil war. The newly 'inviolable' borders of B and H divide families and isolate large groups of Serbs and Croats from their 'mother republics'. All three of the 'nations'[4] in B and H, the Muslims, Serbs and Croats, speak one language, Serbo-Croatian. Intermarriage between the groups was high, as it was in other parts of Yugoslavia in which the various nations lived intermingled, and many residents of B and H have found themselves or their spouses suddenly transformed into foreigners. Indeed, it is precisely because it is a civil war that it is so vicious. Civil wars are always the most brutal, perhaps because no one, no matter what their age or gender, is viewed as a non-combatant.

The disintegration of Yugoslavia is a tragedy at many levels. In terms of immediate victims, in the first year of the war more than twenty-thousand people were killed, far more than that wounded, and perhaps two million (out of a pre-war population of 24 million) driven from their homes. Economically, the entire population of what was Yugoslavia has been impoverished, with even the least damaged areas facing massive unemployment and falls of 40 per cent from 1990 levels in their standards of living. Politically, within (ex-) Yugoslavia, what had been the most open and least repressive of state socialist regimes has been replaced by freely elected militaristic state chauvinist ones that are more totalising in intent and effect than the Communists had been in their last decade of rule. Virtually throughout the territory of ex-Yugoslavia, the levels of individual freedom and freedom of the press are far less under the new 'democratic' regimes than they were in the last several years of communism. In terms of international politics, the 'new world order' has shown itself willing to countenance and even encourage the breakup of multinational federations, even when the cost to the peoples concerned is bound to be civil war and long-term regional instability.

The responsibility for the Yugoslav disaster must rest, first, with those Yugoslav leaders who have harnessed the chauvinism of their individual nations to destroy not only their fellow Yugoslavs but also their own several nations, in whose interests they claimed to act. However, the responsibility for the complete breakdown of the Yugoslav state, which has condemned the region to long-term instability and military confrontation, rests with the European Community and the US. Far from ensuring peace, the formal recognition of independent states in what was Yugoslavia ensures the permanent confrontation of regimes defined only by their opposition to each other, with an arms race and future armed conflict virtually guaranteed. A parallel may be drawn with the partition of India in 1947, except that all of the leaders in the formerly Yugoslav republics are Jinnahs, with no Nehrus, to say nothing of Gandhis, in sight. Just as Pakistan can only be defined in opposition to India, so can the various communities ('nations') of speakers of Serbo-Croatian define themselves only in opposition to each other and to any idea of their communality. That all of this has been justified by expressions of the need to destroy communism and by pious references to the 'right of self-determination' should not blind us to the larger geopolitical games involved, or to the implications of a 'new world order' that sees chauvinistic nationalism as a valid justification for the creation of a state.

Geopolitics of a Buffer State

The creation of Yugoslavia after the First World War was meant to be a solution to several geopolitical problems. At the most grand level, the victorious allies sought to create large states that would block German expansion to the East and South,[5] and they wanted to dismember the Germanic empires that had lost the War. The creation of Yugoslavia and of Czechoslovakia served both purposes. Both incorporated regions that had been part of the defeated Austro-Hungarian empire into new, independent states, thus reducing Germanic power in the centre of Europe. At the same time, the creation of these states seemed to meet both the needs and the wishes of the people within them. Larger states would be more viable than smaller ones, and the peoples to be included in each were similar. Czechs and Slovaks speak virtually the same language, while Yugoslavia would unite the speakers of most of the south Slavic languages, which are closely related to each other.[6] Further, in the case of Yugoslavia, the rise of national consciousness in each south Slavic nation during the nineteenth century had been accompanied by a movement for a united state of the south Slavs, as mutual protection against domination by other powers.[7] Apart from this wider ideological appeal, the creation of Yugoslavia seemed to suit the requirements of each nation within it. Thus the Serbs, who had had their own independent state since 1867 but large numbers of whom still resided outside its borders, would unite all of their people in Yugoslavia. Croats, dominated for centuries by Hungary, would break that subjugation. Slovenes, who had never had a state of their own, would acquire one, as would Slavic Macedonians.[8] Further, by separating from the losing side in the War, Croatia avoided having to contribute to the punitive reparations imposed on the Germans and their allies.

In light of the multinational character of Yugoslavia, it has long been fashionable to view it as an 'artificial' state, composed of incompatible and mutually hostile peoples. In fact, Yugoslavia in 1920 was no more artificial than Italy or Germany at the time of their unifications, or India in 1947, or Belgium or Switzerland at any time. Objectively, there are fewer differences in language, religion and culture between Serbs and Croats than there are between Prussians and Bavarians in Germany, for example. Nevertheless, the existence of separate national ideologies among the various Yugoslav peoples, competing with the ideology of Yugoslavism, meant that lines of potential cleavage were built into the Yugoslav state from its inception, and the first 20 years of Yugoslavia's existence saw the development of strong demands for autonomy if not outright secession, primarily by the Croats.[9] It was always possible for politicians inside Yugoslavia to play to these separatist sentiments, and for external powers to use them for their own purpose. Thus in the thirties, Italy and Germany supported Croatian and Macedonian independence movements, including terrorism. In their most dramatic action, these externally-supported terrorists assassinated the King of Yugoslavia in France in 1934.

With these geopolitical considerations in mind, it is not surprising that Hitler's first major aggression was against Czechoslovakia. With the acquiescence of the British and the French, that buffer state was dismembered in 1938. Germa diplomacy made Yugoslavia an ally until a coup in March 194 brought an anti-German government to power in Belgrad Ten days later, Germany attacked Yugoslavia and dismembered it, creating a fascist 'independent state of Croatia governed by the Ustasha, the terrorists who had been supported by Germany and Italy for the preceding decade (similar fascist puppet state was also created in Slovakia). Th new Croatia was enlarged to include Bosnia. The Ustash Government of fascist Croatia, installed in April 1941, bega a campaign of terror and extermination against the large Ser population in Croatia that summer. The express goal of th campaign was to eliminate the Serbs from Croatia, by killin one-third, expelling one-third, and forcibly converting one third to Catholicism.[10] Many tens if not hundreds, o thousands of Serbs were killed. At the same time, howeve other forces, notably Serbian royalists and Tito's Communi Partisans, fought the occupying Germans and each other. The period 1941-45 in Yugoslavia was thus simultaneously war against foreign occupation and a civil war. Atrocities an massacres were committed by all sides.

For reasons still debated by historians, the Allies supported Tito's Partisans instead of the Serbian forces whic supported the king, and the Croatian fascist regime collapse with the demise of the Third Reich. Communist Yugoslavi reconstituted the country that had existed from 1920 unti 1941, with some additional territory. In theory the Communists opposed nationalism, and one of the bedroc ideological principles of Tito's Yugoslavia was 'brotherhoo and unity'. In practice, the politics of the second Yugoslavi were based on balancing national interests, and the countr was quickly organised into republics, drawn largely on ethnonational lines. From 1945 until the end of the Communis regime, national identities retained their importance i politics. Nationalism and separatism, however, were discouraged.[12] The most extreme nationalists were driven out o Yugoslavia, but maintained organisations in other countries notably Germany, the United States and Australia. Many o these organisations were engaged in terrorist activities and were considered by the US Government to be terrorist organisations. However, the activities of these groups were not overly hindered leaving them free to try to destabilise Yugoslavia.

Tito's Yugoslavia was considered a Soviet satellite until 1948, when Tito broke with Stalin and removed Yugoslavia from the sphere of direct Soviet domination. Western support for this 'maverick' Communist regime, at first tacit, became open by the early fifties, when the value of the country as one of the neutral buffer states between NATO and the Warsaw Pact was acknowledged by both sides. Tito, recognising the intermediary potential to play off the surrounding powers, used this geopolitical position to great advantage.

While the division of Europe after the Second World War is generally thought to have been accomplished in response to the pressures of the growing conflict between the Soviet communism and 'the West', it is likely that the containment of Germany was as much a consideration in 1945 as it had been in 1920. The occupation and division of Germany into separate states, first *de facto* and then *de jure*, was accomplished with this in mind. Despite the important role that Austrians played in the Third Reich and the fact that the *anschluss* had been popular in Austria, that country was separated from Germany and absolved of responsibility for the War. At the same time that the 1955 recognition of Austria's independence made it a neutral buffer state between the Warsaw Pact and the NATO countries, it also completed he detachment of that part of the Reich. Similarly, the econstitution of Czechoslovakia and Yugoslavia re-established them as impediments to German expansion, particulary since the sizeable German populations that had existed in each of these regions for centuries were expelled from both ountries immediately after the War.

The containment of Germany after 1945 was so successful that the importance of independent Austria, Czechoslovakia and Yugoslavia in this regard has been largely forgotten, except, perhaps, among the Germans themselves. It is certainly striking that the pan-German interest in ensuring that no unified south Slav state exists seems reflected in the close coordination between Austria and the newly united Germany in urging the destruction of Yugoslavia. In the EC, Germany was willing to risk the Community's newly proclaimed unity in foreign policy by insisting on the recognition of Croatia and Slovenia in late 1991. Even though such recognition was opposed by all of the other EC countries, it was accomplished when the Germans threatened unilateral recognition if its partners would not go along. (Of course, why preserving EC unity was more important to the British and the French than it was to the Germans is another question.) In the CSCE, on the other hand, the campaign against Serbia was orchestrated by the Austrians. In any event, it is striking that within two ears of the reunification of Germany, Austria's goal of 1914 and Germany's of 1941 have been achieved: the destruction of the unified south Slav state, the partition by international boundaries of the largest nation in the Balkans (the Serbs), and the creation of German satellite states in that region: Croatia and Slovenia. The recognition of the 'independence' of Bosnia should be seen in this light. The impending disintegration of Czechoslovakia will complete the destruction of he states that had limited the expansion of German influence.

atal Confederation

For all the involvement of foreign hands in Yugoslavia, the ragic fate of the Yugoslav peoples was ensured by their own susceptibility to the appeal of chauvinistic nationalism. The political upheavals that destroyed Yugoslavia were first and oremost the result of actions of Yugoslav politicians themselves, although encouraged and aided by foreign powers.

Despite the bitter heritage of the civil war of 1941-45, ntegration in the country advanced substantially from 1945 until the late eighties. The number of people who identified their nationality as 'Yugoslav' (rather than Serb, Croat, etc.) ose substantially.[13] The rate of marriages between peoples of different nationalities was about 10 per cent nationwide in the eighties but considerably higher in those areas in which the populations were most mixed. Thus in Croatia, which had an ntermarriage rate of 17 per cent overall, the rate in some heavily mixed regions approached 40 per cent.[14] Most of these marriages were between Serbs and Croats, the very groups most heavily antagonistic to each other during the civil war of 1941-45.

Regardless of this living proof of the compatibility of the Yugoslav peoples and their growing integration, the political tructures of the country did not recognise this integration, to ay nothing of encouraging it. Instead, the country was divided into 'republics', each except B and H bearing the name of one of the national groups and incorporating most of its traditional heartland. This administrative division may not have been dangerous in the earlier years of the second, Communist Yugoslavia, because of the tight Leninist one-party political tructure and also a federal constitutional structure that gave eal power to the Central Government. However, the claim to fame of the Yugoslav variant of communism was the attempt to develop a less centralised, less bureaucratic, more democratic socialism, which was symbolised under the term 'self-management'. In theory, the League of Communists of Yugoslavia would grow less and less involved in decision-making, while citizens and workers managed their own affairs.[15] However, an attempt to liberalise the political system in the late sixties opened the way for an openly nationalist movement in Croatia which was barely suppressed in 1971. In response, 'reforms' were enacted of both the political system and the federal structure. While the famed oxymoronic principle of 'democratic centralism' remained in regard to the League of Communists, the solution to the 'nationalist question' was to give even greater autonomy to the individual republics. In effect, constitutional amendments enacted from 1969 to 1971 transformed the Yugoslav federation into a confederation of republics, in which the Central Government had very little power. Federal legislative bodies were composed only of representatives of the republics, not of the people directly. All federal legislation had to be approved by all the constituent entities of the federation, and federal laws were to be administered by republican authorities. There was no federal court system, although a single federal court was empowered to hear cases between members of the federation, while a Constitutional court could hear challenges to the constitutionality of legislation and administrative acts. This confederal structure was refined and enshrined in the Constitution of 1974. Enforcement of the decisions of these courts, however, was problematical.

While President Tito lived, the confederal nature of the Yugoslav Constitution was largely irrelevant since his own personal and constitutional power was virtually unlimited. Upon his death in 1980, the constitutional structure seemed to provide mechanisms of governance, and the post-Tito transition went, initially, smoothly. However, the Yugoslav economy began to decline rapidly entering a period that came to be known as the 'permanent crisis', with increasing unemployment and inflation. The resulting political pressures showed the weaknesses of the confederal system since it was difficult to obtain the unanimous agreement needed for any effective action. Instead, the leaders of the various republics entered a period of what has been called 'combative federalism' in which many a federal decision was held hostage by one or more of the republics, in order to obtain gains in other areas.[16] The result, of course, was to prevent effective reforms, thus intensifying the economic crisis.

The worsening economic situation and the growing crisis of socialism in Europe [17] increased pressure for political change. In the early eighties, analyses were published that pinpointed the sources of the 'permanent crisis' in the system of self-management socialism and specifically in the confederal nature of the Yugoslav state.[18] However, by the mid-eighties, criticism of the system took another turn particularly in the republics of Serbia and Slovenia.[19] There, 'dissident' intellectuals began to enunciate criticisms of the Yugoslav federation as harmful to the interests of their several nations. Slovenia, the republic with the highest standard of living in Yugoslavia and one of the lowest rates of unemployment in the world, claimed that it was being exploited by the rest of the country since resources from the wealthier republics were used to help develop the less well-off ones. Serbs, on the other hand, objected to what they saw as the unequal position of Serbia within the federation. While the 1974 Constitution had given virtually complete autonomy to all of the other republics, Serbia had been divided by the creation of the two

'Autonomous Provinces' of Kosovo and Vojvodina within its borders. These provinces, nominally part of Serbia, were actually equal units of the federation with the republics. Further, Serbia itself had no control over the provinces but the latter could exert power over Serbia. Thus, the provinces had representations within the Serbian Parliament, but the republic had no representation within the provincial parliaments. Further, while amendments to the Serbian Constitution required the agreement of the provinces, the provincial Constitutions could be amended without the consent of Serbia. This situation was particularly galling to the Serbs because the province of Kosovo had been the heart of the medieval Serbian kingdom, the source of the myths of Serbian nationhood, but had passed out of Serbian control. Since 1945, Serbs had left Kosovo in droves, reducing their percentage of the provincial population from about 50 per cent to less than 15 per cent in the late 1980s. The per cent of Albanians in the population had increased correspondingly. Thus Serbs saw their co-nationals as a threatened minority in Kosovo, while the Kosovo Albanians saw themselves as a threatened minority within Serbia.[20] Resentment on both sides built throughout the 1980s as Serbia resorted to the kinds of methods of control used by the Israelis in the Occupied Territories.

Serbs, in fact, began to feel increasingly that Yugoslavia had been created and maintained at their expense, and that the Serbs had lost heavily in the federal state. Their resentment was given form in a Memorandum by a 'group of intellectuals' at the Serbian Academy of Sciences, drafted in 1986.[21] Though the Memorandum was never published, it was leaked to the press and sparked great discussion throughout Yugoslavia. The Memorandum condemned the division of their nation in three of the Yugoslav republics and even inside the borders of the Serbian republic itself. It saw the development of post-war Yugoslavia as a continuation of a pre-War Communist conspiracy against Serbia and the policies of Tito's regime as aimed at keeping Serbs subordinate to other Yugoslav nations. It also saw Serbia as exploited economically by the richer republics.

The rising Serbian anxiety over the Kosovo situation and the resentments expressed in the Memorandum were aimed at the Communist leadership. However, what occurred was not the overthrow of the one-party socialist state, but rather its transformation into a one-party national chauvinist one.[22] Slobodan Milosevic, one of the new generation of Yugoslav Communist politicians, embraced what had been dissident nationalist criticism to transform the Serbian League of Communists, in a virtual coup inside that party in late 1987. Milosevic, who aspired to be a new Tito, organised mass demonstrations in Vojvodina, Kosovo and the Republic of Montenegro, overthrowing the regimes there and replacing them with his own followers. He thus inspired fear in the leadership of the other republics and gave ammunition to the nationalists in other republics, who could cite Serbia's rising nationalism as threats to their own peoples. The Slovenian leadership, under heavy pressure from nationalists in their own republic and afraid of Milosevic's growing power, attempted to co-opt their local critics by adopting a nationalistic platform themselves and by searching for ways to limit potential assertions of Central authority over their republic. They found the latter in the confederal structure of the 1974 Constitution, and in September 1989 Slovenia pronounced a doctrine of republican supremacy over the Centre, saying that in cases in which the federal and republican Constitutions conflicted, they would follow the republican Constitution. This position, soon adopted as well by the Croats and then by the Serbs, more or less ensured the destruction of Yugoslavia and the civil war since it precluded constitutional mechanisms for resolving conflicts, leaving only unilateral actions backed by threats of force. That the Slovenian doctrine was arguably congruent with the text of the Constitution shows the weakness of that poorly drawn document.

Nationalism, Homicidal and Suicidal

After Milosevic's ascension to power in Serbia in 1987, the politics of Yugoslavia became increasingly based on nationalism of a singularly vicious kind. The logic of Yugoslav nationalism was binary in structure and zero-sum in content. In this kind of nationalism, the individual does not exist except as a member of a nation and those with ties to other nations are suspect. Further, every element of social, political and economic life is seen in zero-sum terms: a gain for one nation can only be at the expense of another. The idea that all parties could gain by cooperation or at least mutual accommodation was strikingly absent, since anyone who suggested any kind of concession to other nations was immediately branded a traitor. This structural logic, combined with the traditional European concept of the nation-state, renders minorities within such a state not only foreign, but contaminating of the bodies, social and political.[23] Within each of the republics except B and H, politics was immediately transformed into a combination of campaign against the largest local minority and against the Yugoslav federation itself. At this point, the term 'self-determination' took on a sinister connotation never envisioned by Woodrow Wilson or, presumably, by those who included it in various United Nations documents. In the Yugoslav reading in 1990, self-determination would be achieved when the given nation achieved its own sovereign state, in which sovereignty rested with the ethnic nation, not with the body of equal citizens. 'Concessions' to minorities were given grudgingly, if at all, and in ways designed to indicate that the members of these minorities could never be equal with those of the majority. Indeed, the politics of these regimes reversed the logic of 'affirmative action' or 'compensatory discrimination' in favour of minorities,[24] promising instead 'negative action' (to coin a phrase) to ensure that members of minorities would not be given important positions. Sovereignty, of course, precluded any idea of federation and while the concept of 'confederation' was frequently cited, it is clear that those who raised that idea did so as a smoke-screen to obscure their goal of destroying Yugoslavia.

With the fall of communism in Europe in 1989, elections in Yugoslavia became inevitable and were held in 1990. Again, the confederal nature of the constitutional (dis)order was used to help destroy the federation, this time by republican vetoes on federal elections, while the republican ones were held. This strategy gave 'democratic' legitimacy to the newly-elected republican governments but denied the federal government a chance to obtain its own legitimacy. Of course, to do so was necessary for the several republican regimes, since the federal Prime Minister, Ante Markovic, was the single most popular politician in all of Yugoslavia in 1990, and had federal elections been held, he would almost certainly have won them. To avoid this challenge to their own supremacy, the republics of Slovenia and Croatia blocked the federal elections.

The elections in 1990 doomed Yugoslavia, although the voters did not vote to do so. In the first elections, in Slovenia, a coalition of small to tiny parties assembled a 53 per cent majority in the new Parliament, and excluded the two parties that had achieved the largest vote. The new government pushed for 'sovereignty' with the intent of destroying Yugosavia, though this goal had not been put to the voters. In Croatia, a badly written election law let the extreme nationalist Croatian Democratic Union gain a two-thirds majority in Parliament on the basis of 43 per cent of the vote; it promptly used its unassailable legislative power to undermine the federal state.

In these republics, and in Serbia later in the year, the parties that won based their appeal on a combination of national chauvinism at the federal level and hostility to the argest local minority. For all of the peoples of Yugoslavia, however, the adoption of this kind of nationalism was likely to be both homicidal and suicidal. The homicide was implied by he relegation of minorities to the political role of scapegoat: all problems are due to the minorities, who 'don't belong'. The same logic had been applied in Europe in the 1930s and 1940s, with disastrous results. In Yugoslavia, the most sensitive minority was bound to be the Serbs in Croatia, since exactly his kind of nationalism had led to genocide against them by he fascist 'Independent State of Croatia' in 1941-45. Rather han calm their fears, however, the new President of Croatia, who before the election had described that fascist state as a legitimate manifestation of the historical aspirations of the Croatian people", and who had published a book that amounted to an apologia for the genocide,[25] pursued igorously chauvinistic policies.

In such a case, the minorities are likely to resist, perhaps o rebel; but such rebellion must be forcibly put down to show he sovereignty of the majority in its own state. This cycle of iolence, already begun in Kosovo in the 1980s, spread to Croatia in the late summer of 1990, when Serbs in parts of Croatia that were almost entirely Serbian rebelled at the new tate chauvinism of the Croatian Democratic Union Government.[26] The government, rather than attempt to accommodate Serbian fears, vowed only to crush the rebellion. Its ttempts to do so were resisted by the Serbs and the first stages of the civil war began.

In B and H the situation was rather different, since there was no majority population. The results of the 1990 elections aralleled those of the distribution of the nations in the opulation, with a Muslim nationalist party getting about 50 er cent of the vote, a Serb nationalist party getting about 33 er cent of the vote and the Croatian Democratic Union etting the rest. These parties temporarily formed a cooperative government, more or less, but as Yugoslavia crumbled, the Muslims and Croats formed an alliance to proclaim indeendence. Since a similar alliance had been used against them uring the civil war 50 years earlier, the Serbs objected, and ttempted to secede from Bosnia. The political configuration for the civil war there in 1992 was thus established.

The structural logic of the nationalists in Yugoslavia thus made violence inevitable by leaving no room for compromise. In the event, the war that the Croats started with their attempts to forcibly subdue the Serbian regions of Croatia was ursued most vigorously by the Serbs, not coincidentally the iggest losers in the breakup of the joint Yugoslav state. The erbian campaign of terror, forced deportation and murder in Croatia in 1991 and Bosnia in 1992 paralleled that waged by the Ustashe in the 'Independent State of Croatia' in 1941–45. Yet this homicidal nationalism was also suicidal, especially for erbia. As a result of the breakup of the federal state, all the nations of Yugoslavia, and all its former citizens, have lost. As united country, Yugoslavia was relatively prosperous and ad prospects for greater prosperity, and the region saw its nly half-century of peace. Ironically, the generation of lobodan Milosevic and the confederalist leaders of Slovenia in 1989 was the first generation in history in the Balkans that did not itself have to fight a war. Tragically, these leaders ensured that their sons and grandsons are almost certainly going to have to do so. The future for the ex-Yugoslav republics will probably be like that of Pakistan: corrupt, militaristic or outright military regimes, with permanent hostility to their closest neighbours. But such is the result of following Jinnahs, seeking a homogeneous nation-state rather than a democracy of citizens.

'International Community' and Destruction of Yugoslavia

While the Yugoslavs themselves bear the primary responsibility for their own tragedy, the posture of the 'international community' (in reality the EC and the US) seemed designed to ensure that the disaster would occur. First, their ready acceptance of the dismemberment of Yugoslavia stands in striking contrast to the general rule, that state boundaries are not changeable. Thus the world has resisted the demands of the Kurds for their own state, demands certainly more justified than those of Slovenia and Croatia. Similarly, it has refused to recognise *de jure* the *de facto* division of Cyprus. Lebanon has been a state in name only since the mid-seventies. In the case of Yugoslavia, the open Austrian and German political support for Slovenian and Croatian separatism (and more covert diplomatic and logistical support, include assisting the creation of armed forces in these secessionist republics) made the preservation of the federation difficult.

The stance of the US and the EC is even more curious when it is recognised that the destruction of Yugoslavia and Czechoslovakia undoes a major element of the peace strategies following both the World Wars. The German role in the dismemberment of Yugoslavia must have been clear to the other European countries and to the US, and one must wonder why they acquiesced so quickly.

One reason may be in a temporary communality of interest between the US and Germany and the end of the Cold War. With the dissolution of the Warsaw Pact, the Yugoslav Army was one of the largest armies in Europe, and was outside of American control. The easiest way to destroy that army was to destroy the Yugoslav state. This goal may also have accounted for the quick American recognition of the independence of B and H, a step that all parties must have known would induce open warfare in that republic. Bosnia had been the centre of Yugoslav defence strategy since 1920 and had the heaviest concentrations of military industries in Yugoslavia. By cutting the army off from its most important strategic positions and its most important domestic suppliers, the US and the EC ensured its rapid debilitation.

A rather different reason for American involvement in the dismemberment of Yugoslavia is ideological. Much to Serbia's misfortune, Milosevic's identity as the last Communist ruler of Serbia weighed more heavily than the strident nationalism that he shared with the leaders of the other Yugoslav republics. In American eyes, it was easy to present the conflicts between Serbia and the Slovene-Croat axis as being between (Eastern) communism and (Western) democracy. That all participants were in fact closer philosophically to fascism was perhaps difficult for the US and the EC to admit, particularly as Germany and Austria were most fervent in advancing the cause of the 'threatened democracies'.

Yet it is also possible that the reaction of the EC and the US was in fact based more on naivette than on conspiracy. In 1989, the general public assumption in the Western world, and especially in the US, was that the downfall of communism would automatically be followed by democracy in Eastern

Europe. That Hitler was the most fervent anti-Communist of the century, and that European thought over the last hundred and fifty years has oscillated between the poles of 'nation' and 'class' as organising principles,[27] largely missing the democratic concept of a policy of individual citizens,[28] did not seem to enter the public discourse. Perhaps Americans and western Europeans really thought that fascism was dead. In any event, the ready acceptance of the results of a single set of hurriedly called elections as affording democratic legitimacy to the winners made it easy for parties and politicians with no democratic inclinations whatever to wrap themselves in the trappings of the new post-socialist cult of the politically sacred. Indeed, the international community's ratification of the destruction of Yugoslavia may be seen as a cynical, ominous betrayal of any commitment to the development of democratic regimes in the formerly socialist countries. It may be that the death of Yugoslavia was preordained by the realpolitik considerations of the major powers, despite the tragic consequences that Yugoslavia's dissolution meant for all of the Yugoslav peoples. ■

Notes

1. Despite the apparent duality of its name, the Republic of Bosnia and Herzegovina was one entity within Yugoslavia and has been recognised as an independent state by the international community. It will be referred to in this paper as 'B and H'.
2. The republics in erstwhile Yugoslavia were each more or less defined according to the largest national group within it, as identified by their names: thus Slovenia was the republic of the Slovenes, Croatia of Croats, Serbia of Serbs, Montenegro of Montenegrins, Macedonia of Macedonians. However, most of these republics had large minority populations within them, and some parts of Croatia were, in fact, overwhelmingly Serbian in population. B and H was a special category, with a mixed population of about 50 per cent Slavic Muslims (identified as a 'nation' in 1967), 32 per cent Serbs and 17 per cent Croats (1981 figures).
3. The literal orientalism of many Western analyses of the Yugoslav situation is explored in Milica Bakic-Hayden and Robert M. Hayden, "Orientalist Variations on the Theme 'Balkans': Symbolic Geography in Recent Yugoslav Cultural Politics", *Slavic Review* 50: 1-15 (March 1992).
4. The supposed distinctions between 'nationalism' and 'communalism' blur in Yugoslavia. Serbs, Croats, and Slav Muslims in Yugoslavia speak dialects of the same language (although the Cyrillic script is used by Serbs, Latin script by Croats and Muslims), and the divisions between them are based primarily on religion: Serbs are Orthodox Christians, Croats Roman Catholics, and Muslims are, of course, Muslims. Since the Muslims are descendants of Serbs and Croats who converted to Islam during the 500 years of Turkish occupation of the Balkans, the populations are not physically distinguishable. Nonetheless, they are defined in terms of birth into a religious community rather than of personal adherence to a faith. Thus many Communists, *a priori* atheists, still identified themselves as Serbs, Croats and Muslims in terms of nationality. The increasing rates of intermarriage in Communist Yugoslavia mean that few communities are as 'imagined' as those of Yugoslavia, and few so intertwined.
5. The Germans were opposed to a unified south Slav state for just these reasons. It should be recalled that World War I started in 1914 when Austria attacked Serbia in an attempt to block Serbia's expansion into Bosnia, which Austria had annexed in 1908.
6. 'Yugoslavia' means 'land of the south Slavs' in Serbo-Croatian. The south Slavic languages include Serbo-Croatian, Slovenian, Macedonian and Bulgarian; but the language question has always been vexed. Croat nationalists have always claimed that Croatian is a different language from Serbian, not simply a different dialect; while the Bulgarians deny that Macedonian is a separate language, claiming it to be a dialect of Bulgarian. On purely linguistic grounds, the first claim is clearly nonsense, the second one more plausible. Of course, the political implications of these claims are tied to the Romantic vision that requires each nation to have its own language, and, conversely, defines 'nation' largely on linguistic grounds.
7. The best recent history of the formation of Yugoslavia is Alexis Djilas, *The Contested Country* (Harvard University Press, 1991). Ivo Banac, *The National Question in Yugoslavia: Origins, History, Politics* (Cornell University Press, 1984) is a close study of the formation of Yugoslavia and the first few years of the new state's existence.
8. The 'Macedonian problem' has once again arisen in Greece's refusal to recognise the independence of Macedonia as long as the Macedonians call their state Macedonia. The Greek argument is that Macedonia is a Greek word and names a region in Greece, and that calling Slav Macedonia 'Macedonia' recognises Slav claims to Greek territory. In reality, the Greeks are worried about the Slav minority in Greek Macedonia until now treated by Greece in civilised European fashion by denying their existence, who might want to secede from Greece. The Greeks demand that Macedonia be called Skopje, after its capital, a position analogous to a demand by India that Bangladesh call itself the Republic of Dhaka. Macedonia, in fact, faces territorial pretensions from Greece, Serbia and Bulgaria, and possibly Albania.
9. Banac, *op. cit.*
10. The Croatian genocide of Serbs, Jews and other undesirables, and the ideology behind it, is discussed in A. Djilas, *The Contested Country* (*op. cit*).
11. A highly readable account of this multifaceted war, by a leading participant, is Milovan Djilas' *Wartime* (Harcourt, Brace, Jovanovich, 1978).
12. Yugoslavia was not the only Communist country to deal with nationalism by formally recognising the importance of national identity while denying the legitimacy of chauvinistic nationalism. This ideological balancing act was facilitated by the centralism of the Leninist state, which kept political power in the hands of an exceptionally small elite. On the other hand, with the increasing fragility of Communist economic systems, this type of 'ethno-federalism' left the federal entity liable to fragmentation, since in a growing absence of tangible rewards for followers, absolute control over local resources became essential for the maintenance of power by republican leaders [see Philip Roeder, 'Soviet Federalism and Ethnic Mobilisation', *World Politics* 43:196-232 (1991)].
13. Stevan Burg and Michael Berbaum, 'Community, Integration and Stability in Multinational Yugoslavia', *American Political Science Review* 83:535-554 (1989). These authors were careful to note the fragility of this 'Yugoslav' identity, however, and suggested that it might decline as the economy worsened. This pessimism was, apparently, justified; figures from the census of 1991 (which may not be very reliable) indicated a sharp drop in the numbers of those who identified themselves as 'Yugoslavs'.
14. *Vreme*, March 9, 1991.
15. The literature on Yugoslav self-management is truly vast. The best introduction to the history of Communist Yugoslavia and the development of self-management socialism through the early 1970s is Dennison Rusinow's *The Yugoslav Experiment, 1948-74* (University of California Press, 1978).
16. Slobodan Samardzic, *Jugoslavija pred Iskusenjem Federalizma* (Beograd, 1989). See also Dennison Rusinow, ed., *Yugoslavia: A Fractured Federalism* (Wilson

Centre, 1988). Relations between the Yugoslav republics from the mid-1980s until the collapse of the (con) federation exhibited virtually all the failings of confederations that were pointed out by Hamilton, Madison and Jay in the early numbers of the *Federalist Papers* (1787).

17. By the late seventies, one joke common in East European intellectual circles was that no one believed in socialism anymore, except Western intellectuals.

18. See, for example, Iovan Miric, *Sistem i Kriza* (Zagreb, 1983). It should be noted that *glasnost* had thus come to Yugoslavia long before Gorbachev appeared on the Soviet scene.

19. The Serbs and Slovene positions are analysed in greater detail in Robert M. Hayden, 'Yugoslavia: From Civil Society to Civil War', paper presented at the annual meeting of the American Anthropological Association, Chicago, IL, November 1991.

20. Actually, both beliefs were valid. However, international human rights activists, concerned primarily with the actions of governments, focused mainly on the plight of the Kosovo Albanians and largely ignored that of the Kosovo Serbs.

21. One of the least pleasant aspects of studying Yugoslavia since the late eighties has been observing the transformation into fervent (sometimes raving) nationalists of people who had been good, critical intellectuals. A comparable feeling might be engendered if the faculty of the History Department at JNU were suddenly to embrace the theories of P N. Oak.

22. A similar transformation of a nominally socialist regime into a chauvinistic nationalist one had been accomplished by Ceausescou in Romania in the late seventies. See Katherine Verdery, *National Ideology Under Socialism* (University of California Press, 1991).

23. *Cf* Mary Douglas, *Purity and Danger* (London: Routledge and Kegan Paul, 1966). Minorities are 'matter out of place' in Douglas' terms, hence polluting and thus dangerous.

24. See Marc Galanter, *Competing Equalities* (Oxford University Press, 1984).

25. Franjo Tudjman, *Bespuca Povijesne Zbilnosti* (Zagreb, 1989).

26. It must be acknowledged that the Serbs' fears were intensified by a propaganda campaign mounted by the Serbian Government, as chauvinistically nationalist as that in Croatia. The actions of the two governments thus complemented each other in feeding the fears of the Serbs: the Croatian Government's 'firm hand' policy seemed to prove the truths of the Serbian government's anti-Croat propaganda.

27. See Roman Szporluk, *Communism and Nationalism: Karl Marx versus Friedrich List* (Oxford University Press, 1988).

28 See Louis Dumont, *Essays on Individualism* (University of Chicago Press, 1986).

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

IMPRESSIONS

The End Of Compassion

DINESH MOHAN

"The poor people were herded into a university campus in the Caribbean city of Barranquilla in the early hours of Sunday and beaten to death..." So goes a recent news report from Colombia in South America. When confronted with the problems of the Narbada Dam oustees a senior government economist retorted: "Well, some people have to pay the costs of development." Poor people seem to be an embarrassment and also expendable according to present norms the world over. If they didn't exist then it would be so much the better for all of us! If you can't kill them, you can at least pretend that they don't exist.

Consider our own situation. Our population has increased by two per cent every year in recent times; the grain production has remained stable, and pulse production declined. Obviously some people have less to eat. But we take pride in the fact that our grain stocks have gone up!

The health budget has been reduced. This means less money for government hospitals and higher treatment costs for poor people. But higher amounts can be deducted from incomes for health and health insurance expenses for those who pay taxes. The relatively well-off can share their medical expenses among themselves with the help of insurance policies. A reasonable form of socialism?

Lower middle class people end up spending almost ten per cent of their salaries for travelling to work but senior bureaucrats get free rides in staff cars and business executives get free cars with drivers. In the new Budget, deductible hotel expenses have been raised from Rs 600 to Rs 1200 per day. This means that the poor through indirect taxes pay for the rich to travel free and stay in expensive hotels. Quite obviously, the rich like sharing resources as long as the sharing is done by the poor!

The author teaches at the Centre for Biomedical Engineering, Indian Institute of Technology, Delhi.

The 1992-93 Budget has been hailed as pathbreaking, market-friendly, two steps in the right direction, integrating us with the world economy, etc. But to what end and for whom? I am not asking these questions as a rhetorical device. Nor am I ignorant of all the arguments trotted out about the *failure* of socialism and the *death* of Marxism. I am also quite aware of the evils of the centralised controls evolved by the IAS-boxwallah complex. However, if this complex had been broken by some widespread people's movement then we need not have worried too much. But that is not so. The old complex has only been replaced by a bankwallah-*dukandar* complex. The old players' progeny have just changed their loyalties.

●

THE fact is that compassion is out as a value. That is why the poor don't matter or they don't exist. The only recognition of their existence comes from private guards outside private VIPs' homes and official guards outside official VIPs' homes. In this market-friendly society, those inside these homes obviously do not consider those outside to be very friendly. The number of these guards has gone up dramatically over the past ten years. Is this also "good for the economy"?

Most of those particularly in favour of our variety of globalisation are also very upset with the "deteriorating law and order problem". They fear that "terrorism" in Punjab, Kashmir and the North-East can frighten foreign investors away. But they forget that "terrorism" of all kinds—kidnapping, murders and communal riots organised by criminals and the state—have increased dramatically in the 1980s all over India. This has coincided with "liberalisation" of the economy. Is this just a coincidence? And India is not the only low-income country where this has happened—Sri Lanka, Brazil....

The reason I raise these questions is because we will have to go beyond clichés of all kinds if we have to find a peaceful way forward for ourselves. There are very few precedents for India—multilingual, multireligious, multiethnic, extremely hierarchichal and very young as a nation-state. The only other nation we could have been compared with is China. But they took much better care of health, nutrition and education of their citizens before they opened their doors. So we can't really follow their policies now. But they do give us a clue.

There are no successful nation-states in the world today who did not give a great deal of importance to equal opportunities in health, education and nutrition in their early years of development. This is true for all political systems. Even in the USA almost everyone went to neighbourhood schools, state universities were almost free for a very long time, agriculture was heavily subsidised and controlled and the town doctor under tremendous social pressure. Out of the rich countries, health statistics are about the worst in the US where socialised medicine did not develop. The US neglected a significant minority of its citizens—the Blacks. Now the society has to pay for its past neglect in forms of high rates of crime, unemployment and violence and non-functional cities. There seem to be no easy solutions on the horizon for them either.

●

WE don't seem to have learnt from our or others' experiences. We established socialism for the rich but it had a human face at least for some time. And that kept our social fabric together for a few years. The frailties and hypocrisies of the system were exposed by the mid-seventies. That is when our system should have been decentralised, and opportunities extended to the poor. Instead, we went in for debilitating centralisation.

By the mid-seventies we had a good scientific and technological infrastructure which was far ahead of most other nations. We should have liberalised the opportunities for these highly trained persons. Instead by the late seventies we closed the doors for their development and opened the door further for the favoured ones to develop technology by trade.

These past policies were made by almost the same set of actors who are at the centre-stage today. They are in effect repeating their earlier actions—redistributing the wealth among rich politicians, bureaucrats and traders. It is not as if this has gone unnoticed. Talk to any hard working *mochi*, bus driver, small farmer or serious school teacher. They will express similar views but in more colourful language.

Our economists and politicians have to bring back compassion into their world view. All political movements and economic policies are likely to fail if they are explicitly devoid of a compassionate world view. Especially in a society where the majority of the people are poor. ■

EDUCATION

A 'Brahminical Order' in Place of Academic Renewal

BISWAMOY PATI

Prof Veena Das' 'The First Report of the Academic Renewal Committee' cannot and should not be dismissed by anyone connected with the process of education, especially teaching. It comes at a juncture when the government agencies are on the threshold of declaring the educational establishment as a 'sick industry'; there is a revival of discussion on the Accredition Councils; debates on the question of resource generation from within educational institutions; rumours about DA cuts, reduction of the retirement age for teachers and the percentage of teachers to be allowed to take study leave. One can add on many things to this list; however, it would be sufficient to visualise a dark future, with the Indian state declaring a major offensive against the system of higher education.

Consequently, it is significant that the Delhi University has appointed a Committee for Academic Renewal and Prof Das' draft has been circulated for a discussion, even though the participants were chosen very selectively. It is not possible to take up every point raised by Prof Das. We shall, however, take up and examine some of the issues she focuses on; these can be roughly identified as : (1) absenteeism of some teachers; (2) the lack of control over the work spaces at colleges, and the perception that these institutions act as major obstacles to the life projects of everyone connected with them; (3) the alienation of teachers; (4) the career advancement of teachers which undermines the academic process; (5) the young/old teacher dichotomy; (6) the question of empowering the teacher; (7) educating girl students to face problems of dowry, violence or unexpected deaths.

However, this draft suffers from certain major methodological flaws. The writer, a leading sociologist, has not appended any questionnaire, lists of teachers and students with whom she had 'formal' or 'informal discussions' and the bibliographical details of the books, articles and reports consulted by her. Moreover, the top-heaviness of her discourse is blatant in the way she refers to discussions with college principals, since the large majority of them are isolated from the process of teaching and are in their office, as everyone knows, due to their extra-academic qualifications.

Before going any further let us delineate certain basic problems affecting various institutions of Delhi University.

1. In many colleges there are 'young teachers' who have grown old/bald as temporary teachers, and they continue to teach without knowing what would be their fate in the next academic year.
2. Many evening colleges have frequent power cuts, and without any alternative source of electricity, classes are often affected
3. In many colleges the classrooms are worse than stables, lacking basic amenities like fans, desks and lights.
4. There are many institutions in this University which lack proper drinking water, and there are incredible debates centred around whether the dog that was found in the overhead water tank was dead or alive.
5. Many of the colleges have libraries which are overcrowded, provide outdated books and lack basic journals needed by the students.
6. Many teachers of English in this University are forced to teach English literature in Hindi.
7. Unlike the departments, the principle of rotation does not apply to the heads of the colleges, preventing any possibilities of change.
8. On many occasions there are no separate toilets for women teachers, and that most of the toilets in this University are virtual hell holes.

It is at this juncture that one should raise three questions: Is Prof Das aware of at least some of these problems ? Going by her Report, she is not. Is it really worthwhile talking about 'Academic Renewal' being partially/totally ignorant of these problems ? And, finally, should not these be given some space in a 'Report on Academic Renewal'?

●

ANOTHER major methodological problem of Prof Das relates to the splitting-up of Delhi University into two binaries—

Biswamoy Pati teaches Sociology at Sri Venkateswara College, Delhi University, New Delhi.

under-graduate and post-graduate. This goes against the very logic of the process through which Delhi University frames its syllabus, conducts its teaching, tutorials and examinations. This becomes specifically relevant since there have been consistent attempts to divide teachers as college versus university teachers. In fact, Prof Das, method reinforces/legitimises this phenomenon most unambiguously.

And, it is precisely these methodological problems which undermine the Report as one hopes to illustrate through this short intervention.

Prof Das begins with a passing reference to a 'severe crunch on resources'. (p.2) She refers to the 'absenteeism of teachers in some Colleges' and the need to go beyond the 'policeman's approach'. (p.2) The implicit argument seems very clear–everything is fine at the binary opposite work-place. In order to avoid a discussion on this, it is immediately made clear that the purpose of her Report is to 'concentrate on under-graduate education'. This, we are told, is 'central to the life of a university'. (p.2) Given this, her discourse abstracts it from those connected with the process of under-graduate teaching. And, then, in the name of not intending to discipline/punish, chart out a 'Brahminical Order', which is hegemonic in the sense that it leaves virtually no space for any discussion and debate. This is sought to be superimposed from above' by someone who is virtually unconnected with the process and problems of under-graduate teaching. Consequently, her sentiment regarding the active involvement of the Colleges where the teaching is done' cannot be taken seriously.

Then we are told of how in the colleges no one seems to have any sense of 'control over their work environment'. Institutions', we are told, have become 'major obstacles' to their (as, for example, students, teachers, administrators, etc.) life projects. (p.3) Thus, in Prof Das' view the colleges have already reached a 'sick mill' stage, and in many ways it echoes a sentiment articulated by the various government agencies: Bring in order (or, control as Prof Das would have it) to save under-graduate teaching from chaos.'

This is explained through the sense of alienation that exists. And, what accounts for this ? We are told about the regularly irregular Executive Council/Academic Council meetings in the past a pointer to how weak the democratic structure is in this national university. However, we are not told how this could go on for 'several years' (p.4), or who is responsible for this and how this could go on for 'several years' (p.4), or who is responsible for this and how this could be prevented in the future–presumably because it does not concern under graduate teaching ! Then the Report refers to an informal feeling' that the meetings at these bodies are dominated by elected members who represent trade union interests'. (p.4) Perhaps, Prof Das ought to have closely examined the structure of Delhi University's EC and AC which would have prevented her from articulating this point without any qualifications. However, her ire against the elected members is understandable, given their antithetical existence vis-a-vis the 'Brahminical Order' she hopes to enforce. And, given the irregular EC/AC meetings we are told about, coupled with major offensives against the teaching community in the last decade, how does Prof Das expect these bodies to have any sustained and meaningful academic discussion ? Prof Das' discourse seeks to blend two contradictory arguments : she is critical of the irregular EC/AC meetings and appreciates the collective wisdom' (p.4) of the University, and, simultaneously, she opposes the idea of elected representatives. And, it is precisely here that her method gets unmasked.

Continuing to explain alienation, Prof Das refers to some colleges where life ceases to exist after the 12.30 PM University specials have left. Besides the obvious fact that this is applicable to some departments, it is worth thinking why this happens. Prof Das does not have anything to say regarding the unresolved housing question. Most teachers have to cover huge distances. In an ever-expanding city like Delhi, this could be upto 60 to 70 kilometres on a single day. Consequently, it is not possible to stay on unless you live on the campus. And, hang around for what ? In fact, Prof Das should do a separate sociological study about the composition, contributions, etc. of this section before making this forceful point.

Teaching, like any other profession, has good and bad people. Any talk of regular teaching not being conducted in some colleges (and one can add, departments) does not mean anything unless something concrete is delineated, along with suggestions to improve the situation like the Academic Planning Committee (composed of teachers) which has worked quite effectively in many colleges.

Prof Das refers to career advancement breeding alienation. If teaching is located as a professional career isn't it naivety to expect teachers not to look towards career advancement ? And, about 'Quit India'—that is, foreign trips—it would have been really productive if she offered us some statistics. In such a case, the 'emulators' of her Brahminical Order would be a few handfuls as compared to the 'high priests' of this order. And, the assumption that teachers in colleges do not look 'at their own institutions as sources for intellectual development' (p.6) reflects how abstract she is from the process she has chosen to write a Report on.

●

PROF DAS also talks of two categories of teachers–'young' and 'old'. While agreeing that a generation gap does exist in the family, the society and the work-place, let us examine some of her basic premises. She talks of how the 'old' teachers block reform since they have become set in their habits. The underlying assumption romanticises the 'young' teachers as the torch-bearers of reform– a generalisation that is too sweeping and hardly makes any sense. She refers to the 'young' teachers' sense of alienation since 'the system of academic rewards...favours older teachers over younger ones'. (p.9) She refers specifically to the question of time (number of years of teaching) deciding the issue of promotion. One can only tell Prof Das that her 'young' teachers would have joined, grown old/bald, died/retired as 'old' teachers if the promotional scheme–born out of a protracted struggle–did not exist. Prior to it, Prof Das' 'good young ones' became the 'bad old ones', given a system where not a single promotion was possible in a teaching career of 35/40 years. Mercifully, as of today, Prof Das' 'good young ones' have, at least, a chance of becoming readers, along with her 'bad old ones' through a process of selection. And, if Prof Das was genuinely interested in recognising the talent of this section and providing it space and recognition then she would have conceptualised a faster promotional track.

And, how does Prof Das intend to solve the problem of alienation ? By 'empowering the teacher'. (p.7) And, what would the 'empowered' teachers do ? Frame a set of 'core' and 'elective' courses for each college, which would be ratified by the college academic committees and 'monitored' by the inter-disciplinary and the course committees of the University, respectively. The foundational courses would be designed in line with the present system of cooperation between the subject development committees and faculties. We are told about various innovative courses like agricultural pesticides, desk-top printing, video production, infant management in creches, etc. (p.25)

Besides the obvious fact that Prof Das' discourse advocates the emergence of 'centres of excellence' and 'autonomous colleges'—thus, she refers categorically to a college designing an 'elective' course if it 'has a strong competence in a specialised field' (p.24)—in the name of academic renewal and 'empowering the teacher', these ideas can prove to be devastating. Prof Das should have looked at the question of vocationalisation of education and the results it has produced before suggesting these innovations. There would also be the question of resources in an age of resource crunch we are told about, at the outset. Moreover, will not 60 different 'core' and 'elective' courses at 60 odd institutions reinforce the already existing heterogeneity and precipitate a major crisis of standards since mass exams, as she opines, will be replaced by college level evaluation? (p. 25) Is it fair to link innovations in the syllabus to pressurise and cripple undergraduate students with 24 courses in three years ? And, coming from someone who feels that the colleges have almost reached a 'sick industry' stage, as we have seen earlier, it is difficult to understand how these changes would lead to any academic renewal. After all, the same individuals and institutions are expected to implement these changes. And, finally, one fails to grasp the meaning of 'empowering the teachers'.

While talking of students, Prof Das refers to women students who should be made ready to face problems like dowry, violence and unexpected deaths. The Delhi University has a system of Women's Development Centres which can play a crucial role in such matters. However, given the fact that they are not governed by any principles or clearly defined rules, most of them function on an ad-hoc basis, exposed to the whims of the authorities at the colleges. Perhaps Prof Das ought to have devoted some space to discuss their renewal in her Report.

Prof Veena Das ends her discourse referring to a point she had articulated at the outset—the question of resources. As she postulates, if her suggestions are acceptable then the resources can be raised. Isn't this like putting the cart before the horse? More importantly, if Prof Das' recommendations were to be implemented even superficially, they would have the exactly opposite effect of what she hopes to achieve—the complete alienation of those connected with the pedagogical process. ■

J.C.KAPUR : Message from Rio

(Continued from page 13)

THE object of the above narration is to give some indication as to what went on at the Rio Conference. The overwhelming impression which came through was that a section of the developed countries, particularly the United States, came to Rio to assure continuity of "business as usual" and the countries of the South to collect resources for development and reparation for the damage being done to the environment by those who are consuming most of the world's resources.

Before any active action can be taken on the world environment, we have to shatter some of the myths which are conditioning the thinking of many in creating a new human order. We have also to shatter the illusion that the centralised action by international agencies is a solution to these problems. The issues of commerce appear far more important than the environment and the conference should therefore be judged as such . It failed in its grand endeavour because the short-term perspective which conditioned the political and economic thinking of the leaders could not be reconciled for universal action on the environmental realities.

What is needed is a clear-cut long-term perspective which will lead the world away from the drift towards an unsustainable order and the realisation that without such an understanding a hundred conferences such as at Rio without focus and commitment, cannot make even a minute dent on the issues which confront human future.

The issues of environment are basically micro issues which ultimately aggregate into universal issues seeking solutions, which Rio was expected to provide. But the real action on environment lies with every individual, village, community and society. It has to reach hundreds of millions of people around the world to play their role in reversing these destructive trends. And the prerequisite for this will be an international acceptance of the desirable standards and qualities of life and not consumerism and armament riding the tiger of excesses and depressions. But the Conference at Rio neither wholeheartedly accepted nor agreed on the problems nor sought solutions. And it turned out to be a congregation of mutually neutralising voices of narrow as against human interests.

'Though the captains and kings have now departed and the tumult and the shouting has died down' the dance of the cosmos continues unaffected by the arrogance of the armament-protected consumerism disfiguring and making uninhabitable the only living planet that we know of. I hope the Rio Conference will be a warning to the devotees of "business as usual" that the party is coming to an end whether it will be through diverse voices finding a focus or the system disintegrating from within. The message from Rio may thus snowball into an uncontrollable avalanche uniting billions around the world to save the future generations from the approaching man-made cataclysm.

Solar energy in all its manifestations such as wind, water and bio-mass (in spite of the efforts of some to project nuclear energy as a renewable source) and technologies for their harnessing and applications are all part of the solution to the problem of environment. So long as the decision-makers will only remain concerned with interests and discussing or distorting issues, the development of solar energy will remain subdued. It is thus our responsibility not to act as fiscal refugees in search of a patron but the custodians of innovations and knowledge whose time is fast approaching. This spirit alone can sustain and guide the solar fraternity to its role in environment, and the destined future. ■

Foreign Earnings Position in the Public Sector

S.K. SHARMA and ANJU RANI

According to the American Marketing Association "marketing is the performance of business activities that directs the flow of goods and services from producer to consumer or user". In this definition an attempt has been made on the flow of goods and services that may be provided by the private as well as the public sector. When a firm enjoys sufficient freedom to design its production, marketing and distribution efforts, it is considered to be a case of the private sector but when the involvement of the government in production, marketing and distribution of ideas, essential goods and services is significant it is called the public sector. One expert put his view about the public sector (enterprises, undertakings) as the following:

> *By State undertakings is meant the industrial, commercial and economic activities carried on by the Central Government or by the State Government and in each case, either solely or in association with private enterprise, so long as it is managed by a self-contained management.*

The objectives of public enterprises in India, to quote the late Prime Minister Pandit Nehru, are :

> to gain control of commanding heights of the economy; to promote critical development in terms of social gain or strategic value rather than primarily on considerations of (monetary) profits; and to promote commercial surpluses with which to finance further economic developments.

Over a period of more than four decades, the growth of the public sector enterprises has been phenomenal in terms of investment and production, as well as the scope of activities. From only five enterprises as on April 1, 1951, it has gone up to 248 enterprises as on March 31, 1990 with an investment of Rs 29 crores to Rs 1,03,000 crores. This paper gives a brief account of the foreign exchange earned by the public sector through export of goods and from services with their utilisation for production and maintenance and to suggest the various measures to maintain the balance between need for foreign exchange and its foreign earnings.

Contribution of Public Sector in National Production

Public enterprises have played a catalyst's role in several sectors, specially the production of fuel, basic metal industries, non-ferrous metals, fertilisers and communication and equipments. The public sector's contribution in the national industrial production has been shown in table No. 1. This sector has provided 100 per cent contribution to the national production in case of lignite, petroleum crude, copper, primary lead and teleprinters. Coal production was more than 98 per cent in 1988-89 as against the percentage of 17.66 in 1968-69, registering an improvement of 455 per cent over a 21 year period. In case of nitrogenous and phosphate fertilisers, the position is altogether different with a declined percentage from 73.85 and 25.24 to 42.80 and 24.50 respectively during the same period.

TABLE NO. 1
Public Sector Contribution in Industrial Production

Items	As a percentage of National Production	
	1968-69	1989-90
Fuel		
Coal	17.66	98.06
Lignite	100.00	100.00
Petroleum Crude	50.83	100.00
Basic Metal Industries		
Steel ingot	57.14	58.40
Saleable Steel	55,74	56.00
Non-ferrous Metals		
Aluminium	-	52.70
Copper	-	100.00
Primary Lead	100.00	100.00
Zinc	80.59	86.40
Fertilisers		
Nitrogenous	73.85	42.80
Phosphate	25.24	24.50
Communication Equipment		
Teleprinters	100.00	100.00

Foreign Exchange Earnings by PSEs

Public Sector enterprises have been providing a good amount of foreign exchange through export of goods and services. The share of foreign earnings by the public sector in India's total export earnings increased from 20.05 per cent in 1968-69 to about 34 per cent in 1974-75. During the nine year period, that is, from 1980-81 to 1989-90, public sector export earnings increased from Rs 2143 crores (representing 31.9 per cent of total exports) to Rs 6366 crores (representing 23.0 of total exports).

Earnings from Goods

The export of goods in this sector was Rs 2552 crores in the year 1985-86 and shrank to Rs 2501 crores in the next year. It thereafter went up to Rs 2747 crores in 1987-88 and finally touched an amount of Rs 3088 crores in 1988-89. The public sector mainly exports minerals and metals, capital goods, industrial machinery and other equipments, etc. Indian Oil Cor-

Dr Sharma is a Faculty Member of the Department of Commerce, Manipur University, Imphal. Anju Rani is a Research Scholar in the Department of Commerce, Manipur University, Imphal.

poration was a leading exporter among the other exporters in the country. The export from the Corporation was Rs 1854.37 crores in 1984-85 but there was a sharp decline in the next five years so that in 1989-90 it came down to Rs 856.56 crores. The Corporation secured the peak in 1984-85 but thereafter it started sliding down in the next two years with a percentage of 109 and 259 respectively. Minerals and Metals Trading Company Limited and Kudremukh Iron Ore Company Limited were successful units to maintain the progressive image in terms of export. The earnings from Minerals and Metals Trading Company Limited was Rs 1102.08 crores in 1988-89 as against Rs 375.65 crores in 1984-85 thereby registering an increase of Rs 726.43 crores or 193 per cent. There was a tremendous increase in the case of National Aluminium Company Limited from Rs 15.99 crores in 1987-88 to Rs 409.32 crores in 1989-90, an upswing of Rs 393.33 crores over the two year period. The State Trading Corporation of India, Bharat Petroleum Company and Project and Equipment Corporation of India could secure the third, fifth and sixth ranks with their average of exports.

Earnings from Services

The services provided by the public sector have increased from Rs 1270 crores in 1985-86 to Rs 1810 crores in 1988-89. Table No. 3 presents the major earners of foreign exchange through the service sector between 1984-85 and 1988-89. Air India was the dominant earner of foreign exchange that increased from Rs 660.33 crores in 1985-86 to Rs 1078.34 crores in 1989-90, an improvement of 63 per cent during the four year period. Indian Airlines could secure the second position with an average of Rs 206.42 crores in the whole period (1985-86 to 1988-89). Earning by the Company Sector, at Rs 163.14 crores in 1985-86, went up to Rs 205.97 crores in 1987-88 and further to Rs 252.23 crores in 1988-89. The Indian Railway Construction Company Limited had an altogether different position with ups and downs. Earnings of that company happened to be Rs 158.09 crores in 1984-85, fell to Rs 94.49 crores the next year and again increased to Rs 113.31 crores in 1986-87. The Shipping Corporation of India earned Rs 89.98 crores in 1985-86 and this figure went up to Rs 294.54 crores in 1989-90. There was a remarkable increase from Rs 85 crores to Rs 177.24 crores in the period 1987-88 to 1988-89. The Videsh Sanchar Nigam Limited earned Rs 98.50 crores in 1988-89 in place of Rs 78.06 crores in 1986-87.

Ɛarnings and Utilisations by PSEs

Table No. 4 presents the foreign exchange earnings hrough export of goods and from services with their utilisaions. The value of foreign exchange earned by the public ector was far less than the foreign exchange earnings utilised y the PSE. The earnings by the sector were Rs 3822 crores, Rs 3939 crores, Rs 4176 crores, Rs 4898 crores and Rs 6366 rores as against their utilisations (for import of raw materials, tores, spare-parts and payment of royalties, technical services, tc.) of Rs 6393 crores, Rs 5411 crores, Rs 6839 crores, Rs 7445 crores and Rs 12297 crores in 1985-86, 1986-87, 1987-88, 1988-89 and 1989-90 respectively. In the year 1989-90 the ublic sector utilised just double the amount as compared to he PSEs' earnings. In this situation the public sector should ry to fulfil at least its own foreign exchange requirement hrough its own exports and from services.

ompany-wise Utilisation

The company-wise utilisations of foreign exchange has een shown in table No. 5 for production and maintenance perations in the years 1988-1989 and 1989-90. The Indian il Corporation was the first company which utilised the reign exchange of Rs 5459.76 crores as against their earnings f Rs 865.56 crores only in 1989-90. The utilisation of foreign rnings increased tremendously in 1989-90 by Rs 4089 crores compared to the previous year 1988-1989. Air India has d a different experience, the earnings by the company ving been Rs 889.54 crores as against the utilisation of Rs 6.85 crores in 1988-89. Indian Airlines utilised a little share foreign exchange of Rs 98.28 crores in place of a handsome rning of Rs 252.23 crores in the same period. The Steel uthority of India, Cochin Refineries, Hindustan eronautics Paradeep Phosphates and Bharat Petroleum orporation had their utilisations reduced in 1989-90 as mpared to the previous year the figures being Rs 43 ores, Rs 106 crores, Rs 31 crores, Rs 103 crores and Rs 3 crores respectively.

are of PSEs and SSIs in India's Export

Our share in the world trade has steadily eroded from 1.4 r cent in 1950 to 0.5 per cent in 1989-90. In 1938 it was 3.6 r cent. Table No. 6 presents the share of small scale instries and public sector enterprises in total exports by the country from the year 1980-81 to 1989-90. As far as total exports are concerned, these increased from Rs 6711 crores to Rs 20,295 crores in the same period, registering an upswing of 202 per cent over the eight year period. The exports by the public sector have declined from 23.4 per cent in 1985-86 to 15.2 per cent in 1988-89 in the total exports from India. In individual capacity exports were Rs 3088 crores in 1988-89 in place of Rs 2552 crores in 1985-86, an improvement of Rs 536 crores in the three year period. The public sector has disappointed the country in terms of exports with declined percentages. In case of small scale industries, the percentage of exports increased by 3.5 per cent in 1988-89 as against 1980-81 (28.0/24.5). The exports by small scale industries were Rs 1643 crores in 1980-81 and went up to Rs 2785 crores in 1985-86 and finally touched almost double the figure with Rs 5681 crores in 1988-89. The exports of small scale industries were more favourable with the percentage of 28 as compared to 15.2 in case of public sector enterprises in the year 1988-89.

Foreign Exchange eluding PSEs : Why ?

From the facts described above, it can very safely be said that the public sector enterprises position is highly unsatisfactory in terms of foreign exchange earnings, the difference between earnings (Rs 23, 201 crores) and utilisations (Rs 38,285 crores) during the last five years, that is, 1985-86 to 1989-90 being Rs 15,184 crores. The following factors are responsible for the existing paralytic situation:

1. A large number of public sector enterprises suffer from substantial under-utilisation of capacity (the enterprises operated at less than 50 per cent of their capacity for a number of years). The overall capacity utilisation of all public sector enterprises fell from 51.2 per cent in 1983-84 to 48 per cent in 1984-85. During the year 1988-89, nearly 40 per cent of the public enterprises showed capacity utilisation of less than 75 per cent, and in fact 20 per cent enterprises worked at even lower than the 50 per cent rate of capacity utilisation. The cause of this state of affairs are multifarious and range from technical to raw material shortages, inefficient operation and poor management of some enterprises, political interference in day-to-day working and industrial disputes, etc. The result has been less production and productivity.

2. Technology constitutes an important source of higher productivity. With the exception of a few enterprises, all public enterprises are today victims of technological obsolescence as compared to the developed and developing countries. The contribution by technological advancement to economic development in the developed countries in recent years has been as high as 66 per cent of growth. Production with the help of such technology (obsolete and inappropriate) is bound to be inferior in quality as compared to the production using modern and appropriate technology. A case in point is that of Scooters India. This company has suffered from mounting losses due to outdated technology. Enterprises employing obsolete and inappropriate technology are also likely to suffer cost and price disadvantages vis-a-vis enterprises employing modern technology.

Basically, because of the above hurdles, the public sector enterprises are not in a position to fulfil their foreign exchange requirements through export of goods. In this situation there has come a strong feeling that the government should not establish new enterprises and the emphasis should be laid on existing enterprises through privatisation. The concept of privatisation of the public sector enterprises has gained ground with policies of the Margaret Thatcher Government in the UK and some countries of Europe and the United States. The underlying idea of privatisation is to transfer control of the so-called government companies to non-government management.

According to our Finance Minister, Dr Manmohan Singh, "there is no magic solution available for increasing the efficiency of public enterprises and that it is something that cannot be done overnight. Hence the public sector in India has no option but to pass on increase in costs to consumers, through increase in administered prices." The improvement in the efficiency record achieved by the British Airways after privatisation is often cited as an example of what a company can achieve when free from regular control.

Thus the question that arises is : why should there be investment worth thousands of crores of rupees in the public sector when the public enterprises are not in a positio utilise their installed capacity? Some people argue that government is responsible for such a pass due to its defec planning policy. But this is not true. The government tried and is trying to achieve a high and sustained rate growth, a progressive improvement in the standard of livin the masses leading to eradication of the problems of pov and unemployment and the realisation of a self-reli egalitarian society.

Upgradation of technology is essential if one has to business and survive in a competitive world. Japanese b ness organisations are earning good profit because tl products are preferred all over the world due to the use modern technology alone.

The public sector enterprises should pay more attent on research and development activities specially with a view improving their technological back-up. Expenditure on th activities went up to Rs 208.66 crores in 1987-88 in place Rs 178.25 crores in 1986-87, thereby registering growth of 30.41 crores or 17.06 per cent. Fresh doses of funds sho be provided for upgradation of technology and revamp operations. In this context the New Industrial Policy nounced by the Narasimha Rao Government on July 24,1 in Parliament has provided the terms of freer entry to fore investment and technology :

> In order to invite foreign investment in high priority indust requiring large investments and advanced technology, it has b decided to provide approval for direct foreign investment u 51 per cent foreign entry in such industries (earlier on, the li was 40 per cent).

Conclusion

To conclude, it could be said that the public sec enterprises are not only playing a prominent role in our d life in terms of fulfilling our necessary requirements of fo shelter, clothes, conveyance and various other services, tha petrol and power, but also by helping us to maintain balance-of-payments position in the country through exp of goods and from services. But as compared to small sc industries, the public sector is far from achieving the design level of foreign exchange earnings through export of good

The public sector units utilise a large share of foreign change earnings for their production and maintenance ope tions as against this meagre sum of mutual foreign exchar earnings they can record. Therefore, the public sector in Indi in need of undergoing drastic changes so as to enable it to ear handsome amount of foreign exchange through exports throu maximum production and productivity and maintenance o satisfactory balance-of-payments position to face the challen of the twentyfirst century.

BOOK REVIEW

Mirroring Plight of Labour

AMITAVA MUKHERJEE

The scenario has now become a common sight everywhere in West Bengal. Closed industrial units. Workers idling away their time in small groups in front of closed down iron gates hoping hat some day their factory would reopen again. Behind this apparent picture grimmer situation pervades the length and breadth of the industrial areas of the State. Unable to bear with starvation, workers and their family members have been committing suicides at regular intervals. But how many of them have so far embraced this shortcut to get rid of worldly sufferings? Predictably the State machinery in West Bengal cannot be said to have come out with comprehensive figures on this aspect.

This book is a serious attempt to study the causes behind the hapless condition in which the labour has been thrown into over the years due to the debauchery and profligacy of the private sector management as well as meek acquiescence of the governmental authority and also, in many respects, unholy collusions among managements and trade unions. Divided into nine chapters, the book presents a thoroughly researched study on the evolution of labour in West Bengal, deteriorating plight of jute and cotton textile industries in the State, random trampling down of the minimum wages act, employers' offensives and abject surrenders by trade unions in the name of memorandum of understandings and also dimensions of inquiries by Board for Industrial and Financial Reconstruction (BIFR). In the end there is a detailed list of closed large and medium industrial units in West Bengal that can help a student of the subject in getting a quick bird's eye view of the industrial scenario in the State.

Against the Wall: West Bengal Labour Scenario by Nagarik Mancha (Citizens' Forum); Spokesman, 1991; pp. 74; Price : Rs 40; International Price : $5

The usefulness of the book lies in the fact that it attempts to systematise and enrich what we already know about the deteriorating industrial scenario in the State. According to statistics provided by the State Government in 1990 itself, nearly one lakh 50 thousand workers were affected due to lockouts and closures were declared in 17 industrial units. Moreover, during the period 1984-1990 the total number of closures declared in various industrial units stands at a staggering 174 mark which affected more than three lakh families. If 1977, the year of the inception of the Left Front rule in the State, is taken as a benchmark then the figure for closures stands at 663.

The chapter dealing with jute industry, perhaps one of the most enlightening of all the chapters, successfully rebuts, with the help of statistics, the mill owners' two pleas for the sickness of the jute industry : lack of modernisation and shrinkage of the market owing to influx of synthetic packaging materials which the government and other bodies including trade unions seem to have accepted.

However, the book successfully establishes that very few jute mill owners came forward to accept the financial help, arranged by the Central Government more than four years back, for modernisation and expansion of the jute industry. Even out of the total allotted money Rs 92 crores were allotted to clear up statutory dues like provident fund and gratuity. And even though export market for jute goods had experienced a shrinkage the internal market had expanded. The book also correctly sees through the mill owners' complaints about glut in the market. However, the fact remains that about 55 to 60 per cent of jute products are directly bought by the Government of India at a remunerative price fixed by the mill owners themselves.

Euphoric words are now bandied around so far as Narasimha Rao-Manmohan Singh's breakneck attempts towards privatisation of industries are concerned. *Against the Wall, however, presents a truly revealing picture for both of them. Absolutely devoid of human sentiments, the private mill owners even did not pay the workers their statutory dues. For example, in the Victoria Jute Mill the dues to the workers amounted to Rs 11.60 crores at the time of closure—Rs 92,000 as wages, Rs 1.75 crores as bonus, Rs 7 crores as Provident Fund, Rs 2 crores as ESI benefits and Rs 5 lakhs as gratuity.*

However, the book misses one very important point behind the sickness of some of the giant units—the partisan role of the State bureaucracy while trying to prop up trade unions of particular hues that has led to widespread unrest and consequent dislocation of works in some of the best managed industrial establishments in the State. A case in point is the Philips India where the State Government had suddenly cancelled registration of a non-political union while trying to back up another union with a particular political affiliation. It was ultimately left to the court to come out with a severe stricture against the State Government and thus save the situation.

●

TO any bureaucracy and its political executives desirous of meeting the challenge with utmost seriousness, this book can come as an illuminating guide. It is interesting to note in this context that the differential between minimum and maximum wages for lowest daily paid unskilled worker is extremely narrow in West Bengal. While in West Bengal the minimum wage fixed for this category was Rs 16.34 the figure for maximum wages was just Rs 17.43. The corresponding figures for Bihar was Rs 12 and Rs 23, Rs 21 and Rs 25 in Haryana, Rs 18.52 and Rs 33.30 in Punjab, Rs 12 and Rs 20 in Kerala and Rs 6 and Rs 20.58 in Maharashtra. It is noteworthy that so far as the maximum wage was concerned, West Bengal comes at the lowest in the table given in the book.

If the information and statistics in the book are to be believed then the law of the jungle has now been enjoying full sway in West Bengal. For example, minimum wages are to be revised every five years but there are a number of industries where minimum wages have not been revised even after the expiry of the stipulated period. Hosiery, cinema, printing, plastic and glass industries and saw mills are some of such examples.

In the context of the present day situation in West Bengal the argument that this book has taken a blind side in favour of workers does not hold much water in the face of the government's own statistics and assertions that the reasons given by employers behind the alarming trend towards unilateral declaration of lockouts or suspension of work were not the real causes. Labour in West Bengal, the State Government's own publication on the subject noted that lockouts were imposed by employers for extracting unjustified concessions from workers such as reduction in manpower through retrenchment, voluntary seperation, freezing of wages, etc. Interestingly, lockouts accounted for 98.5 per cent of the total loss of mandays in 1990 while strikes were responsible for 1.5 per cent.

Clearly as a fallout of all these, a new type of management-labour relationship has been developing in West Bengal. The dominant feature of it is the memorandum of understandings which have been imposed by the management on workers. The book contains quite a few case studies like the Bata India Ltd., where the workers have been made to agree to extra work without overtime facilities and their work load has been significantly increased with a strange clause that "the workmen employees will perform their normal work...which were all along their normal work". However, if the fresh list of works decided upon by the management was already part of the workers' normal work, then what was the need to remention them as normal work, the book asks. There are many other instances of employers' whims acting as preconditions for reopenings; for example, retrenchment, freezing of wages and on gratuity payments, etc.

Written with a feeling for the working people of the country, *Against the Wall* is an indictment of, not only the Government of West Bengal but the central trade unions as well. The book has presented specific cases where these trade unions have become parties to the above mentioned black MOUs. In fact it lists the corporatist roles of the central trade unions as a major constraint in regard to autonomous bargaining. "Before the Left Front came to power in 1977, this role was performed by INTUC and NLCC...after 1980, a similar role has been perpetuated by the CITU to discipline labour", it comments. However, it has not failed to note the recent phenomenon of workers' propensity to choose their own plant level leadership distinct from the ones of the central trade unions. ■

Ragging and Cultural Decadence

GARGI CHAKRAVARTTY

From rigging in elections to ragging in educational institutions—this is the grim scenario of the lumpen decadent culture before us in this country. Ragging did exist twenty or thirty years ago but not in the crude and vulgar form in which it is widely practised today. And strangely enough with higher education spreading far and wide there has been a phenomenal growth in the incidents of ragging. This places us in a quandary : which direction are we moving, we meaning those of us who claim to be "educated"?

Ragging in Ramjas College in the form of sexual harassment last year and in some other places in the form of harassment of the Scheduled Caste students attracted the attention of the media and through the media the general public. The question of disciplinary action against the culprits on the one hand and the issue of social security of the affected students (particularly the girl students) on the other compelled us to ponder over the deeprooted virus which is spreading like a cancerous disease. How is one to save the mind of an adolescent student in his/her tender age or rescue society at large from the tidal waves of the decadent culture? That seems to be the moot question today.

One needs to delve deeper and go into the roots of the problem. The kind of education prevailing particularly at the school level kills the imaginative mind of an innocent child. Cramming, overburdening, craze for high marks, excessive competitive approach coupled with the ambitious attitude of the parents—this vicious circle of the psychology of "climbing up the social ladder" slowly ruins the mind and brain of an adolescent child. The parents and other relatives, by laying too

The author teaches History in Maitreyi College, University of Delhi much emphasis on results and marks and also comparing with the other children's performance, are responsible for instilling a sense of jealousy in the minds of their children. Gradually a feeling of envy is generated in the young mind and this negative phenomenon turns into anger and apathy once frustration sets in.

Intertwined with this is the TV and VCR culture now that both are available in most homes. Parents, instead of talking to their children or reading out stories for them, prefer to get a video film from the nearby video film library and keep the children occupied. That is how the Bombay film world comes right into the drawing room practically every day. Craze for a consumer-oriented society, violence, sex, degrading music, etc. influence the mind at that impressionable age. Craving for the lumpenised filmy culture replaces love for poetry, classical music and good films and theatre as also pining for nature and everything beautiful in life. As a matter of fact the sense of aesthetics is being relegated into the background and in its place what has come to the fore is the imitation of the Bollywood style accompanied by the values inculcated by the latter. This is reflected not only in the dresses of the modern youth but also in the interior decoration of rooms in the metropolises. And this is found practically everywhere. Most of the young girls and boys are interested in imitating the dances seen on the screen of a Rekha or a Sridevi rather than a Bharatanatyam or an Odissi recital or even a folk dance from any part of the country. There may exceptions as undoubtedly there are but at this critical juncture what one is concerned with is the general trend one finds in most of the educational institutions.

The transition from adolescence to adulthood is almost complete when one enters the college. As one enters the college on the very first day itself the culture of ragging hits one on the face. There is an element of vulgarity and sadism in this ragging culture. Regardless of whatever students or teachers may say in its favour, one fails to find any justification for such a welcome to the freshers. Several people speak of seeking an alternative to this kind of welcome being accorded to the new entrants in the colleges. But the problem is not so simple.

The fact of the matter is that most students will not accept a dignified exchange of cultural gestures. On the other hand, vulgar jokes, physical, mental and even sexual harassment evoke warm response with waves of laughter! Gone are the days of subtle humour, warmth of heart, fellow-feeling. What kind of pleasure does one get by asking a fresher, as had happened at the IIT in Kharagpur, to walk on the rampart of the hostel's terrace at the middle of the night ? The boy fell on the ground below, suffered serious injuries and lost his consciousness. Who was responsible for the loss of the bright future of a young boy ? There are many cases of similar casualties in different cities, particularly in the professional institutions. Who are to be blamed? The teachers, parents, the new society with its degraded values. Can we remain silent spectators of such a degradation? Politicians can gamble with power, but educationists have no right to play with the lives of the students. The process of countering this wave of vulgarity—manifest in ragging, eve-teasing, bride—burning—needs to be initiated now and now itself.

●

RABINDRANATH Tagore began his meaningful experiment with education and culture by launching a new methodology of imparting knowledge at Santiniketan. It was Viswa-Bharati, the first international university in India where both boys and girls studied together, danced together, sang together, stayed together. The magnificent cultural atmosphere of the coeducational institution was a living testimony of what cultural values a towering figure of vision and imagination can propagate. Tagorean aesthetics apart, at a later stage during the period of P.C. Joshi's stewardhip of the communist movement in the country the cultural regeneration sought to be brought about by the IPTA succeeded in creating a new awakening. This is our heritage.

Whether we should revive that past or evolve a new form of cultural expression suited to the present-day conditions and thus help the process of developing a new set of healthy values—are issues that we need to seriously discuss. Mere jargons like progressive culture or people's culture will not suffice in today's context. They cannot work anymore. How to help the young minds to discard the decadent cultural vulgarity reflected in the ragging phenomenon and open up avenues for their attraction towards cultural values that cultivate beauty and taste—that perhaps is the major challenge before us today.

But from where is this process of renaissance to begin? At the college level or the higher level of education the mind is set and notions become fixed. The process of imitating the obnoxious 'rich' begins at home or at school at a very early age. Therefore school education, orientation of school teachers and parent orientation camps may not be sufficient to counter the 'video'culture. And yet efforts in that direction must be undertaken in right earnest. Prominent media personalities, who occupy important positions in the various decision-making committees, have a key role to play in this regard. So have cultural luminaries who need to come forward with more innovative programmes and more often on the streets. Their performances should not be confined to closed door programmes at the Kamani Auditorium or Shri Ram Centre. After all, children of various schools, government as well as public, and colleges must be exposed to that kind of cultural awakening.

A very interesting phenomenon of the ragging culture is that children of the affluent society who studied in public schools were found articulately arguing in favour of ragging on TV. On the other hand, students from struggling low middle class families were literally disturbed over this encounter. They were quite opposed to ragging in the way it is being carried out these days, although they were unable to convey that fluently and forcefully on the screen. Some others spoke of permitting "mild" ragging. This is tantamount to extending tacit support to all that was happening in the name of ragging. In fact any such adjective is a relative term, something may be "mild" to me, but harsh to another person.

The University of Delhi has, through ordinances on ragging (Ordinance XV-C) and discipline (Ordinance XV-B), banned ragging. But the awareness campaign is far more important than just issuing ordinances. There could be legal loopholes on the question of punishment; and the most difficult barrier to surmount is the problem of social inhibition which prevents the girl students from giving evidence against the culprits responsible for tormenting the victims. This is where the issue of social security of the victims comes into focus. This issue cannot be ignored particularly in the light of incidents in which acids have been thrown on the faces of girl students (as happened in Calcutta sometime ago), or the latter have been threatened with dire consequences that could ruin their future life. (Only a few days ago girl student in the Calcutta University's Department of Journalism was reportedly attacked with a razor inside the university campus itself.

This is, therefore, a highly serious matter. The problem too is deeprooted. But one has to search for methods to tackle such problems regardless of the uphill nature of the task. In my opinion it is time to launch a new value-oriented campaign of mass cultural awakening which alone can help to effectively combat the basic malaise accompanying the phenomenon of ragging. It is indeed a crime to remain indifferent to whatever is happening before our eyes and silently watch the society lose its bearing, destroy its ethical values and slowly move towards degeneration. ■

AFGHANISTAN

No Respite in Quick-sand War

D.R. RAJAGOPAL

Even as the quick-sand war drenches Afghanistan, again and again in blood, savagery and carnage (not seen the past 14 years), *a new prayer* is being offered everyday by most Afghans and other devout folk at the *Blue Mosque* (as hallowed as the Jama Masjid in Old Delhi), not far from the Kabul river and also at tens of hundreds of other mosques in the country, suffused with too much history:

"*Please, God, take away your seven donkeys,*" says the *new prayer*.

"*And,*" the supplicants, with rising faith, hope and expectations, pray, "*please, give us back our cow.*"

The reference, is unmistakeable: the seven factions of Sunnis and Shiites (or Shias, formerly based in Peshawar), who constitute the *mujahideen*, with their heavy military hardware and combat experience, have singularly failed to bury their differences and produce and establish a stable administration in Kabul, ever since the strongman and former chief of state, Dr Najibullah, stepped down on April 13, 1992.

It's no reflection on the piety, faith, hope, confidence and expectations of the Afghans that their *new prayer* hasn't been answered. Not completely, though,For, given the historic, inextricable Indo-Afghan ties, cemented by blood, religion and inter-racial and inter-religious family ties, it's most appropriate and indeed inevitable, that India has, as always, even now been forthcoming in the Afghans' plea and prayer for quick humanitarian aid and assistance.

Equally, it's a measure of the political bankruptcy and administrative ineptitude of the ruling Afghan *mujahideen* elite that the Shariat Law — revered and/or dreaded both by the clerics or clergy and the laity—has been slapped on Afghanistan, while her real, immediate and indeed desperate problems are :anarchy, chaos and civil war, and death.

Thus, public hanging, however sterile and grisly or commonplace even though it comes after a lapse of 20 years, of three Afghan criminals is hardly a realistic diversionary ploy for either the chief of state, Prof Borhanuddin Rabbani or the young Defence Minister, Commander Ahmad Shah Masood (a Tajik Shiite).

For, among the worsening daily problems of Kabul are: lack of drinking water supply, lack of electricity, lack of barest essentials of foodstock supplies and medicine, This, as reality bears out, has come about principally because of the savage war launched by Gulbuddin Hekmatyar (a Pathan or Pakthoon Sunni), spearheading armed forces of his Hezb-i-Islami.

In any event, the two Afghan stalwarts, who have experienced life in the raw and real, having raced to the forefront and got bogged down, are amidst political brinkmanship and one-upmanship. The two armed prophets of Islam would, between themselves, be able largely to decide the pattern of the forthcoming conflict in Afghanistan.

While Masood is the quintessential Afghan soldier, who is keen on consolidating the gains of the majority ruling Jamaat-i-Islami, without any more bloodletting and slaughter of the innocents, Hekmatyar is obviously under covert and overt pressure of the highly-politicised Pakistani Inter-Services Intelligence, which has been his moral/political/emotive/military/financial backbone since 1978.

Thus, the future alignment of political/religious forces, which would broadly be determined by what Masood and Hekmatyar are capable of accomplishing, during the current "lull" in the civil war, would draw the ISI (through Hekmatyar, of course) as an element of disruption and delay.

Hence Islamabad (read, ISI under the conflicting command of General Asif Nawaz Janjua and Brigadier-General Hamid Gul) would largely determine the extent of suffering inflicted on Afghans through countless rounds of fighting for political clout and its consolidation by both Masood and Hekmatyar.

If the past is any reliable guide, it is inevitable that Masood's patience, moderation and battle-strategy and combat experience would triumph over Hekmatyar's (read, the ISI's) military hardware, bravado and bellicosity. ■

A LETTER TO K. ASHOK RAO

ARVIND SIVARAMAKRISHNAN

This is a letter to Mainstream *for publication. It comes from Dr Sivaramakrishnan who is a Fellow in Political Science and Public Administration at the Centre for Economic and Social Studies, Hyderabad, and an Honorary Fellow in Politics at the University of Southampton.* —Editor

I read your plea for the public sector ("Letter to the Prime Minister" dated January 20,1992, reprinted in *Mainstream* of July 25,1992), with sympathy and a deepening sense of dismay. I too have been a public-sector official and a street-level one at that, not in India but in the increasingly battered, underfunded and now virtually paralysed British public services. I too have felt political pressure and have heard dark mutterings of corruption, financial and otherwise, in high and not-so-high places. I too have known the simple fear that talk of privatisation, contracting-out, and the like can bring to public services—not to mention the settling of old scores, of longstanding vendetti, under the often spurious banners of rationalisation and efficiency. As I read on, I thought, yes, I've been there too.

Yet your letter, thoughtful and careful though it was, left me wretchedly depressed. You never once pointed at the miserable failures of privatisation elsewhere, at the crumbling infrastructures of the British and United States economies, at the fact that private entrepreneurs do not want to go anywhere near anything that does not first and foremost make them money. You never pointed at the perfectly accessible accounts of increasing numbers of the homeless sleeping on the streets of London, New York, and goodness knows where else. You never pointed at the perfectly public accounts of privatised laundry services sending still-bloodstained linen back to NHS hospitals and then going bust alongwith thousands of other British businesses.

Well, all right, as a distinguished citizen of the former Soviet Union said to me recently over a meal in an English city, we wish we had your problems. So must many an Indian think when looking at the G-7, the EEC, and the other rich countries' clubs. So why didn't you talk of the things we Indians do, not just well but brilliantly, and in the public sector at that? For example, we can run a railway like nobody else on this planet can. Indian Railways constitute a towering achievement, but you did not mention them. (We could run a railway system half-way across the galaxy, and there'd be dosas and hot coffee on the platform at Proxima Centauri at any hour of sidereal time. Try finding any sign even of human habitation at Basingstoke station on a winter Sunday afternoon. I should know, I've done it.)

And of your better examples, why just the DTC? Why didn't you fling the Bombay buses and Pallavan, the pride of Madras, in the faces of the privateers? Let them come from their motor-car cultures, with their violence-riddled subways and their pathetically under-used and grossly overpriced railways, and try to run Indian Railways or Pallavan buses.

●

ALL right, you've got your work cut out just staying afloat, let alone counter-attacking. But I put it to you, and do so as a colleague, that the politicians would not dare touch public services that had real public support from the people who matter—the public. Have you never been at the receiving end of Indian public services, never endured the supercilious complacency, the utter contempt, the too-often obvious and crass incompetence, never suspected dirty work behind the scenes, never seen an official plainly indifferent to the bullying, the shoving, the queue-jumping, the backhanders and the thuggery just the other side of the counter? Never seen it? You've got to be joking.

Yes, I know I've been lucky. I am one of the professional classes, that sharp-elbowed lot who apparently know exactly what they want and just how to get it. I have to wait, but the official behind the counter usually does stamp my papers or sign them or whatever, and does so without wanting bribes, backhanders, or any other favours. And when I utter my unvaryingly polite—and I hope friendly—"thank you" in any one of the three Indian languages they look up, stunned. But I mean it. I am simply grateful for the return of my papers, stamped, signed, or whatever. But have you ever thought of the hundreds of millions of our less fortunate fellow-citizens for whom anything to do with the public sector, public services, or bureaucracy is only ever the subject of the silent, savage resentment and bitterness of the truly dispossessed? And of what have they been dispossessed? No more and no less than the services of those whom they not only pay but whose work they legitimise. They know the score as only the powerless can.

Tell me, if you wish, that you'd do your job properly and well but for political interference and but for the virtual certainty of having your career destroyed if you tell the truth about all that. But when did you mention, say, a constitutionally-protected public-interest defence for public servants who blow the whistle on dirty work? I hope I am wrong, and that the idea has crossed your mind.

Colleague, I do not know what more to say. But I do know that unless we make the public services a sight better for the public, you and I will be out on the street. So will hundreds of thousands of our colleagues. And we'll have asked for it—mate. ■

COMMUNICATION

Why JPC Proceedings should be Open to Media

There is at least one case where two successive Chairmen of Railway Board gave contradictory evidence before the Public Accounts Committee in the seventies. The case was about commercialisation of Diesel Locomotives with Suri transmission. It took sometime for outside experts to realise that the earlier witness fed the parliamentary committee with wrong information. At that period of time, the Lok Sabha Secretariat had a Joint Secretary originally from the Railways. This was also the first case where the PAC—then headed by Prof Hiren Mukherjee—heard a non-official witness on a matter arising from the Audit Report.

If the evidence is taken before the JPC in presence of the media, there will be less chance of incorrect and inadequate information given to the body remaining unchallenged till the time of publication. Since the beginning of World War II Parliament generally avoids printing of evidence submitted before the committees. The Mirdha Committee can hold the proceedings other than examination of witnesses in camera. Similarly, most of the memoranda coming from organisations other than the CBI, RBI and the like should be made public for simultaneous examination by the citizens.

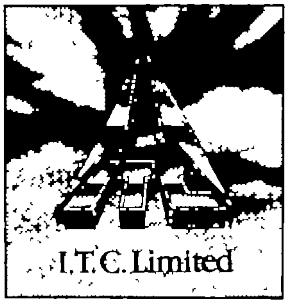
The marketplace.
As seen by ITC, India's largest exporter.

ITC is one of India's leading private-sector companies. Its annual group turnover, in excess of Rs. 3000 crores, is drawn from several businesses: tobacco, cigarettes, hotels, edible oils, packaging and printing, paper, board, computer software and financial services.

Eighty-two years of operating throughout India and access across the world make ITC the ideal trading partner. And, as the country's largest exporter, it offers a variety of value-added products and services.

From branded vegetable seeds, tea, coffee, spices, oilseed extractions, tobacco products and marine foods to mouth-watering Indian cuisine at Bukhara restaurants abroad. From exquisite handicrafts, carpets, garments and leather goods to paper, board and printed packaging. From tailor-made computer systems and software to contemporary comforts at the Sheraton-affiliated Welcomgroup hotels in India.



With offices stationed around the world, ITC's International Business Division is always at hand to procure and deliver quality merchandise.

So, if you wish to do business with India, talk to us. We've made the world our marketplace.

New horizons, new hopes.

REVIEW OF SASHI JOSHI'S BOOK 31

EDITORIAL

Exceptional Step?

An unrepentant N. Janardhan Reddy has finally agreed to step down from the Chief Ministership of Andhra Pradesh. He remained reluctant to quit till the very end resisting the pressures mounted from the Prime Minister's Office and the headquarters of the Congress President in New Delhi. Even in his letter to P.V. Narasimha Rao seeking permission to resign he maintained that the Andhra Pradesh High Court had only made "some references about me" in the private medical colleges case. These, in his view, "relate ..to the norms of business and not to any mala fides".

In the face of such an approach the firmness shown by the Prime Minister in insisting that Janardhan Reddy must resign was doubtless noteworthy. The High Court, in striking down the State Government's orders allowing the establishment of 12 private medical and eight private dental colleges (wherein 50 per cent of the seats were to be filled through the management quota involving capitation fees) as unconstitutional, had specifically reflected on the Chief Minister's role in the sordid episode. Its confirmation of 'bias' on the part of Janardhan Reddy in sanctioning a medical college and a dental college to the Janapriya Educational Society in Nellore with which his wife and brother are associated was an outspoken criticism of the Chief Minister's behaviour. By his interpretation of the court verdict Janardhan Reddy has all the more placed himself in the category of those elements in the ruling establishment who are ever ready to ignore, if not flout, judicial strictures with impunity.

The Prime Minister's speedy moves to change the Chief Minister in Andhra Pradesh were commendable much as they lent strength to the belief that he is by and large interested in ensuring probity in public life. However, what cannot be overlooked is the fact that that belief has at the same time been somewhat undermined by the contrast revealed in his attitude towards C.K. Jaffar Sharief, the Union Railway Minister, despite the Delhi High Court's unambiguous pronouncements on the railway bogies deal. Moreover, the evasive stand taken on the issue of getting T.N. Seshan, the Chief Election Commissioner, transferred in view of the latter's endless display of misdemeanour and high-handedness threatens to adversely affect the credibility of the Narasimha Rao Government as a whole.

Unless the Prime Minister acts with equal promptitude and adopts similar measures in the aforementioned cases it would be difficult to remove the suspicion that his action in *l'affaire* Janardhan Reddy was an exceptional step intimately related to the Congress' factional politics in his home State. Despite the best of intentions he would then once again fail to carry conviction with the public at large that he is really keen to revive the spirit of value-based politics in today's dismal scenario marked as it is by allround degeneration and decay.

Face of Debt Politics

NIKHIL CHAKRAVARTTY

Our Finance Minister seems to be in his elements at the moment in Washington. In the bracing environment of the World Bank and the IMF he is exuding ecstacy, collecting kudos for faithfully carrying out the Fund-Bank mandate of the Structural Adjustment Programme. And he has asked for a massive loan of nine billion dollars, a feat of record-breaking begging, unprecedented in the case of any country, certainly unheard of in the case of this country. Our debt burden had already accumulated over the years to the near-astronomical figure of nearly eighty billion dollars, and now the Finance Minister wants to add nine more billions to it by 1995. At this rate we may be nearer to the grand sum of a hundred billion dollars of indebtness by the end of the century.

This beggar's bowl mission of our Finance Minister may be resented to by quite a few of his countrymen. There have already come out loud and clear voices of protest. There is good ground for getting concerned about it, because as any person of common sense would know, this would mean back-breaking debt servicing for generations. In other words, the danger of making the country a bonded debtor. What is extraordinary is that Manmohan Singh could display the same felicity three years ago in warning against the horrors of the debt trap when he was the Secretary-General of the South Commission. Perhaps in his calculation, public memory is shorter than it actually is.

In one sense, there should be appreciation of the Finance Minister's heroic efforts at securing such massive loans. This would certainly bring relief to his harassed soul in finding the means for large-scale imports in services and goods that his new economic policy demands—no matter if exports are not picking up and imports going up, belying all his budgetary calculations. Obviously the so-called globalisation of our economy as per the Fund-Bank prescription which he has adhered to in toto, envisages more borrowing all the time.

Mainstream

With this issue Sumit Chakravartty is the Editor of Mainstream.

However, to ensure continuity of the role the journal has played since its inception Nikhil Chakravartty will be its Editorial Adviser.

It may be recalled that C N. Chitta Ranjan was the first Editor of Mainstream *at the time he and Nikhil launched this periodical in September 1962.*

When Chitta Ranjan was called upon to shoulder new responsibilities in a well-known newspaper, D. R. Goyal functioned as the Editor for a certain period. In 1967 Nikhil formally took over as the Editor, a post he held till this day and is now relinquishing.

All the talk of economy measures—let alone austerity—which was heard of last year at the time of the balance of payments crisis, have nearly been forgotten as the government is becoming well and truly a debt addict. Only the budgetary cuts in social welfare, education and health are being enforced without deviation. Even the World Bank's own annual report for 1992 warns against the danger of neglecting the poor who are going to be hit by some of the features of the new economic policies, while Manmohan Singh seems to be oblivious to the deleterious effect of the cut in social service spending.

Apart from the such cuts, the Structural Adjustment Programme demands withdrawal of all subsidies, because we are being lectured to that all subsidies militate against the principles of the market economy except of course in the case of the massive subsidy earmarked for the American farmer. Incidentally, it is worth noting that while the Indian farmer is sought to be deprived of subsidy for fertiliser and energy by the Fund-Bank directive, the US Administration is prepared to risk an economic warfare with the European powers in defence of the subsidy enjoyed by the American farmer.

It is not necessary today to dilate upon the benefits that have begun to flow from the Finance Minister's new economic policy as laid down by the World Bank. Apart from the price rise of all the basic necessities of the common people, including the latest hike in prices of petroleum products, leading to increased indigence of the low-income groups—who constitute the overwhelming majority in our country and hence the backbone of our democracy—the threat of the imposition of the Exit policy has confronted millions of workers and employees in the industrial sector with the prospect of being thrown out of jobs in a system which is already afflicted with growing unemployment.

●

ALL the pep talks administered by the government tha nobody would be thrown out of jobs under the Exi policy have carried little conviction with the potentia victims of that policy despite all the fanfare about th setting up of a National Renewal Fund. And once ther starts job cuts in the government enterprises, there i little doubt that the corporate sector would vigorousl follow that course. This opens up the eventuality o large-scale social tensions and disturbances as the mas of unemployed workers can hardly be expected t remain a docile contingent, their embittered state cannot but add up to the minus points for political stabilit

The gusto with which Dr Manmohan Singh has been conducting himself in his current begging mission reminds one of the caption of a hot-seller in the thirties, *To Beg I Am Not Ashamed*. But for a man in the street in this country proud of his status as a free country, such an attitude hurts. This is not part of a Left criticism of the Finance Minister. This very week delivering the Govind Ballabh Pant Memorial Lecture in the Capital, another economist, no less distinguished, who had served the government with distinctions, Dr. I.G.Patel, touched on this very point of public perception of large-scale foreign borrowing:

> The man in the street certainly did not feel proud of those who negotiated aid. I remember receiving a letter from my father a few months before his death in 1963. He said be felt very proud of me when I was sent abroad so often for what thought was important work. But when he discovered that I always went abroad to negotiate a loan, he felt ashamed. He asked me to give up my job as he had not raised a son to get the country more and more into debt.
>
> A few years later, I had a similar admonition from may father-in-law, the much-respected and how much missed, Prof A.K.Dasgupta. In my Shastri Memorial Lecture on Foreign Aid I had referred to a conversation in which I had said that I was not ashamed of begging for my country as, after all, I was not begging for myself. Prof Dasgupta could not understand how I could be so insensitive as to think that the self-respect of the country was less important than my own.

Despite the fact that Dr Manmohan Singh has not bathed himself with glory by swallowing lock, stock and barrel whatever the Fund-Bank moneylenders laid down for structural adjustment of the Indian economy, there is, however, no gainsaying that the model of economic development that the country has been pursuing for several decades now imposes its own compulsions. On one hand, it generates economic disparities, thereby wideningthe gulf between the affluent and the impoverished. On other hand, experience has shown that it has to continuously fall back upon external borrowing because it has so far failed to generate resources adequate for its programme. In other words, growth of the economy under this dispensation intensifies social inequity, while the country's independence is constrained by the inevitable dictates, covert or overt, of the moneylender abroad.

Our economy has therefore already reached the crisis point. Its capacity to serve the common humanity of this country is fact getting eroded: instead, it has been accelerating the process of alienation of the small minority at the top from the overwhelming majority of our people. And with it has also come the threat of the country being turned into a bonded debtor to the powerful moneylending agencies of the world.

All this demands from the thinking sections of our society drawn from all walks of life — politics, professions, the university campus, the media and social activism — to redesign the entire concept of development which will enable the upliftment of the majority of our society, alongwith a norm of living that takes into account the urgency of protecting the environment. In short, a fresh urge for a new paradigm of development. ■

What Joint Parliamentary Committee Can Do

SUBHASH CHANDRA SARKER

The securities scandal involving the most respectable banks in the country represents the most serious breach in the security of the financial system that has surfaced so far. Both the amount involved in the episode and the number of individuals and financial institutions connected with the scandal are mind-boggling indeed. There is nothing comparable to this scam in the history of the financial system of the country or of any industrial country. It is thus of the utmost urgency that the guilty in this scandal are properly identified and punished.

Already more than four months have passed since the scandal came to light. But the identification of the guilty is as far removed as it was in April 1992. Any prolongation of the matter can only complicate this task. Unfortunately, there is grave reason for worry whether the approach to the accomplishment of this task is correct.

A newspaper report says that a demand has been made on behalf of the Joint Parliamentary Committee of all the banks to provide the Committee with a detailed statement of the contracts for the sale and purchase of securities for three years till 1992. The banks have been asked to provide 70 copies of all the statements. The report further suggests that this has created an unusual pressure on the working of banks whose xerox machines are busy making out copies. When the administration of the banks has been found to be wanting in observing due diligence in the discharge of their duties, it does not lie with the bank administration to complain against any extra work that may be necessary for them to undertake to satisfy the Joint Parliamentary Committee which has been asked to go into the scam. The question is whether within the time-frame available to the Committee and the nature of its constitution it can effectively deal with such detailed information on individual transactions of banks over a long period of three years. The thirty member Joint Parliamentary Committee constituted on August 6, 1992 has been asked to submit its report by the end of the next session of Parliament. At best, the Committee has time till the end of December 1992 or about three months from now on. Already there are hints that this time limit may be extended. That has to be prevented.

It is of the utmost necessity to recognise the proper role of a Joint Parliamentary Committee. Cearly its task cannot be routine investigation which must be left to the agencies dealing with criminal activities and the adherence to recognised financial procedures. It can be none of the legitimate functions of such a Committee to undertake investigation at the micro-level since it is impossible for such a Committee to deal with micro- level information. On the other hand, will the excessive attention to details not deter the Committee from giving due attention to the macro aspects of the scam? The question is also how far an examination of these detailed data is really relevant for fulfilling the objectives for which the Committee has been set up?

The terms of reference of the Joint Parliamentary Committee, according to the motion approved by Parliament, are to go into the irregularities and fraudulent manipulations in all the aspects and ramifications in transactions relating to securities; shares, bonds and other financial instruments and the role of the banks, stock exchanges, financial institutions and public sector undertakings, in transactions relating thereto, which have or may come to light; to fix responsibilities of the persons, institutions or authorities in respect of such transactions; in the above context to identify the misuse, if any, and the failures and inadequacies in the control mechanism and the supervisory mechanism, to make recommendations for safeguards and improvements in the system for elimination of such failures and occurrences in future; and to make appropriate recommendations regarding policies and regulations to be followed in future.

The three reports of the Committee of Reserve Bank officials headed by R. Janakiraman, Deputy Governor, Reserve Bank India, provide a wealth of factual material indicating in sufficient detail the involvement of the foreign banks, nationalised banks, private sector banks, a cooperative bank, the brokers and bankers.

The Janakiraman Committee has reported that over 20 per cent in number and 30 per cent in value of the securities transactions reported by banks and financial institutions could not be matched. The Committee has summarised the results of a study of details of securities transactions undertaken by banks during the period from April 1, 1991 to May 23, 1992. The aggregate value of transactions was Rs 12,25,722 crores, of which the ready forward deals accounted for more than half the value of transactions, as can be been from the following tables:

Aggregate Value of Transactions In Ssecurities By Banks
April 1,1991 to May 23,1992

Sr. No.	Nature of Transaction	Aggregate face value (Rs. in Crores)	Percentage share of the total transactions
1.	Ready forward*	6,32,944	51.64
2.	Outright	76,603	6.24
3.	Others	5,16,175	42.11
	TOTAL	12,25,722	

* The ready forward deal is a money market device for borrowing and lending short-term funds against lending and borrowing of assets. It is also a method by which a dealer can obtain short-term funds for financing his stock of investments.

The number of transactions ran to 79,521 of which the government securities accounted for nearly 49 per cent of the total value of transactions, public sector unit bonds accounting for 37 per cent, units a little more than 12 per cent and others about two per cent as can be seen from the following table:

Type of Instrument	NO. of transactions	Aggregate face Value(Rs in Crores)	Percentage
a) Government securities	30,135	5,98,123	48.80
b) PSU Bonds	32,541	4,54,702	37.10
c) Units	11,072	1,49,399	12.19
d) Others	5773	23,498	1.91
TOTAL:	79,521	12,25,722	100.00

●

ONE should have thought that the factual information in these three reports, supplemented by the Joint Parliamentary Committee's direct discussion with the Ministers, officers of the Reserve Bank, the foreign banks, the nationalised banks, the government officers, the Securities and Exchange Board of India, the Stock Exchange executives and brokers and some selected members of the public should be adequate to enable a parliamentary committee to pinpoint responsibility for the misuse of the banking system and to make meaningful suggestions for toning up the administration of the financial sector in this country. For, the Janakiraman Committee reviewed no less than 79,521 transactions extending over a period of a little more than a year from April 1, 1991 to May 23, 1992. The Committee also provided an analysis of the bank-wise transactions of securities trading during this period as can be seen from the following table:

Name of the bank	Aggregate face value (Rs. in Crores)	Percentage
Citibank	215,179	17.55
Standard Chartered Bank	167,014	13.63
Bank of America*	151,646	12.37
Canfina	90,282	7.37
ANZ Grindlays Bank	79,497	6.49
American Express	69,191	5.64
State Bank of India	54,343	4.43
Andhra Bank	42,135	3.44
SBI Cape	32,971	2.69
UCC Bank	28,906	2.36
Canara Bank	27,879	2.27
Bank of Madura Ltd	25,729	2.10
Canbank Mutual Fund	24,223	1.98
Punjab National Bank	20,877	1.70
National Housing Bank	20,582	1.68
Others (below Rs 20,000 cr.)	1,75,268	14.30
TOTAL:	12,25,722	100.00

*Bank of America has since raised some questions about its responsibility.

The Committee has also provided a broker-wise analysis of the transactions as under:

Broker-wise Analysis of Transactions

Name of the Broker	No. of transactions	Aggregate face value (Rs. in Crores)	Percentage
Direct	24,612	463,044	37.78
H.P.Dalal	3,282	75,151	6.13
Bhupen Champaklal Devidas	3,019	67,170	5.48
Harshad Mehta	2,151	61,318	5.00
Somayajulu & Co.	1,778	43,954	3.59
V.B. Desai & Associates	2,339	37,653	3.07
N.K.Aggarwal & Co.	1,487	34,044	2.78
Batlivala & Karani*	1,998	29,388	2.40
C. Mackertich	707	18,279	1.49
Darashaw	1,098	17,470	1.42
Asit C. Mehta	703	12,762	1.04
Excel & Co.	729	8,900	0.73
G.N.Hegde	620	8,290	0.68
A.D.Narottam	575	7,519	0.61
Mukesh Babu	543	6,214	0.51
Others (below Rs. 5,000 cr.)	33,880	3,34,566	27,29
TOTAL:	79,521	12,25,722	100.00

*Batlivala & Karani has publicly challenged the finding relating to the firm.

On all accounts there was an acceleration in the securities trading after the presentation of the Union Budget for 1991-92 by Dr Manmohan Singh in July 1991. To the extent that the origin of the scam lay in the sudden and drastic change in the interest rate structure following the presentation of the Budget in 1991, these large numbers of transactions should enable the Joint Parliamentary Committee to identify the fundamental factors at work in destabilising the financial system, without again having to go into transactions of the preceding period which, even if it did disclose individual discrepancies, would not perhaps mean any significant variation in the assessment of the qualitative aspect of the management of the securities transactions of banks and financial institutions.

Undoubtedly, the failure of the Janakiraman Committee, for reasons that are far from convincing at all, to identify the persons responsible for the scam has not facilitated the task of the Joint Parliamentary Committee. The Janakiraman Committee was appointed by the Reserve Bank of India, the country's central bank, which has both legal and administrative jurisdiction over all the banks and can ask for explanation for any action taken by any bank or its officer. The Janakiraman Committee was again headed by a Deputy Governor of the Reserve Bank itself and most of the members of that committee were drawn from among the serving officers of the Reserve Bank itself. All of them were acquainted with how banks function and could be expected to be able to evaluate the actions, formulate relevant points for enquiry and pinpoint responsibility of the officers concerned. By not fulfilling this normal expectation the Committee has compounded the failure of the Reserve Bank of India to discharge its proper responsibility of ensuring the integrity of the banking system in the country. For a supervisory agency it is hardly adequate only to establish the facts of a situation; it has also to trace the cause or causes leading to any aberration of the system and to pinpoint responsibility of individual functionaries with a view of ensuring the prevention of a recurrence of the malaise.

The Janakiraman Committee has left this task of fixing responsibility to the Joint Parliamentary Committee. And yet if the Janakiraman Committee, after examining individual transactions in over 79,000 cases, has not come forward to pinpoint responsibility, how can a parliamentary committee fix responsibility without examining the individual transactions? This then provides an apparent justification for the Joint Parliamentary Committee to ask the banks to provide it with detailed information on individual transactions in securities trading over a period of three years.

The question is inescapable whether there is any bureaucratic move to scuttle the enquiry by the Joint Parliamentary Committee through diversionary methods. It would be a tragedy, though, if the Joint Parliamentary Committee should succumb to this invitation to go on a fishing expedition which would lead the Committee nowhere and would thus frustrate the very purpose for which the Joint Parliamentary Committee has been set up. The Reserve Bank must be asked to come forward to identify the guilty. This is its inescapable duty. Also the utter failure of a highly controlled financial system to ensure probity should be analysed to devise a more efficient and decentralised financial structure, much more open to public scrutiny than has been the case. Also the banks and financial institutions must be brought under the audit of the Comptroller and Auditor General of India. ■

ECONOMY

Why Policy of Stabilisation has Backfired

ARUN GHOSH

What is good for the gander is hardly ever good for the goose. What is relevant for a developed economy is, therefore, rarely recommended for a developing country. Consider the following statement taken from the London *Economist* (of July 11, 1992), in regard to the US commercial bank lending:

> By the end of May (1992) commercial and industrial loans had fallen by $42 billion from their peak, in November 1989, of $644 billion. Bank holding of government securities had increased by half, to about $599 billion. Figures released at the end of July will probably show that the two crossed over in June.

In brief, the US commercial bank lending to the US Government may have exceeded 50 per cent of total bank lending in the USA by June 1992. One must add that this is part of deliberate choice by the US banks in that they have been disinclined to lend to private investors for more than two and a half years, and have preferred to invest in the US Government securities. We will return to this issue later, with reference to the Statutory Liquidity Ratio (SLR) in India, the Narasimham Committee Report on Financial Sector Reform (insofar as this aspect of bank functioning in India is concerned), and the Government of India's pursuit of economic stabilisation through credit curbs and a hardening of interest rates.

Consider again the following quotation from the London *Economist* (of July 11, 1992) relating to the need for stricter criteria for bank supervision:

> The Basle Committee (on Banking Supervision) is now pushing not just 'best practice' guidelines but minimum standards... Every international bank is to be supervised by its home-country authority on a global basis; none is to be allowed to operate abroad without the prior consent of both home and host countries; a home country will be able to gather information about its bank's worldwide operations; and a host country may ban a foreign bank if it is not satisfied that these standards are being met.
>
> The Bank of England presses for three further changes in its own market. It has power now to refuse or revoke authorisation of a bank... It also speaks of co-ordinating more formally with the police, customs officials, drug investigators and others. And—controversially— it suggests a new debate on whether bank auditors would be required to disclose troubling information to bank supervisors.

One should apologise for the somewhat extensive quotations, but they have particular applicability to the situation in India. For a change, we should opt for the new-found strictness of the Bank of England, not the relaxed approach of the World Bank in regard to financial sector reform. Except on one specific point, namely, the need to increase the equity base of the banking sector in relation to the volume of deposits handled—which have been sought to be introduced at the insistence of the IMF/World Bank—the financial sector reform proposals in India seek increasing "deregulation" of banking when the Europeans are endeavouring to tighten regulations. In fact, the Bank of England, stung by the BCCI scam under its nose, is asking for drastic changes which will make the banking sector subject to hitherto unimagined probes, some of them very desirable provided that the probity of the probing authorities were to be unquestioned. But mark the Basle Committee's recommendation that no bank should "be allowed to operate abroad without the prior consent of both home and host countries". Granted that this provision pertains to the possibility of bank frauds and safeguards thereagainst; but then, it would also be legitimate to enquire whether the type of operations indulged in by some foreign banks are in the best interests of the host country. When a foreign bank engages in outright speculation—as four foreign banks in India have recently been found to do *in extenso*—is the bank performing the functions of banking? And are such operations in the interest of the host country?

The author, a distinguished economist, is a former Member of the Planning Commission.

Let us go back to the first quotation cited above from the *Economist*, which appeared under the caption: "What are banks for?" The unfolding situation in the USA is categorised by the *Economist* as indicative of the "banks' waning role as intermediaries between borrowers and lenders".

The *Economist* goes on to state that "whether the government uses borrowings to stimulate growth as efficiently as business does is the sort of question of which academic careers are made". It is here that the London *Economist* reveals its bias as well as its simplistic one track approach. The *Economist* not only appears to believe that the optimal allocation of resources is best mediated through the market system, it also takes for granted the assumption that the market system will, on its own, bring about a Walrasian equilibrium. Keynes had demonstrated as far back as 1936, that this does not happen. The *Economist* tacitly admits to this possibility but resiles from it. After all, if commercial banks in the USA have, of their own volition in a free market, elected to put the savings entrusted to them by housholds into government securities, if the US banks are shying away

(*Continued on page 35*)

How Best to Recast Rajya Sabha

Serving Interests of India's Federal Polity

A.G.NOORANI

After Dr Amrik Singh's article in Mainstream *(September 19, 1992) on "Restructuring the Rajya Sabha" we are publishing the following piece on the same subject.*

—Editor

There is, generally, very little to distinguish between the debates in the Rajya Sabha and those in the Lok Sabha. But it would be a grave mistake to dismiss the Upper House of Parliament as a dignified irrelevance. It would be far more constructive to restore to it the role which the framers of the Constitution intended it to play but stopped short of setting it out fully in the text of the Constitution. It is as a guardian of the States' rights and a monitor of India's federalism. This aspect has been neglected in most discussions of this institution.

A partial recognition is evident in the very name, the Council of States, which the Constitution assigns to it as distinct from the House of the People (the Lok Sabha). Nor is it without significance that Article 249 of the Constitution empowers Parliament to legislate with respect to a matter in the State List if the Council of States has declared by a resolution, supported by not less than two-thirds of the members present and voting, that "it is necessary or expedient in the national interest" that Parliament should legislate on that matter.

When this provision was debated in the Constituent Assembly on June 13, 1949, T.T. Krishnamachari, a member of the Drafting Committee, fully shared the disquiet expressed by members of the Assembly on two grounds. One was the possibility of abuse of such a unique provision. The other was the universal trend of the Centre amassing power in all federations. If the provision was adopted, nonetheless, it was because the Assembly accepted the Rajya Sabha as a reliable check on abuse of Article 249. As Krishnamachari put it, the Centre would be "empowered by the Council of States in which the component States are adequately represented and that act of empowering Parliament is by a two-thirds majority which implied that the States agree to the Centre attracting to itself that power".

Implicit in this is recognition of the Rajya Sabha as a representative of the States and its vote as the collective will of the States.

But what is so special about the Rajya Sabha to distinguish it from the Lok Sabha beyond the fact that its members are elected by State Assemblies and not directly by the people as is the Lok Sabha, the House of the People? States do not enjoy equality of representation in the Rajya Sabha as they do, for instance, in the American and Australian Senates. Seats from each State are assigned proportionate to their respective population.

●

IN the Constituent Assembly, it is the Rajya Sabha's role as a check on an impatient Lok Sabha rather than as a guardian of federalism which received greater attention. When the Constituent Assembly discussed the report of the Union Constituent Assembly, one of the leading members, N. Gopalaswamy Ayyangar, explained the *raison d'etre* of the Rajya Sabha in these terms on July 28, 1947:

> The need for a second chamber has been felt practically all over the world wherever there are federations of any importance. After all, the question for us to consider is whether it performs any useful function. The most that we expect the second chamber to do is perhaps to hold dignified debates on important issues and to delay legislations which might be the outcome of passions of the moment until the passions have subsided and calm consideration could be bestowed on the measures which will be before the Legislature; and we shall take care to provide in the Constitution that whenever on any important matter, particularly matters relating to finance, there is a conflict between the House of the People and the Council of States, it is the view of the House of the People that shall prevail.

Another advantage he had in mind was:

> We also give an opportunity, perhaps, to seasoned people who may not be in the thickness of the political fray, but who might be willing to participate in the debate with an amount of learning and importance which we do not ordinarily associate with a House of the People.

Prof W. H. Morris-Jones was, therefore, not wrong when he opined in his classic The Government and Politics of India that justification for the Rajya Sabha has always been in terms of "second thoughts" rather than "States' rights". But Article 249 and the debates in the Constituent Assembly on it show that the aspect of the Rajya Sabha as a watchdog of "States' rights" was not absent from the minds of the framers of the Constitution, either.

There is yet another indication of their awareness of that. It was the Constituent Assembly itself functioning as Parliament, before the first general elections in 1952, which enacted the Representation of the People Act, 1950. The Union Law Minister, who piloted the measure, was Dr B. R. Ambedkar, one of the main architects of the Constitution. The language used in Section 3 of the Act for prescribing qualification for membership of the Council of States is significant:

> A person shall not be qualified to be chosen *as a representative of any State*...in the Council of States unless he is an elector for a Parliamentary Constituency in that State.

It is another matter that the requirement has been evaded by shoddy methods. Section 3 envisages the MP (Rajya Sabha) as "a representative" of the State to which he belongs. In contrast, Section 4, which prescribes qualifications for membership of the Lok Sabha, speaks simply of a person to be chosen "to fill a seat in the House of the People". He is required to be a voter in "any" parliamentary constituency in the country.

If the Rajya Sabha is now endowed with a more effective role on protection of "States' rights", its role as a chamber for "second thoughts" will also improve without it becoming a "clog" on legislation. In the final analysis, the will of the Lok Sabha will prevail. But the States will have a forum to ventilate their grievances and put forth their views on legislation.

The West Bengal Government's famous memorandum of December 1, 1977 on Centre-State relations said that "in order to endorse the principle of equality of the federating units and to protect further erosion of the State's autonomy", elections to the Rajya Sabha also should be directly by the people at the same time as Lok Sabha elections; that both Houses must have "equal powers", and all States must have "equal representation in the Rajya Sabha". The first two would upset the entire scheme but the last suggestion is very apposite.

For over 80 years Sir John A. R. Marriott's book, *Second Chambers*, has been regarded as a truly authoritative work on the subject. It emphatically asserts that "whatever be the case with unitary states the bicameral system is essential to the successful working of a genuinely federal system". We need to consider how best to recast the Rajya Sabha so that the bicameralism of our Parliament truly serves the interests of India's federal polity. ■

The Jharkhand Imbroglio

ALOK K. JHA

S. B. Chavan's statement that forming either a separate State or a Union Territory was the only solution for the Jharkhand issue still needs to be fully clarified. The dichotomous and dubious stands maintained by Chavan and the Home Minister (on such occasions persons like these always become two-in-ones), and various national parties have further complicated the issue. As usual, Chavan did not apply his mind before opening his mouth, his statement on Jharkhand is just an another embarrassing chapter of Chavanspeak.

Whether Chavan really meant what he said on Jharkhand or not, the fact remains that a strong demand for a separate Jharkhand State has been there since(and before) independence. Apart from the various Jharkhand parties, all national parties have, in some way or the other, supported the creation of the Jharkhand State.

Is the proposed State viable? Who would benefit if it comes into existence? What will be the fallout for the truncated, 'rump' Bihar? And lastly, taking a clue from the Jharkhand problem is it the only and right solution to go on creating separate States to redress the grievances of a particular region?

The age-old demand for a separate Jharkhand State, comprising of 15 districts of Bihar and nine districts of Bengal(4), Orissa(3), and Madhya Pradesh(2) – covering a total area of 1,87,676 square kilometres. – is on the assumption of 'one people-one State'. But the fact is that the tribal and non-tribal people of the proposed Jharkhand State come from divergent religious, linguistic, economic backgrounds and political affiliations. The Santhal, for example, are not as homogeneous as it appears to be in the list of Scheduled Tribes. As in Nagaland, certain tribes are dominant in Chotanagpur owing to better education, employment and earlier exposure to the plainsmen's world; other tribes find themselves placed at a level lower than them. Then, as early as in 1938, the Adivasi Mahasabha, the predecessor of the Jharkhand Party (1950), had extended its membership to non-tribals of the Jharkhand region and presently the non-tribal Jharkhandis constitute a major part of the Jharkhand movement.

By pointing to the diversity of the indigenous population and the major role played by the non-tribal population in the Jharkhand movement, one is not suggesting that there cannot be unity in diversity or diversities act as a deterrent in State formation. The crucial fact here is the intra- and inter-tribe antagonism propagated and practised by the political elite of the region. And just giving geo-political autonomy to the Jharkhand region, in the hands of the political elites, will not be the real solution in redressing the grievances of the 'aboriginals' and 'non-aboriginals' of south Bihar. Secondly, even if a State is formed it will be, in all probability, the non-tribals like Subodh Kant Sahays, Gyan Ranjans and Suraj Mandals who would capture the political scene, leaving the central demand – 'tribal autonomy' – unfulfilled.

The history of the Jharkhand movement – from ethinicity to regionalism has been faction-ridden. From

'Mahatma' Birsa Munda to 'Guruji' Sibu Soren, politics in the Jharkhand region has always been personality-based. Not to forget the one-time great Oxford educated Jaipal Singh, who (after earning a good name as the leader of the record-making Indian hockey team in the 1928 Olympics) led the Jharkhand movement to its peak in 1949-59 and later on 'betraying' the movement joined the Congress to fight from within'! Also the urban-based Jharkhand movement has not really involved the the masses in any participatory activity, till sometime back they did not have any agrarian programme.

The continuous erosion in the electoral base of the Jharkhand parties since the first general elections is significantly reflective of them. In 1952, they polled 766,366 votes and won 33 seats in the Bihar Assembly elections. The figures for the 1985 elections were 438,000 and nine seats (out of 82), when the Congress won 40 seats from the same region. In the last elections the Jharkhand Mukti Morcha, now split into two groups – Soren and Marandi – secured 19 Assembly seats. The continous erosion has taken place because of, to quote a pro-Jharkhand document, "the deep division among the tribal people, sharpened by growing stratification in tribal society, with their new middle class joining hands with their non-tribal counterparts in the Congress party and elsewhere". So deep is the inter-party rivalry that the All-Jharkhand Students' Union (AJSU), which came into existence in 1986, adopted a rule that no person could be a member of the Jharkhand Mukti Morcha and the AJSU at the same time. The sharp differences amongst the Jharkhand parties on the latest imbroglio is just an extension of the earlier trends. Moreover, the exclusion of Krishna Marandi group of JMM, the AJSU, the Jharkhand People's Party, the BJP, CPI, IPF and other political and trade organisations from the talks on the Jharkhand State formation would ensure that discontent and agitations continue in the region.

Out of the 51 districts of Bihar, only 15 are included in the proposed Jharkhand State. But these 15 districts constitute almost half of the total geographical area of the State and its contribution to the State's revenue is as large as 70 per cent. More than a fourth of the total mining activities of the country is performed in this small region of Chotanagpur and Santhal Parganas. And nearly a fifth of the country's total public sector is located in this region. In the private sector, besides TISCO and TELCO factories of the Tata's, several big, medium, and small industrial units are situated in this region. South Bihar produces 90 per cent of the total electricity generated in Bihar, also the coal produced in this region is the source of thermal power in many other electricity generating units all over the country. If the bifurcation of Bihar comes into being, the already dying economy of the agrarian north will collapse in one stroke. The only industrial activity in north Bihar, besides the refinery in Barauni, comprises of 28 sugarcane mills, which are actually 'dead' now. The fallout for the truncated, 'rump' Bihar is best summarised in the statement of Bihar's Chief Minister, Laloo Prasad Yadav, "If Jharkhand goes, Bihar will be left with *baloo and bal* (sand and upper castes).

●

IT is an irony that in spite of the above-mentioned crucial contribution of south Bihar in the State's economy, the so-called developmental balance-sheet of Bihar has always been in favour of the north. The expenditure of revenue on the Chotanagpur region is 20 per cent (contribution 70 per cent), for the rest of the State it is 80 per cent (contribution 30 per cent). The irrigated lands in the south cover nearly five per cent, whereas in the rest of the State the coverage is 50 per cent, electrification (rural) in the south is five per cent, and the rest of the State is 40 per cent. Paved roads per 1000 kilometres is five kilometres in the south, in the rest of the State it is 20 kilometres.

North Bihar has many universities, south Bihar has only two. "There is one-high school for every six middle schools in the north, there is one high school for as many as 14 middle schools in the south," says Simon Marandi (JMM), Lok Sabha Member of Parliament. Arun Shrivastava of the Jharkhand Advocates' Federation says: "There are 21 tribunals in the State and all of them are situated in the north. To even plead for time (southern people) one has to travel 500 kilometres." Only eight per cent of the State's total storage capacity is available in the south. Despite its relative affluence and industrial potentiality, the region has only 28 per cent of the branches of different nationalised banks... the list of such gross imbalances is exhaustive.

Moreover, whatever little development has taken place in the south, the lion's share has been appropriated by, what the Jharkhandis call, the 'Dikus', the immigrant, alien exploiters, the main target of the movement. The influx of an outside population, comprising of the Punjabis, Marwaris, Gujaratis and South Indians, has led the 60/40 tribal/non-tribal population ratio in 1951 to become 40/60 in 1981. There are provisions of 80 per cent reservation for tribal and local people in training and jobs (in education, medical and engineering), but the fact is that nearly 90 per cent of the same have been filled by the 'immigrant' population.

The history of the Jharkhand region is the history of the onslaught on the "hills" by the "plains". They have suffered 'ethnocide' and continue to do so by the 'outsiders' and in the hands of their own opportunist leaders. The woes of the masses are genuine, their problems are real. But the solution does not lie in granting geo-political autonomy and throwing a separate State in the hands of vested interests.

The basis of the Home Minister's suggestion of a separate Jharkhand State is its economic backwardness. Then, by the extension of the same logic, Bihar should be the first State to become a separate country! A problem like that of the Jharkhand questions the efficacy of the working of the federal character of our Constitution and the implementation of the provisions envisaged in Schedule Five. Give the people their due share in their economy and polity. Give them a well-founded, working Panchayati Raj and India will remain integrated. ■

IMPRESSIONS

Perverted Logic

EKRAM KHAWAR

When the classical textbooks of political economy declared in no uncertain terms, that the modern state (read bourgeois) was only a committee of individuals to look after the affairs/interest of the bourgeoisie, one almost always displayed a quick knee-jerk reflex action and an inbuilt resistance in buying the logic. And even if at times, one did grudgingly agree, it was only with a pinch of salt, so to speak. That, notwithstanding the by now proven bankruptcy of such 'heretical' thoughts, if, subsequently situations by a quirk of fortuitous developments, confront one to the spectre of the same, one cannot help but acquiesce in the extreme characterisation however misplaced it might seem in the face of the proven virtues of moderation and the middle path.

The nation had barely heaved a sigh of relief, so to speak, after the scam and the near magical phenomenon and colossal exploits of Harshad Mehta than the sequence of events repeated almost on predictable lines. One thing leads to another in a maze of events and one finds that P. Chidambaram, a Central Minister of some standing in the Narasimha Rao dispensation resigns from his high office because of his indirect involvement with the major beneficiary of the scam. Not that his 'honesty', belated but coolly considered and to a large measure forced by the compulsion of the situation, goes unheeded and unacknowledged. He wins appreciation for his moral courage and Prime Minister Rao for accepting the resignation.

Still, scrub writers and journalists having a feel of the power structure, continued to smell foul play and probable subversion of truth even after the handing over of the case to the CBI. They went on whispering that what was visible to the public eye was just the tip of the metaphorical iceberg and that bigger fishes continue to swim underneath placid waters.

And as if to validate their position, V. Krishnamurthy, a highly respected technocrat, one-time proud recipient of the Asian Productivity Award and a member of the Planning Commission suddenly lands in all sorts of trouble. Soon the atmosphere is agog and the public is confronted with the unwelcome reality of his alleged involvement in 'operation fairgrowth' and the ensuing benefits to his son, comfortably settled in the USA. The journey from the Planning Commission to the Tihar jail is too lively and fresh to be recounted. But the actual wonder was that even such a vastly respected honest professional and a highly placed individual as Krishnamurthy (being a Member of the Planning Commission is no joke after all), practically finds himself at the end of the rough stick even though the public all along had extreme belief in the ability of the powerful in warding off troubles and also in the spirit of forget and forgive so religiously adhered to by the powers that be.

The public had to eat its own words and V. Krishnamurthy despite his colossal stature finds himself in deep trouble. Why do certain people grudge Dr. Manmohan Singh proudly donning the mantle of honesty by simply allowing investigation of corruption charges against a public servant? But such has been the recent journey of words and the attendant connotations have so indescribably changed that even such simple acts are proudly displayed as signboards of virtue.Sic!

Perhaps this "post-*glasnost*-post-*perestroika*-post Cold War" phase in the human history is not the right time to talk of words, attendant connotations and such archaically antediluvian concepts as vice and virtue. Did not even Comrade Deng say that so long as the cat continued to catch mice its colour hardly mattered.

As a distraction let it be known that the third interim report of the Janakiraman Committee has just been submitted and during the 14 months ending May 1992, 'it puts the quantum of investment in share market to be of the order of Rs 122,57,22,00,00,000. And if at the end of this astronomical figure one loses one's breath it is hardly the fault of the figure itself. Where does so much money come from? The true meaning of this figure may perhaps be better understood if for a brief moment one considers that the total annual budget of the Indian Union remains a paltry Rs 1,13,698 crores. Comparable too is figure of our gross domestic product of Rs 3 lakh crores. But figures after all, big or small will remain figures only that is incapable of meaning anything and hardly signifying any real value in themselves.

●

STILL the foregoing does give a hint of the booty at stake and the probable extent of scam-related

(Continued on page 34)

Sham of Electronic Media Liberalisation

SOM BENEGAL

One should not be stampeded into believing that the announcement about a Broadcasting Council for radio and television and the reported acceptance of the Mahalik Committee report on programmes is a positive development towards the liberalisation of these two electronic media. Even the government has cautiously affirmed that this is the first step toward making the media "less official". It is, however, nothing of the kind. And certainly it is a far cry from the Prasar Bharati concept which itself is only a well-intentioned palliative from some benevolent media intellectuals.

It is interesting to note that the Prasar Bharati, or autonomous media corporation, was conceived in the heyday of the first Janata Government in 1977-78. Fourteen years have gone into its gestation and yet it has not produced even a mouse so far. Instead we are told that the Ministers of Law, and Information and Broadcasting are continuing (note, *continuing*) discussions on proposed amendments to it! In other words, long after the cows have come home and returned to pasture, over and over again, the cogitations will continue.

Is it some abstruse Einsteinian formulation that the Ministers are grappling with? Or is it some Byzantine conundrum about angels dancing on pin heads that they are ferociously trying to unravel?

The truth of the matter is that though actions are supposed to speak louder than words, in this case words speak louder than actions. Well, might they be trying to out – Monica Monica Seles!

The truth is that the government, any government of any hue anywhere, is not going to relax its control over any aspect of life over which it already has a grip. On the contrary this modern leviathan has such a gargantuan appetite that it will consume anything which comes, howsoever distantly, within range of its ever-open jaws. And Indian jaws today can take in the whole universe.

If there has been any sense of stampede it is by the government under the entirely shrill doomsday rhetoric of our vociferous print media and their media writers who see the problem entirely from the upper-class, West-oriented, consumerist viewpoint, now sweeping the world. Cable and satellite television, according to them, is going to deal a mortal blow to Doordarshan.

Here it is interesting to note that radio is rarely mentioned because it has become a poor eighth cousin to be spoken of only in embarrassment! The fact that radio commands an enormously larger audience in our country, indeed the world, is ignored by the lure of live television in colour. The image has taken over the message. And the message has now truely become a massage, without meaning to be clever or funny.

But as usual the stampede by the government, in its true style, is in slow-motion, almost frame-by-frame as in the new-wave French film genre thirty years ago!

Making the electronic media "less official" begs the question, why should they be official at all, less or more? This is the crux of the problem. No media of any kind has the business to be official. This does not, however, mean a kind of bonanza holiday of irresponsible licence to the media. This does not hold anywhere, not even in the much-vaunted free USA.

The Prasar Bharati concept, however much cogitated upon, will never fulfil the real demands of the Indian nation for an electronic information system which meets its essential needs. The Prasar Bharati proponents were concerned with freedom. The government were obsessed with autonomy, or at any rate mouthed it as a counter-point. Worse, later, as "functional" autonomy!

No one has defined the contours (I refuse to use the horribly misapplied word parameters!) of these two concepts. A fruitless battle has raged on the semantics of these two words. One cannot but recall at this point a seminal statement made by Lenin, a much devalued personality in some quarters today but historically a colossus, and contemporaneously very relevant. Lenin said,"When there is freedom there can be no State, when there is a State there can be no freedom."

This is the harsh reality we have to face even in so small a matter as the electronic media.

To put it briefly, autonomy means restricted freedom within certain limits, but freedom means unrestricted liberty. Perhaps the Leninist dream interpreted from Marx, another colossus, is utopian today. But autonomy as prescribed, howsoever clearly (at present it is nebulous, and of course, perhaps, deliberately so), by the government and bureaucrats can never be the answer to freedom. A dialogue between the autonomy proponents of the government and the freedom dreamed of by creative media practitioners is not just of the deaf but also on frequencies which are totally incompatible.

Already there is confusion and misgivings about this Broadcasting Council, its composition, its terms of reference and its constitution. Past experience in many

Doordarshan, Please Note

Jagmohan narrates in *The Pioneer* [September 12,1992]:

BBC/ASIA telecasts regularly a documentary programme entitled *Video Diary/Diaries*. The concept behind it is fascinating.

A fortnight ago, one such Video Diary, recorded by a thirtyish, impoverished Albanian rural doctor, was telecast. Its images, though amateurish in technique, were entrancing. The commentary, in first person singular, was authentic and fascinating.

A few words by way of background are necessary here. In 1946, King Zog of Albania was deposed and Enver Hoxha, a disciple of Stalin, came to power and consolidated his dictatorship over a long period of four decades. A curious form of revisionist socialism was enforced on the people, which was more Maoist than Stalinist as the years went by. With its increasingly isolationist and insular policies, Hoxha's Albania was a thoroughly underdeveloped country, though China extended considerable aid.

It was in this Albania, after the natural death of Hoxha, before the collapse of communism (including Albania's own brand of it) that the BBC discovered the said naive doctor. He happended to be an addict of the BBC's world radio programmes. That was his only contact with his country and the world. He was also a soccer fan and a lover of the Liverpool players, especially Gary Linekar.

The BBC correspondent based at Tirana (capital of Albania) had become a friend of the doctor. One day he thrust a handy video camera and tapes into the doctor's hands, taught him the basic mechanical operations and requested him to shoot whatever he liked, but with some continuity and thus maintain a novel diary on tape.

With great alacrity and zeal, the otherwise sad and sedate doctor took to the video camera. The telecast version enabled me to get acquainted with the members of the diarist's family, including his woman friend, have a close look at their poverty, attend a local wedding and witness the breakup of the dictatorship of Hoxha's successor, protest demonstrations, and elections for a new way of liberal, democratic life. The diarist now, and again, switched on the camera and sat before it to give his comments.

A happy postscript in the diary is about the doctor's trip to the London headquarters of the BBC, with all expenses paid, so that he could edit the diary himself. From London he goes to Liverpool and sees his favourite players and, of course, Gary Linekar. It is a beautiful story thanks to the BBC.

fields, including the media, shows that such bodies are mere show pieces meant to cover the hidden manipulations of the government and its bureaucratic mini-dictators, with a veneer of respectability and legitimacy given by the distinguished non-officials. These hapless creatures, in any case, have rarely time to give in-depth consideration to the problems placed on their agenda.

●

BUT to come to the most crucial and only relevant question in this whole crisis made into a charade is: what actually is the role of the electronic media in our country, indeed in all countries facing the problems as we do. Namely, the so-called developing countries. Are we supposed to duplicate, howsoever farcically, the entertainment programmes of the West – pop-singers, rock-groups, women gyrating in scanty clothes to flashing strobes, sex and violence-related kitchen-sink dramas, space fantasies little related to any science and so on? In other words purely escapist, purely directed at visceral provocations, laced with consumerist siren calls in between? If that is the be-all and end-all, catering to one per cent of our affluent people, why then, why compete at all? Who will want to watch this Indianised fifth rate rubbish? Why waste our resources, meagre as they are to pamper fruitlessly on this microscopic minority who will, in any case, turn away? The debate is preposterous in the extreme.

Let us rather reach back to one of our most perceptive and forward looking visionaries in science, space, and social commitment, Vikram Sarabhai. He said a quarter of a century ago, even while envisaging a future "sky invasion":

> Direct broadcast of TV from a satellite represents the use of advanced technology which for the first time does not impose a penalty on account of the dispersal of the receiving units away from the urban centres.

Clearly seeing the need for reaching all sections of the population, the young and the old, men and women, literate and illiterate, the privileged and the underprivileged for the country's continued stability and national integration through this unique common mass media of communication, Vikram Sarabhai said:

> We should consciously reach the most difficult and least developed areas of the country and because they are in this state, we should reach them in a hurry.

Along with Vikram Sarabhai, many dedicated later luminaries and other rather humble devotees of our country I do not see India as a paradise for parvenu carpet-baggers and free-booters. Rather I see it as a vast land, not a waste-land, for its struggling millions to turn to a sun of reasonable prosperity.

It is for these that a television and a radio can each be a most powerful medium for redemption through education, enlightenment and, incidentally, entertainment.

Five-star lizards, and blissfully-blind voluptuaries may think it laughable that television has any other purpose than titillating their passé passions, but technology, I hope, was not designed for such people. It was meant for higher purpose. All through history, in any form, whether capturing fire, inventing the wheel or leashing the atom it was designed for man, not some selfish men.

If we see television in this light we can use it for a positive purpose regardless of the prevailing jeers all around. To ensure this without deviation from the main objective television has to be restructured in an entirely new format and a new operational matrix.

Several ideas have been floating around. The most essential *sine qua non* is that the electronic media must be wholly free from governmental control, and even remote interference. If it wishes to put forward its point of view it may stand in line with the rest and secure any time that may be available. But it cannot have a rigid monopoly and farm time out to others based on its whims and fancies and in most cases out of political and monetary considerations.

This will be anathema to the vested interests which have grown up and proliferate every hour. The recent determined entry of bureaucrats (to the exclusion of even the few professionals in the organisation) without the slightest knowledge of the elementary principles or requirements of these media shows the gross unconcern about the fate and operation of radio and television.

The development role of television as a vehicle of education and extension, as a means to enrich cultural and socio-economic life, as a tool to inspire the people to their national heritage and rich culture, their unity and integration and prosperity is not to be sneered at. I know there is a very vocal set of people who believe that television has only one role of entertainment and everything else lies elsewhere, if at all. As anyone with the slightest disinterestedness will see television is the only means which can reach our least privileged people, in a hurry to quote Vikram Sarabhai, because new technologies make it possible. It has a rare credibility, is most persuasive and requires no previous perparation for assimilation like writing and reading.

However, Vikram Sarabhai and others were quick to point out that they accepted entertainment as important, but he questioned if that was to be determined by people who had little empathy with their audience. The peoples' participation in what they wanted thus became an important ingredient of a programme.

Let it not be assumed that the peoples' participation would mean the lowest in taste, that filmi songs and sequences would be the only thing they would want. This is the arrogant assumption of the so-called elite who themselves are tasteless. The SITE experiment (Satellite Instructional Television Experiment) in the middle seventies reaching 2400 villages in six States proved to be a great success in the involvement of the disadvantaged classes of the country. This was further augmented by the so-called Pij experiment of localised broadcast in Pij in the Kheda district of Gujarat, where the villagers themselves in time learned the techniques of programme production in all its aspects relevant to their own problems. This intensely localised programme along with other national programmes beamed during the evening proved to be a bench-mark for the creative use of television for inspiring people about their own potential, giving them a sense of self-reliance, an understanding of the world around them, both national and international. Replicated around the country it would have shown the true use and power of television to carry the country as a whole forward.

But for reasons unknown the Pij experiment was abandoned. The emphasis went back to the totally infertile area of so-called entertainment and propaganda.

But, how can one call this area infertile? Surely it became very fertile for those whose primary aim and sole purpose was to use this medium as yet another source for enriching themselves through its profligate exploitation for warping life-styles and cultural attitudes to conform to the new philosophy of self-determination of the rich minority for its affluence at the cost of the poor majority?

Naturally the “sky invasion” has been both a godsend and a windfall to such people. One, it has hastened the pressure to change Indian television to conform to the West-oriented world-view sweeping the globe. Two, it has given an impetus to the practitioners, called media wizards, of this approach and its ardent promoters, the liberalised consumer industries and their allies in other fields, to embrace readily the “sky invasion” by inviting it as collaborators.

But to those who see India as more than a plaything for its new-rich *nabobs* and the misguided segment of its youth, the electronic media have to play a different role as I have already elaborated.

But how to achieve this?

●

FIRST and foremost there should be no Ministry of Information and Broadcasting, and no Minister with a clutch of bureaucrats around him. The Ministry and its appurtenances must be abolished. At best there can be a Department of Information, a role fulfilled by the Press Information Bureau which doles out the news which it thinks is fit to be printed, and newspapers decide whether it is fit to be used.

The electronic media have to be split vertically between radio and television. There can be no promiscuity between the two. They also have to be split horizontally. For purposes of the present discussion I will deal only with television.

Instead of the hydra-headed monster that Doordarshan is today, television has to be further split vertically into five Independent Authorities. An Independent Rural Television Authority, an Independent Educational Television Authority, an Independent News Television Authority, an Independent Entertainment Television Authority and, finally, a National Dubbing Authority. This last will help to convert national and regional programmes understood and appreciated all over the nation — a requisite of any communication.

Again these several Authorities may be Central in character but they have to be split again horizontally so that each area, each region, can evolve its own programmes specific to its needs.

In other words, a Central-decentral matrix, in which the Central Authority oversees the broad nature of the television operation and offers counsel (but not those horrible "guidelines") and leaves it to the decentralised organisms to develop themselves according to their genius.

The essence of this approach is that only professionalism must be encouraged, promoted and allowed the maximum freedom in operation.

I am not sure that all these should be gathered together under a Television Authority of India as we would reach the same position as now in a circuitous way. Instead there may be a coordinating central agency to ensure the smooth meshing of all the Authorities and their efficient operation. Such an agency, needless to say, must have again only professional and public-spirited whole-time participants unhampered by other avocations. Also needless to say imperatively there should be no politicians and bureaucrats even within hailing distance to interfere or influence the electronic media.

The various Authorities should be set up under a benign Charter from Parliament with a specific unchangeable proviso that Parliament or its constituents will have no programme and operational control over them. They should come only under the scrutiny of the Public Accounts Committee who shall judge only their financial operations to prevent profligacy and misuse but not make any value judgements on programme content and performance. This last aspect will be naturally judged by public acceptance or rejection.

As a now-forgotten report said:

> a massive monolithic organisation cannot function effectively. Indeed, it would be unfair to expect it to do so with the deadweight of the organisation bearing down on the people operating it. It needs to be decentralised, diversified, even atomised, so that the elements can breathe more freely and operate with greater elasticity and effectiveness.

Such a set-up need have no fear of invasion from the sky or any other elements.

But is this all utopian? Or is it, as Keats said, "a vision or a waking dream?" ■

Crisis of Socialism

Notes in Defence of a Commitment

RANDHIR SINGH

Prof Randhir Singh, one of the most successful teachers in Delhi University as a Professor of Political Theory, has now retired from the University. His book, Of Marxism and Indian Politics*, published in 1990, evoked considerable interest in intellectual circles and among activist groups. For two years now he has been speaking on the subject of the 'crisis of socialism' and has now decided, at the presistent insistence of friends, to write down his arguments. The following article is the first draft of the opening section of his proposed essay on the subject. This has already appeared in the* Economic and Political Weekly. *We are reproducing it with due acknowledgement to the* EPW *and the author's permission.*

—Editor

> *The theoretical conclusions of the Communists are in no way based on the ideas and principles that have been invented or discovered by this or that would-be universal reformer.*
> *They merely express, in general terms, actual relations springing from an existing class struggle, from a historical movement going on under our very eyes.*
>
> Communist Manifesto

> *Socialism is young...*
> *The road is long and in part unknown...*
> *To build communism, a new man must be created simultaneously with the material base.*
>
> Che Guevara

> *It is only when people get to the point of seeing that the price of contradictions is yet more intolerable than the price of ending them that they acquire the nerve to go all the way through to a consistent socialist politics...*
> *Once you have decided for revolutionary socialism, not because it is quicker or more exciting, but because no other way is possible, then you can even experience defeat, temporary defeat, such as a socialist of my generation has known, without any loss of commitment.*
>
> Raymond Williams

These are tragic, indeed traumatic times for those who still take their socialism seriously...

A long time ago, even as the modern socialist tradition, inspired above all by Marxism, had just established itself, someone as little suspect of sympathy for any sort of socialism as Ludwig Von Mises described it as the 'most powerful reform movement that history has ever known, the first ideological trend not limited to a section of mankind but supported by people of all races, nations, religions and civilisations'. More recently, even as *The Times* too noticed the truly global reach of the ideas of Karl Marx – 'there is no country in which at this moment someone is not discussing Marx's ideas', etc. – Peter Laslett, very far from being a Marxist, pointed out that the teachings of Marx 'have proved more successful than any other set of doctrines which the West has brought forth, swifter and more final in its conquest of the world than ever Christianity was'. In the meantime, even so hostile a critic as Leopold Schwarzschild seemed to sum it all up when he wrote:

> If a name had to be found for the age in which we live, we might safely call it the Marxism era.

And now!...

Many of us had known, even from afar and without visiting there for nearly four decades if not more, that it was bad, in fact pretty bad, in the countries of 'the socialist world' as it was called. We had come to recognise these regimes as, at best, aberrant or deformed versions of socialism as Karl Marx and the classical Marxist tradition had visualised it. Taking our distance, as disappointed but still friendly critics, always hopeful of a change for the better, we had learnt to speak of them, in Rudolf Bahro's more truthful though somewhat ambiguous expression, as countries of 'actually existing socialism'. Yes, it was pretty bad there, but it is only fair to confess that even the most knowledgeable amongst us did not know it was *that* bad! For now even the 'actually existing' has ceased to exist in the Soviet Union and Eastern Europe and is in real crisis elsewhere.

As we move into the last decade of the twentieth century, the wreckage around us is already sufficiently comprehensive not only to eliminate the so-called 'Marxist-Leninist' model of socialism as an alternative to capitalism, it has compromised the very idea of socialism, in every one of its forms, Marxist or non-Marxist, be it Trotskyism or Maoism, or reform-communism, or social democracy, or even whatever anti-Communist socialism is still around in India and elsewhere. The deluge of disenchantment has in fact put a question mark not only on the possibility of any escape from capitalism but on the validity of Marxism itself as the theory and practice of the struggle for human emancipation in our times.

As I look back upon my more than fifty years of hopeful involvement with the 'idea of communism', and as today the memory of the heroic struggles of generations of Communists and common people for a cause recedes and the reality of broken illusions, wasted lives and bloody sacrifices behind a shattered political model grows on you, one begins to doubt, if only for a while, whether hope will ever again create 'from its own wreck the thing it contemplates'!

> One almost instinctively turns, once again, to Goethe's injunction so apt for our troublous times: One must from time to time repeat what one believes in, proclaim what one agrees with and what one condemns.

●

FOR me it all began in 1939...

Global capitalism, as imperialism or its fascist variant, driven by the logic of its contradictions, was inexorably moving towards yet another World War, in the process seeking desperately to destroy, as it had sought all along, the barely two-decades old Soviet Union, still struggling to survive and 'build socialism', no matter how one qualified this pioneering effort, then or now. In India, the struggle for freedom was poised to enter its most critical phase and, despite a certain well-justified distrust of its leadership, there was a hopeful turbulence in the atmosphere around us. For me, personally, Bhagat Singh's had been a compelling presence since childhood, and now there was the immediate inspiration to the still-fresh saga of the struggle in Spain – the International Brigades, the finest of writers, poets and artists, across the continents, taking sides and committing themselves to political action against War and Fascism, their manifestos speaking the language of 'the revolutionary cause', 'proletarian revolution' and 'the destruction of capitalism', 'the establishment of a workers' government', and so on.

And most important of all that fired our radical imagination in that age, that which held together and gave its essential meaning to our idealism, was the continuing reality of Lenin's revolution in Russia – John Reed's *Ten Days That Shook The World* – and its cause now embodied in the Soviet Union; yes, the fabled and forbidden 'land of the Soviets', so distant and yet always so near, the centre of a worldwide fraternity of revolutionaries and the bearer of the promise of *other* possibilities for the oppressed and exploited everywhere, indeed, at last, of a full and truly rich life for the entire humankind.

One almost inevitably moved Left, to revolutionary socialism which was then gathering unto itself, in Punjab and elsewhere in the country, virtually all the streams of modern India's revolutionary tradition – the legendary survivors of Kartar Singh Sarabha's Ghadarite uprising, old revolutionaries in exile or jails of India and the Andamans, comrades of Bhagat Singh and the battle-scarred fighters from different strands of 'revolutionary terrorism', leaders and activists of the militant peasant and working class movements, Left-wing socialist and Congressmen, radical young students and intellectuals, and many more. This is how I recorded it in an autobiographical note some years ago:

> And in due course, on the eve of the Second World War, I again came to Lahore, this time for may studies at a college there. My father, a remarkable man in his own mixed sort of way – a brilliant physician and surgeon, profoundly religious and puritanical, with a rather deadly combination of Gandhi and Lenin in his head – sensing the turbulence inside me, his only son, had advised: 'Do anything out there, but don't join some illegal organisation.' Predictably, this was the first thing I did on reaching Lahore. Even as I was searching for it, the Communist Party found me. When my father admonished me that I had shown scant regard for the family, I wrote back: 'I have found my real family.' The Communist Party meant this and very much more in those days, to so many of us at least. Besides, there was a certain pride in being a Communist. I still remember from those early years two lines from the poet C. Day Lewis. A question and an answer, they went something like this:
>
> *Why do we on seeing a Red feel small?*
> *For he is future walking to meet us.*
>
> Fifty years later, badly buffeted, some of this pride yet remains. Incidentally, this is also how I came to Marxism – beginning with whatever Marxism was then available with the Comintern and permitted or possible, under the British rule, in this country.

●

IN fact, we had very little of Marx and Engels, or for that matter Lenin, available to us in those days, and a government ban on libraries at Lahore in this regard took care of much of even this little. 'Party literature' apart, Palme Dutt's *India Today* and Stalinist 'summing up' of Leninism in the *History of the Communist Party of the Soviet Union (Bolshevik) – Short Course*, in illegally printed or cyclostyled editions, were the staple of our education in Marxism. Sympathetic writing on the Soviet Union was not easy to reach either; though later, with Hitler's invasion and the heroic Soviet resistance to Fascism as the War progressed, a great deal more of the Soviet Union became available. There was the monumental work of the Webbs, *Soviet Communism: A New Civilization* – 'In all social history, there has been no such a colossal and so exciting an experiment,' they had written. And we noticed that within two years they had withdrawn the interrogation mark they had put against the title in the first edition, published in 1935. The Fabian bias of the Webbs notwithstanding – a certain identification of socialism with statification – their exceptionally well-argued and documented writing was at once a recognition of and attribute to the truly astonishing achievement of the Soviet people and Communists in building what they had built – built, I may add, with Stalin and despite Stalin. This achievement retains its rich significance for all socialist experiments of the future.

Webbs apart, there was the Dean of Canterbury's *The Socialist Sixth of the World*, Joshua Kunitz's *Dawn over Samarkand*, reports by Nehru and Tagore, and so much else on the Soviet Union that we most avidly imbibed. So many with impeccable credentials had visited there and assured us with Lincoln Steffens: 'I have seen the future, and it works.' And I can still recall the argument which Eugene Vargas *Two Systems* had, in its own way, endorsed; namely, that given the massive release of people's creativity which socialism ensures as against its pitiful expression under capitalism (or for that matter under all class-divided societies of the past), it is only a question of time before socialism established its superiority and ultimately triumphed over capitalism.

A little later we had that 'strange and frightening story' as *Newsweek* called it, *The Great Conspiracy Against Russia* by Sayers and Kahn – a book which should be compulsory reading for every socialist even today. We learnt, yet again, how the bourgeoisie conspired and how it lied when it came to the Soviet Union and Socialism! Voracious readers, we devoured all this and despite all ~~the odds,~~ the illegal or semi-legal conditions of life and work, grew ever more firm in our solidarity with the Soviet Union as the first effective breach in the global capitalist system and in our revolutionary commitment to the cause of freedom and socialism in India. At the time, nothing, literally nothing appeared impossible to us. As the distinguished historian, V.G. Kiernan, my teacher and comrade of those years, recently wrote to me:

> Yes, those were exciting days we lived through when the dear old Party seemed to be soaring toward heaven.

We indeed lived and functioned in 'the actuality of revolution' as Lukacs once phrased it.

Today it all seems to be so very long ago. Not that the ideal has not held – the ideal of socialism as the historically necessary negation of capitalism, a free, cooperative and democratic society based on a social, that is, *genuinely social*, ownership of the means of production. It has. Through more than five decades, at Lahore or in Delhi, inside the Party or outside, in one form or another, a certain involvement with the socialist cause has always been there: the early activity in the student's movement, years of full-time revolutionary work with a stint in jail; writing, editing and translating for the Party (which, incidentally, included the Punjabi translation of the *Communist Manifesto*), or later, after the partition, as a teacher, occasionally as a Party member but always as an ordinary activist, often with an understandable love-hate relationship with the diverse currents or formations of the Communist Left, and so on. Through it all I have held on to the ideal of socialism and to whatever little Marxism I came to acquire, finding it useful, beyond politics, not only in my work as a teacher but in living my life as well.*

But if the ideal has held, it is also true that today the vision is somewhat blurred, due not so much to the passage of time as to the developments of these past few years which in their totality indeed constitute an unprecedented 'crisis of socialism' that demands an explanation, an honest coming to terms with it.

●

BEFORE I attempt such an exercise, it is necessary to make a point which is often obscured in the current despair or euphoria over what has happened. I would like to affirm that the 'crisis of socialism' we are witnessing, though diversely damaging in its consequences, takes nothing away from the historic significance of the world's first socialist revolution or from the achievements of either the pioneering experiment in the erstwhile Soviet Union or the world communist movement – the achievements of 'historical communism' as it is being described in certain epitaph-like pronouncements these days.

The October Revolution, by its revolutionary breaching of the world imperialist system, not only heralded the *necessary* beginning of the new epoch of transition from capitalism to communism – a fact fully vindicated by the historical experience since then – it also achieved the immediate demolition of 'the prison house' that was Czarist Russia, ending age-old oppressions and freeing vast masses of human beings, peoples and nationalities, within its extensive frontiers. Local variations apart, even when led or supported by the Red Army, the changes in Eastern Europe at the end of the Second World War had similar liberating consequences for the common people in these countries.

This historical truth should not be too difficult to recognise or accept. But the pervasiveness of the crisis, the disillusionment and despair accompanying the collapse of the communist regimes in the Soviet Union and Eastern Europe, makes it equally necessary to point out that these first revolutionary societies have had real achievements to their credit in the period following the initial revolutionary transformations, particularly noteworthy if account is taken of the conditions they had to a greater or lesser degree inherited and the circumstances in which they survived and achieved – economic, social, cultural and political backwardness, massive illiteracy, war, civil war and counter-revolution, continuous imperialist intervention in one form or another and, in most cases, a long tradition of centralised authoritarian rule often imposed from outside, etc. etc. The record is far, very far, from being only negative as the hostile critics are busy making out today.

In the Soviet Union, for example, it is not merely that its prodigies of industrialisation in the thirties constitute an incontrovertible argument for the capacity of a planned economy to achieve growth – in a single decade it turned the country into the world's second industrial power and created the powerful Soviet state that survived years of capitalist hostility and encirclement and could take on the full might of world Fascism and defeat it; an argument well confirmed by the spectacular performance of the Soviets during the years of reconstruction immediately following the Second World War when with its lands ravaged and the entire economy wrecked, and more than twenty million dead, the country was rebuilt into the world's other superpower.

Still more significant have been the other successes of this first experiment in building socialism: the establishment of the right to work and social security for the working people; the equitable distribution of scarcity and the reallocation of resources so as to reduce the economic disparities among different, unevenly developed regions; the rapid elimination of the conditions of extreme poverty and the development of social consumption of health, education and cultural life; the breaching of some at least of the traditional forms of sexism and securing unprecedented participation of women in social occupations and political life; the remarkable initial responses to such difficult and complex issues as national oppression or the protection of nature; and, especially in the early years, the extraordinary flowering of human creativity in every sphere and mass participation of workers and peasants in public life, etc. etc.

---

* Cf. 'In Lieu of a Bio-data' in *Of Marxism and Indian Politics* and Preface to *Reason, Revolution and Political Theory* (third enlarged edition) both published by Ajanta Publishers, Delhi.

Even though there were retreats later on, tragic distortions and reversals in many areas, including the catastrophically rapid decay of Soviet democracy, the Soviet Union assured for vast masses of its ordinary citizens a life of material security and moral and aesthetic culture far superior to what even the countries of advanced capitalism have to offer to their common people. In Eastern Europe too, under the communist regimes, there were parallel achievements in economic, social and cultural spheres. These achievements even today have a great deal of explosive potential for the revolutionary processes of the future in these countries.

●

THE impact of the Soviet Union and the movements associated with or inspired by it has been no less powerful and profound outside of its borders. And this does not refer only to their *decisive* contribution to the defeat of Fascism. It is no doubt true that while the communist movement attracted to itself some of the finest minds in the first world — writers, poets, artists, scientists and others — it was generally less influential than 'social democracy' as the latter had come to be. Despite its powerful presence in Italy and France, communism could not shift politics effectively in a socialist direction anywhere in Western Europe, though its heroic role in the resistance movements of occupied Europe gained for it extraordinary prestige and popularity which was eventually frittered away, partly because of the Soviet connection.

But there is no denying world communism's immense *civilising influence* on capitalism in the first world, in curbing its structurally inherent predatory logic at home and abroad. They very existence and survival of the Soviet Union over these years, together with the communist, socialist or labour movements it inspired or supported, was a most important factor, of course among many others, in persuading the ruling classes in the West not only to cede ground to anti-colonial liberation movements, especially after the Second World War, but also to make concessions to their own people, to establish and enlarge the elementary democratic rights in capitalist societies. It has been pointed out that social welfare provisions were often at their most generous in the West European states bordering the former Soviet bloc; those instituted at a time when the prestige of the Soviet Union was at its highest in the early post-War period, are even spoken of as 'the fruits of 1945'.

Far more significant in the short as well as the long run, perhaps, is the continuing impact of the October Revolution on a world scale, which the erstwhile Soviet Union, in its own much distorted manner, reinforced. Though the immediately following European revolution was betrayed, suppressed or aborted in different countries, the Russian revolution survived to be a source of constant inspiration for the anti-capitalist revolutionary movements everywhere. What is more, it ignited the worldwide anti-colonial liberation struggles in the periphery and semi-periphery of the global capitalist system. This may well turn out to be its crowning achievement in history. The salvoes from the battleship *Avrora*, heralding a 'Workers and Peasants' Government' in Russia, sent out the message of Marxism to the oppressed and exploited in the remotest corners of the earth, and with it came the Leninist summons to militant revolutionary politics, which have since moved vast masses of people to become effective actors in political life, to make their own more or less successful revolutions in China, Cuba, Vietnam and elsewhere.

The Soviet Union, just as it aided the radical causes and the communist movements abroad, also provided help to these liberation struggles and a certain support and protection when they emerged as revolutionary regimes. That, increasingly, this aid or help, support and protection, was born not of any consideration for the world revolutionary process but of mixed compulsions of own history and ideological legitimacy, 'national interest' and even *realpolitik*, or plain superpower politics, should not be allowed to obscure the signal Soviet contribution to the anti-colonial liberation in the Third World. Certainly, the sweep of post-War decolonisation owed much to the challenge and competition resulting from the need for the Western colonial powers to contend with a powerful and prestigious global rival.

Indeed, without the 'historical communism' as it has been called, this world of ours would have been a far more inhuman and hopeless place. Beyond its historically specific achievements mentioned above, to which could be added many more, is a somewhat intangible aspect of the social reality around us today, a general illumination, as it were, that bathes all the failed or successful particularities of our age. You have to take only one quick look around to recognise the living presence of 'historical communism' in the enhanced awareness of humankind the world over concerning issues of human dignity, of justice and injustice, of equality, oppression and exploitation, in the voice and hope the poor and the oppressed have come to acquire in our times, in the quality and spread of their struggles for a better life and, above all, in their confidence, despite all the retreats and reverses, that they can fight and win their emancipation...

I am aware of the complexities of the historical processes subsumed in the sketchy account above, aware of the need to make qualifications as also to take notice of the terrible, often needless, price paid for some of the achievements. But the point I am immediately wanting to make is the simple one: there is a great deal to be said, even today, even in this hour of 'defeat', for Lenin's Revolution, for the Soviet Union that was, and for the world communist movement — they have another record which holds promise of other possibilities that may yet be.

●

BUT the point made, the fact of 'defeat' retains its overwhelming reality. It may be too early or rash to speak of the termination of the historical process that began in 1917, but *the* issue today is the 'crisis of socialism', dramatically highlighted by the collapse in the Soviet Union and Eastern Europe and the stampede backward into the world capitalist system. And this evokes memories of another kind, they come rushing in a welter, filtered through time.

Even as a I left home and took the road to life and politics with Marxism, among the very first books I read was one recently published by a Professor of Economics at Lahore, Brij Narain, titled *Marxism is Dead*. Later I was to learn that periodic pronouncements of this sort are the historic destiny of the doctrine of Karl Marx. One that claimed more than the usual attention and was constantly thrown at us was that symposium by six penitents with communist pasts, *The God That Failed*, as if god, any god, ever does anything else but fail, at least most of the time.

However, I must confess that never before did such a pronouncement sound so convincing as it does today. And the memories, in their rush, travel over the other territory—the territory of doubt and disillusionment over these fifty long years: the dubious aspects of Stalin's pact with Hitler; the sudden switch to 'Peoples' War'—'who lives if Russia dies'—whose ambiguities overnight reduced us from heroes in the freedom struggle to its 'traitors'; the dissolution of the Communist International and the post-War surrender of revolution in Greece and the revolutionary possibilities in Italy and France; the breaking away of Tito's Yugoslavia; the trials, purges and executions in Eastern Europe, reminiscent of the Moscow trials, the purges and executions of the thirties, in which perished, as we now fully know, more than a million Communists, including almost the entire leadership of the Red Army and 1108 of the 1966 delegates present, together with 98 of the 139 Central Committee members elected, at the Seventeenth Congress of CPSU(B)—'the entire flower of the revolution had been butchered', as E.P. Thompson put it later, decimating whatever was left of the 'Party of Lenin'. Incidentally, this Congress held in 1934 and known as the 'Congress of Victors' was hailed by Stalin himself for its 'colossal achievements', for 'the decisive results achieved by socialism in all branches of economic and cultural life', for laying 'an unshakeable foundation of a socialist economic system in our country', etc. etc.

We believed Stalin entirely but we were also learning, without entirely believing though, something of the ruthlessness and terror behind some of these achievements; if ideals had indeed moved millions of Russian people and Communists to heroic endeavor, their actual practice had also caused these people and Communists untold pain and suffering. Socialism was acquiring, above all, in its lack of democratic freedoms, its arbitrary and cruel exercise of political power, an ugly and inhuman face. This was certainly a contributory factor in the working people turning away from this socialism in the countries of advanced capitalism, though it retained its attraction for the backward, poverty-stricken countries of the Third World where an increasing number of people saw in it the promise of rapid economic development and a better life.

For us, however, it was socialism as we believed it to be, and socialism by definition has a human face. Its ugliness in Soviet Russia, whatever part of it we were then willing to see, was credibly attributed to its historical origins—hadn't Marx argued against utopianism and written of the 'inevitable defects' in the new society as it emerged from the old capitalist one? In any case our official Marxism was content to explain it all, really explain it away most of the time, as so many 'mistakes' or 'distortions', as unfortunate 'deviations' from 'socialist norms'... Such 'explanation' was not difficult to accept because we *knew*, and we were daily reminded of it by irrefutable, ever-accumulating, new evidence, how the bourgeoisie lied and conspired against the Soviet Union. The lies and conspiracies of the bourgeoisie indeed stood between us and the truth. For the rest, our idealism, our faith and commitment, made up for our ignorance, our lack of information and understanding.

Then, confirming our worst fears, came Khrushchev's Report at the Twentieth Party Congress, to be followed in regular succession, after the early rumblings in East Germany, by Hungary (1956), Czechoslovakia (1968), and Poland (1980), interspersed with the American-backed brutal massacre of over one million men, women and children in Indonesia, liquidating the largest Communist Party in the non-socialist world and the near-total silence of the entire communist world over it, the violent breach between the Soviet Union and China and further splits within 'the socialist world' and the communist movement, the armed conflicts between countries professing socialism amidst widespread charges that they are taking 'the capitalist road' and so on, accompanied all the while by authentic news about the stagnation of the Soviet economy and society and the continuing degeneration of the Communist Party and its leadership, the rulers of the Soviet Union—the public bestowal of Soviet honours on Suharto, the butcher of Indonesia, being as good a symbol as any of this degeneration... Such are the memories of doubt and disillusionment over the years.

And now, finally, no longer the memories but the harsh contemporary reality, the earthquake of 1989-90 and its tremors at Tiananmen Square, the ignominious collapse in Eastern Europe and the Soviet Union! 'Defeat of socialism', 'triumph of capitalism', the enemies exult and proclaim. And, once again, 'Marxism is dead.'

●

'UPTURNED UTOPIA' is how Norberto Bobbio has described the recent developments in the Soviet Union and Eastern Europe, and to convey the full tragic meaning of the metaphor, he points out that it was 'the first utopia that tried to enter into history', for it was sought to be raised on a real, material basis. Utopias have been with us for a very long time. Religion, for example, has invariably promised a heaven, up there, to its votaries, especially those who have little or nothing down below on this earth—only its details have varied with the varying historical or even geographical contexts of different religions. And there have been the secular versions too, like *Island of the Sun* in antiquity, or Thomas More's and Utopian Socialists' in more modern times. But all such utopias, religious or secular, were imaginary, like Plato's in *Republic* which was, as Glaucon put it to Socrates, true only 'in our words'. These utopias indeed played a socially important ideological role in human affairs, but they did so primarily by virtue of their real significance which lay not so much in the imagined ideal they projected as in the implicit critique they carried of the inadequacies of contemporary society.

But the utopia now 'upturned' was different – it had dared to move from the realm of 'words' to that of 'things', and seemed to have succeeded, almost, in giving a real expression to the ideal. And even if, for the moment, we must speak in the past tense, it is well to remember what an ideal it was! Even as it claimed the allegiance of any number of master spirits of our time – a Neruda or a Picasso, a Joliot-Curie or an Einstein, an Aragon or a Hikmet, a Brecht or a Faiz, to mention only a few from more recent years – it had also the power to move, more than any other ideal in history, millions below, Fanon's 'wretched of the earth', to heroic action on behalf of freedom and dignity of woman and man. It had behind it, as Gandhiji once said, 'the purest sacrifice of countless men and women' – they had risked their all for its sake, accepting all the hazards of life – long revolutionary struggles, cheerfully facing prison and exile, torture and death in the extermination camps. It was the inspiration of Bhagat Singh when he chose to 'mount the gallows boldly and with a smile', and of Che Guevara when death surprised him in the jungles of Bolivia. Gabriel Peri, on the eve of his execution by the fascists had spoken of it as the 'singing tomorrows' of mankind.

'Upturned Utopia' is an understandable description of what has happened, but as a metaphor it has its limitations too. Taken literally, it can be quite misleading. Not only because it is certainly too early to speak of these matters in the past tense, but far more because it simply *was* no utopia. As 'actually existing socialism', its problems, contradictions and dilemmas, its very nature, were for long a subject of angry or anxious, friendly or hostile discussion among socialists and Marxists of the world. Trotsky onward, and including Mao Zedong's critique and Bettelheim's classic *Class Struggles in the USSR*, there is a whole corpus of authentic *socialist* criticism of what was being built in these post-revolutionary societies. While most hoped, rather wishfully it is obvious now, for a turn from 'actual' to 'real' socialism, and none even remotely anticipated the present ignoble denouement, the analytical comment was uncompromisingly sharp and the forebodings clearly expressed. Only a decade back, for example, Paul Sweezy wrote of the very real possibility that the Soviet society may have reached 'a dead end...with no visible signs of a way out'. And as long ago as 1949, in an explicit statement of his commitment to socialism – 'Why Socialism?' – Einstein had, in his own straightforward manner, thus focussed on one of the most crucial issues:

> Nonetheless, it is necessary to remember that a planned economy is not yet socialism. A planned economy as such may be accompanied by the complete enslavement of the individual. The achievement of socialism requires the solution of some extremely difficult socio-political problems: how is it possible, in view of the far-reaching centralisation of political and economic power, to prevent bureaucracy from becoming all powerful and overweaning? How can the rights of the individual be protected and therewith a democratic counterweight to the power of bureaucracy be assured?

Later, equally specifically, as an economist Lange wrote, in italics: *'The real danger of socialism is that of a bureaucratisation of economic life.'* And we had the characteristically pungent and perceptive observation of Kalecki: 'Here in Poland we have successfully abolished capitalism; all we have to do now is to abolish feudalism.' He had thus drawn our attention to the formation of neo-feudal structures of power in these post-revolutionary societies, which involved not only the denial of political equality, the socialist sharing of power and freedoms, but also a politically coercive appropriation of surplus from the direct producers, very much akin to the feudal mode of production.

There was plenty of such criticism, and obviously, for these *socialist* critics there was no utopia in the Soviet Union or elsewhere. It is true, however, that these critics, though socialists or Marxists, were strictly speaking 'outsiders' for official Marxism and the mainstream Communist Parties, and they were treated as such. It is the 'insiders', those who belonged, who really mattered, and for them it was indeed an utopia realised – they saw or heard or spoke no evil!

◆

BUT now it has become impossible not to see or hear or speak. And much as I would have liked to avoid it, a nagging question persists, especially for the period after the Khrushchev Report of 1956. What of the hordes of these 'insiders', scholars, academics and writers of all sorts, members of friendship societies or peace, solidarity and sundry other international organisations, leaders and functionaries of the Communist Parties, and so many others, who visited there year after year, often several times in a year, and yet saw and heard nothing – nothing not merely of the terrible costs of forced collectivisation, the deaths of millions of ordinary Soviet citizens and Communists as 'internal enemies', the purges, executions and gulags of the past or of the growing chauvinism, national and ethnic antagonisms, gender or minority oppression, drunkenness and religiosity, even racism and anti-Semitism, but more specifically and to the point, nothing of the almost mafia-like degeneration of the Communist Party and its leadership and the self-serving abuse of monopoly of power by the new rulers to secure a most corrupt and vulgarly luxurious living for themselves – no different from and in many ways worse and more obscene than what Engels spoke of as 'the senseless luxury and extravagance of the present ruling class and its political representatives' in capitalist society.

They saw and heard nothing of the yawning chasm that had come to exist between the rulers and the ruled, the near-total alienation of the people from the powers that be, or their indifference, hostility or contempt for the new rulers, the communist leadership, which, denied other avenues, found an eloquent expression in the politically explosive humour of popular jokes. Remember the one about Khrushchev's vulgar flaunting of his material acquisitions before his old mother who, impressed, yet has other memories, remains worried, and fearfully asks: 'But son, what if the Bolsheviks come back?' Or the one where a tired and disgusted citizen leaves his never-ending queue in anger to go and kill Brezhnev, only to return, soon, disappointed, for 'the queue there is much longer', etc. etc.

Scholars, perhaps, one can understand—and I am not here speaking of the far-too-many hangers-on or racketeers in the academic business and the business of Left politics as well. Compulsions of official Marxism or 'party loyalty', together with their mundane interests apart, the dominant methodological orientations and the 'functional rationally' that has come to govern the organised academic disciplines and research, may well have prevented these scholars from seeing the reality behind the appearances; they simply chose to be 'scholars' first and Communists or Marxists only a long time afterwards. But what about others, above all the leaders and functionaries of the fraternal Communist Parties and allied organisations, whom Lenin once likened to *inspectors* visiting the Soviet Union for a check-up on what was being done? How come they failed to see what a poet, who was a Communist too, saw so early and so clearly, namely, the awesome alienation of the people from their rulers? This is what Bertolt Brecht wrote, way back in 1953, when the first rumblings of the coming earthquake were heard and a workers' uprising was suppressed in Berlin:

> After the uprising of the 17th June
> The Secretary of the Writers' Union
> Had leaflets distributed in the Stalinallee
> Stating that the people
> Had forfeited the confidence of the government
> And could win it back only
> By redoubled efforts. Would it not be easier
> In that case for the government
> To dissolve the people
> And elect another?

The Communist rulers in Berlin, however, did the next best thing—they went on to build the wall!

Whatever the motivations or the extenuating circumstances, this stubborn refusal to see or hear or speak, when it was their revolutionary duty to see, hear and speak, constitutes an act of historic complicity on the part of these leaders and functionaries that is crying out for atonement, which must *visibly* express itself, above all, in a return to communist norms of personal conduct and a better, revolutionary practice of Marxism. One can only hope that they have the necessary honesty and courage, for the sake of their comrades in the ranks and the cause they hold dear. One does not have to be a repentant Communist to thus come to terms with our past. ■

Forests and Tribes: A Macro-Level Perspective

J.S. BHANDARI and SUBHADRA MITRA CHANNA

Problems related to forests centre around the major issues – that of commercial use of forest produce and that of ecological preservation. These can be viewed at two levels – the macro-level, involving a global distribution and use of resources and the micro-level involving the dynamics of interaction between forest dwellers and their immediate environment.

From primordial times forests have been exploited by humans for their subsistence and provided the natural environment for mankind for most part of their existence as Homo Sapiens. The first mode of subsistence, namely, foraging was largely forest-based for such populations as inhabited them. The process of deforestation is not a recent phenomenon either. It started right from the time human beings created a secondary environment by replacing naturally growing species by domesticated plants. With the growth of civilisation, more and more forest land was replaced by human habitations such as villages and cities and permanently cultivated lands. The first encounter of humans with the forest was one of conquest where man had to conquer the forest, in order to spread his civilisation. In the process, two types of human populations developed – those who regarded the forest as uninhabitable and whose relationship to forest was only marginal and the second type who lived within the forest in a more or less symbiotic relationship. Over a lengthy period, the village-urban man and the forest-dwelling man went their own way. It was more or less taken for granted that the forest belonged to the people who lived in them and little encroachment over their rights occurred.

With the advent of industrialisation and an increased use of the world's resources, which included products of the forest, the civilised man developed a new interest in the forest – a commercial interest. Industrialisation started in the West and pushed the White men to remote areas of the world in search of more and more resources to feed their growing industries. The colonisers developed a commercial interest in the Third World, forests. The colonial rulers established their own rights over the forest resources as against that of the tribal populations who were the traditional users of these. In doing so, they created certain myths as an ideological justification for their usurption. These myths portrayed the natives as predators, vandalising the forest resources. The economically motivated usurption was given an ideological cloak of preservation of forests.

After independence our democratic government had as one of its primary objectives the rapid industrialisation of the country. Quite correctly this policy was formulated to give India its rightful place in the global economy. The macro-level objective, however, had micro-level repercussions that were not always conducive to the well-being of the populations. The national government reiterated the myths created by the colonial rulers of overuse or depletion of the forest resources by the tribals. One long established and accepted myth was regarding the wastefulness of jhum cultivation. (Haimendorf, 1982; Pathy, 1989) To this effect the forest policy formulated in 1952 placed the claims of the government over the forests higher than that of its inhabitants in the name of national interest. The national interest of the Indian Government was the same as that of the colonial government – the commercial exploitation of forest resources, except that now the benefits went to the Indian nation and were not siphoned out by an outside power.

A third phase in the attitude towards forests and its resources started when the forest became important not economically but also ecologically. Interestingly enough, the ecological movement started in those very First World countries that were responsible for large scale global ecological degradation in the first place. Another factor in the equation was that increasingly the individuals at the micro-level, those who were the actual inhabitants of the forest, became aware of their immediate rights over the traditional resources. In the ecological dimension the problems related to forests was not of use but of conservation. Increasingly at the global level it was realised that the world's natural resources must be conserved for a long-term benefit to the human population. But here the problem becomes more complex than a simplified version of conservation. The First World countries, through their long history of colonisation and capitalist growth, had depleted the resources of the Third world countries while preserving their own natural resources. Today, in the name of preservation, the Third World countries will have to cut

The authors belong to the Department of Anthropology, University of Delhi.

down on their use of these very resources, control over which they have acquired only recently.

Moreover, to compete in the world economy as well as for their own internal development, countries like India cannot afford to completely keep off from the wealth of natural resources available in their own country in the name of ecological preservation. The history of colonial exploitation which has enriched the First World countries has today put at the top those countries who have exploited global resources the most such as the USA.

◆

THE ideas of ecological preservation have given rise to completely new ideas regarding the forests and its native dwellers. The people who were earlier regarded as predators on the forest resources are now regarded as the foremost conservators of these resources. The model that was put forward was one of age-old harmonious relationship between the forest and the forest-dwellers and since there was no large scale depredation of forests by the tribals in their pursuit of a livelihood, it was believed that if these resources were left in the hands of the tribals, they would be preserved for eternity. (Leacock and Lee, 1982)

Social anthropologists and social activitists in India have been strongly influenced by these views which when viewed from the micro-level are right in supposing that the tribals under traditional conditions maintained a relationship with the forests in which resource use was regenerative. Neither foraging nor shifting cultivation had any large scale irreversible degenerative effect on the environment. The popularly accepted view was that the tribals should be left to continue their traditional mode of life in the forests. Although it is true that commercialised use of forest resources has led to large scale deforestation in recent times, the solution could not, at least for us, lie in an isolation of both tribals and the forests. Viewing the power equation at macro-level, the globally inferior placement of a country like India must make us a little cautious in accepting in toto the views imposed by the First World countries.

As an example we can take the case of the Denes who live in north-west territories in Canada's western sub-Arctic. (Asch, 1982) The Denes' claim to a separate nationhood and their claims to their native lands, including a traditional mode of livelihood, have been strongly supported by public opinion and the local anthropologists who have taken up cudgels on behalf of these tribals. The tribals supported by anthropologists have won a case staying the Canadian Government's efforts to lay down a pipeline in this region which would have deprived them of their forest based livelihood and also caused widescale environmental imbalance. A clause in the agreement ultimately reached was for the protection of the environment and the species for the benefits of the Dene people.

There is a movement among anthropologists, especially in the First World countries, to popularise movements such as that of the Denes, to bring to light through individual fieldworks, the economic viability and hence rationality of survival of traditional methods of livelihood even in the modern world. The aim is to save the traditional modes of livelihood and way of life and by so doing preserve the environment from exploitation by capitalist penetration. Increasingly, many Indian anthropologists have also started thinking on these lines. But to transfer the problem of forest resources and tribals to the Indian situation, we must first see the points of difference between us and them.

The facts that come to light if we look at the examples of the tribals in Canada and Australia where such homeland movements have taken root are:

1) In each of these cases the political rights of the tribals, who are ethnically the native populations, were granted to them by the active participation, willingness and awareness, on part of those in power (who were also the original usurpers of their land). And tremendous public sympathy for the cause of the tribals who were also viewed as the rightful owners of their native lands.

2) Each of the countries mentioned are in a highly developed stage and abound in resources and have an overall prosperous economy without any population pressure.

3) The tribals in each of the case had certain financial resources of their own which they could spend on their own welfare—in those cases to seek legal aid for themselves though after the initial stages, the matter became a public and national affair.

The Cree Indians had a flourishing trade in furs, the Australian aborigines were being given government cash aid in the form of old age pensions, welfare aid, etc. and the Dena of Mekenzia River Valley also had a trade in fur and other bush resources. In every case the tribals had an input form the macro-system which enabled them to reproduce themselves as hunters and gatherers and at the same time maintaining beneficial trade relations with the capitalist market. The economic viability of the tribals is a direct reflection of the state of economy of the country which is highly developed. Secondly, the power equation between the tribals and their White rulers are different. The tribals, the native population, have every right to regard themselves as rightful owners of the land and the Whites as usurpers. Some reciprocal feeling of guilt would likewise exist among the White people to account for the public sympathy.

●

QUEBEC is ranked as the world's highest producer of hydro-electricity per capita, even exporting a small portion to Ontario and New York. A greater proportion of the hydroelectricity is used to consume local needs of pulp, paper and metallurgical industries. This coupled with the well known fact that Canada is one of the most developed and also demographically one of the least strained countries points to an important fact that the Canadian Government can afford to provide the aboriginals the land resources with which to maintain and reproduce themselves.

Throughout the history of colonial conquests and expansion of capitalism there has been a struggle for resources between the power-holders and those who had traditional rights to those resources. If at the end of the twentieth century we see some of the power-holders relinquishing their hold on these coveted resources, it is probably because they have reached a level of development where the pressure to exploit more and more resources is eased. Moreover, the 'back to homeland' movement reinforces the ethnic divide between the Whites and the native tribals which suits both the sides.

In India if we perpetuate the same divide between the tribes and their forests, we shall be making a grave mistake. India is not divided into natives and outsiders. We are all native to the Indian soil and as such to separate the tribals from the mainstream in the name of preservation would be to create a divide where none should exist. Although traditionally the tribals live in the forests, the forests belong to all who are Indians. Likewise, the tribals are no different from the mainstream population. It is true that traditional methods like foraging and horticulture did not degrade the environment. But such economies had the characters of finite production objectives and maintenance of the population at the minimum level of the carrying capacity of the land. (Sahlins, 1972) It is because the population, which was limited to begin with, also had limited consumption and production objectives that the environment was least affected. Under conditions of modernity, higher rate of demographic growth and increased consumption goals of the people would make traditional methods of foraging and horticulture uneconomic options, even for the populations traditionally engaged in them.

The picture of environmental harmony in terms of maintenance of ecosystemic balance is also not quite correct. Over a millennium, the ecosystems of the globe have not been in a state of static equilibrium. The entire history of civilisation is a history of deforestation. Even under pristine conditions the ecosystemic continuity in terms of regeneration is quite often only partial. However, as Odum (1969) points out, the natural systems seek to reach stability in terms of equalisation of input and output and the human systems tend to maximise outputs and minimum inputs. In the traditional economies of the foragers and forest-dwelling peoples, the social goals being limited the regenerations were more effective. Human interventions of the capitalist type with unlimited production objectives have led to what Bennett has termed, "exponential curves of increasing output and exploitation". But this exploitation has occurred at the global or macro-level. At the micro-level—as has been indicated by many study of forest dwelling people or foragers—they are not in any state of absolute static equilibrium with the forest. As Bird (1988 :17) has pointed out, the isolation st picture of foragers giving a sense of timelessness is false. The South Indian hunter-gatherers such as Paliyans and Nayakans have been in contact with neighbours for a millennium. They engage in a number of activities other than foraging and their social organisation shows inbuilt resilience to adjust to non-foraging conditions and populations.

Thus to try to solve the problem of global ecological degradation by preserving the forests for the tribals and to let them pursue their way of life undisturbed is not the correct approach, at least for a country which is still in the developing stage. First of all, in a country like India we should think of integrating all people under one nationhood and not create a separate category like tribals for the forests. The tribal way of life has not been unchanging and may change further without the tribals in anyway losing their cultural identity. The preservation of forests should be seen in the global context of control of resources. India is a developing country with a tremendous population pressure. We can neither afford to lose our resources nor fritter them away; neither should we think of maintaining the forest-dwellers as they are, in the name of preservation.

The real hindrance lies in the improper utilisation of resources, not in their reallocation. The defect lies in the faulty implementation and ineffective institutional mechanisms for organising proper resource utilisation. The tribals have as much potentiality for change as anyone else. But they should be properly handled. Social forestry, for example, has come out to be a failure in most cases because of planting of wrong species of trees and misunderstanding of local social organisation. (J.J. Roy Burman) The local people can be consulted in the kind of forestation that is best suited to the needs of development. The tribals can themselves make commercial use of forests which by their long experience of forest life should be more judicious than that of the outsiders. The divide today is that the tribals are left with the major forest products (MFP) and the major commercial products are used by outside capitalists who do it with scant respect for ecological degradation. Even social scientists such as Fernandes (1989) talk only of the tribals' rights over MFP such as fuel, fodder and herbs and treat them only as forevers and likely to remain so. The involvement of the tribals even in the commercial use of major produce like timber and their tehnological input into planting of right species at the regional level might help our forest programmes considerably.

●

SINCE global economic pressure prevents us from isolating our forest resources we should not isolate our tribal populations by retaining them as traditional economies. If forests must be used the local people should have greater rights in them both in terms of decision-making and commercial benefits. The considerable ecological wisdom stored in the traditional cultures can be effectively used for the management of these resources. This does not mean that we leave them only with their firewood and fodder but bring them up to take decisions regarding building of dams and industrial use of forest products. This is not to say that ecological degradation is not a real problem, but the costs of it should be borne largely by the First World countries who started it in the first place. To prevent ecological degradation, a most judicious use of forest resources is required, which can be achieved better if the distinction between civilised men and forest-dwellers is obliterated. The tribals should not be kept away from change but must be allowed to evolve their own version of change and development. Instead of trying to manage their resources and taking decisions on their behalf, let them manage their own forests, not in a traditional but in a modern way. Let them participate in the building of an Indian nation and not remain confined to their own world. They should be allowed to manage the forests not only for themselves, but for all of us. That the tribals are *good with the* forest should not imply that they are good *only for the* forest.

Global capitalism is a process that has already been set in motion and cannot be arrested. However, a country like India has to integrate its manpower and natural resources to compete in this race. We should not, in this process, get dictated by the First World ideologies but create a rational order suitable to our own situation both economically and politically in terms of both our external global relations and the internal relations within our country. Our objectives of production cannot be curtailed and our equally pressing needs for preservation must be looked at with a balanced view weighing the micro-level against the macro-global situation. ■

TRIBUTE

Blend of Eminence and Humility

H. Y. SHARADA PRASAD

Mallikarjun Mansur is no more. The torment has gone back into the magic mountain where it used to flow.

He sang for more than sixty years. And he sang till almost the very last although he had been so continuously harassed by illness. I recall a private concert he gave in Delhi just five or six months ago when he was kind enough to tell the hosts to ask me to be present. On that occasion he apologised to the audience for not being able to sing for even two hours.

There was always a special intensity to his singing, a special urgency and earnestness in his treatment of melody. These are days when the voice can be preserved, unlike earlier centuries, on the beginning of the phonograph with three-and-seven minute records. Some may say that the immortals of music can now be truly immortalised. But a record of a Mansur concert can never be a substitute for the live one – for each time he sang with a new creative impulse, and in each rendering there were several surprises. His *Patdeep* or *Shivmat Bhairav* of today would be a different experience from his *Patdeep* and *Shivmat Bhairav* of yesterday.

So many of our well-known authors and artists move about with a swagger for they seem to believe that they indeed are colossi striding the scene. They are all the time looking at those who are looking at them. Mallikarjun did not possess a regal bearing. He did not clothe himself in princely robes. He did not care to be the centre of attraction. He was content to be inconspicuous. He continued to look like a shopkeeper's accountant. He did not speak like an oracle. He rarely referred to his triumphs. He won not only respect but the affection of his contemporaries. He was wholly without envy. His was an unfailing geniality and lightness of heart. His airs were what he sang. He did not put on any.

●

THOSE who met him never failed to wonder at the combination of eminence and humility. His autobiography would throw some light on this riddle of Mallikarjun. *Nanna Rasayatre* (which could be rendered rather inadequately as "My Emotional Pilgrimage" – for there is no satisfactory English equivalent for *rasa*) is a little masterpiece. But few know about it because it is in his mother-tongue, Kannada.

Most autobiographies in our country are by political persons or literary men. Few are by artists. Mansur's book cannot be compared with Yehudi Menuhin's in its length or its depiction of a musician's challenges and rewards. Mansur tells us that his fingers are meant to play the *tanpura* and not ply the pen. He took up the book only under the pressure of a couple of literary friends – A.N. Krishna Rao of Karnataka and P.L. Deshpande of Maharashtra. He had kept no diary. His intention in writing the book ultimately was not to impress but to record his debt to his musical and spiritual preceptors.

Mallikarjun's reverence for his teachers comes out strongly especially for Nilkantha Buwa and for the sons of Alladiya Khan – Manji Khan and Burji Khan. For him they were perennial rivers from whom he could not draw enough. Even when he was nearing forty he kept going from his town Dharwal to Kolhapur for lessons from Burji Khan.

Writing nearly thirtyfive years after Burji Khan's death, he would say that his gurus continued to guide him in spirit, inspiring him, enabling him to understand the meaning of music, and bringing him whatever reputation he had gained.

Outwardly the most captivating aspect of Mallikarjun's music was its dramatic element. He went on the stage even as a young boy, following in the footsteps of his elder brother, and made a name for himself as Prahlada, Dhruva and Narada. But he also got out of the stage early, when he was still in his teens. The musician Nilkantha Buwa heard him and told his brother: "Give this lad to me. I shall make him a musician. His genius should not be wasted in theatre companies." The Buwa himself was with a religious establishment and apprenticeship to him was more than musical training.

Although he had made several discs for HMV even in his early twenties, music did not become a paying profession to Mallikarjun until much later in life. His mother's faith sustained him initially. After marriage, his wife somehow managed the house, convinced that she should aid his *tapas*.

One of the most moving chapters in the autobiography concerns Mallikarjun's mother. The family decided to go on a pilgrimage to the famous Saivite temple at Srisailam. Once there, Mallikarjun went to have a dip in the sacred pool, leaving his coat at the top of the steps. When he came up, the coat had disappeared and with it all the money of the party as well as the return tickets. He spent the whole day and evening moping. But his mother put heart into him. When it was nearly midnight, she took him to the temple and asked him to sing. The main door had been closed, but Mallikarjun obeyed his mother's command. He began to sing and soon the singer was lost in his song. To his surprise a priest opened the door and asked the group to go in. Mallikarjun's mother stood before the idol and made a prayer: "Lord, if you are true, take me unto yourself. I have no further interest in living. This is my only plea to you." Mallikarjun joked and told her: "How can He take you unless we let you go?"

They emerged from the temple and once again Mallikarjun was gripped by worry as to how to get back home. A fellow pilgrim noticed his plight and came forward to loan him the required money. The following day was spent in visits to more religious establishments. The group decided to spend the night at Srisailam and leave early in the morning for the railway station. As was the practice in those days at pilgrim centres, they spread their sheets on stones bordering the streets and went off to sleep. When it was near dawn, Mallikarjun woke up to the sounds of the bells of bullock-carts. All of a sudden a cart came hurtling towards them and ran over Mallijkarjun's foot. Before he could realise what had happened, it had also run over his mother. The Lord of Srisailam had answered the devotee's prayers and gathered her up to him.

It should not be imagined that Mallikarjun has painted himself as a blemishless saint. The book has a chapter which recounts the clash between him and his son. Mallikarjun had eight children, and Rajashekhar was the only son. Much to Mallikarjun's anguish he showed no interest in music, at least outwardly, and kept himself aloof. He even ran away from house when he was in the last year of school. Mallikarjun often told himself that he had seven *swaras* in his daughters and one false note in his son. The only consolation was that Rajashekhar was good at his studies in college. But a head-on collision came when he decided to marry a classmate, while Mallikarjun, the traditionalist, wanted him to marry a girl chosen by the family. Rajashekhar went ahead and Mallikarjun stood before the portrait of saints in the house and vowed never to let his son enter again.

Some years passed. One day Rajashekhar heard his father singing on the radio and something happened to him. Tears cascaded down his cheeks and he proclaimed that he would not touch food until he saw his father. The father, adamant, would not hear of it. In this dilemma, the family went to the prelate of Murgod and narrated the story. He sent for Mallikarjun. There was a long silence, which was broken when the holy man directed Mallikarjun to make up with his son. And he, the prelate, would take upon himself the responsibility for releasing Mallikarjun from his oath. He went on an expiatory fast.

Soon father and son drew close. Rajashekhar became one of Mallikarjun's star disciples, and accompanied him in his concerts, while holding his job as a teacher of English.

●

THE best portions of the book, understandably, are where Mallikarjun speaks about his gurus and about the nature of music.

He was introduced to Manji Khan by Vishnupant Pagnis, who had gained a name for himself as Tukaram in Shantaram's film. Mallikarjun had by then sung *Gand Malhar* and *Adana* for HMV. Manji Khan was impressed by the records and tied the red thread of discipleship around Mallikarjun's wrist.

Practice began at eight every morning and went on until 1 PM. What struck the disciple most in the master was the manner in which *swaras* merged without a fissure. Manji Khan taught him how to visualise the whole configuration of a *raga* and how to move in different tempi within the time cycle, so that *raga*, *tala*, *laya* became one and inseparable. A single *raga* was taught over days, but each day, each time, is assumed a new birth, a new form. The same *raga*, the same composition, the same set of notes, but there was no repetition, no staleness, no feeling of it being a stereotyped reproduction. "Whether it was a straightforward *raga* like *Yaman*, or a twin *raga* like *Basanti Kedar*, or a complex *raga* like *Khat*, the stream of his (the guru's) singing flowed with astounding power and beauty. And once I began learning from him, my personality underwent a change. I felt there was nothing other than music for me. Here was nectar for a thirsty man."

But this discipleship lasted for only a year-and-a-half. It came to an abrupt end with Manji Khan's premature death. Mallikarjun went to his master's father, the venerable Alladiya Khan, and begged to be vouchsafed more insights into the Jaipur style. The elderly man said he was no longer in a position to devote five hours a day to a disciple and directed him to his second son, Burji Khan.

Mallikarjun found that Burji Khan was a true teacher, in that he understood the disciple's strength and shortcomings. Above all he learnt from Burji Khan how to eschew slackness and how to achieve creative independence within the framework of tradition.

Mallikarjun's book is a short one of a mere eighty-five pages, but, like his music, it conveys profundity in an unselfconscious way. It ought to be translated into all our languages (and into English, if anybody can find the vocabulary in English for our musical terms). Here is something that the Sangeet Natak Akademi and the Sahitya Akademi might take up. ■

Global Convention of People of Indian Origin

K. P. BHANUMATHY

Paris was host to the second Global Convention of People of Indian Origin last month. It was organised by the Overseas Indians in France (OFI-NRI). The first convention was held in New York two years ago. Nearly five hundred delegates from as far as Surinam, India, the USA, Europe and South-East Asia attended the four-day meetings held at the Centre de Conferences Internationales at Avenue Kleber in Paris from July 10 to 14.

With 15 million people of Indian origin living in different countries of the world the very idea of bringing them together under one global umbrella may look a gargantuan job, especially when the Indian character of unity with diversity can mean different viewpoints that can keep them apart. The Indian Government which woke up to the tempting prospect of cultivating Indians who had left their country for greener pastures does not seem to have beguiled or emotionally awakened the NRIs abroad to the extent expected. Many reasons can be attributed to this failure and, according to the NRIs, this is the fault of the Indian Government which, they claim, have treated them as 'unwanted people'. "Even now the Indian Goverment treats us as milching cows, the Indian bureaucracy's attitude is daunting" says Augustin Benoit, the Chairman of the Overseas Indians in France.

Largely the NRIs are looking for opportunities to revive ties with the land of their forefathers in economic and cultural fields. The Paris Convention was organised with noble ideals towards solidarity and cultural pluralism with participation in India's industry, R&D, commerce, banking, financial investment and transfer of technology. On the whole one observed a willingness to cooperate with India but there were grievances and complaints galore from the assembly. "The Indian Government's apathy, the bureaucratic hurdles, the mind-boggling rules are a discouragement and the lack of communication puts us off, the NRI Consultative Committee has not met for two-and-a-half years, what use is it if a Minister from the Indian Government comes and talks to us of emotional ties, etc. and then goes away and forgets us," asks many leading NRIs.

Swraj Paul, the London-based industrialist, in his inaugural address told the convention delegates that the investment climate in India was much better today than what it was and would put the Indian economy back on rails. Facing a volley of questions Paul said that as the Indian Government had introduced fiscal reforms it was an encouraging factor for investments. The NRIs want further liberalisation of the economic policies and better conditions for implementation. Keith Vaz, a Member of the House of Commons in England and of Indian origin, said that Indians and other Asians face discriminations on the grounds of ethnicity. Even amongst Indians there were ethnic problems. The NRIs abroad are unanimous in asking for dual citizenship which, they say, will act as an investment incentive.

The theme of the convention – expanding horizons for people of Indian origin – was fully exploited by the delegates in its various aspects. They were particularly worried about the exports policy, currency convertibility and industrial policies. Financial institutions in India, said delegates from many countries, have a stranglehold on business houses and would like their interests, direct or portfolio, be governed by global standards of equity and probity. "We NRIs know the difference between borrowings and investment capital. If industrial development is used as a ploy for import substitution, the result is disappointing. Why has India a feeble role in the world market" asks Swraj Paul.

Streamline the administrative system, remove red tape and upgrade the infrastructure and treat us as business partners – was the refrain.

The NRIs, current deposits in India have reached Rs 6000 crores but it would treble if the government's policies would remove all suspicion regarding repatriable and non-repatriable deposits, says Augustin Benoit Convener of the Second Global Convention and Chairman of the GCPIO in France – a successful businessman of Indian origin from Pondicherry.

But true to the Indian character of infighting and bickering all was not smooth behind the scenes of the convention. Rival groups emanating from the USA tried to sabotage the convention. Bent on creating trouble, the American group of GCPIO suddenly withdrew its support and sponsorship to the convention in Paris. This was done when the steering committee demanded an account of the funds collected and details of expenditure from the Chairman of the first Global Convention in New York. "The raising of the question of inquiry of the huge funds collected by Thomas Abraham was justified under the Anti-Trust Law of the United States. This would clear the misunderstanding among people who wanted to join the second convention," said a member of the Steering Committee.

Almost 80 thousand dollars stand unaccounted. This was collected by the New York Convention. A deficit of 6000 dollars was shown by Thomas Abraham. Prime Minister Narasimha Rao who had agreed to be the Chief Patron for the Paris Convention withdrew when the infighting erupted.

"I was determined to hold the second Global Convention as planned irrespective of the hurdles in the interests of Indians living abroad. The Prime Minister's withdrawal of patronage was a great disappointment to the Indian community," said Augustin Benoit. The third GCPIO, it was decided, will be held in Canada in 1995. The resolution to hold the GCPIO in India was opposed by the USA and strongly supported by the delegation from Malaysia. ■

IF YOU ARE TRANSFERRING IMMOVABLE PROPERTY

YOU SHOULD KNOW

If you are buying or selling an immovable property, that is, any land, building or part, constructed or to be constructed either with or without any plant, machinery, furniture, fittings or other things including rights therein like membership of Coop. society etc., in any of the cities listed below for an apparent consideration exceeding Rs. Ten Lakhs, you should know that under Chapter XXC of the Income - tax Act, it is obligatory to the parties (transferor and transferee).

(i) to enter into an agreement in writing atleast three months before the intended date of transfer, and

(ii) to submit under section 269 UC of Income Tax Act a statement in duplicate to the Appropriate Authority

(1) in form No. 37-I giving particulars outlined in the annexure thereto.

(2) signed and verified in the manner indicated therein.

The jurisdiction of Appropriate Authority is as under:

● DELHI	● BOMBAY	● CALCUTTA	● MADRAS
Union Territory of Delhi Union Territory of Chandigarh. Jaipur, Gurgaon and Faridabad	Bombay	Calcutta, Cuttack & Bhubaneshwar	Madras, Coimbatore & Madurai

● BANGALORE	● LUCKNOW	● AHMEDABAD
Bangalore, Trivandrum Cochin & Hyderabad	Lucknow, Patna, Kanpur, Ghaziabad and Noida	Ahmedabad, Bhopal, Baroda, Indore, Surat, Pune and Nagpur

For further details kindly contact the PRO in the Income-tax department

Failure to file the statement may result in prosecution.

BOOK REVIEW

Communist Role in Freedom Struggle

JAIDEEP NAIR

The collapse of the Soviet Union and numerous other socialist regimes in Eastern Europe brought with it a flood of academic and non-academic iterature on the past, present and future of the Communist Parties all over the world. Notwithstanding the occasional critical study on the 'socialist construction' n the Soviet Union or elsewhere, the deluge began with *glasnost* and *perestroika* being set in motion to stem the rot which had crept in due to deviations in praxis. These had resulted in the Communist Party becoming a monolithic embodiment of absolute power and privileges, supplemented by an inertia-ridden "new ruling class" composed of party member and bureaucracy.

The move towards opening up and further democratisation, both within and outside the Party, is he logical conclusion to decades of Communist Party-led, centralised political, economic and social praxis in hese societies. The resurgence of the Communists in these societies is directy dependent on the extent to which hey can engage in genuine self-criticism of their past performance and comprehend the emerging new realities. Of course, a dynamic aspect of he communist movement historically has been the occasional voice from within the movement (Trotsky, Luxemburg, Damodaran, P.C.Joshi) which did articuate apprehensions at various junctures of the direction he movement was taking, but these voices were muffled by the majority voice.

Struggle for Hegemony in India, 1920-47 (Vol. 1, 1920-34) by Shashi Joshi; Sage, New Delhi, 1992; Rs 325.

The Communist Party in India, unlike in the erstwhile Soviet Union, has not had the opportunity of being in power, except the State level. The Communists have been unable to identify their own roots here, both due to their dilemma-prone relationship with the naional movement, and initial near-total identification with the Bolsheviks. As K. Damodaran pointed out, the Comintern did not grasp the specific nature of the ndian social formation, wrongly assessed the strength of bourgeois nationalism of the Congress and under-esimated the relative autonomy of the Indian bourgeoisie and its political instrument, the Indian National Congress. The Indian Communists inherited this lack of understanding at that juncture and they became completely isolated from the mainstream of the nationalist movement in the late-twenties and the early thirties.

As a result, the Communist Party in India failed to use whatever opportunities it got to play its part in proportion with its effective power of intervention as the transformative part of a Left tendency in the Congress movement, which led the struggle for hegemony in India during the freedom struggle. It is in this context, Shashi Joshi, in her book, *Struggle for Hegemony in India*, Vol. 1, 1920-34 (which was originally conceived as a history of the Communist Party of India), effectively presents a critique of the role, tactics, strategy and understanding of the Communist Party during the nationalist movement that led to its alienation from the mainstream and subsequent marginalisation of its part in the struggle. The author's work differs from the existing historiography and sees the construction of the 'national experience' in terms of a 'triangular contest' (p. 8). For this purpose, she "chose the Left, specifically the Communists, as the protagonists of this story and then constructed the experience of their interaction with the others (state policies and national movement) as well as with social and political reality". (p. 7)

The concept of 'hegemony' which owes much to Gramsci, has been effectively used by the author, alongwith his theories on mass movements, ideological struggles, domination-subordination, etc. This had led to the "construction of a new paradigm" (p. 7) to study the British rule in India and the rise of the national movement. Some of the features which merit mention in this interesting study are:

1) The Communists in India viewed 'nationalism' as a bourgeois ideology and they identified the Indian bourgeoisie as the ruling class. The question which the author rightly raises is: on what basis could a Marxist identify the Indian bourgeoisie as the 'ruling class' under conditions in which the whole Indian people were dominated by an alien imperialistic bourgeoisie? After all, at that juncture, both the bourgeoisie and proletariat were subordinate classes, in the anti-colonial movement. In the course of this unified struggle, various ideologies would attempt to establish a hegemonic influence over the national movement (p. 26). To be able to establish this hegemony, the contending parties needed to comprehend the reality and feel the pulse of the masses.

2) That the Communists failed to perceive the ground reality and their own role in the ongoing struggle is evident from their understanding of Gandhi's strategy. Gandhi was able to link the constitutional method and non-constitutional method – that is, mass movements – to create a new strategy for the national

movement. The colonial policy was to acquire the consent of as many sections of the Indian people and draw them into the constitutional path of activity. In attempting to hegemonise the national movement, the state sought to possess 'moral prestige' and retain 'legal authority' by providing channels and institutions for the constitutional tendency to express itself and carefully handling the mass movements(pp. 14,17). Gandhi's strategy to counter-hegemonise the national movement was by a 'war of position', that is, periods of mass movement and intervals of truce. In this way the Congress acquired a hegemonic influence over a widespread anti-imperialist consciousness. The Communists, showing a lack of understanding of the socio-political reality in India then, and lost in their 'sectarian' ideological debates, propagated a 'war of manouevre' position, that is, a seizure of power model which was most unsuitable at that juncture. The Communists saw the role of Gandhi, Nehru and the Congress Socialist Party as part of a 'bourgeois manoeuvre'.

3) The author finds Nehru as the only leader to initiate a process of 'transformation' in the national movement towards the Left, by presenting a paradigm which transcended the positions of nationalists and Communists (p. 32). His aim was to gradually permeate the existing Congress movement with a Left and socialist ideology.

●

THOUGH the theories of Gramsci are effectively used in this study, the author, by the end of her study, is able to effectively neutralise Gramsci's view that the striving for hegemony in the revolution required the formation of a mass Communist Party. In the Indian context, it is shown in the book, the continuous attempt to form a Communist Party became an obstacle in the struggle for hegemony by the Left and alienated the other Left formations.

The conclusion which the author arrives at is :

> Given the complex of political and social tendencies in the anti-imperialist movement, a paradigm of 'transformation' was the only real and effective form of strategic intervention that would have been practised by the Left. Presenting an 'alternative' to the 'transformation' of the Congress-led movement was not feasible. This transformation could best be achieved by a united Left and socialist tendency and not by separate Left groups competing with each other Above all, it could not be achieved by a Communist Party. (p. 41)

This extremely comprehensive and interesting book (first of three volumes) by Shashi Joshi is of immense relevance to understand the role the Communist Party played, or rather did not play in the nationalist movement. One can trace the 'marginal' state of communist politics in India today to the understanding it had of the freedom struggle and the consequent policies it adopted in the thirties and the forties. Sectarianism in its thinking has presisted even after independence, and the existence of a disunited communist movement at present is a sad reflection of that phenomenon.

Notwithstanding the relevance of the communist ideology as a radical alternative or a humanising influence on pristine capitalism, it is important for the communist movement in India to constructively introspect its past, especially its attitude to the nationalist struggle. It has to be able to reconcile to the fact "that certain ideologies are experienced as truly representing the national interests of the hegemonic position over the national movement and its mass following" (p. 27). And during the national movement, the Congress succeeded in acquiring that position.

It is equally important not to underplay the role of the Communists in the freedom struggle. If the Communist Party did at that juncture commit 'mistakes' due to an incomplete understanding of the socio-political reality in India, and depend on the Bolshevik view of India, it does not mean that they had no relevance in the struggle. The communist ideology was not an indigenous product and this led to a lack of understanding of its philosophy and principles amongst the Communists in India, and thus its direct application to the Indian situation without analysing its relevance. Subjective and objective factors were not taken into consideration at that time.

While reading this book, the mood which seems to unveil itself, amidst unmistakable strains of a nationalist discourse on the freedom struggle, is one which is likely to be found in the memoirs of an Indian Communist. One who after years of dedicated struggle looks back at the 'mistakes' committed and hopes that realisation of these will result in some amount of rethinking in the communist movement today (quite like K. Damodaran's interview to the *New Left Review*, September-October,1975). ■

Morse Report on Troubled Waters of Narmada

HARSH DOBHAL

The much controversial Narmada project was once again in the limelight when the World Bank-appointed Morse Commission submitted its report on the rehabilitation and environmental aspects of the Sardar Sarovar project. "We think the Sardar Sarovar projects as they stand are flawed, that settlement and rehabilitation of all those displaced by the projects is not possible under prevailing circumstances, and that the environmental impacts have not been properly considered or adequately addressed," says Bradford Morse, head of the Independent Review Commission on the Sardar Sarovar Project, in a letter to the World Bank President, Lewis Preston.

This was, for the first time, that the World Bank had taken such an unexprected extreme step of appointing an independent Review Commission to look into a project funded by it, under tremendous pressure from the environmental lobby, public opinion in general and simmering discontent in the troubled valley of Narmada.

The 363 page report that has been hailed as a major victory for environmentalists in the country was released on June 18 in Washington. It says that both the World Bank and the Government of India share the responsibility for the situation that has developed. "Our findings indicate that Sardar Sarovar projects are beset by profound difficulties. These difficulties have their genesis in the earliest of the Bank's involvement in the projects, for they turn on the absence of an adequate database and failure to consult the people whose lives and environment were and continue to be affected."

Bradford Morse, a former US Congressman and head of the UNDP for ten years, has emphatically pointed out that the history of the environmental aspects of Sardar Sarovar is a history of non-compliance. There is no comprehensive impact statement. The project is based on "fragile" or "unfounded" assumptions which overstate the benefits and understate the costs. The World Bank and India both failed to carry out adequate assessments of the human impacts of the project. Failure to consult the people has resulted in opposition to the project. The report also points at the insufficient account taken of the principles enshrined in the Bank's 1982 operational manual statement outlining its policies regarding tribal people. The Bank's appraisal also failed to take into account the fact that environmental clearance in India was not forthcoming in 1983 from the Ministry of Environment and Forests because of insufficient information.

The report further emphasises that the World Bank "should proceed only if practical ways can be agreed to ensure that the pace of further construction of the dam is adjusted to whatever extent is required to permit a fully responsible approach to the resettlement and environmental concerns". It recommended that "the wisest course would be for the Bank to step back from the projects and consider them afresh".

●

THE Narmada Bachao Andolan has hailed the report. Initially it opposed the members of the Review Commission from visiting the area, says an activist. But now, as the NBA leader, Medha Patkar, says: "The report is a slap on the face of those who have arrogantly refused to accept what the Andolan had been trying to say all these years." The report, she said, had rightly reflected the mood of the people in the valley. The report has come as a major victory for the residents of Manibelli village specifically, the first village to be submerged under the mega-project during this monsoon.

Following this on July 6 the Water Resource Minister called a meeting of the Chief Ministers of all the four affected States with Kamal Nath in view of its "dangerous implications" and in a desperate bid to damage the report. However, only polite conversations followed. Only Chimanbhai Patel and Sunderlal Patwa attended the meeting as the Chief Ministers of Gujarat and Madhya Pradesh respectively. Rajasthan and Maharastra preferred to send their Ministers instead.

The Morse Commission Report has raised certain serious questions and the time has come for a genuine introspection on our part. Why couldn't the Indian Government appoint its own independent review committee? What is the history of rehabilitation of the project-displaced people in India? One of treachery and deceit? In project after project, land was acquired for irrigation, industry and other purposes but the promises were quickly forgotten. Why is it that the

The author, an environmental activist, is a Research Scholar in the School of International Studies, Jawaharlal Nehru University New Delhi.

poorest and the weakest who constitute these oustees are made to suffer in the name of so-called development? Who are the beneficiaries of these mega-projects and who bear the costs? Why can't our government come up with a comprehensive, human and uniform approach to rehabilitate the project-affected people so that the environment actually improves and the project-affected people emerge better off economically, socially and ecologically? Why should it suffer the kind of embarrassment it has at the hands of the Morse Commission Report when the activists at home have been speaking the same over the years? Having marginalised its own people why should the government compound its errors by accepting the World Bank's decision to set up a review committee instead of rejecting it outright? Why should a society accept the worldview of the World Bank as its own simply because it is funding the project (for how a society decides to use its natural resources i its own business, specially when we are a diverse cultur plurality)? It is this cultural pluralism, which only w know better than others in the world, that should defin and project sustainable development and not the multi national hegemony.

But as long as there is the absence of a stron political will, as long as our politicians and decisio makers are not sensitive to basic human issues, as lon as a small minority within our country keeps flaunting profligate life-style at the cost of the vast exploite majority, and as long as we keep selling our mind, bod and soul to the mutinationals and the WB, IMF, et these questions will remain where they are, staring at and giving a boost to social tensions, conflicts and agit tions that can assume disastrous overtones. ∎

EKRAM KHAWAR : Perverted Logic

(Continued from page 10)

phenomena. Remember the figure supposedly signifying the alleged exploits of Harshad Mehta and Co. The initial figure put at nearly Rs 2000 crores had to be quickly revised by the wizards of the trade and it suddenly jumped to Rs 4000 crores approximately. And still the sombre-faced knowledgeable ones continue to disagree with the figures. Room for CBI sleuths and all!

Are not newspapers known for providing interesting reading material? Almost true to type, one day they suddenly announce to the whole world that the American Consul takes the trouble of meeting C. Krishnamurthy, co- accused and son of V. Krishnamurthy, ex-Member of the Planning Commission, India. The reason is not far to seek because so and so even though Indian (may be just an NRI or RNI as you prefer) is an American citizen and thus and so on and so forth. And if it prods you to think about the true nature of the modern Indian state, curse yourself.

Democracy continues to flourish on Indian soil. Elected representatives of the people continue to occupy Parliament, deliberate and take decisions, adopt policies for the public good and carve out institutions to serve these goals, properly staff these institutions with suitable personnel. And if at the end of the whole exercise, things donot give an impression of having substantially improved who is to be blamed?

If despite all the good work of the Planning Commission for example entrusted with the job of planning for the bread and butter as well as the personal lives of the vast populace, we seem to lag behind in almost every respect by contemporary standards, the Planning Commission is hardly to be blamed. If actual spending on education, health, poverty alleviation has remained abysmally low the fault does not lie with the planners and their priorities, rather someone else, maybe th people, responsible for an ever increasing populatio have to shoulder the responsibility. If the whole planning process, as seen from below, seems to hav benefitted the rich and the RNIs and NRIs more tha the people, anything but the good intention of the planners is to be blamed.

Be what it may, despite all the compellin 'arguments' one canot miss the too obvious fact th planning for the millions happens to be the prerogati of persons, *prima facie*, having no stake in the projec And if that reminds you of the cynics around (includin the near cynical characterisation of those condemnabl books and their authors) who declare that our ruler given their priorities donot give a damn to whatever hap pens to the people of India it can hardly be helped.

ARUN GHOSH : Economy

(Continued from page 6)

rom lending to industrial and commercial investors, hey are only following the "market". The *Economist* hould be asking as to what ails the system, not what for he banks are there. The USA is, after all, a free market economy; and the *Business Week* (of New York) – an equally conservative journal – recommended a few nonths back that the US Government should go in for nassive investments to shore up the tottering infrastrucure in the USA. Quite clearly, perceptions even among he exponents of the "free market system" vary, dependng on which side of the Atlantic Ocean they live. Anyhow, one must conclude that one expects banks to be prudent with the savings entrusted to their care by private savers.

●

THERE is not point in entering into a polemical debate on whether the government uses savings as efficiently as private entrepreneurs do. Objective situations vary from country to country, and within the same country, rom time to time. None but the blindly dogmatic or wholly naive would have the same economic prescription for all countries for all time. The points of relevance of the above debate for India as of today are: (a) that there is, even as of now after a year of stabilisation policy, a large imbalance n the economy arising from the large deficit on the revenue account of the Central Government; (b) that while every effort should be made to reduce the revenue deficit, the magnitude of this deficit is such – 3.5 per cent of the GDP in 1990-91, as per the *Economic Survey* – that t cannot (and should not) be reduced precipitately; (c) hat as a result, one should aim to reduce, more precipitately, the "monetised" deficit, or in other words, he government borrowing from the Reserve Bank, which s directly inflationary; (d) that consequently, the focus of he policy-maker on the concept of "fiscal deficit" – which ncludes government borrowing from the public – is inappropriate in the context of the ongoing "stabilisation policy", and derives from the obsession of free marke apologists in regard to creating more space for the private sector when, as is well known, public investment in India has a "crowding-in" effect rather than a "crowding-out" effect on private investment; and finally (e) that there is need for both "regulation" of banking as well as the proper use of the savings of the households garnered by the banking sector, in the best interests of the economy as a whole, not for a small section of society.

The net result of the present policy framework is stagflation. We have negative growth of industrial producion and nearly zero rate of growth of the economy as a whole, even as inflation continues at double digit figures (at around 12-13 per cent per annum).

If we accept that the primary task of the policy-maker in India today is "stabilisation", if we concede hat the primary focus in this regard should be on reducing the revenue deficit (as well as the monetised deficit, to keep down inflation), if we also agree that credit curbs *per se* can only dampen production activity and should be resorted to only when the economy is overheated (which the Indian economy is clearly not) – look at the staggering extent of unemployment and absence of growth – we would then inevitably come to the conclusion that the remedy for India's present malaise does not lie with the fiddling of the SLR but with: (a) reduction of the government's revenue deficit (through higher and more effective income taxation and curbs on wasteful government current expenditure), and (b) expansion of infrastructure and other investments which would create more jobs not only directly but also through a stimulation of private enterprise and investment. If the above calls for government recourse to borrowing from the commercial banks, why fiddle with the SLR?

Until last year, the SLR was 37.5 per cent. It has already been brought down to 35 per cent disrupting the process of stabilisation; and the Narasimham Committee recommendation is that it should be brought down to 25 per cent in the course of three or four years. The recent bank scams have their origin partly in "greed" (and resultant fraud), partly in laxity of supervision by the bankers' bank (namely, the RBI), but esentially – and going back to the roots of the crisis – in the present economic policy framework of the government. The 1992-93 Budget and the policies announced therewith (or independently) have spurred a speculative increase in stock prices. The taxation and interest rate policies, the pace of abolition of the wealth tax on financial assets, the reduction of both corporate and personal income taxes, the increase in the interest rates (including interest on government securities), *and* a severe curtailment of investment on the infrastructure and key industries (in which major investments are still government owned), increased the investible savings of a certain class, with fewer opportunities for new private investments for the placement of such savings. Add the tacit encouragement to the bullish behaviour of the stock market, and you have the complete scenario.

It is difficult to conceive of a worse policy orientation which apparently intended, at the same time, to promote economic stabilisation and growth. What the policy succeeded in doing was to promote inflation, stagnation in output, a pause in new private investment, and as a consequence, unwarranted speculation in the limited market for existing scrips.

The relevance of the extensive quotations from the London *Economist*, by way of an introduction to the topic, is the irrelevance of high pulpit preachings by experts well-versed in the functioning of developed economies; indeed, there are limitations even therein of transplanting views based on one country's experience to another. To attempt such transplanation from the developed industrial countries to a developing economy is unwarranted. On recalls Radhakamal Mukerjee's warning as far back as 1916:

> ...the attempt to force systems and methods of industrial organisation, economic arrangements, and institutions, which have admirably suited a different geographic environment, will always be futile. (Preface to *The Foundations of Indian Economics*, Longmans Green, 1916)

The West will soon find this out in Eastern Europe. But do we, in India, also have to learn the hard way? ■

The Human Angle

The conference of Chief Ministers of the States affected by Illegal Immigration from Bangladesh has decided to formulate a plan of action to prevent the outflow of people from that country into India and have it implemented jointly with the Centre. If this exercise is intended to pressurise the Bangladesh Government to concede the fact of such immigration, it is unexceptionable. But if both the Centre and the concerned State Governments of Assam, West Bengal, Tripura, Bihar, Arunachal Pradesh and Mizoram are really determined to push back the immigrants through coercive means, that would only aggravate the human dimension of the problem. After all, it is not just a matter of identifying persons who have crossed the border, they are human beings and need to be treated as such.

The first batch of 132 Bangladeshis — who were residing in Delhi — were deported to Bangladesh on the day of Prophet Mohammad's birthday and this led to vociferous protests in Dhaka with the Jamaat-e-Islami exploiting the issue and lending a communal colour to the Indian action. What is more, the way the deportees were treated with their hair clipped for the sake of easy identification amounted to a kind of humiliation which too has been played up in sections of the Bangladesh media in their attempt to fan anti-Indian sentiments. No doubt the thoughtless and callous bureaucratic attitude of the Union Home Ministry officials is responsible for such a reaction in Bangladesh. And this needs to be unequivocally decried.

The illegal immigration from Bangladesh in recent times is the product of two factors : (a) the mounting difficulties faced by Hindus (especially those in the lowest rungs of the social ladder) in Bangladesh due to the communal situation, and (b) the transformation of Bangladesh into an international bread-basket and the consequent mass pauperisation accompanied by large-scale unemployment. In the early years of such migration in the mid-seventies Hindus outnumbered Muslims thus testifying to their insecurity following the assassination of Sheikh Mujibur Rahman. Lately, however, the Muslim immigrants are far more in number than the Hindus engaged in border crossing. This is conclusive evidence of the economic reason being the motive force behind this outflow. As such the human dimension of the problem cannot for once be overlooked.

While the strains the immigration causes to India's economy are quite obvious — in Delhi alone the number of Bangladeshi immigrants is about four lakhs — one cannot be blind to the plight to which the deportees are being subjected. They have been rendered virtually stateless, the Bangladesh Government having refused to recognise them as Bangladeshis alleging that they are in effect Indians.

Our authorities must realise that neither such deportation nor the revival of the idea of constructing a barbed wire fence along the border can resolve this problem. The undeniable fact is that the Bangladeshis who have crossed over into India are better off on this side of the border that what they were on the other side. If conditions in India are worsening, those in Bangladesh are unbearable. Hence the immigrants can return only if the situation improves on the other side. For that to happen joint efforts are necessary with a subcontinental perspective which is lacking on all sides.

Indians have been highly perturbed over the treatment currently being meted out to foreigners in the eastern part of Germany by racist gangs. By trying to drive out Bangladeshis from Indian soil with the employment of force are we giving a better display of ourselves? Let us dispassionately introspect and try to eschew the double-standard that characterises our responses to events. For example, the BJP regards immigrants from Bangladesh as "refugees" in case they happen to be Hindus and as "foreigners" if they are Muslims.

The issue being highly sensitive it would be injudicious to adopt hasty steps with regard to such immigrants. The proposed bid of some of the North-Eastern Chief Ministers to send back the hapless populace fleeing a ruthless military regime in Myanmar and deport the Chakma refugees in Tripura and Arunachal Pradesh is all the more regrettable and needs to be reconsidered at the earliest precisely because such moves would also amount to a direct assault on human rights.

ECONOMY

Disastrous Course

ABHIJIT SEN

After months of nervousness and inaction, following a late monsoon and the fallout of the stock market and financial sector scam, the liberalisers are back in business. The withdrawal of fertiliser subsidies, soon after the end of the monsoon session of Parliament, was followed last fortnight by two major policy decisions announced in quick succession: the one to allow foreign financial institutions to invest in Indian stock markets with practically no restriction on repatriation of capital, capital gains or dividends, and the across-the-board hike in the prices of petroleum products averaging an increase of 18 per cent. As has become the standard practice since the present government embraced the International Monetary Fund-World Bank stabilisation and structural adjustment package, all these announcements were postponed till Parliament had adjourned and were timed so as to come just before the Finance Minister embarked on a visit abroad to plead his government's case before foreign creditors.

However, although obviously much more sensitive to reactions abroad than to the views of the elected representatives of the Indian people, the government was careful this time around to launch, as a prelude to its policy announcements, a carefully-orchestrated media campaign designed to convince the people that its policies were working and that the country was well and truly set on a path of economic recovery. Such a campaign was necessary now more than ever before because of the battering the credibility of the government's economic policy had taken as a result of the scam And the loyal media has once again risen to the occasion, giving wide publicity to the government's claims that inflation is down and on target towards the eight per cent rate promised to the IMF, that industrial production is up so that a five per cent growth may be possible this year, and that exports are recovering so that the balance of payments situation is now firmly under control.

Unfortunately for the country, however, the economic reality is much more sombre than this hype would have it. For a start, exports in the first four months of this financial year, though up 1.7 per cent compared to the corresponding months last year, are actually *less* by more than five per cent in dollar terms as compared to the same period two years ago. In the meantime, the changes announced in the Budget in February have caused imports to surge. In dollar terms these are now 23 per cent higher than last year and seven per cent higher than in 1990-91. As a result, the trade deficit for April-July 1992 is $2.1 billion as compared to $1.4 billion in April-July 1990. The latest projections, by both the IMF and the Reserve Bank of India, of the trade deficit for the entire fiscal year 1992-93 place this at around $6 billion—higher than in any year after 1985-86.

This is a truly extraordinary achievement by a government whose main justification for launching its new economic policies was to correct the profligate excess of imports over exports which led to the unsustainable build-up of external
debt during the Rajiv Gandhi years. In fact, the result of
policies followed so far has been to increase even further
gap between the country's external liabilities and the abilit
service these through foreign exchange earnings. A
whatever the propaganda it indulges in to keep up pu
support at home, the government has had to notify the I
recently that there has been a fundamental deterioratio
the country's balance of payments.

Similarly, the claim of renewed industrial growth is at t
only a half-truth. The claim is based on the fact that the in
of manufacturing output which declined by 1.4 per cent
year (as compared to 1990-91), recorded a four per c
increase when the first two months of the current fiscal y
are compared to the corresponding months of last year. H
ever, comparing the same two months of this year with
corresponding months of 1990 shows no growth at all, a
indeed, the index for May 1992 (the latest month for wh
data is available) is down two per cent compared to May 19
More important, the April-May average this year is down
per cent on the average for the last quarter of 1991-92, a
although some seasonal decline is expected, the season
corrected figures also show a decline of nine per cent betw
January-March and April-May 1992.

Thus, the claim of a renewal of growth is based o
somewhat spurious comparison of this year's poor per
mance with last year's even worse figures, and this is c
tradicted when one considers either the long-run trend ign
ing last year or the short-run trend comparing the most rec
figures with the immediately preceding quarter. On the b
of these more relevant comparisons, one should conclude t
manufacturing output continues to stagnate, and this is
particular importance because the failure of manufactur
output to recover despite the surge in imports following
removal of import compression measures negates
liberalisers' argument that import compression was the m
cause of poor growth last year.

●

SUCH flawed comparisons are also a feature of
government's claim that inflation has been brought dow
below eight per cent. This claim, which runs totally counte
the daily experience of any householder, is advanced by c
paring the latest provisional figures for the wholesale p
index with the revised figures for the corresponding week
year. This comparison has three problems. First, it amount
comparing the provisional figures for this year with the rev
figures for last year, and this imparts a downward bias o
least one per cent in the measurement of inflation, imply
for example, that the point-to-point annual inflation r
which is placed at 8.3 per cent for August is likely to be rev
upward to around 9.5 per cent when this August's rev
figures are finally made available in November.

Secondly, such point-to-point comparisons can be extre
misleading when the base for comparison is a period such as
or August last year when prices rose extremely rapidly as a re
of the ill-advised recourse to rupee devaluation. More meanin

Human Rights : Basic Issues

NIKHIL CHAKRAVARTTY

The government's decision to set up a National Human Rights Commission is a significant indication of its being able to read the signs of the times. The Prime Minister has made the eloquent claim about his government's commitment to upholding human rights: "We must send a clear message that we do not tolerate violation of human rights." He at the same time conceded that "there is need to identify the weaknesses, the gaps between pronouncements and action, and between legislation and its implementation".

There is a veritable wave on the global plane today for the assertion of human rights. This is part of the democratic upsurge on a world scale. Long before the present ground-swell for human rights in many parts of the world, it is worth recalling that our country has had a long tradition of struggle for human rights. Before independence, this was known as the movement for civil liberties. In fact, this was an offshoot of the freedom struggle, because one of the tenets of the Indian independence movement was that it never deviated in its commitment to democracy, and therefore, its leaders upheld civil liberties.

In the thirties, Jawaharlal Nehru himself was once the President of the All India Civil Liberties' Union. This was not a party outfit of the Congress – its separate identity was always respected just as it could attract many personalities of a liberal disposition who would not toe the Congress line at that time. The Civil Liberties' Union survived after independence, though its complexion was perceptibly changed by then; the ruling Congress establishment lapsed into inactivity, while the radical and Left critics of the government became more prominent in it, and only a handful of liberals who could keep their rapport with the radical activists, only they stayed on in the Civil Liberties' Union. Chakkarai Chettiar, a grand old liberal from the South, was its last President, sometime about 1950-51. After that the organisation was hardly heard of, and it ceased to be even a letter-head organisation.

With the promulgation of the Constitution and the setting up of elected governments both at the Centre and the States, the impression went round that a civil liberties organisation would have little to do in the new democratic dispensation ushered in by the new Constitution. This was not a very far-fetched impression, particularly in the first two decades after independence. There prevailed in the country what can be termed as the Nehru stamp on our political functioning, and this spread over the entire public life. Cases of repression were few and far between in that period.

The scenario changed to a large extent after that period. Roughly it was from the mid-sixties that one could discern a perceptible change. An important area of conflict could be identified in the rural sector. Roughly this was the period of the Green Revolution. Alongwith increased food production, the Green Revolution brought about a significant change in agrarian relations. The increased food production as a result of the new agricultural technique set by the Green Revolution was not evenly distributed. It was cornered by the rich farmer community who owned the land and had the means to exploit the new facilities offered by the intensive cultivation prescribed by the Green Revolution. At the other end, the poor peasant and the agricultural labourer were reduced to the category of wage-earners. The old feudal relations were replaced by the more palpable class antagonism of the modern market. Clashes and tensions spread in many parts of the countryside.

This was the objective backdrop of the wave of militant activism in the rural sector, symolised by what has come to be known as Naxalism. The rich farmer, more powerful than his effete zamindar predecessor, could afford to keep his armed gang in place of the old lathials, and the militant activist also resorted to the gun – inspired at the beginning by Mao's teachings and clung on to them even when Maoism was dethroned on its native soil. It is worth recalling that about this time, a Union Home Ministry in-house survey of the new surge of armed conflicts in the countryside, delivered a very significant warning that the Green Revolution "might turn red".

●

AT the national political level, the scene had changed considerably by then. The old monolith of power that the Congress had been at the time of independence was broken. The party began to lose power in different parts of the country, and with the onset of the seventies, the party itself got split. Followed a new phase of lacerated politics, in which all sorts of permutations and combinations among political parties led to almost chronic instability. Regional parties got an opening and the entire political spectrum became a veritable mosaic of motley combinations.

The inexorable climax was reached by Indira Gandhi's imposition of the Emergency, when democratic liberties were snuffed out and for the first time since independence, an authoritarian rule emerged in this country. The Emergency itself was the barometer of the political insecurity that gripped Indira Gandhi, and

HUMAN RIGHTS COMMISSION

Factors behind the Decision

MANNIKA CHOPRA

In February this year, the Foreign Secretary's office had occasion to reprimand India's High Commissioner to London, L.M. Singhvi. Singhvi, a lawyer by training, a diplomat by circumstance and a human rights activist by inclination had indulged in a minor bureaucratic misdemeanour: At various fora, he had seemed a shade too enthusiastic about the need for his government to form a Human Rights Commission (HRC) – a commitment that the Congress had already made in its election manifesto in 1991.

Singhvi, as President of the World Conference on Human Rights and moreover posted in a city in which Amnesty International (AI) has its headquarters, was only too conscious of the imperatives of having a squeaky-clean human rights record. He knew that human rights transgressions by countries as far removed as Peru and North Korea ate much more space on the front pages of Western newspapers than did the development activities of Third World countries.

He also knew that demonstrations in Brussels and other European capitals engineered by Amnesty International on human right violations in India made for excellent television copy.

Aoid Hussain, Singhvi's counterpart in America, had also realised the economic damage that a murky human rights record could create. In Washington, on June 26, the Burton Bill had been passed by the House of Representatives. The Bill had called for a cut of $24 million from the development assistance account meant for the Third World countries including India. The cuts, it had been indicated clearly, was a rap on the knuckles for India for increasing human rights infractions.

Hussain, now in India, was conscious even then of the strategem employed by the USA. "Certainly, pressure was and is used by powers like the USA to create an international moral opinion against India." However, he added, not only India but Pakistan too had suffered from this selective punishment referring to the ban of transfer of nuclear technology to that country.

The response was inevitable: Prime Minister P.V. Narasimha Rao met with all the Chief Ministers to obtain their approval for finally setting up a National Human Rights Commission (NHRC). But the provocation was transparent. On March 16, 1992, the Union Minister for Home, S.B. Chavan, said in the Rajya Sabha that the proposed body would "counter the false and politically motivated propaganda by foreigners and Indian civil rights agencies".

●

J.N. DIXIT, the Foreign Secretary too in a meeting with US Senators and Congressmen in Washington a week before Chavan's statement reiterated that the formation of the Commission was part of the Congress party's manifesto. Such a body, Dixit had affirmed, would be able to give an account of India's human rights situation to various international bodies.

By the end of April, V.N.Gadgil, the Congress's official spokesperson, had also stated in a press conference that such a Commission would act as a corrective to the biased and one-sided reports of the NGOs (non-governmental organisations). He had also said: "It would also be an effective answer to politically motivated international criticism." Besides, added Gadgil, the Congress party had promised to institute an HRC "by law within the first 365 days of Congress rule". What he didn't add was that the Congress party in its Karachi session in 1930 had also stressed its commitment to protect human rights.

This week Chavan took these party postures to logical conclusion: In a public meeting, Chavan extended an invitation to AI, a group which had been systematically barred from entering India, to "send a delegation to New Delhi within the next few weeks to engage in a meaningful discussion".

What had happened? Had the definition of human rights in India undergone a change? Had the moral passion that used to fire the macho state against criticism from foreign organisations burnt itself out? Had global paradigms shifted with even Amnesty International changing its position on human rights transgressions committed by militants?

In explanation, Yvonne Terlingen researcher, Asia region, AI, had said to this reporter in London last June: "The killings of civilians can never be accepted. The deliberate massacre of a particular community by another is as horrendous as the state killing innocent people." The AI press statement was later to echo the same sentiments.

Complexities of European Integration

ERIC GONSALVES

The hosannas uttered by many including this observer after the Maastricht summit have proved remature and somewhat hollow. Quantum leaps in uman organisation are not so easily achieved. Almost ertainly European integration will go forward. But it ust be slower and more complicated.

Nationalism remains a potent force. Major decision annot be imposed from above. The man on the street as to be involved and consulted. Community mechansms like the exchange rate mechanism (ERM) cannot utomatically ensure European solutions unless these re accepted to be in the national interest or that the uropean and national interests coincide. Assessments n Maastricht and the European Community's (EC) rogress need to be considerably revised.

The recent crisis in the ERM has been dissected at reat length. Its origins go back to divergence in policy mong the G-7 over some years. What needs to be eiterated is that divergent policies followed in the naional interest by two leading members of the EC—ritain and Germany—could only lead to an ultimate ollision. (This happened once before in 1982 when rance was forced to accept considerable alteration in conomic policy to stay in the ERM.) This was further ompounded by the independence from political control accorded to the Bundesbank in working monetary olicy, a prerogative that British politicians would refer to deny to the proposed European monetary uthority if they could.

The world is now moving towards the German posiion. But economists and financiers controlling central anks have also to be able to go beyond numbers. There re human and social considerations which can become owerful politics and must be factored in. Also the more owerful an economy the more it has to think in global erms.

Unfortunately there is not enough evidence of either oliticians or central bankers having this vision or taking nto account events beyond their national borders as oor nations know too well. Whether these lessons are eing learnt will only be known after some time. On this ill depend the future of the ERM and the management f the future European Community (EC).

The author, a distinguished diplomat now retired, was a Secretary in the External Affairs Ministry and India's Ambassador in Brussels.

The grand design for Europe has always had a major flaw. The desire to guard national sovereignty on the part of governments has ensured that European organs are accountable to a Council of Ministers. This functions on the basis of consensus, that is, the lowest common denominator especially is arrived at by compromises worked out in long and tiresome negotiations between technocrats and bureaucrats of the Commission and governments with the concurrence of their political masters. Further towards the worthy end of harmonising practices across the Community, the same group has issued innumerable regulations imposing unnecessary uniformity and interfering in many aspects of the daily life of a citizen.

The European Parliament functions mainly as an advisory body, national parliaments have become bystanders and the general public is often annoyed and frustrated. Maastricht saw the need to address the major defect but made no specific or far-reaching proposals. Almost immediately afterwards the Commission made fairly drastic suggestions that would have invested the Brussels bureaucracy with even more power. The simmering dissatisfaction suddenly burst in the open with the narrow "no" majority in the Danish referendum. Maastricht would not be accepted as a *fait accompli.* This encouraged dissent elsewhere which has surfaced and multiplied.

●

NATIONALISM and the nation-state were given to the world by Western Europe. Demonstrative patriotism may no longer be the order of the day. But the sentiment clearly runs deep. There has also been a revival of far Right and neo-fascist groups which thrive on jingoism and nationalism. The rise of unemployment around Europe has generated chauvinism against the vast number of foreign workers. The prospect of Europe-wide job market without restrictions provide such groups fertile new ground where support can be canvassed. Overt and covert violence against all outsiders is on the rise. Genuine fears of loss of the national ethos of losing the benefits of earlier economic endeavours through Community decisions, etc. while being absorbed into a larger entity are now being fanned by more primitive emotions.

Maastricht Treaty after French Referendum

BHARATI SADASIVAM

By voting yes to the Maastricht Treaty, the French have saved it from certain death. The ratification ensures that the process of political and monetary union will continue, with the ultimate goal of a common regional currency by 1999 and a single market which will culminate in the creation of a second superpower, the United States of Europe.

But the narrow endorsement of the Treaty—less than 51 per cent of voters said "yes"—in a country which was one of the architects of the European Union holds several lessons that the leaders of the 12 nation European Community can ill-afford to ignore. Even among the most ardent Euro-enthusiasts the elation of the moment is tinged by sombre concern, bordering on pessimism, for the future.

●

AT the heart of the considerable voter resistance in France to Maastricht is the deepening divide between EC governments and their 340 million people. In the words of Charles Pasqua, the Gaullist nationalist and vociferous leader of the "no" campaign, the fact that one in every two Frenchmen voted against the Treaty showed that they rejected a Europe that does not take people into account.

The Brussels' vision—shared by the media, the political and business establishment—of a federal, united prosperous European superstate which will, forever, bury the spectre of war between its member-nations has left most ordinary French cold. What they see is quite different: stubborn recession, rising unemployment made worse by the prospect of an influx of immigrants from poor EC nations and even the Third World in a frontier-free community, and a dilution of national sovereignty as unelected technocrats overrule elected representatives.

It was all this that made the middle and working classes in France so vulnerable to what the xenophobic Jean-Marie Le Pen summed up as "Maastricht means more unemployment, more taxes, more immigration and more crime". Such fears were not dispelled despite—or perhaps because of—the distribution of nearly 40 million copies of the text of the Treaty by the ruling Socialist Party.

Alongside, the deeper fears and resentment about fiscal and political domination by France's enlarged neighbour were evident in the strident anti-German tone to the campaign mounted by both proponents and opponents of the Maastricht accord. The racist attacks on foreigners by neo-Nazis in Rostock and elsewhere were used by both sides to boost their arguments for and against European unity and a closer union with Germany, prompting one political analyst to comment in the French newspaper, *Liberation*, that in France everyone is frightened of Germany.

The average French may not actually believe that resurgent racism denotes a return of Germany's old demons, but the incidents provide a focus to the widespread French inferiority complex in the face of Germany's superior technology and capitalisation, its undisputed economic supremacy and the Bundesbank's lead in determining the fate of individual EC currencies. The fears are the deepest among France's political elite, which has failed to come to terms with German reunification.

There is now a reciprocal anger and resentment on the other side of the Rhine, which could strike at the historical Franco-German alliance that has driven European unity for the last 40 years. The Germans' own escalating social and economic problems with reunification have led to a drop in approval for the single market from 42 to 24 per cent, according to a recent poll; only 16 per cent now see any benefits in EC membership.

●

THE close shave the Treaty got in France will only accentuate such sentiments, making "post-Maastricht" a political nightmare for all the EC Governments which have to get the Treaty ratified by their Parliaments. The Treaty has run into rough weather in Britain, the current EC President, thanks to recession and the devaluation of the pound, and growing divisions on the issue even within the ruling Conservative Party.

Across the 12-nation community, domestic problems, resurgent nationalism and widespread fears about the costs of unity are beginning to form a powerful resistance to the Brussels notion of supranationalism. Not all pro-Europeans may agree with the fears expressed by a member of the EC Executive that the tensions brought to the fore during the French campaign have begun to tear the Community apart. But the first task of the summit, called by John Major next month, is undeniably to look at how, if at all, it can stop the drift. ■

Decentralised Planning and Cooperative Federalism

MALCOLM S. ADISESHIAH

This symposium on decentralised planning commemorates our dear friend, guide and colleague, Prof D. T Lakdawala. It is appropriate that on this memorable occasion and on this subject, I recall his advice on decentralised planning at the 1983 Bangalore seminar on Centre-State relations. A new government headed by the Janata Dal had been voted to power and in its Approach to the Eighth Five Year Plan it declared that democratic decentralisation covering both political and economic processes will require political will, as well as sustained pressure from peoples organisations. On this, Dr Lakdawala's advice was:

> Decentralisation is only a starting point to this end in the hope that the effective organisation of the people meant to bring them into the production process can be more successful at the lower parts. There is a fear based on past experience that at lower levels the vested interests are more powerful. This apprehension must be proved false if decentralisation is to hold the field.

We have now talked about decentralised planning for nearly half a century – from the First Five Year Plan (1950-55) Our actions, however, seem to move in the contrary direction. For instance, in agriculture which is actually a State subject, the Union's Plan share in 1991-1992 is 39 per cent of total Plan resources; in village and small industries, another State subject, the Union share is 46.47 per cent; in rural development it is 54.02 per cent; in social and women's welfare it is 79.02 per cent and in family welfare it is 100 per cent. The decentralisation of powers and finances as between the State Governments and local bodies – panchayats and municipal councils and corporations – is even worse. They have no powers even in areas which are clearly within their competence and responsibility like primary schools, primary health centres and sub-centres. Local bodies are being starved of funds, where generous grants and equitable tax sharing are inescapable. The Ashok Mehta Committee, for instance, estimated that if the State Plan expenditures and non-Plan development expenditures and non-development expenditure allocable to districts in 1977-78 were spent through the panchayati raj institutions, it would amount to Rs 8 crores per district (with an average of four panchayat councils) on which Rs 8 crores could be raised from banks and other sources.

This is the text of the Presidential Address of the author, one of the country's foremost economists and a former MP, a the D.T. Lakdawala Memorial Symposium on Decentralised Planning organised by the Institute of Social Sciences, New Delhi on September 24, 1992.

●

NOW what could be done to make decentralised planning real and effective? I suggest two basic measures, and stop there and leave it to the other participants to elaborate on them. The two measures are: first, regular periodic election to the local body – the three tier panchayat raj institutions recommended by the Balwant Ray Mehta Study Team and the Ashok Mehta Committee; and second, agrarian reform. The two are inter-related and should be acted upon simultaneously.

The first measure is to hold periodic elections at the panchayat level as the means of involving the people in the village in their developmemt. This is against the top-down philosophy which we have inherited and which we are practising from the day of the First Plan and which has resulted in the panchayati raj elections not being held for some or all the three tiers for 10 years in most States. Way back in 1952 Nehru warned that we had to start with the top-down approach in the First Plan, but that soon we had to develop a procedure whereby "people may feel that the Plan is something that has been evolved with their cooperation, so that they are responsible for its success". After two general elections, he realised that democracy with universal adult franchise does not throw up a pro-poor government. Looking around Parliament, he saw that instead of small farmers and landless labourers, who constitute 90 per cent of the rural people, being elected through adult suffrage, the elected representatives were well-to-do large and medium farmers.

The second measure is to ensure that the periodic panchayati raj elections proposed does not simply transfer power from the States, well-to-do elites to the rich rural elites. The RBI's all-India debt and investment surveys over three decades – 1961, 1971 and 1981 – show the skewed rural assets distribution with

Freedom from Foreign Debt

I.G. PATEL

The author, a distinguished economist, is the former Chief Economic Advisor of the Government of India (1965-67), former Governor, Reserve Bank of India (1977-82), and former Director, London School of Economics and Political Science (1984-90). The following is the text of the Fifteenth Govind Ballabh Pant Memorial Lecture he delivered in New Delhi on September 20, 1992. —Editor

It is indeed a great honour to deliver the Govind Ballabh Pant Memorial Lecture for 1992. I did not have the privilege of meeting Pantji, much less of working with him. But Pantji belonged to that small but select band of men and women whom Gandhiji's satyagraha movement inscribed in the consciousness of my generation. His was a household name in Gujarat where I grew up; and, in many ways, Pantji, we thought, was like our own Sardar: a man of few words and firm intent, decisive in action and shrewd in judgement, a born leader and a statesman who could also settle down, with rare skill and persistence, to the less glamorous but more basic task of day-to-day administration. Such men are in short supply always and everywhere; and on this memorial occasion, we cannot but reflect that they are needed more in our country now than ever before.

Drift into Debt

It is also in memory of our struggle for independence that I have chosen the subject for my remarks this evening. That we are heavily indebted to the outside world at present is well-known; and, to say the least, most of us feel uneasy about it. We certanly did not embark on this path of borrowing abroad as a matter of deliberate choice. We simply drifted into it when, suddenly and unexpectedly, we ran into a foreign exchange crisis at the beginning of the Second Plan. The First Plan did not postulate any reliance on foreign services—except for a modest use of our own reserves. This was essentially true of the draft Second Plan as well. But something had to be done to shore up our reserves and to protect at least the core of the Plan when we lost a major part of our sterling balances in a matter of months.

Even then, our first response was to cash in on what we thought was our right. We had kept such large balances with the Bank of England for so many years that we thought we had a right to get an overdraft from the Bank when times were lean. Somewhat to our surprise, our request was politely but firmly rejected. Drawls on the Fund could not meet our needs which were far from temporary; and the World Bank had assessed our absorptive capacity and set a very modest limit to what we could borrow from it each year. There was thus no escape from dreaming up a case for government-to-government aid on concessional terms; and the circumstances towards the end of the fifties and in the early sixties were propitious for canvassing such an idea, particularly for India.

The Second Plan had elicited a great deal of academic interest and enthusiasm abroad. This was particularly true of the Centre for International Studies at the Massachusets Institute of Technology which was close to the powers that be in Washington. The MIT Professors and the World Bank Staff helped argue the case for concessional aid, which was best summed up in the theory of assisted take-off, and it became fashionable to speak of "aid to end all aid". A little later a more sophisticated version of this—the two-gap model—was advocated. Developing countries, it was argued, suffered from many rigidities which made it difficult for them to convert their savings into foreign exchange. The need for foreign support thus arose even when poor countries spared no effort to raise their savings. All this found ready acceptance among people already predisposed to support democratic India in the race against Communist China; and it was in this atmosphere that the United State Development Loan Fund was set up towards the close of the Eisenhower administration to give loans repayable in local currency—a device tailor-made to suit our needs. This was followed by the establishment of the Aid India Consortium and, later of the International Development Association. Let it be said also that this denouement owed not a little to the negotiating skills of our own civil servants, notably, of B.K.Nehru; and India can legitimately claim the credit for having ushered in the 'Age of Foreign Aid' in the post-War world.

There was, however, no jubilation in Indian hearts then that we had at long last found the silken route to self-sustaining growth. Most of our leaders, and certainly Panditji, were embarrassed by our predicament; and we tread to put as brave a face on it as we could. Initially, we even pretended that the Aid-India Consortium meetings were not really our affair but that of the World Bank; and we made it a point not to take part in the meetings except by way of a condescending farewell lunch. But this very effort at camouflage told its own tale and had soon to be abandoned.

The man in the street certainly did not feel proud of those who negotiated aid. I remember receiving a letter from my father a few months before his death in 1963. He said he felt very proud of me when I was sent abroad so often for what he thought was important work. But when he discovered that I always went abroad to negotiate a loan, he felt ashamed. He asked me to give up my job as he had not raised a son to get the country more and more into debt.

A few years later, I had a similar admonition from my father-in-law, the much-respected and now much missed Prof A.K.Dasgupta. In my Shastri Memorial Lecture on Foreign Aid I had referred to a conversation in which I had said that I was not ashamed of begging for my country as after all, I was not begging for myself. Prof Dasgupta could not understand how I could be so insensitive as to think that the self-respect of the country was less important than my own.

Questions for Our Time

A generation later, the situation is no better and is, in fact, even more desperate. Plan after Plan we have proclaimed our objective of self-reliance and of doing without foreign aid. Plan after Plan, the reliance on foreign assistance has grown. Commercial borrowing has not proved an escape or an alternative. The non-resident Indians may have their heart in the homeland but prefer to keep their cash elsewhere. Our indebtedness abroad has increased of late with geometric progression. It stands now at the staggering figure of some 75 billion dollar sand amounts to more than four-times our annual export earnings with a consequent debt-service ratio of around 30 per cent. These are magnitudes comparable to those that prevail in some of the more heavily indebted countries in South America.

Where is all this going to end? Do we not need now as a matter of the highest priority a clear, explicitly stated and time-bound policy on foreign indebtedness? What should this policy be? Should it seek total freedom from foreign debt or freedom from only some kinds of foreign debt? What exactly are the benefits we expect to derive from a policy of more or less total freedom from foreign debt? And despite the discouraging experience of the past three decades, can we say now that enough is enough and that, as a nation, we are prepared for the effort and the adjustment needed to achieve what most of us devoutly wish for? These are some of the questions to which I would like to give my subjective response this evening. I emphasise the word 'subjective' as in matters such as these, one's values and preferences are inextricably woven into the fabric of one's argument.

It does seem rather strange to speak of freedom from foreign debt at a time when we are constrained to borrow more from every conceivable source, including the International Monetary Fund. But the time when past excesses have created a crisis and have forced us to take bitter medicine is perhaps the best time to forge the will and say: "Never again. Never again shall we bring the country to the brink where it stood in the summer of 1991."

It is certainly nobody's contention that freedom from foreign debt can be secured except over a reasonable period of time. But setting a definite goal and target has this advantage: it ensures that whatever we do in the meanwhile is consistent with the target and is, indeed, a step towards it. This is why it is also necessary to be clear at the outset about what exactly we mean by freedom from foreign debt—or what I prefer to call, a climate and culture of self-reliance.

Contours of Freedom

Foreign indebtedness comes in many forms and it is certainly not necessary or desirable to seek freedom from all of them. Most people would, I think, agree that direct foreign investment can and indeed should be an enduring feature of our national life. The reasons for this lie not so much in the inflow of capital as in the induction of newer technologies and as a vehicle for the export of domestic goods and services. But if we are defining a goal, we cannot let matters rest just at that.

For one thing, it is equally important that there should be a healthy outflow of direct foreign investment from India also, if only because trade often presupposes some investment. If we want to export leather garments to Western countries, for example, we may well have to set up finishing and packing facilities in Italy or Spain. It is already time that liberalisation in this direction is a part of our immediate agenda.

Again, we can call ourselves truly free only when we do not have to be defensive about such restrictions as we may have to put on direct foreign investment. Nowhere is there a completely open door for direct foreign investment. Life changes and we need a degree of freedom to deal with circumstances yet to unfold. But we cannot achieve a balance in bargaining power as long as we have to contend with a balance of payments deficit which we seek to cover by attracting direct foreign investment. If it comes, it should be welcome. But we are not really free as long as we are constrained to talk of attracting foreign capital to cover a deficit.

The same considerations apply to other forms of private investment. The long-term objective must be to balance the external accounts and even to create a surplus without prior assumptions about any net inflow of commercial capital. If private foreign capital finds investment in India more profitable than elsewhere, there is no need to shun it—now or even in the distant future. But I think it still makes sense to say that policy itself must aim at balance irrespective of such flows; and, in any event, there should be no special concessions towards attracting such flows.

The one concession or incentive I would particularly warn against is government guarantees for private capital inflows. In a state of self-reliance, there should be no question of government guarantee for any kind of private foreign investment—direct or portfolio, by way of loan or a deposit. The only assurance that the government should give is that of convertibility into foreign exchange at the prevailing rate of exchange. I realise that we are far from reaching such a situation; but I submit that as a matter of discipline, we must be clear about the goal and take some steps towards it even in the short-run, if only to a limited extent. I would certainly hope that we are economical about giving government guarantees even from now on. If the Indian Railways or Air India or the Tatas or anyone else can borrow abroad on their own steam for long-term productive purposes, there is no need to limit such borrowing to any predetermined figure. But let us not repeat the folly of making Indian enterprises borrow abroad on the strength of government guarantees, particularly when the borrowing is not needed by the enterprises for their own investment but is intended to prop up the foreign exchange reserves of the country.

The temptation to bridge the balance of payments gap by encouraging short-term inflows of private capital needs to be shunned, particularly at the present juncture. Several countries have come to grief by encouraging such inflows to the point where they prop up the exchange rate and conceal the truly parlous state of the underlying realities of exports and imports. For the foreign investor, the exchange risk is eliminated by the artificially propped up exchange rate, and shifting money in and out of the country becomes highly profitable. But the whole house of cards comes down at the first sign of adversity, leaving the country hopelessly exposed.

It is in the context that there is urgent need to review our policy towards non-resident Indian deposits expressed in foreign currencies. The original justification was that the NRI deposits were slightly cheaper and more stable substitute for commercial loans. The cheapness is doubtful; and experience has shown that the NRI deposits are no less volatile than any other private short-term credits.

This leaves two other forms of foreign indebtedness—that to international institutions like the World Bank and the Asian Development Bank and, secondly, to other sovereign governments. In one sense, indebtedness to international institutions is worse than that to private financial institutions. The former is of necessity guaranteed by the government so that repayments have to be made even if the investments prove misguided or less productive than anticipated. Unlike in any other business transaction, the risk in borrowing from international institutions is virtually all on one side; and the prestige of the institutions ensures that payments due to them take precedence over everything else. Logically speaking then, one must be free from indebtedness to international institutions even before indebtedness to private financial institutions; and it certainly needs to be emphasised that as a long-term policy, the sequence of independence must be from international institutions first and private financial markets later, if at all. This is certainly the perception of the institutions themselves and of their major shareholders. Both of them advocate what is known as the "graduation policy" whereby borrowing countries are expected to graduate out of dependence on the International Development Association first, the World Bank next and private markets only thereafter, if ever.

Again, as a matter of practical political politics, there is no escape in the near future from much greater reliance on international institutions. But it is just as well to remember that they will not like us to be perpetual clients and would like our debt to them to stop growing soon and even to decline somewhat thereafter. I would, therefore, conclude that eventually at any rate, freedom from foreign debt must include freedom from indebtedness to the World Bank and the Asian Development Bank as well.

When it comes to indebtedness to foreign governments, the case for seeking complete freedom from it is perhaps the strongest. An enduring relationship of borrowers and debtors among sovereign states is not a healthy one to sustain; and it is doubtful if public opinion at home or abroad will support this vexatious and debatable relationship, decade after decade. From the purely political point of view, freedom from indebtedness to foreign governments must in fact take precedence over freedom from indebtedness to international institutions despite the fact that the former is often available on more concessional terms. Graduated steps towards this goal must be taken even from now on.

Now that Eastern Europe and the Soviet Union have entered a new phase, we should end forthwith the earlier chapter of a debtor/creditor relationship with all the erstwhile communist states. There is job enough at hand to deal with past obligations without creating new and additional ones. I would also end as soon as possible what might remain of the legacy of indebtedness to the Gulf countries in the aftermath of the two oil crises.

Within the Consortium, we should continue not to agree to any new donor participants. Nor should we be averse to declining future aid from any country with which the aid relationship becomes particularly vexatious. This is a possibility we may soon have to consider seriously vis-a-vis the United States from which we get rather modest aid and immoderate annoyances. Nothing needs to be done in a huff and in a spirit of hostility; and we should not forget the earlier US generosity to which I referred at the outset. But even good friends can agree that some things are proving more a strain than a cement for good relations and are better left behind in the interest of the friendship itself.

On a more general plane, there is no reason why we should not seek a reduction in our official debt by negotiation. If debts to much richer countries like Poland and Egypt could be written off, there is no reason why we should be singled out for martyrdom simply because we have honoured all our obligations so far.

Freedom from foreign debt then is neither a simple nor an absolute concept or objective, and it has to be approached in stages and in a certain sequence. The first sign-post obviously has got to be the elimination of the current account deficit which would put a stop to any further increase in indebtedness. During the intervening period, our debt will continue to increase. But the rate of increase should diminish from year to year, hopefully, at an increasing rate. If this process is allowed to continue for some more years, it would enable us to reduce progressively our total indebtedness. In the first phase, it may make sense to reduce our relative reliance on private financial markets rather than on international institutions or foreign governments or direct foreign investment. But once confidence is restored and balance is reached, we should aim to reduce the debt to foreign governments faster than the debt to international institutions.

While no such self-denial is necessary for direct foreign investment or private capital for productive investments, there has to be sooner or later a distinct change in the attitude to such private flows as well. Apart from the fact that they must be a two-way affair, all artificial props by way of guarantees or special concessions should be dispensed with. Once the goal is defined, some corrective steps may even begin immediately. Refraining from government guarantees, winding up short-term deposits and shortening the list of creditor countries, for example, can be symbols of self-restraint that would set the direction and pace of self-reliance and act as focal points for greater discipline.

Fruits of Freedom

But what in the ultimate analysis is the rationale for seeking to be free from foreign debt? What can we hope to gain from a climate and culture of self-reliance? Certainly not freedom from foreign influence. Nor an escape from international obligations. Whether we are indebted to the US and the World Bank or no, we would still be subject to pressures for accepting the nuclear non-proliferation treaty and for introducing a certain regime for patents and foreign investment. None of us can escape from the realities of unequal power; and membership of international institutions offers at best only limited immunity from the pressures of the rich and the powerful. But it would be idle to pretend that it does not make any difference, however small, to our bargaining power whether or not we have to knock at the door of others for special favours.

If experience is any guide the relationship between borrowers and lenders tends to be a bruising one. In our case, right from the word go, there have been pinpricks and vexations. First, there was the sharp disappointment when the promise of substantial Consortium aid did not materialise. Then came the trauma of devaluation and of President Johnson doling out food aid grain by grain, so to speak. In the seventies, the oil crisis made us dependent on aid from neighboring countries which only till the other day were members of the rupee zone. For some years, we were able to console ourselves that we had a special relationship with the Bank and the Fund as we were after all one of the Big Five on their Boards for many years. But even this illusion could not be maintained for long. And we are reminded week after week that the example of the US in aid relationship will soon be followed by Japan and Germany. The reasons for self-reliance then are essentially political. The rationale for freedom from foreign aid is freedom itself. Why else have we proclaimed this goal now for some three decades?

Even if it were simply a balm to our national pride and nothing else, it would still be valuable to be self-reliant. Societies do not survive on bread alone; and I venture to think that if our efforts to increase our efficiency and competitive power around the world are to succeed, we need a stronger appeal than that of sustaining a five or six per cent rate of growth or even of removing poverty. It would certainly evoke a much greater response from the people if it was put to them that certain policies are needed to stop our debt from growing by the end of the century and to eliminate all official debt by the year 2010. There is surely appeal in the argument that certain policies are needed to restore our national freedom during the lifetime of the present generation itself.

My generation, which is now on the way out, would certainly like to rid future generations of the burden of repaying debts that we have contracted. Whatever may be true of internal debt, external debt is a burden for the future generations. Much as we may console ourselves that the debts are accompanied by the inheritance of much valuable investment, the argument somehow lacks conviction.

Too much sensitivity about debts, it may be argued, is merely middle-class morality. Those who cannot look forward to a square meal a day may perhaps be less squeamish about things such as the burden on future generations or the freedom from foreign domination. I myself very much doubt this. But even if I have to make a concession to this point of view, I would rather make it in favour of people to people gestures of voluntary help and cooperation.

And finally, quite apart from anything else, let us not forget that the rest of the world is not willing to prop us up forever. The question is not whether but how soon we should reach the stage of self-reliance.

Feasibility of Freedom

About the meaning, scope and desirability of freedom from foreign debt then there is not likely to be much disagreement. But can such an objective be achieved in the foreseeable future? The answer to this question can only be attempted with reference to some long-term forecasts such as those included in the outline of the Eighth Five Year Plan that was published a few months ago.

The Eighth Five Year Plan postulates a rate of growth in gross domestic product of 5.6 per cent per annum as against the growth rate of 5.3 per cent achieved in 1985-92. Correspondingly, the rates of saving and investment show very modest increases—from 20.7 per cent to 21.6 per cent and from 23.0 per cent to 23.3 per cent respectively. The incremental capital-output ratio is actually assumed to decline somewhat from 4.3 in 1985-92 to 4.1 in 1992-97. The only major change during the two periods is in respect of the external sector where the growth rate in exports increases from 8.5 per cent per annum to 13.6 per cent per annum with only a modest increase in import growth from 7.5 per cent per annum to 8.4 per cent per annum. As a result, the current account deficit in the balance of payments declines from some 2.4 per cent of Gross Domestic Product in recent years to a little more than one per cent of GDP by the end of the Plan—that is, by 1997. Even so, our total external indebtedness will increase further during the Eighth Plan period by some 20 billion dollars, that is to a level of some 95 billion dollars. This would still be three times our export earnings as against some four times now, and the debt-servicing ratio at some 20 per cent would also remain uncomfortable.

Rough calculations would indicate, however, that if the assumptions in the Plan are maintained beyond 1997, we can certainly look forward to current account balance and a bit more by the end of the century. By then, our external debt will cease to grow and will, in all probability, have reached a level of some 100 to 105 billion dollars. If the same trends continue over the first decade of the twenty first century, we would have liquidated all official debt to foreign governments and the bulk of the debt to international institutions as well by the year 2010.

On the face of it, the objective of substantive freedom from foreign debt over the next 15 to 20 years is thus attainable if the assumptions underlying the Eighth Plan are realistic and can hold good for another ten to fifteen years. The model underlying the Eighth Plan is not easy to understand from such details as are available in the Executive Summary so far made public. It is intriguing how the substantial shift in resources to the external sector that it postulates is consistent with no change in the capital output ratio in the overall efficiency of the economy. Presumably, the assumption is that the gains in efficiency are neutralised by the worsening in the terms of trade necessary to improve the balance of payments.

Be that as it may, the central point remains: exports must increase much faster than imports; and the important question is whether we are prepared to wield the means required for achieving this result. What then are these means or policies and what is needed to implement them?

In theory, the answer is simple. We must improve at least to some extent on our current high rate of saving. Currently, the gap between investment and saving, that is, the deficit in the current account of the balance of payments, is of the order of 2.4 per cent of Gross Domestic Product. If investments and growth are not to suffer, our saving rate of some 21 per cent of GNP must increase by 2.4 percentage points by the end of the century and by perhaps another two or three percentage points over the first decade of the next century.

Even more importantly, we must steadily increase the efficiency of our industry and agriculture and services by exposing them more and more to competition from home and abroad, by encouraging innovations based on domestic research as well as foreign technology, and by improving the skills of our labour force generally. Distortions in the pattern of investment must be removed, particularly those that act against the external sector. In general, investment decisions must reflect relative profitability rather than social and other objectives which must be served, except marginally, by other policies, particularly fiscal ones.

Along with that, we must maintain sound macro-economic management which has two interrelated aspects. First, a sound budgetary and monetary policy which limits inflation and second, and appropriate exchange rate policy which maintains the competitiveness of our economy. The paradox is that while this requires a flexible exchange rate policy, we also need an environment of stable expectations which requires a more or less stable exchange-rate. The only way out of this paradox is a speedy return to a comparatively low rate of inflation and a growth in productivity at least as fast as in our major competitors. The alternative of devaluation is not an enduring one as a continuing and prolonged period of devaluation is surely a sign of failure rather than of flexibility or realism.

All this, I think, is familiar and well understood; and it is in line with the new economic policies initiated over the past year. My impression, however, is that there is not sufficient appreciation in the country of the difficulty as well as urgency of the problem; and it is certainly simplistic and complacent to narrow the task to the confines of the new economic policy alone. Indeed, if the new economic policies themselves are to take hold and succeed, they will need to be supported by changes in all aspects of our national life. We have to be prepared for far-reaching changes in our polity as much as in our economy, in our social attitudes as much as in our individual conduct and in foreign policy as much as in domestic policy. You will perhaps allow me to illustrate this by reference to a few things which are often overlooked and to which I attach particular importance.

Austerity

In India, we assume too readily that the current relatively high rate of saving in the country can be maintained easily, and even increased Plan after Plan. I am afraid so great is the lure of consumerism and so wide its spread through television and other media that we will need much greater efforts to inculcate the spirit of austerity among all classes if even the present rates of private savings are to be maintained. I am not in favour of banning or restricting administratively the production of all kinds of luxury goods. But surely they should be taxed heavily, and we need not get panicky if cars or refrigerators do not sell well for a few months. Investment in luxury production can also be discouraged by fiscal devices; and I for one would not yield to pressures for allowing foreign investment in every item of luxury consumption. Restricting the consumption of less essential goods has the added advantage of a direct impact on balance of payments, for such consumption is import-inten-

Too much talk of budget deficits should not obscure the basic point that it is people rather than governments who do the bulk of the saving and even of spending. It is their habits which are of prime importance so that everything possible has to be done to influence all sections of society towards greater thrift. People do suffer from money illusion so that incentives for savings might work, even if they are matched by higher taxes. Sometimes, even partially successful attempts such as those for discouraging the consumption of gold may have to be continued. If all that is difficult to control or administer is legitimised, there will be little left to social or national purpose. At any rate everything possible needs to be done to ensure that such consumption continues to be looked down upon socially, politically and religiously. Since gold ornaments and gold and silver holdings continue to attract wealth tax, surely an honest attempt must be made to ensure that this provision is strictly enforced. As things are, the implementation of this provision is nothing short of a mockery.

Accountability

As far as a steady increase in productivity and external competitiveness is concerned, it needs to be emphasised that this is necessary not just to increase exports at an adequate rate, but equally to restrict imports to manageable proportions without rationing or high customs duties. Excessive concentration on exports alone can thus be counterproductive. Indeed, we need a steady increase in efficiency all down the line. Even externally non-tradable goods and services such as power and transport must be efficiently provided if exports are to grow at desirable rates without excessive growth in imports. From this point of view, the constant reiteration of the need for an exit policy is also a bit unfortunate. It is necessary to let patients with terminal illness die without too long and lingering a pain. But it is far more important to improve the health of the entire population. And that is a very different and difficult agenda indeed.

By far the most important problem before us now is that of inculcating a new work ethic of efficiency and accountability. We cannot really have an efficient banking system or transport and communications service or even an efficient textile and sugar industry as long as organised labour—of all ranks—continues to indulge in negative and restrictive practices and politicians and judges pander routinely to such tactics. The rot has gone so far that bank staff can resist computerisation to such an extent that even the Reserve Bank of India finds it difficult to keep its books in order. I am afraid the time has long been overdue when our labour laws and their adjudication are brought in line with the requirements of competition and accountability. If need be, one should not be afraid of selective confrontation, and the issue of the computerisation of financial services is certainly an eminent candidate for this

[redacted]

dividual effort or even from a large measure of correspondence between individual effort and individual well-being for the vast majority of the people. Even the scale of our collective effort depends on how far we are prepared to pull our individual weight. 'As you sow, so shall you reap' is a tenet of eternal significance. But we have dragged the country very far away from this over the past few decades. Politicians, economists, judges and journalists have encouraged the dependency syndrome by constant talk of the rights of man and the obligations of the state. Reversing gear here will take a lot of political courage and statesmanship.

The argument about privatisation is also ultimately about accountability. Who is ultimately accountable in any enterprise? Accountability is not easy even in modern private corporations; and one does not need a financial scam to remind us that even private enterprise—whether small or big, domestic or foreign—can at times be as inefficient as public enterprise and even worse. But with all that, I think it is still by and large true that there is a more solid core of accountability in private management and private ownership than in public enterprise; and that is why, to borrow from Churchill, private enterprise is the worst form of economic organisation except for all the others already tried.

I would draw two conclusions from this. First, instead of being defensive or apologetic about it, we should be far more energetic and imaginative about privatisation than we have been hitherto. We should not hesitate, for example, to negotiate bulk sales of shares in some public enterprises to private corporations whether domestic or foreign despite all the risks of malpractices in such a procedure. We should certainly not hesitate to contract out the management of public-majority enterprises to private organisations. Successful private managers could later have a prior claim to purchasing a slice of public equity.

Where privatisation is not feasible or otherwise considered undesirable, it may still be possible to create a core of accountability by laying down certain conventions and norms. Appointment as Chief Executives of persons who can serve for at least three five year terms will make it possible to reward those who are successful and weed out those who are not. In general, abolition of retirement limits altogether for senior staff combined with provision for compulsory retirement at an early stage will make for greater accountability. I, for one, believe that even public servants and technical and administrative staff can become excellent managers and entrepreneurs if they are suitably trained and equipped and are subject to a transparent system of rewards and punishment. The example of the French Civil Service is very instructive in this regard. Shareholding by workers and their participation in management can also help. But we have not yet taken decisive steps

and innovation needed can be generated from within an enterprise.

That is why there has to be an active role played by the State in providing good quality education, not just at the primary or secondary level but also at the university and the research level. I must admit I get rather frightened by the current fashion of pitting higher education against primary or secondary education and of talking glibly of eliminating all subsidies to higher education. Let us by all means have the courage to economise on higher education by restricting access only to those who can meet very high standards of admission, as poor quality higher education is a waste in more senses than one. But high quality higher education to all those who can take advantage of it will cost much more per student than what we currently spend in our universities and research institutions. It will certainly cost much more than what we can conceivably raise by higher fees. Downgrading higher education or denying it more funds cannot help when it comes to competing in global markets. It goes without saying that we must also provide good quality primary and secondary education to all children in the appropriate age-group as soon as we can. But all that means is that the budgets for education—as for health and extension services and social amenities—will have to grow steadily for many years to come in relation to national income. Similarly, the need for much greater public expenditure on research and promotion not just for agriculture and small industry but also for the organised sector of industry and services can hardly be minimised.

Fiscal Challenge

It is against this background that we have to measure the enormity of sound macro-economic management not just now but over the next two decades. However desirable on other counts, a mere transfer of the responsibility to borrow from State to State enterprises and the sale of public assets, they mark no real progress towards fiscal balance. What matters—if investment and social provision are not to suffer—is a reduction in expenditure on subsidies, administration and internal and external security and a rapid growth in revenues absolutely as well as in relation to national income. I am afraid this agenda is much more far-reaching and difficult than most people realise.

So far subsidies have been more talked of than tackled. Everyone seems to be willing to strike but afraid to wound; and the game of opening a new populist door before closing an old one continues. I shudder every time I hear of the extension of the public distribution system with or without better targeting. I am afraid better targeting will remain only on paper and, in any case, will create an administrative nightmare if at all taken seriously. In a democracy, if we are to

[redacted]

ments, it is counter-productive to seriously run down administration, which is an essential part of a modern society.

It is in the area of defence and internal security, in addition to subsidies, that we must look for substantial restraint in government expenditure. But does anyone seriously believe that our defence expenditure can be kept in check without some bold departures in our foreign policy? Nor can our expenditure on internal security be kept within reasonable limits without a substantial realignment of Centre-State relations and of our policy towards different ethnic groups in the country. Unfortunately, while we have moved away from the dead centre in economic policy, we are still ensnared in the same web of yesterday's jargon and knee-jerk reactions in matters of foreign policy and in many aspects of domestic policy as well.

There is much talk nowadays of public expenditure but not enough of public revenues. But there is paramount need for raising revenue as a percentage of national income—not just marginally, but substantially. I feel rather uneasy about the current fashion of reducing direct taxes drastically. It is easy to see that an optimum rate of income tax should be somewhere between zero and a hundred per cent. At these extremes, the tax-yield would be zero. But there is no theory that can tell us where exactly the optimum lies. Much of the talk of lower taxes raising more revenues is merely wishful hearsay. I am not sure why a tax structure with a sixty per cent maximum rate, for example, would yield less than a maximum rate of forty per cent or even less which some recommend.

The task of ensuring much better compliance with our tax laws—for direct and indirect taxes—has also hardly yet begun; and we have a long way to go before we have in place a dynamic and less complicated system of indirect taxes which covers services as well as goods. Once again, it needs to be said that we cannot legitimise evasion by sliding down the road of lower and lower taxes and periodic amnesty of tax dodgers without evading our social and national responsibilities.

Exchange Rate

The second aspect of macro-economic management, namely, a sound management of the exchange rate is not so much a matter of policy as a culmination of sound policies in other areas. The term convertibility—whether partial or full—has been much abused of late even by those who should know better. A dual rate *per se* has nothing to do with convertibility; and a sound exchange rate policy requires a speedy return to a single rate. What we want is a unified and more or less stable exchange rate with little or no restrictions on current transactions although a good deal less than before on trade account. There should certainly be no question whatsoever of our returning soon to full convertibility, including that on capital account which we have not had since the beginning of World War II. Even on current account, invisibles, for example, pose very serious problems so that I would not proclaim too loudly a return to full convertibility even on current account over the next two or three years. And while trade liberalisation is important, it must be accompanied by prompt installation of judicious machinery, armed with adequate trade intelligence, to ensure that our economy is protected against dumping and our exporters are provided a level playing field. There should be no illusion that those who speak loudest of free trade are committed even to fair trade.

Distortions and Population

Even with a high rate of saving, growing efficiency at the level of each enterprise and sound macro-economic management, the agenda for self-reliance is hardly complete. The central task of shifting resources to the external sector—the sector that increases exports and keeps imports under check—requires more specific measures also by way of incentives; disincentives and removal of distortions. These measures can be very painful for some sections of the economy. One has only to ask what would be a sound energy policy for India which will reduce the very high dependence on imports of petroleum and petroleum products to appreciate how far-ranging will be the repercussions of such a policy. It is not only for budgetary reasons that one has to reduce subsidies generally and charge adequate prices for power and irrigation water and kerosene, for example. These undoubtedly unpopular and even harsh measures are necessary primarily for making resource allocation consistent with growing self-reliance.

On the greatest of all distortions—the failure of birth-rates to decline *pari passu* with death-rates—I need not say more than one thing. Better health facilities, education of women and higher standards of living generally will certainly help. But can we rest content with just that? Do we really not need measures which go beyond absolute voluntarism such as disincentives for larger families, social pressures and persuasion at places of work? The dividing line between social and economic pressure and coercion is thin. But should we, therefore, remain always at an arms length from such a line?

It is clear that whichever area of the challenge of self-reliance we look at requires very hard decisions which are bound to be divisive. Can we really rise to this challenge without a sharp break with the current political style in the country? Democracy cannot mean a perpetual state of warfare and vilification among political parties, based often on little more than personal egos. On that basis, no great national effort is possible; and I for one certainly hope and pray that the present talk of national consensus will soon be replaced by the reality of a broad-based and nonpartisan government which alone can tackle our formidable problems. It is always easy to say that this is not the time for a bold departure. But if not now, when? And if now, how?—except on the basis of a common perception of national urgency?

Wages of Failure

The task of achieving freedom from foreign debt even over as long a period as fifteen to twenty years is thus neither easy nor simple. Can we shorten this time-horizon or smoothen the path in any way? It will certainly help if the rest of the world achieves high rates of growth and is willing to put up with high rates of inflation and low real rates of interest as was the case generally in the 1970s. It would also help if we receive substantial debt relief. But such things are beyond our control. Can we then improve our chances of self-reliance by aiming at a slower rate of growth for a decade or two—say of 4.5 per cent per annum rather than 5.5 per cent per annum?

The temptation to think so is strong, and I succumb to it myself rather masochistically from time to time. But I am not sure that this alternative is a real one. A lower rate of growth in all probability will be the result of a slower growth in efficiency which would tend to reduce export elasticity and increase the elasticity of imports at the same time. It would take even longer to bridge the gap between them. Admittedly, growth rates can be slowed down by reducing investment rather than the growth of productivity. In purely accounting terms, even a two percentage point reduction in investment—which might lower growth rates by just half a percentage point—will cover the bulk of the current gap between investment and savings and consequently, the bulk of the deficit in the current account of balance of payment. But I am afraid there are more things in developing countries than are dreamt of in the identities of national income accountants. A policy of reducing investment deliberately in order to improve the balance of payments may well impale us on the cross of lower productivity growth as well.

I should perhaps make a nod here to the hope often expressed that our private gold hoards could be mobilised to raise resources for paying off our debts. I am afraid all such talk is wishful thinking—and even worse, an argument by smugglers and hoarders and processors of gold to get the best of both possible worlds. It is only draconian taxation of gold or a sharp policy-induced deflation which might bring out the gold hoards to any significant extent. The first, alas, is not practical politics; and the second needs no comment. I can only hope that if governments in India are not prepared to do what needs to be done, they would at least refrain from pretending that they are doing something.

What happens then if we are not able to muster the scale of effort required? Shall we continue with a prolonged dependence on others and the consequent abridgement of national freedom? I am afraid we shall end up even worse, simply as a basket case where the basket is filled with consumption support while investment support is progressively withdrawn; no one likes to put money in a country which has no demonstrable capacity to use it wisely. We then may well have freedom from foreign debt even sooner than otherwise. But that would be freedom of isolation, of the forgotten and the forsaken who wallow in their own misery and often inflict incalculable harm on themselves out of sheer desperation. We live in an age when we cannot even hide our shame in our own home. Whether we like it or not, we are already globalised, at least visually; always in the eye of others as others are in our eye. And that is a terrible fate for those who are marginalised in every other way.

Ladies and gentlemen, I hope I have not been alarmist and have not painted too bleak a picture. But we owe it to the memory of our struggle for independence no less than to ourselves and to future generations that we recover our elan and self-esteem by achieving a debtless economy. The pursuit of freedom from foreign debt is not just a vital necessity in an increasingly competitive world which is not yet free from the exigencies of unequal power. It is also an opportunity to shed much of the dead weight that has dragged us steadily down in the league of nations in recent years. On this fiftieth anniversary of the Quit India movement, it is perhaps time to take another national pledge : that we shall stand firm and united in our resolve to free India from fear and want without charity and without blandishments from any quarters, however well-meaning or powerful. Only so shall we recover our rightful place in the comity of nations and remain true to our own inheritance. ■

NEW INDIAN BOOKS RELEASED DURING 5-11 AUGUST

ECONOMICS: COMMERCE
Debt Finance in the Indian Corporate Sector/ K.C. Raut & M.R. Swain 250
Designing Organisations: The Foundation for Excellence/Philip Sadler 195
Entrepreneurship and Entrepreneurial Development/ M. Gangadhara Rao (Ed.) 350
Lease Financing in India/P.K. Biswasroy & D.P. Mishra (Ed.) 175
Management Accounting in Hotel Industry in India/ R.K. Sharma 350
ECONOMICS: INDUSTRY
Industrial Location: Principles and Policies (2nd Edition)/Keith Chapman & David F. Walker (P.B.) 300
Managing Corporate Turnaround (Text and Cases)/ R.A. Yadav 225
Trade Unions and Productivity in Indian Industries/ Ramjee 300
ECONOMICS: INTERNATIONAL TRADE
The European Community and SAARC/K.B. Lall & Others (Ed.) 150
Germany the Soviet Union and Eastern Europe 1949-1991/Rajendra K. Jain 400
Global and Indian Trade Policy Changes/ Bibek Debroy (Ed.) 400
Indo-Soviet Trade Since Independence/Subhash Chandra Sharma 300
Jammu-Kashmir Handicrafts and Global Market/ Santosh Gupta 250
ECONOMICS: LABOUR
Unionisation and Politicisation of Peasants and Agricultural Labourers in India (With Special Reference to Kerala)/Jose George 240
ECONOMICS: MANAGEMENT
Application of Probability in Managerial Decision Making/S.H. Bandey 200
Corporate Management Structure in India/ S.K. Tuteja 175
Corporate Success and Transformational Leadership/P. Singh & Asha Bhandarkar (P.B.) 95
Global Quality: The New Management Culture/ John Macdonald & John Piggott 370
Handbook for Managerial Recruitment and Selection/R.P. Das 400
Participative Management and Rural Development/ S.N. Mishra 195
ECONOMICS: TRANSPORT
Roads and Road Transport: Problems and Prospects/Birla Economic Resh. Foundation 125
EDUCATION
Modernity and Role Performance of women teacher/ P.V.L. Ramana 180
Teaching of Science/M.S. Yadav 250
ELECTRONICS
The Art of Electronics (2nd Edition)/Paul Horowitz & Winfield Hill (P.B.) 295
ENERGY
Changing Pattern of Energy Use/ Palwinder Singh 400
ENVIRONMENT
Environmental Planning for Sustainable Development of Hill Areas: A Case Study Approach (Foreword by T.L. Sankar)/ B.P. Maithani 225
Panchavati: Indian Approach to Environment (Translated from Hindi by Asha Vohra)/ Banwari 200

"America First" Concept Generates Sino-US Cold War

BATUK VORA

As President George Bush spreads federal largesse in critical election regions, his actions are overturning key US, foreign policies, especially on world trade and Sino-US relations. Rise of "America First" nationalism overwhelming the Bush re-election campaign could be described as a major international development following the collapse of the former Soviet Union. Bush is being pushed to the corner by the Democrats and he is fighting for his life now.

In the space of one week, Bush announced $ 6 billion worth of sale of 150 F-16s by General Dynamics of Texas to Taiwan; $1 billion in grain export subsidies for American farmers; $755 million in disaster relief to Florida; decision to rebuild Homestead Air Force base in Florida again; his announcement of approval of the sale of 72 F-15s to Saudi Arabia by McDonnell Douglas in Missouri; dropping his opposition to modernising the M-1 tank and developing the Osprey 22 helicopters – all this were meant in the first instance to give jobs to the American workers and farmers, but its net effect was change in long-set American foreign and domestic policies.

What would be the results of his largesse?

The grain subsidies would cripple a half century US effort to bring about a unified world economy based on "free trade". Bush has sharply brought down the export prices of 30 million tons of grain, half the anticipated production this year. The European Community officials, already facing mounting internal opposition to unification, now look upon Bush as a hypocrite, as he had so far doggedly opposed the grain subsidies.

Till now the US had been pressing hard in the crucial Uruguay Round of the GATT talks for total abolition of farm export subsidies. Europeans, with their heavily subsidised agriculture had been fighting the US position tooth and nail. But all this has changed.

But if for the Europeans Bush is just a hypocrite, for China Bush is a demon who is destroying pillars of Sino-US normalisation of 1972 and 1982 by suddenly playing the Taiwan card. China's grand old man, Deng Xiaoping, exploded in rage at this and said: "The dagger goes both ways, we are right and determined, we will not compromise." Talk of retaliation abounds. China's sale of a large nuclear power plant to Iran came only as a first step.

The author, an erstwhile MLA of Gujarat, is currently a working journalist in San Francisco.

In 1959, when Nikita Khrushchev reneged on a nuclear-sharing pact he had concluded with the then Soviet ally China in 1957, Mao Zedong reacted with fury. The result was over decades of bitter enmity. Beijing clearly fears a repeat but this time with their new friend, the US.

Since 1972 the Chinese leaders had made a *de facto* alliance with the US a cornerstone of their entire foreign policy. Part of that alliance, the Chinese believed, was an agreement for peacefully bringing Taiwan and mainland China together. Now the Democratic and Republican Congressmen and Senators in Washington DC are talking of totally withdrawing from those joint communiques.

Bush is just following his adviser James Baker's direction. Switched from the State Department where Baker was implementing Bush's new world order all over the world, he is now urging Bush to deploy the full power of his Presidency to secure his re-election. According to the old Republican, Richard Nixon, Bush stands only 30 per cent chance of re-election.

Bush's actions, more than just buying votes, are response to the "America-first" nationalism that has been sweeping the country. Bush's talk of new world order pales before this new outcry of America first. Clinton is marching ahead with this and, if he wins, perhaps the first thing he might do is to let the Congress impose human rights conditions on China for the renewal of its most-favoured nation treatment. So why should Bush be left behind? Actually it was the meteoric Ross Perot candidacy who made this slogan popular. This is now strongly reflected in the Clinton campaign and in the American media all around.

This came at the time when a few top Chinese trade negotiators are discussing in Washington the threatened trade penalties. The US trade department issued a notice to the Chinese sometime back demanding free import of many American goods to China or face heavy tariff action on more than 5000 Chinese export items to the US.

An image of China is emerging in the US media which is unrecognisable to most Chinese. When Bill Clinton referred to the "dictators of Beijing", lumping them together with the Iraqi ruler, he was reflecting the current image of China that sees only a dismal human rights record and a failure to democratise.

Yet, millions of overseas Chinese (including Taiwanese) and other tourists, more than three million of them together, visited China in 1992 and their impressions are amply aired in the global Chinese language media. These media are often critical of what they see in China, but they also reflect an almost unanimous view among overseas Chinese and other visitors that China was now enjoying extraordinary growth and political stability.

The mood that prevailed in 1989 June at Tienanmen decisively changed in 1991. That summer vast stretches of East China, the wealthiest part of the country, suffered enormous floods. In the past thousands would have died. This time deaths were just a thousand and rampant pestilence was avoided. The homeless were housed and fed and most remarkable, despite this calamity, China's economic growth rate reached seven per cent that year and again went up to 10 per cent in 1992. China had finally a government that worked and did well for its people, who now number 1.2 billion.

As a recent tourist to Beijing (August-September) this writer witnessed this growth and stability in terms of clean, orderly streets without any unrest. Even now, one can see about 20-22 thousand people lining up every morning in front of Mao ZeDong's mausoleum in Tienanmen square to pay their homage.

"China is enjoying most secure period in the last 200 years", *Mainichi*, a leading Japanese daily recently observed. The now almost certain visit of Japan's emperor of China – even before he visits the United States – underscores Japan's new positive evaluation of its great neighbour. Soon to follow will be Russia's Boris Yeltsin.

What explains the persistently distorted view of China in America? Americans have deep faith in their values and when they find little different elsewhere, they become enraged and angry. Consider for example, the huge display by the US media of an arrest of a 24-year old young Chinese dissident in Beijing, who tried to hold a press conference there on his specially planned visit to establish a branch of Democracy for China Fund under the open patronage of some Harvard University academicians.

That contrasted with the negligible coverage they offer of the vast changes currently underway. China is fast becoming an economic giant. China over the next few years is projected to purchase some $300 billion worth of goods and services from abroad, including the United States.

Unlike the former Soviet Union, China is modernising its economy. Hardline Marxists within the Communist Party of China are finding it harder to justify their orthodoxy on Marxist economic theories as they are found to be overwhelmed by the reform-minded cadres. The next fourteenth Party Congress scheduled in November-December this year is going to pass a formal resolution approving the transformation of the whole country towards market economy.

Given the tragic history of Sino-US relations, American politicians are making another major mistake of their time in skewing the realistic understanding of China. It is time they try to understand the depth of political, economic and cultural changes going on in this ancient and complex society.

The time of 1989 was different. Greed led many Communist leaders and cadres to lay their hands on scarce commodities at cheap planned prices to sell them at higher market prices, making big profits for themselves. The student mass at Tienanmen square were opposing the economic burdens and corruption more than anything else. New student groups such as "T-crowd"? – "T" was a short-term for American TOFEL examination foreign students had to take to get into American universities – wanted some outlet. The middle-aged educated people, crushed by the burden of work, family responsibilities and terrible living conditions, began to die prematurely. A wave of despair had spread throughout the educated class.

The Chinese leadership has now succeeded in bringing down the inflation rate from 17 per cent in 1988 to two to three per cent at present and are found to be trying hard at this time to keep a balance between their high growth rate and inflation rate. They are no doubt facing some highly complicated market problems for their public sector units and the *China Daily* reports indicate everyday one or the other major action plan to curb the huge inventory, subsidies, inefficiency and many such negative aspects of their economy.

Election or no election, American political game-playing with China, using its dormant Taiwan card, may ultimately boomerang on itself. ■

Young Man Whom Gandhiji Admired

AMIYA RAO

After India became independent there was virtually an epidemic of 'big-man' syndrome, and little men, petty men began to be badly affected. Fortunately for us there were a few—truly big—who remained immune to this disease and shunned all limelight with abhorrence. Guided by the light of truth, holding on firmly to their principles and inner conviction they went through life and entered the hearts of thousands of their countrymen and women without any effort to remain there forever. Bengal's Radharaman Mitra whom we lost only recently, belonged to this galaxy of the great. This is not an obituary of Radharaman but an analysis of his rare qualities which, though recognised, were hardly utilised by the people who knew him. Neither the intellectuals of Bengal, nor our Communist comrades felt any urge to seek his advice; his multifaceted experience, his uncommon talent, his deep rationality, and the range of his mind, which could have enriched their own thinking, are lost to us today. All the sentimental articles that have been pouring in since his passing away, will not make up for the cold indifference with which he was treated.

Radharaman was born in Shyambazar in February 1897, in one of the most destitute and indigent families of the middle class. He lost his mother at a very young age, and also his father, who had disappeared from his life unable to bear the pangs of hunger. Little Radharaman, desperately alone, had to face an existence unusually harsh and cruel. Under these circumstances any other child would either have perished, or be one more of those nameless, homeless urchins who roam the streets of Calcutta in hundreds. But, surprisingly, nothing like this happened. With incredible willpower, the little boy pulled himself up and keeping amazingly cool joined the Shyambazar Vidyasagar School as a student. Fortunately for him a remarkable man, a teacher in the Hindu School, took him under his wings, and under his fostering care Radharaman passed his Matriculation examination and took his BA degree also with credit. Possibly he completed his MA degree also in Philosophy.

But when he was still in school something extraordinary happened to him which gave a new turn to his thinking. It was an article on Gandhiji which appeared in a magazine edited by Shibnath Shastri; the story of Gandhiji's extraordinary struggle in South Africa against the powerful Whites, his supreme self-sacrifice, his crusade against the oppression of the Blacks and the Indians, and his single-handed fight to restore human dignity and human rights to the despondent oppressed, moved him deeply and he fell, as it were, under the spell of Gandhiji. He began to feel that men like Gandhiji seldom tread this earth, and told his friends: "If ever I have a Guru, it would be he."

Later, after he had gone through the writings of Romain Rolland and Holmes on Gandhiji, he came to the conclusion that Gandhiji was greater than Christ, even greater than Buddha, and resolved that he would offer his life at the feet of Gandhiji. Were these merely exuberant outpourings of an adolescent or did they have any substance in them? For the answer one has to look into the memoirs he has left, titled, *Mahatma Gandhi, Sabarmati Ashram and I*. Radharaman left no diary, nor did it occur to him to write his autobiography, so all that one knows of his personal life is through a couple of interviews he had given to reporters, a few articles he had written and the memoirs mentioned above. These memoirs are of great value as it reveals not only Radharaman himself but Gandhiji also. In this short piece we shall deal primarily with the memoir which has been narrated in great detail by Dhananjoy Das in his illuminating article (*Parichaya*, January-February 1992, pp. 99).

●

DURING all these years Radharaman worshipped Gandhiji from afar, he was in his dreams, a being he had created with all his love and admiration. But soon came a day when he saw him in person. In 1917 after the arrest of the Home Rule leader, Mrs Besant, when a protest meeting was called by the Congress in Calcutta, Gandhiji came to attend it. Learning that he was staying with his son at Ezra Street, Radharaman cut his classes and started visiting the Ezra Street residence of Gandhi's son everyday without fail; he would sit quietly in a corner of the room among the milling crowd waiting to have Gandhiji's *darshan*. At last Gandhiji happened to notice this silent young man and calling him near asked: "Why do you come here every day?" "What do you want?" In that intensely emotional moment, the Guru to whom he had dedicated his life, actually asking him a question, all that Radharaman could say was: "I want to be near you." Gandhiji said that when his Sabarmati Ashram was ready, he would send for him, but meanwhile he should continue with his studies and keep in touch with him; if there is any problem he should write to him.

Time passed but there was no call from Gandhiji; he must have been immersed in the non-cooperation movement which was in full swing. Radharaman also was longing to throw himself into the movement which had begun in Calcutta, but he was too ill for that. Feeling that a change would do him good, he went to Etawah where he took up a teaching job in the local high school. But it was not long before the movement itself started knocking at his door. One day 500 students of his school went on strike;

Radharaman, ill or not, got busy, and before long the first National School of Etawah came up. Without delay he sent for his friend Bankim Mukerjee (who was to become one of the foremost leaders of the Communist Party in later years) to help him in his work.

After his arrival the two together went all around the district, contacting people, speaking to them in their own language, Urdu, explaining to them the significance of the movement, and arousing their latent love for the shackled nation. At every meeting he called, thousands turned up on their own from distant villages to hear him speak, while to the chagrin of senior leaders of the UP Congress, like Motilal Nehru and Pandit Malaviya, very few, if at all came to their meetings. The spark he had lighted in the minds of the dumb, the illiterate, spread from village to village, and Congress Committees sprang up not only in the district and subdivisions but in every *tehsil* and hamlet of the poor. The sudden transformation of the docile and the mute made the British Raj extremely uneasy, and they spotted the man responsible for the change. Radharaman was arrested, sentenced to one year and sent to Naini Central Jail to serve his term.

In 1922 after his release he wanted to return to Calcutta but the people of Etawah would not let their Mitraji, their beloved Etawah-Gandhi as they used to call him, leave them. They offered him the choice of three elective posts: membership of the Legislative Assembly, chairmanship of the District Board, or chairmanship of the Etawah city. Graciously refusing the great honour, Radharaman left.

With his whole soul longing for the Sabarmati Ashram, he came to Calcutta for a brief halt. In Calcutta he had no home to go to and with less than three rupees in his pocket, not enough money to buy him a meal, for days he lived on cheap half-cooked *roti* and tapwater, and at night he slept on the ledges of peoples' houses. But luckily for him, one day while loitering about, hungry and utterly exhausted, he suddenly came across an old school friend of his, Niren Roy. One could write reams on him, but to mention briefly he too had been inspired by Gandhiji and was in the non-cooperation movement. He was a well-known Professor of English, and one of the founders of *Parichaya*; in the thirties after long and detailed discussions with Radharaman on Marxism he understood the concept of Marxian ideology, and in the forties became an active member of the Communist Party. Hearing about the sorry plight of Radharaman he made him comfortable in his own house. After a few days Radharaman wrote to Maganlal Gandhi, who was in charge of the Sabarmati Ashram and was a nephew of Gandhiji, for permission to come and stay in the ashram. Permission secured, Radharaman arrived at the ashram in 1923, the ashram he had been dreaming about and longing to be a part of it for so many long years.

●

GANDHIJI was not in Sabarmati, he was serving a six year sentence in the Yarwada Jail at that time. But Radharaman settled down, and began to observe all the rules, and customs of the *ashram* meticulously. Attendance to prayers twice a day was compulsory, so were spinning and weaving for eight hours – four hours at a stretch. Three-fourth of the inmates were related to Gandhiji, and the rest one-fourth came from outside. Each had to cook his own meals, but the food was abominable; the material for the cooking was so poor and so little, that it was almost impossible to keep well after eating that food; even the salt would not be enough to go round. One felt as if some sort of competition was going on as to who could eat the least quantity, yet carry on. Undaunted, Radharaman tried his best to adjust himself to his new surroundings; but however hard he tried, he could not master the skill of spinning and weaving and dyeing the khadi and this made him suffer from a sense of guilt. Added to this was his failure to understand the reason behind the belief that the longer the yarn the *charkha* spins after one turn, *swaraj* comes that much nearer; how could there be any connection between the yarn and *swaraj*, he wondered. Yet the inmates of the *ashram* went on repeating the slogan like *mantra*, believing in it.

One day he discovered that the *ashram* had a library but it was locked, he had the lock opened and found to his delight that the magnificent hall had huge almirahs all bursting with wonderful books running into thousands and written in many languages – both Indian and European. These were all gifts to the Mahatma from world-renowned men of genius; there were, for example, two or three sets of books, autographed by Romain Rolland himself as presents to Gandhiji. He suddenly found Tolstoy's *The Kingdom of God Is Within You*, the only book of Tolstoy he had not read and had been wanting to read; so he had it issued and took it. Little did he imagine the rage, the turmoil in the *ashram* only because of his wanting to read a book. After the morning prayers were over, the dawn was yet to break, the work in the *ashram* was yet to start, Radharaman was reading the book in the light of the hurricane lantern, when a shadow fell on the page. Turning round he found Maganlal quietly standing behind his chair. "What are you reading?" he asked; when told that he was reading a book by Tolstoy, Maganlal flew into such a wild rage as if he had gone mad; taking the book away, he said: " Reading of books is forbidden in the ashram, no matter who wrote them or what they contained." It was in vain pleading with him that it was not a novel or a love story.

For sometime, questions and doubts had started tormenting Radharaman; he had been wondering if it was good for the ashram to have such frog-in-the-well attitude leading to complete isolation from the outside world, or to hold such odd views – utterly devoid of reason – which cannot be justified, or even to lead an existence which was so lifeless and mechanical. There was another young man, a Maharashtrian called Balacova, who also had been assailed by similar doubts; he taught spinning and weaving – but he was virtually a jack-of-all-trades, a pillar of the ashram, if he ever left the ashram would collapse it seemed. Balacova, however, was on the point of leaving "because," as he told Radharaman, "instead of helping me to improve and develop my intellect, the ashram had reduced me to an inert creature". But persuaded by Radharaman, he stayed on, on condition, which he made clear to Maganlal, that he must be allowed to reform the ashram. After one month of ashram-life Radharaman also left in spite of Maganlal's earnest request to stay on. But he promised to let him have his address when he had one. He kept this promise when he found a place – stay and meals included – for helping a gentleman in his writing of books in English and Bengali.

Meanwhile, Gandhiji had been released on health grounds, and while recuperating in Juhu, he sent him a telegram which said: "You had come to the ashram when I was away, Maganlal has told me everything about you. I need you most urgently, please come as soon as the wire reaches you." In reply Radharaman wrote: "I spent 17 months in the ashram and realised that I was not fit for the ashram, so I shall not be coming. Please forgive me."

After an exchange of letters for a couple of months, Mahatmaji wrote: "You do not have to spin or weave in the ashram; I would like you to teach English to the top-class boys in the Kathiawar National School which has come up only recently and bears my name. During holidays you can come to the ashram and stay with me. I do hope you will like the job and will not raise any objection." Even then Radharaman did not agree to the proposal, and did not go. One day to his surprise he found Narain Das, a nephew of Gandhiji, in his Telipara house. He said Gandhiji himself had sent him to fetch Radharaman, but if he refused, he would go on hunger-strike, and he actually sat on *dharna*, fasting for three full days. Acutely embarrassed, Radharaman sent him back, promising to follow him soon.

Sometime by the middle of 1924, Radharaman reached the ashram, met Gandhiji and then left for Rajkot to join the school. According to the arrangement, he returned to Sabarmati every Saturday to stay with Gandhiji, and left for Rajkot on Monday morning, and spent with Gandhiji all his long holidays.

Gandhiji would address the inmates after the morning prayers and sometimes he would ask them if they had anything to say, good or bad, about the ashram or if they felt that the ashram was just the same as before and had not changed at all. One day he called Radharaman by name, after the prayers were over, and asked: "Bhai Radharaman, is it true that though you are in the ashram you do not spin?" Radharaman did not remind him that he himself had written to him telling him that he need not spin or weave any more, but replied: "Yes, it is true." "But why not?" asked Gandhiji. Radharaman said: "I had joined the non-cooperation movement so that our country would be politically free; I cannot understand the connection between a *charkha* and political liberty." Putting his hands on his shoulders Gandhiji said: "I will see that you understand, it does not matter how long it takes me." Fondling him lovingly, he asked Radharaman: "Whom does a man love most, can you tell me?" Getting no reply, he himself answered the question. "Man loves his wife most, as I for instance, love Kasturba, then come the children, but it is not true at all that parents love all their children equally. I have four sons, but my youngest son Devdas I love most." Looking at Radharaman Gandhiji asked: "Do you know whom I love most in the world after Devdas?" Radharaman was silent Gandhiji told him, answering again his own question: "You." While talking like this, Gandhiji had not stopped caressing him, and every stroke of his finger made Radharaman's hair stand on end, as if some electric current of high voltage was passing through his nerves. Radharaman knew that Bapuji never told lies, besides why should he try to please with false words a small man like him, an insignificant humble fellow? Deeply moved, he told Gandhiji: "Bapuji, after what you said about me, I feel so tremendously honoured, so overwhelmed, that no word can express my feeling, but you must be knowing it already from the response of my body; I shall remain grateful to you forever and ever." Gandhiji then said: "I have three tasks yet to complete before I die; but to complete them if I have to die, I will die gladly. Do you know what they are?" This time Radharaman was not silent, he said: "I know them, they are removal of untouchability, Hindu-Muslim unity, and propagation of *charkha*." Gandhiji then said: "Well, what is the use of this life, why should I live at all if I cannot persuade one person, who is nearest and dearest to me, to take up spinning on the *charkha* – the *charkha* I am living for, and can die for if necessary." These words of Gandhiji, however, made no effect on Radharaman – the rationalist. He said, with great respect: "You called me here to explain to me the logic and the reason behind the link between spinning and freedom, but instead of appealing to my intellect, you are appealing to my sentiments and to my emotions." The argument was irrefutable. Gandhiji laughed and admitted that he was wrong. And the matter ended there.

●

DAYS passed without any change in the old arrangement. But something interesting happened after a few months. One evening after prayers, one of the Bengali secretaries of Gandhiji, Krishnadas, asked: "How do you find the ashram?," Radharaman said: "Well, I used to think such a lot of these people before I came here, but now after seeing them I must say that ordinary men and women who pass their days looking after their families, even the coolies and labourers in the streets, are far better than these in the ashram." Krishnadas' comment was that Shiva is always surrounded by his goblins. Next day Krishnadas came to his room and told him that Gandhiji would like to see him. He heard that there was going to be a discussion on his views on the ashram which Krishnadas had dutifully informed Gandhiji. Gandhiji was spinning when Radharaman came in; putting his *charkha* away he said: "I would like to hear from you what you feel about the ashram; please do not hide anything, tell me the truth." Radharaman promised, and the discussion began; it covered over 20 topics, and lasted for five hours. We shall mention, only three here: (1) The ashram owns acres of land, with the help of two malis it gets only a small quantity of grain, but most of the land is lying fallow; why not let the ashram inmates work on the field, the produce will be plentiful, and buying from the bazar can be dispensed with. Do you think it is a good idea? (2) When the khadi workers disobeyed Maganlal and refused to weave the yarn, gifted to the ashram by the Ahmedabad Mill, did they do the right thing? (3) Should Maganlal have forbidden the reading of Tolstoy's book, *The Kingdom of God Is Within You*? Gandhiji heard Radharaman with great attention, and replied to each of them. To the first one Gandhiji said: "It is not possible to do without *malis*, for the inmates have plenty of other duties." His answer to the second was, khadi workers were wrong; lakhs of bundles of mill yarn were going waste, they should have used those. Regarding the third, "Maganlal was right; ashram forbids reading of books, it matters little, who had written or what they dealt with; the ashram is not meant for promoting intellectual culture, if someone thinks it does that, he has come to a wrong place; for that he ought to go to Gokhale's Servants of Indian Society at Poona, to Lajpat Rai's Servants of People's Society in Lahore or to Rabindranath's Shantiniketan. This is a place for poor, illiterate people who must work hard to earn their living."

After hearing Gandhiji, Radharaman realised that there was a fundamental difference between his own process of thinking and Gandhiji's. He stood up immediately and said: " Now that I have heard you, I cannot stay here a moment longer; I must leave immediately. But before leaving I would like to remind you that when I was in Calcutta, you often used to write to me to come back to the ashram, and I used to write saying, that I am unfit for the ashram; now I feel, after what you said, that the ashram is not fit for me. I am leaving." Gandhiji jumped up at once, and pressing him by his two shoulders, made him sit down on the ground, and said: "Listen, I shall feel deeply hurt if after all these talks and arguments you leave immediately. Stay here for one more month, you don't have to do any work; think things over and then if you feel that you should not or cannot continue to live here, come and tell me and then leave, I shall not be sorry." Radharaman agreed to stay on for a month and went on pondering over what he ought to do. But after three weeks he at last came to the conclusion that he was to leave. Soon after this, one afternoon Gandhiji sent for him and showed him the telegram which carried the news of Deshbandhu Chittaranjan Das's death. Gandhiji told him that he was leaving for Calcutta and will be staying at the house of Deshbandhu, if Radharaman decided to quit, he should see him there. Radharaman returned to Calcutta in June 1925, and looked up Gandhiji at C.R.Das' house. It appears Gandhiji was startled when he saw him and asked: "So, you really left the ashram?" "Yes," replied Radharaman. "You will never go back there?" asked Gandhiji. "No," said Radharaman. Gandhiji asked for the third time: "You won't go back there ever?" Radharaman said: "No."

●

THUS ended Radharaman's association with the Sabarmati Ashram. This had no effect on his personal relationship with Gandhiji, that bond between the two was permanent and nothing could spoil it. This becomes clear, when after sometime Gandhiji sent him an unasked certificate, which deserves to be treasured; Gandhiji had written: 'Bhai Radharaman had come to the ashram twice. He came to learn something from me. I do not know what he has learnt from me, but I have learnt much more from him than he has from me." We are not aware if any of his disciples ever earned such high praise from Gandhiji, or even any of his most trusted co-worker and freedom fighter. But nobody will dispute the fact that though Radharaman strongly opposed Gandhiji's unscientific views on certain matters, he received from the noblest and the greatest personality of the twentieth century extraordinary affection and regard.

There is yet another letter from Gandhiji we would like to quote. This shows how deeply attached he was to Radharaman. In 1926 when Swamy Shraddhananda was killed in a communal riot in Delhi, Gandhiji went on a 21-day fast to expiate the sins of his countrymen, and to unite the erring Hindus and Muslims. On the eighteenth day of his fast, utterly exhausted and hovering between life and death, he had a feeling that his end was near; that was the time, with his hand trembling, he jotted down a few words on a postcard for Radharaman. The words are deeply moving and unforgettable: "I have been thinking for the past few days of those people who came into my life and left a deep impression upon me. This morning I have been thinking constantly of you. Remember me sometimes if I die." Radharaman wept like a child when he read this letter.

Radharaman was young, not even 30, when one glorious chapter of his life was over. His honesty and sincerity, his courage and candour, the unique catholicity of his mind had earned recognition and admiration from one of the finest minds of this century. We are not discussing here varied activities during the rest of his long life, which stretched a little over six decades.

But whether he was a committed Communist by conviction having been imprisoned in the Meerut conspiracy case, a great master of the theory of the Marxist ideology, a dynamic labour leader, or a dedicated trade unionist, he never forgot the one supreme lesson he had imbibed from the Guru of his younger days—his humanity and compassion for the oppressed. The self-effacing Radharaman has passed away; he is now above all praise or blame.

But when comes such another? ■

DANG TRIBALS

Report of Struggle and Repression

IRFAN ASGHARALI ENGINEER

The Peoples' Rights Organisation, Delhi, has sent us the following article from the author, a well-known activist working among the Dang tribals.
—Editor

Dang is the smallest district of Gujarat. It is a hilly terrain comprising dense forests – roughly about 1760 square-kilometres in area. Ninetyeight per cent of the total area is on record under the Forest Department. The population of Dang is about 1,43,000; 92 per cent of which are tribals, namely, Bhils, Kuknas, Varlis, Gamits, Kathudiyars, Kotwalias, Chaudharis, etc. There are no towns in the district. Ahwa and Waghal are the two biggest villages wherein some trading activities are carried out.

Decent Livelihood – A Struggle for Tribals

Traditionally, the tribals of Dang have been living on the forest land by cultivation and on forest produce. There always was a constructive dependence on forest and forest produce. The Britishers encroached upon some rights of the tribals of Dang by leasing the forest of Dang in 1842. After independence, the Indian Government further encroached upon the rights of the tribals. The rights of the tribals were, therefore, further restricted without any alternate means of livelihood. Thus while the government increasingly commercialised forests and raised its forest revenue and income, the tribals faced a severe survival problem. The forest laws of the country criminalised the existence of the tribals. For example, whereas the tribals were, prior to 1969, freely cultivating in the protected forest areas, after the 1968-69 survey (which was improperly done without following the due legal procedure), only 79,913 hectares of land was recorded as being cultivated by the tribals. On the rest of the land cultivation was prevented. Out of 79,913 hectares of land, the Forest Department forcibly took 21,154 hectares of land the brought it under plantation on land being cultivated by the tribals. Thus, not only was all land being cultivated not recorded in the 1968-69 survey but subsequently the land recorded as being cultivated by the tribals was also brought forcibly under forest cover, thereby snatching away the most important means of livelihood of the tribals. Thus on record, only about 30 per cent of the tribals are cultivators, but actually almost all the tribal families cultivate small patches of land which they have been doing for many years.

The government refuses to legalise this land cultivation and correct its land records. As a result the Forest Department terrorises the tribals cultivating the land – which may be merely shown as forest land – and mercilassly beats up the tribal, threatens him with cases and extracts bribes. The tribals are also beaten up for constructing their houses with teakwood from the forest and for fuel wood. After merciless beatings, bribes are inevitably extracted. Besides land cultivation and forest produce, there is very little employment available in Dang. Since there are no big farmers, agricultural labour is hardly employed. There are no industries; though the government reaps crores worth of forest revenue. From the district, very little is ploughed back for the development of the Dang district through construction of roads, schools, dispensaries, electrification, wells and water pumps for drinking water problems and other such developmental work. As a result, not only is Dang the most backward district of Gujarat, but there is also no employment available there. On an average a tribal family can expect only a month's employment in a year in forest plantation works and some meagre construction activities. Needless to say, the tribals are not paid minimum wages when employed as wage labourers.

Government's Scheme of Development

Tribals were never considered equal citizens in independent India. Therefore, the government not only does not think it worthwhile to fulfil the basic human necessities of the tribals. But the kind of development planned and envisaged by it, marginalise the tribals and further improvish them by reducing their access and rights over the forest. Large-scale commercial exploitation by felling trees according to the working plan formulated and selling timber, bamboo, etc. to the timber merchants and pulp mills is just the tip of the iceberg depleting the forests. Illegal fellings by organised gangs in conjunction with the Forest Department officials are very common. The tribals watch with anguish truckloads of timber crossing the borders of Dang – legal and illegal – while they are beaten to pulp for collecting even their fuelwood. They also see that the forest officials who came to Dang with merely a bagfull of belongings, when transferred after a few years, carry truckloads of goods not all of which can be accounted for from their legal earnings.

When a hill station was constructed in Saputara for the town people, the tribals were pushed out from their own land without any compensation worth the name. Brute force was used against the tribals sitting on hunger strike and all were evicted – lock, stock and barrel. After the protest was stifled, land was given at highly cheap rates to the private hotels with all modern facilities – including

STD, tar roads, etc.—in contrast to the other tribal villages of Dang. Today the hotel owners are reaping rich profits from the "development" while the evicted tribals beg in Saputara from the tourists for their square meal and even feed on the leftovers. In Waghai when land for an agricultural college was similarly acquired—today the staff colony and land for cultivation by the college are to be seen there—the tribals were evicted. The Galkund dam will similarly result in eviction of the tribals. The government has yet another plan—declare about one-fourth of Dang as a wild life sanctuary. In the name of protecting wild life, tribals will be evicted from these areas. Even dry leaf cannot be picked up within the boundaries of the wild life sanctuary. The painful eviction of the tribals—who do not have any other means of livelihood—from the wild life sanctuary areas will not be without resistance from the tribals and therefore is likely to entail brute force from the government.

●

SUCH is the kind of state violence and terrorism unleashed on the tribals of Dang—beating up the tribals, extracting bribes, plantations on the land being cultivated by tribals since ages, abusing and molesting their women, implicating them in false cases, detaining them in illegal custody, pocketing the meagre developmental funds, denying them basic human facilities, forcibly preventing their legitimate access to the forest produce like fuelwood, timber, etc., felling their forest and finally even evicting them from their own habitat. Due to all this, today more than 50 per cent of the tribals leave their natural habitat grudgingly and migrate out as seasonal labourers with their entire family to labour like animals and earn their meals. This is actually their forcible eviction in other words. The legendary king of the forest has been reduced to a slave!

It is in these conditions that the Adivasi Bhoomiheen Kisan Hakk Samrakshan Samiti started organising the tribals since November 1989. It held several village level meetings and awareness programmes. It started mobilising the tribals and held several well-attended rallies. The tribals thus organised, refused to pay bribes and demanded that land being cultivated by them be regularised and each landless family be allotted five acres of land. The tribals resisted the beatings by the Forest Department officials and insisted on minimum wages. The tribals resisted the illegal fellings of the trees. The organisation published a booklet exposing the magnitude corruption of the forest officials totalling about Rs 40 crores.

The feudal-minded arrogant bureaucrats and local politicians could not tolerate the tribals organising themselves, asserting and looking at them straight in the eye. Besides, their illegal income running into lakhs was stopped. The bureaucrats retaliated. They came down heavily on the tribals. On May 5, 1990 44 tribals were arrested and eight of them, including two women, were severely beaten up by fists, lathis and kicks. One of them was a 67 year old fragile tribal. But they could not terrorise the tribals into leaving the organisation. On June 26, 1991 Kainuben and Soniben, tribals activists, were molested. On September 10, 1991 Rasul Nayak was hit on the head with an axe and robbed of his money. On October 10, 1991 all the crops of eight tribals families of Barda village, a stronghold of the organisation, was completely destroyed in an attack by the Forest Department hirelings. On November 20, 1991 the Forest Department personnel entered Kosimda village, another stronghold of the orgnisation, firing indiscriminately without any provocation. A tribal woman passing by was shot at from point blank range and killed. Taraben Pawar (24 years, Bhil) was the first martyr of the movement. In spite of all these repressive moves, the movement could not be suppressed. Rather it gained more and more strength. To placate the tribals, the government pumped in large funds to generate some employment through developmental work.

The Gujarat Government, together with the local elites and bureaucrats, decided to deal a heavier blow by systematic repression. More than 1000 SRPs were deployed in Dang. Tribal activists—Veersingh Vishram Patel and Irfan Asgharali Engineer—were first picked up from the hunger strike pandal (hunger strike was undertaken on January 8, 1992 to demand the arrest of the murderers of Taraben), and detained under the NSA. After detaining them under the NSA, on January 13 eight tribals activists were picked up by the SRP and severely beaten till one of them started vomitting blood. All of them were beaten from 9 PM to 12 PM continuously with special lathis and SRP boots. They were produced before the magistrate only after three days. While these eight were being tortured, the SRP fanned out in the villages, including Kosimda, and entered every house beating up the tribals, molesting women, robbing their scarce belongings, breaking their earthenware and other vessels including those in which food-grains are stored. They were threatened to leave the organisation or face dire consequences like the fate that befell Taraben.

From all the villages, people ran away to the forest to seek shelter with their children. They were scared to return to the houses. More than 100 tribals were arrested and beaten. On January 24 a 200 strong police party as well as Forest Department personnel went to Gira Dabdar village at 4 o'clock at night and entered every house beating up men, molesting woemen and robbing the tribals of their belongings including 60 axes, vessels, some chicken, Rs 500 with two steel plates, two batteries, etc! They also arrested seven people that night. Most of all those beaten in police lock-ups have severe body ache even today. The tribals were terrorised into silence. In the villages the SRPs camps are still there. In March, there were two alleged incidents of rape—one of a tribal woman from Bainaga, she was raped by four to five SRP men near the Dungarda camp another from Dhodhalpa. In Pimpri SRP camp too there have been allegations of rape of women. These women are, however, scared to complain or even talk about it before anyone.

On March 23 and 24 Veersingh Vishram Patel and Irfan Asgharali Engineer were unconditionally released due to the democratic movement and the wide campaign in their support. However, Veersingh was rearrested on April 5 from his residence. He is being denied bail and ill-treated. ■

State Terror Institutionalised in Sri Lanka

Chandrika Bandaranaike Kumaratunga, the Left-wing SLFP leader of Sri Lanka, was currently in New Delhi on a lecture tour. Daughter of Sirimavo Bandaranaike and widow of the slain leader of the Sri Lanka Mahajana Pakshaya (SLMP), Vijaya Kumaratunga, Chandrika is an articulate intellectual enjoying considerable standing in Sri Lankan progressive circles. In this wideranging interview to Sumit Chakravartty, she speaks of her father, herself, her mother, her beliefs and convictions, the present state of affairs in Sri Lanka and the current attitude of India towards Sri Lanka.

—Editor

SC: Tell us something about yourself. Some reminiscences about your father.

CBK: I was fourteen plus when my father died. He was killed in 1959.

I had a habit from a very young age, I was interested in people. And my father had an open house which, a lot of people say, was one of the reasons why he got killed. There was no control at all. People used to just walk in whenever he was available. I used to eavesdrop in the conversations.

I was interested in what was going on and what he used to discuss. He was a very erudite person and very philosophical. So I liked to hear his ideas.

And I liked people, always. I used to go and sit on the laps of the people who used to come to talk to him.

Several things went over my head. But still I was influenced by a lot of things that came up in the course of conversations. It was this factor and the fact that I was a fighter in the house—not physically; but if I was told by my mother not to do something I would ask: "Why not?"...I used to say: "I won't do if you explain to me why I should not do." And my father used to appreciate this very much. He used to say: "Well done, well done, that is how you must be." And so many other conversations I remember.

Because of all this at some point of time, perhaps a year or two before he died, when he was the Prime Minister he used to tell a lot of people who were close to him and whom he liked and trusted—sometimes in my hearing also—"This is the one who is going to follow in my footsteps."

I had heard him tell this to one or two people. He had told it to many others. Some of them came back to me later and told me that is how my father thought of me and so, I must keep it up. But I did not think like that at that time and anyway I was not interested in politics then.

Another impression that I have of my father is that he was a very generous hearted man. As a human being he was very generous. He had a very good understanding of people's weaknesses.

I remember once when a beggar came—I remember this very vividly—for money. I was just hanging around. I heard the beggar say "My mother has died and I don't have money to go for the funeral." You know, even beggars were allowed to walk in through the gate.

SC: Oh, I see. Absolutely open house?

CBK: Absolutely.

This was not a normal beggar, he was a sort of poor man. He said: "I need some money to go and bury her." And my father just looked at him and said: "How many mothers do you have? This is the fifth time you are coming with the same story." But gave him all the same. And when the man walked off, I remember him telling somebody who was present, I can't make out now who it was: "Obviously the man had to make up that kind of story because he needs the money. So I didn't want him to think that I was a fool but I gave it all the same."

Well, there are so many other stories—that I am not personally participant of—of such generosity.

SC: When did you get interested in politics?

CBK: You mean consciously interested in politics? Well, I think the interest was there because unlike other children I used to be hobnobbing with the people. But conscious interest?—No.

I was interested in the sense that from age eight on I used to read all the newspapers that came to the house. After school and homework in the evening till dinner time I used to read the newspapers. Very often I had to be called several times for dinner while the others were at the table because I used to be so engrossed in the newspapers. And we had newspapers in Sinhala and English both.

So obviously there was some kind of interest. But conscious interest in politics came long after, when I went to Paris as a student.

SC: Not before that? Did the assassination of your father spur you on to something?

CBK: Well, in the sense that I am quoted as the person—and my mother throws this at me whenever I am critical of her politically—that when she was refusing to go into politics after my father's death, I am the one who gave the final push which threw her into politics.

SC: Which was?

CBK: Well, persuaded her into it. So many people tried to persuade her but she said "no", because all three of us were against it.

Then Felix Bandaranaike persuaded me saying: "Your father would have died for nothing if you allow the party to go to rack and ruin, and it can't be taken up by anybody else." This is true. Because my mother refused to take up the leadership and there was an election a few months after my father died, and the SLFP just lost it.

SC: She was not at all interested in politics?

CBK: She was. On the sidelines. She used to work for my father's election among the electorate. But always as his shadow.

SC: Why did Felix Bandaranaike say that if she does not become the leader...

CBK: Because already the party had gone to one election and just lost.

SC: Can you say that it was a kind of dynastic succession?

CBK: Automatically it fell on her. The party came and offered her the leadership. And she said: "No." So in that sense it was dynastic.

But because she said "no", and somebody else was made to lead the party and he could not pull it—he missed winning by a few seats. And there was another election three months later because the situation was very unstable at that time. It is for that that they persuaded her.

SC: By then she had agreed?

CBK: No, she agreed after the nomination. She refused point blank even after nomination time. And then Felix spoke to me just before the nomination, the day before. And he managed to persuade me. His final persuading argument was: "If she does not stand the party would be finished and the movement would be finished." And that convinced me. He spoke to me for two hours. And then I went and spoke to my brother and sister. My sister said: "I don't care either way." She was then sixteen-and-a half. And my brother was too young—he was just ten. He got persuaded very easily. And then I went and persuaded her finally.

Her argument against taking the leadership was : "My children are there. I don't want to take up the job because what will happen if I also get killed?"—kind of thing. Then the people had no argument.

But when I started arguing, finally she said : "OK." I was very emotional...

SC: Was it the family tradition that really mattered? I am asking the question because it is relevant to the whole subcontinent—Bangladesh, Pakistan, India.

CBK: No. As far as my understanding goes, after such a charismatic figure as my father the party was totally devoid of any leadership. Because of the way my father was killed there was such a wave of sympathy even those among whom he was not popular they said the only person who could really pull it best was his widow. That was there—but precisely because there was no clear leadership in the party.

SC: After finishing school you went to Paris...

CBK: Yes, I won a scholarship to Paris. I must tell you that my mother did not want any one of us to go into politics.

SC: She was worried about your security?

CBK: Perhaps, yes. And also she very clearly felt that sufficient number of members of the family had gone into politics and she wished that none of the children would do so.

So the dynastic feeling was not strongly there in our family. Except perhaps Anura the others don't feel like that at all.

So she kept us out. And that was the period we were doing our O levels and A levels and so on.

But we did get involved—my sister was in Oxford by then but Anura and I got involved—in her election in 1965. In 1966 there was a byelection...

SC: You were in college then?

CBK: I had passed out by then. I insisted I must be allowed to go and work in that byelection. It was my first baptism in active politics.

And in 1967 I went off to Paris. I arrived just before the 1968 student upsurge.

SC: I see, you were involved in it? With Cohen Bandit and the others?

CBK: I didn't know Cohen Bandit. I was involved at a lower level. But it was a very heady period for us. That was my baptism of fire into Left politics.

SC: Were you with the Trotskyites?

CBK: No, never. I was very anti-Trotskyite. Then I began reading Marx and Marxist texts. I was involved in a lot of student movements though we were not supposed to be because I was on a French Government scholarship. Not when my mother was in power—she was out of it.

SC: But you were not associated with any political party in France?

CBK: No. I was close to the CP (Moscow wing) and had a lot of friends. Used to do some work for them in their human rights organisations. I was close to the China wing, even closer than the Moscow wing, thinking-wise, to such an extent that I was called a Maoist in Sri Lanka.

I had a lot of friends in the Anarchist movements which sprang up at that and died their natural death later on. I used to work with them also.

SC: The Vietnam war was raging then...

CBK: Very much so. We were involved in Vietnam war demonstrations and I was in touch with Madam...

SC: Nguyen Thi Binh?

CBK: Was she stationed in Paris for a long time?

SC: Yes, she was the Foreign Minister of South Vietnam.

CBK: Well, I knew her too a little bit.

SC: Then how did you get in touch with Vijay? Was it back home or there itself?

CBK: No, no, Vijay had nothing to do with Paris. I met Vijay in 1977 because he contested from the SLFP.

I returned in 1972. I did my degree in three years and then I started my doctoral studies in Development Economics. I did my degree in Political Science under Charles Bettelheim as I told you.

I came back to Sri Lanka for data collection. I had actually finished the theoretical part of my research work.

SC: Was it on agrarian relations?

CBK: Yes. The thesis was on the study of the Articulation of Modes of Production in Agrarian Sri Lanka, that is, how the feudals articulate with the capitalists in Sri Lanka. That was strictly on Sri Lanka. That's why I went back home for data collection. And the land reforms programme was just on and I got thrown into that by the Minister, Hector Kobbekaduwa, who was really the SLFP's Presidential candidate. That was the end of my thesis unfortunately. I never had the time to finish it after that.

SC: So you did not go back?

CBK: I kept going back to see friends whenever I had the chance. And I kept in touch with them. A lot of my friends belonged to the intellectual circles of Paris. They used to come and stay with me back home and I used to go and stay with them in Paris. But as I had gone into active politics from land reforms I had very little time to write my thesis.

SC: But you did not contest any election?

CBK: I didn't want to.

SC: You were not interested in parliamentary politics as such?

CBK: I don't know. I was not interested in personal power. In fact the people, the SLFP organisations from six different electorates separately insisted that I contest from their respective electorates. And I refused. Perhaps two or three out of those six I would have won if I had contested. But I wasn't interested.

I did a lot of work for the party at the base, travelling two to three thousand miles every month for five years. Even the cooperative farms, the self-managed farms, etc. This was indirectly highly political—building up cadres not just for immediate political work but for future nation-building. Obviously they were very loyal to me whatever party I was in. So that was politicking at a wider level, let us say.

SC: You were having interaction with the Left as well?

CBK: Yes always, we were known to be the Left group of the party.

SC: But in spite of all these things the very fact that you were not able to tackle the unemployment problem in the south you could not prevent the emergence of the JVP.

CBK: Well, I was not in Sri Lanka then.

SC: No by you I don't mean you personally.

CBK: You mean the governments?

SC: Yes.

CBK: Well, I think we have failed.

But towards the end of the 1970-77 government in the 1974-77 period a lot of experiments was being tried. I mean not only the experiment with which I was involved, but so many others—small industrial projects, medium scale industrial projects. These could have, if done on an extensive scale, provided a lot of employment opportunities.

But what went wrong with our policies in general was that it was too closed an economy while the present one is too open.

SC: You mean too centralised.

CBK: Too centralised and very closed.

SC: Tell us something about Vijay. How did you come to know him?

CBK: I met Vijay during the election campaign of 1977 as he was contesting from the SLFP. I knew of him as a popular actor but I had never met him. He knew my brother-in-law well. But I had not met him. I in fact saw him face to face the day all the candidates of the SLFP were given their nomination papers.

SC: In 1977?

CBK: Yes, in the 1977 elections. In fact he was introduced to me by my brother Anura who also knew him quite well.

After that, during the election campaign he sort of started showing interest—inviting me to his electorate, that is, the one he was contesting from for meetings and all that.

Soon after the elections were over he kept dropping in and then, you know, some kind of an affair started. And the next year we were married.

SC: He remained in the SLFP for quite sometime, didn't he?

CBK: He joined the SLFP in the mid-seventies. We all left around the end of 1983, and formed the new party (SLMP) in January 1984

SC: What really happened? What was the reason for the split?

CBK: That is a long story. But to put it very briefly, there have always been different trends in the SLFP—Left, Right and Centrist. It is very similar to the Congress. It is not a very structured party. As a friend described, it is actually a meeting place of all the political trends in the country. You get very Left people, you get Left-of-Centre, you get a lot of Centrists who are in a majority.

SC: Right as well?

CBK: Yes, that's a minority. But after 1977 the Right-wing was consolidating itself.

SC: Inside the party?

CBK: Yes, but that was the trend in the country also.

SC: But the Right was represented by the UNP in general.

CBK: Yes, I am just talking of the minority Right-wing in the party. It was strong because some people in the party supported it including Anura.

SC: Where would you place Anura? Right-of-Centre?

CBK: Oh, definitely Right-of-Centre.

Because of the presence of Anura in that group it had a lot of validity. They started the rebellion inside the party in 1980, three years after the UNP came in. At that time the UNP took away my mother's civic rights—that was very unfair, you know the story—

SC: Reminiscent of what the Janata Party Government did to Mrs Gandhi.

CBK: That's right. But there the party stood by her.

SC: Yes.

CBK: Here the party was standing by my mother but the Right-wing began to trot out some theory that because she had lost her civic rights legally, a person without civic rights leading a party at election time can cause problems of legality. This in fact was a false theory. It could be very easily argued against.

But they went to the coutryside, not addressing big public meetings but seminars of prominent people with the party people, telling them that she should resign. It was a big rebellion in the party...

Now the rest of the party led by us, the progressive group inside the party—T.B.Lankaratnam, who was a founder member of the SLFP alongwith my father and also a very senior Minister, and Hector Kobbekaduwa, NWJ and myself and a lot of others—we fought for my mother's leadership simply because we felt that she was the only one who could pull it against Jayewardene. In fact we felt that this was a conspiracy which was hatched up by Jayewardene and Premadasa—very ruthless, they had made use of certain elements in the SLFP...

SC: Like?

CBK: I don't want to name them. People in the country know them.

Some were bought up but the bigger ones weren't bought up. But just by giving them little perks of office, they were used by Jayewardene and Premadasa.

This rebellion inside the party just consolidated the government. Because they used this beautifully saying that the son is trying to chase the mother out, the party is in sixes and sevens, and so on.

In fact that whole group of people—their membership was suspended. And we fought for them to be taken back into the party because we wanted to show unity again.

SC: So eventually the Left-wing in the SLFP came out of the party. But it wasn't connected with the developments on the ethnic front?

CBK: No, it wasn't connected with that. It was connected with the inner party conflict. And it came to a position where because we had fought against this Right-wing group and successfully they were very angry with us.

SC: By the way, Vijay had a Left-wing trend or was it your influence on him or both?

CBK: He had a Left-wing trend but it was certainly solidified after he met me. He wasn't very theoretical, though he had his heart in the right place as it were. And we used to discuss a lot at home and I think in ideas I must have influenced him to some extent. He influenced me in his style of politics—he was a very sincere and courageous politician.

SC: I don't want to go into the assassination of Vijay. But what made you return to the SLFP?

CBK: Following the debacle of the Opposition in the 1989 elections, a lot of people left the SLMP (the party formed by Vijay, Chandrika and other after they quit the SLFP—SC). By that they emphatically opposed the then SLMP leadership's open support to Premadasa.

I was in London at that time. I issued statements from London saying that the main programme of all the Opposition parties should be to oppose the terror of the government and others. And for that all forces in the Opposition should work together.

The fact is that the entire Left and the United Socialist Alliance (USA) won less than one per cent of the total votes polled in those elections. This was a clear indication of the erosion of the Left parties' social base. The SLFP had a mass support base whereas we had the dynamic youth with us. So by joining hands with the SLFP we were confident of building a viable Opposition in the country.

At that point we were working together with the SLFP in close alliance. While Mrs Bandaranaike, my mother, and others in the SLFP were for the emergence of a new alliance party this move was being opposed by the Right-wing in the SLFP. So the process of forming the alliance party kept getting delayed.

At that point the SLFP rank-and-file was getting desperate. And that is how there came an insistent demand from the SLFP base that I return to the SLFP. Wherever I went I was pressed to rejoin the party. Eventually in November last year, having realised that my return to the SLFP was the only alternative for me, I took the decision to rejoin the party.

At present our alliance has six parties—the SLFP, the Communist Party of Sri Lanka (CPSL), the Lanka Sama Samaj Party (LSSP), the Mahajana Eksath Peramuna (MEP), the Nava Sama Samaj Party (NSSP) and the Deshabhimukthi Janata Peramuna (DJP). We project a rational progressive view on all issues from the platform of this alliance.

Within some months of my rejoining the SLFP the party put out a programme presenting our view on how best to resolve the ethnic conflict. It was, however, opposed by the SLFP's Right-wing.

SC: I would just digress a bit from Sri Lanka. Since you are connected with Left politics, in the light of the kind of changes that have taken place worldwide do you consider yourself vindicated or do you feel betrayed? How do you evaluate whatever you had professed in the past with whatever has happened today? I want a very frank answer from you.

Do you still believe in the validity of socialism *per se*? Here I am not using the usual jargons.

CBK: It's a complicated answer. Well, not exactly complicated—it has to be a multi-dimensional answer. And I am being sincere.

I am still a socialist in the wider sense of the word.

SC: Not a social-democrat?

CBK: No. But I have also been realistic enough to accept a lot of the horrors that have been perpetrated in the socialist world. And...

SC: Not only in one country but the entire socialist world.

CBK: In the entire socialist bloc. It is very easy for some people to say, people who are diehard socialits or Marxists, that is because socialism was not properly practised. But I don't accept that.

Basically wrong things were done. Theoretically there were things that had to be rethought. Marx wrote and lived in the nineteenth century. The first half of the twentieth century itself saw so many far-reaching changes in the political scene in the world that Marx couldn't have dreamt. What happened in the first half of the twentieth century would have normally taken five centuries to happen historically. And probably Lenin and all other socialists did not rethink and do a research of that thinking.

What has happened in the socialist world probably had deep theoretical causes.

SC: The human spirit was smothered.

CBK: This is something that bothered me always. I have always been an anti-Stalinist. But that doesn't mean I was a Trotskyite after Trotsky turned out to be very adventurist.

SC: Were you Luxembourgist?

CBK: No, I don't want to put a label on it. Certainly I have been always more for people's socialism, for mass people's democratic movements—and I still believe in that.

SC: Then in that context do you think Gorbachev was on the right track?

CBK: Well, I thought, in the beginning, that Gorbachev was doing something extremely interesting. But he also went wrong.

SC: Perhaps the objective conditions were against him.

CBK: Yes, the objective conditions did not permit him to carry through his projects. He had too many oppositions from different sides. And, as you said, the situation had economically deteriorated so much that it was a bit late in the day.

I sincerely believe that he was doing something good; though a lot of socialists, Communits think that he was an agent who was placed there. A lot of people believe this in my country.

SC: They are those who don't know the reality in the former Soviet Union.

CBK: Probably so. I would have been very confused if I had lived at that time in Sri Lanka. Because the foreign news we get in Sri Lanka is very poor.

SC: Now coming back to what has happened in the socialist world, no doubt, phenomenal changes have taken place and the Right-wing is in power in most of the countries of what was the socialist world.

But what we find today is that the American Kremlinologists are now attacking the whole concept of revisionism—in the sense that Marxism in a revised form would be viable in today's condition—this is something they are seeking to debunk.

In that context do you think that it is necessary to update Marxism, apply it to the present conditions and even accepting the label of being a revisionist—because things have changed since Lenin's time really, and one has to think afresh whether Bernstein and Kautsky were that wrong.

Do you think that it is necessary to take that approach which would be very flexible—a kind of free Marxist approach—in the interest of Left politics as such?

CBK: The only thing that can save Left politics in the world context today is a free Marxist approach. Well, I don't think I like the label Marxist.

SC: Precisely.

CBK: A lot of free thinking is necessary. In fact I have been advocating that in my country.

SC: In concrete terms what would you suggest?

CBK: First and foremost a lot of thinking on the economic front—that's where the socialists failed.

SC: With regard to the market?

CBK: There is no doubt that even in Sri Lanka the kind of "socialistic" economy we tried under the SLFP and coalition governments had failed. The open market economy for the first time brought in 15 years ago by the present government has also failed.

The rate of growth in Sri Lanka, they say, is five-and-a-half per cent. If you cut down all the exaggerations it is about four-and-a-half which is a lot compared to the previous government's 2.1.

SC: What is it due to?

CBK: Vast increase in the service sector with accompanied decrease in both agricultural and industrial production.

SC: I see.

CBK: From 1977 upto date there has been constant reduction in agricultural and industrial production.

SC: That will not be good in the long run.

CBK: It is very bad. The whole economy is built on air, servicing and tourism. It is based on just importing and selling.

The entire medium and small scale industrial sector has been throttled to death. By 1977 the nascent local heavy industrial sector has quietly folded up. And the only ones which can exist are those that went into collaboration with the multinationals.

The only industry that has really flourished, I'll give you an example, is the assemblage industry. The foreign companies have come in a big way with Sri Lankan participation also. We import the material, we import the machinery, we just put all of them together, only the labour is local and we sell the product.

SC: What we call screw driver technology here.

CBK: Yes. We had a good base of textile manufacturing in Sri Lanka.

SC: Indigenous?

CBK: Yes, indigenous. From ancient times. And the government has gone into powerlooms with foreign aid. All those factories have been given for a song.

SC: To the foreigners?

CBK: Yes, to the foreigners who also include the Tatas and the Birlas. All for a song. The government gets hardly anything out of it. And the production is for export, not for the Sri Lankan market.

SC: Basically then it is a borrowed economy?

CBK: Totally borrowed economy.

SC: Is it the Singapore type?

CBK: Not really. Singapore developed because they had a very clear national industrial policy whereas we had none. To such an extent some of us are beginning to think—and this is all on World Bank instructions which the government follows...

SC: Hook, line and sinker?

CBK: Yes, hook, line and sinker. And we are beginning to think that the World Bank has—they are known to have demarcated various geographic regions of the world for various types of production—probably demarcated Sri Lanka, though they don't tell us, as a non-producing country which would be buying products from outside. It provides a small market and for assemblage because of its cheap labour.

SC: According to the trickle down theory that is being practised gradually it would lead to prosperity...

CBK: Well, in 15 years it has not led to it.

SC: Has it led to pauperisation of the people?

CBK: Eighty per cent of the population has seen its real incomes decrease in the last 15 years. Only 20 per cent has seen it increase, and of that 20 per cent only 10 per cent has had a real increase. In case of the other 10 per cent it has not decreased and the increase is marginal.

SC: What about the situation with regard to unemployment?

CBK: Unemployment has increased by leaps and bounds, particularly unemployment among the educated.

SC: That means discontent is there?

CBK: Discontent is there in a big way. And it also means something much more interesting which is that the open market economy followed in Sri Lanka is certainly not to be copied by India.

SC: That is very important.

CBK: But, obviously, I don't think India needs to copy it or would copy it because you already have a very strong industrial base. We never had. We were just building it up.

In the 1960-65 period, my mother's first government was the one that really built up industries. That was when the process just started. Then in 1970-1977 the government sort of consolidated it.

To cut a long story short, what I think would work is not a free-for-all, no-holds barred free market economy which benefits only the cronies—it is free only for the cronies—of the rich people, cronies and their relations, not for the rest of the population. Even not for the other capitalists of the country. Only for those who have the ear of the top people. The entire small capitalist class, the national entrepreneurial class, is destroyed in Sri Lanka. It's only the big ones which have tied up with the multinationals that can exist under this policy.

SC: Has the public sector been totally devalued?

CBK: It's being denationalised.

SC: According to World Bank instructions?

CBK: Yes.

SC: Could you give a figure of the number of public sector units that are being denationalised?

CBK: All of them are being denationalised.

SC: That means you don't have any public sector worth the name?

CBK: Well, the buses have been denationalised, the entire bus transport. Trains are goint to be. They have denationalised the refractories. Hardware corporations, steel corporations, five textile mills—the largest ones—were the first ones to meet that fate.

SC: But still it has not worked wonders.

CBK: No, it hasn't. All the industries have been denationalised, even the ones that were running at big profit.

And what is funny is that the government calls this denationalisation peoplistion. It's just the opposite: they take it away from the people and the state and give it to the private sector for a song. They could give for much more.

What I say is that if we have basicallly an open market economy, but a planned open maket economy where the government would come in to decide the priorities which means...

SC: Some form of regulation?

CBK: Yes. No quota systems and all that which are hated in our country—you know for basic needs the government must go for any amount of imports as long as the country is not self-sufficient—but the government, the state must decide what are the priority sectors they want to develop. Encourage those sectors as opposed to any old deals. And certain amount of control over even imports. Now anybody can import anything. Rather than importing toilet papers and so on, encourage the import of things that would help national production.

SC: Quite true.

CBK: And of course meet the basic needs. If you don't have them then import them.

SC: And also allow the subsidy to continue to some extent.

CBK: The poorer sections of the people, a lot of us now think, even in the liberal economy they have to be subsidised until the economy takes off at some point. But I would say not in the way in which we did earlier: that is, giving a free ration of food, but tighten up, in some way, the system to help them.

SC: Now, can you tell me how you assess the present regime. Especially one aspect which has not been highlighted in India: the way in which it handled the JVP. I was told that in the name of fighting the JVP many more people have been killed than at any point of time in the past.

CBK: I have been speaking about this. I spoke on the subject in my talk 'Democracy in Crisis' at the JNU. In today's meeting at the Saturday Club too I spoke of democracy in general because I thought that the gentlemen assembled did not know the exact situation. Well, the figures given very bluntly by the Amnesty International and the UN organisations...

SC: They are not correct?

CBK: They are correct even according to our assessment because we have a list a lot of people who have disappeared. The figures by those bodies come to anything between 20,000 and 50,000 killed by the government in the south within a period of about six or seven months. After they decimated the JVP on the pretext of getting rid of the JVP they killed a lot of democratic Opposition activists of the SLFP and the Left parties...

SC: A lot of them were missing.

CBK: Yes. A lot of them were found strewn on the road on burnt tyres—that is a kind of coercion, frightening people. And a lot have just disappeared we don't know where. Probably they were killed and thrown into the sea. One of the bodies came back and that made headlines all over the world. You know, the young journalist, Richard d'zoysa, was killed and thrown into the sea but somehow—unfortunately for the government—that body was washed ashore very fast before it deteriorated. Within a few hours it was washed ashore to the beach.

SC: Unfortunately some of the public figures who were going to Sri Lanka came back with completely different impressions—the situation had stabilised, the conditions were much better and so on and so forth.

CBK: You see, this is what I said today in my talk: the government in Sri Lanka has destroyed, denigrated and eroded democracy but managed to put up a democratic facade which has fooled a lot of people. And some people who wished to be fooled also had the excuse: we have Parliament, we have not done away with Parliament and said that there should be a one-party system like Idi Amin or somebody similar to him—probably we got that from our old civilisation, we know how to do it better but perhaps there are lots of others...

We totally denigrated democracy and the parliamentary system. Parliament itself has become a joke with thirteen amendments in six months. The President is not answerable to Parliament, he is not responsible before the law as long as he is the President. MPs can be sacked by Party Secretaries without any reference to the people who elected them. If the Party Secretary writes a letter to Parliament the man can be sacked. And new MPs can be appointed in their place—also by the Party Secretaries. Recently the rebel group within the UNP—led by Lalith Athulathmudali, Gamini Dissanayeke—who brought a motion of impeachment against the President, they were sacked like that.

So the very basis of democracy is not there. You elect a man and the Party Secretary does not like him because he has tried to fight for the people's rights or something like that, he is sacked. I can tell you so many other things on these lines.

Now about the killings. Since 1977 we have state terror institutionalised. For the first time in Sri Lanka state terror has been institutionalised as a major form of conflict resolution. And I would say that was one of the major causes for the JVP uprising in the south and the Tamil militants' uprising in the north and the east.

SC: Do you think you could have tried to enter into political negotiations with the JVP for a negotiated solution.

CBK: I think Prabhakaran and Vijayavira (the JVP's founder-leader) had the same kind of mentality. You cannot negotiate with them. It's very difficult. Of course, I don't give up hope but what I am saying is that Vijayavira would not have had the resonance he had, though he would have tried he wouldn't have had a movement like this if the government had not denied and blocked almost all parties of democratic opposition to the government.

SC: So you feel state terror became counter-productive?

CBK: Very counter-productive. Where has it been productive anyway? Well, it has been productive to them in the sense that they remained in power for 15 years but in the long run it is very counter-productive in society. And all the youth who had no other means of democratic protest went back to terror.

The JVP had a fairly long honeymoon with democracy after Vijayavira was released from jail in 1977, and it lasted upto 1983. J.R.Jayewardene released them and tried to use them against the SLFP. And they did it very well. For the first three years after his release all of Vijayvira's speeches were attacking the Bandaranaikes and all the Left leaders by name. Thereafter they started organising themselves. The government didn't like it and then started repression against the JVP and they were forced to go underground. That's when they started collecting arms and all these things happened.

In the north with the 1983 Black July the Tamil militant movement was just being born but they were not very organised or strong. If the government was willing to offer the Tamil people and the militant movement a good package of devolution, etc. short of Eelam, the war would never have started. But what did the government do? They said the Tamil militant youth are making too much noise. And in the same way that they managed to spread terror among the Sinhala masses and in fact cowed them down, they thought they could do the same with the Tamil militants and cow them down. But actually quite the opposite happened as you know. Because the situation was different, the conditions were different and so on.

SC: The present situation being what it is the way Premdasa has been trying to exterminate opposition to him, don't you think he is digging his own grave?

CBK: Well, in the long run he is digging his own grave but as far as he is concerned personally I suppose it doesn't matter. Because he has dug in long enough, Probably a lot of them have enriched themselves sufficiently for several generations. Politically he is digging his grave for his party and himself. The party is splitting up. Some of the most important people in the party have left. There will be a further split in the party very soon.

SC: How is he tackling the ethnic crisis?

CBK: He is not tackling it at all. He doesn't want to end it.

SC: What about Indo-Sri Lankan relations?

CBK: Indo-Sri Lankan relations are at a low ebb at the moment as we all know but I think India is taking the right stand.

SC: Which is non-interference?

CBK: Yes, non-interference, and waiting and watching. The situation is very very complicated at the moment because of what we have in the country—violence, terror perpetuated by the state, by the LTTE now that the JVP terror is over, the political opposition is very disorganised, for the first time it is coming together and trying to organise itself but still all that is in the crucible. And after the bad experience that India had of the IPKF in action I think the present policy is quite right.

SC: You had supported the 1987 Indo-Sri Lanka Accord.

CBK: Yes.

SC: Do you still support the accord?

CBK: Yes, I think it (the accord) was right. But I think it was wrong to have inducted 100,000 troops into Sri Lanka.

SC: The troops went there to implement the accord but they couldn't do so. So has the accord become infructuous?

CBK: Yes. But there is another way of doing it even now.

SC: How?

CBK: Well, as I have been saying, first the government has to be sincere in wanting to solve the problem and the present one I don't believe is wanting to really sove it. Thereafter they have to present a very clear package of what they are willing to give to the Tamil people. I am talking of the Tamil people and not the LTTE because I don't believe the LTTE comprise all the Tamil people.

In the north and the east the LTTE at the moment has successfully decimated all the other Tamil organisations, the other militant movements as well as the democratic ones like the TULF. They are the only active representatives of the Tamil people, and given the fact that they have had a bad experience of the Sri Lankan army the Tamil people have nobody else to turn except the LTTE who are physically present. But I think if a good package of what the government can offer—including devolution and various other things—is offered to the people...

SC: That is for both the Sinhalas and the Tamils—for all provinces, because it has to be uniform.

CBK: Well, yet but in these areas (the north and the east) there have to be special things... And immediately after that those have to be taken to the people there and there are ways and means of doing it even if the LTTE is blocking that. I believe in such a situation either the LTTE will have to agree or the people will force them to agree or they will be marginalised. Because the people want peace, they are not for Eelam—the majority of the Tamil people. Only those who are interested for themselves are for that, may be a minority of them. They want devolution, they want their place in the sun in the Sri Lankan society. If that is concretely given by a government in which they can have faith—that's very important, because they have been let down by so many Sri Lankan Governments—and thereafter a very quick resumption of the democratisation process in the north and the east, elections even if 15 or 20 per cent like in Punjab as a their own hands. At the moment they have not been given an alternative to the LTTE terrorism. And the LTTE has not only killed the Sri Lankan armymen or Sinhala villagers—they have physically eliminated every single person in their movement who talked of redemocratisation or negotiations and so on.

SC: Now if that is the perspective that is something that has to come from inside the coutry, India cannot pressurise the Sri Lankan Government to adopt that kind of a stance towards the Tamils.

CBK: I think it souldn't.

SC: What would be the effect of such a pressurisation in Sri Lanka?

CBK: Very adverse.

SC: So on the whole you think the course taken by the Government of India at the moment is correct.

CBK: For the moment it is correct. Unless, of course, things change objectively. One can then reconsider the situation. ■

ADISESHIAH : Cooperative Federalism

(Continued from page 7)

the bottom 39 per cent of rural households owning five per cent of all assets while the top five per cent own 46 per cent. NSS surveys and the agricultural census report increased marginal landholdings and landless labour households. In this situation, to hold panchayati raj elections will be to benefit the well-to-do farmers. In the case of Karnataka, for example, the Parishad-elected chairmen (*Adhya Kshana*) who were 33.3 per cent Lingayats owned 20 to 100 acres of land each and 22.2 per cent Vokkaligas owning 20-40 acres each. This contrasts with West Bengal where land reform was first carried out, with the result that 75 per cent of the chairmen and members of the three-tier structures of 46,000 elected members were small and marginal farmers. The problem faced by the country accounting for the major part of its maldevelopment expressed in massive poverty, increasing unemployment, growing inequality alongwith the social lack of basic needs caused by illiteracy, ill-health, infant mortality, lack of safe drinking water, rural roads and power and the safeguarding of the natural resources on which the people's livelihood depends which we today call self-sustained development, is to make the panchayati raj institutions responsible for drawing up realistic plans, of which the State and national plans will be the aggregate and the panchayati raj be the willing and effective executors of the plans that they have formulated.

But simply bringing planning down to the State and panchayat level will not solve the above problems faced by the country. The history of the country's development shows that all the measures to tackle poverty, generate employment (except for the Maharashtra Employment Guarantee Scheme), and promote a more equitable socio-economic order through the IRDP, NREP, JRY, SEPUP, DPAP, SFDA, MFAC and land reform have all emanated from the Union. The States have been allergic to these development programmes. Does this point to the validity of what Prof. Lakdawala called cooperative federalism which is expressed through the Planning Commission, National Development Council, the Inter-State Council and some of the Centrally sponsored schemes? ■

NIKHIL : Human Rights

(Continued from page 3)

it meant the total suppression of all civil liberties. Human rights became an anathema for the new establishment.

The experience of the Emergency made large sections of public opinion aware of the need for a movement of civil liberties and democratic rights, and the collapse of the Emergency provided the necessary fillip for such a movement. That was how there came up immedicately after the 1977 general elections, a whole host of organisations and initiatives among political workers, social activists, lawyers, journalists and among the youth which led to the formation of active human rights organisations in this country.

It was this new awareness in concerned sections of the public, coupled with an alerted press, that many of the blatant violations of human rights got exposed. The exposure of the killing of activists in custody with the pretence of their being victims of encounters with the police got widespread publicity and in some cases even judicial strictures. The barbarous torture of suspects in police lock-up; the inhuman incarceration of undertrial prisoners for years, sometimes for decades; the infamous Bhagalpur blinding – all these and many other forms of atrocity, the climax reaching with the pogrom of the Sikh community in November 1984 – all these could be highlighted in a systematic manner through the services of human rights organisations.

With the proliferation of social evils like dowry deaths, caste oppression and the revival of some of the superstitious practices, the role and responsibility of the human rights movements has grown tremendously in our country.

With the spread of violent confrontation between militant groups and the armed forces of the state involving largely police and paramilitary forces apart from the Army at some places, new challenges confronted the human rights organisations. These armed confrontations have international dimension as in the case of Kashmir and Punjab. Naturally, in such confrontations innocent people become the victim in many cases. This raises a very complex question before the human rights activists: should those who observe no human rights principles in dealing with their adversaries in open armed combat, be entitled to the protection of the human rights movement? In other words, should human rights be extended to those who in practice violate human rights in dealing with their adversaries?

This is a question which baffled many a society over the centuries. Much can be said in favour of it or in opposing it, and such debates can go on endlessly until the cattle come home.

There is the more fundamental question which has confronted many all over the world. In a society where there is blatant inequity, and a large section of the population is condemned, for no fault of their own, to a life of persecution and constant deprivation, would not any talk of defending human rights be reduced to a luxury of the rich and the powerful? The Black in the USA or South Africa, the Harijan in India, or the underdog in any of the developed society – is he or she not entitled to the Right to be Human before one talks of human rights to them? But there is another way of looking at the same question: if human rights are enforced and democratic liberties ensured, that itself helps to a large measure, the fight against social injustice.

One hopes that the National Human Rights Commission, when it is set up, will take up its mission with such basic issues in mind, and not reduce itself to a post office for complaints and grievances. ■

CHOPRA : Factors behind the Decision

(Continued from page 4)

But as usual, there was a difference between perception and reality. The perception of an NHRC as envisaged in the Congress manifesto in June 1991 saw the HRC as being an effective body looking into reports of violations of human rights for domestic reasons: "It was," explained Inder Mohan, President of the Indian People's Human Rights Commission, "A promise to stop state authorities from wilfully misusing their power. It was definitely not going to be an attempt at displaying a character certificate to the West. Neither was it contemplated to show-off India as a model country which had its very own HRC – similar to countries such as Australia, Canada or New Zealand."

●

PERHAPS the remarks of the politicians enumerated above do make it sound that the NHRC had been constituted as a response to international criticism. This was the overriding impression amongst several human rights groups as well when they had heard of the formation of the HRC.

Ravi Nair, Executive Director of the South Asia Human Rights Documentation Centre, spoke of the "ungodly hurry" in which the government had activated itself. From the announcement of the committee – comprising five Chief Ministers: Bhairon Singh Shekhawat of Rajasthan, Jyoti Basu of West Bengal, Laloo Prasad Yadav of Bihar, N. Janaradhan Reddy, then in harness in Andhra Pradesh, Sudhakarrao Naik of Maharashtra and three Union Ministers, Sitaram Kesri (Welfare), Arjun Singh (Human Resource Development) and Vijaybhaskar Reddy (Law) – formed to look into the formation of the Commission to the preparation of its first report by October-end, all smacked of "outside pressure" rather than an indigenous, altruistic concern.

Tapan Bose, who heads a group called Initiative on Kashmir, questioned the *locus standi* of the HRC: "Does it mean that the citizen of India needs an HRC to protect the rights guaranteed by the Indian Constitution?"

But then it was expected that the human rights community would by and large be miffed. For hadn't Gadgil when he had made his announcement in April stated categorically that he would be inviting a dialogue on the proposal from all interested groups to "elicit a fair response"? And after several organisations like the People's Union for Civil Liberties (PUCL) and the proposal from all interested groups to "elicit a fair response'? And after several organisations like the People's Union for Civil Liberties (PUCL) and the People's Union for Democratic Rights (PUDR) had seemed interested, hadn't the Congress maintained a studied silence, that is until September 14?

Besides, explained Mohan, what credibility would the HRC have if the committee that was formed to look into the composition of the Commission included the Chief Minister of Andhra Pradesh, a State which had 42 inquiries cases pending against it and the Chief Minister of West Bengal, where non-card holding citizens were routinely subjected to harassment? "Is this HRC a serious attempt of looking at viloations or is it a joke," queried a human rights activist.

●

A joke it isn't but a farce it may well turn out to be. Critics of the NHRC, and they are plenty, point to the weak links already evident in the formation of the Commission. Consider these recommendations made at the Chief Minister's September 14 conference on human rights:

> Even if it is conceived as a fact-finding body, the Commission may have to take up certain investigative actions to discharge its functions. What investigative agency the commission will use will, therefore, have to be laid down. It may not be advisable or feasible to create an independent investigative agency for the Commission. Clearly, the Commission would have to operate through the *existing* (emphasis added) investigative agencies such as the State police; criminal investigation departments of the State Government and the CBI.

The HRC will be depending on a network of State officials, perhaps even the very officials who have committed a breach of law in the first place!

Similarly consider the following:

> It will have to be considered whether the conduct of the armed forces and para-military forces should come within the purview of the proposed Commission.

Perhaps this clause implies that the armed forces are above the purview of the HRC. And that what occurred in Malliana in 1987 could happen again with impunity?

For many other critics, the legal parameters of the NHRC were not clear. Was the HRC meant to enquire into human rights infringements or could it refer cases to the judicial courts? The NHRC, it has been pointed out in the Congress manifesto, "is to investigate and adjudicate (on) complaints of violation of human rights". Would this status be different from past Commissions of Inquiry whose powers were usually confined to inquire, report and recommend measures?

If so, such a body could not be set up by merely an Ordinance but by a carefully structured Bill, which in all probability would be passed through Parliament this November.

Such an eventuality, would definitely chisel the role of the judiciary whose powers have been systematically decimated by the formation of various tribunals and the horrendous Terrorists and Disruptive Activities Act (TADA).

Given that India in the past had not even participated in the training provided by the United Nations's Advisory Service on Human Rights or in a programme initiated by the Commonwealth Secretariat on Human Rights, what future does such a Commission have in India? In this context, perhaps one should also mention the fate of the seven-volume Police Commission Report submitted in 1982 under the guidance of K.F. Rustomji. Then Rustomji had painstakingly enumerated the reasons as to why custodial rape took place. He had also submitted that considering the intolerable conditions that the police force worked under, it was not surprising that custodians of law went on the rampage every now and then. He had suggested that as much as the government, the police should also be made conscious of human rights – a stand which is slowly being articulated today.

●

ULTIMATELY, Rustomji's Report remained confined to dusty shelves and some occasional quotes in articles on the police. What was the fate of other Commissions?

"What has happened to the recommendations of the Scheduled Caste/Scheduled Tribes Commission made by B.D.Sharma? Nothing! How many people realise that the Chairman of the Minorities Commission, Minoo Masani, resigned from his post because he was not even given an office," questioned Nair. The implication that the same fate could await the HRC was evident.

For activists like Nair, therefore, the NHRC and all that it stnads for can only be repudiated. "The NHRC will be rejected but it will be rejected from a position of informed dissent," said Nair finally.

But there are other human rights activists willing to give the government some time. Prominent amongst them is V.M. Tarkunde, *eminence grise* of the human rights lobby: "We should cooperate with the government on this. If the HRC is a fraud, we will expose it. If it is meaningful we will welcome it." Riaz Punjabi, an activist from Srinagar who shifted to the Capital, also offered support: "It is a step in the right direction. But it should be seen how it will link up with national security concerns."

AI had also offered cooperation in its press statement issued after the announcement of the NHRC: "Amnesty International is keenly interested in proposals that legislation concerning custodial deaths may be strengthened...While the modalities of such a Commission can obviously best be set by human rights experts in India....."

One overriding factor on which the success of the NHRC would be dependent on the composition of its members. It is almost certain that former Chief Justice P.N. Bhagwati will have a role to play in the Commission. (Reportedly, he had a one-hour meeting with the Home Minister last week.) Another name being mentioned is that of B.G.Verghese, former Editor of the *Indian Express* whose standing, at least among local and international human rights organisations, is currently low. (Verghese had in a Press Council report on the alleged rapes of some women in Konan-Poshwara in the

Just as important as the composition of the Commission is the area of its functioning. Several questions need to be asked: If it is to be set up by Parliament would it enjoy absolute autonomy and freedom from government control? Would it be independently financed to guarantee this autonomy? Most important, affirmed Tarkunde, for the credibility of the HRC to be ensured it would be necessary for it to interact with the NGOs — both at the national and international levels.

Given the fate of past Commissions, it perhaps wc be asking for too much for all these stipulations tc adhered to.

Nevertheless, with international organisations like and Asia Watch painting a dreary picture of human ri in India, the need for developing countries like Indi vocalise their stand is greater then ever. And such as perhaps the NHRC would be able to preform this tas

GONSALVES : European Integration

(Continued from page 5)

At the other end of the spectrum is the phenomenon of the rise of smaller ethnic groups in Europe and elsewhere. A more democratic world, greater affluence and technological advances resulting in a communication and information revolution have ensured that these groups are acquiring a clearer and more coherent identity. This too alarms both the Rightists and the old style ideological politicians who realise that as such groups acquire a growing role in the European structure it will be to their detriment. Germany has its autonomous Lander and Belgium its almost independent provinces but few politicians at Westminster are reconciled to a local parliament in Edinburgh or Belfast. However, decentralisation is inevitable and cannot be put off. As it reduces the individual's total relationship with the nation-state, it will probably make the Community more easily acceptable in the long run. Again the need arises for many careful adjustments that cannot and should not be made in haste.

The need to inculcate a sense of pride in being European is now being realised. Also the advantages a united Europe will offer to the next generation are realised but not fully appreciated. However, it is possible that the tide has turned with the French referendum. The large turnout and a narrow "yes" vote came despite the most adverse circumstances of a lame duck government and the looming ERM crisis.

Already the Danes are considering a fresh referendum during 1993 provided some not too fundamental revisions are made in the Maastricht Treaty. Italy has swallowed a considerable dose of bitter medicine of economic reform. The advantages she has obtained from the long Europe connection are then to be seen and despite the weaknesses of the political establishment, there seems to be hope that the Italians will not renege as they have done in the past. The British leadership has the most difficult task assailed as they are from the Left and the Right including the redoubtable Mrs Thatcher. Besides, they have to rise above the ignoring of a total failure of their European policy during their Presidency of the Community.

Hopefully the Germans and the French as well as the British will have enough statesmanship to find the necessary face-saving formula while also arriving at a common stand on the revisions. If the British economy is to fit into the global economy by 2000, it is in need of drastic reform. The ERM (like the IMF for India) was to provide an outside target for unpleasant decisions. Thatcher like Reagan could not really bring the economy to global standards. But parallels with the American situation do not hold good as the US economy has far greater stre and depth and the dollar is still a reserve currency.

Much of the haste over Maastricht was to bind German giant into the European framework. The Fre Germans and most other Europeans still hold to thi the first priority. Hence it is possible for them to ac changes in the implementation of Maastricht, but not i overall structure. They would probably prefer to a doubters to withdraw. Faced with this choice the C munity will probably remain together.

●

THERE are Americans who once strongly support United States of Europe. Many of them now h doubts as they suspect that a strong and effec Europe would not provide their policies with the a matic support it has done for the last 50 years. But in multipolar world with global independence whic inevitable, a strong pole in Europe is in America's inte as it is in that of everyone else. Also Europe must ha sustainable and coherent world view of its own.

Only an incurable optimist would say that Maastr will go forward unchanged. Changes providing decentralisation, accountability and consultation will h to be made in the substance if not in the form. Parad cally, the need to find European answers for Europ problems will also have to accepted. The European I liament will have to be given a greater role. Brussels have to be cut down to size, become more efficient responsive. National Governments and Parliaments n debate European questions more responsibly. Enla ment may have to be put on hold. A confederal rather t a federal structure would seem more appropriate as current objective.

The slowing down in its construction may be fortu for India in giving us more time to prepare ourselve engage with the new Europe. But the engagement sho not be limited to trade and finance. Both India and Eur have learnt much about governance in the last half cent Sharing experience could prove of value. Our knowle of dealing with political pressure successfully in pl and diverse society is vast and varied. Linguistic Sta development councils, Articles 370 and 371 of the C stitution and many other devices have emerged fr our efforts to solve our problems which the Europe might do well to study. The problems of decentrali tion and excessive political interference with the bes intentions are issues with which both are grappling. we seek to enhance the bilateral relationship we co also gain by learning from each other.

ABHIJIT SEN : Economy

(Continued from page 2)

comparisons are those which take into account a larger number of months. For example, the April-August average for this year, corrected for the bias due to the provisional figures in July and August, gives a 12.4 per cent inflation rate for the wholesale price index when compared to the corresponding period last year. This is somewhat less than last year. And an even lower annualised rate of inflation, of about 10 per cent, is obtained when inflation is measured month-by-month, with or without seasonal correction, for the period September 1991 to August 1992, avoiding the peak due to the devaluation. However, these rates of inflation, although less than the corresponding rates last year, indicate that inflation as measured by the wholesale price index was continuing at near-double-digit levels in August this year, and that there had been no significant deceleration in the inflation rate once the hump caused by last year's devaluation had been crossed.

Thirdly, measurement of inflation with reference to the wholesale price index can be quite misleading as an indicator of the prices that consumers pay. A better measure of the latter are the consumer price indices, and these indicate a much higher current rate of inflation than the wholesale price index. For example, annual inflation till July this year as measured point-to-point by the consumer price indices for industrial workers and agricultural labourers stood at 13 per cent and 21 per cent respectively compared to 11 per cent as measured by the wholesale price index for the same period. In other words, even ignoring the much higher rate of inflation facing agricultural workers, inflation at the end of August was running at somewhere between 9.5 per cent 13 per cent which, though less than at this time last year, is a far cry from the official claim of less than eight per cent. And again, taken in conjunction with the fact that the trade deficit has more than tripled over last year's, thus adding considerably to supplies through foreign borrowing, the performance on this front is hardly creditable.

Nonetheless, the government is not only indulging in self-congratulation and touting these "achievements" with the help of a pliant press. It has also grasped the opportunity provided by the fact that things were particularly bad at this time last year, for reasons for which it itself was responsible, to paint a picture of some improvement in order to dish out further doses of the dubious medicine that it has accepted under IMF-World Bank tutelage but which clearly has not worked so far. The latest of these is the massive increase in the prices of petroleum products for the third time in two years, during which period world petroleum prices have actually been coming down.

The reason for the present price hike is attributable directly to the IMF target of reducing the fiscal deficit to five per cent of the Gross Domestic Product (GDP) this year, and to its insistence that this target has to be met while restoring the balance in the Oil Coordination Committee Fund into which the government has dipped to meet the fiscal deficit target last year. Moreover, the devaluation and subsequent adoption of partial convertibility of the rupee had pushed up costs for the domestic oil sector and depressed its profitability which required to be restored as the government is keen to attract foreign investment in this sector.

It is to be noted that the cuts in the fiscal deficit so far have not had the desired effects of either reducing the trade deficit or bringing down inflation adequately, and that the manner in which this deficit is being sought to be cut continues to involve inflationary hikes in administered prices and cutbacks in necessary investment rather than any reduction in wasteful government administrative expenditure or more effective direct taxation of the rich. Moreover, the exchange rate policy so far has little to show in terms of reducing the trade balance, and despite the many concessions, foreign direct investment continues to be shy.

●

SO what will be the direct inflationary outcome of the present hike in petroleum product prices? These products collectively account for 8.7 per cent of the wholesale price index, and the 18 per cent increase announced in the prices of these products would therefore have an immediate impact of increasing the wholesale price index by 1.2 per cent. However, this is just the first-round effect, and experience with past oil price hikes suggests that the final effect through cascading transport and production costs is much higher. The available econometric evidence suggests that the most likely outcome, taking these indirect effects into account, will be an additional rise of two per cent to 2.5 per cent in the wholesale price index within a month and a further rise of between one per cent and 1.5 per cent within the next six months. As a result, inflation as measured by the wholesale price index is likely to cross the double-digit level by October, despite the seasonal downswing and the better-than-expected monsoon. And, given that inflation before the hike was already running at a minimum of 9.5 per cent it is now possible that the current fiscal year may end with an inflation rate not significantly lower than last year.

In fact, things might turn out to be even worse because of the government's other policy initiatives and because of the fact that the trade deficit is increasing. The failure on the export front is clearly making the government rather desperate about sources of foreign exchange inflows, as is evident by its ill-conceived decision to open up Indian stock markets to foreign portfolio investment with no lock-in period and without any real control over repatriation of capital gains. This is much more liberal than the existing policies in most of the successful Asian economies other than Hong Kong, Singapore and Taiwan, and may, of course, lead to some initial inflow of funds. But any such inflow is likely to be very volatile and, in effect, the government has set in place a powerful capital flight instrument where not only will a crash in the stock market have adverse balance of payments (BoP) implications, but also bull runs in specific shares may be engineered to make quick profits which can now be used to convert rupee resources into foreign currency assets.

Because of these BoP effects, future Finance Ministers will have to be much more sensitive to the effect their budgets have on stock markets, even at the expense of the real economy, and yet, as the experience of this year shows, what seems a clever idea at Budget time can easily turn out to be disastrous subsequently. Moreover, there is much speculation now that the oil price hike, whose magnitude corresponds almost exactly to the current premium of the market exchange rate of the rupee over the official rate, may be a prelude to full convertibility of the rupee. If so, future BoP shortfalls would immediately be reflected in depreciations of the rupee, and, unlike so far, the inflationary impact of this will not be contained by insulating the domestic price of essential imports. The nation has so far avoided the devaluation-inflation-devaluation spiral that has wrecked Latin American economies. But the unimaginative policies being adopted since July 1991 have continuously been pointing towards this direction, and the announcements made last fortnight bring the nation even closer to this denouement. ■

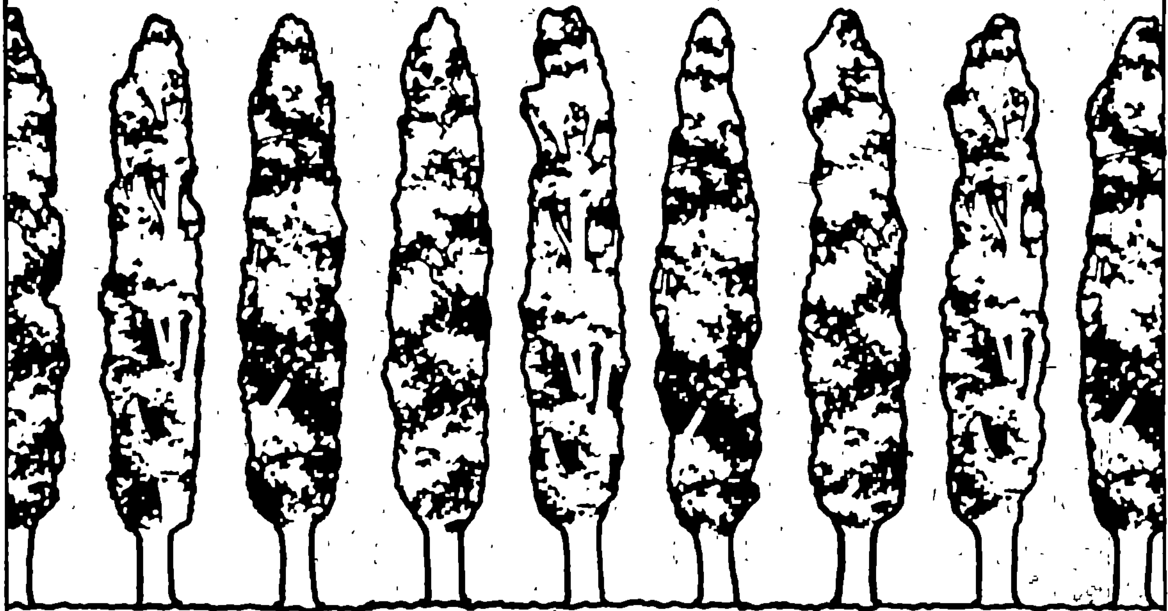
SAIL HAS MORE THAN A MILLION PLANTS



ONLY NINE OF THEM PRODUCE STEEL !

Even that may not be enough!

SAIL continues to play an even more crucial role in the restoration and preservation of the environment.

By employing the latest technology.

By developing specialised expertise in environmental management.

By conducting a $ 3.3 million environmental study to identify and locate critical areas requiring corrective action.

By 2000 AD, SAIL is scheduled to implement 850 environmental preservation measures in and around its plants and mines.

Today SAIL renews its pledge to give back to Nature what it takes to build a better tomorrow.

POLITICAL NOTEBOOK

Factions and Big Money

At the time of writing these lines, there is excitement in the Capital about the imminence of reshuffle of the Union Cabinet. This is of course a source of hypertension for many of the Ministers as to whether they would be divested of their present portfolios and downgraded with the charge of less important ones. There are others who have been getting restless waiting to be called to join the Council of Ministers. While there are indications that this time the Prime Minister is likely to go in for a major reshuffle, there is also a touch of uncertainty about it because Narasimha Rao has conceived so many times in the past few months without actually going through the operation.

The government at the Centre is no doubt a subject of interest and concern for the entire country. At the same time one can hardly shut ones eyes to the happenings in the States particularly in those run by the Congress party because this is the ruling party at the Centre as well. The manner of handling the affairs at the State level perhaps provides a clearer insight into the current state of political functioning in the country as a whole. It is therefore relevant to direct the spotlight on the two southern States of Andhra and Karnataka where turbulence has been very much evident in recent months.

Will the new Chief Minister of Andhra Pradesh last? And will there be no change of guards at Hyderabad till the next general election?

These are questions which may not be fair to Vijaya Bhaskara Reddy but legitimate in the light of the fury of factional tussles within the Andhra Pradesh Congress that preceded the ouster of the previous Chief Minister. For two long months, the inner-party battle rocked the Congress and virtually debilitated the functioning of the ministry headed by Janardhana Reddy. And this sordid squabbling would have continued for many more weeks, if not months, had the Andhra High Court on its part resorted to the proverbially protracted proceedings in the private medical college scandal case which brought judicial censure upon the Chief Minister.

In other words, an ugly tussle within the ruling Congress could not be settled by the party's high command despite the despatch of party observers in relays from Delhi who could hardly pacify the open brawl among the Congress MLAs. Equally ominous is the fact that even after the ouster of Janardhana Reddy, the contending factions could not on their own choose his successor, as they reached a checkmate situation, leaving it to the party President to nominate the new leader of the party in the legislature, that is, the new Chief Minister.

Few can disagree with Narasimha Rao's choice, as Vijaya Bhaskara Reddy

is by far the most deserving individual for the post, among all the contenders. However, personal competence, experience or esteem count little when factions within the Congress party fight like the Chinese warlords, a tradition which has persisted within the Andhra Congress throughout the decades since independence — and the Prime Minister himself can bear this out from his direct personal experience. With all the back-up from the party President, however, the new Chief Minister will have to reckon with the disgruntled within his own party. Will they be reconciled to be left out of the plums of office for long? Even Vijaya Bhaskara's astrologer cannot guarantee that.

●

AT the same time, it would be wrong and iniquitous to single out the Andhra Congress party for this malady of inner-party bickerings. Witness the dog-fight that has been going on in the next door Karnataka. For more than three months now, the Karnataka administration — at one time, one of the most efficient in the entire country — has been in a state of paralysis because of the civil war going on among the Ministers. Bangarappa has broken all record of cliff-hanging with all his adversaries left dumb-founded at his capacity of being a limpet Chief Minister. Deputation after deputation from the rebel Congress legislators have come to Delhi to plead with the party big-wigs, including the President, for the removal of Bangarappa but somehow he has managed so long to survive, tiring out all those expecting his removal, with Veerappa Moiley in the lead.

Dissidence on questions of policy has always had a place in the Congress. Group politics in some form or other was inevitable in a large sprawling organisation like the Congress in the best of times. But in the last two decades these have become hardened into factions each more pronounced and palpable since the days of Indira Gandhi's leadership, though ironically she split the Congress to set up a new party of principles and commitments — both of which are conspicuously absent in the Congress today.

In reality, the great split in the Congress in 1969 accelerated the entry of Big Money into Congress politics with the top leaders unashamedly establishing direct links with magnum-size money bags. All the inhibitions were dropped in the name of collecting party funds. And as the party with the preponderant impact on the politics of this country, even though it has lost its monopoly of power, the Congress has set the fashion which other parties, by and large have taken up consciously or otherwise, with the result that corruption has virtually ceased to be a dirty word in party politics today — so long as it is not caught.

This is borne out in the politics of Andhra and Karnataka today. That was why nobody could actually dislodge Janardhana Reddy nor could he be accused of not having indulged in corruption in that scandal which brought the Court strictures upon him. Bangarappa, on his part, has never made the unreal claim that his regime can flaunt its chastity on this score. Rather his political opponents hold that it is on the strength of the accumulated resources at his command he has so long been able to hold on to Chief Ministership.

Over the years, corruption of political life has assumed a mega size. In the years immediately following independence, a State-level politico, whether he is a Chief Minister, a Minister or a powerful party leader, would have normally been the target for bribing by a contractor or a provincial-level businessman. All this has changed. Today not only Big Business invades the precincts of Pradesh politics, but even international links are being established at that level : witness the procession of Chief Ministers nowadays going abroad ostensibly in search of the hard-currency investors, and incidentally to replenish their own coffers.

As for those installed in power at the Centre, new pastures opened up through kickbacks in purchases of defence equipments and for heavy industries. Collecting for the party fund became secondary to augmenting personal accumulations by individual leaders. Corruption, direct or covert, is thus eating into the very vitals of political functioning. The experience of the last two months in these two important States confirms this in a brazen form. This comes in the way of the democratic functioning of the parties themselves.

●

ONE has, of course, to acknowledge that after taking over as the party President, Narasimha Rao tried hard to restore the practice of inner-party elections. But the virtual embargo on such elections within the party for twentyfive long years, imposed first by Indira Gandhi and then by her son, Rajiv, made the large body of Congressmen inert to the idea of elections within the party. After two decades of unrelieved resorting to appointment from the above, it is but natural that the Congressmen at many places should find it difficult to go back to the principle of election from below.

If democratic functioning of political parties is being thwarted by the vicious inroad of Big Money, its converse is equally true. If political leadership in a determined manner enforces democratic functioning within their respective party organisations, that too in its turn can help to thwart the pernicious encroachment of corruption in public life. The malady of "son-stroke" which has been spreading fast in recent times in the leadership of political parties is a conduit for corruption vitiating public life and also forging the unholy link between black money and the politician. Enforcing democratic functioning within the Congress is thus integrally linked with the task of cleansing political life from pollution by moneybags.

Perhaps too tall an order for any leader on the political stage today. Will Narasimha Rao take at least the first step towards chasing away this behemoth of corruption from our public life?

October 14 *N.C.*

GERMANY TODAY

Reunification to Racism

JAYSHREE SENGUPTA

Most parts of Berlin's wall have long since gone or made into souvenirs and today East Berlin is as easily accessible as any part of the West even though the relics from the past do survive in the form of Check Point Charlie and its infamous warning sign.

East Berlin is becoming integrated into the rest of Germany with designer shops and cafes but it till reeks of greyness and past controls. It will take a long time for it to have gleaming promenades like the famous Kurfurstendamm in West Berlin. To the many Indians living in Berlin today the eastern part is dangerous after dark even though the Indian consulate is located there.

Germany's rising racism is going to affect Indians not only in Berlin but in other towns of Germany. The neo-Nazis are attacking foreigners daily and they do not distinguish between Indians, Arabs or Africans. Many Indians have married Germans and have long settled in Germany but for the first time they are seeing visions of dangerous times ahead. Everyone blames this rising racism on the reunification of the two Germanys. Because it is only since the reunification that these racial attacks have started and the German Government is at a loss as to what should be done.

The government is also faced with the enormous cost of reconstruction of the entire eastern part. It is not only rebuilding roads and bridges but modernising factories and shopping centres and is even repairing monuments damaged by the World War II in Dresden. It is a colossal task. The displaced East Germans are not able to find jobs. Even otherwise their wages are considerably lower than that of their West German brethren.

Many young people living in dreary industrial East German towns are without recreational facilities. Not only are the unemployed youth bored but they are seeing the contrast for themselves between the two Germanys and this is one of the reasons why the level of frustration is rising. Otherwise they have become indistinguishable from the other young people in Western Europe, imbibing rapidly the pop culture and catching up with what they missed out on all these years.

Many homes in East Germany are often full of strife because the parents have no jobs. As some East German young people put it "father and mother stay at home and quarrel so we go out to the streets." They see foreigners being fed and clothed by the state in refugee hostels and their anger is aroused. To the unemployed Germans, the foreigners are seen as parasites, sucking away state money which could be used for the welfare of the local people. So they go and throw fire bombs at the hostels and want the foreigners out of Germany.

They are seeing too many foreigners around in the last few months because the German laws are liberal and allow anyone seeking asylum to come into Germany. These refugees can live comfortably till their cases are decided. It takes months and even years for cases to be decided and refugees often make money working illegally in the meantime.

There are about half a million asylum seekers this year. As the number of asylum seekers is growing, the resentment is spreading from one town to another. The neo-Nazis have played on this sentiment of "out with the foreigners" which was an ominous ring to it. Hitler too started this way. But the young East Germans who have grown up under state regulation and control which guaranteed jobs and careers are not able to adjust to the competition and hard work required in the new system. Yet they know that capitalism is the path to prosperity and affluence. They hate the Leftists and their communist past and are trying to cleanse Germany of Leftists, drugs and pornography and of course foreigners.

But this problem is not unique only to Germany. All over Europe the racist elements can be seen playing an important role in politics. In the past, with increased affluence, Europeans made use of immigrant labour to do all the dirty and menial jobs as in West Germany, France and Belgium. But now strangely enough as these countries are in the grip of recession, they are becoming less tolerant and are not liking the smells and the sights of immigrant colonies that have come up in cities like Paris, Berlin or Brussels. Even in Britain the problem is the same though the British policy is more tolerant and anyway by now the Indians in Britain are a force to be reckoned with in terms of numbers, professional skills and very importantly, wealth.

Germany, however, does not wish to be isolated in the struggle for power that is going on in Europe. Clearly, it is the biggest economic power and its Deutsche Mark is now the currency in which many people are storing their wealth rather than in the dollar, but Germany is not yet the leader. Germany is sensitive to all the criticisms that are being levelled against its race riots and its high interest rates which are causing havoc in the European currency market. It is constantly justifying high interest rates as a defence against inflation.

After supporting the French Franc from devaluing, Germany is now wooing France to join hands in forming a core of European integration to which others willing and able, will attach themselves to. But there is no doubt that with its industrial capabilities, the power of Germany will soon be felt by all.

But to emerge as the leader it has to control the excessive expenditure which is being diverted for refurbishing dilapidated factories, retraining labour force and building infrastructure. It is not an easy task and it will take some years for the whole thing to be put together. In the economic front Germany will have to bring down the interest rates and cut expenditure and finance the reconstruction through increased taxes and borrowing. In the meantime it will have to handle the unruly young and control the revival of racism that sends a chill down the spine reminding one of the atrocities against the Jews and gypsies in the concentration camps.

The German Government has already started taking action on the gypsy front by signing an agreement with Romania to deport tens of thousands of gypsies back to their homeland. (Most European gypsies are said to have come originally from Rajasthan.) But what will it do the 15,000 Jews that have recently arrived from Eastern Europe? Toughening of the immigration laws is on the cards and a crackdown on the neo-Nazis is a must. ■

Market Economy: India's Road to Ruin

JEREMY SEABROOK

Markets are a universal phenomenon. Every culture has its own version—the bazaar, the souk, the market-square. These words call up homely, familiar images of eager sellers and willing buyers coming together for the provision of daily necessities.

If these transactions remain local, and if everybody in the community has the resources to buy for his or her needs, there is no problem. What we are seeing now, however, is the development of something called a single 'global market', a worldwide division of labour into which every country must be integrated.

In this context, it is perhaps time to look a little more clearly at some of the disadvantages of this global market, and of the role of a country like India within it.

The great strength of market transaction is their immediacy: buyer and seller meet to strike a bargain. The seller will naturally seek to conceal any defect in the goods on offer, and the buyer will look for imperfections in order to get them more cheaply. But how different it all becomes when items manufactured in one part of the world are transported across continents to be sold in another part. How it is then to conceal the true costs of any commodity, to "externalise" the costs in the jargon of economics. Which unsuspecting purchaser in the West, buying a garment in some showy superstore, ever stops to think of the sweatshop in Asia where it was produced? Who imagines the pain and the tears of the exploited woman who made it? Whoever, in London or in New York, choosing some luxury fruit for desert, pauses to wonder whether the mangoes he or she buys were grown at the expense of local food production in India or Venezuela and who went hungry to supply this amenity? Within the global market everything can be hidden—the social injustice and the environmental damage. And indeed, it is the function of armies of advertisers to cleanse all products of the sweat and bloodshed in their manufacture, so that they appear in the market place as benign and desirable; rituals of purification.

The market economy is celebrated as the surest way of giving the people what they want. Indeed, the West regards 'what the people want' as sacred. But in this process of getting what they want, people are also compelled to accept many things they do not want. The rich societies of the West certainly deliver the economic goods, but they also deliver some fearful social evils: rising levels of violence, breakdown of families, addictions, the abuse of children, neglect of the elderly, loneliness and social isolation—these are just some of the consequences of extreme competitiveness and individualism that make people see each other as rivals for all the commodities and goods that jostle for attention in the busy shopping malls of the West.

This article by the British author and journalist is reproduced from The Pioneer *(October 7, 1992).*

For instance, everyone in the United States deplores the present levels of crime—28 million recorded crimes last year, including more than 25,000 murders. Yet nobody knows what to do about it. People feel powerless. They feel they have no influence upon the moral shape of the society that shelters them. This impotence is just part of the hidden cost, the unseen price we pay for the deep penetration of our lives by market values which supplant human ones.

●

THE market can never deliver social justice. To the contrary, it worsens and institutionalises inequalities. It concentrates power and privilege where these already exist. The market creates a dominant culture of the cash economy, and then withholds from large numbers of people the cash they need to participate in it. This is why poverty and violence remain in even the richest countries in the world. It is inconceivable that India, where wealth is so ill-distributed, could in any way be emancipated by the free markets. Markets may be free, but the people remain captive.

There are further ill-effects of an unchecked market economy. As it expands and grows, it invades areas of human activity where it has no place. For instance, in the busy buy-in culture of the West, millions of desperate people are paying large sums of money to experts in order to be told how to lead their own lives. They write to newspapers, appeal to radio and TV chatshows, pay counsellors, therapists and advisers to learn how to make themselves more desirable, more successful, to find out what has gone wrong with their relationships, their marriages, why they have been abandoned or deserted, neglected or abused. People buy in friendship, care, tenderness, sex, consolation—all the precious free gifts of humanity now come within the tightening embrace of the market economy, which can do nothing to assuage the value-added unhappiness it has itself produced.

It is perhaps the invasive power of the market that leads to the greatest excesses. For, in the end it undermines our own capacities to do, create, and make things for ourselves and each other, to give and to provide, outside of the cash economy. It penetrates the heart, the spirit and the imagination of human beings in the supreme interest of selling us something more. And as it does so, it makes us more and more dependent upon processes that use up increasing quantities of the earth's resources. If it had been the purpose of humanity to lay waste the world, no better instrument than the

(Continued on page 35)

Hazards of Begmanship

R.K. ROY

The fate of the Finance Minister's plea, made during his latest visit to Washington, for fresh IMF assistance of a whacking nine billion dollars is less certain than has been made out by inspired media hype. Funds will be coming in driblets, and though these might add up to a tidy sum, it is simplistic to conclude that the IMF endorses such strategy as the government has been able to cobble up in support of its mega request

Meeting India's extraordinarily large external debt servicing dues, in foreign exchange, with new debt is a strategy for disaster. The debt servicing liability burgeons every passing year. It is hardly surprising then that Dr Manmohan Singh invited what was no less than a reprimand when he went to the IMF with the largest conceivable Indian hat in hand. Michel Camdessus, Managing Director of the IMF, could not have ticked off the Finance Minister more politely than when he told a press conference to "imagine what it would be not only for India but for the world at large to have a tigerisation of India."

This is the IMF speak for : the government must have a viable strategy to tackle the country's external debt; it cannot rely for long on the IMF and the rest of the world to help it live with crisis; the economic growth rate must be boosted through tigerisation; for this , the Government must persist with 'reform' so that capitalism, foreign and domestic (in that order), becomes the engine of India's growth.

Tigerisation means achieving an annual growth of well over seven per cent a year, as has been done by the Republic of Korea and China. It is of course better to increase the production of goods and services at the enviable rates of the tigers than at 5.6 per cent prescribed by our Eighth Plan. But the case for tigerisation does not stem from the preference for affluence. Without a higher growth rate than planned, the consumption level within the country will plummet. Since the consequent burden is bound to fall disproportionately heavily on the vulnerable poor, the socio-political fall-out will be unmanageable.

India's growth rate is projected to be no more than 3.5 per cent in the first year of the Eighth Plan. Even so, assume that the targeted average GDP growth will be achieved somehow in the Plan period. Debt servicing, in foreign exchange, will require the additional export of goods and services equivalent to 1.8 per cent of GDP. (The country will of course have to keep down the excess of imports over exports to 1.4 per cent of GDP, that is, the level that can be covered by tight-fisted foreign aid.)

Therfore, goods and services available for domestic consumption will grow at 3.8 per cent(5.6 minus 1.8) per year. But we have also to reckon with the requirements of the expanding population – growing at 2.1 per cent a year. This means, net per capita annual consumption growth (3.8 minus 2.1) will be 1.7 per cent , or almost half that of the Seventh Plan period when the country serviced outstanding debt with new debt and not from its own resources.

The fearful prospect is being currently averted with borrowings, mainly from the IMF. By thus pushing up debt servicing with mega borrowings, the ground is being laid for depressing per capita consumption growth in the not too distant future. Debt can only be repaid out of income. Without a rapid rise in income, consumption cannot but come in for a sharp squeeze. The urgency for tigerisation thus arises from the need to maintain per capita consumption growth as near the Seventh Plan level as possible, and not for taking off into the fanciful consumerist orbit of STAR-TV.

●

TIGERISATION requires far larger investment than 23 per cent of GDP achieved in the Seventh Plan and proposed in the Eighth. However, investment must be financed largely with domestic saving, which, as a proportion of GDP, was less than 21 per cent in the Seventh Plan and is slated to rise to not even 22 per cent in the Eighth. (The excess of investment over domestic savings is met by foreign aid and commercial borrowings; the latter, available in the Seventh Plan, is no longer forthcoming.)

India's saving rate is less than two-thirds of the tigers. Tigerisation of India will then have to be achieved with foreign savings, that is , foreign investment. The estimated investment for achieving a growth rate of seven per cent in support of semi-tigerisation, not tigerisation, is equivalent to 28 per cent of the country's GDP (on the basis of the improved relationship of output to investment projected in the Eighth Plan). This is the growth rate required to protect consumption and provide for debt servicing.

Foreign investment required to bridge the savings gap of six per cent of GDP works out to Rs 36000 crores or close to a mind-boggling 13 billion dollars a year. Conceivably, if only a half the required investment inflow materialises, the domestic economy will respond thanks to the inspiration provided by Harshad Mehta with a matching rise in savings. This argument ignores

Pakistan : Contemporary Dilemmas

I.K.GUJRAL

The *Lahorias*, as the residents of Lahore are commonly called, always had a penchant for wit and succinctly telling the juicy part of politics. Neither the partition nor General Zia's lashes have dimmed this zest. During a recent visit to this city of my nostalgia, I met one of my university days friend and a reputed scribe – Abdullah Malik. While discussing the contemporary political scene that looked bleak to him, he said "... if the army were to decide and stage a comeback today, the people of Punjab at least would come out in the streets with flowers to welcome them."

Coming from Malik, with his Leftist background and memories of harsh treatment meted out to him during all military regimes, was indeed surprising. I checked this with several other persons of merit and knowledge. Most of them believed that the popularity rating of Nawaz Sharif had gone very low, but it had not yet touched that desperate mark. For an outsider, it was very surprising since Nawaz Sharif, a son of the soil, had done so much to improve the well-being of the city. Lahore today looks impressively clean, green and tidy. But every assessment of his more than a year's rule highlighted the dark spots more.

Never since the landslide victory of the late Zulfiqar Ali Bhutto had anyone secured a better electoral mandate than him. But saying this would not mean much since only thrice in the history of the country have the people gone to the polls. On two occasions they voted for the Bhuttos – father and daughter – and the third time the mantle of power fell on a Punjabi.

By all accounts, Nawaz Sharif's charisma has vanished speedily. Nobody, not even his devout supporters, endorse that last year's elections were either fair or free. The powerful *troika* – President, the Army Chief and the Inter-Services Intelligence (ISI) – were determined to keep Ms Bhutto out and instal their chosen favourite Nawaz Sharif. For this they had no qualms. Ms Bhutto's own inaptitudes facilitated their task. A more apt politician would not have let her own alliances crumble so easily. For a while Sharif thrived on persecuting her, but such pursuits never last long.

In the meantime, a series of financial and other scandals caught up. What is known as the "Cooperative Scandal" had adversely affected fates and fortunes of nearly 700,000 small depositors in towns and villages of the country. It is widely believed that the Cooperative Banks scam involving a staggering figure of Rs 9.73 billion, had a lot to do with the misdoings of some political heavyweights and their underlings. Kismat of many others was doomed with the bankruptcy of the infamous BCCI that was accused of laundering drug earnings of some highly placed persons. Enquiries in these scams have been ordered but they hardly carry any credibility.

The story of the BCCI – in the context of Pakistan – is very murky. Although it had originated in the Gulf, Pakistanis always took pride in owning it. General Zia's son was its top executive, while many other high and mighty ones in the polity were its patrons and beneficiaries. Millions of dollars are believed to have been siphoned to the Afghan *mujahideens* as well.

While an erudite Commerce Minister of Nawaz Sharif was very enthusiastic in projecting privatisation spree as a success story, Ms Benazir Bhutto had, with a touch of drama, said that "while one brother was selling, the other was buying". The Sharif family is a leading industrial house. Any number of scandals charge them of profiting from the "deregulating of the economy". So much of muck is talked about some leading families in political circuit that accusations against Asif Ali Zardari, Benazir Bhutto's husband, looked puny by comparison.

A close associate of the President has been accused of grave misdoing in Sind. Ms Veena Hayat's molestation scandal had shaken conscience of the whole Pakistani society. Even a brief stay in Pakistan filled one with such innumerable stories of kickbacks that our own Bofors and the submarine slanders looked under-sized. Stories about misdoings of what Benazir has called the "Gang of Four" have contributed a great deal in dipping the image of the Nawaz Sharif regime.

◆

ALTHOUGH affluence of the upper crust of society is staggering, the economic situation of the country continues to be critical. The mounting defence expenditure, on the one hand, and stoppage of the American aid, on the other, have added to its woes. Following the IMF prescription, several steps have been taken to bail out the economy but the end of the tunnel is still out of sight. It may not be peculiar to Pakistan.

The author is a former Minister of External Affairs, in the National Front government.

Almost every Third World country that does not enjoy nature's oil bounty is confronted with similar dilemmas. The stranglehold of mounting debt is getting tighter. Pakistan's external debts are presently estimated at about 15 billion dollars.

"The dominant reality in Pakistan today", says I.A. Rehman, a highly respected journalist,"is the difficulty being faced in completing the transition from the authoritarian system of General Ziaul Haq to normal democratic dispensation...." This is true!

But for the intervention of the Chief of Army Staff General Aslam Beg,in the post-Zia era, another bout of martial law would have captivated the country's polity. Now it is commonly believed that Zia's dictatorial regime not only subverted the 1973 Constitution, it also proved to be "more disastrous for the country than all earlier military regimes, it left on every sphere of Pakistani life deep scars of ruthless repressive rule...." says Prof Kalim Bahadur in his merited assessment of the post-Zia period.

A Bangladeshi scholar, Dr Raunaque Jahan, interpreted the in-built tensions of Pakistan as " failure of national integration". At one stage it scared away Bangladesh and in its contemporary era it was alienating Sind and Baluchistan. But the ruling elite pays scant attention to it. The Punjabi caucus has benefited so much from power centralisation that any idea of devolution of authority or making the polity federal is abhorrent to it. Even within the limited provincial autonomy, it is the big feudal lords and the Pirs who reign, but it is the Punjabi-dominated military-cum-bureaucracy caucus that really rules.

It would be idle to expect that such coalitions would ever let any democratic institution, particularly at the grassroot levels, thrive. As a background it may be recalled that in the past such coalitions had insulated most of this region from the anti-imperialist upsurge. Sind had its *kisan* movement led by the legendary G.M. Saeed. He continues to feel suffocated in the contemporary environment.

◆

THE NWFP, despite its tribal society, got inducted into the Gandhian movement and that explains their high level of politico-democratic urges. Entry of the three-fourth million Afghans has gravely upset their inner cohesion and economic prospects. The Baluchis never deserted tribal loyalties and their spirit of independence. Pakistan could never assimilate them despite harsh army punishments. The Baluchis, it may be remembered, are living in large numbers in Iran and Afghanistan too. Their tribal relationships transcend national boundaries and that adversely affects the nation-state's cohesion. The Zia programme of Islamisation had a sectarian overtone too. It outcasted the Ahmadis and stoked the Shia-Sunni animosities.

Benazir Bhutto was riding a wave of high popularity when she returned from exile in 1986. The Muslim League regime led by Junejo that had been installed in power on the basis of a party-less poll, was shaken. For a while it looked that even an uncanny Zia may not survive. But she neither projected a cogent platform nor was she skilful enough to put together her disarrayed party. As a legatee of her father she relied more on slogans, but unlike him her grasp of the power machinations was unsure.

Some powerful elements in Washington liked her but the Pentagon's foremost priority was the Soviet presence in Afghanistan. It could not disturb the *troika* that was so efficient and cooperative. The American support, on which she had relied so much, was perfunctory. Her tilt towards the USA alienated her from youthful "progressives"in her own ranks, weakening the nerve centre of her party. When the elections came, she chose to delete the young and enthusiastic cadre that had suffered so much at Zia's hand and was committed to her professed ideals, in favour of the feudals who, in turn, jettisoned her.

The story of Benazir's brief ascendance to power may remind one of Joan of Arc minus faith in her own ideological moorings. She used all her rhetorical histrionics to capture the platform of her political rivals. But neither her talk of a "thousand years of war" with India. nor the "*goli chalao, goli chalao*" (shoot, shoot) for "Azadi" for the Kashmir, secured a place for her in the power circuit, nor did she get back her lost constituency. By the time President Ishaq delivered his fatal blow, much of her lustre had been lost. A well-planned disinformation campaign of her adversaries played havoc with her reputation.

With her dismissal, the *troika* plus Ambassador Oaklay of the USA rode back to total authority. The Kashmir front was heated further, and with "victory" in Afghanistan well in sight, they had reasons to be jubilant.

Unceremonious withdrawal of the Soviets from Afghanistan has generated new dilemmas for Pakistani foreign policy. The transfer of power in Kabul has neither been peaceful nor placid. As a matter of fact the ethnic conflicts in that country has every possibility of flowing over to Pakistan as well. The ISI has staked a lot on Pushtoon-speaking Hekmatyar, but the ongoing civil war has spilt the entire country on ethnic-cum-religious lines. It presents grave dilemmas for the policy-makers.

With a great deal of gloating, and as if to mock me, some leading Ministers in Pakistan told me of Pakistan's " great achievements" in Central Asia. Many ministerial delegations had travelled to the capitals of the new republics and signed some bilateral and multilateral agreements for trade, etc. On some occasions, they had also tried to mobilise them over the Kashmir issue. All this had a touch of superficiality and did not manifest a mature understanding of the Central Asian complexities and their urgent economic needs. Pakistan, or for that matter, the entire South Asia, has neither surplus resources nor enough energy to bail them out of contemporary crises.

In the entire region there is a sudden explosion of unfamiliar ideas, alliances and conflicts. Almost every new state is embroiled in a shooting war with its neighbour, or is busy putting down secessionist eruptions. The idea of a Pan-Turkish bloc threatens territorial integrity of many countries ranging from the Arab states to China.

Violent conflicts between nationalisms, ethnic loyalties and religious faiths are already taking a heavy toll. Wars are being fought between Armenia and Azerbaijan and also within Georgia. The situation in Tajikstan is fluid and unstable, while several units of the Russian Federation are up in revolt.

Overriding all these are destabilising dynamics of fundamentalism and sectarianism. While an overwhelming majority of the Central Asian people are ethnically Turkic, they are sharply divided as Sunnis, Shias, and Sufis (Sufi-ism we might recall, had originated in this region). Then there is a vast support for " Jadidism" or reformism.

An obessive upsurge of fundamentalism has created additional dificulties for the Pakistani polity. Despite the high profiles of Jamait-i-Islami and its cohorts, the elite of Pakistan has never been taken in. This explains why the "Islam-*pasand*" parties never got more than six to seven per cent of votes in any poll. Senator Prof Khurshid Ahmad is a very articulate leader of the Jamait. He candidly told us that the Pakistani concept of nation-state was very different from that of the "secularists", and it was an icon that Pakistanis did not worship. "To us," he said, "Umma is the basic concept that melts national boundaries...." Both he and President Ishaq were talking of "incomplete process of partition".

This concept may be of concern to us but, at the same time, it means that Pakistan is one country whose borders remain undefined. Neither the Soviet Union (nor its successive states), nor any regime in Kabul has ever accepted the validity of the Durand line that was arbitrarily drawn by the British. This has been a bone of contention for all Pushtoons. The legendary Khan Abdul Ghaffar Khan epitomised this feeling by instructing that his remains after death be interred in a grave in Jalalabad.

●

FOR whatever reasons, and in the space of this article it may not be possible to examine them in details, Pakistani polity has never been able to emerge out of the shadow of army generals. This has frustrated many. As Air Chief Marshal (Retd.) Asghar Khan puts it: "They (the people) believed that in this new state they had helped create, they would receive social and economic justice; they believed that they would be they would be equal before the law, that they would be free to criticise their rulers and would be able to replace them when they so desired. They never believed for a moment that in this new state, the exploitation of the poor by the privileged would continue and they never thought that within a relatively short time, a coterie of generals would begin to wield political power. Pakistan was the result of a democratic and constitutional struggle. It was not created or conquered as the result of a military campaign. Nor was any general its architect".

But this mass frustration and disillusionment has not been able to assert itself. Most of the time the army has ruled either directly or by proxy. But why? As Prof Mohd. Waseem of Pakistan puts it: "In Pakistan the nationalist party was unable to organise itself as an agent of political mobilisation and critically depended on traditional elite for support at the local level. For example, the Muslim League drew upon the support of landord Pirs for mobilising their religious followers in favour of Pakistan."

And, "Under these circumstances, party was not much of an intruder in district politics which continued to be patterned after the previously operative patron-client relations with relative impunity. It was natural that a party which failed to get control over the purse and policy from the bureaucracy at the federal level lost credibility at the local level as an alternative patron of the elite. The bureaucracy which initially fought for maintaining its powers and privileges finally made a common cause with the military with whom it shared a perspective based on suspicion of all public activity..." and the " party was distrusted as a mere destablising factor in the locality and a rival policy-bearing institution at the highest levels. The electoral mode of politics which defined the role of parties and Parliament itself became the greatest casualty in this context."

The two recently held elections should have changed the political scenario and social psyche, but it was not to be seen. "What the military rule does is to undermine the power potential of parties and Parliament by rendering them non-functional. While the constitutional component of the colonial tradition is taken out of politics, the more virulent tradition of bureaucratic rule gains momentum and causes general discrediting of politicians as brokers between the local community and the state. When the military withdraws from politics, the capacity of a post-military civilian regime to manage conflict in the country is seriously circumscribed. Having once struck, the military continues to cast its shadows over the way pollitics is organised in the country."

In the midst of this uncertain and cruel process of transformation, the anti-Indian syndrome continues to be at the top of the nation's agenda. Whether it is Kashmir or the nuclear arms, or the arms acquisition, these postures sustain the stranglehold of military junta. ■

Paradigm of Entropy State

V.N. NARAYANAN

When Aid is worse than AIDS

Rajiv Gandhi had more than once declared that 85 per cent of all government outlays do not reach the intended beneficiaries. His whiz kid Sam itroda provided a clue to where the funds went: the olitical brokers, bureaucracy and "edifice-making"

Last week Harshad Mehta told a newspaper repre-entative that 80 per cent of all trading in India was in iolation of rules. He ought to know.

The World Bank the other day said that India is the hird biggest debtor country in the world with a current lebt burden of $74 billion(at Rs 30 to a dollar, that vorks out to Rs 222,000 crore!) with a debt service urden of $20 billion. During the five years 1991-96 ndia's repayment liability is estimated to be $47.2 bil-ion and going by the country's incapacity to generate oreign earnings in a substantial manner and the ex-ected quantum of aid inflow, the foreign aid received n the coming years will be less than what the country ad to repay by way of principal and interest. In brief, ndia will be n the same position vis-a-vis aid-giving ations as the rural borrower in India was in the clutches f the moneylender. Aid is a self-perpetuating instru-nent of national insolvency and enslavement.

Interestingly enough, the World Bank has also evealed that India did not utilise aid to the tune of $20 illion! Either this country did not need the money it orrowed or it had no means to spend all the amount.

These four paragraphs have something in common-ogether adding up to what Hazel Henderson, a brilliant uturist-thinker calls the "Entropy state". Entropy is a neasure in physics of energy that exists but cannot be put o work. An entropy society, according to Henderson, is ne where "the transaction costs that are generated equal r exceed the society's productive capabilities". India is lready in that state, but I will come to it later. A set of ules follow from what has been stated above. These are:

Rule No.1: The government exists for itself, and for the government servants in that order and never for the people. So, mortgage the economy to get dollars in driblets and collect Rs1500 crore from the people of India by hiking gas and petrol prices today to pay ADA and bonus to the government staff tomorrow.

Rule No.2: The government's laws are for the law-abiding and not for the law-breakers. No need for illustrations there!

Rule No. 3: Foreign aid is strictly not for economic development. It is aimed solely at meeting the current account needs of the government and foreign travel needs of ministers and bureaucrats. Borrow not to increase your production capacity but to pay for your consumption requirements. When the latter is met, say you don't need the next tranche of the IMF loan, but keep asking for more.

Rule No.4: You need aid to subsidise the Australian and Canadian farmer but to get aid you must cut subsidies to the Punjab and UP farmer.

Consequently, Harshad Mehta is a product, not a malcontent, of the system; the security scam is a logical occurrence, not an aberration. Terrorism, separatism, communalism, corruption, etc, are manifestations, not offshoots, of the system. We must be thankful to the Harshad Mehtas, the Jharkhandis and even the militants of Punjab and Kashmir. They are the convex mirror images of ourselves. Instead of recognising the distorted images of ourselves, we see them as external afflictions to be snuffed out, vanquished or suppressed. If Amnesty International talks of human rights violations and torture of prisoners in India, we do not ask ourselves why such things happen, we question the bona-fides of Amnesty.

Over the past two decades we have both institutionally and psychologically destroyed all self-corrective mechanisms in society and government. That is why we need soft options like deficit financing at home and economic aid from abroad. Knowing full well that aid is an instrument of global economic imperialism, we seek it out at the cost of national self-reliance and even economic sovereignty. As J.K. Galbraith rightly points out, economic wisdom has largely become a factor of affluence."A country is qualified to extend economic and other advice in accordance with the size of its gross national product. The result is a very large flow of instruction – of counsel, warning and rebuke – from the rich countries to the poor." There are very few experts in the USA who would credit their government with good economic management and yet the USA is today dictating its economic thinking to every country in the world. The weapon is economic aid, which can be as deadly as AIDS at worst and at best as useless as Indian diplomatic missions all over the world.

In the classic Tamil version of the epic *Ramayan*, poet Kamban depicts the state of Ravana after the death of his valiant son and brother as "the agony of the debtor". Those were days when the ignominy of debt was as excruciating as defeat in war. In our own times, the Soviet Union, despite the drawbacks of the Communist regime, was a self-respecting economic entity in addition to being a military superpower. Today's Russia and even Deng's China are pathetic shadows looking for crumbs from the West and willing to be bullied to submission in the United Nations by the USA.

Look around the world. How many countries receiving US aid over the past half a century had moved from the

This contribution is from the Editor-in-chief of The Tribune, the well-known daily from Chandigarh, in which this contribution first appeared in two parts.

status of poor country to rich? None, if you omit the post-War Marshall-Plan beneficiaries. Go further, how many countries which were part of defence pacts of the West getting the most-favoured nation treatment have prospered to economic self-sufficiency ? None. The late Y.B.Chavan was profoundly specific. He said some kind of a curse was attached to countries which had military tie-ups with the US. Look at the Philippines, Pakistan, *etal.*

Aid is politics and not altruism. That being so, it will not serve the aims of the aid receiving country. The reason is simple. With the economic aid comes the economic philosophy of the donor country. Liberalise, privatise, cut subsidies, allow direct foreign investment, raise prices, lower currency value, cut down deficits and from there to stop nuclear projects, sign the non-proliferation treaty and yet further to observe human rights as we do.

All that has already happened. Now an indication of what we are in for. In the first four months of the current year India has paid by way of debt repayment and interest an amount which is Rs 425 crores more than what it has received as foreign aid. The foreign exchange balance sheet looks like this: Inflow $ 4.15 billion by October 1992. Outgo $ 5 billion by March 1994. That is, India must get a 20 per cent return on its aid in 18 months just to meet its debt liabilities. All our industrial production, export earnings and efficient economic performance (overdoses of wishful thinking!) would be sufficient only to meet the debt. What scope is there for development? It is the classic example of the race in *Alice in Wonderland*: "Here it takes all the running to remain in the same place. If you have to reach somewhere, you must run twice as fast."

The entropy cannot state do that. So more arm-twisting and more advice from the aid giver. No, don't take loan or aid. Allow us to enter your markets. Ten years ago, the World Bank told India to go in for commercial loans instead of asking for institutional aid. We did. The result is a 300 per cent increase in our debt. In the first 40 years of India's independence the country accumulated a foreign debt of Rs 40,000 crores in just four years, after that it doubled to Rs 80,000 crores. That is about to double in two years. Now comes the advice to allow direct investment. Economic colonialism is not a possibility but an imminence. The arch Robber Clive, as Marx called the founder of British rule in India, has a few lessons to learn from his descendants settled in the new world.

I have concentrated on rules 3 and 4 in the earlier part of this write-up to emphasise the fact that foreign aid is an essential concomitant in the economic enslavement of a nation and in speeding up the march towards the entropy state. Briefly. the government needs money to solve its problems. It taxes the citizens and prints notes to do it internally. To fatten itself it needs external aid. We have come to the end of economics, not of history.

II

Let them eat GNP

Until, the day the Harshad Mehta bubble burst, India's money and share markets were on Cloud Nine; everyone was talking about the vitality and vibrancy of the capital market and the resilience of the Indian economy. The illusion of societal prosperity was fostered by the Phantom prosperity of share-holders and mutual funds and the real prosperity of buccaneers and manipulators. It had to collapse to the simple reason that there was no accretion for real wealth in this phenomenon. The market boom, like inflation, is the manifestation of the massive "economic wheel-spinning" where money flows faster and larger, people work at feverish pace and the general level of life appears to be rising appreciably. The snag in all this will be that fewer and fewer products, goods and services will be resulting from this flurry of hyperactivity and money becomes less and less related to real value.

A horde of highly talented and productive people engaged in utterly unproductive activities—that is the typical entropy state. The colossal illusion of prosperity simultaneosly raises expectations giving rise to a bewildering array of unanticipated social costs. The human casualties of the entropy state—society's dropouts, the educated unemployed, the uneducated unemployable, the causeless terrorists, the aimless addicts and myriads of ordinary citizens who cannot deal with Big Brother bureaucracies—keep growing. So does the proportion of the national income to be spent in controlling crime, mediating conflicts, protecting citizens and the environment. New levels of expenditure are reached without any prospect of growth in productive capacity or income.

Costly and highly remunerative parasitism at one level and unrewarding hard labour at another—the two Indias of Sharad Joshi and Rajni Kothari. The one grows quite unmindful of the existence of the other, perhaps in the mistaken impression that economic growth as exemplified by the gross national product enriches all. In a different era, the aristocratic lady, when told that there was no bread for the people, was believed to have said:"Let them eat cake". The modern market economist and the World Bank expert of today says:"Let them eat GNP".

The campaign around the world about the demise of communism is as premature and misdirected as the current obsession in India with the seeming virtues of privatisation. What is really taking place is the merger of the government of business into the business of government-Harshad Mehta lecturing to the Finance Ministry on budget-making and the kins of politicians and bureaucrats recruited as executives in foreign banks and multinationals-for mutual benefit and at the cost of society. If the bank and securities scam has any lesson to impart, that was known to Thomas Jefferson almost 280 years ago. He warned, back in 1816, that "banking establishments are more dangerous than standing armies". How prescient! Today, the World Bank headquartered (forgive the horrendous verbalising) in Washington conducts war by other means and achieves ideological conquests for the USA.

In his thin and admirably provocative volume entitled *Building a New India*, Dr Subramaniam Swamy sets forth an eightpoint agenda for national renaissance. The most positive part of the book is the title and the recognition of the urgent need for such an agenda. It is not easy for thinking persons to agree with Dr Swamy on any issue but his call for an "alternative model" for the economy which would reject both communism and capitalism for the same reasons (they kill individual enterprise through the use of party and corporate bureaucracies) is certainly on target. It was no accident that the educated feudal-intellectual class of Indians under the British were the most vociferous advocates of the socialist economic model at the dawn of independence Communism and capitalism are not only "converging" ideologies, but also ones that lead inevitably to the entropy state. All along, there was an inevitability about India's slide-down – from being the 105th country in the ranking based on the GNP in 1955 to 161st in 1990 ; from the nineteenth big exporter in 1955 to fortyseventh now. Dr Manmohan Singh's liberalisation-privatisation miracles are as much doomed to degeneration as the mythical Nehruvian model of growth adopted in the fifties.

Dr Swamy's analysis cites a remarkable fact to emphasise the economic failure. It is given by Dr C. Gopalan, former Director- General of the Indian Council of Medical Research, who says that out of 23 million babies born every year in India, only three million – 13 per cent! – can expect to grow up into normal human beings."The other 20 million will either die in the first year (19 per cent) or be handicapped one way or another due to malnutrition or inadequate medical care to be substandard survivors who will perpetuate the undernutrition scenario over successive generations". Not only has India failed to control population – it grew by 161 million in the eighties to a figure of 844 million and will cross the one billion mark before the century is out – but it has failed to ensure a healthy population. The substandardisation of Indian people permeates all sections of society – politician, bureaucrat, intellectual, and labourer.

The West's emphasis on economic growth is questioned by wise men in the West and it is wholly inapplicable to India with its bewildering plurality of tongues, skills and faiths. The strategy should be directed towards a better re-allocation of resources and their efficient utilisation. What we need is not greater production of Marvel soaps, Uncle Chips, *et al.* – but regulated consumption of essentials of life. V.P. Singh's Mandalisation drive, now happily given up, sought to spread the icing of power on the government cake to a wider area of the population. This is what we must do to our existing resources, both human and material. Reduce the cost of economic growth and stem the tide of rising expectations; manage the economy, not manipulate

That is also the greatest argument against foreign aid – it deters the government from looking within. If money is available, there is no need for austerity or even efficiency and if you aren't austere, you can always borro and you will. Privatisation will marginalise the poor for ever by fixing the government's looks on the better – off fifteen per cent of the population. Since that itself is a huge number, about 150 million people, the look of prosperity would be substantial and deceptively national and real.

People ask: can we do without aid? We can. Every self- respecting nation can and must. Of course, it will be inconvenient if India is denied aid, but it will be a disaster if it gets the aid it is seeking. Where do we find the resources to meet our needs in the short run (In the long run, as Keynes told us, we all are dead)? From within, of course. We must undergo the discomfort of having to reduce our wants so that they can be met. For instance: close 60 per cent of the Indian embassies around the world. They do precious little for India's image abroad but cost the nation dearly. We can save up to $ 400 million in foreign exchange. Also, let us have smaller missions in unpretentious apartments, instead of the present sprawling complexes. The value of the Indian Embassy's real estate in Tokyo is estimated at over one billion! Why not sell most of it and take a small building on rent? Diplomacy, in these days of rapid transport and satellite communication, can be done at home and even be privatised to the great advantage of the nation.

Reduce the civil service by at least 50 per cent. You have double saving in that; you save on recurrent DA, bonus, etc., and corruption may drop by some percentage. Other than the political parties and the Indian Administrative Service, the most powerful and character-corrosive vested interest group in the country is the brotherhood of national misery called the government employees. Look at the havoc the engineering department staff wrought on the people of Chandigarh last week!

Abolish official cars for all but the highest level of bureaucrats and ministers and fix a ceiling on fuel consumption for official cars. Encourage officials to own personal cars and pay them a fixed conveyance allowance. Develop a fleet of deluxe public buses to transport employees of various economic tiers. Tax private corporations which provide company conveyance to their staff. Let us ration petrol and diesel rather than import and waste in luxury consumption using aid money or precious foreign exchange.

Close down the offices of DGTD and DGS & D which have become the cockpits of governmental corruption over the years. There are several areas of government which need the guillotine and not the scissors. The best quote to have come from the Reagan era which promised "less government" was his statement: "Government is the problem". (I am not forgetting the memorable remark by Reagan – "I forgot to duck, dear" – to his wife Nancy after he was shot at close range by a psychopathic assailant.) Yes, we need less government, but the government is the least qualified agency to lessen itself. Procrustean, the dimunitive Greek pirate chief who ordered that no citizen of his domain should be taller than him – were cut at the top as at the bottom to conform to specifications of uniform height – never applied the principle vis-a-vis those shorter than him. Socialism does advocate some Procrustean principles in the name of equity, but without success. Today the people of India must become Procrusteans and cut the government down to size. ■

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

Politics of Communalism : Lessons from Kerala

BENNY JOSEPH

Kerala, known for its religious amity, is threatened with violent polarisation amongst the different religious groups following the recent incidents of communal violence. This was unusual for a State which stood in the forefront of many historic struggles, be it social or political. It also occurred in a State which stands better in the distribution of a number of basic services such as education, primary health and public distribution systems catering to all sections of the population. Hence the question needs to be answered as to what are the underlying factors that were responsible for a sudden communal conflagration, irrespective of the social and political developments. The recent incidents, at the same time, are a pointer to the fact that it may be too premature to orchestrate such a development, for the State is now sliding into a deep crisis in the social, political and economic levels. The ability of the political parties, social groups to arrest this degeneration stands questionable. Opportunistic manipulation of the existing order is the rule of the time.

The politics in the State had,for a long time been centerd on coalition partnership resulting in the deterioration of political ethos at all levels.

The Left parties have lost hegemony which they enjoyed during the 1950s and the early sixties. On the other hand, opportunistic influence of communal vote-banks constitute an important factor in the politics of coalitions partnerships. The Hindus, Muslims and the Christian communities have increased their fundamentalist hold over the traditional masses, no different from other parts of India. At the local level this gets turned into alarming situations when exploited by parochial leaders— religious and political. What are the factors that were responsible for such a crisis?

Kerala had a long tradition of social and political advancement. But even in this, one can see the underlying trends of communal and caste politics, be it Communist or Congress led governments. In the murky coalition politics of Kerala, it has come to be accepted that no single party or parties can come to power without the support of communal or caste sections. This being the bane of Kerala's public life, the political rivalry and conflict between the different communities, the Ezhavas, the Nairs, the Christians, Muslims,etc. control the political, social and economic structure of Kerala. Thus the political system in the State revolves on communal foundations.

Over the years, communal associations have become effective socialisation agents of the people at the local areas creating political clout. This sort of politicisation resulted in more and more communal and caste-based fractions and associations. The recent spurt of activities of the RSS (Rashtriya Swayam Sevak Sangh) and the emergence of ISS(Islamic Sevak Sangh) are only an addition to the existing political vacuum.

Looking back at the history of the State, we find that politicisation was initiated by communal-based solidarity groups which exploited the traditional ascriptive values, which had come into being during the early phases of modernisation of the Kerala Society. These groups were considered to be the prime initiators of the early stage of development. In the second stage, the politicisation fragmented each of the solidarity groups and promoted the acceptance of many diverse values, ideologies and affiliations promoting the emergence of a multiparty system. Among the competing ideologies of the time, Marxism emerged as the major force.

●

THE four districts of Malabar with certain pockets in Alleppey and Quilon form the important Muslim areas. Ernakulam and Kottayam have the Christian population and Trivandrum and Trichur have sizeable Nair population. Medieval Kerala witnessed Nair domination. The Portuguese tried to curb the Arab power in Malabar, thus weakening the Muslim community. Subsequently, the Christians and Nairs thrived under the domination of the British rulers..

Another group,the Ezhavas, traditionally cultivating sub-tenants, classified as the depressed Sudra caste, forms around 25 per cent of the population. In Travancore, they were successful in forming the SNDP (Sree Narayana Dharma Paripalana Yogam), the first communal association. It was followed by the Nair Service Society (NSS). On the other hand Cochin witnessed the Christians' entry into the Congress. In the 1940, large sections of the Ezhava population patronised communism through labour unions, peasant movements and student fronts. At the height of the nationalist movement, the Communist Party succeeded in uniting the working class and peasants, in voicing economic and political demands through common agitations. Under

the leadership of E.M.S. Namboodiripad and A.K.Gopalan, it succeeded in building up a tight-knit and trained communist cadre. The reorganisation of the State in 1956, altered the communal composition of the population dominated by Nair-Christian axis by the ideology of Marxism. But this was soon thwarted. In all the major events that followed, like the Education Bill Agitation, Liberation Movement(1957-59) the Christians, Nairs and the Muslims entered into an anti-Communist alliance. Thus, for the first time the secular ideology of the Left parties got a stiff opposition from the communal groups. Later a section of the Christian community switched its loyalty from the Indian National Congress to form the Kerala Congress in the 1970s.

In the electoral alliance of the 1960s, the Communists adopted the Muslim League as a partner in the United Front ministry. Subsequently the League found the fulfilment of the creation of a new district, Malappuram, with a large Muslim population. Soon, the League was also successful in bargaining for coveted posts in the cabinet.

The introduction of modern education and subsequent Communist ideology brought secular trends in the modernisation process of Kerala. The growth of journals and newspapers changed the agricultural society, resulting in structural shift in land ownership. Media and communication helped the development of the vernacular language and literature. The stream of radical literary writers were of great value in initiating change, fighting the traditional beliefs and customs. It led to new social themes for radical change.

At the political level, the period of the early seventies witnessed the most militant mass mobilisation by the CPI. Land reforms and the resultant agrarian legislations had a constant mass involvement at the grass roots. With the trade union movement, many industries were brought under the Minimum Wages Act. The wage policy gave the Communists much support among the lower strata of the population. Cooperation schemes, like the Toddy Tappers' societies, which ultimately turned violent kept the working class in the forefront of many agitations. These movements have virtually come to a standstill now.

Economic Backwardness and Unemployment Problem

The developments that took place at the social levels were not matched by corresponding developments in the economy. Shortage of land and unemployment poses a perennial problem crippling future development. Low rate of industrial growth and its resultant social cost is another pointer. Trade union militancy and daily wages have increased to alarming heights. In Kerala,where nearly 80 per cent of the population own less than half an hectare of land, it is no exaggeration that the wage factor has made life difficult for the small holders.

The inflow of remittances from the Gulf in the late 1970s is another factor. Previous governments failed to channel the Gulf money in a proper way which would have helped the development of the state. Contrary to the existing redistributive efforts, the remittances created a consumer boom, unparalleled in the history of the State. This in fact caused a sudden polarisation in the existing standard of living.

At the social level, it created multiple problems. Along with Gulf money, populist pulp literature and pot-boiler movies degenerated the culture that had been painstakingly built over the years through radical literary movements. Economic backwardness has raised the number of unemployed and the State has become a virtual 'exporter' of manpower. Even though subsequent governments have been successful in working for the advancement of education, this has not been supplemented by creating additional job opportunities.

Political Factors

Both the Communists and the Congress have to be blamed for the existing crisis in Kerala today. Both groups had opportunistic alliance with the communal parties,particularly the Muslim League and Kerala Congress. Factionalism has always been a problem with the Congress party in the State. In the last few years it is not able to produce a viable leadership acceptable to the people who could rejuvenate the Party. On the other hand, leaders have used parochial methods for fan following and electoral victory.

The Communist movement, witnessed in the heydays of the early fifties and sixties, has come down. With the decline of international communism and the subsequent debacle of the Soviet Union, communism in Kerala has its own peculiar problems. Old leaders and grassroot party activities have declined. New leaders are yet to project their capability in the changing political environment. Thus the parties that have ruled the roost over the past one decade have been minority-based communal parties. This has resulted in a situation whereby no group, be it the LDF or the UDF,can be in power without catering to the interests of the muslim, the Christian and other minority- based factions. Even these minority fronts are devided on many issues and have failed to produce a coherent plan of action for their parties. As a result, religion is often highlighted for political ends. In such a situation, it is quite obvious that a certain section of the Muslims have been cornered through fundamentalist ideas by parochial leaders.

BJP as a factor in Kerala Politics

Even though Hindu communalism cannot make any headway in Kerala politics, it has made its impact. With Muslim League gaining much access through its long alliance with major groups, its communal influence spread from the Muslim majority areas of northern

US-Japan Relations In New World Order

THOMAS SEBASTIAN

America is on its way to build a new world order by its leadership. The new world order, in Bush's comprehension, means "to build a new international system in accordance with our own values and ideals.... We must not only protect out citizens and our interests, but help create a new world in which our fundamental values not only survive but flourish."

However, the present economic crisis decelerates this move. Reeling under economic recession, the US is trying hard to improve its economic condition by various means so as to stabilise its economy. In this context it has become imperative for the US to set right the economic friction between Washington and Tokyo in order to preserve its leadership role in the new world order. The nature of the US-Japan relationship is bound to have a telling impact on the evolving world order.

Economic Friction in US-Japan Relations

In the US-Japan relations immediately after World War II, the US had been obsessed with security matters. On the other side, Japan gave supreme importance to the economy in its post-War policy. Its economy took off in a guaranteed security environment which was provided by the US. A reasonable degree of Japanese economic recovery was acceptable to the US. This was to be exhibited as 'success story" because of Japan's pro-Western contacts and policy. The US-Japan economic relations in the 1950s and the 1960s were basically harmonious. Specific product-related issues were handled through voluntary steps. The competition from traditional Japanese exports like clothing, textiles and shoes was resolved by informal voluntary export restraints (VERs).

The economy gradually took precedence over security issues in the late sixties and early seventies. In the 1970s the Nixon Administration was ready to use the "Enemy Act" provision to restrain Japan on textile export. With the two oil crises and subsequent inflation, unemployment and severe recession, the US economy had been facing a worsening situation. Besides, Japan's new competitive and high- quality consumer goods and machinery were posing challenges to the US.

While textiles remained a potential source of tension in the US-Japan relations, in the late seventies technology, particularly electronic items such as colour television, became a major irritant in their bilateral trade. The US has been demanding protection of its electronic firms, chiefly those connected with colour television, steel and automobiles. In the case of colour television, the US tried to overcome the crisis by negotiating orderly marketing agreements (OMA) with Japan to limit colour television exports. By 1976, Japanese colour television exports had captured 40 per cent of the US market. The trade deficit of the US with Japan shot up severely. It became approximately $ 11 billion in 1978.

The author is an M.Phil. student in the Centre for East Asian Studies, School of International Studies, Jawaharlal Nehru University, New Delhi.

Apart from the electronic problem, the automobile issue began to assume the character of a significant irritant. Japan in the 1970s continued to maintain an exceptionally high tariff even after the lifting of quantitative restrictions on imports of automobiles. The protective policy followed by Japan had its adverse impact on its trading partners, particularly the US. Frictions accruing from bilateral trade have been on the increase since the 1980s. To sort out trade-related problems, the US and Japan initiated the structural impediments initiative (SII). Through structural adjustments they hope to overcome the economic problems. But little breakthrough has been made; moreover, the economic issue has been taking serious dimension in the early 1990s.

Relations in 1990s and Bush's Visit

As in the past, the present US-Japan relationship is increasingly characterised by frictions, resentment and mutual recrimination. In other words, the present friction is in one way or another an extension of an already existing one. The economic issue is the thorn in the flesh of the current US-Japan relations. The overriding capacity of Japan's economic power, the recession in the US economy and the subsequent economic and political problems are perceived as a grave threat to the US economy in the coming years. This has become a matter of serious concern for the present US Administration, for it will have a telling impact on the impending US Presidential election. Therefore, it is imperative for the Bush Administration to weather the present crisis with as little damage as possible.

Since US' trade with Japan is a substantial one accounting for the lion's share of the US' balance of trade deficit, it is all the more necessary for the US to find ways to overcome such bilateral economic problems. That would also broaden the prospects of Bush's re-election in the forthcoming Presidential election. It is the domestic imperatives of the economic problems and the coming Presidential election that took precedence over other issues and precipitated Bush's early visit to Japan in the month of January 1992. To quote the *Time* magazine :

> Abruptly cancelled by the White House, for domestic political reasons in early November, the tour was just as impulsively revived, then converted into a re-election road show with Japan trade practices at the whipping post

Bush's visit to Japan focused primarily on bilateral economic issues. The economic bargain was made on a wide range of items besides auto and auto parts. The focal point of Bush's visit was to resolve the US automakers' issue. Bush was accompanied by nearly 21 CEOs of big US firms and they in their negotiation stated that they had been incurring loss in their trade with Japan. The Big Three automakers—General Motors Corporation, Ford Motor Corporation, Chrysler Corporation—in their report noted that their sales fell to an eight-year low last year, plunging more than 10 per cent. The US did, at the trade negotiations, obtain a positive response from Japan. As a result, Japan's domestic automakers decided to increase their purchase of the US-made parts from about $ 9 billion in fiscal 1990 to 19 billion by fiscal 1994. Besides, Japanese automakers came forward with a voluntary plan to sell about 20,000 imported US cars yearly through their dealer network within a few years' time-frame.

The talks between two leaders culminated in the Tokyo Declaration. Attached to the declaration was the three-part supplementary document called the Global Partnership Plan of Action which stipulates a concrete action both the governments have decided to follow in pursuance of the goals of this declaration. The declaration takes into account five issues of contention and suggests means to resolve them. The five major areas of bilateral cooperations are: (1) cooperation to promote world peace and prosperity; (2) political and security relations; (3) economic and trade relations; (4) science and technology; and (5) enhancement of mutual understanding and exchanges. Although the Global Partnership Plan of Action covers a wide range of bilateral issues, it is the auto and autoparts which has been given the maximum emphasis in it. The action plan was formulated to remedy the present economic and trade problems so as to stabilise the US economy.

Miyazawa's Visit

Taking into account different factors like historical linkages between the two nations and the international environment that condition their relationship, one could draw some tentative conclusions as to what would be the possible policy options for these countries in future and the nature of their relationship. The context and the existential exigencies that determined the nature and characteristics of the US-Japan relations have changed remarkably, owing to the revolutionary developments in the world political scenario, namely, the end of the Cold War and the concomitant demise of the erstwhile Soviet Union, the Gulf war, etc. Given this changed environment marked by worldwide economic recession and protectionalism, the US and Japan are restructuring the founding principles of the alliance. The emphasis is being shifted from security interests to economic interests. This altered outlook is evident from the periodic visits of the heads of governments and their respective governments' enunciation of policies on bilateral issues.

The outcome of Kiichi Miyazawa's recent visit to the United States seems to be reinforcing the US-Japan relations in the new world order. Japan's positive responses to the US needs, particularly in the economic front, appear to remove the clouds of conjecture. Japan, since Bush's trip last January, cooperated with the US in a number of regional and global issues. During the visit of the US Vice-President, Dan Quayle, to Tokyo, Japan agreed to coordinate efforts for extending financial help to the East European countries. Japan pledged to provide $400 million in aid in conjunction with the US-managed Enterprise Funds scheme set up in several East European countries to support small and medium scale private ventures.

In addition to this, Miyazawa's acclaim of the US as the world leader and the subsequent revelation of Japan's intention to bolster US leadership unveils the policies opted by Japan in the new world order. The Miyazawa Government decided to extend another economic package to resuscitate the sluggish US economy. The Liberal Democratic Party worked out a package covering extra outlays up to $7 trillion.

On the security front, Miyazawa reiterated that the US forces should remain in the Pacific region as a guarantor of peace and stability in the region. Although the economic problems are yet to be solved, a congenial atmosphere is being developed to overcome or minimise them. The present gesture of Japan is expected to boost the US economy which is plagued by recession. Moreover, it would brighten Bush's prospects in the forthcoming Presidential election.

The US is reciprocating this gesture of goodwill and cooperation on the part of Japan by consenting to Japan's demands. In the first place, Bush—as was already agreed upon in his talks with Shim Kanemaru, Vice-President of Japan's Liberal Democratic Party—did talk to the Russian President, Boris Yeltsin, on the latter's visit to Washington last June, about the Japan-Russian territorial issue. In the second place, Bush assured the visiting Japanese Prime Minister that America will support Japan's move for a permanent seat in the UN Security Council. The US approach on this score is to recognise Japan as an economic power as well as to provide Japan with an opportunity to play a major role in world politics, a role commensurate with its economic strength.

From the strategic, political and economic point of view cooperation between the two nations is not only a guarantor of peace and stability at the regional and global level but also an indicator of the nature of the evolving world order. The political cooperation is strengthened by economic cooperation. This is not merely due to the complementary nature of both countries' endowments. That is, the US with its political and military advantage in the new world order is being economically bolstered up by an economic giant—Japan. The present Japanese readiness to help in meeting the current US economic needs, and the US response by promising support to Japan's move towards acquiring adequate representation (position) in international institutions like the UN, IMF, World Bank, etc. are going to facilitate the evolution of the US-led new world order.

This complementary cooperation of the two giants can be detrimental to the interest of the Third World countries. For, the integration of Japan's economic strength with the US political and military power will develop an environment where they lay down the law. This may lead to the emergence of a US-Japan hegemony in the new world order. ■

The Crisis of Today's Ideologies

ERIC HOBSBAWM

The following is the text of a lecture delivered by the author, a leading British Marxist historian, at the Coloquio de Inviern, organised by the Unam *and* Nexos, *at Los Grandes Cambios de Nuestro Tiempo, Mexico (February 10-20, 1992). It is being reproduced with due acknowledgement from the* New Left Review, *London.*

—Editor

I have been asked to speak on 'the crisis of ideology, culture and civilisation' today—an enormous subject, and one not easy to define. Yet very few people will doubt that there is today such a crisis, even if they cannot say precisely in what it consists. So let me begin by trying to compare the present situation with earlier periods in the era which began with the great revolutions of the late eighteenth century, that is to say, in the era in which, one way or another, human beings have lived in a material world and in societies undergoing constant and unpredictable change.

In some respects, at least for those who think and write about society, all times since the French and first Industrial Revolutions have been times of crisis, for every generation has been faced with experiences and developments that had no precedent, and for which past experience and theories based on it provided no guidance—or at least no adequate guidance. And yet it is also true that historical change in some periods has been so headlong and profound that it has been more than usually difficult to come to terms with or even to grasp, let alone understand, it. We are now living through such a moment, and we have been living through such a period for the past generation or two.

I am thinking not only of the dramatic events in world politics that have been taking place before our eyes for the past two or three years—and I use the words 'before our eyes' literally, for the network of modern television has made it possible for us actually to *see* these events taking place almost as they happened; and modern communications technology has enabled us to participate in them, if we so wish. I am here thinking of a schoolteacher in the English provinces who was in constant contact, via electronic mail, with her colleagues in Moscow during the abortive coup of last August. She could actually inform them of the situation as it was reported on television in Staffordshire, but not, at the time, in Moscow. This was certainly the first occasion in history when time and distance were thus virtually eliminated.

Global Upheaval

The events of recent years have indeed been spectacular and world changing—and also unexpected and unpredicted. Yet the revolutionary nature of the period we have been—we are still—living through goes far beyond those changes in global politics which are now making it impossible for cartographers to prepare atlases that will not be out of date in a matter of months. Never before in history has ordinary human life, and the societies in which it takes place, been so radically transformed in so short a time: not merely within a single lifetime, but within part of a lifetime. Let us consider three such changes.

For much of recorded history most human beings have lived off the land and its animals. This was so at the time of the Second World War, for even in highly industrialised countries like the USA and Germany a quarter of the population still lived by agriculture. Yet etween 1950 and 1975 this ceased to be the case over the greater part of the earth's surface. In Europe, in the Americas, and in the Western Islamic world—in fact everywhere except Continental South and East Asia and sub-Saharan Africa—peasants now form a minority of the population. And this process occurred with dramatic speed. In Spain and Portugal, in Colombia and Mexico, the percentage of peasants halved in twenty years; in the Dominican Republic, Algeria, Iraq and Jamaica it dropped by more than half in the same length of time. (I deliberately take my examples from the less-developed world.)

The second change to consider is the unprecedented creation of intellectuals as a mass demographic phenomenon. Before World War II, people who underwent higher, or even secondary, education, formed a negligible fraction of the population even in the most developed countries. Three of the largest, most developed and most educated countries—Germany, France and Britain—with a total population of 150 million, then contained no more than 150,000 university students. In the 1980s Ecuador alone contained more than twice as many. In fact by then educationally ambitious countries had upward of 2.5 per cent of their *total* population (men, women and childern) in higher education at any time. Once again this expansion was explosive. To stick only to well-schooled Europe, the numbers of students multiplied up to ninefold (Spain, Norway) in twenty years.

The third change is in the position of women. Let us consider merely one figure. In 1940 only 14 per cent of married women in the USA who lived with their husbands went out to work for pay. In 1980 more than half of all US married women did so. Once again, the percentage just about doubled between 1950 and 1970. I need not stress the fact – unthinkable before 1950 – that women are today common as prime ministers and elected presidents.

I could go on, but there is no need. For I have said enough to demonstrate that human societies, and the relations of people within them, have undergone a sort of economic, technological and sociological earthquake within the lifetime of people who have barely got beyond middle age. There has never before been anything like it in world history, for, as I have pointed out, these are not localised or regional changes but global ones even though their specific impact differs from one country to another. And it would be quite astonishing if such drastic changes in material life did not also produce crises in what Marx called the 'superstructure' of ideas – in culture and civilisation.

However, the developments of the second half of this century have also, and inevitably, generated new material problems with which all societies and insofar as they are affected by them all human beings have to grapple. I shall mention only three. The first is the extraordinary demographic explosion which has, since 1950, multiplied world population by about 2.5, and that of Latin America by almost four. A world of over 6000 million human beings has no precedent. The second is the growing inequality between rich and poor countries, which has been reinforced by the disproportionate growth of the population in the poor countries. To put the matter simply – no doubt too simply – the developed economies of the post-War period, that is, the members of the OECD, in the first half of this century represented about one-third of the world's population. Today they represent no more than 15-20 per cent. And the gap between the GNP per capita of the rich countries and that of the poor has widened at an accelerating rate since 1950. Today twentysix countries, with just under 15 per cent of the world's population, enjoy a mean GNP per capita of over $18,000. This is about five times the mean GNP of *the world* and fiftyfive times the GNP of the 3000 million – rather more than half of humanity – who live on a GNP per capita of about $330. An obvious symptom of this unprecedented global disequilibrium is the dramatic surge of migrants from the poor countries into the rich that is now taking place, insofar as racism and xenophobia in the rich ones does not erect barriers against it. But for how long can this situation persist? No world of such spectacular and growing inequality can remain stable for long.

The third consideration is the now familiar set of ecological problems. Thanks to the extraordinary triumphs of science and productive technology we are, for the first time in history, in a position to make our planet uninhabitable. At all events, it is today clear, as it was not before World War II, that unlimited and uncontrolled economic growth without concern for its environmental (including human) consequences, and without systematic management of the resources of the globe, is already leading us towards a fairly imminent era of disaster. The question is how the global action that is necessary can be brought about.

A General Crisis

The developments I have briefly hinted at are quite enough to explain why we find ourselves today in a 'crisis of ideology, culture and civilisation', quite apart from the more immediate economic and political dramas that are being played out today before our eyes, and in which we, indeed, have small walk-on parts ourselves. For, at least in the zone of Western civilisation and economic development, neither past experience nor the ideologies and theories inherited from the pre-industrial past or developed since the eighteenth century, seem to fit the situation of the last quarter of this century.

What I am saying is that the crisis we find ourselves in is not specific to this or that economic or political or ideological system, but general. It is, for instance, a crisis of older and younger traditional Western religions as well as of the ideologies descended from the eighteenth century Enlightenment, as both liberalism and socialism and its various versions are. To give one obvious example, the Roman Catholic Church itself has difficulty in recruiting enough priests and in raising enough income from the faithful, and – in Europe at least – even its most loyal members in the most traditional strongholds refuse to follow its injunctions. Italian women vote in favour of divorce and birth control, and their men, according to the *Financial Times* a neutral observer of these matters, provide by far the largest market in Europe for condoms. The crisis of traditional Churches and the rise of fundamentalist or dissident sects, such as we observe in Latin America, is not my subject. I mention it here only because it is important to realise that, as the second millennium draws to its close, in one way or another the ground is shaking under *everyone's* feet, at least in large parts of the world, including Latin America. We are not talking only about family debates between the ideologies of the nineteenth-century West. Our drama – whatever the parts we have in it – is today being played out in a theatre with which we are unfamiliar, on a stage we cannot quite recognise, and amid unpredicted and unexpected, and insufficiently understood, changes of scenery.

There is another, and somewhat more specific, sense in which the present crisis is global and general: I mean in the more strictly economic and political sense. Western Communism (but not so far, it should be noted, Asian communism) has suddenly and totally collapsed. This has led journalists, politicians and ideologues to play zero-sum games. If communism has lost, then its antagonist, capitalism, must have won. If socialist economies have collapsed, then their binary opposite, free-market liberalism, must have triumphed. Yet this is patently not an adequate picture of the world economy in the early 1990s.

When historians look back on our half century from the next millennium – which is not far away – they will, I think, certainly see communist systems, descended from the October Revolution, which, from the end of the 1950s on revealed their increasing inferiority to Western market economies. From the 1970s on, they began to show signs of breakdown. However, they will also see a world capitalism that, after a quarter of a century of extraordinary and unpredicted expansion, entered another era of crisis in the 1970s. From this it has not yet emerged. During its shortlived 'golden age', 1950-1973, capitalism appeared to achieve the impossible. It virtually eliminated unemployment, economic slumps and in the developed countries serious poverty. It enjoyed constant and accelerating economic growth, even in its more sluggish countries, and gave its working classes the expectation and the reality of constant material improvement. Yet from the early 1970s on this ceased to be so. Capitalism once again has mass unemployment, poverty and even hunger and homelessness amid the wealth of even very rich countries. It has static or even declining incomes and serious depressions.

No doubt in the rich and advanced market economies these are comparatively mild setbacks; but what confronts the ruins of the Eastern socialist economies today is not a triumphant capitalism but a global capitalist economy in trouble, and recognising that it is in trouble. One even hears reference to the 1930s. Consider a recent public-opinion poll from South Florida in the USA: 29 per cent of the respondents had members of their families out of work, and 34 per cent had members unemployed; no less than 73 per cent expected the quality of life in the next generation to worsen.[1] As for the developing countries, again with the regional exception of Eastern Asia, the 1970s, and particularly the 1980s, have been a miserable period, as nobody in Latin America and Africa needs to be told. In fact, the impact of the 1980s in Brazil and Peru has been far worse than of the slump of the 1930s.

In short the late twentieth century will be seen in historical perspective as one of those recurrent periods of crisis in the growth of the world economy, which shook all parts and regions, though it affected each very differently. Such periods are familiar to historians under the name of 'Kondratiev long waves', though there is absolutely no consensus among scholars about what they are, or even whether they exist. Such periods in the past, or at any rate the downswings of the 'long waves', were always associated with major shifts and restructurings of the world economy, and—I would add—'crisis of ideology' culture and civilisation. By sheer chance such a 'Kondratiev long wave' occurred exactly a century before this one. Its upswing is usually dated from 1851 to 1873, its downswing from 1873 to 1896. If this provides any precedent, the world economy should return to a less troubled period of growth by the middle of the 1990s, though it will certainly not return to the unproblematic 'golden age' of the 1950s and 1960s. Certainly the most dramatic result of this era of crisis has been the destruction of the Western communist economies and political systems, but this cannot be separated from the general development of the world economy since the end of the 'golden age', if only because the economic collapse of Western communism was largely due to the growing integration of these systems in the global economy, with whose uncertainties and fluctuations they were entirely unable to cope.

Playing the game of binary opposites is equally misleading in politics. Nothing seems simpler than to contrast tyranny and freedom, totalitarianism and democracy, and to identify the one with communism (which has been defeated) and the other with the free market (which has triumphed). This last equation is constantly made by Washington spokesmen who measure the degree of democracy in the former Soviet Union by the degree to which a market economy is functioning in that region. Against this form of theological argument, it is possible to quote Francis Fukuyama himself, the author of the notorious thesis from which he now appears to retreat like an octopus amid clouds of his own ink. This was that the end of communism was 'the end of history', because it had brought about the ultimate global triumph of liberal democracy. Fukuyama now observes in his new book, with regret, that there are plenty of 'market-oriented' authoritarian states, from the point of view of economic growth, they do much better than democratic states. This is because 'authoritarian regimes are in principle better able to follow truly liberal economic policies undistorted by redistributive goals that constrain growth'.[2] But this is by the way. Let me return to the more general question.

It is perfectly true that there is a fundamental difference between states that forbid their citizens to travel abroad and those that do not; between states that will only permit officially defined truths, officially certified facts and officially authorised writings to be published and that do not. And yet the liberalism which guarantees such individual freedom is not democracy, though we must all prefer democracies that have it. The Habsburg monarchy of Austria was surprisingly liberal—unlike imperial Germany it even permitted socialists to be university professors—but it was not a democracy. The Irish Republic has a more consistent and unbroken history as a democracy since 1922, longer than most other states in the world. But for long periods it was not a liberal state, if only because it was by its Constitution committed to the values of the Roman Catholic Church of Vatican I.

Moreover, the term 'democracy' itself is not much of a guide to the nature of states. After all, during the Cold War both the USA and the so-called 'peoples' democracies' claimed to be democratic; even the Democratic People's Republic of (North) Korea did so. True, a country such as the German Democratic Republic was not democratic in any realistic sense of the word. But even if we define democracy in the liberal-democratic way, as is almost universally done today, this does not tell us much. States where the central authorities are elected by universal suffrage, from among candidates representing a number of rival parties, today include the USA and Japan, all—I think—of the successor states of the USSR, Albania and Israel, Papua-New Guinea and Paraguay, not forgetting

Mexico. Having representative assemblies and elected governments, sometimes even honestly elected presidents, is certainly important, but it does not make post-Communist Azerbaijan like Great Britain, nor Japan like Sweden. Nor does it tell us anything in itself about the prospects of survival for such democratic systems.

In 1919 all twelve successor states to the German Austro-Hungarian and Russian Empires were liberal democracies except Soviet Russia. Fifteen years later only Czechoslovakia and Finland were. To see the world as simply choosing between two and only two political alternatives is not illuminating.

Limits of Capitalism

This is also true of the debate between liberalism and socialism that is at present taking place; or more exactly, about the long and agonised rearguard action which the intellectual and political Left has been conducting as it retreats before the advance of a capitalist liberal ideology, both political and economic, in the past two decades. It is a debate conducted within the same family of what George Bernard Shaw called 'the great sentimental verities' of Liberty, Equality and Fraternity; of Life, Liberty and the pursuit of Happiness. It is a debate conducted, on both sides, in the wrong terms; but if I may say so, the terms on which it is conducted by one side are more wrong than those of the other side.

Socialists of all varieties have ceased to believe in the possibility of an entirely non-market economy, and in the desirability and feasibility of a centrally planned state economy of the kind that developed in the USSR. Some never believed in it, but even those who did no longer do so. Since the 1950s all communist states have tried to introduce greater flexibility into their planned economies, essentially by introducing market elements. It was not that they wanted to stick to economic Stalinism, but that they did not know how to break with it. I am not, of course, denying that socialists in the past, including Marx, dreamed of an entirely non-market, perhaps even non-monetary, communist society; they did, but that utopia cannot be maintained any longer, and it is not.

On the other hand, the opposite belief, namely that the completely uncontrolled free market should be left to allocate resources and will do so optimally, is politically dominant in large parts of the world, even though it is theoretically bizarre, and practically flies in the face of the facts. What is happening today in Russia and other parts of the former communist region is the sudden imposition of a theological dogma as unrealistic as the attempt to construct socialism by the central command in a single country. The consequences have been and are disastrous. The Eastern economies certainly needed fundamental reforms, but the consequence of plunging them into the free market from one day to the next have ranged from the tragic to the fatal. Moreover, this was entirely to be expected. What makes the policies of economic neo-liberalism so incomprehensible, at least for people of my generation, is that these very policies, in the 1930s, demonstrated their inability to cope with the great world Depression which, in most people's opinion, they had brought about. The reform of world capitalism under the US auspices after World War II was based specifically on the rejection of this free-market theology, that is, on the acceptance of a mixed public/private, market-led and planned economy. As Carlos Fuentes has put it: this was 'capitalism exposed to the critique of socialism and learning from it'. The target of the Reaganite and Thatcherite ideologues is not only Marx but Keynes and F.D. Roosevelt — that is, the men whose policies inaugurated the only genuinely golden age of Western capitalism.

It is quite understandable that there should have been some reaction against these policies, when it emerged in the 1970s that even the most successful capitalism could not permanently palliate the contradictions of the system. It was natural that, once the global boom ended, the costs of unrestrained welfare systems, bureaucracy, inefficient management of public enterprise, and other such outlays, should be brought under better control. Yet this does not rationally justify the return to an ideology — and, in the USA and Britain, to policies — of a long-discredited uncontrolled economic liberalism. In fact, the fashion for this ideology is now rapidly retreating in the core countries of developed capitalism, although it is still being recommended to developing and ex-socialist countries.

Theological argument and propaganda apart, the debate between liberals and socialists today is, therefore, not one on the uncontrolled market *versus* the all-controlling state. It is not for or against economic planning, which exists in capitalist as well as socialist economies — no large corporation could function without it — and not for or against publicly owned and managed enterprise, which even market liberals have always accepted in principle. It is about the limits of capitalism and the market uncontrolled by public action. To put it the other way, it is about the ends of public policy, or, if you prefer, the necessary priorities of public action.

Socialists do not, and cannot, accept Adam Smith's view that the pursuit of self-interest by every person will produce socially optimal results, even when they accept that it may maximise the material wealth of nations — which it only does in specific circumstances. They cannot believe that social justice can be achieved simply by the operations of capital accumulation and the market, and they agree with Vilfredo Pareto that a society which had no specific place for social justice and morality cannot survive. In this, of course, they are not opposed to *all* liberals, but only to the currently dominant neo-liberal purists, or, since we are talking about men like the recently deceased Friedrich von Hayek, palaeo-liberal free-marketeers. They also share this view with the dominant social-Christian champions of the 'social market economy' whose influence is dominant in the European Community.

Socialism or Barbarism?

However, quite apart from differences in the conception of what would constitute a just and free society, socialists differ from Keynesian Liberals and Christian Democratic social marketeers in one major respect. They do not simply believe that the admittedly antisocial consequences of unrestrained free-market capitalism can be mitigated, perhaps even made harmless, by public action and policy, but that the system by its very nature continues to generate and regenerate 'internal contradictions' – to use the Marxist term – which it cannot overcome.

Consequently, in practice as well as in theory, social managemen must be more than – to use the British Keynesian phrase – 'fine-tuning' a motor-vehicle that, basically, runs well enough to transport humanity to where it wishes to go. The vehicle does not run well. If we suppose that the development of global capitalism creates problems which cannot be removed by such tinkering because it is the essence of the system that it creates them, then a far more systematic and permanent control of the free pursuit of private interest may be necessary than even reforming Liberals or social marketeers envisage.

In principle, this is recognised by moderate liberal economists through the concept of 'externalities': namely the effect of the world on the individual. 'Externalities' are seen by neo-classical economists from the point of view of the individual – person or corporation – namely, as the effect on it of actions from outside over which it has no control; for instance, the opening of a motorway may greatly increase the potential profit of real estate situated close to its exits, and greatly lower the resale value of family houses situated alongside its traffic flow. But, of course, for non-economists 'externalities' are not just something that affects individual costs or utilities. They are what the world consists of. The city of Mexico in which we attempt to breathe is precisely the mass of 'externalities' that constitute it. And indeed the ecological problem is today the most familiar example of negative externalities, just as government provision of 'public goods' such as education, social services and various kinds of infrastructure, are the most familiar example of positive externalities.

Now where there are externalities – that is, practically everywhere – their general effect (and I am quoting Paul Samuelson) is to cause 'free pricing to be non-optimal, thereby creating a *prima facie* case for (public intervention)'. In all such instances (I quote this pillar of liberal economics again), 'a strong case can be made for supplanting complete individualism by some kind of group action.'[3] Yet suppose we assume that the ecological problems that have arisen from the uncontrolled growth of the world economy since 1950 are so grave as to put the planet and its inhabitants at serious risk within a matter of a young person's lifetime. In that case, a drastic interference with the freedom of producers and consumers may be rationally necessary to aviod catastrophe. If it were globally practicable, such interference would not only be politically difficult in liberal-democratic societies, but it would also have to substitute 'sustainable growth' for maximum economic growth; and it is far from clear whether the private enterprise economy, which has always operated through maximising growth, could operate in any other way.

In short, the difference between liberals and socialists today is not about socialism but about capitalism. Both agree, with negligible exceptions, that the socialism of the Soviet-type communist regimes was tyrannical, did not work, and is to be rejected. Whether it should ever have been called 'socialism' is a question debated among socialists, which need not concern us here.

Socialists and liberals (with the exception of the neo-liberal theologians) both accept a mixed economy in principle. Many socialists – especially in social-democratic countries dedicated in theory to socialism – ask themselves whether there is an actual line separating non-socialist mixed economies from socialist ones, and if so where it is to be drawn and what distinguishes societies on the socialist side from those on the non-socialist side. This is, at least for the present, a highly academic question, which I can also leave to one side. However, most liberals believe that the motor of capitalist development is basically sound, requiring only a modest amount of control and management, though it may sometimes need a systematic overhaul, as after the Great Slump and World War II. The modern world, it is assumed, can function under the conditions of a capitalism of reasonably free and democratic societies.

This, however, is precisely the question. The problems of a globe which can today be made uninhabitable by the sheer exponential growth in production and pollution, the problems of a world divided into a minority of vey rich states and a great majority of the poor, cannot be solved in this way. They do not even, in the last decade of the century, *look* as though they could be solved without systematic and planned action by governments within states and internationally, and without an attack on the central strongholds of the consumer market economy. Things will not just right themselves. That is what socialists remind liberals. If this public action and planning is not undertaken by people who believe in the values of freedom, reason and civilisation, it will be undertaken by people who do not, because it will have to be undertaken by someone. Unfortunately it is most likely to be undertaken by that most dangerous phenomenon of our *fin-de-siecle:* Right-wing, demagogic, xenophobic, nationalist regimes equally hostile to liberalism and socialism, because both represent the values of reason, progress and the age of the great revolutions. That is the danger. Rosa Luxemburg warned us that the real alternative of twentieth-century history was 'socialism or barbarism'. We don't have socialism: let us beware of the rise of barbarism, especially barbarism combined with high technology. ■

BOOK REVIEW

Shifting Priorities in Urban Politics

INDIRA GHOSH

Urban studies as an area of social science research is of comparatively recent origin. The first group of scholars to have been attracted to the field were the urban historians, then came the demographers followed closely by urban sociologists. Political scientists' foray into the domain may be the latest. Most of the political studies dealing with urban affairs, however, were analyses of the electoral politics, voting behaviour, majority-minority conflicts, and so on. Political analyses with urban developmental problems as their focus were still few and far between. In Western societies where urban history, etc. gained currency much before Indian politics of urban redevelopment had also received considerable academic attention. In India the subject is still new as is urban history and as such Ajay Mehra's book under review here is most welcome.

Mehra who teaches Political Science in the University of Delhi and is associated with the New Delhi-based Centre for Policy Research in its research activities had earlier written his Ph.D. dissertation on the same subject. The present book is a revised and edited version of the same and as such does not suffer from the shortcomings that a Ph.D. dissertation generally does.

Politics of Urban Redevelopment: A study of Old Delhi by Ajay K. Mehra; Sage, New Delhi; 1991; pp. 176; Rs 185.

Having dwelt at length about the theoretical postulates of urban politics and scanned through the existing literature on them and related fields Mehra has focussed upon the Old Delhi area to construct his thesis—urban redevelopment is primarily governed by local political considerations which are influenced by the reverberations of national politics.

Living in Old Delhi by any standard is not a comfortable experience. The town is congested, overpopulated and filthy. The civic amenities are too insufficient, resulting in environmental pollution and degradation. As hub of the wholesale market it invites millions of people during the day who make use of the scant civic facilities without contributing financially or otherwise to their up-keep. Lately it has also witnessed the growth of small industries adding to the miseries further.

Old Delhi, built by Emperor Shahjahan, is the seventh city of Delhi. Known as Shahjahanabad after his name, it was built when the emperor had decided to shift his capital from Agra to Delhi in 1638. Soon it became the centre of political and commercial activity and remained so for generations. It was only after 1707, the year Aurangzeb died, that its decline set in. The process was completed with the British conquest in 1803. During the mutiny of 1857 the city was literally ravaged by the British soldiers. Whatever importance Old Delhi had enjoyed was also stripped with the British decision to shift the capital from Calcutta to Delhi in 1911 and build the new capital around the village Raisina which later became famous as New Delhi. Shahjahanabad, the so-called Old Delhi, was increasingly neglected and slowly it was relegated to the background. Following the partition of India, which brought in its train the most violent riots between Hindus and Muslims and an unprecedented refugee migration, mauled the city further. Influx of refugees into the city as well as growth of trading and business centres in and around the city destroyed the unique cultural flavour of the area.

It was not that the government was totally unaware or unconcerned about the deteriorating conditions of Old Delhi. It was as early as in 1926 that the Delhi Improvement Trust was created, one of the essential components of which was the Delhi-Ajmeri Gate Slum Clearance Scheme. Later, under the inspiration of Prime Minister Jawaharlal Nehru, the Delhi Development Authority (DDA) was formed in 1957. The basic idea was to organise a planned development of the town through a Master Plan as well as zonal plans. Subsequently, a Perspective Plan 2000 was also charted.

All these plans, however, did not achieve the real goal for which they were conceived. In the absence of a comprehensive and long-term urban policy, their developmental strategies remained shortsighted and often lopsided. The residents of the old city were never really enthusiastic about these plans. Mehra's painstaking surveys of the residents' perceptions clearly reveal the lack of popular support for the plans and their general apathy to government sponsored improvement measures. The Turkman Gate demolitions have traumatised them of the developmental endeavours.

Mehra is at his best when he discusses the "politics of urbanisation" which is essentially what the book under review is all about. The most important requisite for any redevelopment is the political will of the government and its developmental priorities. Evidently, by the time the DDA's Master Plan was poised for its take off the priorities of the government had changed. The wars with China (1962) and Pakistan (1965) and (1971) and changes in the political leadership resulted in a shift of emphasis in

Dr Ghosh belongs to the Department of Political Science, Daulat Ram College, University of Delhi.

which defence requirements started encroaching upon developmental allocations. The effect of this shift was noticeable in the plans of Delhi's development also. Given the reality that the politico-administrative structure of Delhi remained in the grip of the Central Government left little room for local political manoeuverability.

The study offers an interesting comparison between the people at large and their so-called leaders. While the people are by and large well conversant with the city's civic problems the perceptions of the leaders at best are superficial. The author's dialogue with several of the leaders showed that by and large they were more keen to criticise other leaders for their non-action rather than mobilise people for any constructive action.

Behind this apathy of the political leaders are of course the invisible hands of the vested interests. The unfettered commercialisation of the old city and unauthorised constructions go hand in glove and together they form the bane of Old Delhi's redevelopment. Both the leaders and the people interviewed by the anther underscored this point. These vested interests have powerful lobbies operating at the highest political level and as such are virtually indomitable. An interesting sidelight of the ingenuity of the unauthorised builders has been cited by the author.

> Unauthorised construction by clandestine builders has been mentioned as one of the menaces runing this city. The way these builders operate and the way they are able to construct and alter buildings violating all the municipal laws under the very nose of municipal authorities, has been termed as an 'art' by a former Chief Engineer of the MCD....[The latter] discovered that there were such expert builders in the city who could create old buildings. Not only that, there was also a 'flourishing industry in Delhi which specialises in manufacturing bricks which look appropriately Moghul and the customer, while placing an order, can choose the century to suit his requirement'. (p.141)

Yet another important aspect analysed in the book is the politics of slum clearance. Since slums are generally considered as vote banks none of the parties ever consider the problem without keeping an eye on its potential to influence the election.

On the whole Mehra's book addresses the problem of urban redevelopment from an overall perspective of politics and argues that in this game everyone is motivated by his narrow self-interest.

> An individual would flout the rules and regulations for his personal gain, local businessmen would obstruct any large-scale morphological change that hampers their business, the local politicians would not let slip their grip over their constituency, municipal bureaucracy would close its eyes on irregularities for monetary gains, political parties would keep political interest above any other consideration and the Central Government would keep the capital city under its thumb. A combination of these factors constitute the politics of urban redevelopment in Shahjahanabad. (p.154)

In conclusion, the book makes an interesting reading and it would be welcome by students and teachers alike interested in the subject of urban politics. To urban planners of course it would not be so much palatable. ■

NEW INDIAN BOOKS RELEASED DURING 21-27 AUGUST

AGRICULTURE
Land and Soils/T.N. Khoshoo & B.L. Deekshatulu (Ed.) 395
AGRICULTURE: AGRICULTURAL ECONOMICS
Economic Analysis of Rice Cultivation: A Study of Tamil Nadu/V. Nirmala 165
Forest or Farm? The Politics of Poverty and Land Hunger in Nepal/[illegible] Ghimire 280
Imbalances in Agricultural Productivity (A Study of South Bihar Plateau)/Rameshwar Thakur 125
Land Productivity and Employment in Indian Agriculture (A Case Study of Meerut Region)/Mahipal 170
AGRICULTURE: FORESTRY
Indian Forestry–Scene/Sudhir Kishan Ahluwalia 350
AGRICULTURE: WATER MANAGEMENT
Technology and Social Transformation: The Case of the Hirakud Multi-Purpose Dam Project in Orissa/Baligovind Baboo 135
ANTHROPOLOGY
Mizoram Nagas–A Socio-Cultural Study (Foreword by M. Horam)/Joseph Athickal 295
BIOGRAPHICAL SKETCH: GANDHI MOHAN DAS KARAM CHAND
Selected Works of Jawaharlal Nehru Vol. 14 Part I (15 November 1949 - 8 April, 1950) (Second Series)/J. Nehru Memorial Fund 200
BIOLOGY
Immunology (Including Serology, Immunopathology & Immunochemistry)/K R. Joshi & N O. Osamo 400
BOTANY
Flora of Allahabad District Uttar Pradesh, India/Bal Krishna Misra & Birendra Kumar Verma 750
A Manual of Poisonous Plants (Reprint)/L.H. Pammel 1500
CHEMISTRY
Chemical Kinetics and Reaction Mechanism Topics in Chemistry Series 1/K S Gupta (Ed.) 400
Laboratory Manual for Chemical and Bacterial Analysis of Water and Sewage/Frank R. Theroux & Others 350
COMMUNICATION/JOURNALISM
Communication Techniques: A Practice Book/Ravi S Verma 125
COMPUTER
Introduction to Computer Science/S Govindarajulu & Others (P B) 70

DEFENCE STRATEGY
India's Strategic Future: Regional State or Global Power?/Ross Babbage & Sandy Gordon (Ed.) 250
Indian Defence Review/[illegible] (Ed.) (P B) 125

Panchayat Bill Deceptions

BUNKER ROY

Read between the lines of the Panchayat Bill, a clear and strong message is being conveyed to the millions living at the panchayat level: that our politicians are scared of their own people. All this talk of decentralisation and giving power to the people is all humbug.

I said this openly in 1989 when it first came out and till date there has been no change. Whether it was V.P. Singh's Government, full of arm-chair experts, or the present government, the politician across board is the same.

Those who know how panchayats actually work and have risen through the ranks to become Members of Parliament (MPs), do not protest because they are vastly outnumbered. The MPs who stand out are the city slikers-smooth, oily, shallow and outspoken—who have never lived in a village or seen a panchayat at work.

Look at the people pushing the Bill and one can understand the contents. We have elected representatives who do not know what it is like to live in a village. The only time they see a panchayat is when they are invited to speak at public functions. They do not have the comprehension to feel the pain, the trauma and the fear of living together in one Village Panchayat. They drive through panchayats at terrific speed and once they are elected they do not come back for five years.

Apart from the money-lenders, the booze kings, the touts and the criminals who have a vested interest in keeping in touch with the MPs (since they alone have been responsible for putting them in Parliament), a majority of others do not know (and of course couldn't care less) who their elected representatives are. For the rural poor the reality is the Village Panchayat in the hands of declared criminals who have enough money to buy votes. Most of them are MLAs sitting in State Legislatures.

We like to think that the Panchayat Bill is being designed to protect the rural people from declared scoundrels who are using village panchayats for their own selfish ends. So where is the hope of getting protection from such people?

Way back in 1989 I said there were major flaws in the Panchayat Bill. In 1992 none of the flaws have been rectified.

●

THE first and major flaw which makes the Bill totally toothless and confirms the suspicion that the elected representatives are scared of their own people is the absence of the *Right to Recall*. Under the Special Provision for Dissolution of Panchayats the Right to Recall needs to be included. If need be the Governor must facilitate this process.

If two-thirds of the registered voters in a Gram Panchayat send a written representation to the Governor in writing that they have lost confidence in the sarpanch and the members then the Governor must facilitate the process of holding a referendum within a specified period.

If two-thirds of the registered voters on that day (with not less than 75 per cent polling according to the list of voters) indicate they have lost confidence in their village leaders the sarpanch should be dismissed and fresh elections held. There should be no right to appeal because the village collectively have conveyed their decision.

This clause alone will scare the hell out of all the sarpanches and keep them somewhat in line. It is guaranteed to minimise corruption substantially because the leaders are accountable to the community who elected them—the Gram Sabha—not to the State Legislature.

The few specific grounds on which dismissal is possible and written representations from the community will be entertained can be clearly spelt out in the Bill. The grounds can include:

Embezzlement with documentary evidence

Rape and murder

Untouchability and a case is registered under the Protection of Civil Rights Act

Keeping bonded labour and land encroachment and,

Illegal felling of trees and misuse of natural resources.

It should be mandatory under the Bill to display the voters' list on a public notice board in the Panchayat Office. It could be updated every year and open for everyone to see.

Who is the State Legislature to decide on the powers of the Gram Sabha? Yet another indirect way of confessing that the politician is scared of facing the people and would rather work through dubious intermediaries like the MLAs at the State level who should have bribed and intrigued his way through 30 to 50 sarpanches of Gram Panchayats.

What a ridiculous and outrageous suggestion that the Gram Sabhas cannot exercise any powers. They have the power to hire but they do not have the power to fire. I suppose it is easier to get to one MLA and turn than get to 50 sarpanches. Much more cost-effective and economical.

●

THE second serious flaw in the Panchayat Bill is the absence of the Eligibility Clause. Who can stand for elections at the Panchayat level? Who is qualified and who should be disqualified cannot be taken for granted. As it stands the Bill allows everyone to stand.

Here is one real chance of cleaning the system from below but we are on the verge of losing this one opportunity.

The Eligibility Clause must limit the number of times a person can stand for Sarpanch. If the duration of the Panchayat has been fixed for five years (three would be much better because then the Sarpanch has to produce results: with five he/she can relax) then the sarpanch cannot serve for more than two consecutive terms: 10 years is more than enough. With a gap of one year then he/she should be eligible once again.

This is to ensure that there is enough opportunity for an alternative leadership to grow from within the village.

The Bill must guarantee a Constitutional provision that where the percentage of the Scheduled Castes/Tribes and Other Backward Classes (OBCs) in a village. Panchayat is more than 40 per cent the village leaders must also come from this category. This is not to say that SC/STs have leaders who do not exploit their own castes but in this case the eligibility clause will provide protection that it does not become a family concern.

Its time we changed our attitudes and stopped spoon-feeding people at the village level. They have sharp, clear minds of their own and know exactly what they want and need. To treat them like idiots and half-wits is grossly underestimating their knowledge and ability to take collective decisions without interference. Getting the State Legislature to decide for Gram Panchayats is an insult to their intelligence.

Unless the idea is to use the Gram Panchayats as a front to legitimise criminal activity at the State level, regularise wastage and leakage of funds. at the panchayat level in the name of development and give it some sanctity.

In which case the Bill is perfect. ■

MEDIA

Challenge before Television in India

CHANCHAL SARKAR

The British Labour leader Ernest Bevin was the sworn and implacable enemy of another well-known labour figure, Aneurin Bevan. In the House of Commons Bevan was one of the finest debaters but Bevan held that whenever his enemy spoke it was nothing but "clich clich clich".

I, too, am going to begin with oversized clich. It is: "In Indian broadcasting we stand tiptoe at the edge of an era of change of rending and buckling change."

The change, and the challenge, that comes in lock-step with it is due to the developments in satellite broadcasting. These have been known for quite some time. In a moderate way India has been experimenting with space technology for years. There hasn't in fact been any thought through response to the development – only some stitched up, *ad interim*, ad hoc proposals leaked to the press in driblets, none of them has yet been put to work.

But before talking about any evolving Asian culture – spurred by satellite footprints and continental viewing – we should ask if we know the scale, intensity and nature of the option on offer from abroad. It has always been very difficult to gauge realistically the viewing of Doordarshan and breakup of the viewing because that organisation has, I think, never engaged an outside agency for assessment. The number of Indians taking cable television and the plans and dreams for India of STAR, CNN, etc., are known. Even if one chips away the sales pitch the thrust is like that of the world's multinationals with a lot of money to spend because of the expectation of recking in much more.

The writer, who is a well-known media specialist, addressed the Broadcast Engineering Society, India (September 1991), out of which the present contribution is made.

In some developed countries television has reached the point of saturation. Britain, for instance, where the number of TV sets, 36 million, exceeds the number of households, 22million, by a large margin. Faced by a saturated market British Television, with a yearly turnover of three billion (that is to say, Rs 18,000 crores) must look to the outside world for expansion. This outward urge is true of some other countries as well and, in a competitive world, there is a lot of rate cutting. STAR, for instance, puts a lot of Australian programmes because they, and American, are cheaper. Some American serials cost a user £ 7000 an hour. A quality British programme would cost for £ 35,000-60,000 an hour for repeat rights. The American can afford to 'dump' programmes for next to nothing, and they do.

Faced with the multiple choice at the end of a button what will the Indian viewer watch? It is probably self-delusion to say that people will get tired of the stuff from space and fall back into the arms of Auntie Doordarshan. Certainly not Auntie as she is today. What people want, and will get from satellite TV is lashing of entertainment — serials with love and romance or rapid gunfire, pop and rock, lots of sports, films, fashion shows, crime and espionage, travel and adventure and programmes about consumer goods.

It is out of this mix that the new Asian culture will be fashioned. Only, it will not be Asian culture as such but a mish-mash that the young everywhere in the world has clutched on to and will never let go. Language doesn't matter in pop and rock, in sport and fashion or in much of travel and adventure. Even people with faltering English can squeeze meaning out of overseas serials (remember the success of Dynasty and Dallas which were among the most watched programmes in Taiwan and Mexico and even in Bangladesh?) And the faltering watchers might not have to do that for long. Japanese serials on view in Thailand, Hong Kong or Malaysia are dubbed into Thai, English, Chinese or Malay and (any number of audio channels) are already available.

The cultural modes which are exclusive will remain exclusive. Chinese opera, Indonesian Wayang Kulit or Indian Kathakali will not overnight become the rage elsewhere. They need language, a scaffolding of traditional knowledge and a special taste. I doubt if these modes can be painlessly transmitted elsewhere but apart from language-free things like sport, audio channels, dubbing and press-button interpretation will make many more satellite programmes acceptable to Indian listeners.

Does Doordarshan then face annihilation? What menu must the Metro channel plonk on the table? Nobody has precise answers but the formula must revolve round entertainment, stretching maybe to 'infotainment. Looking at Doordarshan's ad-revenue of Rs 345 crores a year the ad-people know the elementary fact that the biggest national draw is Chitrahaar and then Hindi films which together net about 19 per cent of the total ad-money. Advertisers, sponsors and programme-makers scan these figures like hawks. They will also study what Indians watch from abroad.

A report covering adolescents in Italy, elderly in the US and Canadian and American adults found that only about three per cent of them watched the News. This suggests that there will be few News-based programmes in the new offerings. Does this mean that quality programmes, minority programmes as they are often called, have no future and will not be part of the cultural spectrum?

This question is related to one which has surfaced in several countries where broadcasting is widespread and powerful. It was answered best, I think, by Newton Minow perhaps the most well-known of the Chairmen of America's Federal Communications Commission. In 1961 Minow made a speech where he called American Television the "great wasteland". In 1991, thirty years later, in another speech he said that he was deeply disappointed that his 1961 speech was remembered only for those two words because he had wanted it to be remembered by two other words also in that speech. Those were "public interest".

Minow went on to describe the TV scene in the United States since 1961. From 47.2 million the number of sets had more than tripled to 172 million in 1990. Cable TV, which had served just over a million homes has reached 55 million. From 2.18 hours Americans watched TV for 7.3 hours a day. Advertising revenue was up from 1.2 billion to 24 billion cable subscriptions 51 million then, were 20 billion.

As I said, Minow didn't want to be remembered by the "great wasteland"."To me", he added, "the public interest meant, and still means, that we should constantly ask: What can television do for our country? For the common good? For the American people? "

We have failed, he went on, to use television for education, to use television for children, and to finance public television properly.

Now isn't that exactly the same with us ? Not quite, for we have never known public interest television. Although the government has often called it "public", Indian television has been very private — put out for the benefit of the government and the ruling party no matter what the complexion of the government and the party.

●

WHEN talking about quality programmes in the atmosphere of the commercial siege which is to be anticipated, there is reason to remember Canada. Wide open to continuous electronic bombardment from the United States, Canada has striven hard to maintain a distinct identity. Whether it has succeeded is an open question but, in the process, and despite financial cuts, it has produced some of the world's best programmes, and some splendid broadcasters and film-makers.

So there is a glimmer of hope. Only a glimmer, mind, because the Government of India and its Ministry of Information and Broadcasting seem to have been reduced to taking a purely commercial view, calculating how much money Doordarshan and the Metro Channel will bring in. To this end they are willing to sacrifice scruples like cross-ownership and don't seem to have applied their minds to public interest television. Ultimately it is money which is likely to rule programmes — money from sponsors and advertisers and money from the film-world. In this scrabble game no one will use the counters to make up words like "quality", experimentation or "creativity".

Will this enthusiastic surrender to the market place, this eagerness to give the public what it wants, this understanding of television that it is a cake stuffed full of entertainment cherries with maybe a thin icing of News keep Indian television standing in the flood of satellite programmes or will it be swept away?

This is a question impossible to answer because the uncertain factors are too many. Some suggest that instead of trying to meet the competition from outside head-on the best strategy would be to make the foreign programmes part of Indian TV, to enter into arrangements of collaboration and exchange with the companies abroad, to be partners and divide the labour and the lolly. What the terms of such arrangements will be it is not easy to foretell but, in their quest for Indian viewers and Indian advertising, the companies abroad may be willing to enter into contracts. But if Indian television, till now so stunted and neglected and so distanced from education and the political process is to have any tryst with quality and with culture then it must have a spine of public interest television and not put everything into private hands. Please remember that everywhere in the world, and perhaps notably in India, there is evidence that traditional checks,ethical and social,on private behaviour have been rubbed thin.

Of the satellite programmes leaving aside CNN which deals only with News of various kinds, not always of interest to the overseas viewer, the BBC is most genuinely successful with its News and News-based programmes. India's outlook on News was analysed not long ago in a worldwide study which drew interesting maps of continents and countries showing what the world looked like to them from the way their TV covered news. Japan, for instance, devoted 78 per cent of its attention time to itself. China's range was surprisingly wide, but India's concerns, too, were mainly with itself. This partly explains one of the greatest failures of Indian broadcasting in the last 50 years. It threw away the opportunity of setting up first ever radio and then TV, a worldwide alternative news service, covering and interpreting events from the Third World point of view. Properly conceived and run, it would have gained immense prestige for India and become a reference point of credibility.

Television is about programmes. That much is gospel. But there can never be good programmes without sound business management and a competent grasp of technology. The President of the Canadian Broadcasting Corporation puts it like this: "Canada has attempted to marry two distanctly different approaches the hard-headed sharp-pencilled perspective of the Corporate Section.... alongwith the visionary programmes and broadcasters who have given Canada an outstanding international reputation." India will not be able to broadcast for culture or have a'broadcast culture' unless it combines those two elements with a technological grasp.

This is a lesson which the print media learnt quite some time ago.The world's most influential and effective editors today are not those who write banderilla paragraphs but these who combine editorial skill and planning with managerial and financial knowledge, topped with and understanding of technology.

Advances in technology proclaim that casts by way of Direct Broadcast Satellites can now be received on ordinary television sets with inbuilt antennae. Dishes are no longer necessary. This is already true for the laboratory and will soon be for the marketplace. What is the implication for culture and life if programmes from the world over can be in Indian homes at the flip of a switch?

If it means mayhem for the minds of Indian citizens then is the answer to censor them wholly or selectively? Apparently this can be done by an alteration of design. But doesn't the history of the last 20 years declare against that line of thought? The Soviet Union and its satellite countries in Eastern Europe tried to control Information and Culture from abroad and even from within. In the USSR a person or an office could not even set up a copying machine without permission .

. Radio, Television and the Press were strictly controlled. With what result? Information and cultural influences seeped in and riddled the whole edifice of control until it crumbled like a house of cards. By an ironic turn of the wheel the very transmitters used by the Soviets to jam the BBC are now being hired by the BBC to relay its World Service to India and China! One of the few countries where strict control still persists is North Korea. Is India going to make North Korea its mentor?

With the arrogance of size and, even more, of population, India's policy-makers in Communication might think Indian broadcasting has an automatic teaching and preaching role in Culture. Those who think so might ask what has India's most popular cultural export,the Bombay film contributed to the many countries where it is screened? One might also ask if, after 57 years of radio and 34 of television, the sum total of their cultural contribution is either remarkable or adequate? Going further, one could ask if the institution of broadcasting in India deserves to adopt a teaching role in relation to the rest of the subcontinent and continent?

Let us be clear. After the struggle to free broadcasting from the overlordship of bureaucracy and officialdom, is it to be handed over to the money-changers at the Temple? Be they sponsors, advertisers or producers are the electronic media to be laid open for their milking? Is there to be no room for public interest broadcasting?

A most thoughtful approach to an answer was from the late Professor Hilde Himmelweit. A very distinguished social scientist, she was a member of the Annan Commission and several other committees on broadcasting. In 1972 she wrote:"There has been a shift of emphasis from considering the broadcast media solely in terms of the programmes they produce to one in which the BBC and the ITA are seen as powerful institutions in their own right whose style of decision-making and action profoundly affect the community. It is this view that has led to the demand for public accountability and for increased participation and access." That in short,is the case for broadcasting in the public interest.

India's broadcasting institutions, I'm afraid,are very far from having attained the sort of stature she described. They won't do so by a waving of the magic wand of Prasar Bharati over them. Excellence in broadcasting, influence and freedom emerge from the slow acceleration of history. But they cannot emerge if they do not safeguard the interest of the public. ■

Fourth Estate or Fifth Column

JOHN TUSA

The term 'fourth estate' originated in a speech of Edmund Burke in the British Parliament towards the end of the eighteenth century. He noted the various estates of the realm: the Lords Spiritual, the Lords Temporal and the Commons – the powers that hold in their hands the ultimate destiny of British governments. Then Burke added, pointing to the press gallery: 'And yonder sits the Fourth Estate, more important than them all.'

The phrase 'fifth column' was first used by the fascist General Mola, who said, during the Spanish Civil War in October 1936, that he was commanding five columns in the assault on Madrid; four converging on the city from various directions 'and the fifth column within the city'. It was Ernest Hemingway's use of the phrase in a play called *The Fifth Column* which established it permanently in the language. The term means civilians subversively working in a clandestine fashion to undermine a regime or a state from within.

The idea of the media as the fourth estate, with its explicit connotation of a legitimate place in the constitution of the country, is flattering. The idea of the media as a fifth column is quite the reverse. Both cannot be true. I have yoked them together in an attempt to face the reality that while a public commitment to freedom of expression, and freedom of activity for the media, is general throughout the world – a commitment more honoured in the breach than in the observance-the acknowledgement that the media should have a quasi-legitimate constitutional position is weaker than it should be. The allowance that if the media do have such a position, then they deserve to have it, is weaker still.

Despite his admission that the standing of the media – national or international – is not what it should be, I shall argue:

> that free press is essential to a healthy democracy-indeed is a condition of it;
>
> that governemnts and journalists have different objectives and that tension between them is inevitable;
>
> that the right to criticise and expose exercised by the press in a democracy carries a corresponding responsibility;
>
> that bad governments are far worse for their citizens than even the worst media.

For a century, the power of the printed word has been clear for all to see. W.T. Stead, the Editor of the *Pall Mall Gazette*, wrote to his father in 1883,'Here I am, not yet 35, and already the most influential man in England.'

John Tusa is the Managing Director of the BBC World Service. This is the text of a speech delivered to the Nigerian Institute of International Affairs, Lagos, on November 12, 1991

Such status has not been granted to all journalists, nor to all organs of the press. It is said that a group of journalists were once introduced to a minister by his private secretary with the words,'Minister, the press and the Gentleman from the *Times*'. In the 1960s, Harold Macmillan, the most quasi-aristocratic of Britain's leaders, was asked what he thought of the press. He replied that they were all very well but they were 'hardly the kind of people you would ask to the country for the weekend'.

The new broadcasting media, taking their cue from the press from which their journalistic skills and outlook originally derived, initially adopted a posture of absurd deference to ministers. In 1951, the British Prime Minister, Clement Attlee, was interviewed for television on his return from the United States. Attlee was a man of few words at the best of times:

> **Interviewer:** Good morning, Mr Attlee. We hope you've had a good journey.
>
> **Attlee:** Yes, excellent.
>
> **Interviewer:** Can you, now you're back having cut short your lecture tour, tell us something of how you view the election prospects?
>
> **Attlee:** Oh, we shall go in and have a good fight. A very good chance of winning. We shall go in confidently, we always do.
>
> **Interviewer:** And on what will Labour take its stand?
>
> **Attlee:** Well, that we'll be announcing shortly.
>
> **Interviewer:** What are your immediate plans, Mr Attlee?
>
> **Attlee:** My immediate plan is to go down to a committee and decide on just that thing, as soon as I can get away from here.
>
> **Interviewer:** Anything else you'd care to say about the coming election?
>
> **Attlee:** No.

We have advanced a good deal since then, whatever the difficulties we experience from time to time. The main objection to that interview – both to its questions and to its answers – is that it tells the audience, the democratic voters, absolutely nothing.

A still more celebrated instance of the stone wall interview occurred in 1962. The BBC Commonwealth Correspondent, Douglas Brown, met Malawi's Nationalist leader, Dr Hastings Banda, on his arrival at London airport on June 21, 1962. This is how the interview, preserved to this day in the BBC's archives, ran:

> **Brown:** Have you come here to ask the Secretary of State for a firm date for Nyasaland independence?
>
> **Banda:** I won't tell you that.
>
> **Brown:** When do you hope to get independence?
>
> **Banda:** I won't tell you that
>
> **Brown:** Dr Banda, when you get independence are you as determined as ever to break away from Central African Federation?
>
> **Banda:** Need you ask me that question at this stage?
>
> **Brown:** Well, this stage is as good as any other stage, why do you ask why I shouldn't ask you this question at this stage?
>
> **Banda:** Haven't I said enough for everybody to be convinced that I mean just that?
>
> **Brown:** Dr Banda, if you break with the Central African Federa-

> tion, how will you make out economically? After all, your country isn't really a rich country...
>
> **Banda:** Don't ask me that. Leave that to me.
>
> **Brown:** But which way is your mind working?
>
> **Banda:** Which way? I won't tell you that.
>
> **Brown:** Where do you hope to get economic aid from?
>
> **Banda:** I won't tell you that.
>
> **Brown:** Are you going to tell me anything?
>
> **Banda:** Nothing.

By the 1970s, the role of the microphone interviewer as the deferential handmaiden of the interviewee had been altered. The former British Ambassador to Uruguay, Sir Geoffrey Jackson, one of the first victims of modernday kidnapping at the hands of the Tupamaros in 1971, wrote of the change in the role of the reporters:

> Before the war, I had been drilled to an instant evasive reflex if the press ever hove into sight. Only the mighty ever confronted those coffin-like microphones of the early radio; television did not even exist to panic us. A decade later, we were to run with outstretched hand to meet the press. On tour from overseas headquarters we were not to shrink from the intrusive hand-mike, or to wince at the inevitable question, "What does it feel like...?"

The idea that the media are troublesome to diplomats and politicians is long-standing. It spreads across governments of all shades, both democratic and totalitarian. The Emperor Napoleon once said that 'four newspapers are more to be feared than a thousand bayonets'. There is a Russian joke which has Napoleon saying to Stalin that if he had a newspaper like *Pravda*, nobody would ever have known of his defeat at Waterloo in 1815. Clearly the French—great believers in the importance of central authority—continue to have a cautious view of what to do with the media. In the early 1960s, President de Gaulle asked President Jack Kennedy, 'How can you control your country if you do not control television?' Many American Presidents since must have asked themselves that very question.

What is implict in those questions is the view on the part of government that the media are at best a nuisance, at worst dangerous, and that they should be subject to state regulation, control or manipulation; but it is—for the most part—only implicit. Others present a view of the imperative need to regulate the media in a more direct way. That theoretician and practitioner of the control of the state power, Lenin, declared his highly qualified view of press freedom in 1920: 'Publishing enterprises must not be permitted to abuse their autonomy by pursuing a policy that is not entirely Party policy.'

Information, communication and comment are, according to Lenin, too important to be left to the merely bourgeois so-called freedoms of the press and, by natural extension, the electronic media. But you do not have to be an autocratic ideologue such as Lenin, to raise questions about the role of the media. That extraordinary Russian religious nationalist and anti-Communist dissident, Alexander Solzhenitsyn, mused:

> The press has become the greatest power within Western countries; more powerful than the legislature, the executive and the judiciary. One would like to ask: by what law has it been elected and to whom is it responsible?

Let me take three cases where government and an element of the media have clashed head-on and examine what both sides said at the time. In 1852, the *Times*, then truly deserving of its name The Thunderer, was engaged in a headon clash with that most buccaneering of British Foreign Secretaries, the founder of gunboat diplomacy himself, Lord Palmerston. Defending his minister, the Prime Minister, Lord Derby, gave the *Times* a sharp pull on the reins. He did not like the sight of newspapers telling his Foreign Secretary how to run foreign policy. According to Lord Derby:

> As in these days the English Press aspires to share the influences of statesmen so also must it share in the responsibilities of statesmen.

The challenge is clear enough: if you want to meddle in these affairs, then you must become part of them. The then leader writer of the *Times*, Robert Lowe, replied at length and in detail. He conceded that if the first part of Lord Derby's proposition were true—that the press wanted to have the same influence as ministers—then the second—that it should accept the same responsibilities as ministers—would certainly follow. But Lowe did not accept Derby's proposition about the relationship between what he called the two powers, the government and the press:

> The purposes and duties of the two powers are constantly separate, generally independent, sometimes diametrically opposite. The dignity and the freedom of the Press are trammelled from the moment it accepts an ancillary position. To perform its duties with entire independence, and consequently with the utmost public advantage, the Press can enter into no close or binding alliances with the statesmen of the day, nor can it surrender its permanent interests to the convenience of the ephemeral power of any Government.

The following day, the *Times* returned to the theme as it certainly deserved. My own response to the extract that follows is that I wish I had known about it earlier in my present job. It defines precisely the area of tension which exists between the BBC World Service's broadcasting and journalistic imperatives today and the equally valid, but functionally different, imperatives of any British Foreign Office. Writing in 1852, the *Times* declared that the press must roam freely over topics that men of action dare not touch. (I would add that there is nothing wrong about this, nothing disreputable about a plain difference of function.) The *Times* went on:

> Government must treat other Governments with external respect, however bad their origin or foul their deeds; but happily the Press is under no such trammels, and while diplomatists are exchanging courtesies, can unmask the mean heart that beats beneath a star, or point out the bloodstains on the hand which grasps a sceptre. The duty of the journalist is the same as that of the historian—to seek out truth, above all things and to present his readers not such things as statecraft would wish them to know but the truth as near as he can attain it... To require, then, the journalist and the statesman to conform to the same rules is to mix up things essentially different, and is as unsound in theory as unheard of in practice.

I believe the *Times* was right then and its conclusions are still valid today. If the responsibilities of the media are no different from the responsibilities of the government then you need no media at all, but merely the activities of a Ministry of Information. But to purvey information to the public on such a basis is to perpetrate a fraud on the citizens – they are not receiving independent reporting but a partial and self-serving view of events-and ultimately leads to the government believing its own propaganda untramelled by any counterbalancing point of view. That is no sort of formula for good government and more and more countries are coming to realise it.

One of the most celebrated clashes between the media and the government in recent times came over the Vietnam War in the USA. The Nixon Administration, trying to extricate the USA from a disastrous war which was losing any support it had had among the American people decided it must attack the instrument that was helping the steady loss of credibility of administration policy, the TV network news shows. The person chosen for this selective strike on the media was Vice-President Spiro Agnew, who later pleaded guilty to income tax evasion, was fined $10,000 and put on probation for three years.

In 1969 he launched into a general attack on what he called the television establishment:'A small group of men numbering perhaps no more than a dozen "anchormen" commentators, and executive producers', who 'live and work in the geographical and intellectual confines of Washington, DC, or New York City', and whose capacity for choosing what 40 to 50 million people learned each day through television concerning national and international affairs represented ' a concentration of power over American public opinion unknown in history'.

Agnew ignored the fact that the three network news shows were in deadly competition with one another, that their search for a competitively different journalistic line was hardly conducive to sharing the same line, and that the public could, as they have often done, vote with their switches.

Agnew personalised his attack on one correspondent in particular, Daniel Schorr of the CBS News. He and others, claimed the Vice- President, made up 'a tiny, enclosed fraternity of privileged men elected by no one and enjoying a monopoly sanctioned and licensed by government'.

It is curious that Alexander Solzhenitsyn and Spiro Agnew – surely with nothing else in common – share one query:'Who elects the media?" Schorr was very direct in his reply to the Agnew attacks. The argument was not only a matter of principle; it was undoubtedly a matter of power:

> I think we've come to the point where big concentrations of power can be controlled only by other big concentrations of power. Just as it would take the federal government to control the oil industry, which even its power hasn't succeeded in doing yet, so it takes big news organisations to stand up to big government, with a lot of power. That's what the *Washington Post* had and needed, and that's what the networks have and need.

But the issue of the distribution of power itself conceals a major issue of principle. In a democracy, power is diffused; in the USA, it is formally separated. The power of the media is one way of creating a necessary alternative counter to what would otherwise be an overconcentration of power. In the course of the controversy over the TV networks' coverage of the Vietnam War, in July 1970, Frank Stanton, President of the CBS, made a speech in Utah warning that the delicate mechanism governing the interaction between the government and a reasonably well-informed public might be thrown out of balance "if the words and views of the President become a monolithic force, if they constitute not just the powerful voice in the land but the only one speaking for a nationwide point of view'.

Stanton was stating a basic principle. All leaders hope that they speak for the people, that they articulate the hopes, dreams, wishes of a nation. If they are great leaders, that is exactly what they must try to do, and sometimes manage to do. But they cannot take the achievement for granted. They must earn it. And they cannot snatch it by suppressing all those inconvenient voices which call their claims to be the sole, unchallenged national voice into question. The media are inconvenient; they get in the way. But they do so not just because they are congenitally members of the awkward squad but because national leaders need to have their claims to unquestioning legitimacy, to be the sole arbiters of their nation's destiny, subjected to test.

Surely this assertion hardly needs testing itself. Modern history is littered with instances of leaders who claimed to speak for their people and then killed those who challenged that right. The magnitude of their failure is matched only by the scale of their presumption and the size of the tragedy they visited on their people:

My name is Ozymandius, king of kings:
Look on my works, ye Mighty, and despair!
(Percy Bysshe Shelley)

Who has killed more people throughout the twentieth century? The most mendacious ruler, unchallenged by the media? Or the most exploitative media baron, unregulated by a government? In such a contest, the only one that matters, there is no contest.

But the argument will not rest there. What responsibility does the media have to the state? Some journalists think the press has no responsibility whatsoever to the authorities that are in place. The press, is answerable, says this school of thought, only to its readers, or audience.

Lord Annan, the distinguished British academic who was the chairman of the official enquiry into broadcasting in the UK in March 1977, maintains that the state must be brought into the picture:

> It is the legal expression of the nation; repository of sovereignty, sole source of legal cohesion; source of authority of the armed forces; agent of law.

For Annan the state is

> quite different from the government. It is different, incidentally, also from the Establishment. The state is our nation: Monarchy, Parliament, Judiciary, Ministers. It is the entity which demands our loyalty, which the government has no right to demand except of course from the members of a political party who belong to it. Each of us owes duties to the state because it is the state which defines and sustains our rights through the laws of the country. And it demands our loyalty because, through the armed forces and the police, it alone can defend us from invasion or anarchy.

As the leading news-provider, the BBC, says Annan, 'cannot be impartial when British soldiers are in action and suffering casualties against the aggressor'.

Annan goes on to emphasise the onus on the powerful media, radio and television:

> Broadcasters owe a duty to the state. Broadcasters should remember that they owe a duty to the reputations of politicians Statements which "discredit not merely the politicians but the whole concept of government, without which a society cannot exist", destroy public confidence in the nation in a peculiarly 'poisonous way'.

I recognise the argument but I question its validity. What should the broadcaster do if the very foundation of the state is unjust? In asking the question, I do not arrogate to the broadcaster/journalist the duty to question constantly the justice of the foundations of the state. As Lord Annan put it, there is something very British, very settled, very smug about the dichotomy between the government—whose actions should be monitored—and the state whose basis guarantees us, the British, our very freedoms. Of course, a state which gives its citizens its basic freedoms, including freedom of expression both public and private, deserves and requires a special respect.

But even before the democracy movement in Eastern Europe, the Soviet Union and now in Africa, it was clear that there were many states which made claims to give their citizens fundamental rights, but who did nothing of the kind in practice. What kind of duty does the broadcaster owe to a state which not only does not guarantee basic rights but actually violates them? Must the broadcaster bend the knee to an entity merely because it calls itself a state and thereby puts itself onto a higher plane of being in the rarified world of political theory? According to this view, the Soviet Union, the state of Stalin's purges, of Brezhnevite stagnation, of massive historic oppression and injustice, should not have been challenged because it was the state. The media have no choice but to ask questions about the government of the day or the state of the moment, not because they are special, not because they are better, not because they are arrogant, but because if they do not do it, no one else will. No one else, that is to say, until the people themselves, their spirits freed by the prior releasing of their media, take matters into their own hands as they did in the velvet revolution of Eastern Europe in 1989.

So what is the responsibility of the journalist? It is to report evenly, accurately, to tell the truth. Democracy is a hollow word unless those who exercise their right to vote have the facts on which to base their choice at the ballot-box. The great British writer on the Constitution, Walter Bagehot, warned:

> Knowledge will forever govern ignorance. And a people who mean to be their own governors must arm themselves with the proper power that knowledge gives. A popular government without a popular information or the means of acquiring it, is but a prologue to a farce or tragedy, or perhaps both.

During a recent trip to Czechoslovakia, I heard the director of Czechoslovak Radio, Frantisek Pavlicek, apologise to his people for allowing lies to be told to them over the years:

> I am sorry I ask you to accept this apology. I ask you to forgive us for all the lies, insult and odium.

In Eastern Eurpoe, we are seeing today the result of four decades of systematic deception on the part of the governments who used journalists as their tools. Some hid reality from their audiences for the best, in their eyes, motives. These were idealists who thought that only a totalitarian system could transform their societies. Rather more did so out of cynicism and self-interest. During those years the BBC and other Western radio stations were jammed, at enormous cost. But many still managed to listen.

A great illusion holds the censors and the regulators in thrall: the conviction that if one prevents an awkward fact from being printed or broadcast, one's people will not, somehow, find it out. In today's world, with the growth in communication, it is even more inevitable that an increasing number will learn that which the state does not want them to know.

The influential American columnist, Walter Lippmann, wrote:

> The theory of a free press is that the truth will emerge from free reporting and discussion—not that it will be presented perfectly and instantly in any one account

As Lippmann realised, the path to truth is an arduous one and many stumble on the way. It needs single-minded devotion on the part of the prospector. He or she cannot serve another cause at the same time, such as being a propagandist for the state, a party or a cause.

But to make a single mistake or even several, does not undermine the argument for independent journalism. It merely shows that the participant is human, not that what they are trying to do is invalid. Repeated errors of a pre-ordained and deliberate kind are very different. 'To err is human, to forgive divine'. But, as George Bernard Shaw wrote: 'To err is human, to persevere diabolical.' Lippmann recognised that it is the process of honest inquiry that matters. For the process itself, if honestly undertaken and honestly maintained, will produce a decent result, despite the errors, the moments off balance, the nit-picking. The process is far greater than the challenge which calls it into question.

●

ONE of my BBC colleagues, Colin Morris, a great Methodist preacher, has graphically sketched the conditions under which the broadcaster works:

> In the Book of Genesis, it is God who brings order out of chaos, in the modern world, television journalists have to make a stab at doing it They subdue into harmony a mountain of telex printouts, miles of video tape and a pandemonium of ringing telephones They organise into a coherent picture a riot of impressions, a chaos of events, a bedlam of attitudes and opinions that would otherwise send us scurrying to the hills in a panic. And they have to construct this world view at lightning speed, in a welter of instant judgements Not for them the luxury afforded to philosophers of earlier ages who could reflect at leisure on the fitness of things Aristotle had no six o'clock deadline to meet.

The work of the journalist is, in a fundamental sense, religious, says Morris:

Is not the word " religion" derived from a Latin root, *religare*, "to tie together" or " to bind"? And is not this what the journalist does as he or she knits together verbal and visual symbols into some semblance of reality?

My old and distinguished colleague was undoubtedly overstating the case. Even in our most optimistic moments, broadcasters would not in the main argue that our function is quasi-religious except in the amusingly philological sense used by Colin Morris. But we would argue that the activity of the media gives a cohesion to society, a cohesion based on freely delivered information easily received, and consent to government openly granted, leading to a more decent society.

I am well aware that these claims do not resonate with recent African theory, experience or inclination. Governments feel weak rather than strong, threatened by tribal rivalries, economic failure, ideological disputes, religious tensions. In such an atmosphere, the response has been to demand of the journalist/broadcaster in Africa that he/she should indeed live up to the definition offered by Colin Morris – should bind the nation together – and that criticism, dissent, investigation, all the customary activities of the media should take second place to the primary need of national unity.

As Paul Ansah of the University of Ghana wrote in the *Index on Censorship* in October 1991:

> African governments find it necessary to control broadcasting operation in order to promote national unity, socio economic development and stability. It is felt that if control is not exercised, there is the danger of the system falling into the hands of a group of wealthy people who could use it to promote commercial, sectional or political interests that may be at variance with national objectives.

President Kaunda, who has just set an example of the democratic process at work, said in 1968:

> The international press qualifies as one of the many invisible governments. The press is capable of making or destroying governments given appropriate conditions, it can cause war or create conditions for peace It can promote development or create difficulties in the way of development.

That is an inflated idea of the power of the Western media. It confuses cause and consequence, but it shows the concern and suspicion with which many African leaders view it.

That pioneer of independent rule, Kwame Nkrumah, was preoccupied with the role of the media in his new state. Nkrumah maintained that the press must be under party and government control. His was a Leninist view of the function of the journalist.

In the capitalist media the writer 'finds himself rejecting or destroying facts that do not coincide with the outlook and interest of his employer or the medium's advertisers... trivialities are blown up, the vulgar emphasised, ethics forgotten, the important trimmed to the class outlook'.

Nkrumah saw a newspaper as"

> a collective organiser, a collective instrument of mobilisation and a collective educator – a weapon, first and foremost to overthrow colonialism and to assist total African independence and unity. The true African journalist very often works for the cause of the political party to which he himself belongs and in whose purpose he believes. He works to serve a society moving in the direction of his aspirations

There are many in Africa who argue that the press has a special role in addition to the tasks of informing and entertaining. For these people, continues Paul Ansah:

> The press in a developing country is expected to help forge a sense of national unity, identity and integration and to mobilise the people for development. Many leaders in developing countries also consider that it is their responsibility to provide information to citizens as a social service in the same way as they provide other services such as educational, health and recreational facilities.

It was interesting to see what Swaziland's acting Minister of the Interior, Senator Wilson Mkhonta, said in October 1991:

> Africans should be made to trust their own media so as to avoid the necessity to tune into foreign radio stations in order to learn what is happening in their own countries.

Let me say that I do not see how there can be two different codes of journalistic ethics. A higher set of editorial standards for the developed world and a looser discipline for the developing nations seems to me to be ultimately unacceptable. It is as dangerous to accept such a differentiation as it would be to set different standards for surgeons or aircraft maintenance. It is patronising on the part of the West, defeatist on the side of the Third World. It is a disservice to those who look to the media for a true picture of events, and it is harmful to the democratic process. It handicaps young talent and blights the lives of those who try to report honestly.

A free press is the mark of a confident nation; an accurate press is the sign of a mature people; a press which can criticise governments temperately, and governments which react rationally to such criticism, are evidence of a civilised state.

Arrest warrants for editors who point to the gap between words and deeds expose frightened rulers. The response to media which trivialise and sensationalise is best left to their audience.

Finally, in defence of my order, let me quote once more from that robust apologia for the fourth estate written by Robert Lowe in the *Times* 140 years ago:

> The first duty of the Press is to obtain the earliest and most correct intelligence of the events of the time, and instantly, by disclosing them, to make them the common property of the nation. The statesman collects his information secretly and by secret means, he keeps back even the current intelligence of the day with ludicrous precautions, until diplomacy is beaten in the race with publicity

I find it enormously heartening that a defence of freedom of information made almost 150 years ago still resounds with such strength and relevance today. It suggests to me that the principles which I have tried to articulate are well-rooted in soil so eloquently dug over by Robert Lowe.

For us, to whom publicity and truth are the air and light of existence, there can be no greater disgrace than to recoil from the frank and accurate disclosure of facts as they are. We are bound to tell the truth as we find it, without fear of consequences – to lend no convenient shelter to acts of injustice and oppression, but to consign them at once to the judgement of the world.

COMMUNICATION

Ragging : Culture Defiled

I have read with interest the writing of Prof Gargi Chakravartty—"Ragging and Cultural Decadence" in *Mainstream* (September 19,1992) that has reached me only this morning.

My own experience is indicated in this letter.

I joined the Dhaka Collage in 1919 and my direct association with Dhaka University continued till 1946, when I left Dhaka for my fresh assignment in New Delhi.

The resident students were treated with unreserved affection and the renowned teachers—Dr Gnan Chandra Ghosh, Prof Satyen Bose, Dr Ramesh Mazumdar, Dr N.C. Sen Gupta—nurtured us collectively like a bunch of fragrant flowers. There was no form of favoured treatment of the special batches of learners and the newcomers were accepted as young brothers by seniormost Research Scholars, in Science and Arts. We took bath in the attached big tank together and took daily meals in the same dining hall, with no seats reserved for senior scholars. The community life was slowly taking shape because of the guidance of Hostel Superintendents and the psychic factors worked a lot. No question of disorderly behaviour and the ugly manifestation of sadism had ever been allowed to disturb our fraternity-banded together by sincere feeling of brotherhood.

I left Dhaka University and joined the renowned institution, Brajomohan College, Barisal,—where co-education had been introduced from the very beginning—with the largest number of students in Calcutta University, outside the metropolitan city.

I never felt uneasy and troubled on any occasion—so long I continued teaching thousands of students for few years, before my arrest and confinements in Barisal jail in 1942.

The perverse and petrified way of life—that has crept into our body politic has imperceptively influenced the young learners—now grappling hard to attain recognition amongst the neo-elites. And the culture is debased and defiled. The teachers have no reason to disown blemish and continue to stand aloof, when dangerous signs are made abundantly visible.

Believing in the triumph of commonsense, strengthened by realistic study—I assure the teachers that they are sure to root out this malady—once they decide not to tolerate perversion. The students will stand behind them in such healthy venture.

JOSEPH : KERALA

(Continued from page 14)

districts to the regional pockets in the south. This growing political influence of Muslim League created resentment among sections of the Hindu population,especially the Nairs. It led to the emergence of the Hindu communal group,the RSS, making its hold in Kerala. The BJP has gained access in electoral politics too since the 1980s. In the 1982 election the BJP-Hindu Munnani combine contested 69 seats and won 2.75 per cent of votes. The recent Ram Janmabhoomi Babri Masjid controversy and the subsequent Ekta Yatra added strength to its cadres in the local areas.

ISS and minority communalism

In December 1982, Trivandrum witnessed anti-Muslim riots. Tensions were also built on the 'Nilakkal Controversy' over the disputed site of a church between the Hindus and Christians. But it eventually subsided. Liberation theology-related movements and changes are fast taking place within Christian religion.

The Muslim community on the other hand,still stands educationally backward and economically weak. Thus recently Islamic Sevak Sangh (ISS) emerged as a counterpart of the RSS. Its founder is the 27 year old Abdul Madani. His speeches denounce the 'Muslim League for their incapability in caring for the Muslim cause. The ISS is alleged to have been supported and funded by sources within and outside the country. It has a majority following among the youth from the southern districts of the State where Muslims live in pockets. The open support for the ISS by Muslim League supremo Ibrahim Sulaiman Sait,also had its impact on the recent riots. This is a glaring example of minority communalism and its political clout.

It is important to note that the riots occurred at a time when the ruling United Democratic Front (UDF) was riven by factional strife between Chief Minister Karunakaran and A.K.Anthony. In the events that followed, Electricity Minister Padmarajan acted as Chief Minister. The caretaker government failed to take stern action due to political factionalism and there was virtual paralysis of administration in the State.

The only solution, out of this present crisis,for Kerala is to have viable and efficient leaders,both social and political, who can highlight ideas of secularism and national pride to the different sections of the population. Modern values of democracy, nationalism, secularism have to be inculcated into the minds of the people.

The economic structure of the State needs immediate boosting, whereby industrialisation and proper channeling of foreign remittances is the need of the hour. The problem of unemployment has to be tackled at any cost. For this, a political leadership capable of bringing about such a change is essential. Otherwise, Kerala with all its problems will remain a fertile ground for subversive activities,the most probable being community-based violence. ■

SEABROOK : MARKET ECONOMY

(Continued from page 4)

market economy could have been devised for this task.

It should always be remembered that the countries of the West are also developing countries: their aim is constantly to invent new commodities, services, enterprises, products, needs and wants. This involves a double wastefulness: human resources lie neglected as the earth's resources are intensively consumed — a dual prodigality in a poor, perilously close to perishing world.

Everyone knows that, above all, India needs relief from poverty. But the path to that cannot lie in the treacherous pursuit of Western prescriptions, for these lead only to dependency, captivity, violence and ruin. India's present policies modernise poverty but do not alleviate it, streamline injustice but do not combat it, exacerbate inequality rather than redress it. If the West calls this wealth, so be it.

A decent sufficiency for all lies well within India's capacity, is within reach of its ingenious, hard-working and creative people. If at the time of independence, India had developed its own traditions of frugality, conservationism and respect for the earth, and had sought to remedy its own monstrous inequalities, the country would not now be going can in hand to the West for extortionate loans. On the contrary, the West would now be coming to India, humbly begging for aid, assistance, instruction on what it should do to achieve a self-reliant and secure life for its people.

The market must be kept in its proper, subordinate place. Limited, local and fair, it remains a neutral, useful mechanism. To look upon it as a vehicle of salvation, as the present leaders of India seem to do, is doomed; and while some lucky few might make a killing in the free markets, the real killings will, alas, not be metaphorical, as the poorest continue to yield their last breath within full sight of a global plenty denied them. ■

R.K. ROY : HAZARDS OF BEGMANSHIP

(Continued from page 5)

the consumer sm that has gripped the better-off sections of society, that is the savers.

The suspension of rational disbelief required for the pursuit of semi-tigerisation, extends to supportive foreign investment. Dismantle FERA and exchange control, free income of foreign companies from taxation, permit total alien control of ownership, do what you will, investment inflow of the required magnitude will elude India.

The average annual foreign investment in the developing countries amounted to 26 billion dollars during the period from 1986 to 1990. Of this, nine billion dollars went to Latin America, three billion dollars to Africa and 14 billion dollars to East Asia and South-East Asia. With the formation of the North American Free Trade Zone, the US and Canadian investment will flow into Mexico at the expense of investment elsewhere. The on-going normalisation in South Africa will resume foreign investment in that country. The tigers of East Asia, who have not gone to sleep, will strive to retain their share of foreign investment.

Besides, in 1990 and 1991, 34 countries made 82 changes in rules and policy to attract foreign investment. The competitive wooing will push India into getting foreign investment to replace the domestic investment that caters for the market of 200 million. That will quench the thirst of developed capitalism for new markets. But the net addition to the growth of investment, the key to India's tigerisation, will be small.

The mocking Camdessus did not need to set a government committed to begmanship on the tiger trail. The pauper tiger will declare as many industries sick as possible, proceed to kill them under the unfolding exit policy, and clear the ground for foreign investment. This government will drastically reduce import duties to promote competition, even though industry has been rendered vulnerable by continuing policy-induced haemorrhage. Foreign supplies and investment will be larger than before but smaller than is required to give a significant fillip to investment and growth. Per capita consumption will remain constrained, but will not fall unduly, so long as the IMF is willing to be humoured.

A nation can grow only on its own steam as shown by the tigers worthy of emulation. This government will take long to relise that there is more to liberalisation than looking outward. Sense will dawn only when loans begin to dry up. Before that the ballooning external debt burden will have totally sapped the nation's will and made India a basket case. ■

POLITICAL NOTEBOOK

Ominous Outburst

A very disturbing threat to the nation's integrity has come from within the leadership of the ruling party in the country.

Kerala's Chief Minister Karunakaran is a senior leader of the Congress, and has been playing an important role in the power-politics within the ruling party claiming proximity to the Prime Minister, so much so that his admirers regard him as the king-maker of the present establishment. In a recent interview, he is reported to have bitterly complained that "certain rootless North Indian politicians' are bent on finishing off the Prime Minister "in the South before capturing his post" and hence they are "fomenting trouble in the Congress States in the South".

The grave implications of such allegation are, first, there are rootless politicians in the Congress in the northern States; secondly, these northern leaders are fomenting trouble within the Congress party in the South; the ultimate objective of these northern Congress leaders is to weaken the Prime Minister's position and then to throw him out.

By Karunakaran's logic Narasimha Rao draws his strength as Prime Minister by virtue of his getting the support of the Congress in South, where the party has been ruling in three States—namely Andhra Pradesh, Karnataka, Kerala. Secondly, he ascribes the surfacing of acute dissidence in the Congress ruled States in the South to the manipulations of these rootless politicians in the North.

This opens up the prospect of bitter in-fighting within the ruling Congress party, in which Karunakaran has brought in the question of mutual rivalry and suspicion between the North and the South. When Narasimha Rao became Prime Minister last year, there was certainly a feeling of pride that for the first time, the chief executive of the government of our republic has come from the South, underlining the sense of national unity. The Congress as the ruling party could certainly take credit on the occasion for having elected a distinguished leader from the South to lead the Central government of the entire country.

But Karunakaran's diatribe betrays a totally different mentality. It actually encourages narrow regional chauvinism, and makes out that Narasimha Rao's becoming Prime Minister is by virtue of the Congress strength in the South, and therefore a matter of acute jealously for the northern leaders in the Congress. In a sense, this is a blatant invitation to open factional fighting within the Congress along narrow regional lines. This is bound to provoke angry response from the Congress leaders in the North, and thereby not only intensify factional fight within the Congress but will also bring in the element of narrow regional loyalties in the outlook and functioning of the Congress leadership.

One can of course understand that Karunakaran's outburst is perhaps the outcome of his political frustrations. He has hardly been able to rise to the eminence of a national leadership despite the seniority that he commands. Secondly, the mismanagement that is writ large in the running of the Kerala government under him has weakened the Congress party in the State, as some of the leaders within the Pradesh Congress will vouch for. Thirdly, Karunakaran could hardly win laurels by his widely known opposition to the selection of K.R. Narayanan as the Congress candidate for the post of the Vice-President of India, and the subsequent official mismanagement of Naraynan's first visit to Kerala after assumption of the august office. However, it is a dangerous game for any politician to try to cover up one's own frustrations by such diversionary moves as whipping up regional frenzy. It is possible that under pressure from responsible Congress leaders, Karunakaran may be pulled up to retract his statement.

What however is a matter of utmost concern is that the ruling party itself which claims to be national in its outlook should be harbouring within its leadership such persons who are so bereft of fealty for the nation's integrity. The Prime Minister has to realise that a thousand homilies on national integration can easily be countermanded by such ominous outburst as Karunakaran is guilty of.

The edifice of the nation's integrity already so badly battered, can hardly be safeguarded by such hollow men claiming to be in the leadership of the ruling party in this great country.

October 21 *N.C.*

Finance Minister's Bankrupt Economics

ARVIND N. DAS

Manmohan Singh must be feeling lonely nowadays. Only a few months ago there were many who eulogised him as the harbinger of India's economic transformation. Today, there are few who join that chorus.

Even in his own ministry, there is nervousness if not outright embarrassment, among his subordinates who were so *gung-ho* about their version of globalisation a few weeks ago that they chortled about getting inflation in India down to a single-digit rate and thereby signalling the success of their policies. Today, as the rate of inflation is again climbing perilously towards double digits, there is a resounding silence in the North Block

Worse for Manmohan Singh, his perceptions are being disputed even by his erstwhile political admirers On Budget day not so long ago, by drawing the red herring of the "non-leakage" of the Chelliah report across the heated parliamentary discussion on the issue of the World Bank's foreknowledge of budgetary provisions, the leader of the Opposition, L.K. Advani, has provided Singh an escape route. Today, Advani not only pointedly distances himself from Manmohan Singh's liberalisation, he even asserts that his party does not uphold capitalism.

Similarly, R. Venkataraman, who is surely familiar with fiscal facts of life since he had, as Finance Minister, negotiated an earlier IMF loan and was President of the republic when Singh repeated the exercise, has now expressed his discomfort with the effect of the dramatic shifts in economic policies that Singh has effected.

Much more significantly, P.V. Narasimha Rao himself has chosen the forum of the FICCI to pronounce his view on the scam. The Prime Minister's assessment is quite different from that of his Finance Minister: the former sees the scam as a serious phenomenon, the latter pooh-poohs it as having been overblown by the media.

Indeed, there is much in the scam that reveals basic fallacies of the dominant economic superstition. To those who did not seek simple vindication of the government's new economic policies in the madly zooming share prices, it was apparent even before the scam came to light that there was lack of congruity between a wildly bullish share market and a largely stagnant economy. It was correctly argued that such a dichotomy was inherently unstable and that the apparent accumulation was mostly of account of unscrupulous speculation. However, instead of heeding such warnings, the overheated money market was seen as the goose that would lay golden eggs. Now the chickens of chicanery are coming home of roost.

Of course, it is a sign of the globalisation of the Indian economy that, while its liberalisation has drawn more platitudes from abroad than actual investments, the financial scam has become truly "post-national". The news of the litigation in New York between the Stanchart Bank and Citibank on the issue of inter-bank fraud has been followed quickly by the report that the Bank of England has initiated liquidation proceedings against the Mount Bank Corporation, an NRI enterprise, which is alleged to have played an important role in the scam transactions. The JPC too is believed to be investigating the trans-national flow of scam funds.

As interesting figure in this context is the estimated total of the scam: Rs 6000 crores. This is almost exactly equivalent to the two billion dollars which India has borrowed from the IMF and other foreign sources since the globalisation plan was inaugurated.

A curious aspect of the scam investigations to date is that little attention seems to be paid to recovering the looted amounts. The normal police method on receiving a report of a crime, against property is to try to recover the stolen goods even as the culprit is hunted down. In the case of this financial crime however, the country's premier criminal investigation agency, the CBI, has as yet not reported any success in locating the loot. Like the JPC, the CBI too appears to the more involved in unravelling the *dramatis personnae*

Of course, locating the loot is not as easy as it sounds. In

(Continued on page 35)

Devaluation of Foreign Policy

H.K. DUA

Does India have a place in the world commensurate with her size and potential?

Fortyfive years after independence, an answer to this question creates an uneasy feeling. Most discerning people are increasingly realising that India does not enjoy in the world the respect it should have now.

Unfortunately our leaders, whether in the government or in the Opposition, do not seem to be much bothered about the diminishing role India is playing in international affairs. This indifference to the nation's place in the world is not because of any lack of status consciousness among our political leaders but because of their narrow vision and absorption in the domestic mess which they themselves have created. They could have been forgiven for their shrinking worldview if they were really engaged in the task of nation-building. Unable to look beyond a few miles or the immediate, our political leaders have virtually stopped thinking about the massive changes that have been sweeping across the world or are likely to occur during the next few years. To expect them to think of a foreign policy to match these changes would be to expect them to do something beyond their capability.

It is not that India is suffering from a Middle Kingdom syndrome. Our political elite realises that the sun does not revolve around India, but its inertia seems to have overtaken it. What is evident is a callous unconcern for the country's dwindling prestige abroad. Maybe it is too much to expect from our leaders to have a foreign policy befitting a nation of as many as 850 million people. The reigning philosophy in New Delhi in fact questions why India should necessarily play a role in international affairs at all. This perhaps is not the deeply-held view but an attempt to rationalise the marginal role India is playing these days. It implies a sort of the recognition of the insignificant position India has been reduced to during the last two decades.

Maybe preoccupation with domestic problems has made Indians inward-looking, insular, perhaps anxious over being ignored by the rest of the world. Political instability during the last few years has taken its toll in the country's failure to evolve a coherent and dynamic foreign policy. The situation in Punjab and Kashmir, the internal strife in other parts of the country, a slow-growth economy and endless controversies over petty issues have all been diverting its attention from the essential tasks and aimed at building a nation and securing a better place in the world.

There is a link between the two. Who will, after all, take a nation seriously which willy-nilly changes its government every alternate year, where every village presents a picture of disunity, where caste and religious differences keep it bogged down in daily acrimony? The only time India makes news abroad is when it is hit by a natural calamity, widespread riots or a political upheaval or when the World Bank and the International Monetary Fund meet to throw some crumbs.

The author is the Editor of the The Hindustan Times *which carried this article as a signed commentary.*

Little do our leaders realise that a nation weakened by divisions at home and flaunting the begging bowl as a national symbol abroad cannot earn the esteem it might have been craving for. Whatever the politicians might say or the bureaucrats glibly rationalise, the nations which have got hooked to living on borrowed money simply cannot have an independent foreign policy, least of all command respect from others.

India no longer wields at the United Nations the same influence it used to a few years ago. Our Minister of State for Foreign Affairs, Eduardo Faleiro, who represented India at the United Nations a few days ago asked for a permanent seat for India at the Security Council. It was an impromptu request that Faleiro made to voice a national wish. What he did not realise – perhaps innocently – is that he had neither a studied brief from the government nor the diplomatic strength of a nation to back the demand for the special status at the UN. Official claims notwithstanding, those who went to Jakarta themselves know that India was not performing a leadership role at the non-aligned summit. It was perhaps out of tune with many an event at the summit.

You can blame neither the present government nor the government that preceded it for the vacuity of our foreign policy. The failure perhaps is nation. Those whose job is to take decisions, the opinion-makers or the entire political establishment have to work out a foreign policy that is aimed at promoting the national interest. This would involve working out a foreign policy that can smoothly negotiate through the immediate difficulties India is facing vis-a-vis the rest of the world, keeping at the same time a long-term perspective. To evolve such a foreign policy would need a clear vision and considerable skill.

The challenges before Indian foreign policy are going to be fairly serious considering our shortcomings and years of neglect. It must be acknowledged that India is under pressure and this is partly an outcome of the changes the world has experienced during the last few years.

The Soviet Union has collapsed. The world is not unipolar as has been projected after the Gulf war; India nevertheless does not enjoy the bargaining power its ties with Moscow gave it for years. Even before the Soviet Union disintegrated, its attitude towards India had changed but New Delhi was slow in recognising the new realities. And now the new Russia, caught in its own problems which perhaps are more serious than those of India, cannot and should not be seen as a power to lean on. Moscow will be instead keen on accommodating the West's wishes even at the cost of causing annoyance in India.

India has to be on its own to find its way through the emerging scenario. In the long-term, India has to work out an independent foreign policy that will give it more elbow room than what it has now. It should aim at peace in the neighbourhood so that India does not have to fight another war which can inflict misery on the subcontinent and distract attention from the key talks of economic development. The new foreign policy should also take into account the strategic environment beyond the immediate neighbourhood of South Asia and China. A peaceful climate continues to be important for fighting the battle against poverty and building a strong India.

Immediately, the foreign policy-makers have to ensure that the world develops a greater understanding and perhaps a vested interest in Indian unity and territorial integrity. It is under strain in Punjab where the situation is improving, and in Kashmir, where the threat is serious. Competent diplomacy is supposed to earn security and promote national goals without fighting wars.

India is under pressure on other counts also. The United States, Japan, Germany and Russia are making demands that India should either sign the Non-Proliferation Treaty or accept some other arrangement envisaging non-proliferation in South Asia. The idea simply is to make India give up its nuclear option. The powers which want India to give up its nuclear option also want it to accept the rigours of the Missiles Technology Control Regime and cut its defence spending.

These demands are coming from the countries which wield considerable economic and political clout in the world. Although one has begun to hear different voices on foreign policy, the prodominant view in P.V. Narasimha Rao's government favours India's keeping its nuclear option open and not to submit to the pressures for accepting restrictions on the development and transfer of missiles. On defence expenditure the divergence between th Western and Indian views is also not noticeable. Th developed countries think India is spending more on ar and in the process depriving itself of funds that could used for development. New Delhi holds the opposite vie

Defence versus development is as old a debate swords and ploughshares and is unlikely to be resolv easily when the Kashmir question has again become h and Pakistan is known to be encouraging terrorism fro across the border. India is feeling that Pakistan deliberately needling it in Punjab and Kashmir and such it cannot accept the Western pleas for cuts in defen expenditure. The noises being made in Washingto Bonn, Paris and Tokyo on this account are, however, goi to create more difficulties soon for India, and New Del may not be able to brush them aside.

The Group of Seven is virtually telling India that cannot continue resisting non-proliferation proposa step up its missiles programme or retain the present lev of defence spending. And if it continues to do so, it ris cut in the flow of loans, investments and technology.

India has already accepted suggestions to liberalise i economy, throwing the doors wide open to foreign inve tors, but is finding it hard to accept these demands. Th challenge for the country is to work out a foreign policy which there is a consensus in the country and whi advances national interest. India will have to tackle th pressures with finesse. The situation need not cause Ind to curse itself for its past mistakes or the neglect of th essentials that help a nation itself decide its foreign polic

The situation, even if it is not to India's liking may, fact, be throwing up an opportunity for exploring creati possibillities in foreign policy. India can still advan national interests without going under.

India-China : Reflections on 1962

NIKHIL CHAKRAVARTTY

This week, thirty years ago, the Chinese army had mounted a full-scale military attack along the entire length of our northern border. For three years previous to that there were occasional clashes, accompanied by angry polemics and tension over border claims.

What happened on October 20 was entirely different in character. It was a massive aggression into territories beyond the lines claimed as the border by the Chinese themselves. In other words, what the Chinese achieved on the ground by the sudden military offensive was to grab fresh territories beyond what they were putting up as their claim line during the protracted negotiations.

Looking back after a lapse of thirty long years — the span of a generation — many points of reappraisal come up while the old tensions subside. It is customary in any active foreign-policy establishment, to undertake a thorough review of the past so that one could be better equipped to deal with the present and to chalk out the future. It is high time that our Foreign Office and oth specialised bodies undertook such a review. In the a sence of any comprehensive reappraisal, one has to fa back upon certain impressions and insights picked up as reporter of those troubled times.

The Chinese attack not only pushed back our line defence, but dealt a body blow on Jawaharlal Nehru authority at home and standing abroad. As one watche the mounting tension in the space between Dalai Lama arrival in India in April 1959 and the Chinese fullsca attack in October 1962, one could discern how Neh found himself unable to get a grasp over the situation. H message over the radio at that time reflected his shock the unprovoked military offensive by a neighbourin power whom he had trusted more than anybody else.

Political collapse of Nehru was evident when wrote the letters to the US President asking pathetical for arms supply (November 19, 1962). Although su sequently, he tried to rally by appealing for the five-nation non-aligned initiative, it was clear that he would be hardly able to recover, physically, mentally and politically. In a sense, the Chinese aggression came as a godsend for all those who had been denouncing the non-aligned stand of India. It was no accident that within a few weeks the Anglo-American initiative came for the virtual partitioning of Kashmir. It was Sardar Swaran Singh's tireless stonewalling that warded off the Duncan Sandys mission.

Where did we go wrong, diplomatically and militarily? For one thing, while Nehru had a remarkable vision of independence from the clutches of the big power military alliances, one could not help feeling that in the euphoria over the success of the Bandung Conference where he had actually chaperoned Zhou-en lai around, he missed assessing in time the Chinese approach to world affairs which is throughout guided by the imperatives of power politics; in other words, by the principle of balance of power.

China's concern has always been Tibet, and in the prevailing uncertainty, it wanted to show off its military prowess as a decisive element in foreign policy. That was how during the official level talks on the border claims in 1960, while the Indian side argued with legal acumen, the Chinese were working out military strategy of piercing the frontier.

Consequently, the disarray of the Indian Army in the NEFA sector was due to the fact that our troops were totally ill-clad for the high altitude operation, while there was mismanagment in the conduct of the war.

●

THIS is now disclosed in great detail in Major General Palit's latest volume – a work of seminal dimension – in which one gets a glimpse of the shocking mismanagement at the top, in which the serious business of conducting a war was totally missing; instead there comes up total disregard of all norms of administrative functioning, in which personal ego played an insignificant part. The bravado of General Kaul based on the gasbag's megalomania, stands out as a fearsome reminder of unpreparedness and the absence of any well thought out strategy of dealing with a full-scale military offensive. It was a dismal picture.

While Krishna Menon's role as an outstanding diplomat will long be remembered, his stint as Defence Minister was marred by his petty subjective interference in professional military matters. It was really a tragic case, because one has to take into account his signal contribution towards the setting up of an indigenous defence system which reinforced our independence in world affairs.

An aspect of the Chinese aggression of 1962 is generally missed, and that is its linkage with the domestic politics of China at that time. The Chinese themselves have brought out the extensive damage wrought by their own aggressive sectarianism of the sixties. Obviously, such an over-heated political line at home had had its inescapable repercussions on foreign policy outlook. The Cultural Revolution had been preceded by successive waves of aggressive sectarianism, beginning with the back-to-the-village campaign, followed by the rectification campaign – all leading towards the disastrous Cultural Revolution. If one tries to integrate this domestic scene with China's angry foreign policy posture then the picture would be clearer why China took a hostile stand towards not only India but other friendly countries as well. If our understanding of the Chinese foreign policy of those years had been placed in this context of that country's domestic policy, then perhaps the damage could have been minimised and the debacle averted in 1962.

●

IN the three decades since those heady days, China has chastened and Indira Gandhi's initiative in restoring ambassadorial level diplomatic relations has paid good dividends. There was a period of stalemate and the talks were reduced to rituals particularly on the thorny issue of the border dispute. There was glimmer of a breakthrough when Rajiv Gandhi visited China and Deng Xiaoping received him in 1988. While the ghastly events at Tienanmen Square put the clock back, there has been an appreciable recovery in the last two years.

In this context, it is important to note the present Chinese approach to the border dispute. At present, the entire Chinese emphasis is on confidence-building-measures (CBM) along the present line of control. Border trade is to be reopened, the intelligence network between the opposite border security establishments would be upgraded and all this may help to reduce the forces posted now on both sides of the frontier. While the Chinese have not turned down the proposal for the resumption of talks for the examination of the boundary claims, their entire emphasis is now on the confidence-building-measures along the present line of control. Obviously, the Chinese perspective is that after a few years, with the establishment of stability and tranquility along the border, the clamour for redrawing the border line as per respective claims would be fairly weakened, if not given up altogether.

On a wider scale, at the global level the Chinese maintain a caste-system approach. As a member of the club of great powers – the five permanent members of the UN Security Council – they count themselves as one of the Big Powers of today with its own nuclear arsenal. At the same time, China is serious about maintaining close and friendly relations with India on the basis of recognising India as the leading regional power in South Asia. In other words, India in the Chinese eye, does not belong to the top drawer but as the predominant regional power.

No doubt there is need for improving our relations with China. But this need can hardly be realised without taking into account the Chinese perception of themselves as being in the top category, while India will have to contend with being acknowledged as a regional power. ■

Pakistan Recasting Afghan Policy

NASIM ZEHRA

As the October 24 deadline approaches for the Afghan Interim President Burhanuddin Rabbani to vacate his seat, Afghan-related diplomatic activity in Islamabad has picked up significantly. As part of its effort to create a consensus for implementing the third phase of the May 24 Peshawar Accord, Islamabad played host to a number of key players on the Afghan scene.

During Iranian President Rafsanjani's visit in September, a major breakthrough was made on the Afghan front. They welcomed the August ceasefire which brought an end to rocket and missile attacks on innocent citizens. Islamabad and Tehran decided to coordinate their efforts and keep each other informed through diplomatic channels.

Discussions between Nawaz Sharif and Rafsanjani yielded an eight-point agreement on the objectives. These included appeal to the people of Afghanistan to avoid ethnic, linguistic, and sectarian divisions, and to seek an overall political consensus peacefully through dialogue; support to the Islamic government of Afghanistan; reaffirmed their adherence to the internationally recognised principles of non-interference in its internal affairs and called for international respect, initiation of the electoral process in Afghanistan in which all groups will participate; not to provide aid in any form to the warring Afghan factions and ensure that all aid to Afghanistan is channelled through it; create conditions in Afghanistan which would enable Afghan refugees in Pakistan and Iran to return to their homes in safety and with honour; provide material and moral support for rehabilitation and reconstruction of Afghanistan and its economic development ; and, welcome Afghanistan into the ECO.

During the Afghan President's three-day visit beginning on September 25, Islamabad clearly articulated the government's position on Afghanistan. In fact, President Ghulam Ishaq Khan said in his banquet address :

"I would also like to affirm we would not allow our territory to be used for undermining peace in Afghanistan or its legitimate government...there is however an imperative need to convert the Afghan ceasefire into permanent peace by taking measures to deal with factors responsible for the periodic recurrence of factional fighting in a country already ravaged by war."

Prime Minister Nawaz Sharif also reiterated that, "Islamabad will make sure that our territory is not used to undermine the legitimacy of the Afghan Government. In underlining the utility of the Peshawar Accord as a basis for a peaceful political transition, the PM said: "The Peshawar Accord represents a broad consensus among the Afghan people and provides a mechanism for smooth transition, including the convening of a *shura* which will strengthen the process of conciliation and bring other political groups in the mainstream of national life."

Another key supporter of the Afghan *mujahideen*, Prince Turki al-Faisal of Saudi Arabia, head of Saudi intelligence and King Fahd's special envoy, visited Islamabad during Rabbani's visit. Trilateral talks were held between Nawaz-Rabbani and Turki. However, the primary objective of Turki's visit was to convince Hekmatyar to make peace with Kabul.

A Saudi press release in Islamabad acknowledged a joint meeting of Turki, the Saudi Ambassador in Pakistan, Lieutenant General Javed Nasir, Director-General Inter Services Intelligence and two ISI officers, with Hekmatyar in Nangarhar province on September 28. They all "called upon the leader (Hekmatyar) to abide by the August ceasefire".

These moves convey three important elements of Islamabad's current Afghan policy:

One, that Islamabad has totally delinked itself from all political elements inside Pakistan, including the Jammat-i-Islami, that call for supporting specific elements, like Hekmatyar.

Two, that it understands that Afghan reconciliation means that a 'grey' area on the Afghan political scene must be created to accommodate the *mujahideen* and non-*mujahideen* segments like Commander Dostum and many others.

Three, that without active cooperation and trust among Kabul and its bordering countries including Iran, Tajikistan and Pakistan peace will not return to Afghanistan.

These moves by Islamabad acquire special significance as differences continue among the Afghans. Especially the contentious issue of withdrawal of the Dostum militia remains unresolved. A decision was taken by the Peace Commission in late August that the Kabul Government will ensure the withdrawal of the militia.

On October 2, the Nangarhar Peace Mission that brokered ceasefire between Hekmatyar and Kabul, issued the October 4 deadline to Kabul for withdrawal of the Uzbek militia from the capital.

Underlying this commitment has been Kabul's

Punjab : Problem or Opportunity ?

NIRMAL MUKARJI

Punjab presents a problem at once complex and simple. Complex, if one gets lost the turns and twists of its history, or if one tries to track the doings of its splintered *jathebandis*, overground and underground; relatively simple, if one stays with basics and then looks for possibilities.

First, let me quickly put down some perceptions. These were mostly gathered during my short stay in Punjab as Governor, but their roots go back to my twenty year stint there as a civil servant. Subsequent contacts, admittedly limited, have only confirmed these perceptions. And though others are bound to have different ideas, it is only by sharing each other's thoughts that a workable foundation can be established.

Punjab is basically a Sikh problem. True, others are also affected, but that does not disturb the basic proposition. The problem has persisted for so long, without any sign of abatement, that it should rank at the top of the nation's political agenda. Unfortunately it does not, despite the rhetoric poured out by every political party, in or out of power at the Centre.

The essence of the problem today is that virtually all Sikhs feel alienated. Those in Punjab feel so most of all, but so do those in other parts of the country and, indeed, all over the world. The Indian mainstream would like to believe that alienation is confined to a limited number of misguided youths, some of whom have taken to militancy. This is not true. Alienation is near-universal among Sikhs.

Most Sikhs have learnt to keep their feelings bottled up in the presence of 'mainstream' elements. In the spectrum of Sikh alienation, one end is heavily occupied by those who sublimate their feelings in a life of prayer. The Sikhs are an extremely devout people, contrary to a 'mainstream' view that they are wild creatures. At the other end of the spectrum, many have taken to violence. Thus alienation is expressed in a variety of ways ranging from silent prayer to booming guns.

Sikh history has its own place, but it is the events of recent years that are more relevant for understanding the present level alienation. The turning point was 1984, when the Sikhs went through three traumatic experiences in quick succession. The first was the Operation Bluestar, which desecrated the Golden Temple and completely destroyed the Akal Takht. The twin shrines mean at least as much to the Sikhs as the Vatican does to Catholics. Bluestar was, therefore, an emotionally shattering experience for them.

The second was the Operation Woodrose, which immediately followed Bluestar. This made the Sikhs in the countryside, especially in the Majha belt, feel like hunted animals. Countless young men preferred to flee rather than face capture and worse. Those left behind—women, children and the aged—suffered indignities, often imprisonment, for refusing to disclose the whereabouts of the young men. The third was the massacre of innocents in Delhi and elsewhere following Indira Gandhi's assassination. This was seen as vengefully organised by those in power. Almost overnight, Sikhs felt that they had become second class citizens.

●

ALIENATION has steadily deepened since then. For one thing, nothing has been done by those responsible for Bluestar, Woodrose and the November 1984 killings to atone for the suffering inflicted on the Sikh community as a whole for the wrong-doings of a few. Politically, the Rajiv-Longowal accord which was projected as a brave measure for forging peace has, in fact, remained unimplemented to this day. That, and the subsequent dismissal of the Barnala Government without valid justification, has generated much mistrust of Delhi in the Sikh mind.

A largely 'law and order' approach may curb militancy, but it is hardly the answer for mass alienation. Especially as 'law and order' has come to mean 'order at any cost', never mind law, certainly never mind human rights. Finding even draconian laws inadequate, the security forces have joined the battle in the extra-constitutional arena. As a result, there are innumerable allegations of harassment, illegal detention, torture and false encounters. Unlimited powers, especially extra-constitutional, have led to correspondingly high levels of brutality and corruption. Innocents have suffered, and continue to suffer, far more than the militants.

In Punjab, the maxim that eventually individuals and groups tend to acquire the attributes of their adversaries has proved to be cruelly true. If Sikh extremists have become terrorists, the state has become counter-terrorist. If the extremists commit brutalities and trample upon human rights, the state feels justified to

The author is a former Governor of Punjab and a former Cabinet Secretary, Government of India.

do exactly the same. The Sikh peasant is caught between the two, with the militants knocking at his door at night and the police during the day. The security forces have thus added to his insecurity.

The 'order at any cost' policy requires the security forces to commit what would otherwise be regarded as crimes under a straight-forward 'law and order' regime. This is bad enough. But far too often security personnel go beyond even this framework. For instance, innocent persons are illegally detained as suspects and then let off on payment of large sums of money. The two strands of an 'order at any cost' policy and operations beyond that, account almost entirely for the deepening of alienation since the turning-point year of 1984.

There is no justification whatsoever for those who operate beyond the framework of given policy. There is some extenuation for those who are required to implement an 'order at any cost' policy handed down by political masters drained of political ideas. The security forces work in extremely difficult conditions. They and their families are in constant danger of their lives. It is as idle to blame them as a group as it is to condemn the Sikh community as a whole. Terrible things have been done by wrong-headed individuals on both sides. If and when the happy day dawns when there is peace, there will have to be a large-hearted burying of hatchets on both sides.

In effect, we are operating a breeder reactor system in Punjab. A breeder atomic reactor produces more fuel than it consumes. The two-strand 'order at any cost' and 'beyond the framework' operations, ostensibly to curb Sikh militancy, are pushing more and more young men into the ranks of the militants. The more we persist with such operations, incorrectly referred to as 'law and order' enforcement, the stronger militancy becomes. Body counts of the last several years tragically bear this out. Concomitantly, alienation and mistrust grow.

Peace will not come so long as there is mass alienation. The Sikhs, particularly of Punjab, profoundly mistrust the 'Delhi durbar'. That expression to them means the totality of the so-called 'mainstream' ruling class at the Centre. It does not matter which political party is in power, for on an issue like Punjab all components of this class think alike. Of all parties, the Congress is mistrusted the most, even hated. For it is seen as being responsible not only for the injuries of the watershed year, 1984, but also for the brutally corrupt regime imposed since then.

In the face of such deep-seated alienation and mistrust, any political initiative by the Centre is unfortunately doomed to be regarded as yet another piece of deception. After all, the much trumpeted Rajiv-Longowal accord proved to be one. So did V.P. Singh's much publicised visit to Amritsar soon after taking office. Any package unilaterally granted to Punjab may prove to be equally doomed. For what is involved is the self-respect of a bruised people who perceive their case in terms of rights to be recognised, not as a beggar's bowl into which crumbs of questionable generosity are to be dropped.

●

IF Punjab is essentially a Sikh problem, do the non-Sikhs (mainly Hindus) not matter? Of course, they do. But they cannot survive, much less prosper, if the Sikhs remain disaffected. The future of the minorities in Punjab depends on the Sikh problem being solved. The Hindus of Punjab have to learn to live with the Sikhs (and vice versa) and with the Punjabi language. Regrettably, so far they have thought of themselves more as part of the so-called 'mainstream' ruling class at the Centre, mistaking this for nationalism, than as Punjabis.

There is no doubt that Pakistan has been infiltrating arms and trained personnel into Punjab. This has made Sikh militancy increasingly potent and the task of containing it correspondingly more difficult. Effective measures, both diplomatic and on the ground, to counter infiltration are necessary. But it is simply not true that Pakistani interference is the real problem in Punjab. If we in India could find an answer to the disaffection of the Sikhs, Pakistan would eventually be squeezed out of the Punjab situation.

Sandwiched between Islamic fundamentalism on one side and its Hindutva counterpart on the other, sections of the Sikhs too have become fundamentalist. This is one mode through which alienation is expressed. It is, in other words, an effect and not the cause. 'Mainstream' critics who pick on Sikh fundamentalism as the real villain are thus mistaken. They need to get past this surface phenomenon and discover the underlying reality.

Punjab has its economic problems. Its agriculture has plateaued. Its industry and trade are declining. It has a growing army of unemployed youth, many of whom take to militancy. But its per capita income is still among the highest in the country. Other less prosperous states are in greater economic distress. Therefore, while Punjab's economic issues do require attention, especially its unemployment, it would be wrong to view the Punjab problem primarily in terms of economics.

Calls for Khalistan or its latest variant, a sovereign Sikh state, do disturb the nationalist mind. But two sobering thoughts might help to put these in perspective. First, the unity and integrity of the nation is undoubtedly important, but the idea has acquired inviolability only since independence. Prior to that, it was breached with impunity when the 'mainstream' ruling class acquiesced in the partition of the country. Second, ethnic groups the world over are busy declaring sovereignty for their homelands. This has not necessarily made them independent, because pre-sovereignty interdependency on neighbours in matters like trade, communications and defence remains intact.

Finally, we return to the basic theme. The demand for sovereignty made by Sikh *jathebandis* is a reflection of a deep sense of alienation amongst the Sikhs. The mass alienation of any group results in the assertion of its identity, often in an aggressive manner. When the group has a territorial base, as is the case with Punjab's Sikhs, the assertion of identity gets linked to the concept of a homeland. It is only a short step from there to a cry of 'autonomy for the homeland'. Thus it is that the operative word in Punjab today is *khud-mukhtari*.

●

FROM these basics of the Punjab situation, two major issues emerge. First, something simply has to be done to ameliorate, if not entirely eliminate, the alienation of the Sikhs. And, second, an acceptable answer has to be found to the demand for autonomy. All other issues are secondary in importance. For instance, if alienation goes can militancy or the Pakistan factor survive for long? Again, if there is the fullest possible autonomy, can Punjabis not be trusted to look after their economic well-being? Also, since autonomy implies a corresponding degree of responsibility, do the minorities really have any cause for fear?

If *khud-mukhtari* in whatever form can be viewed as the ultimate goal, getting rid of alienation is the immediate agenda. The two are interlinked. It is only by clearing the undergrowth of alienation that possibilities about the more distant goal of autonomy can open up and be discussed. Conversely, a degree of clarity now about the range within which alternative forms of autonomy can be thought of could itself help in reducing the level of alienation. Consequently both items require simultaneous thought and debate.

But first a dilemma has to be overcome. On the one hand, as stated earlier, the Sikhs in Punjab mistrust the Congress. On the other, the Congress does happen to be the party ruling at the Centre, and is likely to be so for some time. Possible alternatives to it, such as the BJP, are neither in real contention nor, from Punjab's point of view, better. Therefore, the Sikhs of Punjab and the Congress at the Centre will perforce have to do business with each other.

It is not going to be easy for either side. A large and flabby organisation like the Congress cannot change easily. On their part, the Sikhs may find it difficult to forgive and talk. Especially as the person heading the Congress now was the Union Home Minister during the *Katl-i-am* of November 1984 and did nothing to help the Sikhs then. He was leading the Congress when, in June 1991, the Punjab elections were unjustifiably called off at the last minute, simply because non-Congress victory was otherwise certain. How, the Sikhs may argue, can such a party with such a leader be trusted?

However, there are mitigating factors. The focus of the Sikhs' ire against the Congress was, after all, the dynasty. That is no longer there. It would be self-defeating to hold the sins of the dynastic rulers against the successor Congress leadership. Certainly the Congress has still to rid itself of much that is undesirable in its inherited baggage. Also, the departure of the dynasty has made little difference to the travails of the people of Punjab. Nevertheless, the plain fact is that the Congress at the Centre has begun to change for the better so far as the Sikhs are concerned.

As to Narasimha Rao's past record, there is a case for not judging him too harshly. He was hardly in real command in November 1984. The cancellation of elections in June 1991 was without doubt inexcusable, but a charitable view could be that possibly Rao was not properly briefed about the consequences of such a step. All in all, giving the Congress under Rao a chance to redeem itself vis-a-vis Punjab, and more especially the Sikhs, has much to commend itself. The alternative of not doing so would only prolong Punjab's agony. Without any visible sign of a more favourable opportunity opening up in the future.

As Prime Minister, Rao has shown a new understanding of the problems of States like Punjab and Jammu and Kashmir. On Kashmir, he has not only rejected the BJP's call for abrogating Article 370 but has expressed his willingness to consider 'what else they would like within the Indian Constitution'. He has elucidated that 'if some people think that within the Indian Constitution an amount of autonomy which meets with their aspirations is possible, then that is what we have to explore'. Earlier, while speaking of greater autonomy for the States generally, he had not ruled out special status for problem States like Punjab within the framework of the Constitution.

In effect, the Prime Minister seems willing to consider 370-plus for Kashmir and perhaps much the same for Punjab, though within the framework of the Constitution. The expression 'framework' obviously allows room for Constitutional Amendments that would incorporate such special status as may be worked out for these States. At the same time, it captures in a single word the doctrine of the basic features of the Constitution, in respect of which the Supreme Court is clear that such features cannot be amended. It appears that the Prime Minister has set the range within which levels of autonomy which meet the aspirations of the people can be looked at.

But how is one to discover such levels of autonomy? The traditional way has been incremental, taking the existing federal dispensation as the starting point and advancing here or there beyond that. The Sarkaria Commission did just this and ended up making recommendations which, for a State like Punjab, turned out to be far short of the aspirations of the alienated group. The other route, untrodden so far, would be leave it to the people's elected representatives to propose the extent of autonomy and the form of governance that would meet their aspirations. If their proposals do not offend any basic feature, they could without further ado be incorporated in the Constitution as special provisions.

Applied to Punjab, this modality would require the existence of a truly representative legislative assembly. The present legislature does not qualify, because the Sikh peasantry largely did not vote in the last election. If all concerned were to participate in the next election, the legislative body they elect could be treated as a sub-constituent assembly as well. In this capacity it could propose the system of governance and the degree of autonomy that Punjab wants. The sub-Constitution that emerges would need to be endorsed by a two-thirds majority, in line with the practice at the Centre. If it does not breach any basic feature, parliament in its constituent mode should have no serious difficulty in adopting it.

The sole agenda before the sub-constituent assembly would have to be to give concrete shape to Sikh aspirations. A useful beginning could be the Anandpur Sahib Resolution, the essence of which is that the Centre should look after only four subjects: defence, foreign affairs, currency and communications. The Sarkaria Commission rejected the resolution, more or less ex-parte, mainly because the Centre would be left with no 'fiscal resources of its own, independent of the constituent units'. So far the resolution has been discussed in purely Sikh gatherings. When a secular forum like the assembly takes it up, Sikhs and non-Sikhs would have a chance to appreciate the anguish and the aspirations of the one and the fears and anxieties of the other. There would have to be a process of give and take. If this is done with determination, a formulation enjoying the support of two-thirds of the assembly should not be impossible to hammer out.

An election in which all concerned take part is not unthinkable. All those concerned did contest in the parliamentary election of November 1989. They would have done so if Punjab had had elections in February, 1990 when several other states went to the polls, but the National Front government missed the opportunity. They were ready to do so in June 1991, but the Congress played foul. The boycott of the last elections by Sikh elements was unfortunate. Whenever elections are next held—and this must be soon because the present government lacks legitimacy—those who abstained last time would have to be persuaded to return to the hustings. If they are sure that the next legislature will also be a sub-constituent assembly, they might be so persuaded.

If the suggested route has takers, at the Centre and in Punjab, there may be new hope where there is despair. But while such a 'light at the end of the tunnel' expectation may bring some cheer, it would be no substitute for an agenda to neutralise Sikh alienation.

That subject really requires a separate article. For now it is sufficient to mention three sub-agendas which demand synchronised attention. One is the need for those who perpetrated Bluestar, Woodrose and the November 1984 pogrom to make amends seen as satisfactory by the affected group. The second is to right the wrong done to Punjab by not implementing the three main elements of the Rajiv-Longowal accord: Chandigarh, river waters and territories. The third is to provide humane administration to Punjab so that alienation can come down rather than keep getting aggravated every day. All three sub-agendas are important, but the third is pressingly urgent. Putting it through is not going to be easy, for those running the present system will be stout opponents. A changeover to humane governance is possible only if those in political control develop the right perceptions.

●

ONE final thought. Alienation is generated when relations get soured between an 'out' group, like the Sikhs in the present instance, and the dominant group, earlier referred to as the 'mainstream' ruling class. Essentially, therefore, alienation is a problem of relationship. Seen in this way the responsibility for restoring harmony rests on both sides. Indeed, the greater part of the responsibility lies with the dominant group, for its very dominance can influence the situation more than anything the 'out' group can possibly contribute. It is also in the enlightened self-interest of the dominant group to heal festering sores like Punjab and J & K rather than worsen them by persisting with repressive policies.

In sum, possibilities may open up in Punjab if two variables move in a positive direction: the state of mind of the 'mainstream' ruling class; and Punjab's position in the Prime Minister's priorities. (Courtesy: *Seminar*) ■

Now a G-1 ?

In the interests of economy, Bush has privately suggested that Western leaders change the format of the G7 meetings, even holding them alternate years. This prompted Prime Minister Brian Mulroney of Canada into creative if not lateral thinking. His proposal for effecting econmies: Why not just put George Bush in a room by himself for three days?

At the concluding news conference of the eighteenth Annual G7 summit meeting Mulroney said "We could move Bush around from year to year, put him in a room so he could cogitate for three days and then come out and tell you what he thinks."

Seven Commandments for South

JOHN KENNETH GALBRAITH

As a follow-up of the South Commission, the South Centre has been set up under the leadership of Julius Nyerere. The South Centre publishes South Letter. *This article by Prof Galbraith is in the form of a brief review of the Report of the South Commission, entitled* The Challenge of the South. *It appeared in the* South Letter *(No 14, Summer 1992).*

It is some 40 years since I first interested myself in the economic problems of the poor lands of the planet, called in more neutral fashion the South. There was then almost no literature on the subject. The erstwhile colonial powers accepted the poverty of their subject people as normal. A concern for the problems of the developing lands came with the end of the colonial era.

Teaching those early courses in economic development, I would have greatly welcomed *The Challenge to the South*. This splendid piece of work, the product of informed study and discussion and a remarkable will to find agreement, would have been a basic and nearly unique text. It would also have saved both my students and myself from a number of positions since shown by experience to be in error.

There is, perhaps, one flaw in this document. Although it covers much ground, there is some tendency, I believe, for the essentails to be lost in the merely good. And, on occasion, on particular difficult matters, the role of the state in development being one, there is a slight sacrifice of emphasis to tact. Accordingly, I have thought in this comment to isolate in the shortest form what I believe to be the basic principles governing the economics and politics of development. There are times, I venture to think, when the errors of hard, short statement are less than what is lost in longer, more cautious prose.

The first need is to recognise the primary role in early economic life of agriculture – the peasant. Without food there is nothing, not life itself. One of the gravest if past errors has been in associating development with industry, notably primary industry. And farm prices, in frequent cases, have been deliberately kept low as a favour to the urban population. This has been a disastrous error, redeemed too often only in later hunger. It is noteworthy that the developed states, all of them in the past, strongly favoured their farmers and still do.

Second, and closely associated with agricultural development, is land reform. No country in recent times has flourished under an economic and political regime of great landlords or even small ones. Both the economic progress and political democracy require that economic independence be accorded to the men and women who till the land.

Next, and third, is the central role of universal education. This the developed lands strogny emphasised in their emergent years – nothing was deemed so important as compulsory schooling for all. Progress has been made on this in the Third World, but there is far yet to go. Let it be remembered that there is no literate population on this planet that is poor, no illiterate population that is otherwise than poor. In the decades past too many physically impressive industrial plants have been located amidst ignorant people.

Next is the role of the state. This role is important, but it must be kept within the limits of the scarcest resource in the poor lands – that is the supply of honest and effective administrative talent. It is in the nature of planning,regulation and public developmental action that they early exhaust this scarce administrative resource. Socialism – the extensive public ownership of enterprise – especially exhausts this scarce resource and with strongly adverse consequences.

Next, and also central to the role of the state, is a firm fiscal context. There must be effective tax collection which bears firmly on ability to pay. No escape may be allowed through favouritism,corruption or incompetent administration. Expenditure must then be within the available revenues, well-considered longer-range investment apart. There must be no drainage of resources because of badly managed enterprise.

Next is the role of the military. This must be minimal and under strict civilian control. Military expenditure and the consequent claim on scarce resources in the poor countries is the greatest and cruellest scandal of our time. It is also one in which the developed countries,including notably the United States, happily participate. The military power is the major modern threat, directly or indirectly, to democratic process.

Next, a closely related matter, is the devastating effect of international or internal conflict between or within the countries of the South. Nothing so ensures poverty leading on to starvation and death. In the direct Cold War confrontation between the Soviet union and the united States extending over nearly half a century, no one got killed, a few espionage agents and escaping refugees excepted. Under American and Soviet auspices hundres of thousands were killed and many more further impoverished in Indo-china and Afghanistan. (The issue was whether these lands should be capitilist or communist, both systems being irrelevant.) And elsewhere in the Third World millions were destroyed in national, ethnic or religious conflict and many, many more reduced to impoverishment and starvation. Tolerance and peace must be a prime goal in all of the South. Nothing else should be so emphasised.

Finally, there is the role of othe rich countries – the North. Here I strongly emphasise the writing down and writing off of debt unwisely incurred in the past. In earlier times the United States, Canada, Britain and France resorted to abrupt default when they could not pay. Now when foolish banks have made foolish loans to then-foolish governments, repayment should not be expected. An economically depressing share of the external earnings of Latin America and some other countries now go for service of dedundant debt. Beyond this, I would like to see a continuing flow of help from the internatinal agencies and direcly from the rich countries. This is an elementary manifestation of civilised values.

There is much more in this admirable treatise. Here, I would argue, are the seven absolute essentials- the seven commandments. There is also merit, I would urge, in identifying what cannot and must not be escaped. ■

A Brief Biography of Samir Amin

by

SAMIR AMIN

This article first appeared in A Bibliographical Dictionary of Dissenting Economists *(England: Edward Elgar, 1992), edited by Philip Avestis and Malcolm Sawyer.It was written by the distinguished radical economic thinker, Samir Amin himself, in the third person. It is reproduced here from the well-known journal,* Monthly Review *(September 1992).*

Samir Amin was born in Cairo in 1931 and was educated at the Lycee Francis there. He gained a Ph.D in Political Economy in Paris (1957), as well as degrees from the Institut de Statistiques and from the Institut d'Etudes Politiques. He then returned home where he was attached to the planning bodies of Nasser's regime. He left Egypt in 1960 to work with the Ministry of Planning of the newly independent Mali (1960-1963), and following this, he commenced an academic career. He has held the position of full professor in France since 1966 and was for ten years (1970-1980) the director of the UN African Institute for Economic Development and Planning (in Dakar). Since 1980 he has been directing the African Office of the Third World Forum, an international non-governmental association for research and debate.

The main contributions of Samir Amin can be classified under four headings: (i) a critique of the theory and experiences of development; (ii) an alternative proposal for the analysis of the global system which he calls "really existing capitalism"; (iii) a re-reading of the history of social formations, and; (iv) a reinterpretation of what he describes as "post-capitalist" societies.

Amin's critique of the theory of development goes back to his Ph.D dissertation (1957) published later under the title *Accumulation on a World Scale*. Conventional theory presents a general view of the problem that might be summed up in the simple proposition that "underdevelopment" is nothing more than delayed development. The emerging conclusions advocate "development policies" focused on more thorough participation in the international division of labour. *Accumulation* was among the first texts to challenge this conventional wisdom. Bourgeois economics finds attractive only the study of contingent interconnections resulting from the play of such strictly economic phenomena as prices and incomes. Moreover, in this exercise it invariably posits a hypothetical system close to the "ideal type" of capitalism. For that reason, an examination of bourgeois economic statements on "underdevelopment" throws into exceedingly sharp relief the inadequacies and the narrow range of the conventional "science" of economics.

The limitations are most clearly visible in three areas of economic analysis: monetary problems, the conjunctural state of the economy, and international relations. That is hardly an accident. The ebb and flow of economic tides indicate that in proffering its hypothesis of spontaneous, ineluctable balance, bourgeois economics turns a blind eye to the contradictory dynamics inherent in capitalist accumulation. As for the theories it propounds on international exchanges, notably those f comparative advantage and the self-equilibrating alance of external payments, they rise no higher than vapid ideology of universal harmony between nations perating as partners in the world capitalist system.

Such was the critical thrust developed in *Accumula-* *on*. However, bourgeois economics aspires to the for- ulation of a social philosophy asserting a broader idea: iat in its spread, the market of commodities and roduction factors" creates maximal conditions for the tisfaction of all, thus constituting a rational process anscending history. This claim stands on shaky ound. For the discipline of "economics" itself is noth- g more than a pseudo-science, a consequence of the onomic alienation peculiar to capitalism. "Economics" the result of that peculiarly capitalist trait whereby ienomena generated by society seem to confront that me society as if they were natural laws external to it. hus linked to the illusion of a rationality beyond his- ry, bourgeois socio-economic philosophy is unable to al with the real history of societies.

Beyond this critique Amin offers an alternative ethodology to deal with the analysis of global pitalism in two books, *Imperialism and Unequal* *velopment* and *The Law of Value and Historical* *aterialism*. According to him, there are two ways of oking at the social reality of our modern world. The st stresses the fundamental relationship which fines the capitalist mode of production at its most stract level and, from there, focuses on the allegedly ndamental class struggle between the proletariat and bourgeoisie. The second stresses the other dimen- n of capitalist reality, its unequal development rldwide, and hence focuses its analysis on the conse- ences that polarisation involves at every level, thus fining other issues in the political and social struggles it occupy the forefront of the historical stage. In this alytical framework, the development of the periphery s always been the history of a never-ending "adjust- nt" to the demands and constraints of dominant pital. The centres "restructure" themselves and the ripheries are "adjusted" to these restructurings. linking is precisely reversing this relation; that is, ordinating external relations to the logic of internal velopment.

Polarisation on a global level is thus the immanent oduct of the expansion of really existing capitalism. the scale of the world capitalist system, the law of ue operates on the basis of a truncated market which egrates the commerce of products and the move- nts of capital but excludes labour power from it. The rldwide law of value then tends of standardise the ces of merchandise but not the remunerations of our since its range of world distribution of produc- ty. Even beyond the law of worldwide value, unequal ess to natural resources, technological monopolies, ra-economic mechanisms of political and military mination – as well as the effects of the domination of life-styles, organisation, and consumption – have vastly increased this polarisation in every dimension.

In fact, the polarisation of wealth and power within the world capitalist system has passed through three stages. In the seventeenth and eighteenth centuries, thanks to the colonisation of Americas and its effects on the acceleration of the mercantilist proto-capitalism of Atlantic Europe, that part of the world acquired for the first time a decisive superiority over the old civilisations of the Orient which it prepared to attack, thus bringing a halt to their own proto-capitalist evolution (and sometimes even precipitating regressive involution). In the nineteenth century the industrial revolution and then imperialism (in the classical Leninist sense of the term), accentuated this polarisation of wealth and power which became expressed in the contrast between industrialised and non-industrialised countries. Amin proposes the thesis that the structural crisis of our own epoch, starting in 1970, begins a new stage in world domination (marked by new technologies, new forms of worldwide finance capital, etc.), which results not in a reduction but an aggravation of polarisation. The peripheral industrialisation of one part and the "fourth-worldisation" of another part constitute the new forms corresponding to this last stage of polarisation.

This polarisation has postponed the question of the eventual socialist transformation in the developed capitalist societies, while in the periphery it has required objectively envisaging a "different development" from the one that would result – in these conditions – from its integration into the world capitalist system.

In this conceptual frame, Amin has re-evaluated the various radical attempts at development which occurred throughout the 1960s and 1970s in the Third World (what he calls the "Bandung Era 1955-1975"). The Bandung project was defined by the following features: (i) a determination to develop productive forces and diversify production (notably to industrialise); (ii) a determination to ensure that the national state should lead and control the process; (iii) the belief that "technical" models are "neutral" and can simply be reproduced; (iv) the belief that his process does not involve a popular initiative as a starting point but simply popular support for state actions; (v) the belief that this process is not fundamentally in contradiction with participation in the international division of labour even if it involves temporary conflicts with the developed capitalist countries. Realisation of this national bourgeois project involved the hegemonic national bourgeois class, through its state, acquiring control in a number of areas, at least of the following processes: (i) control of the reproduction of the labour force, which implies a relatively complete and balanced development so that local agriculture can be, *inter alia*, in a position to provide the basic ingredients of that reproduction of capital, (ii) control of national resources; (iii) control of local markets and the capacity to break through into the world market in competitive conditions; (iv) control of the financial circuits making it possible to centralise the surplus and direct it to productive uses; and (v) control of the technologies in use at the level of development of productive forces reached.

History has exposed the inadequacies and the fragility of the dream of the bourgeois nation-state in today's Third World. For after the initial period of post-War prosperity, the world economy slid into crisis in the early 1970s. Immediately the capitalist camp went on the offensive again and imposed the hard-nosed demands of the transnationalisation process on Third World Societies. It turned their shattered state machinery into simple transmission belts, and over the grave of the aborted bourgeois national-state, it erected the object of its own desire: the comprador state (*Maldevelopment*).

Amin also developed a reading of history consistent with his concept of unequal development (*Class and Nation*). In his opinion what separates capitalism from all the advanced societies preceding it is not only a quantitative difference of the degree of development of productive forces. The difference is also qualitative. In capitalism, surplus value is obtained through the economic mechanism of the law of value whereas in all earlier societies the extraction of the surplus took the form of a tribute imposed by non-economic means. The contrast between, on the one hand, the transparency of economic phenomena in pre-capitalist societies and, on the other, its opaqueness through the law of value in capitalism, leads to a reversal of the hierarchy of authority. Whereas the economy directly commands the capitalist dynamic (which is then expressed through the play of economic laws which seem to impose themselves on society as laws of nature), a politico-ideological authority was dominant in earlier societies. Amin believes that Marx emphasised precisely this reversal of relations between structure and superstructure and therefore emphasised the essential character common to all advanced pre-capitalist forms (which Amin calls, for that reason, the "tributary mode of production"), in contrast to capitalism.

Unfortunately, the dominant currents of Marxism refused to consider the superstructural dynamics (contenting themselves with a vague theory of the superstructure as a "reflection" of the exigencies of the economic base), just as they refused to analyse the systems of pre-capitalist societies closely bound by multiple relations—political, cultural (religious among others), and economic. This reduction of Marxism did not predispose it to understand the transition to capitalism, while it inspired research in a false direction, namely that of the possible "succession" of modes of production such as that of slavery-feudalism or by default, Marxism became trapped in the mythological contrast of the "two-roads": the open Occidental way (slavery—feudalism—capitalism), and the *cul-de-sac* of the "Asiatic mode of production." Amin has rejected these theses and has tried to demonstrate their Eurocentric character.

According to Amin, pre-capitalist societies are characterised by differentiation of the principal source or authority because of what he has called the "central" or "peripheral" nature of the tributary society under consideration. The "central" or "peripheral" character in pre-capitalism can be found in the area of the dominant authority, that is to say, in the state (power) and in ideology (cultures, religions), whereas the "central" or "peripheral" character of a capitalist formation is located in the area of the economy. In this sense, Amin has defined feudalism not as a specific mode of production but as a specific—peripheral—form of tributary society. It was peripheral simply because the centralisation of state power which defines central tributary society was embryonic: the absolute monarchies (close to the advanced tributary model), appeared relatively late in Europe, precisely in the proto-capitalist phase of the mercantilist transition. Amin has explained this peripheral character of feudalism by the proximity of the communal phase among the barbarians from which medieval Europe developed. But this lag in Europe—less advanced than the Oriental tributaries—did not seem to have been a handicap in the acceleration of later development, but on the contrary was an advantage because of the greater flexibility of the society which it encompassed.

Amin later developed his reflections on culture through a critique of Eurocentrism which he qualified as "culturalism," meaning that it is based on the hypothesis that the different "cultures" (European, Oriental) are characterised by trans historical invariants which determine developments; these are not subject to the laws of general evolution. There he tried to show the mythological character of these invariants, artificially constructed both to legitimise the specific dynamic opened by European history (by the myths of Greek ancestry, by "Christianophilia," by racism), and to legitimise by contrast the supposed impasse of other societies.

It is also in this overall framework that Amin discusses the issues of socialism (*The Future of Maoism, After Capitalism, Delinking*). In his opinion, Marx underestimated the center-periphery polarisation in the worldwide process of capitalist expansion. Marx thought that following the industrial revolution, the capitalist system would take very little time to accomplish its universalising mission. Reality worked out differently.

According to Amin, the challenging of the capitalist order from revolts in its periphery compels a rethinking of the whole question of "socialist transition" towards the abolition of classes. The Marxist tradition remains handicapped by its initial theoretical vision of "workers' revolutions" opening up (on the basis of advanced productive forces) a rapid transition marked by popular democratic rule which should be considerably more democratic than the most democratic of bourgeois states. Nevertheless, all the revolutions of our time (Russia, China, Vietnam, Cuba, Yugoslavia, etc.) that were unmistakably socialist in intent have been the result of the unequal development in capitalist expansion. Global polarisation has thus been the historical force behind these types of revolutions by the *peoples* of the periphery. They have been anti-capitalist in the sense of opposing the existing capitalist development which has proved intolerable for the people.

But that does not mean that these anti-capitalist revolutions are purely socialist. By the force of circumstance, they have a complex nature. The expression of their specific and new contradictions, which had not been imagined in the classical perspective of the socialist transition as conceived by Marx, gives post-capitalist regimes their real content, which is that of a *popular national construction* in which the socialist and capitalist forces and projects combine and conflict. This objective contradiction should be managed through political democracy and a mixed economy. Instead it has been managed through statism which negated its very existence, thus reflecting the reconstruction of privileged class interests.

Will the ongoing crisis of alleged socialist societies ead to the restoration of capitalism? Amin has stressed hree main challenges that these societies face. First, the democratic issue: will they accept a pure and simple estoration of bourgeois political democracy or will they ucceed in giving it a progressive content and thus move oward the social management of the economy? Second, the market issue: will these countries simply ccept the law of the market, which is bound to be operating savagely against them, or will they succeed in mastering the market through non-bureaucratic social planning? Third, the external issue: will these countries eintegrate into the world economy and so inevitably be eripheralised or will they succeed in mastering the pening of their economies? Amin argues that the nswers to these questions will depend on the outcome f the ongoing social struggles. Will class interests override the popular dimension of the systems and opt penly for capitalism or, by contrast, will this dimension e reinforced through democracy?

For Amin the unilateral market solution can never ut right unbearable social, political, internal, and international contrasts. Critical thought is concerned recisely with identifying alternative social alliances which can provide escape routes from the vicious circles f the market. Different routes are required by the arious regions of the world; specific individual policies annot be derived from the unilateral rationality of the market. The imperatives of our time therefore imply he rebuilding of the world system on the basis of olycentrism. The various regions and countries hould coordinate their visions and subordinate their xternal relations to the contraints of their internal

internal development to the global expansion of capitalism.

The social alliances which define the content of the strategies for the various regions are necessarily different. In the West they will certainly keep a "bourgeois" dimension, produced by a long history of advanced development. This reality does not preclude an evolution towards socialisation. In the East the alliances will call for a liberation of society from the exclusive rule of the state and will encourage a social dialectic which recognises the conflict between capitalism and socialism. But in the Third World they will more often call for revolutionary change since here the bourgeois subalternisation is unbearable. In all cases one can acknowledge a popular, national, and regional content rather than a unilateral bourgeois vision of the market. This dramatic challenge is felt in the South stronger than in the West or in the East, but *perestroika* is needed everywhere.

Amin suffers no illusions as to whether Marxism is going through a crisis. For him whoever approaches historical materialism as a method (not as a definitive theory forever sealed and delivered at the death of Marx, Lenin, or Mao), knows that the changing realities of life present a dynamic Marxism with a continuing series of challenges to creative innovation. To renew its vitality, Marxism has to meet those challenges. The penalty for failure is atrophy. Only religious dogmatism, which is impervious to reality, is capable of seeing in an intellectual crisis nothing but threats to its own certainties. ■

Rural Family Welfare Strategies

FROM GOVERNMENT TO PEOPLE

J.P. GUPTA

India, demographically speaking, is the world's most critical country and is projected to overtake China to become the world's most populous country early in the next century. Its population, estimated at about 844.3 million (Census 1991), continues to grow at the rate of 2.11 per cent (1991) per year. With more than 16 million being added each year, India contributes about 16 per cent (1990) to the world's population.

India's population doubling time is around 32 years. The decade of the nineties is, therefore, a critical decade and represents India's last opportunity to take the actions needed to prevent yet another doubling of its population, before it stabilises at about 1.5 billion, around the first quarter of the next century.

India was the first country to launch a purely voluntary national Family Planning Programme (FPP). Though there was a compelling demographic justification for such a programme, its over-arching objective has been, and rightly so, to help assist couples achieve their reproductive goals; to enable them to determine in a free, informed and responsible manner, the number and spacing of their children. The Indian Family Planning Programme clearly sub-serves a demographic goal, but, to solely place on the national programme the burden of societal fertility decline may not be appropriate.

Reproductive freedom, in its truest sense, implies the right to ready access to family planning information and services. This right must, necessarily, be accompanied by the right to make voluntary and informed choices on the methods of contraception, be they traditional or modern, reversible or irreversible. These decisions of the millions of couples would have to be supported by the full knowledge of the personal, familial and societal consequences of their reproductive behaviours. Rather than reinforce the bias towards a single permanent method—70 per cent of the couple protection to-date is through sterilisation—the programme should now facilitate informed voluntary choice by:

- widely disseminating comprehensive reproductive health information; and
- providing universal access to a broad range of quality reproductive health care services.

Dr Gupta is the Director, National Institute of Health and Family Welfare. He has emphasised that the views expressed in the article are based on his personal experience and do not necessarily represent those of the organisation he is heading, which is an autonomous body under the Ministry of Health and Family Welfare.

The national programme has not been coercive, (except for a brief spell, which boomeranged and literally derailed the programme for a long while) though scattered incidents of sterilisation abuses occasionally continue to be reported. There is an absence of real reproductive freedom for a vast majority of the 142 million (1990) eligible couples in the country, particularly those tucked away in the remote desert, hilly or tribal hamlets.

The constraints to the reproductive freedom arise not merely from poor physical access to family welfare service delivery points. In rural areas where the population is highly dispersed, there is a constraint on outreach by family planning staff and frequency of client-provider contacts.

Social barriers to the demand for contraception arise due to a number of factors including a strong pronatalistic culture, that puts pressure on proving fecundity as early after marriage as possible; the strong gender bias including son preference for the purpose of old-age security and death and other rituals. Under the pressure to limit family size and the not-so freely available legalised abortion services, there is evidence to the large-scale use of pre-natal sex determination and female foeticide. This is further affecting the already adverse sex ratio.

This is an indicator of the low status of women in the society, who, right from birth, are denied equitable access to nutrition, health care services, educational and employment opportunities and so remain in a forced dependency situation throughout life. In such a cultural milieu, women are largely confined to the home and are even denied the freedom to make their own reproductive choices. The "Beyond family planning" approaches consisting of emphasis on measures such as age at marriage, female literacy, employment and status of women and old age security etc. must, therefore, be incorporated into the strategy to empower women to make responsible decisions in the interest of their own reproductive health and the health of the future generation.

In a predominantly agricultural rural economy children continue to be an asset, and are valued as additional labour for herding, minor field jobs, home-based industry and to fetch scarce fuel wood, water and other forest produce, much needed for their subsistence.

●

ON the supply side, the reasons for the absence of real reproductive freedom to the rural women include:

- Restricted options of contraceptive methods;
- Erratic supply of contraceptive and frequent breakdown in logistics,
- Incomplete knowledge of all aspects of contraceptive methods, their indications/contra-indications, side effects and their management;
- Illogical spatial location of FP centres, communication barriers, time and wage lost in travelling and waiting time,
- Non-availability of the irregular visits of FP staff to service centres;
- Far from desirable quality of FP services rendered, and the callous attitude of FP workers, quite apart from lack of appropriate skills in counselling.

In the four decades since independence, India has successfully created an impressive health and family planning infrastructure with over 1.5 lakhs outlets (1992) consisting of subcentres, Primary Health Centres and Community Health Centres etc. for delivering family planning service. There are about 3.8 lakhs (1990) doctors trained in modern medicine and family planning service delivery and a comparatively higher number of physicians of the indigenous systems who have the potential to deliver reversible contraceptive services. There is a virtual army of over 2.5 lakhs (1990) auxiliaries/para-medics also trained in contraceptive communication and conventional contraceptive service delivery.

But, unfortunately, the credibility of this massive workforce has been undermined because of the poor quality of training, inadequate knowledge of the full range of specific contraceptive methods, lack of counselling and inter-personal communication skills and the undue pressure to meet the unrealistic sterilisation targets. The existing family planning facilities are very much under-utilised because of the inadequate quality of services, poor accessibility and frequent break-down in the logistics. Eventually, the Family Planning Programme is paying a high price for inadequacy of services resulting in unacceptably high drop-out rates and public resistance to governmental Information, Education and Communication (IEC) efforts.

Considering the fact that the Indian society is largely rural, poor and traditional; the Family Planning Programme, far from being a failure, has, indeed, achieved a fairly significant fertility decline. An estimated 118 million (1990) births have been averted in the programme life of about 40 years. Despite political instability, frequent changes in programme leadership, a highly conservative medical profession, a rigid bureaucracy and highly centralised programme, a number of States (including Maharashtra, Punjab, Gujarat, Kerala and Tamilnadu) have achieved small family size. Fertility rates in these States have fallen considerably between the early sixties and mid-eighties and average number of children in Kerala during the same period came down from five to 2.4. Intensified Family Planning efforts along with social development efforts in the Hindi belt where almost half of India's population resides, can well bring about the demographic transition that has already taken place in the other States.

However, one thing is certain; if the Family Planning Programme is to have any impact on moderating fertility in the demographically sluggish States, the programme will have to get out of its entrenched ways and become sensitive to the reproductive needs of the millions of rural couples. The rural family planning strategies need to be responsive to and resilient enough to support the chosen paths of the rural couples to manage risks and outcomes of their own reproductive behaviour.

An estimated 155 million (1990) eligible couples need access to reliable, affordable and acceptable contraception by 1995. Universal access to a broad range of reversible contraceptives of good quality is the most critical step towards increasing the effective contraceptive use from the current levels of 43.3 per cent (1990). Of this, 30.1 per cent were protected by sterilisation; 6.3 per cent IUD; five percent by conventional contraceptives; by 1.9 per cent by oral pills.

●

A national survey in 1988 found that the latent demand was very high, almost a fifth of couples in the child-bearing age (some 25 million couples). These are the couples who did not want any more children, yet are not using any contraception. These, I believe, are predominantly the rural couples who do not have good access or cannot surmount the social barriers to contraception. Universal access to a broad range of reversible, non-invasive contraceptives of good quality is the most critical step towards increasing the effective contraceptive use from the current level of 43.3 percent to 60-70 per cent by 1995.

The demand for reliable, affordable and acceptable contraception by 1995 is estimated to be around 155 million couples. Currently, out of the 45 per cent of the 142 million eligible couples who are using contraceptives, 40 per cent couples are using modern contraceptives, and about five per cent traditional methods, but 70 per cent of these have chosen sterilisation – mostly females – in rural areas.

Given the rapid increase projected in the number of couples of child-bearing age, if this 60-70 per cent target is to be realistically achieved, what is called for at the highest level of the government is a strong and consistent political commitment which is evidenced not merely by 'words' but by 'actions', demonstrable in the allocation of adequate resources to the programme. The current outlays for the eighth. Five Year Plan of Rs 6500 crores is far too inadequate. Certainly bilateral and international assistance can play a useful catalytic role in tackling the problem.

Though there is a constraint on internal financial resources, it is not deemed a major handicap. India is rich in human resources. Every village and community has its potential change-agents. A resurgence of the masses is apparent; people are becoming aware everywhere that the government cannot fulfil all their aspirations; that the communities can organise themselves for bringing about change. Rural family planning strategies then should capitalise on this new awareness and invest in programmes of social mobilisation and leadership development.

●

TRAINING of village-level health and development volunteer workers has been a very successful strategy with a number of voluntary agencies, for many years in India. Somehow, the Community Health Guide (CHG) Scheme, in which a total of 416,672 CHGs have been trained, failed to deliver the goods. The scheme may be resuscitated, energised, re-packaged and re-launched as a comprehensive social marketing strategy to include contraceptives, simple medicines, delivery kits, ORS ARI, etc.; charging a small fee for service and marginal profits on retail sales.

There are several traditional birth attendants (out of which 599,556 are trained) in every community who enjoy the confidence of the people. An effective training programme of all such existing TBAs with a continuing contact programme is the priority rural family welfare strategy. This will not merely upgrade their natal and other skills but enable them to serve as depot-holders in a community-based distribution programme as conventional and traditional family planning workers.

The recent child survival and safe motherhood initiatives are directed towards the TBAs and the health functionaries to upgrade their surveillance and screening skills to use the risk approach to maternal and child health. This is an effort to bring down neo-natal mortality and pregnancy losses, to contain infant mortality and promote child survival. Ensuring the health and life of the child born will alone motivate the mother to accept the terminal methods. The new baby-friendly initiatives to reinforce traditional breast feeding are really attempts to promote natural spacing in addition to ensuring child survival.

Besides, in the rural development, social welfare, agriculture, veterinary and other related sectors there are a multitude of government functionaries and extension agents whose services are not integrated. A strategy that effectively converges on local village leadership, enabling them to engineer social and economic development within their own communities is currently being tried out by some established non-government organisations. The lessons learnt from such experience could be put together as the new programme of convergence of basic services is being implemented.

Concerted action for women's reproductive health should take into account infertility, sexually transmitted diseases, including the threat of AIDS and a host of other diseases that women are particularly vulnerable to. Family counselling centres should form the backbone of the Family Welfare Programme, providing counselling on adolescent sexuality, genetic and premarital counselling, family planning guidance including advice on right and healthy life styles.

Communication efforts should be directed towards adolescents, newly married and young mothers, in an effort to promote delayed marriage and child-bearing as well spacing. The cafeteria approach to family planning should provide several alternatives to choose from and allow switching from one method to the other, depending upon the different phases of the woman's reproductive life cycle.

●

IN order to improve the quality of services and credibility of health and family welfare infrastructure, qualitative upgradation of existing training infrastructure, development of such infrastructure wherever it does not exist, bestowing a status on training infrastructure, trainers and training processes and coupling of linkages between training, research and service components of the entire delivery system will have to be given more attention. It is these inputs which can make a difference in the manner in which services can be delivered to the people by the personnel who maintain continuity and consistency and are committed for this cause.

A strong research base has been laid but more investment needs to be made in research and development to develop a whole range of culturally acceptable reversible yet effective contraceptives. The research-industry interface as well as the research-policy interface needs to be strengthened to reduce the product cycle period.

The government's family welfare plan of action for the nineties may be an excellent document in terms of policies and strategies, but if it is to be implemented at the grassroot level, it needs to be done with techno-managerial efficiency. The country has an abundance of technical and managerial expertise which has successfully advanced the fields of nuclear and space technology, computers, and communications, etc. India has the capacity to make a grand success of the family welfare programme provided that every concerned person in this land, joins in the effort to make it happen. This is an effort to mobilise public opinion and support for improving the quality of life of our population. ■

Analysing Premadasa Visit

P. SAHADEVAN

“Short and sweet”. This is how the Sri Lankan President, Ranasinghe Premadasa, chose to describe his recent visit to India (October 1-3,1992). It was “short” in the sense that he spent only three days in India to transact his official business with the Indian leaders and to visit the State of Bihar. The visit was also a “sweet” one because the Indian leaders deliberately discussed off the record, the bilateral issue of the status of the Indo-Lanka Agreement of 1987, owing to the fact that he visited India in his capacity as the SAARC Chairman. Interestingly enough, the other tendentious bilateral issue – the extradition of the LTTE leaders, V.Prabhakaran and Pottu Amman, for trial in the Rajiv Gandhi assasination case – was not discussed at all.

This is, however, not to say that India did not express its own views on certain issues bearing on Indo-Lanka relations. For instance, President Shankar Dayal Sharma and Prime Minister Narasimha Rao reiterated India's commitment to uphold the validity of the 1987 Agreement in resolving the ethnic crisis, and stressed the need for “effective devolution of powers” to the Provincial Councils to fulfil the “legitimate aspirations” of the Sri Lankan Tamil community. The message, – through such an expression – conveyed to the Sri Lankan President was that India was not an unconcerned irrelevant party in the island's ethnic crisis, and that its present ‘low-key approach’ marked by a non-confrontationist attitude should not be construed as indifference towards the problems of the Sri Lankan Tamils.

That President Premadasa was least interested in discussing the controversial bilateral issues was evident from his banquet speech, which he devoted only to matters important to the SAARC. However, when the Indian Prime Minister raised the issue of resolving the ethnic crisis in his closed-door meeting with him, the Sri Lankan President put forth his country's own point of view. While Premadasa stressed his Government's commitment to devise a “peaceful negotiated settlement” of the ethnic crisis, the Indian side insisted that such a settlement should be “fair and equitable” which should meet the “legitimate aspirations” of the Tamils. Furthermore, apart from registering a success in avoiding a direct reference to the “status of the 1987 Agreement” in the joint communique, the Sri Lankan President got India's endorsement for the continuation of operations by security forces in the North-East of the island which, according to him, were “necessary for the protection of innocent civilians”, presumably from the LTTE.

The author is a Senior Research Scholar, Centre for South Asian Studies, Jawaharlal Nehru University, New Delhi.

The questions which arise here are: is the Sri Lankan Army's operations in the North-East basically to safeguard the interest of the innocent civilians? Are the people of North-East(especially the Tamils) vulnerable to the LTTE's attack alone?

President Premadasa's statement on the principal purpose of military operations in the North-East included in the joint communique, is misleading. It is well known that the Sri Lankan Army is engaged in a war with the LTTE mainly with a view to preserving the Sri Lankan state and creating a congenial atmosphere for the resolution of the ethnic crisis after liquidating the LTTE militancy. In the process, the specific task of protecting the civilians becomes a secondary job of the Army. This is evident from the Army's inability to stop several killings of the Muslims and the Sinhalese by the LTTE, and the counter-killings of the Tamils by the militant Sinhalese and Muslims in the past.

●

ALSO, there is no denying the fact that the people of the North-East dare not oppose the LTTE for fear of losing their lives and property and, hence, submit to their rules of governance at places. Tigers have been intolerant of any rival groups functioning in the Jaffna peninsula, and of the articulation of dissidence and anti-LTTE sentiments. This is evident from the fact that the LTTE has denied the people their political rights and suppressed their freedom of speech. Furthermore, it was alleged that the LTTE was imprisoning people who failed to make payments to the Tigers and mercilessly liquidating those who opposed them.

The point here is that the people of the North-East are not only the victims of the LTTE terrorism but also of the Sri Lankan Army which, in the past, destroyed Tamil villages in the name of fighting the war against the LTTE. Besides, on several occasions, the military personnel killed the innocent Tamils of North-East in vengeance against the killing of soldiers by the LTTE. One such incident took place in August 1992, when armed men raided a village near Poonani in Batticaloa in the Eastern Province and massacred about twentyfive Tamils. This followed the killing of ten top-ranking army and navy men, including Major General Denzil

Kobbekaduwa in a landmine blast on Kayts island off Jaffna peninsula.

Further, Premadasa's expression of "commitment to peaceful settlement" of the ethnic crisis sounds rhetorical. The 45-member Parliamentary Select Committee (PSC), through which the Sri Lankan Government is trying to forge a solution, has been, by and large, regarded as a farce in the island. When the leaders of the eight non-LTTE Tamil groups and the Sri Lankan Muslim Congress met President Premadasa in June 1992 on the issue of the Tamils' demand for the permanent merger of the Northern and the Eastern Provinces into one administrative unit, he was reported to have assured them that the ruling United National Parrty (UNP), despite its anti-merger stance expressed in the last parliamentary election manifesto, would accept a "consensus" if the PSC is able to evolve one. But the question which confronts the Tamil leaders is how to arrive at a "consensus", particularly in a situation where the dominant Sinhala parties – the UNP and the Sri Lanka Freedom Party (SLFP) – are the 'prisoners' of Sinhalese votes.

●

THAT both the parties are using the ethnic issue for one-upmanship is evident from their non-committal role in the PSC. For instance, with the (often) large-scale absence of the UNP and the SLFP members who have packed up 23 and 12 seats respectively in the PSC, quorum has been a problem at many of its meetings. But the Committee Chairman, Mangala Moonesinghe (an SLFP MP) is able to keep the exercise going with the support of the Tamil and Muslim parties which account for only 10 members in the PSC. More importantly, leaders of only these groups have so far submitted concrete proposals on the merger issue and on the devolution of powers to the Provincial Councils.

At the same time, feeling vulnerable to the political sniping from the Opposition, the UNP has not spelt out any proposals to reach a consensus on the merger issue. Instead, President Premadasa wants the SLFP to take the initiative to work out such a consensus. But the SLFP, on its part, prefers to know the stand of the UNP before it puts forward its proposals on the merger issue. If the UNP adopts an anti-merger stance, the SLFP will not take a risk antagonising the majority Sinhala opinion on this major plank. The SLFP also alleged that the Government was not interested in coming out with a political solution to the ethnic crisis, but only trying to pick holes in the arguments and the proposals of the Opposition. SLFP does not obviously want to let the UNP take any advantage of the consensus formula worked out by the Opposition. In reply, President Premadasa assured the Opposition that if a consensus is evolved at the instance of the Opposition leaders, "he would not only make a public declaration, but also state in the UNP election manifesto that it was possible to solve this crisis beacuse of the efforts of the Opposition
and the entire credit was due to it....." Such a stanc
the UNP and the SLFP leaders shows the politicisat
of the complex national issue and ethnicisation of
Sri Lankan politics.

Finally, President Premadasa's visit to India clea
all speculations about the Sri Lankan governm
attitude towards the LTTE after its proscription by
Indian government. His statement that Colombo wo
be prepared to initiate a peace dialogue with the LT
if it "stops the use of arms, agress to join the democr
process and elections," represents a shift in its polic
the past. When the LTTE declared an unilateral ce
fire in January 1991, the Premadasa administration
forth two major conditions. First, negotiations wo
be conducted only with V. Prabhakaran himself
not with the People's Front of Liberat
Tigers(PFLT), a political wing of the LTTE. Seco
ly, talks should be preceded by a declaration aga
the possession and use of arms by the LTTE. S
render of arms was not insisted at that time.
seeking negotiations directly with the LTTE supre
the Sri Lankan Government hoped to circumvent
problem it faced in June 1990 when the PFLT did
talking while the LTTE armed itself. Now, the
Lankan Government does not seem to be insisting
more on these two conditions. The adoption of su
moderate stance seems to have been guided by
current strategic environment in the North-East, wh
the Army recently recived some setbacks in the op
tions against the LTTE. The Defence Ministry of
Lanka calculated that on an average a hundred sold
were dying every month in the war with the LTTE.

At present, what is lacking in the context of
settlement of the ethnic crisis in the island is b
initiatives and genuine interest on the part of the U
government. This is precisely what seems to be miss
on Colombo's part. New Delhi has to reckon with t
position in any exhortation of the solution of the Ta
question in the North-East of the Island, whose integ
it is Committed to.

Changing Perspective of Social Work

MEHER C. NANAVATTY

s social work ambulatory, ameliorative and rehabilita ive, helping people to adjust to the prevailing social milieu by strengthening the ing mechanism of individuals and groups? Or, is it elopmental? Or still further, is it's role one of kening and conscientisation to enable people to ngthen their own capacity to demand their right to fare and developmental services in a democratic iety?

Behind such questioning lies the conviction that ially created diseases should be socially cured, and ocacy and activism should become an instrument of ial work in promoting services for the deprived the ginalised and the "real poor" population of the ld.

These and allied questions were discussed at four national conference held in Septmeber 1992, is at hington D.C. Interesting enough all four organisa- s, including Inter-University Consortium on Social elopment, International Congress of Schools of So- Work, International Federation of Social Workers International Council on Social Welfare, came to d conclusions that professional social work should more confine exclusively to strengthening coping hanism of individuals and groups through counsell- to adjust to the existing socio-economic and political em thus, becoming the "confirming arm of ad- istration, but participate actively in strengthening further promoting the process of development in all ntries, especially the developing and the least eloped.

●

IS role has to be played through reorganising the hbourhood communities through the use of com- ity organisations and working with groups and ngthening people through conscientisation, and kening in them the desire to demand the human t to social security including basic services of health nutirition, education and welfare. Removal of erty and promotion of social change should be the n objective and advocacy—the main tool of social k—while working with the people. This acquires question of priority of attention in addition to the vision of basic human services for all people in the eloping countries of the world.

Although different conferences traversed different paths of deliberation, examining the major problems of poverty among the people throughout the world, they tracked down similar realism, so succinctly and picturously presented by Kofi N. Awoonor, Ambassador of Ghana and Chairperson of the Group of 77 in the UN in his key-note address at the twentysixth Congress of International Association of Schools of Social Work.

> By nightfall today, over 40,000 children will die the world over largely from intestinal disorder; four million people will die by the end of this year from diarrhoeal ailments; 1 3 billion have no access to safe drinking water; 2 3 billion people worldwide live without access to sanitation services, 136 million live in areas afflicted with desert conditions under which barely anything grows And in that Third World, the developing or under developed portion of our planet, where these figures are realities of everyday existence, life expectancy ranges from 42 to 63 if you are lucky.
>
> The rich North comprising of 25 per cent of the world's population, in contrast, earns 85 per cent of the world's income whilst the poor made up of 75 per cent of the global population receive the remaining 15 per cent.
>
> Besides, with five per cent of the world's population consumes 25 per cent of the fossil fuel burned annually, 33 per cent of paper, 24 per cent of the aluminium and 13 per cent of the fertiliser. A child born into a typical middle class home in that country will, in his or her lifetime, consume over 12,000 paper grocery bags, drive more than 700,000 miles in an automible, and burn more than 28,000 gallons of gasoline in doing so. This same person will, in his or her lifetime wear and discard 250 shirts or upper garments, 115 pairs of shoes, purchase 12 automobiles, and discard over 110,250 pounds of trash.
>
> In the final analysis, it is social and economic issues that will determine the nature of the global polity in which we all live And in search of that policy we must seek answers to fundamental issues such as equity, fairness, justice, equality and humanity. These, as abstract as they may sound, are reducible to such bare facts as food, shelter, health, education No democracy, or a new world order, constructed on the present given global reality in wich the rich take from the poor, will endure this. Any democracy, that cannot feed, clothe and keep all its people in health is a terribly flawed democracy. Any democracy that promotes a racial, poverty or so-called under-class divide, is not worth the paper which its constitution is written.

These were inspiring realisations for the delegates to the conferences to imbibe. Similar realisation, but in a different context, was highlighted by Stephen Lewis, a journalist from Canada and a member of the UNICEF Board. While delivering the key-note address at the World Assembly of the International Federation of Social Workers, he declared that the debt of the developing countries to the IMF was depriving the children of these countries of their food and nutrition, health and welfare. How can the countries that earn an average of 250 dollars per capita pay back the loans of credit that ranged from 1 to 1.3 trillian dollars? The propelling greed of the North deprives children of the South their very existence. How can indebted countries provide children their basic needs of food, nutrition and health, to which the UNICEF and UN are wedded? As Kafi Awoonor asked, "how can the world endure half poor and half rich, half starved and half over-fed, half unclothed and half fully dressed?"

After such a clarion call, which social work delegate can continue to remain ameliorative and the promoter of the existing socio, economic and political system of his/her country?

The Inter University Consortium discussed, major issues of social development and how social work can assume the mantle of development. More than hundred academic treatises were discussed out of which fifty per cent were related to the subjects like market economy and social develoment, intregrating social justice in social work practice, social work and the new world order, charity or justice-perception for donors, urbanisation as a dilemma of development, ideological roots of social development, empowering women for societal development, ethnic conflicts and social development, and the like.

More than three hundred social scientists, social work educators and social development workers participated in the delibrations for four days. The consortium has extended its network to European countries, including East Europe, but not as effectivelly in the developing countries as conceived by its founding fathers.

●

THE Congress of International Federation of Social Workers was a grand show at Washington Convention Centre with fanfare and colours singing "We are the world". More than a thousand delegates attended varied programmes of deliberation enabling them to focus their attention on areas of their specialisation as well as engaged in dialogue on social welfare policies and human welfare by strengthening families, developing human capital, enhancing empowerment, consideration of ways of dealing with the impact of conflicts, violence, war and disaster and substance abuses. The meetings deliberated on challenges of demographic explosion, neo-colonialism and exploitation-free new world order. Five days of deliberation covered hundreds of papers, and a number of symposia, workshops and institutions. The deliberation at the Congress of Schools of Social Work, by its very constituents, related primarily to the teaching of social work education in the universities and schools of social work and improvement of their curricular context to equip students to relate to social change and development and prepare for ushering in a new economic order. More than three hundred academic papers, analysing the contexts of social work education were discussed by more than five hundred delegates for four days.

Most outstanding feature of the Congress was the key-note address by Kofi N. Awoonor on "The New World Order,Social Realities in Developing Countries and Global Security" and the concluding address by Leena Dominelli on "European Unity, Opportunity or Opportunism". The Congress also honoured Dr Armaity Desai, Director, Tata Institute of Social Sciences, Bombay, India, with Katherine Kondell Award for being the best international social work educator. It was indeed a proud day for the Indian delegates and schools of social work in India.

The fourth organisation, the Indian Council on Social Welfare, which is less militant than the other three mentioned earlier, held a symposium on the "Future of ICSW", analysing its past performance, its achievements and pitfalls and draw backs and recommended that the Council should become a more militant organisation giving attention to the social welfare problems of the developing countries promoting advocacy role for social change and development.

●

THUS, four conferences provided the visitors a feast of thoughts to carry back home. In the words of Kofi N. Awoonor, the deliberations recognised the work of different international, voluntary non-governmental social work education and social welfare organisations and appealed to them to be more active in the advocacy of the deprived popualtion of the world. He urged them to be the new missionaries for social and economic justice acquiring centrestage in the global crusade against social oppression stating "we do not ask for charity. Charity cannot answer our needs; we are not poor because we are less hard working; no one is poor, hungry, homelss because he or she is stupid." He concluded by saying; "It is our sacred belief that human rights begin with the fundamentals that sustain life itself. Freedom and liberty become a loomingly distant abstraction for a person who is homeless, sick and hungry. We will sleep more peacefully if we release the poor, the sick, the helpless and the illiterate from the burdens imposed upon them by our history and collective neglect."

How far these deliberations, the stimulation for assuming the role of advocacy and awakening in favour of the teeming millions of the world, who are marginalised, will influence social workers and social work educators back home in India and what they will do to change the senario of social work education and social welfare, however remains to be seen. ■

IMPRESSIONS

What does it Mean to Live in Modern India?

AVIJIT PATHAK

How should one live? What should be one's social practice, morality and ethics? One tends to raise these questions not for any academic reason. The fact is that living in modern India is no easy proposition. As ideals collapse and existence gets reduced into an opportunistic game for survival, the question of *meaning* assumes added significance. Because for all those not yet adjusted to the prevailing void, a meaning of existence ought to be evolved. It is necessary to have faith in one's being, in one's mode of existence. What is, however, ironic is that this necessary faith is becoming increasingly difficult to restore. There is no meaning anywhere. And this *meaninglessness* can be seen in what characterises modern India: all-pervasive corruption, violence and instrumental religiosity.

A look at these 'structural' realities, let it be stated, requires a biographical approach. Corruption or violence can no longer be seen as a pathology limited to the political realm only; its visible presence in everyday life affects one's being, one's social relationships, one's priorities. In other words, without that intense biographical sensitivity it is impossible to realise — and realise authentically — the danger of the disenchanted world we are living in. That's why, it is necessary to *feel*, to grow sensitive, to experience the prevailing madness. Only then is it possible to know our fate, rescue ourselves from insanity and create a new India not at all ignorant of her higher principles of existence.

The need of the hour, as we have already said, is to see oneself as a *responsible person*, not a reified citizen watching mega-corruption and mega-violence and spectacles. The need is to experience these pathologies in one's own existence and raise the voice of protest. Rebellion is therapy. And rebellion is impossible without having faith in existence, in a meaningful social order. Before we explore the nature and possibility of such a rebellion, it is desirable to have a look at the phenomenology of the three vices we have just talked about: corruption, violence and instrumental religiosity.

I

Corruption, as we see its democratisation, its universalisation, robs the community of its notion of the *sacred*. The increasing denial of the sacred, it is not difficult to realise, is prone to anarchy, meaninglessness, chaos and confusion. No society, however secular it is, can survive without having its own realm of the sacred. Because the realm of the sacred — the realm of these higher/nobler principles and institutions, persons and practices — keeps one's faith in life, in the potential strength everyone is gifted with to realise mankind's epic dreams. In other words, the meaning of existence requires its close affinity with the sacred.

But, as we have already said, corruption with its ugliest manifestation, in contemporary India, denies the sacred. Now everything is possible, Ministers and parliaments, professors and religious leaders, intellectuals and people with awards, prizes and honours — everyone can prove to be corrupt, ugly, nasty; In other words, one lesson that modern India teaches everyone is that there is no assurance anywhere. The brutality of the profane has colonised the sacred. Life is what it is — money and gambling, power and profit!

As the sacred dissolves into nothingness and all that is supposed to be 'higher' proves to be empty, there is invariably a crisis of faith. Imagine the fate of living in a world in which, everyday, one is asked to realise that there is no God, no saint, no revolutionary, no hero; instead, there is only one thing that matters — money as a great *seducer* before which neither can retain its autonomy and dignity!

This legitimisation crisis does another damage. It breeds cynicism; never does it allow to look at others with faith and hope. As one takes for granted that everyone in this cursed land can prove to be corrupt, the relationship between self and others becomes absolutely instrumental and manipulative. To get things done, as the opinion goes, one must know how the world really functions: commodification of life, power of money, temptation of immediate material gains. It is futile to have faith — faith that a teacher would teach his students, a doctor would cure his patients, a police officer would take care of the citizen's security. Faith or trust is important. When nothing works, money alone can do everything. It can perform miracles. So, man knows where he should go: not government schools, but teaching shops: not public hospitals, but costly 'nursing' homes. This is pragmatism *—free, spontaneous, communicative interaction.*

That is not all. The worst damage that corruption does is that man loses faith in himself, denies his own possibility. He tends to feel that not solely the other is corrupt: he himself is prone to it, the solidity of corruption in everyday existence, he fears, he cannot resist. To survive, one tells oneself, is to accept the popular commonsense, accept its rationalisation. This growing helplessness before corruption has affected us so severely that one can see it even amongst the younger generation. Dreams die, ideals collapse and our 'practical' young men believe that corruption is bound to prevail; nothing can be done about it !

That is the danger. One calls it pathology; yet one calls it normal. In other words, one sees oneself as sick and morbid, yet rational and calculative. With this schizoid existence, salvation becomes an impossibility. With the all-pervasive corruption, almost all of us have begun to see ourselves as fractured/fragmented beings incapable of fighting the commodification of life, the marketisation of our possibilities.

Life cannot be lived meaningfully with such self-hatred, disgust and pity.

II

Like corruption violence too is an important constituent of contemporary social reality. The normalisation of violence or its easy acceptance in our times is striking. As violence tends to become the only mode of articulation in conflict-resolution, the possibility of *dialogical communities* begins to disappear from our social practices. Doubtless, this is a great loss. Because dialogue is the primary prerequisite for the existence of a meaningful community in which men understand one another, give their consent to a shared practice. Dialogue means faith in life, in unity, in love. With the end of dialogue and the consequent triumph of violence, one's understanding of social-existence undergoes a drastic transformation. There is no art of listening, one argues. Democracy is pretence; life is perpetual war! To get things done one must destroy, annihilate others. Are we taking it for granted that man is too closed a machine, never does he open up and embrace others?

Ironically, in modern India we are living with this doubt and skepticism. We are doubting not solely the state or the terrorist, the capitalists or the workers, the landlords or the *Dalits*. We are doubting ourselves—our own possibilities. In a terribly violent universe it is becoming increasingly difficult to have faith in any power except that of brute force. As a result, one is seldom encouraged to cultivate one's soul-force, the potency of love. Life, without the technologies of violence, one tells oneself, is not worth-living. The teacher as well as the psychiatrist, the bureaucrat as well as the father, the technocrat as well as the policeman—everyone, it is argued, should have an access to the technologies of violence, to the science of instrumental reason. What is taken for granted is the asymmetry of relationships. Equality or participation or dialogue gets reduced into an empty ideal. To equate truth with power, and power with violence is to rob the world of its deeper meaning. The state the terrorists, our routinised violence in everyday existence—everything seems to indicate that we in contemporary India are passing through a chaotic stage of meaninglessness.

With this meaninglessness each of us acquire a strange capacity to distort everything. The striking example is the way we now define peace. Peace, for us, is a *military construct*; it is born out of fear; it is the domination of the mighty over the weak; it is latent violence; The tragedy of contemporary culture is that we can no longer visualise a harmonic existence in which peace is born out of intense relationships, dialogue, communication, mutuality and love. That's why, with our wounded psyche, each 'law and order' problem, we tend to believe, has got only one solution—hard, military solution. Communalism or ethnicity, terrorism or students'unrest—it is the army that alone can restore peace !

The easiness with which we accept the growing militarisation of the society reveals our decadence, our insensitivity to death, insurgency, murder, violence. It is now possible for us to reduce humanity into abstract categories like 'agents of the state' or 'terrorists'. Their deaths, therefore, do not surprise us; shock us. Their deaths are only statistics!

The reification of death and the militarisation of the society go together. And we find ourselves caught in a world without any exit. That is modern India.

III

Another tragedy of contemporary culture is its religion, its speedy transformation, its enhanced thickness. But we all know, religion, a deeply meaningful experience, should prevail for an altogether different reason—not for power-politics, but for salvation; not for one's preoccupation with the fleeting and the transitory, but for transcendence. This requires explanation.

With the growing secularisation of the world, religion, it is obvious, loses its importance. Secular education or what we call science preoccupied with the dynamics of the phenomenal world—demystifies religion, its beliefs and premises, its institutions and elites, its rituals and dogmas. The positive contributions of secular education notwithstanding, it despiritualises the mind. That is the danger. Because religion as a spiritual quest tells us an entirely different story. Far from remaining fixated to dogmas and prejudices, it seeks to provide a meaning to existence: a meaning that every sensitive being needs in order to evolve a point of mediation between life and death, the finite and the infinite, history and transcendence. In other words, without that spiritual quest life loses its depth.

A depthless existence means one's preoccupation with merely the temporal, mind incapable of comprehending the limits of the finite: death, suffering, pain, separation, misery. A depthless existence is a meaningless existence prone to violence, brutality and narcissistic pride. Ironically, secularism, its liberation dimensions notwithstanding, has not been able to alter this meaninglessness. That's why, we require the spiritualisation of the mind; we require a religion capable of restoring that lost meaningful experience.

As we have already said, the kind of religion we see in contemporary India is incapable of spiritualising the mind. Instead, we see how religion, far from retaining its spirituality, has embraced the crude logic of power politics. As a matter of fact, we see once again the domination of *totalising politics*: the way it enters every realm of existence and, then, kills its autonomy. Religion, therefore, forgets its spiritual concerns. It allows itself to be used a political tool, as a technology of political 'violence'. Religion loses its emanicipatory reason, something that man needs to cross the wall, the wall that separates this 'iron cage' from the world of unboundedness, eternity, permanence, truth. Religion begins to celebrate the same instrumental reason. Power, wealth, possessiveness and calculation become its sole objectives. With this religion, as we are experiencing, there is no positive expansion of the mind. Instead, it classifies and hierarchises us, it makes us sectarian and possessive. With this religion we deny our possibilities everyday. That is the fate of modern India; religion is another killer!

The uglification of religion can be seen in one's everyday religious practice. An intense moment of solitude, an exclusively private moment of prayer, a metaphysical moment of wonder, clarity and humbleness – all that rescues religion from the noise of the world – is dying. In modern India, as everyone can see, religious moments are *thick moments* full of noise and violence.

Religious rituals and festivals demonstrate the power of wealth and money. A religious occasion, far from spiritualising man, creates a situation conducive to the emergence of a crowd: *mindless, soulless* and always eager to find its *other* in order to destroy it, annihilate it. The massification of religion is its ultimate tragedy. It loses its calmness and purity. It is now gorgeous. It advertises itself; the gods are the gods of the market place !

That's why, the question: where should one go? As religion becomes purely instrumental, life in contemporary India loses another opportunity to evolve a meaning, to invent a radical practice.

It is darkness all around.

IV

Before we explore the possibility of an alternative life practice to come out from this all-pervasive darkness, it is perhaps necessary to examine the social construction of contemporary reality. To begin with, it is possible to see corruption as a symptom of scarcity. And scarcity is inevitable because the political economy that rules us is divisive: unevenness is the primary principle. Living, for the majority, is never free from the perpetual anxiety born out of continual inflation and increasing price rise. Under these circumstances, corruption – an urge to earn money through illegitimate means – becomes a necessity. Corruption is survival !

That is, however, not the complete answer to the problem. Because corruption, we all know, is not just for mere survival. It is for an *induced ambition* to achieve a life-style – a life-style largely constructed by the culture-industry, the extraordinary emphasis it attaches to the proliferation of desires and images. As capitalism, in the post-Nehruvian era further modernises itself, it creates a new middle class: aggressive and willing to be seduced by the images of instant success, power and glory. What we call consumerism is precisely this. Consumerism creates new needs and induces artificial poverty. This leads to corruption. Because corruption is an aggressive urge to fulfill the ever-growing new needs and, therefore, become rich. In other words, corruption is becoming normal because India has chosen to accept the language of hegemonic capitalism, the way it equates life with unlimited consumption. Corruption and the dreams of the new middle class have to be seen together.

Violence, it is obvious, is an important part of this worldview. Domination or exploitation is its primary principle. An orientation that emphasises only the instrumental relationship with everything – be it nature or society – denies all that is needed for peace: understanding, tolerance, communication, sharing. A life that knows no restraint is invariably violent.

Not solely that. It is a world in which one witnesses an eternal conflict between one's needs and one's resources. As, for many, there is always an incompatibility between the intensification of desires and that of resources, violence becomes almost inevitable. Violence can be seen as a reaction, as a protest, as an expression of despair. It goes without saying that in modern India there are many unemployed young men and urban poor, whose violent, restless minds can always be used and manipulated to add to the prevailing chaos and anarchy.

A worldview having violence as its inherent principle explains the nature of the modern nation-state. It acts like a *patriarch* always justifying its coercive apparatus in the name of 'development' 'unity' and 'national security'. It is so constituted that it understands only violence. The state paradoxically, legitimises not solely its own violence; it legitimises the violence of even those who are protesting against it. Because the state bows down, proposes 'dialogue' only when violence is created. As our contemporary experience shows, the state humiliates peaceful demands and protests. Modern India sees this politics, transforms herself into a battlefield in which the state and its enemies are fighting continually, but never arriving at a real alternative. It is the same worldview – instrumental and manipulative – that characterises even the enemies of the state. The aim is power, power for the elites (local or universal). It is hardly for dialogue, for people, for relationship. That is the irony.

As power politics becomes the dominant reality, it affects even religion. Politics incorporates religion, despiritualises it. The religious war that we see in contemporary India is nothing but apolitical war having power as its sole objective – the power that classifies and hierarchises, the power that tempts and induces pleasure.

The plain truth is that it is a despiritualised world, an empty world.

V

To overcome this emptiness, as we have already suggested, one requires a meaning of existence. This is impossible without having faith in life. What should be the nature of this faith? Faith is a radical act. This requires man's faith in himself, in his ability to find the deeper meanings of existence in an altogether different zone: not in consumption, accumulation and possession but in love, communication and understanding. This means faith in the fact that man is more than what he is: his immediate boundary, his armour, his politics, status, pride.

This also requires a belief that the universe in which man finds himself is beautiful; to live is to relate to it, not to conquer it.

This *radical faith* need not necessarily be appreciated by the proponents of modernisation. Because modernisation as a worldview relies on an entirely different principle. It assumes man's supremacy in the world and hence his natural right to shape, modulate and manipulate nature according to his narcissistic will. It emphasises 'having' not 'being'. Its principle is victory, not prayer; instrumental reason, not communicative interaction; fragmentation, not holism; quantification of time, not its transcendence. This, however, does not mean that this modernisation project has got nothing positive to offer to mankind; in fact, its gains are enormous. The only point we are trying to state is that the radical faith we are speaking of does not deny modernity; it transcends it.

And it is this radical faith that alone can spiritualise the world, provide a meaning to existence. Only then is it possible to fight the empty would we have been confronting in modern India. Only then it is possible to gain the moral courage needed to resist corruption, violence and instrumental religiosity—the vices which, as we have already implied, have been intensified by the very logic of modernisation.

Yet, it is difficult to restore this radical faith. And this is ironical. Because unlike the West, India, we all know, did have a tradition of this faith. But what a fate! This 'spiritual' land of ours knows nothing but materialism, violence and aggressiveness. India has failed to resist—despite the glorious anti-colonial struggle she launched—modernisation's universalising tendencies, its hegemonic penetration. As a result, her tradition has already been robbed of her essence and the violence of mondernisation that a society in transition has to pass through has caused all that we have been seeing before our own eyes in contemporary India. Ironically, the dominant mainstream socio-political thinking has not yet saved itself from the materialistic dream of mondernisation.

That's why, radical faith as an emancipatory act is not easy to evolve. Yet, there is no reason to plead for social determinism. Cultural innovation is impossible without utopian experiments; cultural innovation requires morally courageous persons transcending the limits of the 'taken-for-granted' worldview.

Is it possible to feel, experience and act like a morally courageous person in modern India?

A question that haunts all of us. ■

NEW INDIAN BOOKS RELEASED DURING 21-27 AUGUST

HISTORY: ECONOMIC
Credit System in Early Medieval India (C 650 A D - 1200 A.D)/ Ashok Kumar 130
Trading Communities in Ancient India from Earliest Times to 300 A D./Anup Kumar Mishra 160
HISTORY: INDOLOGY
India in the Age of the Panchatantra/ Apurba Chandra Barthakuria 225
HISTORY: MODERN
The Soviets and the Indian Revolutionary Movement 1917-1929 (Foreword by Devendra Kaushik)/ Ashok Kumar Patnaik 195

Experience of Assembly Functioning

Recently a very high powered convention was held in Delhi to discuss ways and means to maintain decorum and discipline in the Parliament and the State Legislatures. It was not a day too late to hold such a convention.

About its outcome from the viewpoint of contribution towards achieving its goal, one has to keep one's fingers crossed. It seemed to have been mainly a one way traffic—why members must maintain discipline and decorum, why they must not indulge in stunts, cheap demagogy, reckless allegations, acrobatics of various types, etc., in order to catch the eye of the press and to get cheap publicity. All this may be and in fact is very necessary. I have no grudge on that account except that all this does not represent the entire truth. The Prime Minister while summing up the proceedings said if rules and regulations of the functioning of the Legislatures are strictly observed (by the members of course) every thing will be fine. This simple prescription overlooks a very important fact that not unoften rules are no conducive to proper and fully democratic functioning of the Assembly. Nor is that all: quite often the way they are interpreted and implemented results in curbing the rights of members and especially of Opposition and keep out matters inconvenient to the government.

The Budget Session of the newly constituted Punjab Legislative Assembly began towards the end of February,1992. Apart from what could be said during the omnibus discussions on the Governor's address and the Budget, a separate discussion on Punjab problem was the need of the hour. The CPI group gave notice of a non-official resolution which sought to recommend to the Government of India to announce a political package for Punjab. It was disallowed on the ground that it raised many issues and related to many departments. This was totally unjustified if one were to go by the spirit of the rules and their reasonable interpretation. The fact was that some one high-up did not want some sensitive issues to be raised in the Assembly.

Quite an important aspect of the Punjab problem has been police excesses against innocents. Such excesses undoubtedly bring grist to he mill of the terrorists. From time to time claims of strong action ncluding dismissal of police officers guilty of excesses for malafide reasons are made by the goverment. One would think that a question seeking information in this regard would be welcome unless the government had some skeletons in its cupboard to hide. The question given notice of by the leader of the CPI group was disallowed on the ground that "it is a sensitive question". In my opinion this again was a violation of rules of their spirit if not also he letter. In any case, refusal to admit the question was totally unjustified. If I were a member of the Assembly and the rejected question were mine, I would have certainly kicked up a row on the loor of the House.

The same lady member Vimla Dang had given notice of another tarred question. It sought information about "the number of perons killed by the terrorists after the present government took power" and "how many (of these) have been killed for voting in elections, for being polling agents, etc.". This question too was disallowed on the ground that "it relates to a sensitive matter and it may lead to arousing of feelings of different sections in the house, if nswered". It only needs to be pointed out that such questions are sked and answered in the Parliament without any negative effect. It is not difficult to find out the real reason.

Hardev Arshi and three other members of the CPI had jointly given notice of starred Question 143 seeking information about deaths in police custody in Punjab during the years 1990 and 1991 and about the results of enquiries held regarding the same. It was admitted but its turn did not come for reply. It was converted into an unstarred question in the list for April 9, 1992. Even seven months after the question, the reply has not been received. The Speaker seems helpless in making the Home Department/Office of the Chief Minister to send the reply to the Vidhan Sabha Secretariat. If such refusal for such a long time to such a question were to lead to some breaking of decorum, that should not be a surprise for any. In fact absence of protest in such a matter should cause not only surprise but also concern.

Another question which could not be admitted had sought information about plots alloted to Ministers and their kin by Chairmen of various Improvement Trusts in the State out of their discretionary quotas.

The next session of the Punjab Legislative Assembly was convened in July 1992. It was a two days affair. Demand of the entire Opposition to extend it was rejected. Even a meeting of the Business Advisory Committee was not held. The purpose of the Session was to enable members to be present to vote in the election for the Rashtrapati and to rush through a bill enhancing a good deal of allowances and facilities for Ministers and, Legislators. Much has been written about the manner in which this Bill was passed in gross violation of rules. This could be done because the entire house with some exceptions seemed interested in the passing of the bill at the earliest.

The Opposition was keen that the Punjab situation be discussed. To forestal Opposition initiative some from the Treasury benches managed to get their resolution admitted first. It sought to congratulate the Government for the improvement that had taken place. The CPI group gave notice of an amandment to this. The same was disallowed for which there was hardly any justification. That however, did not matter as it would not be possible to present opposition members to have their say even while speaking on the Congress-I resolution. However, as usually happens, the entire Oppositions staged a walk out to record protest just before the resolution was to be moved. In a quick move, the Minister for Parliamentary Affairs managed the withdrawal of the resolution a move which was resented even by some Congress-I MLAs. The opposition had allowed itself to be out maneovered and there was no discussion on Punjab- and this is precisely what the ruling party wanted at that very time.

An important matter had been just reported in the press. Fifteen days notice was just not possible. Vimla Dang therefore gave notice of a short notice question which the Speaker would admit only if the Minister concerned had no objection.

On June 22, 1992 or so, the Mohali police had registered a case under the Terrorist and Disruptive Activities(Prevention) Act against some executives of JCT Electronics Ltd.—a Thapar concern. The case arose out of the fact that this management had got printed some threatening letters in the name of some terrorist outfit(s) and these were being sent to their trade Union leaders and also the Labour Courts etc. before whom their disputes with the labour were pending.

Only the State government could withdraw the case. A news had appeared in the press that the case had been withdrawn. It was a surprise. Withdrawal meant unwillingness on the part of the government to displease the Thapars, to say the least. There was all type of speculation in the press. It was in this background that the CPI MLA gave notice of a short notice question. If it had been disallowed on the ground that the Chief Minister being the Minister concerned had not agreed, it would have been bad but not in any way violative of rules. The question was disallowed on the ground that "it relates to an individual". Not a convincing reason to reject an important though inconvenient question. The question related not to any individual but the action of the government in withdrawing the case.

The MLA concerned desired reconsideration of his order by the Speaker. She seems to have been informed that the decision of the Speaker is final. I personally would think that the refusal to admit this question on a ground which does not hold any water would be good enough reason to have some protest in the Assembly.

What has been written above may be construed to imply some criticism of the Speaker. Maybe, but no disrespect is meant. I should also add that he prevented some situation taking an ugly turn by his tactful and flexible handling. He quite deservedly won tributes on more than one count like this.

That is no small matter because Speakers of the type which should be there and who could play the pivotal rule they are excepted to play in the functioning of parliamentary democracy are almost an extinct species. The Lok Sabha Speaker taking on the function of a party leader and allotting seats of its MPs drew much flak quite justifiably.

Prime Minister's recipe will not work. All should follow rules and regulation but these too should be genuinely democratic and must not be interpreted and implemented to suppress opposition. That will prove counter-productive. Be that as it may, Addresses by the President and the Governors should be very dignified occasions. Opposition parties must give up the unhealthy practices which have developed in connection with these. And of course, the Prime Minister was on very strong ground when he chided the Opposition for its frequent demand for dispensing with the Question Hour. It is not for nothing that Question Hour, once upon a time, used to draw big crowds in the visitors galleries.

Structural Adjustment Policies and Women

Experience of South East Asia

S. UMA DEVI

The 1992 Union Budget presented by the Finance Minister in the wake of the Structural Adjustment Policies (SAP) carried out in India at the behest of the IMF and World Bank, meted out some concessions to working women earning below Rs 75,000/- per annum. Marginal though these concessions were, the Finance Minister highlighted these as a gesture to working women. Was it to give an impression that the SAP would be in favour of women? If that was the aim, it would be worth exploding this myth at the earliest. The experiences of the countries of South East Asia, which are projected as having been successful in carrying out the SAP has proved otherwise. The case of Hong Kong, Thailand, Philippines, Korea and Taiwan are quoted in this regard. Therefore, it would be worth looking into the condition of women in these countries after the SAP was carried out.

SAP has been considered successful in these countries because of the rapid increase in their GNP's and per capita income. Hence, it is pertinent to unveil the factors which led to their rapid rate of growth.

Take the case of Hongkong. She has very quickly established herself as the biggest textile and clothing exporter among the LDCs, notwithstanding the fact that her position is being threatened now by competition from South Korea, Thailand, Malaysia, the Philippines and Indonesia. In the 1970s, Hong Kong, Republic of Korea and India had together accounted for 85 per cent of clothing exports with Singapore, Pakistan, Brazil and Egypt catching up fast.

Dr Uma Devi is a Professor in the Department of Economics, University of Kerala, Trivandrum.

This should be viewed as part of the process of new international division of labour, characterised by a shift in industrial production from the highly industrialised countries to developing countries where labour conditions make it possible to undercut production costs.

One study reveals that in the last 15 years world production in textile and clothing industries has been characterised by industrial relocation from the industrialised to the developing countries. The increase in exports of garments from Hong Kong and other countries of Asia and South Asia took place simultaneously with a considerable decline in textile and clothing production in the EEC. Decline in production of these goods in the EEC led to a fall in employment in these sectors alongwith a decline in the share of exports of these goods. Infact, the EEC once a net exporter turned into a net importer of textiles and clothing.

The number of establishments in the EEC fell while there was a sharp increase in their numbers in the Newly Industrialising Countries (NICs). In the textile industry alone the EEC lost some 900,000 work places during the period 1960-77, which came to one third of all employment in the industry. Job losses in the clothing industry were less significant. As a whole the EEC lost 143,000 jobs in this sector between 1971-77. On the other hand, jobs in the textile land clothing industry in the NIC nearly doubled (in the case of Hong Kong) and trebled (in the case of Singapore).

Given the fact that more than 70 per cent of workers in the textile and clothing industry consist of women, a decline in female employment took place in the EEC while the reverse happened in the NICs. Those thrown out of this sector could not be absorbed — for example, in the electronics industry. One may ask, 'what is there to lament about it'? There are sufficient grounds for that, one being the motivation for such a relocation of the textile and clothing industry namely, exploitation of cheap women labour in the NICs.

Among the reasons sighted are the economic weakness of women, their social subordination, their ability to perform these monotonous repetitive activities, their lack of involvement in trade union activities which make it easier to manage and control them than men. Moreover, in the NICs women's labour tends to be cheaper than in the EEC, due to the fact that no social security benefits are given in the former.

●

THE story of Korea is no different as another study shows. Since the Korean government embarked on export-led industrialisation in the early 1960's, women's labour force participation increased. In 1965 about 45 per cent of women aged 14 years or over were economically active, this increased to about 57 per cent in 1980. Increase in female labour force participation was greater in the farm sector (41 per cent to 53 per cent) while comparatively less in the non-farm sector (31 to 36 per cent). Proletarianisation of labour force was more for the females than for males.

The urban based export linked capital accumulation in contemporary Korea is expressed in the form of (a) sizeable increase of factory work in the city in which predominantly young single women were employed, (b) intensified agricultural work among rural women and (c) an increase in white collar jobs for a small proportion of women. Participation rates of single women in each age group is two to six times more than that of married women. Eightyeight per cent of working urban single women are wage workers while only 23 per cent of working urban married woman work for a wage as most of the latter are self-employed.

Besides, the textile and clothing industry another industry which has grown tremendously in South East Asian countries is tourism – again an industry which has led to increase in employment of women. A strong correlation has been found between development of tourist industry and the rise of prostitution in the Third World countries.

In 1982 more than one million Japanese tourists are supposed to have visited Thailand, the Philippines, South Korea, Taiwan and Hong Kong tours called 'trips for men only' which explicitly include visits to brothels.

The manifestation of prostitution has also undergone significant change. In place of bonded girls there are call girls, and the 'mail order brides'. The establishment of the US Military bases in Thailand and Vietnam had already led to the emergence of prostitution in these new forms.

Olangapo near the US naval base called the 'Liberty City' consists of rest and recreation network of more than 500 clubs, bars, restaurants, sauna baths and massage clinics run exclusively by women for a clientele consisting of men.

We present below in Table I and II an estimate of the income per year from prostitution. It further shows that the income from that activity is more attractive from any other.

Table I

Gross Income per year from Prostitution and from Alternative Forms of Employment : Different years in the Period (1974-1978) (US Dollars).

Korea	
Garment Industry	135 – 480
Prostitution in Seoul	4500 – 9000
Philippines	
Spinning and Weaving	580
Prostitution in Manila	850 – 3200
Prostitution in Ologapo	3375 – 5000
Thailand	
Restaurant Waitress	250
Battery Factory	312
Garment Industry	450
Prostitution in Bangkok	1875 – 18,000

Source: Truong Thanh-Dam, "The Dynamics of Sex Tourism : The Case of S.E. Asia", *Development and Change*, Vol.14, No.1,January '83.

Table II

Prostitutes Gross Revenue, Gross Income per deal (US dollars) and Gross Income Share of Gross Revenue, (Different Years 1970-1980).

	Gross Revenue	Gross Income	Gross Income Share as percent
Korea			
Seoul	30-60	18-36	60
Philippines			
Manila	5-30	0.66-1.06	12.5 - 20
Thailand			
Bangkok	2-3	0.5-1.50	25-50

Source : *Ibid.*,

The number of prostitutes appear to have increased in South East Asia. According to Ministry of Labour and Employment of the Philippines about 100,000 hospitality girls (a sophisticated name for prostitutes) had secured a licence and health certificate in Metro Manila in 1979. In 1969 tourist arrivals in Manila was 125,000 while in 1979 it went upto 950,000. Majority of them were Japanese males.

The moral of the story is clear for India. An increase in female work participation rate *per se* cannot be declared as an indication of improvement of the lot of women. In the case of increase in female work participation rate, we should not fall a prey to the relocation of the sweated industries in the Third World and India whereby, women would come to be exploited more. Thus the Third World should not become a zone of AIDS with the increase in prostitution. No wonder the medical infrastructure to deal with AIDS is coming in first because it is sure to have a market for its products in the near future. ■

BOOK REVIEW

Rabindranath Tagore's Impact on Germany

JAG MOHAN

Opening this illustrated,handsomely produced book and glancing at the pages itself was a pleasure. Perusing this bi-lingual book in English and German was a great pleasure. Brought out to mark the Gurudev's fiftieth death anniversary last year, it records the impact (both favourabe and critical) of the three visits of the Nobel Laureate to Germany in 1921,1926 and 1930.

Those were the halcyon days between the two World Wars when a high premium was placed on literature as such. Books were not considered as well as packaged commodities in the market place as they are today. Books were the vehicles that conveyed sparkling ideas or aesthetic pleasure. They also promoted international understanding and exchange of ideas and visions of individual writers.

Rabindranath Tagore and Germany: A Documentation, by Martin Kampchen (Max Mueller Bhavan/Goethe Institute, Calcutta. Distributed by Rupa & Co., 1990; pp.160, Rs.100).

Germans are famous for their scholarship and documentation. It is one of their specialities. Martin Kampchen, who has been living in India since 1979 at Santiniketan, belongs to this fine tradition. Doctorates have been bestowed on him by the Vienna and Vishwa Bharati Universities for his theses on German literature and comparative literature respectively. He has translated two volumes of Bengali poetry into German and written a biography of Gurudev, also in German. Recently, the Tagore Prize of the Indo-German Association was awarded to this *Deshi Kotama* of Santiniketan. His credentials are impeceable.

Wisely enough he had chosen Alex Aronson to write the preface to this book. Aronson's book, *Rabindranath Tagore through Western Eyes* (1943) was a pioneering study. Aronson, a scholar in German, French and English had lived for many years at Santiniketan and taught at Viswa Bharati. His preface does not say a word about Kampchen's book but he has written much of the Indo-European dialogue through books and about the atmosphere in Santiniketan.

This book with a large format, published with taste in typography, lay-out, binding and cover design, which carries a photograph of Gurudev and Albert Einstein, taken in 1930, when they had met in Berlin. This is not to be mistaken as a coffee table book. Its value lies more in the text than the few rare photographs, drawings, reproductions of cartoons and covers of Gurudev's books in German. (The back cover has a drawing of Tagore ice-skating with Henny porten, a well-known film actress.)

Kampchen, like a detective, has perused books and magazines, newspapers and the letters and he has written a candid book about the reactions of the stalwarts of German literature of that period—ranging from Thomas Mann to Franz Kafka, from Rainer Maria Rilke to Albet Schweitzer, from Hermann Hesse to Stella Kramrisch.

Germans from Goethe to Schopenhomer had built up a tradition of Indophiles in their country. But when an Indian was awarded the Nobel Prize for Literature as a token of universal recognition of *Gitanjali*, quite a few among the German literati of the period were in consternation. Some welcomed and others felt jealous. Some were charmed by the "exotic" presence of Tagore and others dismissed him. While the French savant Andre Gide, spontaneously decided to translate *Gitanjali* into French, Rilke declined to do so, even after appeals from a publisher. Even the fact that W.B. Yeats, the Irish poet and Ezra Pound, the American poet and translator, were very much involved with the English translation of *Gitanjali* did not inspire Rilke.

During the inter-War period Germany, even while being a defeated nation, was rebuilding itself. Nazism was rearing its head as also Fascism in Italy. Peace and international harmony were a little too difficult to subscribe or endorse.

●

MARTIN KAMPCHEN has recorded various opinions. The Jews and their friends thought Rabindranath should be a "Rabbi" from the east. The PRO of the Nazis, Josef Goebbels dismissed him as "Rabbi Nathan"? ~~Mussolini described him as~~ "the Poet of Flowers and Stars and Pounds Sterling". Even Thomas Mann, who was reluctant in meeting Gurudev, after a personal encounter wrote thus: "The impression of a fine old English lady gained strength".

But Gurudev triumphed over his critics and denigrators. Tagore's friendship with Romain Rolland, a patriarch among European intellectuals mattered very much. Count Hermann Keyserling wanted to monopolise on Tagore and capitalise on his popularity.

An Old Ghost's Grouse

It happens whenever an important dignitary dies. It happened again when Hidayatullah died. All India Radio told us that "his mortal remains" were cremated.

Some people seem to think that when the great go, ordinary words won't do. AIR employs a special vocabulary of death. The staff are probably afraid that they might be pulled up by Ministers and MPs if they were not respectful enough towards the "departed leaders".

Let us look at this business of death. Suppose a dignitary dies. Is it not a strange kind of autopsy to say that the funeral that follows is not of that dignitary but only of his body—his "mortal remains"?

PTI, which is a kind of private sector All India Radio, also used the expression "mortal remains" when reporting Hidayatullah's funeral. The UNI report did away with this artifice and told us that Hidayatullah was cremated. So did *The Times of India*. But none explained how a Muslim had come to be cremated, contrary to the practice of burial common to the people of that faith. (Had the former Chief Justice and Vice-President expressed a wish to this effect, or was it the family's decision?)

The funerary vocabulary is always a little more pompous in our mother-tongues. The Hindi bulletins of All India Radio spoke of Hidayatullah's Paartiv Sharir. "Paarthiv" means "earthly"; it is the adjectival form of "Prithvi". The question arises whether there is any "Sharir" that is not "Paarthiv".

The expression "mortal remains" is what *Modern English Usage* calls "stock pathos". The paragraph under that heading says:

> *Some words and phrases have become so associated with melancholy occasions that it seems hardly decent to let such an occasion pass unattended by any of them. It is true that such happenings and suits of woe save much trouble; it is true that to mock at them lays one open to suspicion of hard-heartedness; it is also true that the use of them suggest, if not quite insincerity, yet a factitious sort of emotion and those are well advised who abstain from them.*

H.Y.S.

Kurt Wolff, Tagore's publisher went out of the way to look after Tagore and his comforts, meeting and tour programmes. There is an interesting story of how he became Tagore's publisher in Germany. The story is that the English translation of *Gitanjali* at the proof stage was sent by the English publisher to Kurt Wolff. It was scrutinised by two of his editors who found it a bit too esoteric and mystical. So, the story goes, Wolff asked the advance copy to be returned immediately by post. When the editor concerned was returning from the post office he met another editor who informed him that the Nobel Prize had been awarded to Tagore for *Gitanjali*, the editor promptly went to the post office and managed to retrieve it.

Wolff commissioned Rilke to translate it and he refused after protracted correspondence. Finally, the German translation from the English version was done by Marie Louise Gothein and the book came out in 1914. It sold a million copies over the years. Incidentally, Kurt Wolff, who had migrated to the USA was also the publisher of the English translation of Boris Pasternak's *Dr. Zhivage*, another Nobel Prize-Winner.

Subsequently, several other books of Tagore were translated by Helene Meyer Franck and published by Wolff. Helene was such a devoted translater that after translating from English for some time she learnt Bengali and after mastering it, did the translations directly from Bengali. Tagore's books were reviewed among others by Bertolt Brecht — and the whole review is reprinted in this book.

Just before and during the second World War there was a slump in Tagore's popularity in Germany. His philosophical ideas and ideals and his plea for universal hamanism were against the grain of the collective mood of the period. Then emerged the two Germanys. Years later, there was a revival of Tagore, mere so in the erstwhile German Democratic Republic. East German Indologists and Indophiles like Walter Ruben and Heins Node popularised Gurudev.

The bibliography included in Kampchen's book is extensive and methodically arranged. Books on various aspects of Tagore (as painter, playwright and choreographer) have appeared in GDR and Federal Republic of Germany.

The English language version of the book has been translated by S.V.Raman (Programme Officer of Max Mueller, who is well-known for his proficiency in German language as also in Bengali, English and his mother tougue, Tamil) and Martin Kampchen, under the editorship of Jeanne Openshaw, now working for her doctorate at Vishwa Bharati. No wonder the book reads well. ■

CAMEO

COMIC
or
The Great Indian Perestroika

SOM BENEGAL

(The Prime Minister is standing in front of a large map of India—if India it can be called anymore. He is looking intent and thoughtful. Enter Political Adviser, who, although an alumni of Harvard, MIT, Oxford and Matsushita Universities, comes from a long line of butchers reaching back to Chengiz Khan.

P.A. (*coughing discreetly*): Ahem... You sent for me, sir?

P.M. (*turns round*): Ah, my dear fellow, just the person I wanted. We have a problem. I was admiring the way you have helped to divide our country. In fact, to carve it.

P.A. (*with suitable deference*): It comes from my histogenetic background, sir. We have been great carvers in our time. Not just wood, ivory, stone and metal but something more vital, if I may say so—meat! Goulash was invented by my great-great-great-great-great-grandfather in Magyardesh in Taras Bulba's time. Kheema by my great-great-great-great-grandfather in Timur's time when he ruled from the Oxus to the Brahmaputra not to mention the Godavari and Cauvery. Olla-podrida was invented by my great-great-great-grandfather Who served Torguemada in Spain. My great-great grandfather invented the chop, and my great grandfather....

P.M. : Yes, yes I know all this. I read it in your biodata when you applied for this post.

P.A. : Sir, I was only proving that we have always endeavoured to satisfy.

P.M. : Yes, I know, I can see the result of your work. You have outdone Sardar Patel in reverse. From 372 princely states and presidencies consolidated by him into 23 States, you have not only undone his work but added to the number. What are we now—the Commonwealth of Micro-Indian Countries (COMIC)—602 states?

P.A.(*modestly*): No, sir, at the last count we were 753 independent countries.

P.M. : Very impressive.

P.A. (*even more modestly*): All your work, sir.

P.M.(*looking rather suspicious*): Is that a compliment or a back-handed compliment? At any rate, who would have thought that the break-up of India, as we knew it, would begin, not with Khalistan or Assam, or Tamil Nadu, or even Biju Patnaik's Orissa, but the short war between Maharashtra and Karnataka over Belgaum!

P.A. : Sir, you solved it brilliantly by getting a consensus to recreate themselves.

P.A. (*with his famous smile*): or shall we say, restructure? (*They both laugh.*)

P.A. : The ghost of perestroika still loomed large! (*They both laugh again.*)

P.M. : It still does, you know! (*More laughter.*)

P.A. : Sir, I cannot but recall how States returned to provinces, to principalities to princes. The Peshwas, the Holkars, the Gaekwads, Bhonsles, the Scindias all came into their own. And, of course, on the other side the Chalukyas, Cholas, Pandians, Pallavas and Cheras. It was a domino effect, as they used to say.

P.M. : Yes, very interesting—the Rajputana and Kathiawar states broke up Rajasthan and Gujarat and Saurashtra. The list is too long to enumerate. What I liked was that Jayalalitha and Biju were happy to get their Eelam and Kalinga. Even Karunanidhi could find common cause with the Puratchi Thalaivi, the Revolutionary Leader.

P.A. (*coughing discreetly*): But I think, sir, your handling of Punjab was simply fantastic.

P.M. (*modestly*) :Well, the situation had reached absurd proportions with 78 Akali Dals.

P.A. : In a master-stroke through consensus you brought them down to 26 and gave them each their Khalistans.

P.M. : Yes, this way we could alphabetically have Khalistan (A) to Khalistan (Z).

P.A. : And, of course, they are living happily amongst themselves and the rest of us. But, sir, there was even a greater challenge that you had to face—the illegal immigrants and refugees who claimed to be part of this country.

P.M. : You know, in a sense, we are prisoners of our history, tradition and philosophy. As I assured President Mitterand long ago, in French, *nous sommes un peuple tolerant*, we are a tolerant people, no one needs to fear us. Everyone's right will be respected and upheld.

P.A. : (*coughing diplomatically*) : Sir, when you said that you, perhaps, did not know the dimensional apogee of your assurance.

P.M. : Yes, I did not realise that I was going to swallow the whole world—almost. (*Smiles his famous smile.*)

P.A. : Here again, you almost, to use your own words, carried it off.

P.M. : What choice did we have? There were these Bangladeshis, or non-Bangladeshis or Bangladeshi Indians, or Indian Bangladeshis or non-Indians, Bangladeshis or Indo-non-Bandladeshis, the situation was weird. As I told Begum Khaleda Zia in Bengali: We can take some Bangladeshis for all of the time, and all the Bangladeshis for some of the time but we cannot take all the Bangladeshis for all of the time.

P.A. : As I recall, Begum Zia denied that there were any Bangladeshis at any time!

P.M. : It was a bizarre situation, as I told Chancellor Helmut Kohl in German—*die Situation ist Bizarr*.

P.A. : Sir, you could also have said, "*der Zustand ist Wunderlich*".

P.M.: Ah, but our people back home would not have understood. So in the highest traditions of our tradition we took the Bangladeshis and gave them their Swadhin Muslim Banga Bhoomi. I must say that Laloo Prasad Yadav, overcome by some attack of Moral Rearmament, readily agreed to accommodate both Jharkhand and this Swadhin thing. So also Jyoti Basu, overcoming his discredited Marxism.

P.A. : Sir, that took care of the Bangladeshi situation which was attracting unfavourable world-wide attention from Amnesty International and other bodies, including our own vociferous liberty and human rights groups.

P.M. : I cannot, of course, forget that the ultimate carving was yours.

P.A. (*with unctuousness*): Sir, as I said, from time immemorial we, in our family, have endeavoured to satisfy.

P.M. (*sternly*): You realise, of course, that it was inevitable in the circumstances that we would have to regularise the Tibetan presence in India which had been there for half a century.

P.A.: So you graciously let them have the independent state of Little Tibet. It was quite amazing that you got consensus from Xiao Ping-pong, Hsu Sing-song, and Qui Qing-qong, the great Chinese helmsmen, to agree to this.

P.M.(*drily*): Frankly they had no other choice, as I told them in the Shensi dialect. With Taiwan gone and pro-democracy uprisings in Anhwei, Kiangsu, Honan, Hunan, Szechwan, Hupeh, Hopeh and so on, they could not resist our giving our Tibetans their Little Tibet.

P.A. : Naturally another domino effect followed.

P.M. : Quite naturally. You had to carve out states for all the other refugees and immigrants—the Palestinians who badly needed a homeland, the Afghans, Iranians (who recalled the Greek influence on our culture and sculpture from the time of Alexander), even the Bosnians (who Iqbal Masud told us have everything in common with us.) Were there not some from Africa, north of the Sahara, and Africa, south of the Sahara?

P.A. : Yes, and some from South America, north and south of the Mato Grasso. There was once a Hindu America, sir, as some of our scholars have proved. The original people of South America cherished their relations with us from the dawn of time. You took them in also, the Incas, Mayas, Aztecs, Naczas...

P.M.: (*cutting in*): We had no choice, as I told the Presidents of the Latin American countries in Spanish and Portuguese depending on the case—*no tenemos alternative*.

P.A. :(*highly ecstatic*): Sir, what a unity in diversity we have created!

P.M. :(*drily*): And also a diversity in disunity! Remember the Era of the Dissidents?

P.A. : (*admiringly*): But by your maxims, "Not to act is to act", "Speech expresses as folly, silence impresses as wisdom", and "Confusion can be led to fusion", and furthermore, "Consensus brings people to their senses", you brought everyone to unity.

P.M. :(*deprecatingly*): Let us end this mutual back-slapping. I called you for one of our most difficult challenges.

P.A. :(*cloyingly*): Sir, no challenge is too difficult for you. As Ali Siddiqui said, you are the "Saviour of India".

P.M. (*severely*) : Stop it! I don't want to hear that. You know last month the first extra-terrestrials landed on the Earth.

P.A.: Yes, sir, the commotion died down after a week.

P.M.: The commotion may have died down but their emotion is very much alive and they are a dissatisfied lot. They want lebensraum or living space, as Bangladeshi intellectuals once used to argue. Having rejected all offers they want to settle down in our COMIC. I got this in a secret report from our Ambassador at the UN.

P.A. : Actually, sir, if I may say so without sounding impertinent, it has already been broadcast by all the satellite networks and news agencies.

P.M.(*wearily*): Nothing remains a secret anymore, does it? A secret used to be leaked within hours even in the old non-satellite days. But now you cannot whisper without its being slammed around the world in minutes.

P.A..(*in a matter-of-fact tone*): Within seconds, sir, actually micro-seconds.

P.M.: So, can you give me a brief on this problem. As you know, I have been travelling abroad for the past three weeks and have been rather out of touch.

P.A. (*putting his fingers together and holding them beneath his chin*): Actually, sir, these extra-terrestrials have come from one of the two planets of the nearest star from our Solar system – the Proxima Centauri. This planet is called Xerocqx. It has a tyrannocracy. Though very advanced technologically, enough to make the journey to the earth, they are ruled by Tyrants. Like the Pilgrim Fathers who escaped from Europe to America, this group has escaped from Xerocqx to come to the Earth. But having come here – and the journey took them four years travelling at just under the speed of light – they are disappointed to find tyranny everywhere.

P.M. : But surely we have many democracies on the Earth?

P.A. : They do not see it that way. Their leader observes that man is born free but everywhere he is in chains except in the COMIC. Why should they exchange one tyranny for another after such a long flight?

P.M. : So?

P.A. : They feel the COMIC is the only place where all are free to do anything they please. So they want to come here.

P.M. : But, my dear fellow, do we have any room left?

P.A. : Sir, if I may state humbly, isn't that why you sent for me?

P.M. : Of course, of course, don't tell me you have already found a place to carve for them!

P.A. : All through history our family has endeavoured to satisfy!

P.M. : Yes, yes, now don't go into that history. What is the solution?

P.A. : (*in a pedagogic tone*): Sir, the Xerocqxians, are amphibious, ahem, entities. Basically they live underwater where they have built remarkable architecturally designed megalopolises. But being amphibious they need to surface from time to time. By a strange coincidence their atmosphere is like ours and...

P.M. : (*somewhat impatiently*): My dear fellow, can you come to the point? What do you suggest? The Bay of Bengal?

P.A. : (*imperturbably*): No, sir, the littoral states around it would never agree. There is a better solution...

P.M. : The suspense is killing. What is it, what is it?

P.A. : (*like Gogia Pasha pulling out a surprise*): Sir, if you will see in the map before you, in the Ten Degree Channel between the Andaman and Nicobar Islands is a large body of sea and in it a trench of deep water, perfect for the Xerocqxians to build their cities. Being just above the Equator it is warm water. For the same reason, above water there is a largely uninhabited island called Teressa, lush, tropical, verdant, sylvan, organometallically rich...

P.M. : Please, less poetry and oratory...

P.A. : Sir, it would be perfect, a *paradiso* for them.

P.M. : What about the people around, the Andamanese and the Nicobareans. You expect no opposition from them?

P.A. : No sir, such opposition as there might be can be settled by consensus. But from my own information gathered in the past fortnight, they would actually be happy to accommodate the Xerocqxians, seeing the tourist possibilities, and the worldwide publicity their area would get. It only needs your presence to assure them.

P.M. (*looking very thoughtful in his famous way*): I see you have done a good job in anticipation, as usual, but one thing bothers me. What language do the Xerocqxians speak?

P.A. (*smugly*): Sir, it consists of clicks, beeps and whistles in a binary system, much like our computers but, of course, highly advanced. But they have reduced it to meet our lower comprehension.

P.M. :How do I greet them to our shores, actually our deeps? In what language? Surely not in clicks, beeps and whistles?

P.A. (*with a straight face*): Sir, why not, with so many languages and sounds at your command, including *guna, vriddhi, swarabhakti* phonetics, you should have no trouble with the Xerocqxian language.

P.M. (*dubiously*): I am not so sure.

P.A.: Sir, if I may say so, I took the liberty of asking our foremost computer and linguistic scientists to work out a comprehensive programme for you to have a crash programme on this language. They are ready.

P.M.: Is there anything you do not think of?

P.A. (*with a steady look going back to two thousand years*): Sir, we endeavour... ■

ARVIND N. DAS : BANKRUPT ECONOMICS

(Continued from page 2)

the first place, it is necessary to identify who lost, not just who benefited, from the scam. First, the losers are the innocent depositors in the now liquidated Bank of Karad and similarly-placed financial institutions. Second, there are those native investors who were lured by the spiralling share prices and lost when the market crashed. Third are the industries whose money was put into dubious transactions. Fourth are the banks which were defrauded through fake banker's receipts. And finally, the tax-paying price lost when government owned banks and public-sector undertakings were defrauded.

It is also necessary to understand the systemic reason why such a scam, which Manmohan Singh calls "a systems failure", took place at all. The easy answer is the cupidity and greed of some Indians and foreigners, but that is not enough. It is important is realise that the scam became possible when economics was so altered that manufacturing was discounted and premium was put on merely manipulating money. As significance shifted from productive to speculative uses of capital, as agriculture and industry, producing and even marketing, were subordinated to finance capital, profits could be made by merely entering book transactions and moving money around. Usury staged a respectable comeback and Air India and OIDB, PFC and National Housing Bank all rushed forth to multiply money through interest. The scam players were mere middlemen who were conveniently present to brush illegalities under the carpet. When prudence is sacrificed along with productivity, the economy stagnates and the scum floats to the top.

As an old-time student of political economy, Manmohan Singh should have known this. The distortions in the economy brought about when finance capital dominates over manufacturing capital are not new discoveries. Hilferding and Lenin, Schumpeter and Galbraith, and even Keynes who is being resurrected in post-Thatcherite Britain and Clinton's employment-oriented America—all these and many other political economists have written on these. Educated Indians in charge of shaping the economy ignored their lessons and ordinary Indians now pay for that negligence.

What now? Has the lesson of the scam been learnt? It would appear not, if one looks at the most recent "success story" of the double-entry economics currently in vogue; the disinvestment of public sector shares. It appears that the shares have largely been transferred to the public sector Unit Trust of India since actual private investors were debarred from the proceedings by the fixation of an enormously steep floor bid. Thus, even "privatisation" has been given a new meaning by those who set the tone of the political discourse. It does not mean that more funds have become available to public sector concerns. At the same time, the public sector financial institutions like UTI will have less funds to be invested in to private sector.

Clever budgetary accountancy does not help where the crunch lies in the balance of payments. More loans only mean more debts and higher debt servicing. Globalisation also means that global recession will limit foreign investment in India and curtail exports. Meanwhile, import liberalisation continues apace and the trade gap widens.

The ghosts that lurk behind the scam are nurtured by faith in the mythology of globalisation without encouraging production and modernising the infrastructure. They can only be exorcised by the reassertion of real-time political economy. The shrill notes of the big-time scammers squealing against each other are distracting from the task of actual economic modernisation. They must be stilled soon. ■

NASIM : RECASTING AFGHAN POLICY

(Continued from page 6)

resolve to weaken Hekmatyar's forces. Hekmatyar's Hizb claims that Dostum forces together with Jamiat-i-Islami's *Shoora-i-Nazar mujahideen* attacked Hizb bases in the northern Baghlan province.

Another indication of absence of a patch-up between Hekmatyar and Kabul is that in the latest shuffle in the armed forces no one from Hizb has been inducted.

Differences among Afghans over the holding of the traditional *Loi Jigra* or elections remains unresolved. A third option that is emerging is the selection of a *Hal-o-Aqd* or Council of Wise Men that will be convened instead of the *Loi Jigra*. This *Shoora* will comprise of members from major *mujahideen* groups and from different provinces. It would elect the interim government before October 24.

Even Hekmatyar who was earlier only supporting elections has agreed to this *Shoora*. The interim government elected by the Shoora will remain in office for eighteen months. Its mandate will be framing of a constitution and making preparations for holding of elections.

Islamabad's efforts have yielded a unity of objective and policy on Afghanistan among external forces. To a large extent suspicion and harmful competitiveness appears to have been replaced with enlightened cooperation among Iran and Pakistan and Saudi Arabia. This will have a positive impact on the divisive forces inside Afghanistan.

While many of the major groups and splinter forces within Afghanistan tied to external benefactors may not have become autonomous—Hekmatyar being a case in point—there are still many who recognise that without external humanitarian support by neighbouring countries Afghanistan cannot ensure its own rec-onstruction.

Also, to rebuild a politically fragmented Afghanistan cooperation from outside, especially from neighbouring countries, is important. These countries, will largely have to ensure that the Afghan groups they had previously tutored in lessons of unbridled political ambitions unlearn these lessons.

Now lessons of mutual accommodation have to be taught. Islamabad is doing just that: after following an Afghan policy whose partial objective was to supposedly serve Pakistan's interests while undermining the Afghan national interest. Recent developments on the Afghan front have proved the absurdity of acquiring strategic depth by installing its own man in Kabul and has revealed the extent of damage inflicted upon the Afghan political scene.

Islamabad's latest moves on Afghanistan appear to be aimed at 'undoing' much of the political damage Pakistan's military leadership of the eighties had inflicted on the Afghan scene. Islamabad's efforts to resolve the Afghan political crisis are on the right track. Much of the statements issued by politicians on Afghanistan naively calling for non-interference by Islamabad are therefore unthinking statements. ■

GARDEN FRESH ASSAM
TEA

India is the world's largest producer, exporter and consumer of tea.
The country produces from the ordinary to
the best teas, yet the Indian consumer does not get to
drink the best. That is why APEEJAY, which is
the 4th largest tea producer in the country, has decided
to introduce its selectively picked high quality pure
Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens.
Make it the way you normally make your tea and it will
give you a superb flavour and liquor.
Drink this tea for 3 months and you will
never want your old brand again.

POLITICAL NOTEBOOK

Chickens coming home to Roost

Significant events signalling landmark developments do not sometimes get the treatment they deserve from the media. One of these occurred on October 23 when the Congress President held a meeting with the presidents of the Pradesh Congress Committees.

The meeting was scheduled to review political developments as well as the party's organisational matters since the Tirupati session of the Congress held six months ago. As per the official briefing, the resolution passed at the end of the day's labours was along expected lines—laurels for Narasimha Rao for holding inner-party elections, for having lowered communal and caste ensions, for the Punjab elections, for his consensus style functioning and also or the economic reforms. By themselves all these are important points as they provide for the Congress President a demonstration of support for his leadership, particularly as he has been voking criticism for protracted indecision on many issues.

However, this is not the entire story bout that meeting. What is undoubedly more significant about it is the harp criticisms over the economic olicies, voiced by a number of prominent leaders present. It was obous that the party leadership was not prepared for such a volume of criticism n this score, as was clear from the fact that the Finance Minister was not iginally scheduled to be present at the eeting. But the Congress President nsing the magnitude of the discontent as voiced by a number of senior leaders, offered to call Dr. Manmohan Singh to listen to the criticism and to offer his explanation about them. So, the Finance Minister was sent for and attended the afternoon session during which he had to face quite a formidable barrage of criticisms. At the end, some of the stalwarts present could not help carrying home the impression that the economic reforms package as implemented is undermining the support base of the Congress party.

Quite unexpectedly, the Kerala Congress President Vayalar Ravi, placed a report which strongly criticised various facets of the new economic reforms. He was categoric that this new economic policy package was antagonising the traditional supporters of the Congress who had stood by it since the days of the freedom struggle. He specifically mentioned that the working class, the peasantry and the middle class were being badly hit by the present economic policies. During the discussion that followed, specific mention was made about the cut in fertiliser subsidy, and closure of some of the public-sector units, the unchecked price rise, the plight of the small scale industry and the inadequacy of the public distribution system.

The critics made it clear that they were not opposed to liberalisation and the removal of controls, but the policy as is being pursued could bring no improvement to the majority of the population. It was pointed out that the government's claim about improvement

of the balance of payments position is based on heavy external borrowings and not on export earnings which is still dismally low, contrary to what was promised last year. Vayalar Ravi's note made a pointed reference to the rise in imports which were being wasted for importing luxury goods pandering to the rich minority. He warned that this would land the country "in an unbailable debt trap". The main thrust of the criticisms voiced at the meeting was that the economic reforms as pursued by the government would seriously undermine the political base of the Congress party.

Subsequently, on October 26, Vayalar Ravi told the press at Kozhikode about his differences with Manmohan Singh as he felt that the economic reforms should emphasise maximum utilisation of the existing infrastructure and manpower available in the country. He made it clear that the new economic policy package has created rift within the Congress party.

It is significant that on that very day, the former Commerce Minister P. Chidamabaram, speaking at a seminar, pressed for additional allocation of at least Rs one thousand crore for poverty alleviation programmes through a supplementary Budget, adding: "I am not happy with the allocations made for poverty alleviation programmes in the Budget for 1990-91 and 1991-92", and he also made it clear that in real terms, the allocation on this count for 1992-93 was less than that of the previous year. From his speech, it also came out that the much-publicised National Renewal Fund which is supposed to provide alternative openings for those to be hit by the Exit policy has not yet received Rs one thousand crore which the Finance Minister had promised in his Budget. One more assault on the political standing of the Congress party.

In this context, there has generated considerable interest in the British Prime Minister John Major's crisis on proposing the closure of a large number of coal-mines. The fact that he had to beat an ignominious retreat over his exit policy is not irrelevant for our Prime Minister, no matter what his Finance Minister might propose.

There are already visible, some items of difference between the two. The Prime Minister himself has acknowledged to pressmen on return from his Kathmand visit that difference existed between him and h Finance Minister about the role and impact of th securities scandal. Narasimha Rao has been categor in stating that the scam had damaged the econom position of the country particularly the crucial bankir sector, while Dr Manmohan Singh has throughout bee underplaying the effect on the scam; in fact in the ve first round he had claimed that the abnormal over-hea ing of the stock exchange was one of the symptoms the success of his economic reforms.

marking its

Thirtieth Anniversary

The Finance Minister has been at pains in defendi the indefensible, namely the negligence and miscoudu of the Reserve Bank as revealed by the scam. On t contrary, the Joint Parliamentary Committee engag in studying the scam, has already given sufficient indic tion of the serious lapse of the bank executives whi the RBI should have checked. This would come c more glaringly when the JPC examines the RBI offici early in November. Besides, Dr Manmohan Singl gratuitous defence of the two Ministers of State unc him who are facing the charge of violation of parliame tary privilege, has not exactly earned him encomiu from this parliamentary body itself.

It is now getting clear that that sudden claim by t Finance Ministry of having contained the rate of inf tion was misleading; in fact, the inflation rate has ag been picking up,belying the predictions of the Finar Minister. And cap it all, the actual investments fr abroad have so far been appallingly disappointing f sifying the Finance Minister's forecast.

With his attention glued to almost round-the cl Fund-Bank guidance, it is understandable why he is n going to import, as reported, a whole host of so-cal experts from that outfit—including a number of foreign for the purpose—to advise him how to proceed with economic reforms programme. Implied in this is his derstanding that those distinguished specialists in country who have devoted themselves to the study of country's economy do not command the Finar Minister's confidence. This is certainly not going to dear him to the Indian public, and to that measure, Congress circles would be further embarrassed development which the Prime Minister can hardly br aside. An economic policy package which enjoins c tinuous borrowing from abroad—as M mohanomics openly demands—can hardly be acce able to the nationalist opinion in the country, as Dr Patel has recently emphasised in his lecture on the n for freedom from foreign debt.

By the time the Parliament meets for its wi session next month, the deleterious political fall-ou the over-publicised economic reforms progran would become the central concern for the nation fearsome dilemma for the Prime Minister of ha relied on a Finance Minister so appallingly innocer the political consequences of the policies he has b trying to push through at the behest of the wor super-moneylender, the Fund-Bank outfit.

October 27

Be Indian, Be Damned

V.N. NARAYANAN

Ravi Vats is an Indian citizen; he gets bashed up by a police officer. For being at a spot where the police does not like him to be. Ravi Vats is also a serving Army officer. The Army establishment is outraged. Senior police officers offer apologies to senior Army officers.

Talwar is an Indian citizen with a camera. He clicks it where a police officer thinks he should not. The camera is seized and the film taken out. Talwar is also a senior news photographer of a national daily. The press is outraged. Apologies from a police officer to the photographer.

An Indian citizen again, a doctor at a famous medical institution, incurs the wrath of a police officer for not bestowing the professional attention the latter's authority demanded. The doctor gets roughed up and is delivered a verbal lashing too. The doctors go on strike. Parleys all round; apologies and...well...“let bygones be bygones”, “forgive and forget”...*et al.*

I am not surprised about the police end of the above incidents. Over the past few decades our policemen have rendered meaningless the term “law and order”. Excesses are a routine and they have to invent news and newer atrocities to suit the definition.

Just think what would have happened if the above three victims were plain Indian citizens without professional prefixes and appendages. Were Ravi Vats not a Colonel, the Army wouldn't bother if he were to be pulverised and detained; were Talwar not a press photographer, the press would have treated film-snatching as, at best, a news-in-brief on an inside page; a private doctor bashed up wouldn't make the PGI's medicos go on strike.

A soldier in distress becomes the Army's concern; a newsman offended is the press offended and a doctor attacked is the profession attacked. But an Indian citizen in distress is nobody's concern. If the watermen of Chandigarh had only seen themselves as Indian citizens, they would never have subjected their neighbours to such misery as they inflicted, by their five-day strike and sabotage.

Laloo Prasad Yadav inimitably brought home the irrelevance of the common citizen vis-a-vis Indian society by seeking to approach the telephone people as a “common man” wanting to convey something urgent and important. The phone was slammed on him. The media emphasised the same point in their coverage of the cable car episode where the exploits of armymen and air force personnel got extensive coverage while the individual who devised his own ways to reach the stricken tourists with food and blankets got but a passing mention.

When W.S. Gilbert, in Victorian England, accosted a pompous gentleman on the road and asked him: “Excuse me, sir, are you someone in particular?” he was trying to puncture the ego of snobs in society. In today's India, the policeman would ask the same question to the law-breaker on the road, so that he can keep his options open on bashing him up if safe to do so, or to salute him in recognition of his VIPdom.

This contribution is from the Editor-in-Chief of The Tribune, *the well-known daily from Chandigarh, in which it first appeared.*

●

THE malady is contrywide and deeprooted. As an individual, you have rights but to exercise them you must be a member of an interest group. The group not only protects your rights but also seeks to protect you from the law. Thus when an advocate is arrested for stealing, the entire lawyer community rises to save him and hound out the police personnel who dared do it. When a newspaper is proceeded against for violation of building laws, it shouts: “no, press freedom is in danger”.

The group identity submerges individual delinquencies. Take the case of the journalist found guilty of slandering Jagmohan; the reaction of an overwhelming segment of the Indian press was one of shock—not at their own tribesman who had been proved to have published patent falsehoods but at the judgement sentencing the character-assassin to four months' imprisonment. The journalist community has expressed itself extensively against the judgement not with arguments and facts but with judgements of their own. The press loves to hate Jagmohan, without feeling the need for solid reasons to harbour the hate. Jagmohan has confronted the press with facts; the journalists have responded with innuendoes. Suddenly, as it were, the united stand of the press against Rajiv Gandhi's anti-defamation bill seems hollow and devoid of credibility. Journalists would not like to face the consequences of their writings. Instead they say: “We may defame you, but law should not be used against us...at any rate put kid-gloves on it”.

Sectarian appeal superseding national identity; nay superseding basic human instincts. Take Punjab. Akali leaders like Simranjit Singh Mann, Parkash Singh Badal and Gurcharan Singh Tohra were over-keen to organise a *bhog* for Sukha and Jinda. I strained and stretched my memory to recall one bhog function organised by these leaders for the countless innocent Sikhs killed by the militants and the police in Punjab. A count that I have kept (subject to acceptable statistical margin of error but based on official and police figures) shows that between 1981 and 1991 as many as 10,148 civilian citizens of Punjab lost their lives in militant killings and out of these 6,177 were Sikhs. That works out to 60.8 per cent, or 61 out of every 100 persons that a decade of militancy claimed were Sikhs.

Statistics abhor me. The death of even one individual human being takes some vital part of myself away from me. I endorse Subramania Bharati's view that a system which allows even one man to die of hunger (or of violence) should be destroyed. The state has an obligation to see that no one kills anyone... What does one say about a state which not only cannot prevent killings but also kills.

But let us come back to the Akali leaders. They have reservoirs of tears to shed for every militant killed but

Promoting Free Media in Central Asia

The United Nations Educational, Scientific and Cultural Organisation (UNESCO) sponsored a seminar on Promoting an Independent and Pluralistic Asian Media in Alma Ata, the capital of Kazakhstan (October 5-9, 1992). The focus of the seminar being the promotion of free media in Central Asia, a highly valuable background paper that substantially contributed to the deliberations was the report of Martin Hadlow, the UNESCO's Regional Communication Adviser for Asia, following a mission he undertook to all the five Central Asian states of Kazakhstan, Kyrghyzstan, Tajikistan, Turkmenistan and Uzbekistan for getting a picture, from primary sources, of the state of the media in all the five countries. The report pointed to the (a) absence of any established media links between the Central Asian states; (b) paucity of international news and information with not one news agency, newspaper or radio/TV organisation in the region subscribing to any major international wire service (most of the world news coming through cooperation with ITAR-TASS in Moscow); (c) historically sustained Eurocentric, rather than Pan- Asian, outlook in Central Asia with the existence of few links with South or South-East Asia.

The report identified several problems relating to availability/cost of newsprint; lack of computer facilities; outmoded broadcasting technology; inadequate training opportunities; few modern management techniques; poor inter-regional cooperation; limited knowledge of foreign languages; scarcity of international news and information; lack of understanding of the role and responsibilities of independent media. The report also listed four immediate project areas for support from donor agencies: (i) development of news agencies and establishment of a Central Asian news exchange; (ii) international exchanges of media personnel from Central Asia with other countries of Asia; (iii) provision of computerised equipment to in-country centres for journalist training and editorial/production use by small independent newspapers; (iv) modern cameras/editing equipment and staff training for television stations to upgrdde the gathering and dissemination of news.

The final Alma Ata Declaration highlighted project proposals — identified as the specific needs of the Central Asian media but having regionwide application as well — relating to legislation, training, free flow of information, protection to journalists, public service broadcasting, professional associations and special economic issues.

Some of the participants spoke to Sumit Chakravartty (who attended the seminar as an observer) and gave their opinions on the seminar and other issues. The following excerpts of interviews with them provide an idea of their attitudes, approaches and thought processes.

— Editor

Thomas Lawrence Early
Head of Media Section,
Directorate of Human Rights, Council of Europe

Q: Please say something about your organisation.

A: The Council of Europe is an intergovernmental organisation based in Strasbourg. It brings together at present 27 European democracies, countries committed to respecting rule of law, democratic principles, fundamental human rights and freedoms.

The Council of Europe is extremely interested in the developments which have occurred in Central and East European countries since 1989 and three of the former countries of the Communist bloc have joined the Council of Europe as full members — namely Czechoslovakia, Hungary and Poland.

Media laws and policy constitute an essential component of our activities. The Council of Europe is committed to ensuring freedom of expression, freedom of information across frontiers. We have done a lot of activities in the field of media laws and policy within the West European context and also within the context of the newly emerging democracies in the Central and East European countries.

We are in the five Central Asian republics of the former Soviet Union for a number of reasons. Although there is a tendency for them to look towards the wider Asian framework as the ultimate destiny there are still links with Europe. In fact some people still talk of Eurasia while talking of Tajikistan, Uzbekistan and Kryghyzstan. In June of this year the Secretary-General of Council of Europe toured the five Central Asian republics and met with officials in these countries and they expressed interest in taking advantage of our cooperation and assistance programmes for the Central and East European countries.

Q: Now that these countries have thrown off the yoke of state tyranny don't you think that they are entering a very uncertain period of getting accustomed to what is known as the tyranny of the market? In that context here in Central Asia, something which is different from Central Europe, there is a possibility of national chauvinism coming to the fore. How do you view this danger?

A: This is a problem not peculiar to the Central Asian republics, it's a problem shared by all the newly emerging democracies. They suddenly find themselves in a new situation wherein they can control their own destiny but the problem is how they master their destiny in accordance with the democratic and market principles.

You spoke of national chauvinism that could be quite pernicious if it means turning one group against other group, if it means ethnic groups seeking revenge over other groups for the sins of the past. So it is very essential to work out mechanisms to prevent national chauvinism from asserting itself at the expense of minority groups within the particular emerging democracies.

Q: I asked that in a different context. In Central Europe also you may be facing the same problem. After all it is the process of European integration which will be able to overcome that problem. But here in Central Asia they are at a lower level of both economic development as well as consciousness. The danger on this score therefore becomes more acute here. How would you react to that?

A: I think it's true what you are saying. It's a question of trying to come to grips with the new realities which have presented themselves.

Q: Don't you think that this problem has come up in the course of this seminar?

A: Yes, I think it has. And that's why it's essential for them to take advantage of the existing structures which may be able to help them. For example, the various Asian networks from the viewpoint of media that were mentioned. These could help them to adjust and grow within the new framework....

Q: There is an apprehension in the West that these Central Asian republics would veer towards some kind of Islamic fundamentalism. Do you share that apprehension on the basis of your experience here?

A: I don't think this has emerged to any great extent in the course of the discussions at the seminar. We have left the seminar with the impression that there is a risk of fundamentalism arising in these particular countries. That is why it is necessary for these Central Asian republics to be locked into a wider pluralistic framework, for example, the wider Asian framework which brings together Confucianism, Buddhism and Catholicism, and the Shinto and Islamic approaches.

Q: In the field of broadcasting you had raised at the seminar a very important point with regard to public interest broadcasts distinct from state controlled broadcasts. When there is so much talk of wholesale privatisation in these countries, what is the potentiality of public interest broadcasts here?

A: The potentiality of public interest or public service broadcasts is tremendous. I think if there is a mad rush towards deregulation, leaving everything to the market forces that could prove ruinous. I think it would be completely wrong for policy-makers at this stage in the economic development of these countries to hand in everything to the market forces. First of all, there is not sufficient advertising market available in these countries to sustain commercial operators. It's necessary to try and start from the basic principle that a public broadcasting organisation should be set up which is independent from state control, which is adequately funded...

Q: Funded by whom?

A: Funded by licence fee, for example : a licence paid by the viewers; or funded by Parliament; the government could propose a budget which would be voted by a democratically elected Parliament.

Q: That is possible in European countries. But here the economic situation being what it is do you think it is practicable?

A: I think it is practicable to find money which could be voted by Parliament to create a public interest broadcasting company which is independent from government control.

As time goes on, once the market develops, once there are the advertising and commercial sectors, once there is money around to sustain private operators you can introduce a mixed system — you can allow the public service braodcaster to cohabit with the commercial organisations. But my point is that at the present time the market is not strong enough to sustain commercial operations.

Q: What is the American response to public service broadcasting?

A: It is not that positive. Public service broadcasting started in the European countries. But in America, which has a different background, they lay a great deal of emphasis on market forces, commercial logic, business profit, broadcasting as an entrepreneurial activity. In the European countries the initial premise was to support the public broadcaster and then as time went on to open up the frequencies to the commercial channels. And this is now a feature of all European countries with the exception of Austria.

I think the Council of Europe should say that in this sort of situation when the new emerging democracies are finding their feet from the point of view of broadcasting policy you should consider very carefully in the early years a commitment to the public service principles rather than the purely commercial principle which entails obvious risks.

For example, if all the frequencies are given to commercial broadcasting, there is a risk that foreign investment might move in, people in other countries who have the money to operate will come in — the Americans, the Germans and so on.

Q: Which could lead to indirect external intervention?

A: Well, it carries with it problems in the sense that your broadcasting culture — a vital form of national culture which broadcasting is — becomes dominated by foreign press groups and foreign broadcasting groups. That is why if you have the public interest broadcasting set up by Parliament then you can maintain cultural control over your own country.

There are a whole series of different issues which are to be considered. I mentioned some of them yesterday all pertaining to the various components of broadcasting and press law systems could be brought to bear on policy makers of this region. Of course the aim should not be a paternalistic one: trying to impose upon them a package. It should be exposing them to a whole range of organising a broadcasting system or a press system in respect of fundamental human rights and freedoms, in particular freedom of the press and freedom of expression, and each country has its own traditions, works in its own environment, it is for each country to adapt or take on board these options in accordance with its own system. You cannot transpose the British system into the Central Asian republics nor can you transpose the American system here.

●

Lady Diana Dougan
Chairman, International Communication Studies, Centre for Strategic and International Studies, Washington

Q: Can you give your impressions of this seminar? How do you compare this with the previous one in Tashkent you were referring to sometime back?

A: As I mentioned in my speech at this seminar here there is a delightfully stark contrast with the meeting in Tashkent nine years ago where the focus was not only on the new world information order but there was also the rhetoric of press freedom. But in this case although the understanding is not terribly deep, I think there is a much deeper understanding of diverse and pluralistic communication.

Q: As a leading exponent of the American policy on communication how do you view the American policy towards Central Asia? The way things have developed do you think the evolution of Central Asia towards a more pluralistic society is by and large in line with whatever you had in view as an objective?

A: Obviously I welcome the pluralism as long as it doesn't end up disadvantaging certain cultural minorities and so on. I would say in general my personal view — not a governmental view — is that there has been too much focus on Moscow and Russia and not enough on some of these other republics. And Russia itself is so vast and so large and so politically complex that in some respects no amount of outside influence is going to have much effect on Russia. The political and economic reform and change they will have to undertake themselves. In some of these smaller republics who have had no ability or history to be in charge of their own destiny the relationship with them is every bit as important. It may not appear strategically as important but...

Q: But strategically also Kazakhstan occupies a very important place.

A: Of course. But I would not dismiss the smaller republics either. I think that if there can be an economic and democratic success in one of the smaller republics it would have a very radiated effect elsewhere.

And in Kazakhstan — although it is not that small and in terms of natural resources it is only surpassed by Russia itself — there is a lot of potential here.

But you can't expect those who have spent their whole lives under one system to suddenly learn a new language and a new way of thinking.

I think the biggest problem is not so much going back to communism, reverting to communism, but to an oppressive nationalism in these republics. There are battles within these countries. Here you have the battle between the Kazakh and the Russian languages, at what point you are going to be suppressed...

Two points that I found missing in this conference: there is still very little understanding or appreciation of private media as opposed to "independent government-funded media"; and even though there was a lot of discussion about private media, and I myself mentioned the importance of becoming economically self-sufficient, in the final declaration and resolutions there was no reference to private media.

Q: Do you think that these were a negative feature of the seminar?

A: Well, I think this was the result of a compromise.

Q: What do you think would be the long-term perspective now?

A: I think things would get worse before they get better.

Q: So you do not rule out the emergence of that kind of nationalism here which you were mentioning sometime back?

A: It's already in existence in Tajikistan — it's already happening there.

Q: How should the pluralistic societies of the West and the East try to combat this?

A: Well, among other things focussing on trying to develop a middle class. There is an evolving class of rich former Communists who were always rich and privileged under communism, and the transition to a market economy is not well organised and as far as the trading process is concerned I doubt if it ever will be. But I would hope that one of the biggest areas of focus is on activities that would help to create a market economy of middle class not just a few rich former bureaucrats.

Q: But how do you react to the way in which they were really begging for aid?

A: That's why I want to emphasise on self-sufficiency rather than assistance. There's no money up for Marshal Plans any more.

Q: After this seminar would the United States be thinking of returning to the UNESCO formally?

A: No, at this point of time I think although we still support their changes in terms of reforms — I think they have taken certain very positive steps — but at this point of time I am not close enough to the issues and situations to make any specific comments; besides I am speaking as an individual.

Q: One last question. Did you get any kind of feeling of Russian-Kazakh tensions here? What do you think of the potentiality of that kind of conflict taking shape in the coming few months?

A: I think it exists. But it is very difficult to say by how much it exists because there is always a tendency to exaggerate at times one, to draw attention to something so that it will not happen and the other, to exaggerate because they want to happen. It's a problem. Language in any country can be a problem. But I can't really say much on this.

Q: Now that the United States has come in a big way here, especially with the conclusion of the Chevron deal on oil exploration in Kazakhstan, do you think the conditions here would stabilise?

A: Well, Chevron is a company and not the United States. It only touches on one aspect and...

Q: Economic aspect.

A: A limited one at that even though it seems quite large and has been quite publicised. I would now go back to my earlier point that there needs to be an understanding and laws and regulations passed that would support middle class privatisation and middle class development in a model economy.

●

Anuar Alimzanov

President, Independent TV Company TAN, Alma Ata

Q: As far as I know you are the President of the Socialist Party. After the way things have changed here do you think it necessary to retain the name 'socialist'?

A: 'Socialism' comes from the idea of social justice. Social justice is the ever-present aspiration in all the Holy Books — Quran, Bible, etc. It (the word 'socialism') has a new meaning now.

Q: In your concluding speech you spoke about financial dependence on Russia. They are providing five billion roubles and taking away seven billion roubles. Is it connected with the rate of interest on aid from Russia?

A: We take credits from Russia and then when we return the amount we have to pay interest and that demands an additional amount. We cannot change this situation because economically we are too much connected with Russia. We must gradually reach independence. But so far economically we are so connected...

Q: You mentioned in your speech that you should not pay attention only to the West but also to the East, to Asia. In that case since our conditions are similar I think there is need for you to have more interaction with countries of Asia.

A: All the journalists go to the West and come and sing praises. But there is little interaction with countries of Asia. Can you imagine there is no Kazakh correspondent in such countries as India, China?

Q: You said that you want to have interaction with countries like India, China etc. But do you want to have direct interaction and not through Russia?

A: Yes, direct. We used to reach the nose in the round about way in the past. Now we are trying to reach it in the normal, direct way.

Q: Do you think the whole idea of free flow of information should also be a kind of balanced flow of information as was mentioned in the Mcbride Report which is now being totally rejected by the UNESCO. The idea of a new international information order — what do you have to say about that? Have you also rejected it?

A: The idea is good. But we have to gradually swallow it. It comes at a time when we cannot digest it immediately. Gradually we will come to the new international information order. Economically we are so much dependent...

Q: On whom?

A: We are so dependent on anybody and everybody — we don't have our own currency, there are so many economic problems. That's what I mean by dependence. ■

Does India have a Role in New World Order?

J.D. SETHI

Does India have a role in the new world order, whatever that order means? Not for another ten years. During this period her highest priority should be to protect herself against the threats from abroad and internal political disorder, sabotage of development, and economic crimes and crisis. Indeed India has to go back to the original Nehruvian position of 1946 of its limited external role from which he was pushed to a road to disaster of globalisation, first by Krishna Menon and then both by the Soviet lobbyists and American liberals. Overreaching in foreign policy increases the chances of war.

The debate about the world order is not being ordained by any new philosophic view, though there is a lot of questioning about the self-proclaimed rationality of the main actors which a former British diplomat, Philip Albot, has called "a form of madness". The full extent of the madness is not yet revealed but there is enough to go around spilling blood. The crux of the order is in the minds and the structure of ideas of those who will make the order for tomorrow.

The old world order, as Bruce Cummings has argued, consisted of two projects, the containment project and the hegemonic project. The American hegemony had already been eroded during the last phase of the Cold War. The Americans could not keep the Germans and the Japanese in check. Europeans will slowly edge out the US from Europe. Therefore, let us not accept the American claims of their hegemonic world and its other popular version – the unipolar world.

According to a section of the American establishment, the Gulf war and the collapse of the Soviet Union have marked the new beginning of *Pax Americana* in which the world will have to acquiesce in. Some of the LDCs, including India, accepted this view as gospel truth. The statement is a half lie because there are equally powerful actors and factors which will undermine this hegemony.

How amazing our analytical simplification is in defining and characterising the new world order! Experts are hammering into our ears that it is a unipolar world and the rest follows. After the US, war with Iraq and the collapse of the Soviet Union, the experts feel nothing else can override that reality. However, some Americans think quite the contrary to the *Pax Americana* idea. They are conscious of their military power and the need to use it in defence of the US interests. But they are equally aware of such limitations as the growing power of other actors, the assertion of international opinion, the new role of the UN, etc.

Professor Lester Thurow, in his new book, *The Coming Battle among Japan, Europe and America*, has suggested that the US will remain a military overlord without a matching economic superpower. He has reminded his countrymen that Rome remained a military power even after the barbarians sacked the capital; the military simply moved to Constantinople. China was a military power behind the Great Wall as the country fell apart. Great Britain after World War II desperately and unsuccessfully tried to maintain a large military force without adequate economic basis. Now the US is hanging there like a ripe apple.

The US is no longer on a strong economic wicket. She can always bounce back under a determined leadership and with some new economic organising principles, but for many years the situation can only marginally change. Even though the US productivity is higher than that of Japan, her saving rate which was already very low, that is, seven per cent has slipped to about five per cent. The interdependence between the US, the EEC and Japan has become so deeply structured that Washington cannot extricate itself from the crisis unless its savings rate goes up.

Although the basic structure still rests on nation-states, profound political changes are taking place to erode the concepts of a nation, a nation-state, sovereignty, etc. Four developments in the recent past have come to dominate the globe, no matter how many poles survive. These are: (1) multinationals, (2) international regimes, (3) trading regimes overtaking their growth counterparts and (4) international media power. Earlier their power and hegemony were subsumed in a different order of arrangement: the security based on deterrence, the economic and information orders. The old orders got ruptured with new disorders and produced the aforementioned regimes.

There will be many diverse power poles, economic, military, political, etc. As Joseph Nye once remarked: "The distribution of power in world politics has become like *the layer cake*". The top military layer is largely unipolar, for there is no other military powers comparable to the United States. The economic middle layer is threefold. The bottom layer consists of the transnational interdependence. It is interesting to note that in the layers of power the Third World countries do not appear anywhere. For quite some time India had no significant role in the world order.

But the environment has drastically changed for the Third World countries. First, many of the LDCs which were caught in the cold and were comforted on either side, have now been unshackled even though this unshackle is creating a lot of uncertainty. Not only India

Prof J.D. Sethi is a former Member of the Planning Commission.

but such countries as Angola, Mozambique, Ethiopia, have been obliged to choose new options. Second, the related economic and political power has removed a lot of ideological obfuscation. Nations will have to build themselves economically and militarily either by their own effort or in cooperation with others. Third, the human rights and ecology issues which most Third World countries treated in a very cavalier fashion have surfaced. Fourth, the UN has emerged for the first time as an active international force and can give notice to any potential aggressor, as it did in the case of Iraq.

The most critical and menacing aspect of the yet ambiguous new order is that those nations which are not members of the aforementioned fourfold regime will be out of the global order's decision-making. They will be treated as new ghettos. All the major ideas or concepts used in international politics have to be redefined. Sovereignty, security, international organisation, international law, deliverance, etc., all need to be situated in the new context. One thing is quite certain. Power and domestic order will remain the most important determining factor in a world of nation-states and power-based international regimes.

Power corrupts; power without justice and purpose corrupts even more. But powerlessness corrupts most. Michael Lerner has warned us that "When we fell powerless for any extended length of time, we tend to become more willing to accept parts of the world we would otherwise reject. We act in ways that go counter to our best visions of who we are and who we can and want to be."

The Third World was a loser then and is a loser now. The main reason is the subservience of their ruling elites to the advanced nations. The middle income group nations seem to have come out of the old trap. However, the triumph of democracy in the post-Cold War phase has exposed the Achilles heels of the Third World rulers. Whatever maybe the new order, there will be unrest, violence, terrorism within the increasingly marginalised Third World. Paradoxically, the new world order has become very dangerous for us too even when it is offering new opportunities. This is because our adversaries have also got at least as many opportunities as we have got. China is galloping towards becoming a big military, economic and political power.

The global strategic environment has been radically altered, since the collapse of the Soviet Union. Consequently, all our external safety networks have disappeared overnight. The old environment gave us some scope for diplomatic initiative, despite the fact that the MEA never succeeded in optimising the benefits because of its preoccupation of image-building of Nehru-Gandhi dynasty. The Nerhuvian romanticism, the realism of Indira Gandhi and then a dramatic shift towards the utter naivety of Rajiv Gandhi, V.P. Singh, etc. led India to face a succession of foreign policy deadends.

There is a new perception among big military powers that they can internationalise a local war. On which side will intervention take place depends on their preference. Pressure would be exerted on the contending parties before any conflagration takes place. India may face such a situation. Our redefined relations with Japan and the US should give us strength to avoid war and make intervention into India become unacceptable. We have to put Pakistan on guard. The way we are trying to improve relations with China or Pakistan is most counter-productive.

All this is not going to be easy. With the end of the Cold War and the removal of the threat of the military conflict, efforts are on to create a new ruling coalition. Until such a coalition is created, we would not know the real face of the new world order. All the evidence suggests that India is not going to be a member of that coalition unless she builds a wide network of relations with Japan, the US and Israel. India's option has become sharp but narrow. She is either to accept her marginalisation or become a strategic partner with the United States if the latter is willing to accept India's needs.

India's relations with the US have entered a new phase of cooperation and conflicts. We are still at the receiving end either way. The initiative is still with the US. The same is true in respect of our relations with other nations or international regimes. The habit of repeating old *mantras* has not gone because our safety, according to our rulers, lies in inertia. We seem to forget the first principle of physics that inertia is a situation in which our external force applies force of motion.

The US is likely to keep its military presence in East Asia as well as West Asia, the areas which are of importance to us as well. With the removal of bases and other facilities the US would not be able to create a link between her forces in the West Asia and East Asia without having facilities in between. That is why India has suddenly become relevant for the US. Washington will keep attacking India on the economic issues but on security issues the two countries will come nearer.

Therefore an important lesson we must learn is that the Indo-US economic relations cannot be a strong base for our new economic policies. Even quantitatively, relations are not and cannot be as large as our globalisers imagine. The US is facing a winner-take-all economic competition with the newly integrated Europe and Japan. Her trading partners or competitors are economic superpowers. However, the mutual interpretation, intensified over the last two decades between developed capitalist economies of Europe, US and Japan have brought about a remarkable shift from the international economic system to a global one. Even if the US wanted she cannot get out. But nor can we. We must clearly see the limits and possibilities of Indo-US relations.

If the prospects of Indo-US economic relations are incremental, the scope for the Indo-US military relations is enormous. The break-up of the Soviet Union, the elimination of many US bases in Asia, the restraint Japan has put on itself or is put on it by others, the emerging of China as both a massive military and economic power, ~~etc.~~ are filling the vacuum and menacing Asia. India is one large potential ally of the US and we equally need her desperately. If we are unable to optimise our strategic relations with the US to build a defensive-offensive power, the fault will be that of our foreign policy-makers.

Japan is in trouble with both the US and Europe. The drop in the stock market prices by fifty per cent, her part disinvesting abroad in old outlets, pressure of Japanese-bashing, etc. give us scope for new kinds of relations by which we can offer Japan the opportunities and facilities for investment which we may refuse to the US. We have to learn the Japanese way of doing things if we wish the Indo-Japan relations to be an economic bulwark against China. There is asymmetry. We must work for overriding strategic relations with the US and/or even more overriding economic relations with Japan. Can India become an area of agreement between Japan and the US in order to create a new balance of power?

The world has entered—at least for a decade—a phase of global capital shortage. The demand for eastern Europe, investment for raising the standard of living in the DCCs, the rise of capital-intensive technologies and the small but rising demand from the LDCs add up to a huge total. On the other hand, generation of new capital-intensive technologies and the threat of higher oil prices could permanently damage the LDCs. India is doubly vulnerable because of her increasing dependence on imported oil. The Gulf war which cost us two to three billion dolllars had nearly brought down the whole financial system. We are the losers anyway, in recession or high capital-generating technological growth. The US is unlikely to offer us large economic support but Japan can and will if we join her in building a new Asian balance of power.

The global order cannot do for us what we are supposed to do for ourselves, namely, maintain the internal order. The successive governments have played a dangerous game of instilling in the minds of the public that foreign intervention is the main source of India's trouble. In reality the ineptness and corruption, and elite alienation disrupted the social order. Our adversaries can intervene only when the situation is propitious. No major actor in the new world order can come to our rescue. To maintain order the government relies on the police force or panders to vocal groups and terrorists. The Indian armed forces have been called too many times to support the government and thus weakened security. India may have averted the risk of disintegration, but there is nothing in the new order which can protect us from the Sino-Pak military build-up. We don't know yet the quality and thrust of Indo-US or Indo-Israel military cooperation.

The most critical challenge that India faces is the possibility of the new world order propping up powers and forces which are hostile to India. At the same time, the same order provides new opportunities for building relations with countries like the US, Japan, Germany, etc. both for security and developmental objectives. China will pose a big threat to us in another 10 years time. The threat will become more complicated and serious if Sino-Pakistan collaboration become militarily entrenched. Therefore, the most serious option that we have to work out is, new Indo-US relations. Most Americans believe that the Sino-US relations will go into serious difficulties in the next few years. This would give us additional space to build up security relations with the US. The US is applying the carrot and stick technique to test India's mettle to adjust to the situation which has changed in every respect and not too favourably for India. The break-up of the Soviet Union has liberated us from the stranglehold of some aspects of our foreign policy but it has also removed a variety of safety networks which Moscow provided. Events have not yet jolted us from our "waking sleep".

It is not surprising that Washington is attempting to extract the highest price from India for upgrading Indo-US relations, believing that India is weak and vulnerable. What is surprising is that New Delhi is caught unprepared every time a new demand is made on it. New Delhi has never prepared the nation to get ready for a prolonged struggle. India is not weak; it is her ruling elite and classes who have acquired a giving away complex.

In the past, the Indo-US relations have been partly friendly and partly adversial. This was an uneasy situation which was exploited by others,—Moscow Islamabad, and even London. The situation has changed. However, if both countries do not strike a proper deal—and each knows the cost of the deal—we can relapse into old habits. The US is currently pursuing a wrong policy of carrot and stick. India may not have the right answer but she cannot be pushed too far.

In four areas the US is exerting pressures against India: (i) the IMF-World Bank loans, (ii) trade policies, (iii) the NPT and (iv) India's space programme. New areas will come up as we proceed further. There is a method in the American strategy which is left for us to unravel. Each area does not have the same priority and the bottom line. But the crux of all these problems is that if India can get through her economic, nuclear and space programmes, the US pressures, after initial aggressiveness and threats, will gradually ease and the two nations will be truly on road to friendship. The US needs Indian support in her fight against Islamic fundamentalism, for containment of China, and achieving regional stability as we need hers for the same reasons, notwithstanding other areas of conflict.

Unfortunately, instead of preparing a national framework of a new foreign policy, New Delhi is pursuing two contradictory courses: it is insisting on continuity while succumbing to pressures of change. Old shibboleths continue. Even economic liberalisation has no framework. It is the absolute adhocism in our policies which the US is fully exploiting. We have started joint military exercises with the US, but without developing a strategic consensus between the two countries. ■

Second Round of States' Reorganisation

ISSUES AND PROBLEMS

PRADEEP KUMAR

Even though the very issue of reorganisation of the States has always been controversial, the linguistic basis of such a reorganisation had become somewhat dormant for all practical purposes after the creation of Punjab and Haryana out of the bilingual Punjab in 1966. Most of the cases of reorganisations thereafter, were either on ethnic basis (as in Meghalaya) or were simple cases of elevation of the Union Territories to the level of States for example Himachal Pradesh, Mizoram, Goa, Arunachal Pradesh, etc. Sikkim, of course, was a case of an altogether new area acceding to India. Thus, in a way, no serious attempt was made to tinker with the boundaries of the States after 1966.

However, the demands for separate Statehoods have always been raised all these years. While some of these demands have had a partly, if not wholly, linguistic basis (for example, Braj Pradesh, Uttarakhand, etc.), others have primarily resulted from the regional imbalance. The cases of Vidarbha, Telengana, Bundelkhand, Chattisgarh, east Uttar Pradesh, etc. fall in this category. The issue of a separate Jharkhand State is unique in the sense that it is perhaps the oldest movement in India which has yet to fulfil the dream of a separate tribal-dominated State. The tribals of the north-east were luckier in this matter as they could get several miniscule the States carved out on ethnic basis, in relatively a less painful manner. The recent aggravation of the agitation for the Jharkhand State has opened the entire issue of States reorganisation once again. This is primarily on account of the relatively big size of the proposed tribal State which for many agitationists includes areas of Madhya Pradesh, West Bengal and Orissa, in addition to large areas (nearly 16 districts) of southern Bihar.

The serious dissensions within the Congress party on this issue speak a lot about the popularity of the movement. It is not merely the political compositions of the State and Central Governments that have led to this dissension in the Congress circles. It may be remembered here that it was nealry two decades ago that the then Prime Minister, Indira Gandhi, had created a Chhota-Nagpur Santhal Paragana Regional Congress Committee, to satisfy the aspirations of the Congress members of the region. This was reminiscent of the Congress doings in 1920 (Nagpur) when the party had resolved to form its Pradesh Congress Committees (PCCs) on linguistic basis without any regard to the political boundaries of the States which criss crossed the linguistic zones a great deal.

The current agitation in the tribal belt of southern Bihar has raised some of the issues which can briefly be catalogued here: the issue of a comprehensive reorganisation of States to fulfil the demands of several other sub-regions for separate Statehood; the long standing demand in some intellectual circles to break all the bigger States into smaller ones so as to create as many as 50 to 60 smaller States to make them administratively more viable; and finally, the perceived threat of linguistic and regional patriotism resulting from such a reorganisation which might ultimately pose a threat to the territorial integrity of the country.

We shall take up these issues one by one, beginning with a brief historical perspective.

II

A peep into the history of the creation of the linguistic States clearly reveals the niggardly and reluctant manner in which the Central Government has gone about it, despite the promise of a comprehensive linguistic reorganisation made at the Nagpur session of the Indian National Congress, in the year 1920. As is well known, the first linguistic State of Andhra Pradesh in the post-independence days (Orissa being the first in the pre-1947 period when the Bihar province was bifurcated in 1936), was carved out of the multilingual province of Madras in 1953, after violent agitations which claimed the life of men like Sriramulu. The Dar Commission and the JVP Committee (comprising Jawaharlal Nehru, Vallabhbhai Patel and Pattabi Sitaramayya), had rejected the linguistic basis unequivocally despite all populistic pressure. All kinds of sermonising was inflicted on the linguistic elite in the name of territorial integrity of the country that was perceived by the national leadership as having been threatened by the linguistic patriotism. The latter, in their opinion, was bound to get a fillip after the linguistic redistribution of the State boundaries. The case of Andhra was conceded only because the CPI-led movement in the northern coastal districts of Madras

The author is a Reader in the Department of Political Science, Panjab University, Chandigarh.

province had created a momentum that simply had become irresistible. Even here the Telugus had to wage a long struggle for the creation of the Visalandhra, which was conceded only in 1956 after the dismantling of the Hyderabad state. The States Reorganisation Commission, on whose recommendations the 1956-reorganisation was largely carried out, also acted in a half-hearted manner by keeping several linguistic States outside the purview, chief among them being Maharashtra, Gujarat and Punjab. These were created in the next 10 years or so, but only after the Congress lost heavily in terms of the popular support in these years.

If one seriously examines the issue of linguistic patriotism-regionalism, it becomes apparent that this apprehension was largely based on the presumption that any mass scale upsurge was bound to create trouble for the Indian state. The attempt in 1920s to induct linguism in the Indian politics, was aimed precisely at massifying, and consequently, radicalising the politics which had hitherto remained confined to the elite circles despite the efforts of making it all-comprehensible. It is different that the same strategy was found quite dangerous and inconvenient in the post-independence days for obvious reasons. While linguism or linguistic regionalism was seen in the twenties and the thirties as a device to involve more and more people into the national movement, it suddenly became a "hindrance to the national unity" in the fifties and the sixties. However, one may be reminded here of several other idioms, apart from language, that were used in the twenties and the thirties for large scale mobilisation. These included, among others, religion, such as the Khilafat movement, for ensuring Hindu-Muslim unity. While most other forms of mobilisation could not fit into the "secular" framework of the Indian polity, language fitted rather well as it often appealed on more modern and rational bases.

The niggardly manner in which the Centre gave in to this demand in the post-independence decades, naturally left many a case of half-hearted reorganisation. While no amount of efforts perhaps can really ensure full scale linguistically homogeneous States, the issue could, perhaps, have been taken up more dispassionately and liberally, without giving the impression that each time a State was created, it amounted to the Centre giving in to fissiparous tendencies, which somehow had grown with linguistic patriotism. This impression often put the entire issue of linguistic States in a rather misplaced perspective.

Here it may be important to remember that language alone has not led to fragmentation of bigger States into smaller ones. For example, a very large number of miniscule States that dot the north-eastern region of India today were created largely on ethnic basis. Similarly the States of UP, Bihar and Madhya Pradesh do not owe their existing boundaries to language. It is more an outcome of historical factors, than any linguistic principle that these States continue to have overlap areas with their neighbours, in terms of the dialects spoken in the border districts. They have been kept outside the pale of reorganisation in the name of abstract nationalism which has somehow been equated with the status quo.

III

More often than not, similies like "opening a pandora's box", "hornet's nest", etc. are used to thwart any demand for further reorganisation of States. While it is true that bifurcation or trifurcation of existing States is bound to generate and strengthen such feelings elsewhere in the country, what is not easily intelligible is the fear that it generates in the minds of not only the politicians but also some rather well-meaning intellectuals. If only to allay such fears, it is important to look at history. With the benefit of hindsight now, it can easily be discerned that linguistic regionalism has not threatened the territorial integrity of the republic. Considering the Mauryan, the Gupta and the Mughal empires as powerful on account of centralisation, and then equating centralisation with national power, is perhaps a preposterous exercise. The empires of yesteryears which flourished in feudal and semi-feudal environments cannot be relevant beyond a point. The strength and power in those days flowed not from the masses but directly from the arsenals of the ruling class. It may sound rhetorical to say that in present days the people are the source of a nation's strength, nevertheless, the democratic system, even if it is largely a "facade", makes it incumbent upon the leadership to satisfy the peoples' aspirations in political matters.

While issues of economic backwardness and social discrimination can be postponed by pleading "resource crunch" and "operational difficulties", the pure political decisions which need no large scale investment, cannot be delayed beyond a point by any party aspiring to contest elections. In such circumstances, resistance to popular pressure for Statehood, etc. may at times become counter-productive. The case of Punjab is quite obvious, where a delayed organisation in 1966 gave a handle to the Akalis that the Centre was discriminating against the Punjabis or the Sikhs, to be more precise. In no State of India can the fissiparous tendencies be ascribed to its linguistic homogeneity. In fact it is the lack of it that has led to identity crisis in Assam (vis-a-vis Bengalis), Punjab (vis-a-vis the Hindi-speaking areas in pre-sixtysix days), and Maharashtra (vis-a-vis South Indians in Bombay in the sixties). Most secessionist movements in the last decade have been either based on religion (J and K/Punjab) or ethnicity (north-eastern India). On the contrary, greater powers to the province of Quebec in Canada in the last few years have rather blunted the edge of separatism among the French-speaking Canadians there. So has the creation of smaller States in the north-east of India.

IV

It may not be out of place here to bring in an important international event, namely the disintegration of the Soviet Union into fifteen independent sovereign States. When it took place last year, a lot of hue and cry was made to make comparisons with the Indian state of affairs. In some intellectual circles it was being argued that the break up of the USSR would give a fillip to such tendencies in India. While some inspiration may always be drawn by the fissiparous tendencies from all that is going on all around the world, the Indian case has simply been incomparable with that of the USSR, where the Czarist empire had extended itself to forcibly include several areas into the Russian territory. The Yalta Conference and the role of the Red Guards in engulfing the States into the Union, is all too well known to need repetition here.

It seems that the total neglect of the democratic aspirations of the people in terms of their linguistic and regional identities, perhaps boosted the cases of secession, even though economic scarcities and Gorbachev's political philosophy played a major role in the onset of the disintegration process. Is it merely accidental that in no State of India (except perhaps in the Kashmir region of Jammu and Kashmir) the people in general have supported secession? In fact there is a very serious concern in all parts of the country against the threat of secession in J and K and Punjab. It is this concern of the Indian masses at the national level that has often been exploited by some Central leaders to fish in the troubled waters of these States for strengthening their own numerical support from other States. This is what the Congress party did in the mid-eighties. And when we say the Indian masses, we don't merely talk about the "dominant-Hindi-heartland", which has been equated with centripetalism, but also the States which have resented the Centre in most of the Centre-State bargains, and on the linguistic issues.

Similarly, those who are fascinated by the geometrical boundaries of the States in the USA, and tend to equate this with the superpower status of the country, commit the grave folly of comparing a diverse and federal society of India with a society that has a bare 500-year existence, and has been "bulldozed" by the neck-break speed of rapid and massive industrialisation in the last 200 years or so. Will it be logical to compare this "melting pot" society with the "multilayer-cake" society of ours, where each layer is distinctly clear and identifiable? Fortunately, the language has been the only major factor that really imparts a feudal character to our plural society, as it alone makes territorial organisation of diversity feasible. The caste and religion largely remain overlapped. We have used the word "fortunately" because language, despite its negative dimension of linguistic chauvinism, is the least dangerous and the least "closed" of all such other identities, as caste and race, etc.

V

The question that is being raised once again these days is that of not merely tinkering with a few political boundaries of the States, but of a comprehensive reorganisation. Now that the States were already created on linguistic basis, why do we need this reorganisation? The answer is simple: to take the logic of reorganisation of the States further.

Originally the language became a factor not only to make the State boundaries more rational but also to avoid "suppression" of one linguistic group by the other. The demand of the Oriyas for separation from Bihar and Bengal, and that of the Telugus for separation from Madras was precisely raised on these issues. The economic and cultural dominance of the Bengalis and the Tamilians in the two regions respectively, was perhaps the real basis of separatist demands that were apparently linked with the issue of regional States did not make much sense. It was the language that became a symbol of, and a forum to give expression to, the regional aspirations.

In the contemporary circumstances with the extension of democracy to several sections of the society (it being not a mere rhetoric), these aspirations have not remained confined to the linguistic elite, and have gone further to include the masses living in the lesser developed parts of these linguistic States. In most cases these pockets of underdevelopment did not have the literary forms of their dialects and the latter were, therefore, simply included in the dominant language to inflate the population of the State languages. Their own elite being relatively backward, in terms of socio-economic wellbeing and levels of political consciousness, did not have much choice except to become subservient to the dominant linguistic elite. In fact over the years, these relatively more underdeveloped regions have only experienced what one may call the "development of underdevelopment", and consequently have emerged as the classical cases of internal colonialism or Uttaranchal (Garhwal and Kumaon regions of UP), Jharkhand or Vananchal (in Bihar and some parts of Madhya Pradesh, West Bengal and Orissa), Vidarbha and Marathwada (in Maharashtra), Chhattisgarh (in Madhya Pradesh), Telengana (in Andhra Pradesh) and Konkan (the coastal areas between Bombay and Goa), are some such demands. In most of these cases the demands are not actually for linguistic reorganisation but the basis is clearly economic. The latter in fact was always there even in the original linguistic regionalism where unilingual distribution of resources in multi-lingual States was resented by the different linguistic groups. At present, quite a large number of these sub-regions within the States have a sizeable population and area to make them administratively and politically viable.

It is not merely the States like UP and Bihar which need a reorganisation (they had bypassed linguistic reorganisation) but also some of the so-called linguistic States like Andhra Pradesh and Maharashtra, etc. which had themselves fought vigorously for linguistic States. In the Hindi-speaking States of Madhya Pradesh, Uttar Pradesh and Bihar, the second reorganisation can really take care of the intra-regional imbalances in addition to providing separate States to several fullfledged dialects, which for many practical purposes are almost languages and have rich and developed literacy forms. Thus Bundelkhand, Rohail Khand, Braj, Oudh, Bhojpur, Malwa, Mahakoshal, Ghhattisgarh, etc. can be viable States. Their creation will naturally pave the way for the development of these dialects, some of which had formerly enjoyed the status

An Old Ghost's Grouse

Bidyut Sarkar's occasional column "Corrections and Clarifications" in *The Times of India* is something I read with respect and profit. He is one of those few who care for common-sense and civility in the prose used by our English newspapers.

Recently he pointed out the confusion created by arbitrary abbreviations in headlines. The abbreviations are resorted to for lack of space, but confusion occurs because the sub-editors have been too lazy. The example he gave was: "Delhi to host nat cycling". "Nat" had been used as a shortened form of "national". But that abbreviation is unknown.

Ironically, the very next day after Sarkar's column appeared, his own paper had the following headline:

"Joshi flays govt's eco policies".

There is always a Joshi in national politics. In the very old days we had N.M. Joshi, the pioneer labour leader. Then there was P.C. Joshi, the Communist. A little later Joshi stood for S.M. Joshi, the socialist. Later on Joshi meant Harideo Joshi. Now it is the turn of the BJP President, Murli Manohar Joshi. So the use of Joshi without the initials is permissible.

But what are "eco policies"?

The first sentence of the report told us that Murli Manohar Joshi attacked the Congress government's economic policies.

The trouble is that these days "eco" is commonly used as an abbreviation of "ecological" — for example, "ecosystem", "ecosphere", "eco-climate". This short form has also the sanction of *Concise Oxford*, which describes it as a prefix suggesting ecology.

If the sub-editor had spent a minute more on the headline he could have written:

"Joshi flays economic policies".

The word "policy" implies that it is governmental, especially when it is being "flayed".

Now to the word "flay" — a favourite with newspapermen, the word means "strip off the skin or hide of". But when a metaphor is used too often, it loses its force. Journalese is indeed a heap of dead skins.

H.Y.S.

of languages. Far from strengthening any fissiparous tendencies by way of setting a chain reaction in other States as feared by some, these large scale reorganisations will actually lead to 50 or 60 smaller States. Such a large number of States will, in fact, act as an insurance against any one State dominating the others. It will also ensure that no State harbours the illusion of an autonomous existence. More interdependence and greater interaction as a result of the smaller size of these States will obviously make them think more and more in terms of cross linguistic interaction. One reason for Quebec's separatist threats in Canada has been its size that accounts for a very large percentage of the French Canadians.

VI

However, any talk of further reorganisation of the States should not make us believe that reorganisation in itself is a panacea for all regional pulls. Issues of identity and domination of one "ethnic" group by the other are bound to remain there even if several rounds of reorganisations were to be carried out. For example, even in a tiny State like Meghalaya, there can be (and, in fact, there is) conflict between the Garos, the Khasis and the Jayantias; in another small State of Mizoram, the Mizos maybe accused of dominating over the Chakmas; in Sikkim the Nepalis may be pitted vis-a-vis the Bhotias, the Lepchas, etc.; within the proposed Jharkhand State, several tribes may come under the political domination of rather more numerous Mundas, Santhals, Orans, etc. All this however, should not lead us to abandon the idea of creation of new States. It is true that there is seemingly no end to an individual's craving for separate identity. But we should not forget that the line has to be drawn somewhere, certainly short of the anarchical view of an autonomous individual standing alone without any group identity. It must be kept in mind that there should be nothing sacrosanct even about this line, which should naturally be subject to further changes in future course of time. It is entirely possible that the craving for separation into smaller and still smaller groups, may ironically one day result in a reverse trend towards merger. After all, all demands for linguistic States were not for smaller States, and at least Andhra Pradesh and Maharashtra had demanded much larger areas than they already had in their parent States; so was the case with Mysore which was enlarged by merging the Kannada-speaking areas into the larger princely state. The current trend in the European Community is one such phenomenon in the world politics where centuries of hatred and separatism have resulted in a reverse trend towards a more united Europe. No solution is ever made to bind the future societies for all times to come, and even if a step remains valid for 20-30 years, it should be welcome in the fast changing world of today where even international boundaries of the sovereign states have not remained sacrosanct. ■

Restructuring the Constitution

ARSHI KHAN

On August 15, 1947, India entered into a free political environment which provided ample opportunity to our leaders and freedom fighters to reconstruct, reform and transform our country into a popular, participatory, parliamentary democracy. The Constituent Assembly of India became the main platform of debates and discussions in order to engineer a secular representative polity. Leading political figures, jurists, academicians, intellectuals and others from cross-sections of our society took part in the Constituent Assembly debates.

The reasons, such as the creation of Pakistan on the basis of religion and community, invasion of Kashmir by Pakistan-aided army and volunteers, frequent communal riots in most part of our country, non-nationalisation or a separatist attitude of Hyderabad and Junagarh and the over-all vulnerability of our country to divisive forces made a remarkable shift from a true federal polity to a centralised federation. They invented a new role of the Union government in a federal set-up. They deliberately decided to give maximum power, privileges, sovereignty and full decisive authority to the Centre, while the States were provided with separate legislative and executive organs and limited autonomy, that too on the mercy of the Centre. As a basic principle of federalism, the Constitution did create a dual polity with division of powers but the supremacy of the Centre over the States was not avoided. Basically, the federal character and identity of States depend upon the political temper of the Centre.

The structural arrangment of our Constitution itself is responsible for damaging the very fabric of our federal polity and society. Some non-federal tendencies such as the role of the Finance Commission, constitutitional devices for the Governor, possession of the residuary powers by the Centre, development of extra-constitutional bodies such as the Planning Commission, provisions for the President's rule and Emergency powers retained by the Centre—to alter, create or dissolve the boundary or name of the State or States, Centre's interference into the legislative, executive and financial fields of the States, etc. have-been detrimental to the federal-political edifice of our country.

There is much similarity between the Act of 1935 and the Constitution of India. Around 75 per cent of the 1935 Act was xeroxed in our Constitution. The 1935 Act envisaged a powerful Centre on the one hand and devolution of powers to the provinces on the other. In brief, it created a decentralised polity without granting autonomy to the provinces. Britain and France are well known to have a wide network of devolutionary political system but they are not federal polities. In our country all efforts were made to talk and extend decentralisation in our polity without optimum autonomy. Since 1861, we have, most of the time, experienced decentralisation. A federal polity is the ultimate result of two phenomena, that is, autonomy and decentralisation at the State, regional or provincial levels.

The author is a Research Fellow in the Indian Institute of Federal Studies, New Delhi.

During the debates in the Constituent Assembly (1948), Loknath Mishra of Orissa said that the Constitution was "laying the foundation more for a formidable unitary Constitution than a federal one" (Constituent Assembly Debates, Vol. VI, p. 241). H.V. Pataskar of Bombay criticised the idea of a strong Centre which the members of the Constituent Assembly had developed at the second reading stage of Constitution-making. For the strength of the Centre, they favoured the idea of maintaining the strength of the units. "The power of the Centre must flow from the States which in the first place must be made strong and powerful (CAD, Vol. XI, pp. 970-74). Some scholars have described our Constitution, as federal and quasi-federal.

It is also said that the Constituent Assembly of India was not a representative body due to the absence of adult franchise. The Congress dominated the Assembly and debates. Jawaharlal Nehru, Dr B.R. Ambedkar, Sardar Patel and Dr Rajendra Prasad had silenced dissent within, as well as outside. Dr Ambedkar emerged as the chief architect of the Constitution. He was an extremely wise, logical and impressive personality. He liked a strong and united Centre, much stronger than the Centre created under the 1935 Act. He praised the existence of a strong Centre engineered by the British empire in India. In a way he extended legitimacy to the British legacy of a centralised administration. Dr Ahir says in his book, *Dr Ambedkar and Indian Constitution*: "Though a good number of the amendments moved by the members were accepted by the Constituent Assembly but no amendment was accepted by the House unless it was acceptable to Dr Ambedkar."

As many as 7635 amendments were tabled and 2447 were actually moved in the House. Some members hailed him as the modern Manu. His efforts were strongly supported and supplemented by all "Centralists", particularly Nehru, Dr Rajendra Prasad and Sardar Patel. Provincialists who always demanded autonomy for provinces and a full federal apparatus for our polity, were defeated and silenced by the, "Centralist" Congress elites.

Moreover, the Congress elites ignored the political and social ideas of Mahatma Gandhi. He had a distinct vision of India in which all citizens were supposed to enjoy the fruits of freedom. He was the person whose ideas reached out to the Indian masses. But his ideas were partially included in the Directive Principles of State Policy which is non-justiciable. However, he could not emerge as a "messiah" in the Constituent Assembly dominated by the urban Western-educated Congress elites.

The partition of *Bharatvarsha* authenticated the demands of the Centralists to proceed for a dual polity marked by a strong Centre and weak States. In order to provide a national stamp of approval, the framers of the Constitution emphasised national security and later economic development. Nevertheless they considered the Constitution as an instrument of social engineering and nation-building.

It would be perhaps untrue to call India as a land of different nationalities. But India is certainly a country of different regions which mirrors diversity. However, the concept and awareness of Pan-Indianism is inherent in the psyche of every Indian, which guarantees stability and unity in diversity. A single all-India market has also been a catalyst in cementing the very base of national unity.

Intra-regional and inter-regional disparities have already surfaced. Regionalism and regional agitations have unveiled their faces due to the failure of the Constitution and the Central government to recognise and satisfy regional aspirations. The sixty-year old Jharkhand issue is still unresolved. In the meanwhile, various regions have asserted themselves to get Statehood– Bhojpur, Mithila, Koshal, Telangana, Vidarbha, Bodoland, Chhattisgarh, Gorkhaland, Uttranchal, Bundelkhand, Ladakh, etc. Some of the regional agitations have turned into secessionism and separatism. Centre-State relations have worsened during the period of four decades.

Centralisation of power is becoming the general trend in our polity. Growth of various communal and anti-national elements and groups have become a serious threat to our social fabric. The Constitution has no concrete mechanism to avoid and preclude the proliferation of communal elements in politics. Money and muscle power have now become the stamp of approval in all elections. Besides, there are many other issues such as human rights, communl riots and caste violence, political parties, etc. on which our Constitution is silent.

Now the time has changed. Our Constitution was a response to a particular situation. There is now a big difference between 1950 and 1992. Restructuring of the Constitution is intended to cultivate an in-built capacity and mechanism to face the present crisis, but it certainly needs to be free from those provisions which smell of the legacy of the British paramountcy and centralisation of power.

Major changes are required in the Constitution to envisage a federal, participatory polity in which States should not remain weak and fully dependent upon the Centre. The new Constitution is supposed to accommodate the demands for strong States, smaller States, regional development councils, harmonious Centre-State relations, political parties, human rights and secular polity. The Election Commission has been so far, partially successful in conducting free and violence-free elections. New constitutional provisions are required to guarantee free and democratic elections. Communalisation of politics need to be checked and thwarted. It has become an easy job for political parties to violate the Constitution. Religiosity in politics is an ominous trend. It must be rooted out. Religious fundamentalism, be it of majority or minority, may push a country like India into turmoil.

Since the explosion of the "Ayodhya bomb", emotions and sentiments of the majority have been manipulated by some political parties and groups to express hatred against secularism, tolerance, Indo-Islamic culture and democracy. Press and electronic media have been misused to pursue a narrow and chauvinistic goal. In the name of liberty and freedom, anti-human and anti-minority rhetorics have been propagated publicly. Riots after riots were engineered to cripple a particular section of society. Means of education, particularly history and oral instructions, are now undergoing a drastic change from a modern-liberal way to a Hindu-chauvinistic thought. Myths are replacing historical facts.

It is here that we need to realise a blow to our composite culture and secular polity. The Constitution needs to be more viable to establish a responsible government and vigilant society. At present we need to have a fresh look at the Constitution to transfer India into a harmonious and federal nation. There is nothing wrong in making a new Constituent Assembly to decide the present and the future of India. All these changes will not be destructive but constructive so far as our national unity is concerned. The doctrine of consent, concession and participation can only be a panacea to the problems facing the Indian sub-continent. Our ultimate objectives are peace, democracy and development which we must ensure.

Nehruji once said that "a Constitution to be living must be growing, must be adaptable, must be changeable." ■

Need for Development Vision

AVIJIT PATHAK

Intellectuals, political activists, social scientists—everyone, it seems, is fond of writing on development. Because development has always been endowed with a meaning—a meaning attached to technology and environment, science and religion, economy and polity. That's why, development as a theme has always invited a spectrum of viewpoints. Marxists, Gandhians, spiritualists, environmentalists, feminists, technologists—all participate in the ongoing debate on development and, as a result, each new book on development arouses one's interest; one is eager to know how the world is redefining its priorities, looking at its brutalities and pathologies.

Yet, when one begins to read Ghorpade's book, one finds it utterly disappointing. The book is without its intensity, without a sharp focus. The book raises no deeper questions related to the sociology of modernisation and development. Ghorpade may, however, argue that he has written about planning and employment, agriculture and rural development and about Centre-State relationships. So what more can one expect?

M.Y. Ghorpade, *Development Ethos and Experience*, A Southern Economist Publication, Bangalore, 1991, pp. 281 price Rs. 150/.

While appreciating Ghorpade's concerns it should, however, be mentioned that a book, in order to assert itself as a good book, should contain not just fragments of information, political relationships, journalistic generalisations and a package of moral messages ("a partyless democracy at the panchayat raj"/"matriculates and graduates ploughing the land with knowledge and dignity"/"politicians must agree to observe a common political code and eschew association with communal elements"): A good book should stimulate one to think, go deeper and raise fundamental questions. It is precisely for these reasons that Ghorpade's book fails to sustain one's interest; none would like to read it twice.

This, however, does not mean that Ghorpade is incapable of surprising us, providing us with new insights. Ghorpade— an economist with a profound experience at the grass-roots level— one hopes, will subsequently come forward with a new book: more thoughtful, analytical and stimulating. With this hope this reviewer intends to provoke the author, make him confront his unbearable contradictions. It is better to focus on his ideology and worldview. Because, that would ultimately reveal his mind, the way he looks at all the empirical details related to budgets, employment, panchayatraj, rural energy and reservations.

As one reads the book, one finds Ghorpade expressing his happiness with everyone: Gandhi, Nehru, Indira and Rajiv. All of them, he would argue, help him to evolve his vision of development. And this is really surprising. Is it a serious thoughtful endeavour? Or is it a public-relations exercise? Because it is difficult to believe how one committed to the Gandhian vision of development can be so easily impressed by Indira and Rajiv. With Indira Gandhi's ruthless, aggressive politics (and everything is 'justified in the name of 'development' and 'national' integration') modern India witnessed some of her traumatic moments. Ghorpade remains silent about it. Where is his Gandhian *satyagraha*, Gandhian dissent?

Likewise, if one really takes Mahatma Gandhi seriously, is it possible to give one's consent to Rajiv's twentyfirst century fantasy: a development package designed to seduce the aggressive, hedonistic middle class? No such questions are raised. Instead, there are only pleasantries: "Power did not adorn Indira Gandhi; she adorned power "/ "Rajiv Gadhi's hands must be strengthened and the Congress organisation, which has made history for a hundred years, should be revitalised and made to fully reflect the positive aspirations and values of modern India".

And finally about Nehru. Ghorpade likes Nehru, That is his privilege. But never does he look at contemporary India critically; never does he see how the Nehruvian vision is collapsing. He does not examine the discontents of the modernising mission implicit in the Nehruvian vision of development, the danger of its homogenising...hegemonising impulses, its insensitivity to local cultures and traditions. Modernity too can be oppressive. Perhaps it has never occurred to Ghorpade's mind. And it is this absence of spirit that explains why he fails to see the limits of the Nehruvian 'scientific temper' in a plural tradition like ours.

In other words, Ghorpade's book takes us nowhere. Read the book and say everyone is fine: Rammohan, Vivekananda, Aurobindo, Gandhi, Nehru, Indira, Rajiv and Ghorpade! No dialectics anywhere. No critical spirit.

That is not the way, Ghorpade. Write another book, enlighten us, tell us what ought to be told. ■

COMMUNICATION You have betrayed our trust....

AN OPEN LETTER TO DR MANMOHAN SINGH

Dear Mr Singh,

A little more than a year ago, you shot into limelight when Prime Minister Narasimha Rao picked you from a bunch of hopefuls and made you the Finance Minister of this country. It was a prestigious post but there wasn't exactly a stampede for it. It was considered a hot seat, with the country poised for an economic catastrophe.

The choice was widely appreciated. You came loaded with tremendous and invaluable experience in economic affairs. Gained not in the course of running a Ministry as a politician-or worse, overlooking a department as the all-knowing IAS official. You were the Governor of the Reserve Bank of India. You were an economist in head and heart. In addition to your academic qualifications and experience, you had the reputation of being a non-controversial and upright official. You were not known to call a spade a hammer. And you had interacted closely with most of the government and Opposition leaders in the past.

I must admit that you started off in a most impressive manner. Like me, there must have been millions of other Indians who applauded your every move and statement in those early months. I rubbed my hands in glee at the discomfiture of the Congress when you matter-of-factly announced that it was not possible to honour the election manifesto promise to roll back prices in 100 days time. Finally, I said to myself, here's a Finance Minister who talked what made economic sense rather than populist sense.

My admiration for you grew on noticing the way you went about setting right the economy. You ignored the jibes of your partymen and those of the Opposition as you appealed to the IMF for financial assistance; as you went about wooing the NRIs scattered all over the world, to invest in India. I understood the humiliation of performing such a task, but it was necessary for the sake of the nation and you did it.

On the other hand, you went about dismantling the various obstacles to the growth of Indian industry. The licence-quota-permit raj was partially dismantled, a number of industries were decontrolled. You took some unpopular and harsh decisions in the interest of the Indian economy. Brakes were applied on bank credits, thereby causing hardships to the small businessman. The automobile industry was badly hit because the banks cut off finance to purchase vehicles. I took a philosophical view of the thing. I felt that having pampered ourselves for long, it was time to face the hardships to ensure a better future.

So, I did not vehemently object to the soaring prices and deepening recession. I consoled myself by dreaming of the good things in store for us, although I felt the pinch of the present as sharply as did the others who howled in protest and resentment. I, Dr Singh, still had faith in your healing powers. More than that, I had faith in you as I perceived you an honest politician, a rare species nowadays.

Sad as I am to acknowledge it, but the fact is that you flattered to deceive. The exposure of the multi-million scam also exposed your unknown persona. I do not know whether the new identity was in-built in you or that you developed it in the year-long innings as a politician, surrounded as you were by some of the world's most consummate politicians. Maybe a streak of the former was in you that flared up when catalysed by your environment.

Even several days after the scam became public, you maintained a stoic silence. How could you! I was surprised. That a man of integrity should not utter a word to condemn what is now regarded as the biggest financial scandal the nation has faced, baffled me. Still, I thought, maybe you were waiting for details, and doubtless, you would come down heavily on those involved or responsible in due course of time.

In due course of time, however, your utterances and behaviour turned more mysterious. Such an attitude behoved more a third-rate politician, not you. You jumped in support of the RBI Governor like he was your relative caught with his pants down. That gentleman should have quit on moral grounds the day the large-scale manifestations of the scam were known. As a former RBI chief yourself, you would have known that the scandal could not have taken place but for the laxity of the RBI.

Please tell me, if a bank chairman can be given the marching order, why should the RBI Governor be spared? If a ministerial rank holder and management-genius can be arrested, why could not the Governor be similarly treated?

You chose to punish some insignificant officials of the RBI and have (so far) allowed the RBI chief to complete his tenure. May I ask you—what is it about Venkitaraman that compels you to support him so recklessly and so blindly?

Of course, no replies can be expected. What do you have to say? Your metamorphosis from an honest economist to a lowly politician was complete when you backed two of your colleagues who had attempted to surreptitiously influence a section of the JPC to investigate the scam. Incidentally, the JPC has declared that the RBI had knowledge of the scam a year ago. So what was your blue-eyed Governor doing all this time?

You have lost my trust, Finance Minister. And the trust of millions of Indians like me. You have betrayed us. Perhaps you can salvage your prestige even now, if you go—something you should have done weeks ago.

Will you oblige?

Vasco-da-gama,
Goa

Yours distraught,
Rajesh Singh

Give Rajya Sabha a New Avatar

R. L. M. PATIL

The founding fathers of our Constitution did hardly have mental ease or opportune time to prepare a thorough-bred basic document to govern the country. The division of the country physically and psychologically, its ghastly consequences, the war over Kashmir, the princes' recalcitrance, fears of administrative breakdown were but a few of the facts of the grim situation under which they worked to produce a Constitution. Not surprisingly, therefore, the Constitution of India suffers from a number of structural imbalances and conceptual ambiguities.

If the defects noticed in the constitutional architecture of India are not set right in time, the whole edifice may crumble down. Also, it should be borne in mind that a shoddy or extensive approach to the repair work might also hasten the collapse of the system. Under such a circumstance it should be prudent to locate one or two nodal parts of the system and replace them immediately.

In this context the Rajya Sabha comes to prominence. "One of the most vexing questions of political science is the problem of second chambers." wrote Sir S.N. Rau in his *Constitutional Precedents* which was used as a basic material by the makers of our Constitution. But Rau's poser was mere rhetorical. The second chamber in India's constitutional history has never been meaningful. Started first under the Government of India Act 1919, it has remained more or less unchanged uptil now. It did not assume the intended federal character under the Government of India Act 1935 since the federal aspect of the Constitution never came into being.

Under the new dispensation when the present Constitution was drafted, the second chamber was given more respectability and power, but at the same time, its character as a companion of the popular House in a unitary system of government remained unaltered. In fact not much attention was bestowed by the Constitution-makers while preparing draft provisions dealing with the second chamber or the Council of States. The discussions on the subject in the Constituent Assembly too were sketchy and scanty. Only on two brief occasions did they refer to it, and that too in July and August 1947 when the partition of the country had seized the minds of the leaders and the public. "In both the cases the debate centred on the role of the second chambers in modern *democracies*; the place of an upper house in federal legislatures was discussed only once, and then cursorily," (Granville Austin). By far the strongest justification of continuance of an upper house in the new regime came from N. Gopalaswami Ayyangar a leading light of the Constitution Drafting Committee: "the need for a second chamber has been felt practically all over the world wherever there are federations of any importance," he said, and yet he did not adduce any reason to justify the retention of the Council of States of any *federal* grounds.

A suggestion had crossed the mind of Sir B.N. Rau that, there could be provided, in the Council of States an equal representation to the constituent units of the new India. But it was dropped like a hot potato when it became obvious that the new Council of States would then be dominated by the representatives of the princely states. While the Congressmen would by all their expertise continue to dominate the House of the People (Lok Sabha), hardly any body in the Constituent Assembly wished that the other house should become a forum for others. Hence the Council of States was fashioned to facilitate dignified and cool but non-decisive debates befitting the upper chamber of a unitary state.

In its work over the past four decades the Rajya Sabha has hardly given indications of its being anything other than what it was intended to be by the Constitution-makers. Perhaps on a few occasions its performance has been below expectations, as for example, when its members voted for Indira Gandhi's imposition of internal emergency in 1975, or approved the infamous Constitutional Amendments (39 and 42), or brought tears to the the Chairman Dr Shankar Dayal Sharma through their disorderly behaviour sometimes ago.

It may be worthwhile now to take a second look at the nature and justification of the Rajya Sabha. By its name and position it is ideally suited to be the protector of the States. If only its composition and power as presently enumerated in the Constitution could be amended, the Rajya Sabha might truly emerge as the balancer of then federal system and the saviour of the Constitution.

Most of the ills of our present constitutional system can be traced to the extraordinary powers given to or exercised by the Central government over the States. Appointment/control of the Governors of States, and imposition of Central rule over the States through Governors are but two of the examples of Centre's vise-like grip over the powers and status of the States.

Secondly, the source of structure and conceptual weakness of our Constitution can be traced to the superimposition of the United States' notions of federalism

Dr Patil teaches in the Department of Politics, Bangalore University.

and judicial review over the British Westminster model of parliamentary government. In the British system the Parliament is supreme whose leader, the Prime Minister, advises the Head of the state. There is no Supreme Court in Britain to pronounce acts of the Parliament *ultra-vires*, nor is there any government at the provincial or State level to share legislative or executive power with the Parliament or the Prime Minister. But in India, we have got a Constitution whose chemistry is not sound; uncompoundable elements have been soldered rather loosely, and pained off with deceptively attractive colours.

The potential and current practice of undesirable Central intervention in State affairs can be stopped with the bestowal of powers of supervision on the Rajya Sabha over the Central government in so far as the State administration is concerned. Presently the President of India who is the Head of the state is guided by the advice of the Prime Minister who is the head only of the Central government of India. This constitutional relationship between the two should continue without a change—but should be confined only to the affairs of the Central government. On matters of States administration the President need not any more be guided by the advice of the central government leader, the Prime Minister. The role of advising the President on affairs of the States could as well be entrusted to the Rajya Sabha which should be a compact body representing the interests of the constituent State units of the federation of India. For this purpose one might consider the redesignation of the Governors as Vice-Presidents of India elected by the respective States and made members of the Rajya Sabha. The Constitution should also be amended so as to make it mandatory for the President or the Union Council of Ministers to receive endorsement of the Rajya Sabha in matters affecting the status, rights and powers of the States, as for example, the appointment of Governors, (if he is not to be elected), the imposition of Central rule or the dismissal of Chief Ministers or mid-term polls to the State Assemblies, assent to State bills reserved for the Presidential consideration, constitutional amendments, and appointment of high federal officers like the Judges of the Supreme Court, members of the UPSC, UGC, Election Commission etc.

If re-cast, the Rajya Sabha could come to discharge the much-needed role of a constitutional arbiter between the Centre and the States as we all as obviate the hazardous exercise of overhauling the Constitution. It might as well be a viable Inter-State and Centre-State Council. In short, the Rajya Sabha in a new avatar-say, in the form of Rajyapal Sabha—would be the master control-switch to correct the imbalances in the functioning of the present Constitution. ■

NEW INDIAN BOOKS RELEASED DURING 23-29 SEPTEMBER

ENVIRONMENT
AQUATIC ENVIRONMENT /Ashutosh Gautam 200
ASSESSMENT AND ANALYSIS OF ENVIRONMENTAL MANAGEMENT /P R Srivastava & S K Shukla (Ed.) 400
MINE ENVIRONMENT AND MANAGEMENT (An Indian Scenario) /A S Chaudhari 350

Religion and Human Rights

GOBINDA MUKHOTY

When Gokhale said that freedom is our birthright, he did not mean simply political freedom. He felt that in a free society, Human Rights would be available to all. Such rights *inter alia* mean freedom from want; freedom so that nobody can abuse another person's body and mind. Freedom means to be able to air freely his or her views on any subject. Such a right means freedom to be religious or an atheist. Such right means that he or she cannot be subjected to arbitrary arrest or torture. Such a right also means that all these above freedoms cannot be taken away by the state.

Expounding the scope of Article 21 of the Constitution, the Supreme Court of India said that everyone has the right to live with dignity. That is why, our Constitution ensured and resolved to secure to all the citizens: "Justice, social, economic and political;

liberty of thought, expression, belief, faith and worship;

and to promote among them all fraternity, assuring the dignity of the individual.

Human Rights Charter of the United Nations (December 10, 1948) and two United Nations Convenants—International Covenant on Economic, Social and Cultural Rights January 3, 1975 and International Covenant on Civil and Political Rights (March 23, 1976) are extremely important qua human rights. The Charter and the Convenants unambiguously and unhesitatingly declared:

(a) All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

(b) Everyone is entitled to all the rights and freedoms set forth in the Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status...

(c) Everyone has the right to life, liberty and the security of person;

(d) No one shall be held in slavery or servitude: slavery and the slave trade shall be prohibited in all their forms.

(e) No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

(f) All are equal before the law and are entitled without any discrimination to equal protection of the law, etc.

(g) No one shall be subjected to arbitrary arrest, detention or exile.

There are 30 Articles of which only seven, that also in truncated form, are given above.

The author is a Senior Advocate in the Supreme Court of India, and a well-known figure in the civil rights movement. This contribution was presented by him at the Indian Social Institute, New Delhi (September 1992).

What do major religions have to say about human rights?

As far as the Hindu religion is concerned, in Chapter 6, *Shloka* 31, *Srimad Bhagwat Gita*, says: "A Yogi who finds Me in everything, and prays to Me being in everything, is a proper Yogi and he is with Me." It clearly means that if you are a pious Hindu or for that matter *Ram Bhakta*, you must *see god* in every human being, be he a Hindu, Muslim, Christian or an Atheist.

Vivekananda, the great exponent of Hinduism, asked: "Where are you searching for God, when God is in front of you in his various manifestations? He who serves humanity with love and humility, is serving God." The Guru of Vivekananda, Rama Krishna Paramhansa, said: "I have prayed to God by going to temple. I have prayed to God in a Christian way by going to a church and I have prayed to God in a Mohammedan way by going to a mosque, and I have found that one can reach Godhead through any of these and other religions."' This is the Truth.

Lord Buddha rebelled against Hindu fundamentalists. But Hindus ultimately accepted this rebel as one of the ten *avatars* of God, proclaiming thereby that even rebels are not outside the God's domain.

Hiduism indeed found Godhead in Baraha (the pig), Kurma(the tortoise), Mina(the fish) and Bamana(the Midget).

The message is clear. God is in every being and everywhere. He is all-prevading and is omnipresent. Therfore, a true Hindu cannot make disparaging remarks about people belonging to other faiths. Verily, in that event, he will cease to be a Hindu.

As far as Christianity is concerned, it says: "For that which befalleth the sons of men, befalleth beasts; even one thing befalleth them as the one dieth, so dieth the other; yea, they have all one breath; so that a man hath no pre-eminence above a beast; for all is vanity. All go unto one place; all are of the dust, and all turn to dust again."—(Ecclesiastes 3).

St. Mathew says: "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despite-fully use you and persecute you;

"That ye may be the children of your father which is in Heaven: for He Maketh his Sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust.

" Be ye therefore, perfect, even as your father which is in Heaven is perfect."

"For if ye forgive men their trespasses, your Heavenly Father will also forgive you. But if ye forgive not men their tres passes neither will your Father forgive you trespasses".

St. John said: "This is my commandment, that ye love one another, as I have loved you." He further says: "If a man say, I Love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he had not seen?

"And this commandment we have from Him, that He who loveth God love his brother also." Obviously, this brother is the mankind at large.

Every chapter of Koran starts with: "In the name of Allah, the Compassionate, the Merciful". In the Chapter called daylight, it proclaims: "Therefore, do not wrong the orphan, or chide away the beggar. But proclaim the goodness of your God."

In great humility, Prophet proclaimed in the Chapter called, The Cave: "If the waters of the sea were ink, with which to write the words of my Lord, the sea would surely be consumed before His words are finished, though we brought another sea to replenish it." In the Chapter called, The Creator, Paigamber proclaimed: "If it was Allah's will to punish men for their misdeeds, no one creature would be left alive on the surface of the earth". In the Chapter called Luqman, Mohammad said: "Do not treat men with scorn, nor walk proudly on the earth. Allah does not love the arrogant and the vain-glorious. Rather let your gait be modest and your voice low: the harshest of voices is the braying of the ass." In the Chapter called Cow, it is said: "To Allah belongs the East and the West, whichever way you turn there is the face of Allah. He is omnipresent and all knowing."

What is the difference then between Hinduism, Christianity and Islam?

According to Bahaiullah: "We are all leaves and trunks of the same tree."

Sai Baba said: Treat others in the same way as you would like them to treat you. And do not inflict pain by word or deed or even thought to others. That is the way to gain Santhi. That is the way a man could earn others' love. Avoid in you behaviours, your actions and your speech all trace of desire to pain others, to insult others or to cause loss or misery to others." He commands: To help the helpless is the only way to please, follow and reach Him. Further: "love, respect, tolerance, mutual cooperation, forbearance, these must flow from the hearts of all towards all. You are all limbs of one body". He further says: "Love is joy, love is power, love is light, love is God."

This is the fundamental of religion. Religion cannot see any difference between man and man, man and woman and woman and woman. Perhaps, in the Article 14 of the Indian Constitution, there is a glimpse of the essence of religion when its says: "All are equal in the Eyes of Law."

But, unfortunately, through the centuries, religion has not grown. Instead, fundamentalism, blind faith in fundamentalism, intolerance to the religions, have grown in such a way that the spirit of religion has become irrelevant, and blind dogmas and intolerance in the name of the religion have crept in.

In the medieval times, in the name of Christianity, the so-called Christians started crusade against non-Christians and in the process destroyed property and annihililated a large number of people belonging to differnt faith.

In Iran, not may years ago, intolerance reigned supreme and throttled ordinary people's human rights. Muslim women were denied their human rights interpreting precepts a religion in a way, which gives dominance of men over women. A *fatwa* has been issued against a writer asking for his head and the murderer has been promised both money and paradise. The author's crime: he has slighted Paigamber.

Coming to our country, in Punjab, we find God's children are being killed by God's children in the name of the great Sikh religion, whereas Guru Nanak could never conceive of killing even a fly, and after his death all people of all faiths claimed his body.

On the issue of Babri Masjid-Rama Janmabhoomi, a section of the Hindus and Muslims are taking hard lines. One community is proclaiming that there will be bloodshed if Rama's temple is not built, and another community is insistent that there will be bloodshed if the masque is destroyed. Is there any difference between Rama and Rahim? In the wake of *ratha yatra* of a great leader, there have been killings of members of the other community.

To my mind, this fight between two, three or four religions is not really a religious fight. These are fights between fundamentalists. They do not try to understand the true sense of religion. They are intolerant to other Indians which is anti-thesis to the proper religious thinking. And obviously, this type of movement whether by Hindus, Muslims or Christians is deadly against the concept of human rights. Because in the name of religion one individual belonging to one community hates another individual belonging to another community and is prepared to murder him even. No religion can support such an attitude; but then that is the reality today.

It is a trite saying, perhaps, that the very irreligious people in the name of religion are playing havoc with the destiny of the country and the people, and in the process human rights, as we know of, are being violated and will be violated if there cannot be a total halt to these fissiparous and non-religious tendencies. People of different communities have lived in this country for centuries. People of different opinions and different beliefs have lived in this country for centuries. We cannot claim like Hiter, the purity of race. We are a mixed people; we have in our blood Hindu blood, Muslim blood, Christian blood and aheist blood. Because of this, our greatest asset has been secularism and this great secularism cannot be allowed to be truncated by intolerant people, by the so-called faithfuls and the fundamentalists.

All right-thinking people of different communities must be able to sit together as they sit in panchayats and solve the problems in a secular way, which is the basis of any religion. No law courts, no government, no legislature can solve this problem. It has to be solved by the people and for the people – people who are all children of God and in whom God reside, according to Hindu religion, according to Christianity and according to Islam. ■

TRIBAL PROBLEM

Groping in Daylight

ABHAY JHA

The first Prime Minister of independent India reflected upon the tribal situation and three distinct options with regard to its tribal population in the background of the British attitude of "benign indifference" toward them.

The three options were:

(a) leave the tribals alone, and allow them to continue to live in relative isolation untouched by modern civilisation and the process of socio-economic change, a continuation of the British disposition;

(b) bring them into the mainstream of national development and integrate them, socially, economically, politically and culturally – a merger without leaving any distinctive identity; and

(c) protect and promote the essence and the best of their traditions and culture, even as they are exposed to modern science, medicine, education as a part of the process of development.

Nehru had strongly projected the third as the best alternative, that meshed with the vision of India, the Preamble, the Directive Principles, the Fundamental Rights and various other policy perspectives adumbrated in the various policy statements.

Apart from articulating the canons of a Democratic Republic as applicable to all citizens – egalitarianism, universal adult franchise, etc., we had evolved specific policy measures such as "protective discrimination" in order to provide a fillip to the weak and the disadvantaged so that they do not lag behind for all times. Even the process of socio-economic development was designed, in explicit terms, to minimise regional imbalances and to promote accelerated development of people lagging behind in socio-economic terms.

We had gone further in providing for special tribal components in our design for planned social change, created special instrumentalities like the Chairman for Scheduled Tribes (to oversee and monitor the process and the impact of development) and the like in order to eliminate 'middlemen', and to provide a thrust in translating policy into reality.

Complex social problems call for matching (adequate and appropriate) responses, often a judicious mix of socio-economic psychological components, evolved identification, definition and consensus, within the framework of an ideology summed up in the Indian context by the expression 'Welfare State'. Distortions in the policy process could lead to a mis-match between the problem and policy, leading to a decisive but negative impact on its efficacy, ultimately resulting in aggravating and complicating the problem. Naxalism glaringly illustrates the point, a case of distortions on policy process.

The problems of tribals have been seen for many years by the various political parties as a problem of Naxalism ever since the label got fixed to the gut issues of 'development' of the community. The problem was subjected to a partisan-politics approach, but without a holistic analysis. The process was distorted as different political parties approached it as an issue to beat the party in power with, instead of perceiving it as a 'national' problem demanding consensus process and a development perspective in consonance with the concept of the welfare state and democratic ethic.

When the partisan policies did not yield the desired or desirable results but led to unintended consequences – violence being its most visible manifestation – policies were evolved to treat the symptom as one of 'law and order'. Responsibility for the management of the problem was passed on to the 'Law and Order' administration which not merely 'accepted' the primary responsibility for its management, but reinforced it as nothing more than a 'law and order' problem. The professional task, responsibility of analysis and redefinition of the problem, the policy perspectives, appropriateness and adequacy of the police organisation to manage the problem were neither debated within the police, nor articulated before the political executive. In other words, policies formulated by the political executive were 'accepted' as 'given' by the professional administration; their own contribution to the analysis of the problem and policy formulation was nearly absent.

Having accepted the ill-defined problem and inadequate policy frame, the law-and-order machinery chased the problem. Demanding and securing additional powers, more stringent laws, frequent use of preventive detention, special codes for summary trials, stiff punishment for possessing arms, opening up new police stations and outposts, provision of sophisticated arms, increased mobility and communication (paradoxically, not with the affected community), induction of paramilitary forces, such as grey-hounds to strengthen local police, special policing in sensitive areas, co-ordination among different security forces through institutional arrangements resulted in the growth in members not only of police but different police organisations/units (aggravating problems of co-ordination) with any solution to the problem nowhere in sight. Further demands such as issue of identity cards to the residents, only confirm the conversion of tribal development into a law-and-order problem – a police problem.

It is no more the tribals alone but we the citizens, the government and the police organisations who find ourselves at crossroads due to the distortions in policy and its process. Which way should we turn, to reach the welfare state? We seem to find ourselves groping in daylight. ■

She fought the Nuclear Bomb

V. SUDARSHAN

If there was one recurring theme in all of Petra Kelly's actions and life – and one she liked to quote often – it was Martin Luther King's Christmas message in 1967: "Even today I still dream that one day there will be an end to war and that men will beat their swords into ploughshares and their spears into pruning hooks, that nation shall not lift up a sword against nation, neither shall they learn war any more."

Petra Karin Kelly was then twenty years old, serving her apprenticeship in social activism as a student in the United States, protesting against its military involvement in Vietnam. She was motivated by the writings of Thoreau, the activism of Martin Luther King and the philosophy of non-violence espoused by Mahatma Gandhi. Considering all this her death – "It could be a joint suicide, a murder with suicide or murder" – contains in it elements of an unseemly irony. Once the best known face of protest, partly because of its photogenic quality, there was further irony to come because of the initial problem of identification that the decomposed state of her body presented alongwith that of her companion Gerd Bastian a former Major General.

West Germany's anti-nuclear and environmentalist Green Party, which Petra Kelly helped found and which first entered the Bundestag in March 1983, and described variously as 'anti-party party' and an 'amalgam of people with grievances' and a 'lobby for people without lobbies' had in Petra Kelly its most visible and articulate representative.

Petra Kelly whose family name was Lehmann was born in Gunzberg, Bavaria on November 29, 1947. After her journalist father abandoned his family, her mother married Lieutent Colonel John E. Kelly who adopted her and he family moved to the US where she got her BA from the American University in Washington, DC in 1970. A frail child, she spent as many as three of her childhood years in hospitals where she underwent several kidney operations. But even more traumatic than this was the death in 1970 of her 10 year-old half-sister after a three-year bout with eye cancer. There is some speculation that Petra Kelly's belief that overdoses of radiation treatment at a Hiedelberg clinic contributed substantially to her sister's death may have helped to motivate her opposition to nuclear armaments and power plants.

In 1968 she worked as a volunteer for the campaign of Robert F. Kennedy and after his assassination, in the office of Hubert H. Humphrey. She took a Masters of Political Science from the University of Amsterdam in 1971 before joining the staff of the European Community even though she considered it a "corrupt organisation squandering a lot of taxpayers money". She worked there for 12 years, contributing 50 per cent of her salary to the Greens.

Impressed with the idealism of the West German Chancellor, Willy Brandt, she joined his Social Democratic Party only to leave it in 1978 in protest against its policy of defence, energy, health and women under Brandt's successor as Chancellor, Helmut Schmidt. She left also to found the Green Party (*Die Grunen*), initially a loosely organised political party with her friends. One of her closest companions who accompanied her to meetings and demonstrations was her maternal grandmother, Kuningude Birle.

At first the Greens were little more than a rag-tag organisation of pacifists, feminists, former Marxists and ecologists who were opposed to such projects as the extention of the Frankfurt airport and who were easily worked up about the environmental consequences of chemical pollution and nuclear power plants. But in 1979 when the Schmidt Government accepted the NATO plan of stationing American intermediate-range nuclear missiles in German soil against the Soviet Union, the Greens found an unifying issue in their opposition to that plan.

Petra Kelly's biographers will also note that her companion in her somewhat murky death, Gerd Bastian, also dates back to this momentous period in her life and the life of the Green Party. Bastian was forcibly retired from the army in 1980 for opposing the deployment.

In 1982 she quit the EC to devote herself more fully to German politics, campaigning for as many as twenty hours a day. In the elections of March 6, 1983 alongwith the victory of Kohl's Christian Democratic-Free Democratic coalition, the Greens received 5.3 per cent of the votes moving into the 498-member Bundestag for the first time with 27 representatives.

Writing of the entry of the Greens in the London *Times*, Michael Binyon said: "It enfranchises a generation of disaffected youth. It brings to fruition the student revolt that began in Berlin in 1968 against the accepted norms and values. It symbolises the power and influence throughout the country now of the 'Alternatives', of those who previously opted out but have now been co-opted in."

The innate disparate nature of the Greens, its internal conflicts and its inability to maintain party unity helped to send the movement down the road to self-destruction. Petra Kelly and her 'fundamentalist' faction of the Greens was critical of the movement's growing tendency towards Marxism-Leninism and the strident anti-Americanism.

To apparently prevent the development of a leadership cult, the Green's Bundestag faction removed Petra Kelly from the party's parliamentary leadership. Her marginalisation from the world stage had begun. She remained unmarried, choosing to sponsor a Tibetan orphan girl who stays in Dharmashala. ■

Communal Prejudice behind Communalism

UROOJ ABDI and M.G. HUSSAIN

Since independence various parts of the country have witnessed the occurrences of communal riots. The riots have not only taken numerous innocent lives, damaged national properties but also have brought a bad name to the country. Such ugly acts of violence remain a threat to national integration and to international relations. It is but natural that politicians as well as scientists have been trying to identify the causes of communal riots and to suggest ways and means to control them. Though politicians and social scientists are working along different lines, they atleast agree on one contributory factor, that is, communal prejudice.

Indian population consists of several religious groups, Hindus, Muslims, Sikhs, Christians, Buddhists, Jains and other religions but communalism in India is mainly limited between the two religious groups, namely, Hindus and Muslims. These two communities have many stereotypes and prejudices against each other. This results in disharmony, hatred, dislike, schism and separatism. Such prejudices towards each other sometimes result in communal riots that have caused destruction to life and property on a large scale. Even if it is correct to claim that the medieval period of India was free from communalism in the relations between the Hindus and Muslims and it was fostered by the Britishers, it remains a fact that there always existed a gulf of prejudiced attitudes between Hindus and Muslims, and this is what the Britishers exploited and thereby put the two communities against each other. During the British rule, particularly towards the beginning of the twentieth century, the cleavage between the Hindus and Muslims became much more apparent and wider. In 1906 the Muslim League was formed to safeguard and advance the political rights and interests of the Indian Muslims. The Muslim community, by and large, remained alienated from the mainstream of the Indian National Congress and rallied round the Muslim League because of their prejudiced outlook and narrow-mindedness and also partly because of their reaction against the Hindu revivalist movement, Hindu millitant nationalism of some political leaders and their religious dogmatism. Consequently, the gulf between these two major communities was further widened.

Prejudice is defined as "a composite of stereotypes, myths, and legends in which a group label or symbol is used to classify, characterise and define an individual or group considered as totality" (*Kimbalyoung*, 1948). According to Ackerman and Jahoda (1950), "Prejudice is a pattern of hostility in interpersonal relations which is directed against an entire group, or against its individual members; it fulfills a specific irrational function for its bearer".

An operational meaning of prejudice has been given in Webster's *New Twentieth Century Dictionary* (1965) which can be summarised as "a sort of prior unfavourable judgement or opinion of the members of a race or the occupation of any social role held in disregard of facts that contradict it". After a very careful examination of the writings on prejudice, Harding, Kutner and Chein (1969) have advanced a definition of prejudice.

According to them, prejudice is a "failure of rationality or a failure of justice or a failure of human heartedness in an individual's attitude toward members of another ethnic group". A careful perusal of various explanations of prejudice reveals the fact that prejudices are a widely held complex phenomena which are gathered in the course of life, are multi-causally determined and are functional in character for the individual.

●

NUMEROUS theories have been advanced to provide positive explanations of prejudice. However, following Ashmore (1970), the different theoretical explanations of prejudice may be classified into two categories on the basis of their level of analysis—societal and individual levels. As far as the analysis at the societal level is concerned, there are two theories about the origin of prejudice: (a) the theory of economic exploitation and (b) realistic group conflict theory. Prejudices against the minority groups are produced by the majority group. This exploitation in turn enhances conflict between the two groups. As a matter of fact, economic competition is one of the chief sources of inter-group conflict. In our social and economic set-up, the attitude of the dominant group toward the subordinate one has usually been friendly so long as the system of economic relations was not challenged, but the attitudes turn hostile whenever the subordinate group attempts to improve its own position. The realistic group conflict theory, on the other hand, advocates the importance of actual or per-

The authors belong to the Department of Psychology, Jamia Millia Islamia, New Delhi.

ceived nature of inter-group relations in the development of prejudice.

It has generally been observed that whenever the members of one group looked upon the members of the other group with distrust and hostility, inter-group conlict originates. Prejudice in the present-day Indian situation was intensified into conflicts between Hindus and Muslims during the partition of the country. In his book, *Prejudice in Indian Youth: A Socio-psychological Study* (1981) Hassan discussed sociological and personality correlates of prejudice. Among the sociological factors, religion, education, social class, occupation, ncome and parental influence are some of the imporant causative agents of prejudice. Frustration, aggresion, anxiety, rigidity, security, insecurity and inolerance of ambiguity of the major personality correates of prejudice which are frequently researched and discussed.

●

A large number of studies have investigated the inluence of religious affiliation on the development of prejudice. The findings of these studies are inconsistent. For instance, Merton (1940), Allport and Kramer 1946), Bettelheim and Janowitz (1950), Stoufer (1955), Goldsen (1960), Lenski (1961), Kilpatrick, *et al.* (1970), have reported that Catholics were most hostile toward he Negroes; Protestants were the next most prejudiced gainst the Jews and those with no religious affiliation were the least prejudiced. However, Mackenzie (1948), Rosenblith (1949), Adorno (1950), Campbell (1947) nd Harlar (1942) have reported little or no differences etween Catholics and Protestants with regard to the xtent of prejudice towards the Jews.

More or less similar conflicting results were obtained by Indian researchers. Thus one group of researchers such as Adinarayan (1953), Chaudhary 1958), Hassan (1975-78) and Singh (1980) have observed that Muslims are more prejudiced than Hindus. The other group of researchers, on the other hand, ailed to confirm this observation (for example Natraj 1962), Sarkar and Hassan (1973), and Chatterjee *et al.* 1967)

sycho-social and Personality Correlates of Prejudice

There have been very few studies on the relative influence of the social-psychological correlates of rejudice. However, in their study of riots, Chatterjee *et al* 1967) observed that the deeply rooted psychological factors and particular social climate were the most important auses for the communal conflicts. There is, however, one Indian research which makes a comparative evaluation of sychological and sociological correlates of prejudice Singh and Hassan, 1976). Many studies have demonstrated that highly prejudiced individuals have a greater tendency to displace hostility than unprejudiced individuals, and prejudiced individuals are more susceptible to frustration (Raper, 1933, Houland and Sears, 1940, Cantril, 1941, Pettigrew and Cramer, 1959). On the other hand, Wright (1945), Cohen and Murphy (1966) have reported that displaced aggravation plays a very important role in the growth of prejudice. Further supporting evidence that prejudiced individuals tend to show greater hostility after frustration, were provided by Berkowitz (1961), Weatherby (1961), and Berkowitz and Green (1962).

In a study Lindzey (1950) selected 10 prejudiced and 10 non-prejudiced subjects and subjected them to frustration. He found the prejudiced subjects more frustrated than the non-prejudiced subjects. In the extent of increasing tension and social conflicts all over the world, it has become increasingly necessary to investigate into the personality organisation of the individual which helps in the development of prejudice in them. Allport (1954) observes: "A person acts with prejudice in the first instance because he perceives it in a certain way. But he perceives it in a certain way partly because his personality is what it is." His view suggests that personality variables may contribute significantly in the development of prejudice. The studies mentioned above would not only provide us useful information about communal prejudices but would also help us to suggest certain conditions by which communal prejudices may be reduced, if not wholly eliminated. As a matter of fact, communal prejudices are not only an obstacle in the advancement of the nation but also remain a threat to national integration. ■

Sixteen years of Left Front Government

JYOTI BASU

Chief Minister of West Bengal

The people of West Bengal are electing us for sixteen years. In panchayat and municipalities, the Left Front has been elected. In a feudal-capitalist set-up, the people are electing a people-oriented government. With an unfriendly Central government in the background, we have been working most of these years. To deliver more goods we are demanding restructuring of Centre-State relations giving the States more powers.

We have never promised the people anything unattainable. Our duty is to serve them assiduously. The panchayats have been working all these years. Elections are regularly held. Democracy has spread its tentacles. Land reform has been done successfully. West Bengal is an example of its own kind in the whole of India. We are always getting support from the majority of the people. Yet there is no reason for complacence. Because we have only limited power and thus we cannot satisfy all. So we have to tell the people about the difficulties. We have to be polite. No obstinacy with the people. With patience we must be with the people always. We have to listen to what the people have to say.

What is necessary is to educate the people and make them socially conscious. People would learn from their own experience about who is a friend and who is an enemy, who is right and who is wrong. The Left Front would perform its duties, taking the people with it. Similarly, it is the Left forces which would have to play the most important role in fighting the dangers threatening the sovereignty of the country, self-reliance, unity, integrity and communal amity. ■

Different languages,
different wears,
different views - in diversity
lies the greatness of unity.

Government of West Bengal

Rural Development : West Bengal Experience

SURYA KANTA MISHRA

Within the overall national policy perspective of overcentralisation and growth devoid of distribution, West Bengal rural developmental efforts present an alternative approach of growth based on distribution of basic asset that is,land and decentralisation through Panchayats. If the former approach has landed the country in everdeepening crisis, with its overall industrial and food grains production falling by 0.8 per cent and 1.5 per cent respectively (in 1991-92), the later approach could place West Bengal in the first position among all the States in the rate of growth of food grains production in the Seventh Plan period (34 per cent) with over-10 per cent growth rate in 1991-92.

West Bengal continues to occupy the first position in rice, jute and fish production, second position in potato and egg production and third position in broiler chicken production. The index for industrial production in the State in 1991-92 has increased by 1.1 per cent inspite of discriminatory attitude of the Centre and the estimated increase in SDP and per capita SDP for West Bengal at constant prices in the same year will also be double the rate of growth of GNP and per capita GNP at the national level. The fiasco of the national policy of growth with trickle down effect was evident from the increase in rural poverty (45.2 per cent in 1967-68 to 50.5 per cent in 1972-73) and malnutrition (26 per cent in 1969 to 30 per cent in 1971) during the peak period of Green Revolution. On the other hand, when the Left Front ministry assumed the office in 1977 the percentages of people below poverty line in West Bengal, both rural (58.3) and combined (52.2) were higher than the corresponding figures for the country as a whole (51.2 and 48.3 respectively), where as the provisional figures for 1987-88 (30.3 and 27.6 for West Bengal) are not only less than the all India figures (33.4 and 29.9), but also the percentage decline of poverty in West Bengal during this period, both rural and combined(-28.8 and -24.6 per cent respectively) is more than all India decline(-17.8% and -18.4 per cent) in the same period. West Bengal stands only second to Kerala among all the States and Union Territories in this regard.

Micro level studies conducted by Sunil Sengupta in collaboration with Amartya Sen in 1987-88 indicate that rural children in West Bengal no longer suffer from what is termed as 'severe' or 'disastrous' malnutrition as per UNICEF standard weight for age chart. Other grades of malnutrition taken together was found to be on decline and not a single house hold skipped the staple food of cereals for a single day even during lean periods. A comparison of thirtyeighth and fortyfifth round NSS data also reveals that West Bengal stands first in the country as a whole in terms of the rate of increase of per person cereal consumption, when the quantity of cereal consumption per person per 30 days for the country as a whole has fallen from 14.80 Kg in 1982-83 to 14 Kg in 1989-90 (14.28 to 15.44 Kg for West Bengal). As increased production in agriculture and allied sectors along with the better purchasing power for the rural poor was accompanied by a related growth of cottage and small scale industries linked with the primary sector and those producing mass consumption good, for example handlooms. It is not, therefore, surprising that West Bengal has the highest number of small scale units in the country now and the production of handloom industry has more than doubled from 200 million meters in 1976-77 to 443 million meters in 1991-92.

Bullocks put before the Cart

The impressive growth in different sectors of rural development in West Bengal owes its origin to land reform. This State having only 3.58 per cent of the country's cultivable land contributes 20.77 per cent of the total ceiling surplus land distributed in the entire country. Over 56 per cent of the vested land allottees in the State belong to the Scheduled Castes and Scheduled Tribes comprising only 26 per cent of West Bengal population. As per NSS data nearly 60 per cent of the total agricultural land has come to be owned by the small and marginal farmers (as against corresponding national figure of 29 per cent only) and adding the land recorded under cultivation of sharecropper this may exceed 75 per cent. Micro level survey conducted in the district of Midnapore in collaboration with the Rural Development Centre, IIT, Kharagpur had almost similar findings. Agricultural

Dr Surya Kanta Mishra is the Minister-in-Charge, Panchayat and Rural Development, the Government of West Bengal.

farm census data had already established that smaller working peasants with their limited holdings did exhibit superior production performance. It is more so in West Bengal because of a relatively better delivery system of non-land inputs which was to follow redistributive land reforms in the State. This was how the *bullock* of distribution was put before the *cart* of growth to keep in moving forward with a faster pace. One can safely conclude that, in the national plane the policy approach continues to be one of putting the cart before the bullocks.

The Instruments of Decentralisation

It would have been impossible to talk of expansion of democracy to the 'grassroot' level without having the three tier Panchayat Raj Institutions (PRIs) in the State. Here again, West Bengal is the only State in the country where panchayat elections had been held regularly at five years intervals for three consecutive terms in last one and a half decade. West Bengal presents a sharp contrast in another sphere—the class and social composition of its panchayat members, more than 70 per cent of whom belong to the category of small and marginal farmers. This pro-poor composition of the panchayats continues to be preserved in successive elections as confirmed by several studies. The SC and ST representation is roughly in conformity with their proportion to the entire populace with a rising trend in successive elections though there was no provision for reservation till the latest amendment to West Bengal Panchayat Act was passed in the last session of the Assembly. Percentage of women members, which however continues to remain unsatisfactory (around 10 per cent including nominated members) will exceed one third of the total after the election due next year is over. The class and social composition of PRIs is bound to have important bearing on the quality of implementation of antipoverty programmes. The results of concurrent evaluation reveals that 100 per cent of the beneficiaries were selected by Gram Panchayats in West Bengal as against 59 per cent in India as a whole. The ineligible beneficiaries (family income more than Rs 6400 per annum) financed under IRDP were two per cent in West Bengal as against five per cent in the country. The quality of the assets was good in 91.7 per cent of cases in the State (81 per cent in India); assets were found intact in 97 per cent (All India 72 per cent) assistant was sufficient in 99 per cent (India 81 per cent); income from asset was more than Rs 1000 per annum in 80 per cent (India 51 per cent); difference between cost and asset value was more than Rs 500 only in three per cent (India 18 per cent) and the beneficiaries had to pay more than Rs 100 for going to block, bank and market in only one per cent (India 11 per cent) of cases. The effort for decentralisation through PRIs in West Bengal acquired a new dimension with the formation of District and Block Planning Committees (DPC and BPC) headed by the chair-persons of Zilla Parishad and Panchayat Samitis respectively. The devisible outlay meant for the districts has registered steady growth since then and has reached nearly 50 per cent of the approved State Plan outlay by now. The initiatives unleashed through PRIs in a scale hitherto unseen have come to explore ever newer horizons of people participation. West Bengal has come out as the biggest contingent of literacy and health movement in the country with over one million volunteers engaged in the total literacy drive without any remuneration whatsoever. It may be recalled that West Bengal became the first State in the country to receive NOMA prize of UNESCO for literacy performance last year.

Experience Summed Up

The foregoing account of achievements should not lead to complacency. There is ample scope of self criticism and need for improvement in many areas. The Left Front Ministry has been functioning in a State when the country to which this State belongs is ruled in the interest of concentrating land in agriculture and capital in industry in fewer hands, be it Indian or foreign. This ministry has limited financial powers but no political power (that is state power) in the truest sense of it. The Centre-State relation is getting skewed in favour of the Centre everyday. In spite of such basic limitations, the West Bengal experience offers a valuable lesson to be learnt. There cannot be any sustained growth with distribution and therefore development must start with land reform. There cannot be any expansion of democracy in the rural areas without decentralisation through PRIs and the efficacy of the PRIs depend upon their class and social composition which is again determined by the degree of success in land reforms. Finally, whether land reform or panchayat it all depends upon the political will. That the Left Front Ministry in West Bengal has the political will and that the will could be translated into action, is vindicated by the political stability it enjoys for the last fifteen years, something unparalleled in the country. ■

Looking for an Industrial Climate ?

SUNRISE PROJECTS :
Haldia Petrochem Project, Polyester-filament Yarn Plant, Mini Steel Plant, Hot Rolling Plant, Teleprinter Industries, food Processing Industry, Acreylicfibre Plant, BOPP Project.

ELECTRONICS :
Salt Lake Electronic Complex is unique in its kind in the country. You are also welcome to avail of the service of the West Bengal Electronic Industries Corporation as a catalyst and also as a provider of infrustructure

INDUSTRIAL GROWTH CENTRE :
We can offer you land for your Industry at any growth centre viz

- Dabgram Growth Centre—Jalpaigurı Dist.
- Raninagar Growth Centre—Jalpaigurı Dist

- Bishnupur Growth Centre—Bankura Dist
- Coochbehar Growth Centre—Coochbehar Dist.
- Malda Growth Centre—Malda Dist
- Bagdogra Growth Centre—Darjeeling Dist
- Uluberia Growth Centre—Howrah Dist.
- Falta Growth Centre—South 24-Parganas Dist
- Kalyani Growth Centre—Nadia Dist Phase–II.

ELECTRICITY (Power) :
New power plants under Commission at Budge Budge, Kolaghat and Bakreswar will meet the growing demand for your Industries

LAND :
We have new development zones, where special areas are located to set up new Industrial Unit

ONE WINDOW POLICY :
Now state level organisation is active to solve various problems in setting up industrial unit in the state. You will have all the infrastructural facilities at single point

DOESN'T CLIMATE ALSO MEAN ?

Political stability of the State • Free from communal and Ethnic Violence • Responsible Trade Union Movement. • A new Generation of Young and Talented Technicians

WEST BENGAL HAS AN INDUSTRIAL TRADITION BUILT OVER AGES

Government of West Bengal

Now filmmakers don't have to travel to other cities in search of excellence.

RUPAYAN *provides the very best facilities....*

LABORATORY TO FINISH.... COMPLETE SERVICE

RUPAYAN is the first complete post production centre in Eastern India, comparable with the finest top-of the-line units anywhere. Today, RUPAYAN is a totally integrated 35mm/16mm complex with film processing laboratory,

editing rooms and more—facilities and services that meet the highest standards of excellence.

Situated in Calcutta's picturesque Salt Lake City, only about 5 km from the airport, Rupayan also offers attractive financial incentives to filmmakers.

THE ULTIMATE IN SOUND RECORDING

Now RUPAYAN has a hi-tech Sound Recording, Dubbing and Mixing Studio. Advanced equipment such as High Speed Rock and Roll System, 16 channel Audio Mixing Console for Scoring and Dubbing etc, are already at work.

Still from Satyajit Ray's 'Agantuk' processed at Rupayan

CHOSEN BY THE BEST

Satyajit Ray, Mrinal Sen, Tapan Sinha, Tarun, Mazumdar, Gautam Ghosh, Buddhadeb Das Gupta, Nabyendu Chatterjee, Sandip Ray—the latest works of all these master craftsmen, and many more, were processed completely at Rupayan. Yes, Rupayan has been the choice of the country's top filmmakers. Why not yours ?

Decentralisation in Planning in West Bengal

Decentralisation in planning means devolution of powers of decision-making in formulation as well as implementation of the Plan schemes down to the level of districts and further below, with corresponding financial provisions and involvement of the local common people through the elected Panchayats and similar local bodies

In any discussion on the decentralisation of planning with involvement of people through the Panchayats, the following issues have to be discussed:

(a) priorities of planning including land reforms, (b) organisational set-up at the district level and below indicating the role of the Panchayats and other elected bodies vis-a-vis the official administration, (c) financial provision, (d) formulation of plans, (e) implementation and monitoring of Plan schemes, (f) public accountability and (g) new extensions.

Priorities of Planning:

In West Bengal, the Left Front Government has in its approach to development planning, chosen the priorities which are in the interest of the common people. It has begun with redistributive land reforms in agriculture. With the implementation of land reforms, according to the National Sample Survey data, nearly 60 per cent of the total land has come to be owned by the small and marginal farmers against the national figure of 28.8 per cent as owned by the small and marginal farmers.

When the priorities of planning are thus placed in every sector in favour of the common people, particularly beginning with land reforms, an objective condition is created for involvement of the common people in the process of planning. The Panchayat elections, which had been stalled in this State for about 15 years, were held in 1978 after the Left Front government came into power. These elections were then held with regularity of five years in 1983 and then again recently in 1988.

Plan priorities in favour of the common people, including the emphasis on land reforms, regular holding of the Panchayat elections and the pro-poor class character of the Panchayats – these characteristics taken together have created preconditions where the common people have reasons to be involved in the entire process of planning through the Panchayats.

Organisational set-up for District and Block-level Planning

In each district, about five years back, the District Planning Committee (DPC) was set up with the Zilla Parishad Sabhachipati as its Chairman and the District Magistrate as its Member-Secretary. The other members are, on the one hand, the Heads of the Standing Committees of the Zilla Parishad, the Sabhapatis of all the (Block-level) Panchayat Samities, and the Chairman of municipalities of the district and, on the other hand, the District-level officers of all the departments and the representatives of the Statutory Authorities in the district. The necessary technical and administrative support is provided to the District Planning Committee. The sub-divisional officers are invitees to the District Planning Committee. This District Planning Committee is regarded as the real executive arm of a slightly bigger general body called the District Planning and Co-ordination Council (DPCC) which has all the members of DPC plus the Minster(s) hailing from the district, MPs and MLAs of the district. This DPCC has the minister hailing from the district as its Chairman (on rotation if there are several ministers), the Zilla Parishad Sabhadhipati as its Vice-Chairman and the District Magistrate as its Member-Secretary.

The DPCC is a general body, meeting twice or so in a year, while the DPC, the executive arm of DPCC, keeps on meeting frequently and regularly. Similarly, at the level of each block within the district, a Block Planning Committee (BPC) has been set up with the concerned Panchayat Samiti Sabhapati as its Chairman and the Block Development Officer as its Member-Secretary. The other members are, on the one hand, the Heads of the Standing Committees of the Panchayat Samiti and the Pradhans of all the Gram Panchayats within the block and, on the other h and, the block-level officers of all the departments as its members. The necessary technical and administrative support is again provided to this BPC. It may be noted that through this composition of the District and Block Planning set-up the relationship between the Panchayats and the all other departments and agencies in the districts has been well defined. Defined also is the relationship between the Panchayats and the municipalities, that between the Zilla Parishad Sabhadhipati and the District Magistrate and also that between the Panchayats members and other elected representatives.

Financial Provision

Given the over-all priorities of planning and decentralised organisational set-up mentioned above, the Plan budget of each of the concerned departments of the State government has been divided into two parts – one relating to the

WEST BENGAL AT A GLANCE

Area	..	87.853 sq.kms.	Number of C.D. Blocks	..	341

State-level schemes and the other relating to the District (or below) level schemes. The general criterion adopted is as follows:

If the scheme has a command area encompassing districts more than one, then it can not be settled at the level of any one district and it may be regarded as a State-level scheme. But, if the scheme has a command area restricted within the district, it will be regarded as a District-level scheme. Similarly, within a district, if a scheme has an overlapping more than one blocks it will be a District-level scheme. But, again, if the scheme, in terms of command area, is restricted within a block, it will be regarded as a Block-level scheme. To give one illustration relating to road schemes, a State Highway running through the districts is a State-level scheme, whereas a district road within a district but covering several blocks is a District-level scheme, and a village road starting and ending within a block is a Block-level scheme.

Funds to be allotted in a certain financial year under District (and below)-level schemes of each department are provisionally communicated to the District Planning Committee (DPC) of each district well in advance.

In addition, there is a special united fund given to each district by the State government, called the "District Plan Fund" which is used by the District Planning Committee (DPC) for filling up critical gaps in certain sectors which may remain even after pulling the resources of all the departments.

Formulation of Plans

The District Planning Committee (DPC), holds its meeting in which, as members of the DPC, the Panchayat chiefs from the blocks (Panchayat Samiti Sabhapatis) are also present.In this meeting, keeping in view the pro-poor priorities as assessed by the DPC in the specific context of the district, a decision is taken for dividing allotted funds for the district between the District-level schemes and the Block-level schemes for each department, and further dividing the allocation of the Block-level schemes (department-wise) among the blocks on the basis of objective criteria.

Given the felt needs and the physical condition of the Block, the Block Planning Committee then formulates a comprehensive Block Plan for each sector by combining and coordinating the funds available from the different departments and in relation to special programmes. For each sector, the plan will be formulated, indicating the schemes, the physical targets (broke-down to quarters of a financial year) and sources of funds – all in the framework of a two-way Table.

In this way a comprehensive Block Plan, covering each sector, is formulated and approved by the BPC. All these Block Plus as well as plans prepared by the municipalities for the concerned urban areas are then brought together and placed before the District Planning Committee(DPC). The DPC cannot alter a Block Plan, once approved by the BPC, except when there is a gross violation of priorities or a problematic overlap with another block or municipality.

To this Block Plans, and Municipality Plans, the DPC then adds, after discussions and analysis, the District-level schemes in every sector, that is, schemes with command areas covering several blocks or blocks as well as municipalities. In this formulation the DPC will also combine funds from different sources. This sum total of Block Plans, Municipality Plans and District-level schemes constitutes the District Plan, and its is then placed before the general body of District Planning and Coordination Council (DPCC) for final approval. After approval by the concerned DPCCs, the District Plans of all the districts are presented before the State Planning Board. In the discussions at the State Planning Board, there is also State-level representation from each of the concerned departments. The State Planning Board will not ordinarily alter the District Plans, once these are approved by DPCCs, except when there is a gross violation of priorities or a scheme of a district has a problematic overlap with another district. After discussions at the State Planning Board, the District Plans become an integral part of the State Plan. The remaining part of the State Plan is constituted by the State-level schemes of the different departments which are settled after discussions again with the State Planning Board.

Implementation of the Plan Schemes

In these jobs, the Panchayats are provided with technical and administrative staff support. For certain categories of staff, this support is sometimes provided on the basis of deputation from the concerned departments. The entire establishment cost on this account is borne by the State government. For executing these responsibilities, the Panchayats are prevented in this State from using any contractor. They involve the local people directly with technical assistance by the staff and voluntary supervision by the Panchayat representatives.

Monitoring of Plan Implementation

Once the implementational responsibility is fixed with physical targets (quarter-wise) and provision of funds, powers of monitoring have been entrusted, alongwith the implementing agency, also with the Block Planning Committees and the District Planning Committees, depending on whether the schemes are Block-level or District-level schemes. The importance of this extra monitoring by the BPC and the DPC is that this is a collective exercise in which the representatives of the implementing agency are also participating. This monitoring can be conducted quarter-wise and the results of monitoring from each district can then the reviewed at the State-level. The subsequent release of funds can be tied up with the findings of the review, with a built-in incentive for higher release of funds depending on the achievement of targets.

Public Accountability

The ultimate accountability of this decentralised planning exercise is to the people. There is first of all a regular arrangement for auditing of all expenditures incurred by the Panchayats. But, in addition, there is a direct mandatory procedure of accountability to the people. To this end, at least two public meetings are mandatory on the part of each Gram Panchayat – one to discuss with the general people the selection of schemes and the other for presentation of accounts of expenditure. It is insisted that these accounts should be shown in a public place. In addition to this display of the written accounts, verbal direct communication to the common people in an open meeting is also considered essential. These are the ultimate democratic checks on the entire system. ■

V.N. NARAYANAN : BE INDIAN

(Continued from page 3)

nothing at all for the innocent citizens. Their group interest is not served by taking up the cause of innocent victims.

Compare them with Sant Longowal who declared that every Hindu killed by militancy in Punjab reminded him of Guru Tegh Bahadur's martyrdom. Compare them with Surjit Singh Barnala who held an Akhand Path for the Lalru bus massacre victims. The Hind Samachar group has a fund to rehabilitate the families—both Sikh and Hindu—of victims of terrorist violence, but neither the Akalis nor the SGPC ever even thought of having such a fund for Sikh victims of police and militant violence.

Look at the attitude of the powers that be in Delhi. Their group interest demands that the perpetrators of the most heinous communal massacre in Indian history since independence should not be proceeded against. Eight years after the savagery of November 1984, the effort is still to subject the judicial process to cynical delay. Judgement had long ago been delivered on the October 31 outrage but the lives of over 3000 citizens taken by brute force cannot stand judicial scrutiny. Incidentally, the victims of the Bhopal gas genocide are still awaiting crumbs of relief. The Bahugunas, the Medha Patkars, environment group and even the L.C. Jains and Nanaji Deshmukhs are at the periphery of India shouting about the people who don't matter. Gilbert's "somebody in particular" matters, but the demos do not. From the Vedic "*Vasudhaiva Kutumbakam*" (the whole world is one family) India has traversed in less than four decades to the post-historic "*Kutumbaiva Vasudha*" (My family is the whole world). The late comrade Ram Piara of Karnal put it in one sentence; "In our country we want Bhagat Singhs to be born—in our neighbours' houses".

Indian nationhood suffered its most grievous blow in 1947 when we allowed India to be divided on the basis of religion. Then a few thousand people joined together and called themselves "We, the People" and granted to the emerging nation a Constitution which emphasised "unity in diversity". Over the years the people of the country progressively atomised their identities even as successive governments moved away from the people. The apogee is reached in the present with the government looking almost wholly towards Washington and hardly at its own people.

In the past three days I have read and re-read the *Business Today* interview of Harshad Mehta and I think he has put his finger on the problem. He says, and he must know, that 80 per cent of business (in the financial and share markets) is illegal and they are not touched. He also says his total business dealing is less than the amounts raised by the smallest mutual fund. The question is: Who manipulates the market? The inference is obvious—the plethora of government institutions, banks and public agencies. If 10,000 persons are individually engaged in Rs 10 crore frauds, it is within the system and no one bothers; but if one man accounts for Rs 1000 crores, the rest gets jealous and pounces on him. One scamster is a fraud; 100 scamsters make a government.

Harshad Mehta concludes his interview with the remark that the governments is making so much noise about the $ 1 billion (Rs 3000 crores) scam, but during his 100 days in jail he was thinking about "India's $ 72 billion (Rs 2,26,000 crores) foreign debt and how to liquidate it". The moral of the story is: when in jail, think of India. Out of it think of yourself and the money you can make. ■

ACTIONAID

We are a UK-based international non-governmental organisation supporting development initiatives in some of the poorest parts of Asia, Africa and Latin America. In India we offer financial, managerial and technical assistance to over 100 local voluntary agencies in planning, implementation, monitoring and evaluation of poverty reduction programmes. Our team consists of development professionals in the fields of general management, agriculture, watershed management, health, education, community organisation and disability. We are now strengthening our work in the area of influencing public policy and need a

PUBLIC POLICY ANALYST

You will be located in Delhi but must be willing to travel. You will have the ability to identify and use the rich experience in ACTIONAID-supported projects and the voluntary sector in general and to amplify the needs of poor communities to a wide variety of influential audiences - the government, development agencies, the media, research organisations, etc.

Your experience in policy and research work, excellent communication skills, familiarity with social science research methods, knowledge of the voluntary sector and a post graduate degree in a related discipline are factors that will help in the final selection.

DEVELOPMENT PROFESSIONALS

We are also looking for Development Professionals at all levels from any related discipline who are interested in a stimulating work environment and a challenging vocation. You will be located either at our headquarters in Bangalore or at our rural development projects.

When India's demand reaches 200,000 MW, where will the electricity come from ?

The global village you see in the picture is called India North Delhi is in the foreground

The power needed to support a civilization such as this is an electrifying 200,000 MW Where will this come from? The source identified by just about every developed and developing country is ABB

Brazil, for instance, commissioned ABB to put up a hydro-electric project, the world's largest, across the Amazon Similar requests poured in from Latin America, Africa and Asia

At Anta in India, ABB has installed a 'combined cycle' power plant of 430 MW, comprising three gas turbines of 98 MW each, with a waste heat recovery system for further power generation.

The power plant coming up at Talcher will have two 500 MW steam turbine generators ABB has also installed HVDC systems at Vindhyachal and Rihand — the first of their kind in India. Add to this list medium and extra high voltage circuit breakers, capacitor banks, SCADA and relay protection systems in vast numbers throughout India. This is only the beginning. Evidence of what the world's largest and most sophisticated electrical engineering company can do as India prepares for the 21st century

Jute. On friendly terms with the environment!

Today, with campaigns emphasizing the importance of a clean and green world, jute is making its presence felt because of its bio-degradable quality and environment friendly nature. It is a preserver of ecology as well. Jute merges with the soil and on combustion does not leave any residue or emit toxic fumes.

Jute can easily replace wood especially for packaging and thus save precious forest reserves. Jute Reinforced Plastic (JRP) has proved to be an ideal packaging material for fruits, tea and garments.

Geo-jute is also ecologically harmonious and is being extensively used to control erosion and promote vegetation.

Jute's sheer versatility and environment friendly nature has made jute extremely popular at home and abroad. Jute has catapulted India into a major foreign exchange earner in recent times. The Golden Fibre produces bead curtains, carpets, fabrics and furnishings, lampshades, table mats and coasters, bedcovers, briefcases, soft luggage, slippers, wall hangings and coverings, pot hangers, swing chairs, garments, shopping bags, floor runners, panels etc.

The whole range is available at SONALI Showrooms at Madras, Hyderabad, Calcutta, New Delhi and Bhubaneswar

To promote jute further, the Jute Manufactures Development Council is engaged in identifying new and diverse uses. Encourages their manufacture, offers incentives and financial assistance.

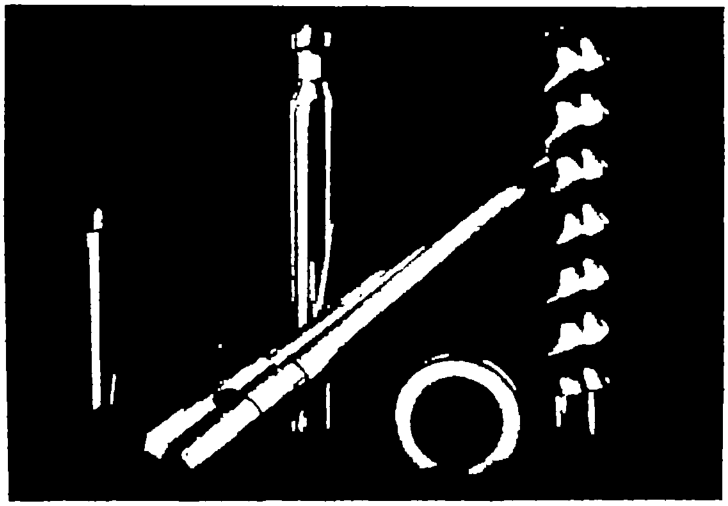
WEAR PREVENTION FROM THE OUTSE

Rust can mean bust This old saying can equally well apply to the problems of wear. Chemical, thermal and mechanical wear and tear make metallic components unusable and this in turn has an adverse effect on the national economy. Replacement expenditure, repairs, supervision and assembly costs all add up Losses resulting from production breakdowns and the consequences of environmental damage are well nigh impossible to estimate. Active wear prevention is thus increasingly important. Active protection with DELORO STELLITE starts with component design



DELORO STELLITE IN ACTION

DELORO STELLITE can help solve the problem of wear in virtually all branches of industry be it power station, chemical production, glass production, steel processing, plastics, medicine or food industry.

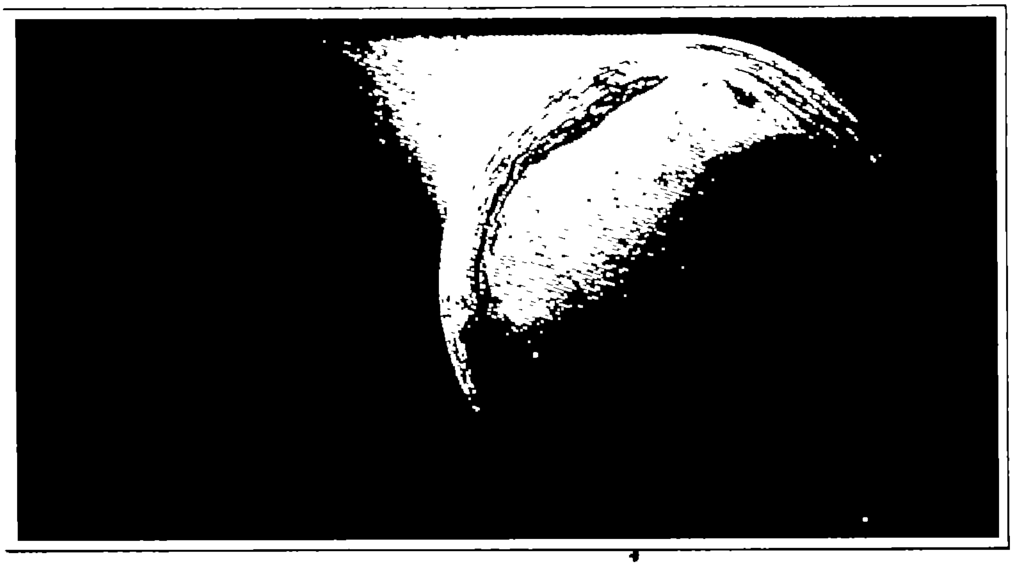
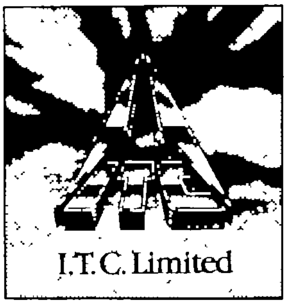
The marketplace.
As seen by ITC, India's largest exporter.



ITC is one of India's leading private-sector companies. Its annual group turnover, in excess of Rs. 3000 crores, is drawn from several businesses. tobacco, cigarettes, hotels, edible oils, packaging and printing, paper, board, computer software and financial services.

Eighty-two years of operating throughout India and access across the world make ITC the ideal trading partner. And, as the country's largest exporter, it offers a variety of value-added products and services . From branded vegetable seeds, tea, coffee, spices, oilseed extractions, tobacco products and marine foods to mouth-watering Indian cuisine at Bukhara restaurants abroad. From exquisite handicrafts, carpets, garments and leather goods to paper, board and printed packaging. From tailor-made computer systems and software to contemporary comforts at the Sheraton-affiliated Welcomgroup hotels in India.



With offices stationed around the world, ITC's International Business Division is always at hand to procure and deliver quality merchandise.

So, if you wish to do business with India, talk to us. We've made the world our marketplace

New horizons, new hopes.

Vista of Hope

Thirty eventful years span a full generation.

These thirty years have seen three wars on our territory; several change of guards at the Centre and in the States; the death of two Prime Ministers in harness and the assassination of two of their successors; mounting tensions and turmoil in different parts of the country on account of a host of political, economic, social factors. The spurt in secessionist-terrorist activities actively abetted from across the border, the growing assertion of regional and ethnic identities alongside increasing exposure of class, caste and gender-based inequalities, the progressive degeneration of the polity through the nexus between politics on the one hand and money and muscle power on the other, as also the advent of yuppie culture among politicians of different hues, the phenomenal influence of black money on the national scene, and the marked rise in fissiparous tendencies characterised by sectarian communalism and religious fundamentalism—all these have been responsible for the gradual weakening of the democratic ethos of this nation, the mainspring of its vitality.

However, these thirty years have also been witness to numerous achievements registered by the people of this great country. As the indigenous efforts to build a durable industrial, scientific and technological base have recorded spectacular successes the information explosion and scientific technological revolution have been accompanied by a striking heightening of human consciousness across this vast landmass of India that is Bharat. No doubt this cannot obliterate the phenomena of obscurantist practices and medieval rituals surviving to this day as we approach the end of the twentieth century. And yet the impact of this burgeoning consciousness is being felt far and wide in the progress of mass struggles of the teeming millions in our countryside where dedicated bands of workers outside the pale of established parties are playing an enhanced role in mobilising the people for socio-economic transformation at the grassroots. Even if the entrenched vested interests in the rural areas have not been dislodged from the vantage positions they continue to occupy, the growing awareness of their rights among members of the weakest segments of our society has already provided sufficient testimony of radical changes in the not-too-distant future.

If the rich continue to display vulgar opulence and thereby seek to widen the chasm between the haves and have-nots, their clout is not all that powerful today when faced with the organised might of the poor. This has been testified on more than one occasion even if there is little room to doubt the pernicious impact of wealth on our society as a whole.

These thirty years have seen breathtaking changes on the global plane. The burial of the Cold War has not automatically resulted in the abandonment of Cold War mindsets. And yet the fact is that those who had forecast the "end of history" following the downfall of regimented societies that had misappropriated the ideology of 'communism', have been forced to beat a reluctant retreat. The protagonists of establishment of a "new world order" fashioned through the Bush fire in the Persian Gulf now stand bewildered in the wake of the stunning defeat the US President suffered in the just-concluded historic election which gave an unequivocal mandate for change. The Bush Administration's myopia that led it to claim "global victory" in the Cold War and subsequently initiate feverish moves for ensuring unipolar hegemony is in a large measure to be blamed for its present plight.

The humiliation of George Bush in the US Presidential poll is in effect a defeat for the psychology of arrogance of power based on military might that had come to characterise his Presidency. It was this arrogance of power which was responsible for making him blind to the bitter reality of the shattered American dream for the ordinary US citizen grappling with the economic crisis and socio-political-ecological hazards which are lately scaling extraordinary heights. Herein lies the significance of the generational change in the White House. This is not the "end of history" as the pundits had predicted in a hasty interpretation of the demise of the statist 'socialist' experiment but in fact the inauguration of a new era wherein the historical processes would not only retain their validity but in fact gain increased legitimacy in the days ahead.

This new scenario in the international sphere demands new thinking in all its implications. The dialectics of the changing world cannot be understood in isolation. The process must be viewed in its entirety. Failure to undertake such a task can only make one a prisoner of subjectivism.

As far as the developing states are concerned, their future is undoubtedly beset with formidable challenges. These basically spring from the obvious infirmities afflicting these countries. These are intensified as a result of the all-pervasive poverty and destitution, the relentless assaults on the purchasing power of the common man and the constant threat of falling into the debt trap laid by the multilateral financial institutions and international lending agencies. In the sombre backdrop of such prospects our country has to summon all its strength and courage to meet the situation that confronts it and incessantly strive for self-reliant progress foiling dubious attempts by the powers that be to mortgage our sovereignty.

Nevertheless, the latest global developments—the consequences of the severe blow to the temperament associated with the concept of a "new world order" as well as arrogance of power exhibited in abundance by the world's sole superpower, donning the mantle of a global policeman—offers a silver lining whose importance for the developing world including India can barely be minimised. As it observes its thirtieth anniversary *Mainstream* is thus reinvigorated with an element of hope that promises to sustain it in its arduous and difficult battle for realising a society free of ignorance, want and deprivation—the essential precondition for unfettered advance towards a higher stage in human civilisation.

PRIME MINISTER

MESSAGE

I am happy to learn that **Mainstream** is celebrating its 30th anniversary. Through the years Mainstream has maintained its stature as a serious publication for the discriminating reader. It has avoided the lure of sensationalism and concentrated on in-depth studies of high academic standard whose validity and reason have endured. The success of such scholarship in journalism is a tribute as much to the maturity of the Indian reader as to the intellectual integrity of the small and dedicated band of writers who have made this possible.

Freedom of the press in our country is epitomised and preserved by publications like **Mainstream** which provide a forum to independent journalists to articulate their views. Indian journalism comes into its own in the pages of such small-budget ventures. They help reinforce our nation's strengths, not merely, compensate for its weaknesses.

Nikhilda has infused the " **Mainstream** " tradition with the essence of his person - pride tempered by humility, the strength of conviction invigorated by openness to reason and above all, staunch nationalism rooted in the pride of a common humanity. We have had, at times, our difference with him and his perceptions, but this is the strength of our democracy and the relationship that the executive and the press must cherish with each other.

I convey my best wishes to all those who have made this publication a success, many of whom I have the added privilege and pride to count among my personal friends.

Rediscovering South Asian Heritage

K.R. NARAYANAN

For two weeks since the inauguration of the First South Asian Festival of the SAARC countries at Delhi by Prime Minister Narasimha Rao, different corners of India have resounded with the mingled melodies and rhythms of South Asia, shone with the splendour of its arts and crafts, and stirred with the sentiments and ideas of its poetry and literature. This Festival has brought together, for the first time, in a comprehensive manner various aspects of the cultural heritage of South Asia—its classical arts, music and dance, crafts, paintings including by children, films and photographs. It has also staged dialogues, discussions and seminars on education and literacy, poetry, literature and the media. Though such interchanges have taken place in the past in spasmodic and isolated ways, it is for the first time that a representative cross-section of the splendid diversity of the culture of the region as a whole has been presented in one country. I would consider this as one of the significant and far-reaching developments in regional cooperation since the SAARC was formed seven years ago.

As the late Rajiv Gandhi put it at the Islamabad Summit on December 29,1988:

> Culture is the medium through which we can best affirm our affinities, while celebrating our diversity.

While geography binds us together with inextricable ties of neighbourliness, culture has caught us all in a silken network of common experience. The roots of our culture go back far and deep into the night of time. They have got intertwined over the centuries producing a cultural scene that is complex and composite. It is this culture that makes the seven nations of South Asia a distinct and inter-dependent entity. Despite all the diversities and differences that exist among us, it is this that makes one South Asian react to another with a delighted shock of recognition.

One of the creative tasks of the SAARC is to bring to the surface this inner affinity and make it an integral part of South Asian cooperation. At the same time, we will have to recognise the differences and varieties of our cultural experience, frankly and boldly, and respect and nourish them with care and understanding. The artisans and artists and the poets and writers who have participated in this Festival are legitimately proud of the particular identities and uniqueness of their creations. But they would also have sensed the basic commonality that overleaps what Rabindranath called "the narrow domestic walls".

The author, the distinguished diplomat, educationist and Vice-President of India, delivered an address at the valedictory session of the First South Asian Festival of the SAARC countries at Thiruvananthapuram on October 24, 1992. This contribution is based on that address.

◆

CULTURE in South Asia is not a superficial superstructure. It is rooted in our history and runs through our society as the sap of the tree of life. Howevermuch it had been overladen and distorted with superstitions and social ills over the centuries, it is culture that had enabled the common people to bear their hardships and sufferings and survive with dignity and a certain sense of the joy of life. I believe that in the unfolding future it would again be our culture that would enable the people of South Asia to cling together and add an aesthetic and a human dimension to the harshly impersonal industrial-technological society towards which we, alongwith the rest of the modernising humanity, are racing. I believe that it might be possible for South Asia to build up an industrial system that is more homely and humane. The spiritual basis of our culture, whatever religion or sect one may belong to, will also facilitate an evolution in that direction.

In this rapidly changing world advanced technologies are threatening to make many of our handicrafts and cottage industries uneconomic and outmoded in terms of methods of production and deprive millions of households of the means of their livelihood. South Asia, which is the home of some of the finest crafts, will have to think out ways of preserving and promoting this precious heritage of arts and crafts. We can, through cooperative efforts, give training to our artisans, extend financial support, upgrade their production technologically, and provide for their products a wide subcontinental market and also outlets into the international market.

South Asia has the capacity to dazzle the rest of the world with its classical as well as its folk arts. The classical music and performing arts of the individual countries have already created serious interest in the developed countries of the world. The folk music and dances have also earned a high reputation. There are few regions which possess so much variety and depth, colour and drama as the South Asian region in their artistic forms. A combined projection of all these on the world stage would startle people everywhere with the richness of our cultural heritage. It would enhance the reputation of each SAARC country more than what it can do on its own. Our film industry has also the same potential which is yet to be fully exploited. As regards television its potentialities are unlimited. Unless we cooperate with one another in the region in this field we would be at the receiving end of images and information, even about ourselves, through satellite and cable networks owned and operated by foreign agencies almost as it was during the colonial period. That would, indeed, be one of the ironies of history.

◆

MAY I say that culture is something more than songs and dances and films and TV shows, however delightful and informative they may be? In the modern world of visual arts and mass entertainment culture has tended to luxuriate in beautiful superficialities. As a French philosopher put it:

> The boundary line between culture and entertainment has become blurry. Today it is common to designate as cultural, activities in which thought plays no role at all.

We are fortunate that in our region even the traditional popular arts and entertainment have sprung from deep cultural roots and are manifestations of our thought-processes and value-system. Nevertheless, it is gratifying that in this Festival sufficient emphasis has been given to thought-laden cultural activities like education and literacy, and poetry and literature. Literacy and education are the basis of a consciously cultural existence. The need for the most widespread cooperation among South Asian countries in this field is self-evident. A fully literate South Asia will be a force in the world. Linked to it is the position of women in our societies. Spreading literacy and education among women, together with uplifting their status and endowing them with rights and power would be to release a major liberating force in our vast region.

In my view some of the most important programmes of the Festival were the seminars on "Future Potential for Cultural and Educational Links", "The Contemporary Literacy Scene : Search for Roots" and the "Media Dialogue". These gave a dimension of thought to the Festival. For purposeful regional cooperation it is essential for us to understand the streams of ideas and thought that flow through the minds of people in the different countries of the region.

While the public has some knowledge of Rabindranath Tagore, Mohammed Iqbal, Nazrul Islam, Faiz Ahmed Faiz and some others we have very little acquaintance with contemporary writers in the countries of the region. Meetings of writers of the region should be a more frequent happening. Their books should be made available to the public in translations and there should be free flow of literature within the region. Anthologies of South Asian poetry and short stories should be made liberally available in translation in English as well as in the major languages of the region. In that way only we answer the lament of Iswar Baral, the Nepali writer: "We are total strangers in a lonely crowd. So near, yet so far."

We in South Asia are prone to talk about our traditional culture and the glorious heritage of our civilisation. The Indian poet A.K. Ramanujam, who lives abroad, once remarked:

> Even one's own tradtion is not one's birth-right; it has to be earned, repossessed.

Thus we cannot take our culture for granted. To be inheritors of it, in the real sense, we have to earn it, repossess it through our own education and efforts. The South Asian Festival is an effort in re-possessing our heritage. It has enabled us to have a glimpse of our collective identity, or should I say, our glorious composite identity. May I add that this identity established through culture has to be buttressed by concrete trade and economic exchanges within the region. Otherwise it would remain weak and fragile. Cooperation, be it in the realm of culture, trade, economics or politics, will not diminish the status of any country or substract from its sovereignty; it will only make an addition to it. I believe that the nations of South Asia will rise to the plenitude of their potentialities only through cooperation among themselves. Working together, we can provide a better life for our people and also make a mark in the world much more than each one of us can do separately. That is the rationale behind the formation of the SAARC. That is the importance of the South Asian Festival in the fundamental field of culture. ■

What Would Sir Syed Say Today?

BADR-UD-DIN TYABJI

I am delighted to be here on this Sir Syed's Day. Thank you for inviting me. My mind flashes back to that memorable day for me, thirty years ago, when as a freshly appointed Vice-Chancellor, I first addressed the University on Sir Syed's Day, October 17, 1962. I had then called upon the spirit of Sir Syed, whose portrait hung before me. There it was Sir Syed's strong, determined, self-confident visage to inspire me. Those appraising eyes, that level look, his powerful nose—upstanding rather like the Rock of Gibraltar; impregnable and dominant amidst the surging white sea of his beard—gave me instant confidence.

So I spoke my mind freely about what the University represented, and the ideals it should have, in the light of what I read in those appraising eyes, sustained by the strength and poise of that dominant upstanding nose, over-riding the turbulence of his beard, just as the Rock of Gibraltar does that of the surrounding ocean.

Today, 30 years later, faced by a more mature and sophisticated audience in the industrial and financial capital of India, invited to speak on Sir Syed's Day, I turn to him once more, enquiring of myself: "What would have Sir Syed said? What would he have advised?" He would certainly have had something to say about current Hindu-Muslim relations, a subject that was of primary interest to him. Did he not liken them to the two eyes of Mother India? They had to focus evenly together to enable Mother India to march steadily forward without stumbling or collapsing. What would he say about the situation as it prevails today?

I am not one who believes that Sir Syed, in striving to build up the broken morale of the Muslims of North India after the 1857 collapse of their attempt to throw out, with the active support of like-motivated non-Muslim compatriots, the stranglehold of the British on the remnants of the former Mughal empire, was aiming to recreate the latter. By then he had fully recognised the overwhelming superiority of Britain's Western techniques of management, learning and the utilisation of science with new technology for buttressing and developing the power and material progress of a state and its peoples.

The author is a distinguished educationist and a former Vice-Chancellor of the Aligarh Muslim University. He delivered this speech at the Aligarh Muslim University Old Boys' gathering at Bombay on October 17, 1992, observed as Sir Syed's Day in the AMU.

He was convinced that without a switch-over to this kind modernism by Indians they could never get the British off their backs. A long apprenticeship under the British for this purpose seemed necessary and inevitable. He saw that the lead given by Raja Rammohan Roy and others in this direction, had been taken up by the Hindus to good effect. They had taken to English and its concomitant "Modernism" much more readily and profitably than the Muslims. The reason for the difference between the Hindu-Muslim response to this call is plain. For the Hindus, it was more a less just a switch-over from acquiring one form of foreign mores and language (Persian) during Mughal rule or hegemony to acquiring their English equivalents. It was almost as easy as changing the type of one's hat or the cut of the suit one wore when dining out. For the Muslims it was much more painful and fundamental. It was the official discarding and downgrading of the main source, the fountain-head. If their civilisation, the ideals of which constituted the core of their beings and their aspirations in this life and thereafter.

Sir Syed's attempt was to bridge the gap that lay between the unequal effect of the impact of the British takeover of India on Hindus and on Muslims: to retain or regain the former status of Muslims vis-a-vis Hindus, as one of the two eyes of Mother India. That he succeeded in doing this to a considerable degree is undeniable; but that it should have led to the partition of the country was not what he had aimed at or worked for. In my personal view he would have opposed it.

But it has taken place nonetheless—and we today have to try and learn from the way in which Sir Syed dealt with the paramount power of his time—that is, the British—when we deal with the paramount power of today—that is, the Hindu elite —in order to regain for the Muslim community its historic importance and influence in present-day India.

NOT ALL OF ONGC'S BIGGEST ACHIEVEMENTS LOOK LIKE THIS

The smile on your child's face when he discovers the wonder, the fuel that makes his school bus move. The sound of diesel gensets that help water the fields when the rains don't come. The roar of aeroplanes and trains. The glow of light bulbs. The growth of industry and high technology that has been fuelled by us. The gas flame in your kitchen. And the good quality of food. The redder apples, the greener spinach, the better wheat grain made possible by the fertiliser plants that run on gas from our oil wells. And, of course, the clink of crores of rupees that we now save in foreign exchange through both curbing oil imports and indigenisation.

Also nearly a million job opportunities that ONGC helps to create. These are but a few examples of what our other achivements look like. Because, though our job is to discover oil, our aim is to discover a smile on your face.

FERTILISER

VITA

OIL & NATURAL GAS COMMISSION

Fortunately for us, legally and constitutionally there is nothing that stands in our way of achieving this except a lack of will, application, stamina and leadership within ourselves.

◆

AS I pointed out in my Dr Yusuf Najmuddin Memorial Lecture at the Anjuman-i-Islam, Bombay on May 19, 1992, our Constitution not only gives the minorities of India (amongst whom the Muslims are by far the largest) absolutely equal rights as citizens of India as it gives to the majority; it goes even further. It enjoins the state to ameliorate their backward status in all national spheres of activity by giving them a helping hand. This 'helping hand' may take the form of protective discrimination in favour of a backward minority, or in plainer terms 'reservation' in various fields. Nor does the Indian Constitution frown upon the minorities as an inherent weakness in Indian national life, or as an obstruction to the formulation of an egalitarian society. Far from it, it views the minorities as a healthy variety, enriching Indian national life in myriad ways.

There is however, as one—who is not purblind or congenitally incapable of seeing anything except what he is predetermined to see—knows, a vast difference between principles enunciated in Constitutions, through laws, or, for that matter, religions; their enshrinement as ideal objectives in statute books and scriptures and their active implementation and working in practice.

So far as the Minority Rights conceded in our Constitution are concerned, it would not be far wrong to say that it was more the enlightened, liberal, egalitarian sentiments of the principal leaders of our national movement—persons like Mahatma Gandhi, Pandit Jawaharlal Nehru, Maulana Abul Kalam Azad—that prevailed over those of the bulk of their followers and of the general sentiment in the country at large.

The latter did not desire or dare to flout their leaders on these issues, but they saw to it later that the whole subject of encouraging administratively stricken and deprived minorities was given a bad odour politically and socially. Anyone trying to do something for his own community, even if it was for the purposes enjoined and lauded in our Constitution, was dubbed a communalist, or even an anti-nationalist. A new form of Two Nation or Hydra-Headed Nation theory—divisions between the "Haves" and "Haves-nots"—began to be propounded. The hysteria aroused and the violent excesses committed over the mere announcement of the Mandal Commission's recommendations showed clearly how divided the views and sentiments of the powerful, entrenched elite that mans and runs the government of the country are on taking practical steps to implement the principles and directives of the Constitution: in particular those that seek to redress and eliminate the imbalances prevailing between them and the minority and backward communities in the Indian social system and administration.

These facts have to be accepted as facts of life inherent in the history of our country, and the texture and fabric of her social and political life. It cannot be willed away by the dictates of even such great spiritual and political leaders as Mahatma Gandhi and Jawaharlal Nehru, and others of comparable eminence or spirit.

The change has to come about not through confrontation, but by the minorities themselves winning their place in the hearts, confidence and conscience of the majority by demonstrating in practical fashion that by their presense they can enrich the common pool of the resources of the nation as a whole materially as well as psychologically. This requires a joint effort to be made; not just a "give" by one side and a "take" on the other; either on the part of the majority or the minority. There has to be a two-way traffic. I am convinced that there are a sufficient number on both sides who, if approached in the right way, would respond to the call.

So far, however, after the cataclysm of partition the only real signs of this taking place that I see are in the fields of film-making, sports, music, drug-trafficking and the Don-dominated regions of the underworld! However much I may deplore the existence of the last two fields of activity in our society, I must confess that, ironically, it gives me some satisfaction as well. It engenders the hope that observing such successful collaboration in anti-social joint ventures might induce other entrepreneurs engaged in more worthy and productive enterprises to adopt their organisational and representational pattern of employment: free from all ethnic, racial and social prejudices.

Is that Nariman Point in the distance?

What you see in the picture is the Bombay skyline and the Borivili Express cruising at the speed of an aircraft

If the train left Churchgate Station nine seconds ago, it will arrive in Borivili nine minutes from now. Fantasy? Not quite.

The technology for this is already here in the hands of ABB. This technology has worked wonders in Europe where ABB's *intercity* trains reach speeds of 350 kmph.

ABB's tilting train technology has also worked wonders in Sweden, where ABB was called upon to install trains *on existing tracks* capable of travelling 40% faster over curves. Soon ABB locomotives will shuttle across the Euro tunnel, the underwater link between England and France

ABB has vast global resources that it now places at India's command

ABB is no stranger to India. Its technology is already at work in the Indian Railways. Every diesel and electric locomotive running today has vital equipment supplied by ABB. Tap changers, turbo chargers, single phase AC breakers apart from sophisticated signalling equipment along the track Six locomotives have been specially designed by ABB to run on existing tracks

This is only the beginning ABB has a substantial role to play as India steps into the 21st century.

the definite and indefinite articles, compounded by wrong spelling and widespread printer's devilry) on Hindu-Muslim relations. It is entitled *The Eternal Web* written by Shalini Mehta of the Punjab University, Chandigarh, and published by Cosmo Publishers, New Delhi 1992.

This empirical study was carried out during the past fifteen years. It is based on field investigations conducted in the northern belt of India—Kanpur, Lucknow, Delhi, Meerut and particularly between 1973-77 for a research project entitled "Hindu Muslim Relations in Delhi". Sadar Bazaar was the prime focus of this latter study. I have extracted what follows from this study.

Sadar Bazaar before 1947 was more or less a Muslim-dominated locality except for the area known as Pahari Dheeraj which was occupied by Hindus. In 1948 Bara Hindu Rao and its surrounding Muslim dominated areas were declared a protected zone by Pandit Jawaharlal Nehru, the then Prime Minister, for Muslims desirous of staying on in India. This cut down the outflow of Muslims from the area, as well as brought in others from the unprotected areas like Daryaganj, Paharganj and Multani Dhanda. All through the partition riots this area did not experience a single major communal outburst, although its neighbours like Sabzi Mandi and Roshanara Road were completely engulfed in them. It was late in June 1973 that Sadar Bazaar recorded its first communal riot.

From 1947 onwards, houses vacated by Muslims were occupied mostly by Hindu refugees from Pakistan, This influx of Hindus upset the status-quo of the local population. The new entrants brought their own cultural values and, above all, business values. With official help and shrewd business sense they established themselves in the economic sphere. In contrast, the Muslims were highly demoralised in the first post-partition phase. Many for long kept debating the issue of migrating to Pakistan. Others found it difficult to sustain their business interests under the growing influence of Hindu-owned businesses, Sadar Bazaar developed into one of the biggest commercial centres in India, but in its growth Muslim merchants were mainly excluded. Muslims, even now, continue to be the best craftsmen, but poor in the art of selling. Most of the goods manufactured by them are sold in the market by Hindu brokers.

The Muslims of Delhi largely live in and around the walled city of Old Delhi. Between 1979 and 1989 almost 50 per cent of the newly rich Hindu merchants moved out of the locality because it had become unworthy of their new economic status.

On vacation these houses have again been bought by an emerging newly affluent few among the Muslims. However, only four Hindus interviewed said that they only wanted to live in Hindu localities. Similarly, very few Muslims bluntly stated that they wished to stay only in Muslim localities. Out of four hundred people interviewed 139 were graduates and above. There was no significant difference between the educational levels of Hindus and Muslims. Approximate information about incomes ranged widely from a minimum of Rs 250 to Rs 3000 a month and above. About 70.25 per cent knew Hindi, 54.25 per cent English and 57.5 per cent Urdu. Though only 48.12 per cent Muslims said they knew Hindi, spoken Urdu is very similar to spoken Hindi generally in Delhi.

The Hindu-Muslim settlement pattern in Sadar Bazaar may be categorised as follows :

a) Muslim-dominated or exclusively Muslim *mohallas*.
b) Ditto—Hindu.
c) Mixed localities where the communities are almost equal or in the proportion of 60/40 per cent.

Some of the exclusively Hindu or Muslim dominated *mohallas* are more or less reserved ones where a Hindu or Muslim respectively cannot buy property. Houses are not even let out to members of the other community despite the fact that their own respective exclusive *mohallas* are adjacent or opposite each other; so they share a common market as well as the limited recreational facilities available.

Only seven per cent of the Hindus and 20.5 per cent of the Muslim residents regard their relations with each other as cordial. The common complaint of the Muslims against Hindus is that they do not dine with them. On visiting Muslim houses Hindus often refuse to eat anything offered to them though cold drinks bought in the market are accepted. Muslims, therefore, find it humiliating to accept food from Hindus though there are no religious restrictions preventing them from eating with Hindus.

◆

THE general presumption that neighbourliness promotes social integration is belied. On the contrary, neighbourhood relations are characterised by conflict and tension and a strange kind of isolation. People pretend to be friendly when actually they are not. Edibles are accepted but not eaten. A Hindu landlord is always hesitant about renting a house to a Muslim and vice versa. There are reservations and inhibitions in regard to each other in practically every sphere of social interaction. All attempts to develop friendships appear to have an ulterior motive behind them. Because of this perception of their motivation they do not make any significant contribution to Hindu-Muslim integration; nor do they help in influencing individuals to change their preconceived community stereotypes of each other.

There is, however, a small but growing group to be found among both Muslims and Hindus. They pick and choose their friends on the basis of compatibility and mutual interests. Their friend's religion is personal to them. When they discuss each other's religions, the philosophic content of the text is more important than overstated opposites. The majority of Muslims interviewed from this group are willing to suspend and/or revoke rituals that obstruct communal integration. They favour restrictions on polygamy, support family planning measures, and oppose ostentatious performances of *"kurbani"*. Likewise Hindus in this category do not regard caste restrictions against inter-dining and even inter-marriage as inflexible or sacrosanct. This is not to suggest that the alter and ego involved in such dyadic relations have no community commitments—only that the community commitments are not allowed to become subjectively negative.

The reason why I have taken so much of your time in this recital of Hindu-Muslim relations in Sadar Bazaar, Delhi is that I fear that the situation depicted in it, as seen through the refreshingly unbiased but keen eyes of Shalini Mehta, is more/or less a true picture of what prevails in most urban localities in India where the two communities, for reasons that are beyond their control, find themselves residing cheek by jowl with each other.

Turning Sir Syed's gaze on it, I would venture to assert that he would consider this situation most disappointing and disquieting. He would have been pained at learning that two sets of Indian citizens possessing equal civic rights were unable to live together as friendly neighbours. He would have sought ways and means to bridge the gap between them. Had he not kept the gates of the Aligarh Muslim University open for non-Muslims precisely for this purpose? He had invited them in because he wanted Hindus and Muslims to learn to live together, cooperate with each other, learn from each in a civilised fashion. I would suggest that the Aligarh Old Boys' Association should apply their minds to this problem and take some practical steps to remedy it. It would be a worthy undertaking in memory of Sir Syed and his two eyes theory for Mother India.

◆

IT is inevitable that I should say something on the Ram Janmabhoomi and Babri Masjid controversy in this context. I have of course been following it with anguish in my heart and hope on my lips. I have been gratified by the comparatively temperate stand taken on this issue by the Aligarh Muslim University and its students. They have also behaved admirably compared to what the Jamia Millia Islamia did in their cooked-up tantrums over the dead carcas of Salman Rushdie's novel, and again on Dr Bedar'a most sincere and scholarly Indian Muslim's remarks on the connotations of the term *"Kaffir"* in the Qu'ran. When Muslims are capable of getting up so much steam and fury over issues that barely touch the outer fringe of their own faith, surely those amongst us who have been born and bred on this soil, have eaten and drunk from it, should be more sympathetically aware(and publically express that awareness) of what Ram stands for, and what Hindus feel about anything that concerns him in this ancient land. Personally, I would place Ram in the foremost ranks of the Prophets who preceded Hazrat Mohammad, *Sallala-alhaiyam-va-sallam*, some of whom nearer his own advent, are mentioned by name in the Qu'ran, others far distant only by implication, but implicitly.

A distinguished Congress leader told me recently: "I can fight the BJP, the VHP and others of that ilk, but I cannot and will not fight Ram." I replied: "Nor do I want you to fight Ram; I respect Ram. I should like to do what Shri Ram would have approved of in this situation." I do not believe that Shri Ram would countenence the demolition or uprooting of the Babri Masjid, a place of worship that has stood for over 400 years, or approve the building of a temple in his honour on the demolished site. It would go quite contrary to the concept of Ram Rajya formulated by Mahatma Gandhi that is mirrored in the Indian Constitution that I have sworn to uphold. I agree that a worthy Ram temple should be built in the Ram Janmabhoomi area. I should have liked this to be a national memorial and to be able personally to participate in planning it. There is no reason why this temple cannot be so designed and built, so as to fit in with the existing Babri Masjid without offending either Hindu or Islamic sentiments. There has to be a give and take by both communities in this matter. Our aim should be to promote communal harmony and not confrontation for either vote-catching or losing. ■

Consensual Nationalism

An Approach Paper

KRISHAN KANT

From the vantage point of the last decade of the twentieth century we are in a position to look back dispassionately at the whole scenario of the country's history through this century. We saw the rise of the nationalist spirit in the first decade when Bengal was not allowed to be partitioned by the people of India; and from then on the further evolution of the glorious freedom struggle led by men who were world leaders by any standards. They were pioneers in the global struggle against imperialist domination. We saw the emergence of the Mahatma, the leader of non-violent mass struggle for human dignity and rights of the weaker sections on a scale not witnessed before in human history.

In spite of the historic struggle, the spirit of nationalism was not strong and pervasive enough to stop the partition of India nearly forty years after the resurgence of the spirit which was so powerful as to thwart the British move to partition Bengal. We agreed to the partitioning of the country, a development about which Gandhiji had said that it could take place only over his dead body. Acharya Narendra Dev rightly said that there was not enough nationalism in the country; otherwise India would not have been divided.

After independence, the nationalist spirit has been getting diffused day by day despite an economic growth which can be compared to China notwithstanding deficiencies in many directions.

Now there is a deep concern all over the country about the dangers of disunity and fragmentation. The feeling is so overpowering that we are not able to see through and analyse clearly the origins of this cancer eroding the body-politic of the nation.

In order to understand the crisis that India is facing and the degeneration that has set in in all facets of our national life, we have to trace the central source of this malady.

Parameters of Power and its Values

On a dispassionate analysis one finds that it is directly connected with the operation of politics and government at various levels. Political interests of the powerful in the seats of power determine the functioning of institutions often manipulating situations, and conditioning the people.

This is visible in all walks of life and in all the four estates as they are called: Legislature, Judiciary, Executive and the Media. It has affected the whole society—mind-sets of the individual, family and the community, the village and above, in all spheres. Many critical situations were the creation of political exigencies of the people in power. Even economic decisions become subservient to parochial interests whether in the government or the Opposition. Both are a part of the system. Lenin had said that politics is the dominant factor and on occasions economics has been shaped by it. Not only economics but social values of a society are influenced by the values of power, that is, (i) those in power; (ii) the process for achievement of power; and (iii) the operation of power.

The relative positions of (i) and (ii) have changed during the last century or more. In the days of kings and kingdoms of feudal lords, (i)—that is, these in power—proved critical. The divine right of the king was transferred to the son after the demise of the king who ruled the kingdom. Otherwise, the change in power would come when the armies of another kingdom took over the kingdom, killed or deposed the king and a new king was anointed by virtue of the military strength of the invading army.

The right to vote and the exercise of vote are essential ingredients of a democracy. But equally, if not more important, is the content of democracy and the democratic process. In the days of feudal kingdoms, the character of a king determined the character of the court and his courtiers. The ruling elite connected to the court or the king influenced the the lives of the people living in vast unconnected areas to a minimal extent.

Hence the well-known proverb: what does it matter if the king is Ram or Ravan? Now the situation has changed. Transport and communications are integrating the polity in a geographical

sense into what maybe called the country-village. The interconnection and interdependence are increasing and unavoidable.

After the coming in of participatory democracy (ii)—that is, the process for achievement of power—became the dominant factor in determining the social, political and economic values and goals of society through a process of upgrading and devaluing morality and a system of gains and penalties.

The prime cause for the failure of the Mahatma and the national movement to keep India united was the introduction by the British of a basic change in the process of power—that is, separate electorates, quota for religious communities, etc. In spite of all the sacrifices, the exemplary characters of Gandhiji and other national leaders, the constructive programmes, the national awakening and national unity, all the efforts for Hindu-Muslim unity came to a naught before the grinding wheel of the altered Basic Process of Power. Gandhiji and the national movement and their achievements became subservient to it. The rules of the game of power, as described by Lala Lajpat Rai, determined the direction of the events or the destination for India—the partition. The division of the country was the natural consequence. An ancient country like India has divisions of castes, communities, ethnicities and religions. The process of power can help in exacerbating these divisions or transcending these divisions in course of time. Power sharing is the most dominating force driving individuals, groups or societies. That makes or unmakes, strengthens or distorts and finally conditions the psyche and minds of the people.

Electoral Process: a Flawed Process of Power

Elections and what we call the electoral process are in fact the mechanism through which people acquire and lose power, what may be in short called the Process of Power. The term 'electoral' camouflages the real nature or potential of the critical process which determines the character of everything in polity and society. The character of the persons to be elected to power is determined by the process. The political leaders and political parties are moulded by the dynamics of the political process. Mahatma Gandhi and the national movement were helpless before the Basic Process of Power providing separate electorates. That process was continuously conditioning and shaping the psyche of electorates—Muslims or Hindus or Sikhs. It was encouraging the development of communal identities, reducing the significance of the national identity. After the enforcement of separate electorates there was no Indian as far as the Basic Process of Power was concerned but only Hindus, Muslims and Sikhs. All national endeavours of Gandhiji and other leaders and the national movement could not prevail against the entrenched process of power.

Process of Power: Unsuited to India's Genius

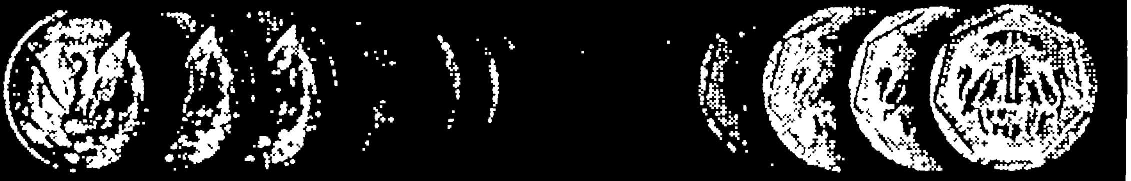
India is an ancient society with caste, communal, ethnic and race divisions inherited from long history and yet bound together by common civilisational traditions and historical memories. It has been a communitarian society based on these divisions and subdivisions. But it has been maintaining an essential unity under the guidance of Saints and Dharmacharyas (without the classical framework of religious traditons based on the Prophet and one Book). We had the tradition of transcendence through the social institutions of the Sanyas Ashram and Sanyasins, which also served as a vehicle for social transcendance. For, the Sanyasin came from all social castes and divisions, and belonged to all. In that sense the divisions were not rigid.

The process of power prescribed by the British had two elements: (i) separate electorates and the quota system on religious basis; and (ii) the first-past-the-post system of election, that is, any candidate getting the largest number of votes to be declared elected. After independence, while the first element dealing with separate electorates was removed from our law, the second continued to have the place of honour. In my view this is the focal point of our political cancer.

The first-past-the-post process of power exacerbated these divisions and rigidified them rather than transcending them. We should have devised a process of power suitable to the genius of our civilisation which could keep the advantages of our communitarian life intact while introducing the modern concept of democracy and competitive politics and economics in a new stage of historical development. Even in some Western democracies, the electoral method of first-past-the-post is not the only one in vogue. In the context of India, with a pluralistic and fragmented society, this system has proved to be inherently divisive.

The present process of first-past-the-post system encourages all social evils of casteism, communalism, muscle and money power and elevates the practitioners of these values to the highest seats of power. A person elected through the exercise of these evils legitimises them and gives them systemic

Calling Non-Resident Indians! Your deposits grow faster in Indian Banks.



If you're NRI or even a relative or friend of NRI here's some news to cheer

We offer multi-currency deposit schemes: NRE Accounts, FCNR Accounts in US Dollars, Pounds Sterling, Deutsche Marks, Japanese Yen and Foreign Currency (Ordinary – Non-repatriable) Deposit Scheme.

Exemption on Income/Wealth/Gift Tax. No ceiling on investment amount. Nomination/ Automatic renewal facilities

Then-there is also Forex A/c facility NRI's who return to India for permanent settlement, will be permitted to maintain with banks, the entire amount of foreign exchange brought in at the time of return to the country

respectability. During the struggle for freedom which was no doubt a struggle for power, the recognition of leadership demanded the exercise of the values of service, sacrifice and suffering. Those values are no more required to get into power. So they have become disutilitarian as far as gaining power is concerned.

Vote 'Capturing': Varied Afflictions

In the first-past-the-post process of power, capturing or influencing a minority of booths with muscle and money power enables one to win a constituency. This minority of captured or influenced votes puts a candidate ahead of the other candidates and he wins the seat though he may not get a majority. He also gets into power at the State and Central levels and rules the state with these values which put him in power. Politics based on the caste and interest conglomerates results in the victors in elections looking after their constituencies vis-a-vis those who voted against them.

This process has tended to divide the rural and urban areas on caste, religious and interest based groupings. The divisions are sought to be perpetuated to make the groups into solid vote-banks. Corruption linkage with organised crime and interference with administration are the direct result of this kind of politics. The constituency for victory is the caste, communal, goonda and money power. The elected representative has to serve that constituency and nurse it.

In this situation the need for building up political parties on ideologies and programmes has become irrelevant. That is why the need for activism at the ground level for political parties is being reduced. There are today just caste and interest group conglomerates. Nationalist approach and nationalist values have lost their relevance. They are for rhetoric only. Lack of nationalist approach is replaced by populism which is destructive of economy and polity and meant to appease people without intending to implement the promises.

Caste, communal mafia gangsters and black money leaders are pampered and pushed up in all walks of life, in all institutions and in all fields of activity. Economic and political climbers are the visible and dominant figures. They are seen at the higher echelons of power. These influence the civil and police officials at the lowest level through the government to keep their pockets of influence. It is these pockets which are useful at the time of the elections. Violence, corruption and chicanery dominate at the ground level with the support of the top. These *dadas* rule the roost—no department of civil administration or life is free from its claws.

What happened in Punjab is a dire reflection of the working of this process of power, that is, the first-past-the-post. Political leaders accelerated divisions of the Punjabi community into Sikhs and Hindus to consolidate their vote-banks. They encouraged and sustained communal, casteist, goonda and corrupt elements. They were successful in enlarging the easiest social breach of Hindus and Sikhs. After the breach in psyche became politically profitable, the process leading to Blue Star was inevitable. The Blue Star could have been postponed but not avoided. It was the natural logic of the Basic Process of Power, just as partition of the country and creation of Pakistan were the logical end of the operation of the Basic Process of Power of separate electorate and communal weightage. A proper approach to the solution of the Punjab problem is not possible unless there is a change in the Basic Process of Power.

The New Basis

The Basic Process of Power must give the people the right to express their disapproval of all who in their views have subverted the democratic system and vulgarised it for individual and partisan interests. The right to reject all on the ballot in a legitimate and non-violent manner is inherent in the exercise of democracy as the right to exercise a positive vote. At present, the right to vote is limited to giving a positive vote in favour of one candidate only. The present system in many cases brings up candidates all of whom the population would like to reject. But the present electoral system does not give them that right.

Democracy implies not merely a choice among alternative unsuitable candidates. It should enable people to indicate that none of them come up to their expectations. When the choice of the people is restricted to a choice between two evils, frustration is the result. Then people indulge in violence and blood-letting to express their anger, frustration and alienation from the system which does not give them any other avenue of expression. The election manifestos are not intended to be implemented and promises made are either populistic in character and economically ruinous when fulfilled or to be ignored adding further to the alienation of the people.

The Two Imperatives

So the content of the process of power has to be changed as to include two principles: (i) the Right to Negate all and not voting in favour of anyone; and (ii) only those will be elected who get an absolute majority of the votes polled. A majority of the voting booths cannot be captured or purchased easily. Majority also gives a representative character to the elected.

Of Revolutionary Potential

Gandhiji characterised the process of power through elections as a subtitute for bloody revolution and even mass civil disobedience. When armed revolutions are no more possible, there is a danger that terrorism may grow as a result of alienation. This may in turn lead to the strengthening of violent power in the hands of the state which also can be misused. Gandhiji had led mass civil disobedience and he knew how difficult and tortuous it was to organise it. Those movements were meant to unite and mobilise people behind a cause and to achieve an objective.

The elections of today tend to polarise the nation and excerbate the divisions. This needs to be changed and replaced by a process which will strengthen the unity of the nation. The electoral process can become an instrument for promotion of unity as well as change in the direction of the people's interest. Legal mass mobilisation of the people is taking place around the ballot box periodically but this process is not being utilised to rally the consciousness of people around a national purpose. The Indian society is so structured that no grouping is in a majority. In our urban and rural constituencies if the electoral process lays down the prerequisite of getting an absolute majority of the votes polled, then instead of being divisive, the uniting forces will get strengthened. Those who wish to get elected will have to devise methods which will make them transcend caste and ethnic divisions and get elected by a majority.

If the two factors—the right to reject all candidates and the requirement of an absolute majority—are enforced, the parties will be compelled to choose candidates who would not generate antipathy among the voters but who will be able to secure a majority. That would mean men of ill-repute cannot be nominated as candidates nor those who are likely to foster parochial interests. Only such candidates will be set up who have a reasonable chance of getting a majority.

The Present System: Profile of Scourge

Though the present system has functioned in the interest of the upper classes, the interesting fact is that because of the basic flaws in the process of power, all classes are unhappy and dissatisfied for reasons of their own. It has divided families, communities and groups. The balance and poise that were the hall-mark of the Indian society have been lost. The increasing violence that we witness is a reflection both of the increasing greed and injustice, and popular reactions to them. When justice is not available through the legal institutions of the state like the Executive, Judiciary, Parliament and Legislature it leads to violence. Those who are in power want to grow rich quick. They use not only the state authority but also maintain and sustain illegal unsocial forces and give them state protection.

One sees this phenomenon all over the country in various shapes and forms. No work can be got done without a bribe or political contact. Justice at various levels is unavailable. Police does not help. Fleecing people is considered legitimate by petty and higher bureaucracy. Honest officers in the bureaucracy are at a discount. Rich and poor, businessman and industrialist, teacher and taught, beggar and money-grabber, land-grabber—everybody is unhappy with the system. A new gradation of anti-social elements is taking place. Those who were powerful yesterday are being replaced by more powerful and sophisticated ones. Even those who manipulated the system are today disgruntled, each for one's own reason. A general sense of alienation is growing. There is an overwhelming demand for change in the system though no mainstream articulation of the nature and direction of change has taken place.

Concurrently a major disillusionment is sweeping all over the world about some of the long cherished values and approaches. The change we should aim at is to bring about a structure of consensus to promote a consensual nationalism. Such a structure and process should help transcend the differences fostered by caste, sect, religion, class, language and ethnicity. It has to be based on our common civilisational heritage, fully provide for individual rights and full development of one's potential and contribution to society, nation and the world.

This has to take into account the vast disorienting changes taking place in our society transiting from the pre-industrial to the industrial stage. Now there is no factor of stability in the form of joint family system or extended family. Individuals and traditional institutions which were once looked upon to render justice or give impartial advice are vanishing or have already vanished. Families are breaking up for want of such advice from sympathetic and well-meaning relatives. Family wreckages are multiplying. One can see the same affliction even in respect of the break-up of political parties and institutions. Ordinary people are running from pillar to post without any solace. I was told by a *sarpanch* in a Punjab village that one of his sons was telling him that he did not want to hear about justice and fairplay from him but only whether he sides with him or his brother.

Lord Krishna said in *Mahabharat* that in a society where impartial personages are unavailable, it drifts into civil strife. Rapid industrialisation and commercialisation have wrecked our traditional values and atomised our society without the compensating values of sense of fairness and justice. Hence a rapid fragmentation is taking place at the ground level.

An impartial person was respected in our society and always had a place of honour. Such persons were considered the wise people. Till some decades ago one could point out such people in every village, town, neighbourhood and in any sphere of activity. This value of impartiality has been downgraded and at many places eliminated from the famly and the village up to the top institutions in the country.

The moral and social crises in the country, visible in the working of all the political and social institutions, represent the ramifications of this crises in our society. This has percolated to all levels from the seats of power. These evils generated through the operation of the Basic Process of Power in politics has polluted our social, religious and moral life.

To bring out the Best in Us

Gandhiji has written in his last Will and Testament that India has still to attain social, moral and economic independence. We must mark his priorities. Social and moral independence comes before economic independence. Our march towards social and moral independence has had serious setbacks arising out of the Basic Political Process of Power. This model of the process of power has been imitated in all spheres of life and in all activities in panchayats, trade unions, university elections, corporations and other organisations of all kinds and spheres of activities. And everywhere we find people going through the process of elections in form but violating the basic spirit.

Politics has come to mean partisanship and violence. All means are considered fair in politics as in love and war. Criminalisation of politics has led to politicisation of criminality. Soon they may take over the constitutional seats of power unless the nation acts now to prevent such a development. The present national crisis and the situations in Punjab and Kashmir, besides the interference by Pakistan, are because our politicians and the process of power had legitimised criminality. Capitalists and labour both consider it legitimate. Even in the university and corporation poll they use it as a legitimate instrument to achieve victory in the elections.

If the social, political and moral crisis has to be met and we have to bring back in India a society where impartiality, consensus and wisdom, peace and tranquillity are to prevail, the two principles of majority and negation in voting need to be ingrained into the social process and made a part and parcel of the national psyche. This has to be consciously done by a deliberately worked out process in order to introduce the principles into the social and political structures. This will be a structured approach to consensus.

Gandhiji used to term our freedom struggle as a civilisation battle. And he was proud of the basics of our civilisational inheritance which permitted full intellectual freedom to the individual and tried to combine it with a communitarian approach. The traditional communitarian approach based on village community has to yield place to the modern democratic one structured from the village panchayat to the Parliament in Delhi. In developing these structures our basic philosophical and moral values will have to be synthesised with the modern concepts of human rights.

There is a lot of talk on decentralisation. At the same time fears have been expressed that decentralisation with the present first-past-the-post election will lead to greater violence and injustice and rule through money and muscle power will become the order of the day. Decentralisation should not mean decentralisation of patronage and corruption. The only remedy is to use the combination of negative vote and absolute majority requirement, the majority percentage being fixed higher as the constituency becomes smaller in numbers.

The present represents the age of the common man. Swami Vivekananda spoke of the age of the Shudras—of the common people who had not upto then been part of the system where policy directions were decided. Now the common man can only choose among the candidates offered to him. In the

proposed system of negative vote and absolute majority requirement those who exercise power will be held accountable and be rejected indicating the disillusionment of the population with particular decision-makers. This is what happened in the Soviet Union. Using this mechanism Gorbachev was able to clean up the Communist Party system and effect systemic changes without violence.

The Logic of Right of Negation

When Right to Reject and election through absolute majority are introduced, a new situation will arise. Because there is no provision of Negation in the present Basic Process of Power (BPP)—all political parties continue to offer similar kinds of candidates and indulge in similar behaviour to get elected. No genuine debates take place in spite of the existence of a multipolar free society. Violence continues to envelop the system for which there seems to be no answer.

In the proposed system, a candidate in order to get elected will have to persuade the majority of the people to vote for him and conduct himself in such a way that a majority of the people will not vote against him. Getting a majority of votes from a constituency is not the same thing as surviving the choice to the people to cast the rejection vote. People often go to the polls to vote against somebody. Most of the so-called waves are in fact Rejection Vote translated as vote for the rival party. Once people have the choice to reject they will be able to speak out their minds freely, not being constriained to choose between a number of undesirables. *The Rejection Vote will create a situation which will make everybody come to the ground.* They will be consciously joining the national process at the booth. Genuine workers and leaders in all classes, castes, professions will work out, step by step, solutions to genuine national problems. Since we do not have majorities, different castes, groups and interests will have to transcend their differences and parochial interests to get a candidate elected with an absolute majority, surviving the Rejection Vote. Here the system will compel them to move in the direction of national consensus.

A new situation has developed after independence. There is no people's organisation of all classes and castes and professions after independence. There are no 'people' in the collective sense of the term. 'People' are 'people' when they have a common objective. At the time of the struggle for freedom, in spite of differences between political, economic and social approaches, they were together on the common objective of 'freedom'. So they could join together or could emotionally feel together to struggle to achieve freedom.

After the achievement of freedom, the people have been divided into 'interest groups'. Each group pursues its own parochial interest often in conflict with others. When leaders and political parties talk in the name of the people, in fact they mean only particular interest groups in their favour. Development has not become a uniting ideal. It is divisive according to the interests. It is only a common national objective that unites a nation. That is why the spirit of nationalism was aroused either when we were subjugated or under foreign attack. Can there be a common national objective when we have achieved freedom? It seemed difficult a few years back. Now the desire to change the present system by changing the process of power can be the uniting factor since all classes, castes, religious groups—in spite of their differences—want change. Secondly, the new international and national challenges to unity and integrity of the country can be a unifying factor provided there is the determination to give up the present conflictual approach to politics and replace it by a structural consensual process. Thirdly, only through such a process greater autonomy and decentralisation are feasible and not in the present one. This gives a chance to decriminalise politics.

The values of the freedom struggle changed our psyche in certain respects. But Gandhiji's emphasis on social and moral liberation was not pursued. Through this process we should attempt to carry out those objectives. The two principles of *Negation* and *Absolute Majority of votes* constitute a *mantra* which will build up individually and socially the morality of the people through its application to the Basic Process of Power and in all other electoral processes in the society. The value of consensus and impartiality will be developed in the psyche of the people just as election has seeped in as a value.

International Context

These developments in our country have also to be viewed in the international context which is undergoing cataclysmic changes. In the international politics of today three major trends are visible all over the world.

First, pluralistic democratisation is making headway. This is in line with the value we have accepted in this country.

Secondly, there is a demand for greater autonomy

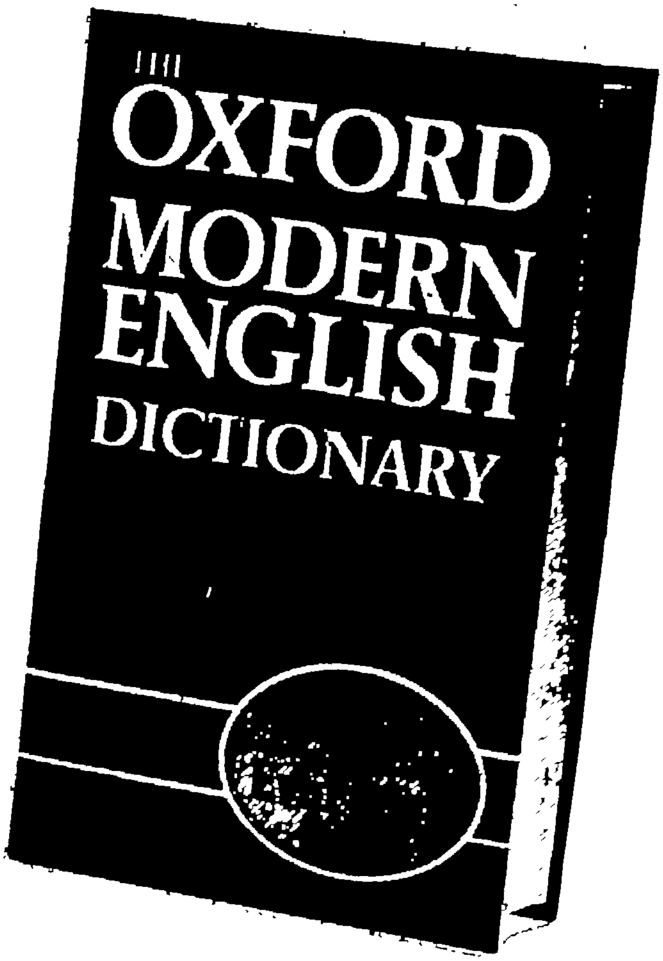
NEW

THE OXFORD MODERN ENGLISH DICTIONARY



Edited by Julia Swannell

A new dictionary for the English of today.

Perfect for everyday use, this is a completely new member of the Oxford dictionary family. This compact and affordable format is full of helpful usage notes. It is ideal for those who want the expansive definitions, full spelling, and pronunciation guidance of the *COD*, but do not need all its technical, scientific, or literary terms.

- ▲ 90,000 entries
- ▲ Written in straightforward English
- ▲ Packed with new usage notes
- ▲ Full origins and pronunciation
- ▲ Hundreds of new words including *gobsmacked*, *womanist*, *bhangra*, and *zouk*

90,000 entries

State and Rights Movement in India

UPENDRA BAXI

Let me first file a caveat of resistance to the tyranny of the singular. Despite the verarching grid of sovereign power, the state onstitutes a variety of multiplicities; in India, the tate at the local level symbolises itself often in icrofascism of power; while the nation-state elebrates its commitment to the rule of law it also llows space even for (what I have elsewhere called) urplus repression or reign of terror. It is a historic act that rule of law does 'peacefully' coexist with he reign of terror.

Similarly, there is no nationwide human rights ovement; there are only human rights movements. he trajectory of resistance to undemocratic practices f power, entailing profound violations of human ights is yet to be fully traced and understood. India s yet to find her own history, and historians of uman rights.

This raises the question, partly one of method, oncerning historiography. The violation of rights tands embedded in the genealogy of state and ower. Thus, a history of state formation ought to llow enough scope for the narrative of how rights-nunciation occurs, and how violations of rights ialectically interrogate practices of power. But the iscourse on the life of the state in India suggests mply that human rights perspective does not rovide any vantage point in the narration of state ormative practices. On the other hand, any attempt t narrativising the state which privileges human ights lays itself open to somewhat justifiable riticism of inadequacy and even distortion. But uch privileging would indeed be critical for an nderstanding of the growth and development of he state ideology and its hegemonic apparatuses.

There is further the question of hegemonic emporalities Would it be anachronistic to seek the ite of human rights consciousness in the early phases of the nationalist movement? Or to interrogate the leadership of the freedom struggle from the contemporary perspective of human rights movements? Of course, to invoke the Universal Declaration of Human Rights as a marker of the birth of contemporary human rights consciousness will itself be an act of privileging the notion that human rights are essentially Western in their origins. Such a position, as we all know, has its own historic impact on practices of power in many a Third World society which valorise the discovery of their own cultural traditions emphasising duties and responsibilities over entitlements. The current cottage industry of philosophical critique of the very notion of basic human rights, not too curiously, aids and abets such practices of power.

◆

IS it possible to say that the nationalist struggle in India selectively reappropriated the liberal traditions of rights, as a resource for combating colonial/imperial domination? Would it be too much even to say that the Universal Declaration of Human Rights is a text co-authored among others, by the Indian nationalist pen? These questions await Foucauldian labours.

A related question of method is one of periodisation. One may periodise the study of rights movement in India by identifying charismatic/inaugural leaders or regimes. Or do we accomplish periodisation in relation to basic changes in the economy and polity? Or, further still, by combining the elements of the foregoing with the consciousness and solidarity—both in terms of enunciation of rights and praxis of implementation—at the global level? Any choice on this count will certainly predispose the narrative of the 'state' and human rights movements in India in a certain ineluctable direction.

In all these, decompostion of the semiotic entity "human rights" is constantly operative. For example, one hears of distinction between "civil liberties" and "democratic rights": "political rights" on the one hand, and "cultural, social, economic rights" on the other; rights of specially disadvantaged groups (the aged, children, indigenous peoples, women)

The author, an eminent Professor of Law, is at present the Vice-Chancellor of the University of Delhi. This article is the synopsis of the paper he presented at an international workshop on "Social Movements, State and Democracy" held at the Indian Statistical Institute, New Delhi on October 4-8, 1992 as part of Prof P.C. Mahalanobis' birth centenary celebrations.

and rights of people as a whole (right of self-determination, and the recent UN Declaration on the Right to Development). We also see a steady emergence of concern, articulated by Karl Marx with the *species rights*—that is, collective rights of mankind to survival (perhaps the only justification for the emerging environmental rights, jurisprudence). The manner in which one wishes to privilege certain notions of rights will undoubtedly affect both analysis and the doing of history of rights and of state.

How do we deal with the problem of production of discursive truths in the narratives—whether global, national, or local—of rights-violation? The activist discourse produces an order of truths about violation which differs from the order of official truths. The collision between the truths of power and of resistance, of necessity, characterise the state-human rights movements' encounters. A prime task of human rights historiography in India would be to assess changes in patterns of discursivity. How far, for example, the institutional modes of production of official truths have been affected by change/discontinuities in the power of activist discursive practices? What resilience do these practices have? Or how does the politics of human rights movements in India impact upon national/State level politics? And by what indicators do we locate the impact of the former on the latter?

Even the raising of these issues of method runs the risk of being inaugural. Human rights communities are marked by, as we see later by a variety of actors, almost all of whom seem to have strong aversion to what remotely resembles 'theory' type concerns. This has generated a mounting loss in terms of anguished collective reflection and stocktaking. Perhaps, the activist aversion to 'theory' is wholly understandable, and some will say, despite the great examplarship of Marx, that disdain for rigorous analysis is even justified. What is *not* so easy of comprehension is the disregard of these issues by all those whose freely chosen avocation is political or social theory.

◆

IN what follows, I trace innovations in the rights-regime accomplished by the Indian Constitution and by a historic activist assertion of the judicial process and power, and identify some dilemmatic arenas in the life of state-human rights movements' interaction.

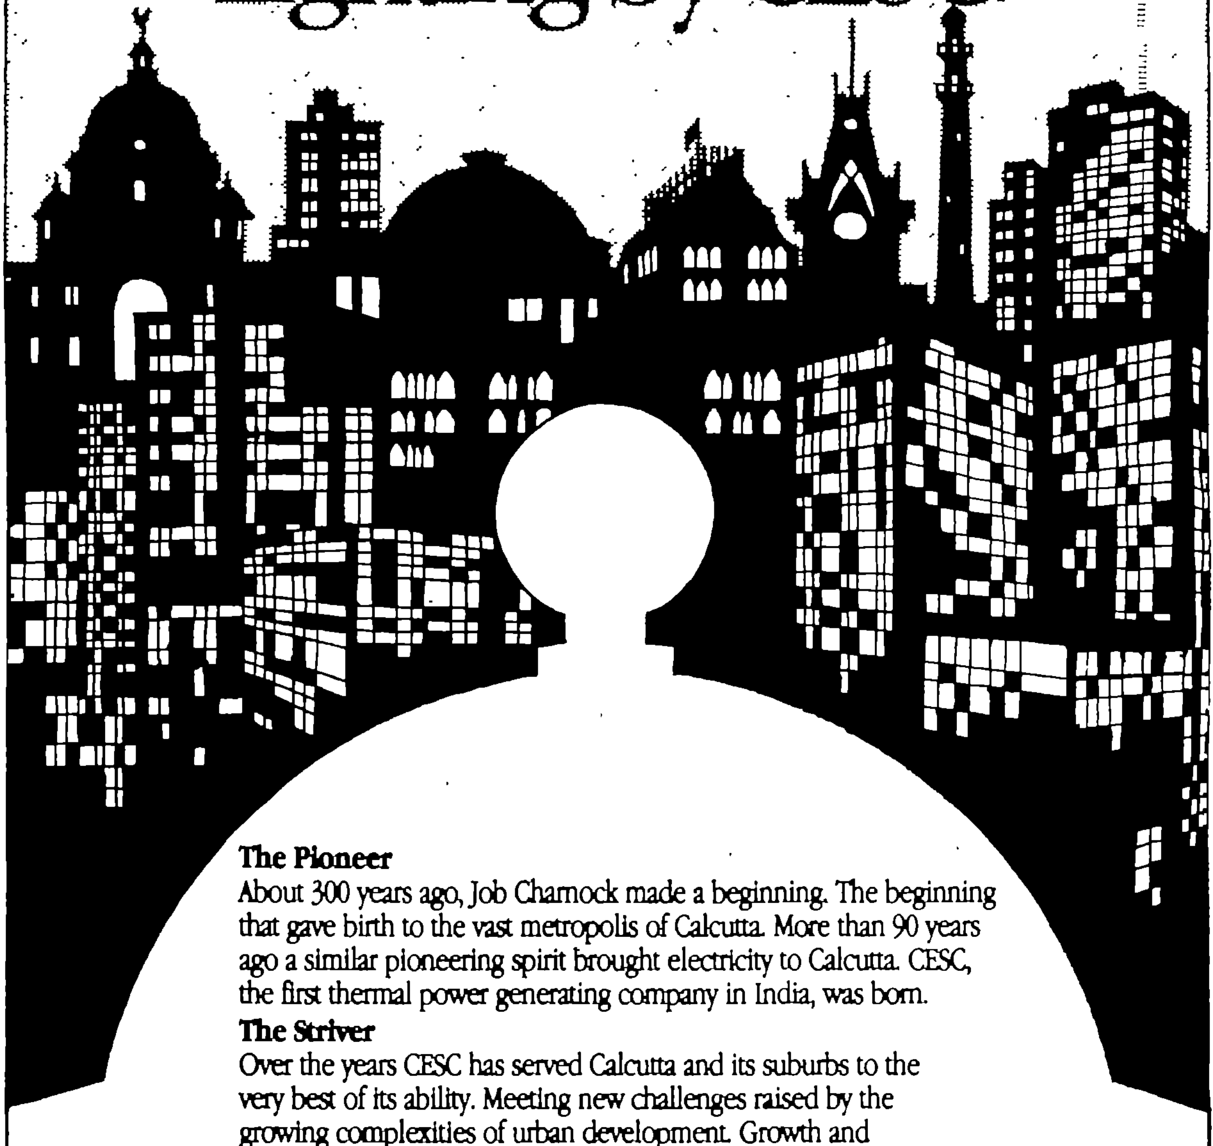
The "theory" of rights animating the Indian Constitution has at least three distinctive features. First, the Constitution distributes rights into judicially enforceable rights (Part III of the Constitution) and social and economic rights which the state must respect in law and policy-making as well as in governance (Part IV—the Directive Principles of State Policy). Second, in many respects the fundamental rights in Part III emerge not just as a corpus of limitations on the power of the state, guaranteeing state-free spaces for individual and collective life-projects, but also as an onslaught on intransigent attitude and behaviour in society and culture. In other words, through Article 17 (constitutional outlawry of untouchability) and Article 23 (constitutional proscription of many forms of agrestic serfdom and traffic in human beings) the Constitution directly addresses and confronts the dominant formation in civil society; the Indian Constitution is inaugural in the sense that it enhances the reach of fundamental rights beyond the state to civil society. Third, the Constitution is distinctively solicitous of solidary rights of linguistic, cultural and religious minorities.

These three innovative features, particularly the last two, recognise the possibility of what M. Foucault characterises as "illegalities of rights"—the third feature limits the scope of tyranny of majority assuring cultural autonomy of the minority groups, and the second feature seeks to arrest, at least normatively, intransigency of peoples' law formations. And the first feature, after three long decades of adjudicative discourse over the right to property in the context of agrarian reforms, has helped (even though too late) exorcise from the constitutional text fundamental rights to property, as well as to curb, at least until now, a variety of 'market' rights.

The task which was left unaccomplished by the authors of the Constitution in terms of the minimum entitlements of the large masses of the Indian impoverished has been followed up since the eighties—through social action litigation by the Supreme Court of India which through its corpus of activist jurisprudence has enunciated many new basic rights. Among the judicially created fundamental rights are the

— right to the dignity
— right to livelihood
— right to compensation and rehabilitation for injuries done or caused by state agents or agencies.
— right to speedy trial
— right to health
— right to education
— right to gender equality.

City by Job Charnock. Lighting by CESC.



The Pioneer

About 300 years ago, Job Charnock made a beginning. The beginning that gave birth to the vast metropolis of Calcutta. More than 90 years ago a similar pioneering spirit brought electricity to Calcutta. CESC, the first thermal power generating company in India, was born.

The Striver

Over the years CESC has served Calcutta and its suburbs to the very best of its ability. Meeting new challenges raised by the growing complexities of urban development. Growth and dynamism have characterised CESC since its inception.

The Complete Calcuttan

Having spent nearly a century in the service of its consumers, CESC today has the experience and the capability to take on new projects. An integral part of the life of Calcutta, CESC is poised to keep the city lights burning well into the 21st century.

CESC
LIMITED

Serving night and day, everyday, since 1897.

CLARION C-CESC-26R2

Of course, the education of new rights through the Apex Court does not signal any comprehensive achievement of these rights, given the not-too-readily subversible ingenuity of executive power. But it is nonetheless, remarkable that through the deft deployment of the relative autonomy of the judiciary from polity and market, the adjudicatory power differentiates itself as a form of state power, thus accentuating contradications within the hegemonic apparatuses of governance in India. In social action litigation, we find a whole new range of themes on which public discourse on the ethic of practices of power emerges.

And social action litigation is itself an extension of human rights and popular movements into state formative practices. The initiators of the social action litigation comprise a variety of activists, individuals and groups, supported by the media and the bar. In this sense, people participate, through activation and legitimation of adjudicatory power, in fashioning an expansive regime of rights converting the Supreme Court of India into a permanent Constituent Assembly of India, sculpting the nature and future of rights movement, steadily converting the Directive Principles of State Policy into judicially enforceable rights.

◆

AS I have analysed elsewhere (see U. Baxi, *The Indian Supreme Court and Politics*, 1980), judicial activism arose as an aspect of cathartic populism for the Supreme Court's own constraints of commission and omission during the internal Emergency of 1975-1976. But much of human rights activism also arose out of the middle-class 'radicalisation', out of the same experience of the collapse of state structures into legitimated arbitrariness in practices of power. Both the media and legal professions, as well as many other learned professions, who had taken a modicum of rule of law granted as a public good (despite the problem of free riders) suddenly found themselves as deprivileged as large sections of the impoverished since independence. Allround public energies were released to ensure that the Constitution does not remain a plaything of power, at least in ways which affect the privileged strata or 'classes. The judiciary emerged, especially the Supreme Court, through social action litigation as a new democratic icon. The Supreme Court began to hunt and haunt the nooks and crannies in the edifice of state power to locate sources of despotic arbitrariness and to curb and confine them; this saga of judicial valour affecting state formative practices awaits its own racounteur.

The fifteen year old innovation in state-ways has attracted its own dynamic of disenchantment and wearisomeness, and periodic critique of the betrayal of revolution of rising expectations. And yet despite all the limits of judicial powers and process, the Supreme Court of India, amongst all the institutions of governance remains, in the words of Justice Goswami, the "last refuge of the bewildered and oppressed". The Supreme Court of India has become the Supreme Court for Indians; it has been able to take rights seriously only because it has been, to some extent, able to take people's *suffering* seriously.

Human rights activists, naturally, have an ambivalent approach to high judicial power and discretion, enwombed as it is in the state. Their perceptions are shaped, despite democratisation of judicial access through simple letter petitions (what I call 'epistolary jurisdiction'), by their varied experience of efficacy/impact of judicial decisions on the structures of power. During years of struggle for the Bhopal victims, on the adjudicatory terrain, I myself experienced moments of disenchantment. And there is no assurance that these may not recur. But in any struggle for rights realisation, all search for such assurance is futile.

That apart, I am unmoved in my belief, shaped by overall assessment, that 476 (450 High Court justices and 26 Supreme Court justices) public policy-makers in India are destined in ways different than others (about 5500 odd legislators, and 15,000 top echelons of bureaucracy, police and paramilitary forces) to carry forward the task of sculpting the nature and future of Indian democracy. What the Western, notably American, critics of judicial power and process condemn as an anti-majoritarian, unrepresentative institution, has an extraordinary role potential in restoring minimal democratic virtues and values to practices of power in India. Indian human rights movements have yet to make this proposition a contested site, even as they, eclectically, invoke judicial power and process for their own noble ends. They need to remedy their insufficient appreciation of relative autonomy of adjudicatory state power as a resource for social and human rights movments, and to locate in the social/political history of comparable societies of South the salience, and resilience, of appellate judicial institutions in India, consistent with a searching critique of the judicial process, which I have myself included as a part of overall praxis.

◆

A marked ambivalence is also on display, among human rights movements and constituencies, concerning the executive and the legislature. State-bashing (state here being conceived as the supreme executive) is our favourite pastime but the uncomfortable question persists: "What do you say after saying 'Hello'!" (One Hindi equivalent of 'Hello' nowadays is "Hi-Hi" or "Down with...") It is here that we find a variety of antistate experiences, in the realm of rights.

One response is state/law/rights transcendent, embodied by Gandhian/Sarvodaya movements, which are endangered species in India, with the distinction perhaps that the species may have done much to periclitate itself! On this approach state/law are redundancies before the awakened social conscience and consciousness. The state undoubtedly exists but can be marginalised by 'truth-force', 'third-force', high-minded ethical fundamentalism, 'service-before-self' activism, a type of self-consuming artefact, through the practice of austerity and minimisation of wants. At one end it points to philosophical anarchism, at another, and in a related way, it valorises construction of moral community (or civil society) as a way of putting state/law in their place. The state/law as an immoral nuisance will undoubtedly seek to impinge on Gandhian renaissance, as happened in the bizarre case of the Kudal Commission which opened up for hostile gaze the management of Gandhian/Sarvodaya institutions, and patterns of resource raising and financial 'management' (how mean can the state get?). Making the state/law bizarre is a typical preoccupation of the spiritual heirs of Gandhiji in contemporary India. And it works well, as it did for Mohandas in relation to the colonial/imperial state, at times in contemporary India as well.

But the nihilism of the neo-Gandhians to state/law is different from that of Naxalite and neo-Naxalite jurisprudence, not just in the latter's valorisation of retributive violence as practice of insurgent politics but also in the critique of rights model/thesis. The Gandhians/neo-Gandhians have no serious discourse on rights, since rights do no belong to the genre and lexicon of superior moral good. In contrast, the Naxalite/neo-Naxalite critique of rights finds it, not altogether 'pure', genealogy in the *Critique of the Gotha Programme* and *On the Jewish Question*. Theirs is not a project of ameliorating the Indian state; their project is its demolition by revolutionary praxis, with strategies of sustainable violence. If strategies or tactics demand a recourse to rights languages (as in manipulating the contingencies of state/law in the Draconian dragnet 'security' legislation or fake encounters), it is luminously clear to them, and their next best friends, that what is being practiced is the motto: "All is fair in love and war". (Incidentally, this expression has always puzzled me because love is, *fortunately*, after Rousseau's valiant attempt at distinction between 'romantic' and official or 'moral' love, has been insufficiently 'theorised' in human sciences!)

◆

AT the mid-point of the spectrum thus delineated lies the human rights activism of the troubled Indian bourgeoisie, where most human rights movements have their inescapable class location. The Indian state often thinks through them, even when they remain convinced of their anti-state predispositions. Avoidance of 'statolatry' is their first postulate; aggressive competitiveness in condemning practices of power is a sound governing guideline and again naturally so; fear of, and resistance to, cooptation by the state is their third, and again rightly so, animating passion. But at the end of the day activism is consumed by negotiating state/law/rights. But not without profound dilemmas.

The first dilemma centres upon the empowerment/disempowerment dialectic. In order to combat regressive forces (take your pick to instantiate—this 'communalism', 'sati', gender-based descrimination, child labour) one needs to enhance the powers of an interventionist state. But to empower the state by activist praxis, even in pursuit of rights, is deeply disturbing; surely, it can't be the project of human rights activism to empower a Leviathan! Traditionally, the mission of such activism is to *disempower* the state, to create state-free spaces for individuals, groups, communities. But insistence on a *disempowering* approach is unproductive of struggle against dispersed power of people's law-formations, some of which strike at the roots of rights. Encounters between human rights activism and the Indian state presents a series of manipulation of contingencies. This is ineluctable; but the legitimacy problem for activism seems to grow apace insofar as the legitimating principle has in the mastery of suspicion about the state's evil designs on human freedoms and rights. What other basis of 'legitimation' (an old problematic for human rights movements) may we find instead?

At a recent dialogue in Delhi (under the auspices of the People's Union of Civil Liberties) the problem of 'legitimacy' of human rights, astonishingly, surfaced and there was even some talk of the need for human rights communities to "woo the middle classes" back to the value/mission, of languages of rights. Not too long ago (I add this by way of reminder), many leading human rights communities critiqued, rightly (prescinding the question of moral opportunism in practice of politics), the middle-class support to the anti-Mandal agitation on the foundational principles of equitable social transformation. How shall we package, recommoditise, rights languages in market-friendly ways? This seems to be an important question in some human rights quarters in India today.

A second dilemma pertains to the question: what shall we do with the sonorous enunciation of constitutional values? This is particularly acute with some leading social theorists/colleauges who in the wake of Shah Bano legislative reversal were very articulate on the foundational value of 'secularism' but now feel harrassed by the fact that secularism is an alien, unworkable, futureless metaphor, which politicians harness to their own ends (as if they could ever do otherwise!) and find a way of *somehow* invoking traditions of interfaith tolerance, discovered to be the hallmark of the Indian culture and civilisation.

The politics of nihilism, in a Nietazschean sense, makes us revert to a pre-Constitution Indian past, which was visited with a mayhem by the insertion or imposition, of culture-bound, history-laden, concepts from the "West". This kind of 'critique' raises not merely critical questions concerning the lineage of languages of human rights but also marks the erosion of rights 'fundamentalism' to combat other kinds of—majority or minority—'fundamentalism'.

The same dilemma arises, and persists, in what to do with the constitutionally mandated scheme of derogation from the egalitarian principles for educational, employment, and legislative reservations for the Scheduled Castes (a caste created by a secular caste—assaulting the Indian Constitution!), Scheduled Tribes and Other Backward Classes outside again the arena of polemical condemnation of self-interested practices of power (as if these could be otherwise).

A third dilemma relates to amelioration of state institutions. On this issue, the evidence is at least unimpeachable. Human rights communities in India have surrendered the opportunities they have had to reform state institutions. They have failed to organise campaigns around, for example:

the National Police Commission Reports towards making Indian police democratically oriented;
the Mulla Committee Report on prison reforms;
the Law Commission's recommendation that the burden of proof for death in police custody must initially shift to the police to show that death occurred due to natural causes;
India's derogation from the civil and political rights convention for compensation to victims of torture, cruel or unusual treatment or punishment.

◆

ALL these matters have been before us for more than a decade. And despite repeated solicitation of attention of human rights communities, no supportive public opinion/pressure group campaigns have yet been launched. Nor does one witness similar campaigns for worker and community safety, against predator multinationals in a post-Bhopal India. Nor, further, is there organised engagement in demand formation for the state deference to progressive judgements of the Supreme Court of India on the rights of the dispossessed, disadvantaged and deprived millions of India.

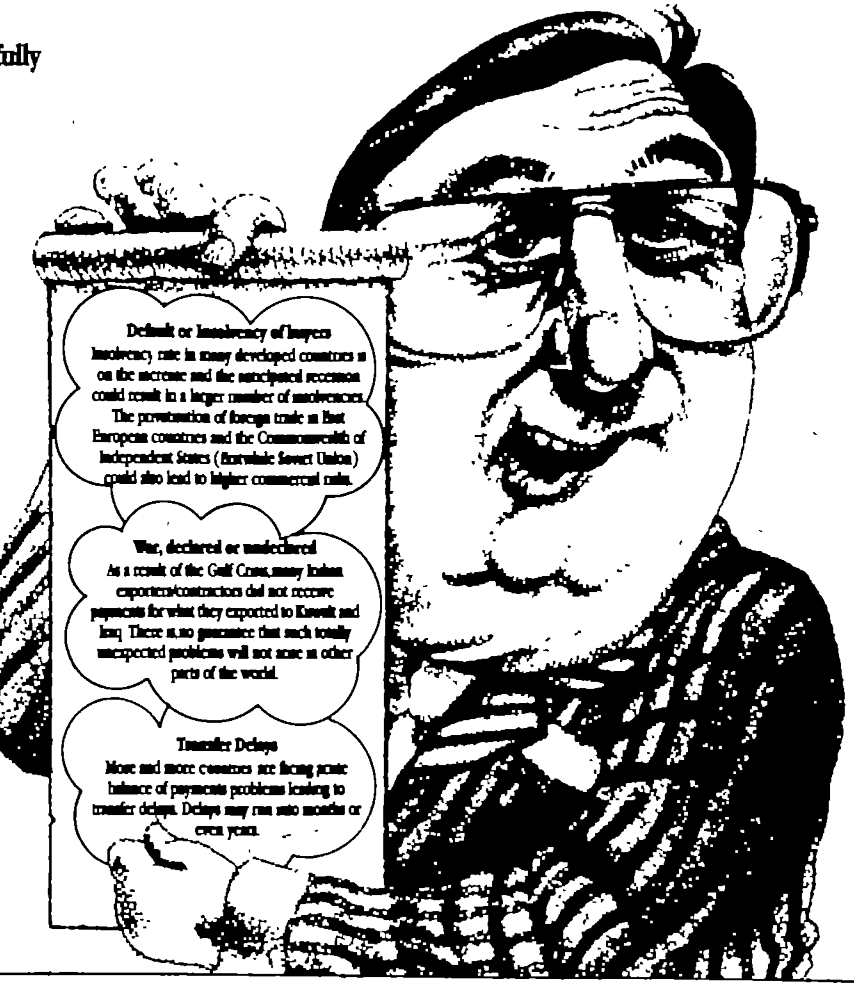
How does one explain this? By recourse to the hypothesis that the troubled bourgeoisie of India, including the human rights communities, is as yet insufficiently historically troubled? Or insufficiently formed bourgeoisie? Or, as I often put it, is it a situation of libidinal fascination with the pathology of power, which is seen as a germinating force for the very existence of human rights communities? Or, in a related way, by a formative anxiety in nascent human rights consciousness/organisation that reformation of state may pose a setback to their growth and development? I do not know the answers to these questions; but, in the present state of play, as I am learning by experience, even raising these questions seems to invite agitated attempts at censorship by some human rights communities and activists. Regardless of such contingencies, the code of censorship opprobrium and even exile operative in human rights communities may begin to bear, if we are not vigilant, a family resemblance to that of the state.

Internal, friendly, and co-suffering interrogation of the direction and contours of human rights movements in India is disvalued, perhaps for cogent reasons of protection of fragile emergent com-

(Continued on page 58)

Here are 3 good reasons for taking ECGC cover

Read them carefully



Default or Insolvency of buyers
Insolvency rate in many developed countries is on the increase and the anticipated recession could result in a larger number of insolvencies. The perturbation of foreign trade in East European countries and the Commonwealth of Independent States (Erstwhile Soviet Union) could also lead to higher commercial risks.

War, declared or undeclared
As a result of the Gulf Crisis, many Indian exporters/contractors did not receive payments for what they exported to Kuwait and Iraq. There is no guarantee that such totally unexpected problems will not arise in other parts of the world.

Transfer Delays
More and more countries are facing acute balance of payments problems leading to transfer delays. Delays may run into months or even years.

These or any other reasons could also affect you because as of now no export deal is ever safe – and non-receipt of payments is a real threat.

One default can wipe out years of hard work for an exporter.

Over the last three decades, ECGC has paid out claims aggregating about Rs. 486 crores. For the year April '91 to March '92, claims amounting to over Rs. 105 crores have been paid, and this has helped many of India's exporters stay in business.

This is where taking an ECGC policy helps.

Take care. Take cover. ECGC cover. Today.

Call or write to us. Remember an ECGC office is only a phone call away.

In Tribute to the South's Golden Age

SURENDRA J. PATEL

Then Prometheus gave wisdom, which is strength,
to Jupiter...
And he tamed fire which like beast of prey,
Most terrible, but lovely, played beneath
The frown of man; and tortured to his will
Iron and gold...

He gave man speech, and speech created thought,
Which is the measure of the universe;
And Science struck the thrones of earth and
heaven,
Which shook, but fell not...
He told the hidden power of herbs and springs,
And Disease drank and slept. Death grew like
sleep..

To defy Power, which seems omnipotent;
To love, and bear; to hope, till Hope creates
From its own wreck the thing it contemplates...
Percy B. Shelley, Prometheus Unbound, *1817*

There is an air of despair allround. The East and the West have now joined the South[1] in a crisis which has become truly universal. But the crisis is the most severe for the South which is burdened by heavy debts, declining terms of trade, mounting deficits, reverse transfer of resources to the North, and negative or zero growth. Structural adjustment, whether masked by a human face or not, is leading to a sharp worsening of conditions of life for the hungry, the poor, the disadvantaged—women, children, and the homeless.

The prophets of "doom and gloom" are now riding high. Their loud wailings are drowning the flicker of hope the South may have for its future. They are beginning to wipe out even the memory of what the South collectively achieved in the four decades since 1950. The clock of history has already pushed into the past the story of these decades. It is on the verge of being forgotten.

The achievements of those decades are a story without parallel in world development history. It tells of the South bettering the 80-year record of the North's nineteenth century (1820-1900) advance. The South did this in half the time, at twice the growth rates, and with five times the North's population in the nineteenth century. It even excelled the North's rapid pace during 1950-90. This record is truly remarkable. Hence this essay pays a tribute to that Golden Age of the South's development, to honour these decades lest they are forgotten.

Dr Patel is a Visiting Professor at Saint Mary's University, Halifax, Nova Scotia and the Sardar Patel Institute of Economic and Social Research, Ahmedabad. This article appeared in Great Britain in World Development, *Vol. 20, No. 5, 1992 (from where it is being reproduced).*

The essay begins with a brief review of nineteenth century Europe's advance, which could serve as a frame reference for the South. The next section takes up the post-War expectations for the South's development. These are then contrasted with the actual economic and social advance of the South during 1950-90. The concluding section suggests that we can perhaps look back to the South's past and forward to its future, with hope—as Shelley's *Prometheus Unbound*, cited above, did for Europe.

EUROPE'S ADVANCE SINCE 1820

The nineteenth century was the age of hope and progress for Europe. We will begin with a review of Europe's advance during this period so that it can then be compared with what the South achieved later. To catch the temper of the times, we turn to the setting of Rome in 1817. Shelley, just 26, had come to Rome leaving behind the fog and rain of England.

The long, bloody Napoleonic Wars had come to an end. Its dead were counted and buried. Europe beginning all over again to hope. The Industrial Revolution, the promise of progress, was in full swing. The Roman spring was an intoxicating inspiration for Shelley, the romantic, unrepentant reformer. His creativity was at its height. A few weeks of intense composition, and his most passionate lyric drama, *Prometheus Unbound*, with Asia as Prometheus' beloved, was born. It was the opening salvo in his salute to the dawn of the springtime of humanity.

Beethoven too was inspired by the new winds. In tones ringing with hope, he composed his "Overture to Prometheus". Two of the greatest artists of Europe, Shelley and Beethoven, had pulled the curtain down on the past and sung of their hopes for the times to come.

Times were hard in Europe in the early nineteenth century. Life was short, brutal. Death was always at the doorstep, for infants, adults and the aged alike.

In Hi-Tech Construction Projects

NBCC stands apart!

With more than three decades of experience and expertise in diversified hi-tech construction projects, NBCC today stands apart as a premier Public Sector Construction enterprise.

NBCC has in-house capability of Consultancy, Design Engineering, Project Management and Quality Assurance programmes. With its own Human Resources Development Schemes and Computerisation, the Corporation has added new dimensions in specialised construction field.

Highest T.V. Tower, Widest Bridge over River Yamuna, Airports, Oil-berths, underground transportation to over-head transmission.. the list of achieyements is endless.

NBCC— Set for time bound T&D Plan.

NBCC A Team in Pursuit of Excellence

Most Europeans were poor, ill-fed, ill-housed, ill-clad, and illiterate. Standards of living had improved only somewhat since the eighteenth century. Thomas Hobbes' comment on his own times still generally applied to Shelley and Beethoven's era:

> No arts, no letters, no society; and which is worst of all, continued fear of and danger of violent death: and the life of man, solitary, poor, nasty, brutish and short.[2]

Reform Acts were far away. Slavery had not been abolished. Technological advance had spread only to textiles and steam. Railways, steamships, diesel and electric motors, new medical discoveries, organic chemistry, universal adult franchise, and free, universal and compulsory education—all these and many other embodiments of progress—were far away. European lives were firmly anchored in the past. The amenities the Europeans now take for granted did not exist a dozen decades ago. Progress then was but a dream, a hard-to-believe hope.

Since Shelley wrote, the North has changed beyond recognition. Slavery and serfdom have been abolished. Kings and tyrants have been overthrown. Democratisation has spread far and wide. Disease has been put to sleep, as Shelley said. Death rates have dropped. The Northerners are now healthier. They have grown on average four inches taller. Life expectancy has gradually risen. Illiteracy has been all but eliminated. There are now more students in the North's universities and institutions of higher learning than in its primary schools in Shelley's day. The magic of electricity lights citizens' lives. When the sun sets, darkness no longer dominates.

There is no simple way to measure the scale of this advance. We may employ here the greatest invention in economics of the early twentieth century. Drawing upon the work of King and Clark, Kuznets had perfected the system of national accounts. It could chart the growth of a nation's gross domestic product (GDP) over time. It could express its total and per capita income in simple figures. There are many deficiencies in these numbers, but this is not the place to delve into this issue.[3]

In the century and a half since 1820, the North's total GDP increased 40-50 times, and its per capita GDP 12-15 times. In comparison, as Keynes had remarked, per capita productivity could have at the utmost doubled in the 4000 years ending in 1700;[4] and its increase by 1820 could not have been more than 50 per cent. There were too many violent ups and downs, but little steady and sustained advance. In sharp contrast the advance since 1820 was spectacular and unprecedented, as described by Kuznets in his study, *Modern Economic Growth.*[5]

The advance was not orderly. This fact is too often overlooked, or even forgotten. There were many economic ups and downs, many cycles. There were three long economic crises—in the second and the last quarters of the nineteenth century, and in the period between WWI and WWII. There were also some 15 depressions and nearly 40 recessions. Schumpeter distinguished them by the names of the authors who identified them—Kondratiefs, Juglars and Kitchins.[6]

There were wars, big and small, among the small states of Europe. There were also wars of colonial conquest. There was much destruction of men and means. All these economic and military disturbances notwithstanding, the engine of Europe's advance rolled on relentlessly.

The 80-year advance of Europe during 1820-1900 may be even more relevant for comparison with the South's. For then, the nations of the North were all newly industrialising countries, the unrecognised NICs of the nineteenth century. (They did not know then that that is what they really were. The title was to be invented in the post-WWII period to single out a few ministates from the rest of the South.) Great Britain, the pioneer of the Industrial Revolution, was joined by a succession of newcomers: Belgium and France in the 1820s; Germany, the United States, Canada, Denmark in the 1860s; Norway, Sweden, the Netherlands, Italy, Japan and Russia in the 1890s.

In the nineteenth century too, as now, development did not begin in all countries at the same time. It was uneven among countries and over time. Each new entrant standing on the shoulders of those who started earlier, demonstrated its learning prowess by attaining a progressive acceleration in its rate of growth.

What did the North achieve in these 80 years? This can be expressed in simple overall terms. The North's total GDP rose about six times in these years, growing at about 2.2 per cent per year—lower for the first 40 years, and higher for the second. Its real per capita GDP expanded 2.7 times, increasing at 1.25 per cent per year.

These achievements richly deserved all the tributes they received, then as well as later. For they were until then simply unprecedented. Hobsbawm called that period The Age of Capital".[7] Over a hundred years earlier, Marx and Engels had welcomed the rule of capital in the most glowing terms:

> During its rule of a scarce one hundred years, [it] has created more massive and more colossal productive forces than have all preceding generations together.[8]

POST-WAR DESPAIR FOR THE SOUTH

The North has always had an underlying despair for the South. But that is not really even a North-

STRIVE FOR GREEN GUJARAT

Making Gujarat green involves an intensive tree plantation drive by the people.

Let each family grow one tree and contribute towards preserving the environment. We need to plant trees on the sides of roads, rail tracks, canals, wells and on playgrounds and wastelands.

I appeal to all students, panchayats, farmers, industrial houses and voluntary organisations to join the plantation drive.

CHIMANBHAI PATEL
Chief Minister, Gujarat State

South phenomenon. The industrialised have generally dismissed the abilities of the industrialising, their potential rivals. Moreover, when the industrialising do industrialise, the industrialised have a hard time accommodating, let alone welcoming, the newcomers on the world stage. A mixture of arrogance, fear and jealously must be responsible for such attitudes.

These prejudices were all too visible in the British comments on German products exhibited at the Great Exhibition, the First World Fair, held in London in 1851. The lead article in the special Exhibition Supplement of a famous British journal ridiculed the low level of division of labour (beginning where Adam Smith began) among the Germans: their products were trivial uniform, imitative. The article then concluded:

> What they exhibit gives a painful impression of an emasculated industry... Such an exhibition like their toys, is better adapted to children and the vulgar than to mature and enlightened beings.[9]

The comments on Japanese products and management in the early phase of its industrialisation were similar if not more brutal, particularly on the competence of its management. An Australian expert invited by the Japanese Government in 1915 stated:

> Inferior goods, irregularity and indifferent shipments have caused no end of worry...First class managers are required to wake things up and get out of the go-as-you-please style that seems universal at present.[10]

In these respects, the South has probably suffered even more. Most of its countries were colonies, being "civilised" by the European empire builders. A disdainful attitude on the Europeans' part was to be expected. Even within the South, there were conservatives who hankered for the days of colonial rule.

The skepticism on the South's ability to develop following decolonisation spread to more respectable levels—even to academics, Pessimism was universal. Hope itself was crippled. Literature on the South's failures, disasters, crises, and inabilities mushroomed. When the South was in gloom, its "developers" were in bloom. When the South was in bloom, they sang of its impending doom.

Their skepticism has too often bordered on worries, concern, even on despair. The development profession in general has been much more at ease when the South was in crisis. It could then analyse, diagnose, prescribe and describe. Professional reputations were built in such times. A few examples may be cited for illustrative purposes.

The tone for what the South could do was set as early as 1951. The United Nations had an important provision in the Preamble to its Charter. It called for employment of international machinery for the promotion of the economic and social advancement of all people. A major step in this direction was the convening of the first United Nations Expert Group to propose measures for the development of the countries of the South.[11]

In its report, *Measures for the Economic Development of Underdeveloped Regions* (United Nations, 1951), the Expert Group struggled with estimates of investment and financing needed for raising employment and output in agriculture and industry in the South (including China). It concluded that the South needed a *net* investment in these two sectors of $19.1 billion, which was equal to about 20 per cent of the South's estimated national income of $96.6 billion in 1949. Since these poor underdeveloped countries were caught in the vicious circle of poverty, quite in vogue then, it was considered impossible for them to save such a large amount. Net domestic savings for the South as a whole were at that time estimated to be only $5.2 billion, or about five per cent of the South's national incomes.

The Marshall Plan for the reconstruction and recovery of War-devastated countries in Europe was an ideal model. Why not call upon the developed countries to assist the South? At least one-half of the needed investments the Group recommended would have to be financed from the outside. Domestic savings, it was hoped, would be raised from five to 10 per cent of national income to cover the rest.

The only possible funding source in those years was the United States. The task was to convince the United States to furnish such aid. The Experts Group therefore concerned itself with the benefits that could be achieved when these investments were undertaken. But its response on this point was rather cagey. Its conclusion is a classic illustration of asking too much to achive to little. The Group concluded:

> We guess that with the national income increaseing annually by $2^{1}/_{2}$ per cent as a result of the assumed investment, and with population increasing at $1^{1}/_{4}$ per cent, the per capita income [in the South *might rise by about $2^{1}/_{2}$ per cent.* (emphasis added)[12]

The real per capita growth following from the Expert Group's calculations would have been only 1.25 per cent (2.5 per cent income growth minus 1.25 per cent population growth), and not about two per cent as the Expert Group stated. The lower figure (1.25 per cent) implicit in the Group's calculations, it was thought, was too low—attractive neither to the donors nor to the South. The Expert Group simply raised it. Fortunately for the Group's conclusions, the much higher estimates of population growth—two per cent or more per year—were not then available to the Expert Group. If they had been available, the Expert Group's estimates of the expected per capita income would have been near zero. What a large effort for so little an achivement!

The Expert Group was not disturbed that its recommended *net* investment of 20 per cent of the national income of the South (which could amount to a *gross* investment of some 27-30 per cent) was to yield a mere 2.5 per cent growth of overall national output. The implicit net capital/output ratio was 8:1; and the probable gross capital/output ratio would be 12:1. The Group was not concerned about how the US Congress could be persuaded to allocate as much as three per cent of US national income to the South.[13] In comparison the Marshall Plan absorbed some two per cent of its GDP. But then, those were heady days for development. Now, we are better informed about development economics. Such fantasies of high capital/output ratios and external aid and such a juggling of figures would not now be enterained at even an economics undergraduate level.

This was also the period when India prepared its First Five Year Development Plan. The Plan would later act as a model for many other South countries. It too was coloured by current thinking about the incapability of the poor countries to develop rapidly. It therefore set the overall target of India's economic growth at a very modest 2.1 per cent per year.

To give a flavour of the times in the 1950s and early 1960s, I cite here the views of Lewis and Kuznets, both Nobel Prize winners. Lewis writing in the late 1950s, concluded that a growth rate of "4% is so difficult to obtain that it is really quite an ambitious target".[14]

Twenty years later, however, he was to ridicule those who had argued earlier that the poor countries simply could not grow fast:

> In 1950 these people were secptical of the capacity of LDCs to grow rapidly because of inappropriate attitudes, institutions or climates. The sun was too hot to work, or the people too spendthrift, the government too corrupt, the fertility rate too high, the religion too other-worldly, and so on. This kind of analysis has now almost completely gone from the literature.[15]

In his classic study *Modern Economic Growth* (1966), most of which was ready in draft by late 1950s, Kuznets stressed in general the advantages of the latecomers to industrialisation. But when he came to the underdeveloped countries, he was worried by the adverse influence of two factors: the very existence of the North, its policies and its economic dominance over the South, and the constraints of the traditional social structures of the South. He therefore concluded:

> ...we find it difficult to avoid the judgement that the orientation of the under-developed countries of today... must contain many elements that are inconsistent with, hence obstacles to, modern economic growth.[16]

By the 1970s, such pessimism was on the way out—for a while. The South had quite well by then—indeed much better than what Lewis and Kuznets had earlier expected. They too reflected the new mood of the 1970s. Receiving the Nobel Prize, Lewis stated:

> I think the LDCs have demonstrated beyond doubt their ability to use physical and human resources productively.[17]

Kuznets had an occasion to review the 22-year (1950-72) growth experience of the South. The per capita growth rates in the South, he found, were quite high in the long term perspective of both less developed countries and the developed countries. Bewildered by the persistent negative reporting on the South by journalists as well as most academics, he then asked:

> If growth rates in the per capita product of the LDCs over almost a quarter of a century were impressively high, one may ask why the reaction to them in the general flow of news about these countries in the persistent concern about critical conditions with respect to supplies of economic goods, seems to ignore these growth achievements. [He wondered] why no litanies of praise [were sung] for these economic miracles... Instead, there were only references to dangers of collapse in the Third World.[18]

The earlier despair about the "dangers of collapse in the South" began to give way. The performance of some of the South countries started to be described as economic miracles"—in Brazil, South Korea, China, even on occasion Pakistan.

We may close by citing the view of Streeten *et al.* (1981). They considered the post-War development record of the Third World a "spectacular, unprecedented and unexpected success".[19] Spectacular and unprecedented it was indeed. But the last adjective—"unexpected"—underlined how ill-prepared the profession of development economics was for the impressive economic performance by the South, described below.

THE SOUTH'S ECONOMIC SPRINT SINCE 1950

We may begin with the setting in the 1950s. India had just become independent. China soon followed with its liberation. These events greatly strengthened the incipient national liberation struggles throughout the colonies. Empires much larger than ever known in the past crumbled in a few years. The colonies liberated themselves. New countries were born. New governments were established. People's aspirations were high. Their visions reached out beyond the distant horizon.

We may now summarise the main economic advances achieved by the South during 1950-90. There was, of course, unevenness among countries in their rates of advance. An analysis of this unevenness is critical for identifying its causes and working out new strategies according to the specific requirements of each country. But this is not the main concern here. We are simply presenting the broad sweep of change in the South as a whole.

(a) Overall Economic Growth

The actual development record of the South contrasted sharply with what most had expected of it in the 1950s. During 1950-80, the South raised its overall output at an annual average of 5.3 per cent and per capita output at about three per cent. During the 30 years from 1950, the combined GDP of all South countries increased 4.7 times, and per capita GDP 2.4 times.

These three decades during 1950-80 were the most remarkable period in the one-century history of economic development. World output and trade expanded at unparalleled rates. As shown in Table1, both the eastern and western regions of the North and the South participated in this worldwide wave. The tidal wave of growth also embraced the South, until then bypassed by past development.

With the slowing of the world economy in the 1980s, the development scene changed radically. There was a general decline in growth rates for all the major groups of countries. The rate for the South fell sharply—from 5.3 per cent during 1950-80, to only 3.8 per cent for 1980-87. Preliminary estimates for the next three years suggest that the average may well be about the same as for 1980-87 (about 3.8 per cent) or some 30 per cent below that of the preceding three decades.[20]

Table 1

*Population and real GDP and its growth in the South and the North: 1950-85**

	Population in millions 1985	GDP in billions $ 1985	Annual growth of GDP in % 1950-80	1980-87
The South	3650	2500	5.3	3.8
China & India	1835	560	5.3+	8.6
The North	1190	-	-	-
West	790	8800	4.2	2.3++
East	400	-	6.0	3.4++
World	4840	11,300	4.4	2.8

Sources: Data up to 1980 and for 1980-85 for West and East from UNCTAD (1987), Supplement, Tables 6.1 and 6.2; other post-1980 figures based on data in World Bank (1988), pp. 2, 23, 189, 224.

*Data on Eastern Europe and the Soviet Union excluded from World and North GDP and its rate of growth. Population and GDP data rounded to the nearest zero.

+ 1965-80.

++ 1980-85.

National output in several countries in crisis (for example, Bolivia, Nigeria, Venezuela, Zambia) fell during the 1980s by as much as 25-40 per cent, equalling declines which were experienced only during the Great Depression. World Bank data for 1980-86 show that overall GDP declined in 17 countries. In 41 countries, the average growth was below three per cent indicating that per capita real output must have fallen in most of these countries. The scope of the crisis is underlined by the fact that out of 87 developing countries for which data are reported by the World Bank, the per capita GDP actually declined in 58 countries.[21] After a brief honeymoon with optimism, despair for the South was back in business—with a vengeance.

Yet taking the four decades since 1950 together, the South's total GDP had increased at about 4.9 per cent per year, and per capita GDP at 2.7 per cent. By 1990, its total real output had thus expanded 6.8 times and per capita GDP some 2.9 times over the 1950 levels. Not so bad, one would say.

(b) An Assessment of the South's Economic Advance

The current concentration on the crisis facing the South has been responsible for obscuring the scale of the South's achievements. Crisis mongers have had a field day. Pessimists have turned into prophets. The crisis is indeed critical for the future of the South. The crisis should, nonetheless, be kept in perspective. Is it really as grave as the Great Depression of the inter-War period or the Long Depression in the last quarter of the nineteenth century? By any stretch of imagination can its gravity be placed next to WWI and WWII?

I will attempt here a broad assessment of the South's achievement during 1950-90 using several yardsticks: (i) the needs of the South; (ii) plan targets of individual Third World countries; (iii) the past performance of these countries; and (iv) comparison with growth of the North during the post-War period and its historic transformation in the more than 100 years since 1870 (including past achievements of a few individual countries of the North).

Points (i) and (ii) can be dealt with together rather briefly. The South's achievements since 1950 were certainly lower than what it needed for significantly raising its people's well-being. In most cases they were also lower than the plan targets of individual countries.

A comparison with the South's past performance would, however, present a very different picture.

An Export House since 1974, RSI is in the manufacture of Iron Castings, to an ISO 9000 Quality Assurance System exclusively for international markets. RSI is the winner of several prestigious Export Awards for its outstanding performance over the years.

Bringing you an opportunity to sell your products: Around the World

Now, with RSI's Worldwide Network, varied experience in Foreign Trade, and with assistance from SBI and EXIM Bank, promotion of other Indian products meeting International Quality Standards is our new business.

May we invite you to join us to share today's emerging business opportunities? Around the world. Please write to us with your product information.

YOUR GLOBAL BUSINESS CONNECTION

During 1890-1950 the South's per capita development for the group as a whole could not have been higher than 0.5 per cent per year.[22] Most evidence suggests that it was lower. Two of the largest countries in the South were stagnant or declining. China was shattered by a destructive, protracted civil war. India's growth did not keep pace even with its population increase.[23] Other countries had an uneven record. In some small countries, there was a limited development of plantation products and minerals, mostly for supplying the growing requirements of the North. In others, there was either stagnation or decline.

We may even suggest by a little statistical exercise that the South's real per capita growth during 1950-90 might be regarded as equal, or perhaps even superior to its experience over the long stretch of 3000-4000 years of its past history. To illustrate, we may extrapolate backward to 1950 the South's average real per capita income of $685 in 1985. Since it increased 2.5 times during 1950-85, its real level in 1950 would have been, for example, $275 in 1985 prices.

We may now imagine, for illustration, that the South countries had succeeded in raising their per capita incomes at least 2.5 times over the 3000-4000 years of their history—or by about the same proportion as during the 35 years during 1950-85. In that case, incomes would have been at the initial point of this long journey no more than $110 in 1985 prices.

But according to the World Bank data, there was only one country (Ethiopia) which in 1986 had a per capita GDP of $120, a level which could then be taken as the minimum for simple human survival. Below this level, survival would be impossible. We could then take $120 real per capita output as the minimum for survival—a level which is slightly higher than our (derived) estimate of the South's per capita income at the dawn of its history. Above that minimum were the fruits of progress, passing through many ups and downs, as the fortunes of individual civilisation rose and fell, and as the centres of culture shifted from place to place over time.

Looked at this way, the South's recent overall achievement—a 2.5 times rise in real per capita output—would equal the maximum advance the South countries could have made over their long past. That it was attained in just 40 years gives us a measure of its significance. One need not rush to read absolute precision in these figures. They do, however, underline that the South's record of economic growth during 1950-90 was indeed impressive. It needs no apology.

As for point (iv), we may now compare the South's recent achievement with the long-term development of the North. Based on Maddison's data for the combined growth of 16 North countries during 1870-1986, it can be concluded that the historical growth rate of the North for these 116 years was some 2.7 per cent per year for total GDP, and 1.7 per cent for per capita GDP.[25]

The South's achievement may also be compared with growth at selected periods in a few individual developed countries. Van Duijn's data on industrial output for several countries for the 1870s to 1890s show that it grew at 1.3 per cent in France, 1.7 per cent in Great Britain, 2.9 per cent in Germany, 3.1 per cent in Sweden, and 4.7 per cent in the United States.[26] It is a general feature of early economic growth that industry expands at a rate faster than overall GDP. The South's recent record would then seem to be superior to that in these North countries. We may also compare the South's rate of growth with that of Japan's-GDP expanded at a little less than three per cent per year during this period.[27] This was two-thirds of the rate achieved by the South as a whole during 1950-90.

What do all these comparisons mean? They show that the growth rate (5.3 per cent) achieved by the South during 1950-80 was unparalleled in the history of the economic growth of nations. Moreover, this high average growth rate was maintained for 30 years. The South was a big, indeed a very big group. Its 130 countries accounted for 3.65 billion people in 1985. In comparison, the North's population, when it began its development in the nineteenth century, was very small—barely 300 million.

The advance of the South as a whole was indeed the most sustained and widespread development "miracle" of the twentieth century, perhaps of all history.

Moreover, we must not forget that the South has been treated here as a whole. Achievements of individual countries varied very widely. Some did very well and some pretty poorly. Eight countries attained an annual growth of 6.5 per cent sustained for 30 years during 1950-80. They raised their total GDP 8-15 times, and their per capita GDP 4-8 times. Their combined population was 1.3 billion, or twice that of the developed West. Thus, the miracle-makers were not just the so-called four baby tigers. In reality, the elephants in the South too had begun to learn the tiger's sprint. Some people have been too myopic to notice this.

The process also brought about significant structural transformations in the South:

- an increase in urban population and decline in the rural;

- a decline of the share of agriculture from 40 per cent in 1950 to only 17 per cent of total output in 1980;
- a corresponding increase in the share of industry from 16 per cent in 1950 to 36 per cent in 1980;
- an unprecedented expansion in the share (and real volume, of course) of resources devoted to capital formation and development and public—from 10-15 per cent of total output in 1950 to 35-40 per cent in 1980;
- a corresponding decline in the share of consumption;
- a significant change in the composition of exports leading to a decline in the share of primary product; and
- an increase in the share of manufactures in both exports and imports.

These forms of structural differentiation within the South followed from its accelerated development, described earlier. They merit a much closer examination and analysis. But this is not the place for it.[28]

STILL MORE SPECTACULAR SOCIAL ADVANCE

The South's economic achievements were impressive. But people do not live by bread alone. The advance in the social field, as has been graphically shown by M. Patel in his recent study prepared for UNICEF, was still more spectacular.[29] We will focus upon the achievements in health and education, which serve both as goals and means of development.

There is no single indicator which can be used to measure advance in health. Data on the decline in fant mortality rates (IMRs) and death rates in general and on the increase in life expectancy may be used as broad proxy indicators. Death rates in the South have fallen from 25-30 per thousand in the 1950s to 10-15 in the 1980s. Several countries, including China, have brought them below 10, or not much different from the level of 7-10 current in the North.

The IMR in the low-income countries only 40 years ago was as high as 200 per thousand—about the same as the rate in the North in the mid-nineteenth century. In just 36 years, the South brought it down to 70 by 1986, or equal to the 1940 level in the North. The 100-year process in the North was telescoped into less than 40 years in the South. Infant mortality rates in the North ranged around 30 per thousand in 1960. Eighteen South countries with a combined population of 1.15 billion had reached this range by 1986. It may be expected that by the year 2000, the IMR in 20 low-income countries will be 20-30, or about the same as the 1980 level in Europe.

The decline in death rates and infant mortality rates is reflected in higher life expectancy (LE) in the South. LE rose from around or below 40 years in 1950 to 60 years or over by the mid-1980s. Twenty years were added to the average life of a citizen of the South. In several South countries, LE has already reached 70 years, only a few years below the average in the North. LE for females increased even more than males nearly everywhere in the South.

The advance in education was also spectacular. We begin with literacy rates.[30] In the mid-nineteenth century, literacy rates in the North ranged from about 60 per cent in England and the United States to a low of 20 per cent in Spain, 10 per cent in Italy and even lower in the rest of Southern Europe. The average in the North could not have been above 25 per cent in 1850 and 50 per cent in 1900.[31] The comparable level in the South was about 30 per cent in 1950. But by the 1980s, it had risen to 50 per cent in Africa, 70 per cent in Asia and 80 per cent in Latin America.

The North of 1960 had 56 per cent of the world total gross number of literate persons (GNLP) with only 44 per cent for the South.[32] By 1985, the South's share had risen to 69 per cent and that of the North had shrunk to 31 per cent. It should be noted that male literates accounted for a much larger share than female literates—a feature which is still crying out to be altered.

In the 35 years during 1950-85, education in the South sprinted ahead. Total enrollment at all levels rose from some 90 million to 684 million. One-fifth of the entire population of the South was attending some kind of school the comparable ratio in 1950 was as low as one-sixteenth. Primary school enrollment became nearly universal—rising from only 80 million in 1950 to 475 million by 1985. Secondary school enrollment rose from 10 million in 1950, or under one-third in the North, to 184 million in 1985, or twice that in the North.

The advance in enrollment in universities and institutions of higher learning was unprecedented from under one million in 1950 to nearly 25 million in 1985. The South as a whole had in 1950 less than one-fifth the tertiary enrollment of the North. By 1985, the ration had shot up to 5:6—or almost equalling the North. In this sprint, female enrollment was much lower than the male one but even the gender gap was narrowing.

Here are extraordinary advances. In the process the North-South educational distance narrowed significantly. In 1950 the South was behind the North by 60-70 years in primary enrollment and 40-50 years in secondary and higher enrollment. By mid 1980s, the South had on a per capita enrollment basis equalled (or surpassed) the comparable developed-country level in primary education, because of a larger relevant age group. It had reached mid-1950 developed-country levels in secondary education and nearly attained the 1950 enrollment levels of tertiary education in the developed countries.

Table 2
Educational advance in the South, 1950-85

	South		North		Ratio South/North	
	1950	1985	1950	1985	1950	1985
I.Enrollment (mil.)						
Primary	80	475	110	105	0.7	4.5
Secondary	10	184	31	88	0.3	2.1
Tertiary	1	25	5	31	0.2	0.8
Total	91	684	146	224	0.6	3.1
II.Enrollment per thousand population						
Primary	49.0	125.0	149.0	95	0.3	1.3
Secondary	6.0	48.0	41.0	79	0.1	0.6
Tertiary	0.6	6.6	7.2	23	0.1	0.3

There are, to be sure, many shortcomings in the quality of education imparted, and in related areas. But the sheer size of the numbers involved is simply staggering.

CONCLUDING REFLECTIONS

Here are monumental achievements—both economic and social—by the South. But contemporary history has simply disregarded them. Our aim here was to set the historical record straight. Whatever may be the nature of the current crisis in the South and its outcome in the years to come, one fact stands out in the post-War development experience.

Neither in the rate nor in the scope is there a parallel in history for the South's achievements during 1950-90 No prophet of doom and gloom can detract from this record.

It seems as if the vast masses of the South have been climbing upward in a virtuous growth spiral in the post-WWII period. They have written an obituary of the vicious circle of poverty, that is, people are poor because they are too poor to save enough to invest in their growth. The South was poor, and yet it saved, invested and grew!

In concluding this discussion it may be noted that if there were ever a golden age of growth. The star performers in it were the vast populations of the South. They outperformed both their own past and that of the North. The South has by this act left behind the theatre of the absurd and legitimately entered the world stage.

The current crisis has spread gloom and despair. There are yet miles to go. There are too many poor people in the South. The scale of malnutrition and hunger is enormous. Illiteracy has not been abolished. The distribution of income, and more particularly of wealth and economic power, is highly unequal. The economic distance among the countries of the South has increased.

This is not the place, however, to explain or even to apologise for these and many other weaknesses. They remain to be overcome in the decades ahead. The overall record of the South during the past four decades nonetheless stands without parallel in history. The lessons of this rich experience remain to be distilled. They could help in forging future strategies for overcoming the South's patent weaknesses and building upon its strengths. Hence this tribute, lest we forget. The memory of the South's Golden Age could form the foundation of future hope and confidence.

I would like to conclude by citing from Nobel Laureate Rabindranath Tagore's *Naibaidya*, published when the nineteenth century was yielding to the twentieth. He immortalised his dream of future India; and by extension all the poor and the oppressed of the world:

> Where the mind is without fear and the head is held
> high;
> Where knowledge is free;
> Where the world has not been broken up into
> fragments by narrow domestic walls;
> Where words come out from the depth of truth;
> Where tireless striving stretches its arms towards
> perfection;
> Where the clear stream of reason has lost its
> way into the dreary desert sand of dead habit;
> Where the mind is led forward by thee into ever-
> widening thought and action-
> Into that heaven of freedom, my Father, let my
> country awake.

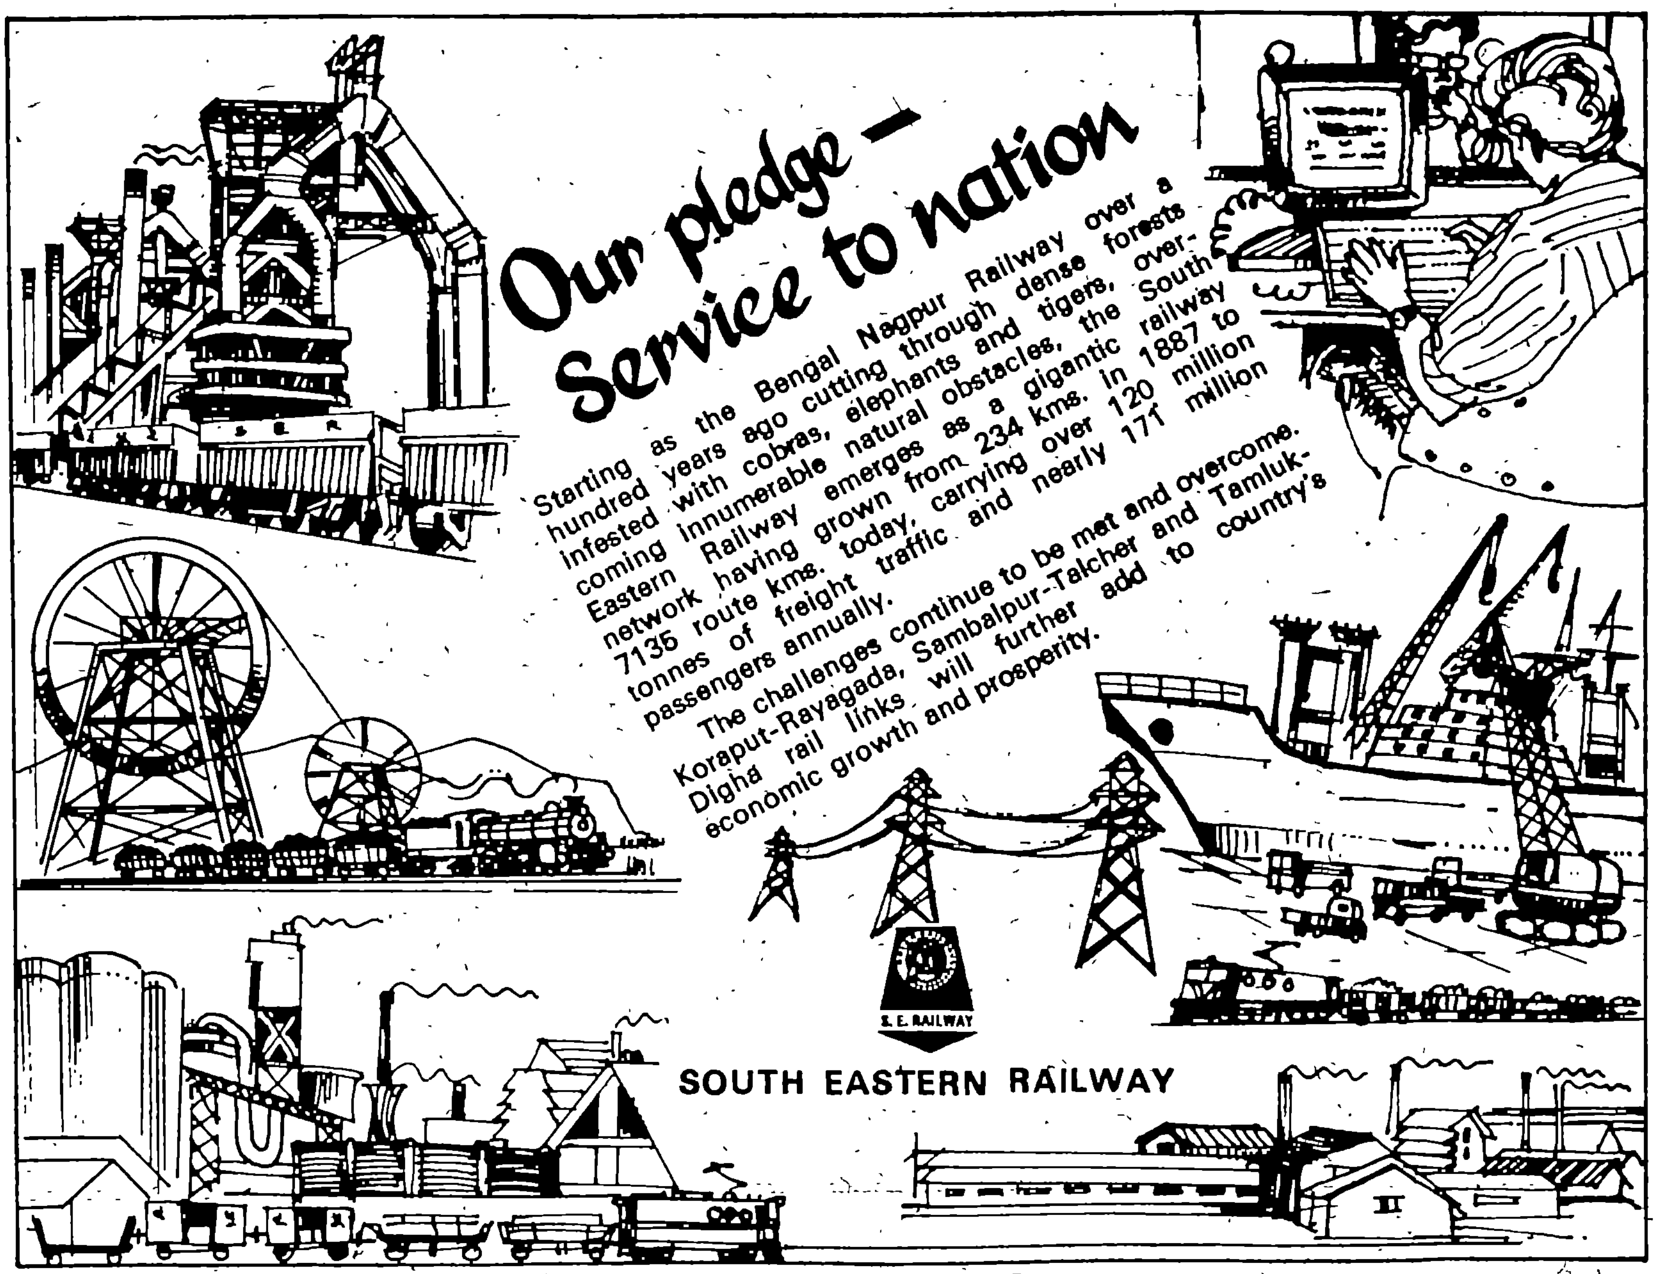
■

I would like to acknowledge the support of the United Nations University, World Institute for Development Economics Research (Helsinki, Finland); the Sardar Patel Institute of Economic and Social Research (Ahmedabad, India); and Dalhousie University and Saint Mary's University (Halifax, Canada).

An earlier version of this essay was discussed in 1990 at seminars at the Sardar Patel Institute of Economic and Social Research, at the Starnberger Institut (Starnberg, Germany) and at the Sixth Conference of the Canadian Association for the Study of International Development (Victoria, Canada). I am indebted to the participants in these discussions for their comments which have proved valuable in revising the paper.

NOTES

1. The terms South, Third World, developing countries and less-developed countries (LDCs) have been used in this paper



Our pledge — Service to nation

Starting as the Bengal Nagpur Railway over a hundred years ago cutting through dense forests infested with cobras, elephants and tigers, overcoming innumerable natural obstacles, the South Eastern Railway emerges as a gigantic railway network having grown from 234 kms. in 1887 to 7135 route kms. today, carrying over 120 million tonnes of freight traffic and nearly 171 million passengers annually.

The challenges continue to be met and overcome. Koraput-Rayagada, Sambalpur-Talcher and Tamluk-Digha rail links will further add to country's economic growth and prosperity.

SOUTH EASTERN RAILWAY

interchangeably. The North denotes the developed countries, both in the West and the East.

24. World Bank (1988), Appendix, Table 1, p. 222. For comparison, the figure for Bangladesh was $150 and for Sudan $320.
25. Maddison (1988). If Maddison's long period (1870-1986) is broken down into two subperiods (1870-1913 and 1913-86), we find that the growth rate for the earlier period was about 0.1% lower than that for the latter. This constancy syndrome in the long-term growth rate deserves a more systematic analysis than it has received so far.

KRISHAN KANT: Consensual Nationalism

(Continued from page 35)

with emphasis on ethnicity. In Yugoslavia, the Soviet Union and Eriteria this has progressed to outright secession. In many other areas of the world there are prospects of more composite nations breaking up. Consequently, in India we have to build up forces of consensual nationalism and strengthen the structures of the consensual electoral process in place of the conflictual one we have at present. Our consensual process will have to accommodate the legitimate aspirations of autonomy at various levels and yet create an overarching consensual nationalism.

Thirdly, the world is moving towards marketisation and greater discipline of rational economic choices. This in turn calls for eschewing populist politics and economics and replacing them with a structure of decision-making which would enable the electorate to reject the politics of gimmickry.. That can be tried out in one election but cannot be repeated.

A new spirit of unifying nationalism is required. This can be brought about only through a change in the system of the process of power. All people want change and it is going to be a continuous one now. In the late twentieth century the future is pushing the past at a pace not known before. Just as there was a vested interest in freedom in spite of differences on various issues, people from the rich to the poor have a vested interest in the change of the national system. This is a long-term vested interest.

Concerned and sensitive political leaders, academicians, lawyers, journalists, students, activists—all should be invited to join this movement for a new nationalism in India. Just as the objective of freedom was liberation from the evil of foreign yoke, the unifying nationalism will be *'for social, moral and economic independence'* in the words of Gandhiji. This will be the *second battle for freedom* in which people as a whole will be joining and working together. ■

BAXI: State and Rights Movement

(Continued from page 43)

munities, beleaguered as most are by hostility of state and society. The enervation of dialogical spaces deprives the fledgling human rights communities of the resources of critique and coherence. But even a contingent coherence, despite a post-modernist world around us, is, I believe, a source of sustenance for human rights movements. And the dialogical space, within the matrix of human rights movement of the troubled Indian bourgeoisie, is most critical for its future (now marked by forces of a unipopular globalisation) theory as well as concrete engagement, especially when the state manages a representation of superior coherence.

Let me conclude by a gloss on Albert Einstein's dictum: "Politics is harder than physics." I add, by way of a footnote, that politics of human rights is even harder than politics of domination. And let me, also, compound the footnote by adding Emmanuel Levians' favourite phrase: "difficult freedom". Those who practice and proselytise human rights engage in the most difficult of all difficult freedoms since, above all, they owe an accountability to the victims of violation of rights, who should never experience the possibility that human rights advocacy or action may in turn revictimise them. The leitmotive of human rights movements in India, and elsewhere, is to resurrect the sovereignty of victims against that of the state. In that sense, human rights activism must subscribe to the radical wisdom of Albert Camus: "I rebel, therefore *we* are." ■

Technology and Capital Import in Development Policy

ARUN GHOSH

It is a good principle in life that one should not have to rediscover or reinvent all that our predecessors have done. Human progress has depended in the past on every generation building on and improving upon the corpus of scientific knowledge and technological base left by previous generations. There should, therefore, be no difficulty in principle in a country seeking to import technology from abroad. That is how one could hope to take a leap-frogging stride in the quest for the material development of a nation.

But matters of principle do not always make good sense in real life. In principle, there are traffic rules which give the right of way in any intersection of vehicles coming from the right. Certainly, one has the right of way when the traffic lights are in one's favour. But supposing a ten-tonne truck is coming thundering along, breaking all traffic rules and simply ignoring the traffic lights, it would make good sense to forget the principle of the right of way, and to let the offending vehicle pass by first. You hang back if you value your life.

What is stated above is neither irrelevant nor inappropriate in the matter of technology import. Gone are the days when scientific inventions were regarded as intended for the benefit of all humankind. The concept of predatory "Intellectual Property Rights" (IPR) has not taken over. You may learn the properties of some herbal medicines from the aborigines, take away samples and take out a patent and behold, you can make millions from the discovery you have made, by making it legally impossible for anybody else to prepare the herbal concoction you have literally "stolen" from some people not quite as worldly-wise as you are.

The above is an extreme example. In general, today no company (or any other organisation except for some institutional bodies including some governments) is prepared to part with really good, efficient, or even the latest technology.

If you want to import technology, you have to pay through your nose; the IPR regime ensures that; and even so, by and large developing countries are sold third rate, outmoded technology, at a high price.

The author, a prominent economist, is a former Member of the Planning Commission.

In fact, there is a new buzzword now: developing countries need to be provided only with appropriate technology. It does not occur to any advocate of the principle of export of appropriate technology that most of the developing countries do indeed have their own appropriate technlogy; but that when you have to leapfrog in some selected direction, what you do not need is to be sold a lemon—at a high price—as the appropriate technology for you.

Take the development strategy adopted for India by P.C. Mahalanobis in the mid-fifties. Between Mahalanobis and Homi Bhabha, India has developed, in the teeth of world opposition, (a) nuclear and space capability, for which not only knowledge but also the import of all relevant components and materials had been scrupulously denied to India; (b) capability for the manufacture of equipment (for example, power generation, the setting up of complex process plants) which enabled us to make rapid strides in the build up of capacity which could be for further growth. In the late seventies, the Bharat Heavy Electricals Limited (BHEL) could win orders for setting up turnkey power projects abroad in the teeth of competition with the General Electric of the US, Siemens of Germany, English Electric of the UK and a number of other competitors from Japan. The BHEL did not merely get the order; after successful completion and commissioning of the project in Malaysia, it got a repeat order.

It is a different matter today that for more than a decade now, we have been sliding backwards. Our equipment manufacturing capability is getting rusted, partly for lack of orders and partly for the general demoralisation resulting from a combination of reasons. Our economy has stumbled from one crisis to another, with our balance of payments in such a dire striat that we have to surrender all our economic policy options to international lending agencies.

But that is not what we are discussing today. What we are discussing are the present policies on the import of foreign technology and of foreign

WEBEL

Role of Webel

- ☐ Nodal Agency for growth of electronics industry in the State
- ☐ Setting up of subsidiary and joint sector units, infrastructure development, Research and Development providing guidance and assistance to entrepreneurs
- ☐ Providing necessary infrastructure support to entrepreneurs—Salt Lake Electronics Complex
- ☐ Infrastructure development in districts, spread electronics industries in rural areas

Facilities Available within the Salt Lake Electronics Complex

- ☐ International Gateway Switch by Videsh Sanchar Nigam Ltd.
- ☐ Software Technology Park by DOE-WEBEL with dedicated high speed data transmission facility for software export
- ☐ Remote Job-Entry Terminal hooking up with Cyber 340 situated at Regional Computer Centre, Jadavpur
- ☐ ASIC Design Centre with ITI
- ☐ Three National quality and reliability centres are being established within the Complex
- ☐ DOE-WEBEL National R&D Centre—ER&DC, Calcutta has been established
- ☐ Vocational Training Centre under Indo-German collaboration being set up for training in test engineering in electronics

capital (by way of Direct Foreign Investment or DFI).

Historical Background

The first "official" statement on foreign capital was made by Jawaharlal Nehru in Parliament in November 1949. In that policy statement he clarified that: (a) existing foreign investments in India could remain, and would be free to repatriate profits and dividends (subject to payment of Indian taxes); (b) all future foreign investment proposal (and that covered proposals for foreign collaboration) would hereafter be screened so as to permit foreign investment only in desirable directions, in terms of the country's needs of growth, especially in areas where we need the infusion of foreign technology; and (c) by and large, we would prefer minority foreign investments so that new technology could be disseminated by Indians, with a view to promoting further growth of the economy on the basis of indigenous effort.

This policy informed the government's position on foreign collaboration and foreign investment upto 1974 when the Foreign Exchange Regulation Act (FERA) was enacted.

But prior to the FERA there was a landmark development which has remained generally unknown perhaps because it has remained wholly unimplemented to this day. In 1973, the Government of India came out with a Technology Policy Statement (approved by Parliament)—which, one then thought, was at par with the Industrial Policy Resolution of 1956.

There is not much merit today in going deeply into the Technology Policy Statement of 1973 because, as stated earlier, this policy has never been implemented; in fact, the bureaucracy managed to systematically sabotage all the essential ingredients of this Policy.

The main focus of the Technology Policy of 1973 was threefold: (a) the primary effort at technology development was to be through indigenous Research and Development effort, in which the various national laboratories were to play a crucial role, though similar effort by the private sector was also welcome, for which purpose, generous tax concessions were granted for Research and Development activity. (b) Import of technology was to be sought only in areas where we lacked such technology and which were necessary for national development. Thus, all proposals for technology import were to be screened by a high power official body called the Foreign Investment Board (which was to consider all applications for both foreign investment and foreign collaboration). (c) Finally, Indian industry was to first seek technology from one of the many R & D institutions before applying for the import of technology from foreign suppliers of technology. The Department of Science and Technology was to be one of the important agencies represented on the Foreign Investment Board, for this purpose.

The FERA (of 1974) changed the ground rules for foreign investment drastically. No unit with 100 per cent foreign equity was to be allowed to remain as such; they were required to compulsorily dilute foriegn equity, which was to be limited to 74 per cent, 51 per cent and 40 per cent of the total equity, according to the "prioriy" of the industry, its export capability/performance, and other considerations. A number of foreign firms decided to wind up their Indian operations as a result of this policy for which they were permitted full repatriation of their capital.

There were many objections to some of the implications of the policy package introduced in 1974. For instance, any firm diluting to 40 per cent foreign equity was to be treated as an Indian firm and, therefore, allowed the freedom to expand like any other firm. As is well known, *control* over a firm can be effectively exercised with much less than 40 per cent equity; and a large number of consumer industries took full advantage of this policy, driving out whatever little competition there was in respect of certain consumer goods. It would be invidious to take names, but some of the products are now household words in India.

Anyhow, at that time the Ministry of Finance which introduced the FERA—drew a distinction between direct foreign investment and the import of foreign technology, deeming the former as of relevance only from the balance of payments angle, though even from this angle the policy was clearly flawed and counterproductive.

Policy followed from the Eighties: "Supply Side Economics"

The eighties saw a remarkable turnaround in the strategy of industrial development in India, without any clear formulation of either the policy framework or its relation to overall development strategy. The broad philosophy behind the changed strategy needs a brief explanation. The seventies saw a steady growth in the domestic savings rate, reaching 23.2 per cent of the Gross Domestic Product in 1978-79. We had overcome the shock of the oil price hike (in November 1973), and managed to, by and large, balance the payments on external accounts and to stabilise prices. But the rate of economic growth remained sluggish. Instead of focussing attention on rural development—so as to stimulate mass demand—the economic policy-makers in India were attracted by the Reaganite theory of "supply side economics" (without pondering for a moment that the supply inelasticities in India were basic, and reflected the state of underdevelopment of the infrastructure, of human skills, of externalities as they are technically described by professional economists).

There was, in the eighties, a growing middle class in India, the size of which could be compared almost to the size of the population of Western Europe. This group of consumers now aspired for living standards of the Western countries. The free play of "supply side economics" involved: (a) the steady lowering of direct taxes (as well as of selected indirect taxes) to promote consumption; (b) the lowering of taxes on business also, to stimulate investments; and (c) greater reliance on market forces to lead to growth (which would in turn promote employment) through increased production and investment encourage through fiscal policy changes as per (a) and (b) above.

The results of the above set of policies are well known and need to be briefly enumerated as they are relevant for the present discussion. First, on the fiscal front, the deficit of the Central Government kept on increasing, leading to strong inflationary pressures. Secondly, there was a spate of applications for the approval of foreign collaboration arrangements for the manufacture (in India) of a whole set of elitist consumer goods. Significantly, the policy of liberalisation adopted by the government made for automatic approval of foreign collaboration arrangements so long as they did not envisage the payment of royalty higher than five per cent of sales (*minus* the import content). Thirdly, the manufacturing programmes initiated as a result were all import intensive; in some cases, we merely assembled diverse imported components, to be sold at a high price domestically. The increase in import demand—following the liberalisation of both industrial licensing and import policies—together with the imbalance between aggregate home demand and availabilities (arising from mounting budgetary deficits) led to an increasing deficit in the balance on external payments, which was met increasingly by short-term capital borrowed from abroad, at a high rate of interest.

To briefly illustrate these developments, the deficit of the Central Government on revenue account increased from an average of 1.1 per cent of the GDP in the Sixth Plan period (1980-81 to 1984-85) to 2.6 per cent in the Seventh Plan period (1985-86 to 1989-90), and further to 3.5 per cent in 1990-91. The deficit in the current account of the balance of payments likewise increased from 1.3 per cent of the GDP in the Sixth Plan period to 2.2 per cent of the GDP in the Seventh Plan period, and further, to 2.6 per cent in 1990-91. (All figures cited above are taken from the *Economic Survey 1991-92*, published by the Ministry of Finance; the 1990-91 figures are provisional.)

We have briefly looked at the consequences of a set of policies adopted during the eighties. We will later have occasion to examine the type of foreign collaboration/foreign investment cases approved in recent years, but the following figures of payment or royalty and technical knowhow fees—together with the number of proposals for foreign collaboration and foreign investment approved—over recent years would indicate the type of problem we have invited for ourselves.

Table 1

Number of Foreign Collaboration Cases Approved, and Actual Payments for Collaboration

	Number of Technical Collaboration Cases	Payment of Roylaty	Technical Approved Knowhow Fees
		(Rs Crore)	
1976/1975-76	277	10.49	25.66
1981/1980-81	389	8.88	104.93
1982/1981-82	588	15.99	270.70
1983/1982-83	673	39.72	258.58
1984/1983-84	740	27.60	314.89
1985/1984-85	1041	28.49	300.60
1986/1985-86	958	23.50	367.90
1987/1986-87	853	40.10	358.40

Source: Reserve Bank of India; as reported in *The Economic Times* (New Delhi), January 24, 1990.

It will be seen that the total payment on account of royalty and technical knowhow fees increased from Rs 36.15 crores in 1975-76 to Rs 398.50 croes in 1986-87, a more than ten times increase.

Some Examples of Foreign Collaboration

What is the type of product for the manufacture of which we have been paying close to Rs 400 crores (annually) as royalty and technical knowhow fees? Obviously, it is not possible to give a full list involving hundreds of collaboration arrangements, but a selection—with the names of the Indian parties and the country and year of collaboration—would be instructive.

The following list (Table 2) is long and tedious; it is also highly selective and partial and we refrain from citing the continuation of similar approvals in 1990 and 1991. It may be added that the above is merely a sample to the type of "freedom" enjoyed of late in regard to the type of collaboration arrangements agreed. Many prominent TV/VCR/VCP/Washing Machines and similar manufacturers have been omitted in the list proffered (obviously with limited data) by Chandra Shekhar. What is

Note: Those indicated as (F) involve financial collaboration, that is, foreign capital participation in the equity also.

Source: Chandra Shekhar: *Political Economy of India*, Vikas Publishing House, published for Studies in Industrial Development, New Delhi, 1992.

important to note are: (a) that as many as 34 out of the 57 cases cited above involve foreign financial participation in equity in addition to collaboration; and (b) mere participation of foreign capital does *not* imply that royalty on sales of knowhow fees would not be charged by the foreign party. In fact, the common practice is for such payment, *plus* the import of components from the foreign partner at whatever price he wants. There is no "competition" because the import of the finished products is not allowed.

One should not be churlish. One should not envy some people having access to the "goodies" which make life pleasant for the elite in India, in the style of the affluent in the developed countries of the West. But two basic questions arise: first, was the new technology policy which was initiated in the eighties put up to and approved by Parliament, because all the cases cited above fly in the face of the 1973 technology import policy of the eighties, added by the liberalised facility for import of components, has succeeded in doing is to significantly increase the import bill for the country, together with a significant increase in the repatriation of profits, royalty and technical knowhow fees, without any benefit either to the basic industrial strength of the country or to exports. The impact of "supply side economics" as practised in India during the eighties has merely resulted in inflation at home and balance of payments difficulties abroad.

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

Jawaharlal Nehru

(October 4, 1940)

M/s Sah Brothers

9, "Naples",
9, Sobani Road,
Cuffe Parade, Bombay - 400 005

The other major point to remember is that this pattern of development has been totally different from the pattern of development envisaged in successive Five Year Plans. The technology policy followed over the past decade has ignored the basic needs of the bulk of the population; of the need for increased employment (which would make for more widespread income generation); of the need for making a positive thrust for exports.

Example of the Asian Giants

At this juncture it would be useful to bring in the example of the "Newly Industrialising Countries" (NICs) of East Asia, or the new Asian Giants in the field of industry and export as they are sometimes called. Reference is, in particular, to Japan and South Korea, and of late, Taiwan, mainland China, Thailand, Malaysia and Indonesia.

The Japanese and the South Korean models are particularly instructive. Both countries exercised a rigid control over the import of technology. The government and the industry together formulated a set of target products—for large scale manufacture and export—and set about the business with single-minded effort. Technology—the best of technology—was to be imported, with a significant domestic Research and Development (R&D) effort to absorb, adopt, adapt and further develop the technology. In area after area, this procedure was followed with singular success. Japan and South Korea, and of late Taiwan as also mainland China today dominate the US market for manufactured goods, starting with automotive vehicles, to consumer electronics, and on to garments, toys, diverse items of home appliances and, almost all consumer goods except alcohol and perfumery, which are European specialities.

But even to this day, the Japanese and South Koreans do not allow free import of technology—except with a purpose and a long term plan.

Indian Scenario

Why has Indian technological growth lagged behind? Has it lagged behind or has it been forced to take a backseat? Take the achievements of Indian scientists and technologists in the fields of nuclear and space technology. With the whole Western world denying *any* help (either by way of technology or even of highly specialised materials), our experts have made significant headway in both areas. As stated earlier, during the seventies the Bharat Heavy Electricals Limited (BHEL) was able to secure turnkey contracts abroad, for setting up power generating plants. The Bureau of Industrial Costs and Prices (under the Ministry of Industry) has found that our "conversion costs for most types of heavy equipment (including not only power equipment but also equipment for the manufacture of like pressure vessels) are lower than abroad, our sale prices being higher only because of higher prices of raw materials like stainless and special steel.

What is the status of the BHEL and other giants of yesteryear? Today, the BHEl is starved of orders and is languishing. The Government is short of funds, and new power projects are approved only against foreign aid. The aid donors naturally insist on purchase of equipment from their countries. Two simple examples should suffice. The Anpara Power Station in UP is being set up with foreign aid, at a cost nearly 80 per cent higher than the cost of an equivalent BHEL plant. The Bakreswar Power Plant in West Bengal is today in doldrums because we depended on assistance from the USSR for the project. India can produce the required equipment, but India has reached a stage when India's development cannot be financed from India's internal savings. India must depend on external aid to finance its development.

A direct consequence of this policy is under-employment of the capacities for equipment manufacture already created in the country, under-employment of the labour engaged in these businesses, absence of profitability—and sometimes—losses of the public sector enterprises involved and, worst of all, demoralisation of the entire workforce in the PSEs.

Latest Policies

To remedy the problem of lack of resources, the Government of India has embarked on a set of policies which are incomprehensible. All direct tax rates (including the Capital Gains Tax) have been lowered, and the wealth tax on financial assets totally abolished. At the same time, the rate of interest on government securities has been increased and the Satutory Liquidity Ratio (SLR) of banks lowered. We need not go into the stock market scam and fraud which these policies induced; but clearly, the above policies can only increase the budgetary deficit of the Central Government. And the response of the government is to give an open invitation to foreign capital to set up power plants (with even 100 per cent foreign equity) with a *guaranteed return* of 16 per cent on the investment, when the power rates charged by the State

Electricity Boards (SEBs) involve a subsidy even at the present lower costs of power generation and transmission.

The above is but one example. The other is the open invitation to foreign capital to invest (up to 51 per cent equity in joint ventures) for exploitation of proven oil reserves at Mukta, Panna, and a few other fields. The two specifically mentioned are calculated to yield a total of more than 26 million tonnes of crude oil per year, together with the associated natural gas recoverabe with the crude oil. At current import price of crude oil at some Rs 4500 per tonne ($ 20 per barrel of oil), the value of the crude oil alone would be some Rs 11700 crores per annum; the value of natural gas would be additional. Profits in the oil extraction business range from 30 to 40 per cent, after taking *all* costs, including capital servicing charges. The foreign investors would be able to repatriate their investment in a year or two.

The third approach of the government is to gradually sell off the equity of the public sector enterprises (PSEs). A first lot of such sales (averaging eight per cent of the equity of 38 PSEs) has already been made at par. Take the BHEL. Its equity is Rs 240 crores. The value of its assets today is of the order of Rs 25000 crores. On market valuation, the BHEL share should have a premium ranging from 50 to 100 times. And yet, 20 per cent of BHEL shares have been sold "at par". And as per the report of the Janakiraman Committee, they have ended up with a foreign bank.

Since the government is unwilling to tax the rich, it wants to sell off all the assets the nation has built up, over the past 40 years, to both nationals and foreigners, including foreign banks.

In the process, we are not only damaging the productive capacity in the economy built up over the years, we are giving a permanent setback to the growth of indigenous technology.

Concluding Remarks

Development of an economy implies, in essence, the development of the capabilites of the people of the concerned country. The effort has to be a multifaceted one; it has to do with improving the level of education, of health, of skills, of general living conditions—and most of all, employment opportunities with an adequate income so that children are not forced out of schools to work— together with encouragement of indigenous scientific and technological capability. This last requirement calls for state support of Research and Development activity and proper follow-up through wide dissemination of information, knowledge, technical education and technological capability. If "innovation" is to be promoted—and innovation has been and continus to be the mainspring of productivity growth—we need to have an economic regime which promotes indigenous capability. This does not imply "insulation" from the rest of the world; in fact, there is need for continuing interaction with developments in other parts of the world. But such interaction is successful by and large among equals or near equals.

India is endowed with a manpower which has shown the ability to rival any other country in terms of knowledge, of skills, of technological capability. It is these talents and forces that need to be nurtured and promoted. The type of regime now being introduced since July 1991, with the Dunkel Draft on GATT reform looming large on the horizon, is not conducive to the growth of technological capability of Indians. Little islands of excellence—by way of "enclaves" of foreign capital generated production ventures, where indigenous skills and capabilities are deliberately prevented from flowering—leads to what is known as banana republic -like development.

This is what our economic policy-makers need to relearn from the fact that over the past fourteen months we have had neither internal stabilisation nor a balance in external payments, but merely an accentuation of unemployment and internal dissent throughout the country, and a steadily deepening external debt. As per the World Debt Tables published by the World Bank, India's total external debt as of December 1990 was $70.1 billion. This figure somehow misses out the "foreign currency" and non-resident (external) rupee deposit of the NRIs, which were, as of December 1990, $5.5 billion and $ 3 billion respectively. Since 1990 end, we have borrowed significant sums from the IMF the World Bank and the ADB. The total external debt of India, as of June 1992, may be estimated at between $82 to 84 billion. As per official statements, we need "extraordinary external financing" to the tune of some $ 3 to 4 billion annually over the next few years. We desperately need to halt this mounting external debt, to rely on internal savings, to rely on our own capability to promote the future growth of the country. The pursuit of the present technology and capital import policy can result only in getting the country mired in debt from which it would be difficult to extricate ourselves. ■

South African Indians

Facing the Future in a Period of Transition

NINAN KOSHY

As the pillars of apartheid begin to crumble and South Africa moves agonisingly towards the goal of a non-racial democratic society, a good section of the Indian community there appears to be uncertain and even anxious about their future. A number of factors contribute towards this uncertainty in a situation which is highly complex.

There is an impression in many quarters that South African Indians are generally prosperous. This is partly correct but subject to several qualifications. If one visits Indian areas in and around Durban one can see palatial bungalows, middle class dwelling places and sub-standard houses, often in separate sections. While there are some very rich Indians, a visible middle class and a large number of professionals, the majority of the Indians belong to the working class. Within the confines of the apartheid system it is true that the Indians have been less disprivileged than the Africans. But it should not be forgotten that the Indians also have been oppressed in various ways under apartheid and have been victims of many laws of discrimination including that of the Group Areas Act. In the suburbs of Durban one can notice old temples in prime land, set apart for the Whites (under the Group Areas Act). This is the land from which Indians who had lived there for long were evicted. It is true that Indians have been upwardly mobile because of ambition, hard work, family ties and the full utilisation of the opportunities especially in education. As the moment of truth approaches with the ending of apartheid and the possible emergence of a non-racial democratic South Africa (which in practice will be dominated by Africans), the situation is in some ways reminiscent of Indian attitudes in the last stages of decolonisation in countries like Kenya and Uganda.

As a minority of one million, Indians constitute less than three per cent of the total population of South Africa. But if one looks at the delegates at the CODESA (Convention for a Democratic South Africa), this smallest population group in the country is highly visible. There are two from the Tri-Cameral Parliament and two from the Indian Congresses (Natal and Transvaal); then there are Indians wearing the hats of the African National Congress (ANC) and the South African Communist Party and an Indian judge as co-chairman of the meeting. This apparent prominence of Indians in the negotiating forum is misleading as in the new South Africa which emerges from the negotiations the Indian community as a minority may not be politically prominent or influential.

The minority issue in South Africa has special characteristics which make it even more complex than it is in most other countries. It is a minority (the White) that oppressed the vast majority with a vicious and inhuman system the effects of which will continue for a long time. That minority still rules the country, controlling all the levers of power. It owns the vast majority of wealth and resources including the land. That same minority is now using the issue of minority rights to block progress in negotiations for a non-racial and democratic South Africa, and it wants to impose a permanent minority veto in the future administration. This makes it extremely difficult for the ANC to address genuine minority issues which may be there for the Indians, the Coloureds and also for the Whiltes in a fututre South Africa. The official position of the ANC is that the rights of minorities will be protected by a justiceable Bill of Rights which will be part of the new Constitution. The ANC has published a Bill of Rights which will easily stand the scrutiny of constitutional lawyers and human rights advocates. But it assumes, as many constitutions do, that by protecting individual human rights the rights of minorties also will be protected. This has not proved to be the case in most countries and hence the discussion internationally on what is called group rights. But because of the history of the rights of groups under apartheid, the ANC does not want to touch group rights. That term has an

The author, a former Secretary of the World Council of Churches, was a Visiting Fellow of the Harvard Law School (1991-92). A prominent educationist, he spent a fortnight in South Africa last July and studied the situation with regard to the Indian community there.

ominous meaning in South Africa. This in addition to its own understanding of the national question makes the ANC unable to deal, at least for the present, with minority issues. The result is that many Indians feel that the ANC has either neglected them or taken them for granted. This perception has to be dealt with though several of the concerns of the Indians may not be well-founded.

This is in spite of the fact that for several decades large sections of the Indian community have identified themselves as Blacks and have seen themselves primarily as Africans and then only as Indians. It is true that till the late thirties the Indian political movements in South Africa were dominated by the richer and bigger merchants who pursued a policy of accommodation with the Whites and the socio-economic order they imposed. But this changed as consciousness developed not only about unity among Indians but also unity between Indians and Africans. It is in this context that Yusuf Dadoo and M.G. Naicher emerged as leaders whose personal histories coincided with major developments in the history of the liberation movement in the country. They gave leadership to the Indian Congresses of Natal and Transvaal. During the 1950s the South African Indians took active part in campaigns such as the Defiance Campaign, the Congress of the People which drew up the Freedom Charter and in the trade union movement. When the strategy of the revolutionary movement shifted to armed struggle, young militants from the Indian community joined 'Umkhonto we Sizwe' (the armd wing of the ANC-Communist Party alliance). In fact Ahmed Kathrada, an Indian, was one of the founders of Umkhonto.

This has been part of the record of the Natal Indian Congress which was never banned as an organisation though a number of its activists were banned or imprisoned. The NIC of course faced a dilemma at the time of the unbanning of the ANC in 1990. There were differences of opinion within the NIC about its future role. In spite of its separate identity in the CODESA, the NIC does not any longer function as a separate organisation. It has no branches and all its activists have been absorbed by the ANC. Indians played a major role in the early eighties in the Mass Democratic Movement (MDM) and the United Democratic Front (UDF) because the style of these organisations suited the Indian tradition of passive resistance and mass demonstrations. Even earlier in the ANC and the SACP several Indians held important positions and through the MDM and UDF also many joined the ranks of the ANC. Some Indians now hold leading positions—including that of the General Secretary (Jay Naidoo)—in the Congress of South African Trade Unions (COSATU).

◆

A very large number of young people of Indian origin are active in the ANC. While it is true that there are not many Indians holding positions at the highest level in the leadership of the ANC, there are a number of Indians in the National Executive and it does not go unnoticed that several of the intellectuals who do the research and produce the documents of the ANC are Indians. The leadership relies on them and they are highly respected and quite influential. In south Natal alone there are seven thousand Indians in active membership of the ANC in addition to thousands of supporters.

However, it would be far from the truth to suggest that the majority of Indians support the ANC. In fact surveys as well as general impressions show the opposite. The most extensive survey on political attitudes of South Africans conducted by the Institute for Black Research found in 1990, at the height of the popularity of the ANC, that the majority of Indians would vote for the National Party, the ruling party in the White minority government. Since then the National Party has staked its claims as a non-racial party and a party that can forge and lead an alliance of the minorities. These claims are now assiduously canvassed among the Indians (and Coloureds) by a large number of full-time workers of the National Party which has made inroads into the community. This process has been to some extent helped by the Indian representatives in the Tri-Cameral Parliament. Though these MPs were elected in an election which was boycotted by more than ninety per cent of Indians they are now quite visible on the national scene and obviously enjoy their role during the transition.

This brings up another interesting point. Progressive Indians and their political movements have successfully persuaded the majority of Indians over the last three decades to boycott apartheid's political institutions for Indians, like the South African Indian Council (SAIC), Local Committees and then the House of Delegates of the Tri-Cameral Parliament. It may be recalled that it was at an anti-SAIC meeting in 1981 that Reverend Allan Boesak first made the proposal to form the United Democratic Front. Thus the experience of the Indians has been in boycotting elections and not in participating in them. Now Indians have to be persuaded to vote in the non-racial elections which may take place in the near future. This may not be easy at a time when a sizeable section of the Indians seems to be indifferent to political activity. This indifference goes hand in hand with the fear of changes.

Partly the fear is about Africans and the African ascendancy. Indians—may be with a transplantation of the caste system—are apparently not averse to someone being above them as long as there is someone below them. But they find it extremely uncomfortable when those below them suddenly rise to the top. This happened in a number of East African countries and it is now happening in South Africa. But it has to be admitted that it is not just 'caste psychology' that affects the Indians in South Africa. While some of the fears may not be well-founded there are grounds for genuine concern.

The violence in the Black townships affects Indians in various ways though they are not directly touched. The escalation of violence from the mid-1980s partly accounts for the decline of their interest in mass action. Violence has made them an inward-looking community. While violence erupts between the supporters of the ANC and those of Inkatha in the Black townships, it makes many Indians nervous about membership in the ANC. Meanwhile the Inkatha leader, Buthelezi, periodically reminds them of the 1949 riots in which Indians were attacked by the Africans. Indians of the older generation have still haunting memories of the attacks by African rioters. The reminder by Buthelezi is taken not as an empty threat but a reason for real fear not only from the Inkatha supporters but possibly even from other Africans during the transition or after a change of government. In 1990 there was an orchestrated campaign of violence against Indians in central Durban when Africans attacked Indians. Many traders closed down their business. It is said that central Durban has not yet recaptured its former vibrancy.

Indians fear that the upward mobility which has been characteristic of the community may be halted or even reversed when the African majority make their legitimate claim on the resources and services in the country. To the Africans the positions of the Indians may appear to be what they can immediately aspire for and some of them may see the Indian community as a stumbling block in attaining such aspirations. The villain of the piece, the White, may often be invisible, and the 'boss' in a firm will be the Indian who is a middle manager. While the real exploiter will be sitting at a distance or in the top floor of the multi-storyed building, the Indian will be seen as the exploiter.

Already some problems can be noticed. With the abolition of influx control and the Group Areas Act a large number of Blacks has moved to squatter camps known as informal settlements. In the Durban area many such informal settlements are close to Indian areas and some in Indian-owned farms and other properties. The more wealthy Indians take legal action for eviction of the squatters or demolition of such settlements while the working class Indians appear to be tolerant of these settlements in their proximity. African children now want to join Indian schools and because of the differences in the educational systems for the different communities under apartheid, including the medium of instruction, this has begun to create problems of adjustment. Many Indians feel that this will result in a decline of the standards of their schools.

On the broader political issues also Indians have concerns. Some of them have raised questions about the influence of the South African Communist Party in the ANC. They are worried about the eventual policies of the Communist Party on religion, economy, etc. It is true that these concerns are not confined to the Indians. About the ANC itself many Indians have questions about some of its policies, especially economic policies and even about styles of leadership and negotiating positions.

Other political movements have only negligible influence among the Indians. The Pan-Africanist Congress (PAC) does not appear to be very active in most parts of the country though many feel that it enjoys substantial support from sections of Blacks. From the beginning there have been Indians in leadership positions of the PAC. There will be few supporters of the Inkatha in the Indian community though there are some who believe that some federal or regional arrangment which Inkatha advocates might bring some advantages for the Indians.

Vast sections of Indians seem to be uncertain of the future and their own political options, an uncertainty that is likely to be of benefit to the National Party. Meanwhile, one is impressed by the large number of young Indian activists in the ranks of the ANC especially in Natal who not only are effective political organisers but committed to social action and community service in the sprawling Indian townships like Chatsworth, a suburb of Durban. They are convinced that the democratic rights and the welfare of the Indian people can best be defended in a country free from the scourge of racism, national oppression and class exploitation. They believe that the future of the Indian community lies in its identification with the Africans as they struggle together for justice and human dignity and build together the new South Africa. ■

Communalism in Contemporary India

Some Theoretical Considerations

RANDHIR SINGH

Communalism was a major social and political problem in our country during the colonial period, it gained yet another basis and lease of life with the partitioned independence of 1947, and has acquired a truly explosive dimension in recent years. It is significant that while there is a general abhorrence of communalism and literally none in this country would like to be described or known as a communalist, communalism persists, an ugly presence in our everyday life and a potent threat to the life and property of our people in large parts of the country and to their struggle for a better life everywhere. The need to understand communalism, and to struggle against it, was never more imperative than it is today. What follows is a modest effort in this regard, based on what I have already written on the subject elsewhere.*

One aspect of the matter needs to be immediately taken note of. We must recognise that, once arisen, like any other socially significant phenomenon, communalism has come to acquire an autonomous reality and logic of its own. As such, subject of course to the ebb and flow of the country's social and political life, especially the shifts within bourgeois politics, communalism today has an extraordinary diversity of forms or aspects, community, region or economy-wise peculiarities and variations, complex and changing historical contexts or conjunctures, and a certain specificity of expression each time, including its use by the different political formations of the ruling classes at different times, occasionally even in their factional infighting, and so on. These are indeed among considerations of great tactical importance in the struggle against communalism, for there is no escaping *the absolute necessity* of fighting communalism in each and every one of its expressions on its own specific terrain. This is an essential part of any effective struggle against communalism. And it is in this area that competent scholarly work on communalism has made its most valuable contribution.

My concern in this note, however, is not with these specificities of communalism but with a few issues of general nature, clarity regarding which, I believe, may help towards a better, more true, and therefore politically more effective understanding of communalism in contemporary India (including its reality and logic as an autonomous phenomenon).

◆

THE first issue concerns the *decisive* importance of *how* you understand or explain contemporary communalism, for this determines how you will proceed to struggle against it, what will be the focus or main thrust of this struggle. In social scientific thinking much has been made in recent years of the *logical* disjunction between facts and values, between explanation and prescription, and there has been an ignorant, philosophically illiterate insistence upon 'value freedom' or 'ethical neutrality' in social science scholarship. This is not the place or occasion to discuss this problem. Nor is it necessary. For my *purpose* it is enough to recognise and counter-insist that in all human activity, whose characteristic is purpose, knowing and doing are so related that explanation is invariably suggestive of prescription, just as a diagnosis always points to the treatment. In other words, an explanation or understanding, of any social phenomenon, always has a 'value slope'. And this, I suggest, is true of every understanding or explanation of communalism in contemporary India.

Thus, if 'religion' is central to your understanding of communalism, the remedy will necessarily lie in exhortations on behalf of either 'true religion' or,

The author, one of the most successful teachers in Delhi University as a Professor of Political Theory, has now retired from the University. The argument of this article was put together sometime back as a keynote address for a seminar at the Aligarh Muslim University but eventually that did not take place.

*See *Of Marxism and Indian Politics*, especially the essay "Theorising Communalism in India", Ajanta Publications (India)", New Delhi, 1990; also "Communalism and the Struggle against Communalism: A Marxist View" in *Social Scientist*, Vol. 18, Nos. 8-9, August-September 1990.

I believe that we have cause to be proud of the fact that for a long series of centuries beset with vicissitudes of stupendous proportions, crowded with things that are incongruous and facts that are irrelevent, India still keeps alive the inner principle of her own civilisation against the cyclonic fury of contradictions and the gravitational pull of the dust . . . Our great hope lies there, where we realise that something positively precious in our achievements still persists in spite of circumstances that are inclement.

from the other end, cultivation and spread of 'scientific temper'. An explicitly formulated variant of this kind of understanding, which in fact has emerged as the most widely accepted theory today, is the view that 'communalism is above all a communal ideology', a dangerously 'false' ideology. That being the case, it only follows that 'it is at the level of struggle against that ideology that the way out has to be found. Any other way out will prove to be no way out at all.' The 'value slope' indicated is a struggle at the level alone—any other 'level of struggle' is simply explained out. (Incidentally, those who understand and argue in this manner generally hold that salvation lies in the ideology of nationalism: 'nationalist ideology must confront and overpower communal ideology'). Again, if the evil of communalism is primarily located in politics as such, the solution almost inevitably turns out to be an appeal to all and sundry, including political parties, to eschew such 'pseudo-politics' or 'anti-politics' as scholars have called it, and practice non-communal or secular, some kind of 'true' or 'genuine' politics. Or, if you go by an 'economic interpretation' of communalism, the prescription will be a demand for 'rapid economic development', 'more job opportunities', etc. And so on.

Such explantations, each in its own partial manner, certainly partake of the 'truth' about communalism in contemporary India and the forms of active intervention suggested by these explanations are indeed important in any struggle against communalism today. But 'the truth is the whole', as Hegel put it. And if therefore we have an understanding of communalism which, including all this and more, is a totalising, all-sided understanding, which even as it grasps communalism's specific aspects or autonomous reality and its certain irreducible basis in religion or religious identity, seeks to explore the entire ensemble of its social interconnections, above all with economy but also with history and politics, ideology and culture, etc., especially those which have made it the explosive issue it is in Indian society today, the prescription will be: a really effective struggle against communalism has to be a *revolutionary* struggle, which even as it values and includes within itself every form of particular intervention or struggle against communalism, is a part of the Indian people's larger struggle for a better life, for a sane and just, a genuinely secular and democratic society that guarantees a life of dignity and honour to all its citizens.

The second issue concerns what is possibly the most common ideological error characterising scholarly as well as 'common sense' understanding of communalism in India, which invariably regards communalism as the opposite of nationalism. Nationalism is, by definition as it were, assumed to be secular, a view typically expressed in the daily invocatory reference by anyone or everyone these days to 'national and secular forces' in India. This error is born of a certain facile understanding of the pre-1947 history of Indian nationalism and is reinforced by an equally facile understanding of what happened in India when it gained its independence in 1947.

◆

INDIAN nationalism has to confront and oppose communalism as a divisive and anti-democratic force, sought to be used by imperialism to divide the Indian people and undermine their fight for freedom. Thus, it is often taken for granted that nationalism and communalism are by their very nature antithetical or mutually exclusive, that to speak up for nationalism is, *ipso facto*, to be secular, and even democratic. However, this is simply not the case. A certain historic justification for this view notwithstanding, even for the pre-1947 period it is today well to recognise that Gandhi and bourgeois-led Indian nationalism, along with its other limitations, carried a great deal of Hindu and other communal baggage with it, and that its 'final triumph' in 1947 was at the same time a compromise and settlement with imperialism which partitioned the country along communal lines, with disastrous long-term consequences for the common people on both sides of the borders.

As regards what happened in 1947, its essential character, we need to recognise that a powerful social, political and ideological force in modern India, nationalism (including nationalist movement or politics) is yet a historical phenomenon with class and society-specific character, potentialities and limitations. As such, nationalism is not something progressive, or for that matter reactionary, in itself. On the contrary, whether nationalism (or nationalist politics) is one or the other, or anything better or worse, this is determined by its specific character, its programme and leadership, and above all by the concrete historical conjuncture.

Thus nationalism in India before 1947 was indeed progressive; under a different, more advanced class leadership and programme, it could have been radical, even revolutionary. It was progressive because it aimed at resolving the basic structural contradiction of Indian society, congealed in imperialism, whose resolution, *against* imperialism, alone could clear the path for the Indian people's continuing struggle for a better future. But nationalism need not be necessarily or entirely so in the post-1947 period. For the settlement of 1947 had its own harsh logic.

It is customary in conventional scholarship or historiography to take a liberal, linear view of the historical process in India around 1947. In this view the Indian nation, or 'nation-in-the-making' if you prefer, is seen as winning *political* freedom for India in 1947 and then expectedly and almost unproblematically moving on to win *economic* freedom for the country—a movement which fortyfive years hence is still on. The real historical process, however, has been quite different, essentially dialectical. The very manner in which the contradiction with imperialism was resolved, its 'transfer of power' involving no basic economic or social structural change, but putting new, now *Indian* ruling classes in control of the state power this made the Indian people's struggle for economic freedom not only that much more complex and difficult but also primarily a matter of struggle against these classes for the same reason, even the Indian people's continuing fight against imperialism, or neo-colonialism of the transnationals, is no longer simply a continuation of the old anti-imperialist fight; henceforth it too can be effectively waged only as a part of this more base struggle. For the imperialist intervention in our country, the neo-colonialist 'integration' into the global capitalist economy, now takes place primarily by the grace of end through the opportunities provided by precisely new rulers of India.

For my present argument the point to be noticed is that the Indian ruling classes have, over the years, used their state power to facilitate a kind of socio-economic development in India which has led to the emergence in this country of the now universally admitted 'two nations'—the Indian 'twin-nation' (K.N.Raj), "socio-economic *dualism*' which is so very 'corrosive' (Sukhamoy Chakravarty), 'this dualism in Indian society' that is threatening to become 'explosive' (V.K.R.V.Rao), the 'two Indias' of Rajni Kothari, V.P. Singh, R.K. Hegde *et al*, etc. etc. In this situation nationalism or nationalist perspective only obscures the essential character of Indian social reality today, its underlying exploitative and oppressive socio-economic structures, and thus serves to cover up or provide alibis for the historic default of the post-colonial ruling classes in India, and increasingly turns into a legitimising ideology for the new social order and the powers that be.

Nationalism as an ideology in the service of the established social order is nothing new or surprising. In modern times, the ruling classes of the countries of imperialism have traditionally used nationalism to consolidate their rule at home and to defend and justify aggression and domination abroad. More recently we have witnessed several cases of similar political-ideological use of nationalism by ruling class politicians—among these by Margaret Thatcher in England with the Falklands War, or by Ronald Reagan in the US in his twice successful bid for the American Presidency. Nearer home we saw Rajiv Gandhi romp home in the unprecedented electoral triumph of 1984 on a platform of nationalism, with strong Hindu chauvinist, even anti-Sikh, overtones the emerging platform of Hinduised Indian nationalism, which has now been well and properly appropriated by another political formation of the Indian ruling classes, the Bharatiya Janata Party.

Besides, we must not forget that we have known nationalism of German, Japanese and Italian varieties. With the ruling classes in the normal pursuit of their interests or when faced with situations of crisis in the polity, nationlism has often taken all sorts of statist or racist or fascist or imperialist forms, providing ideological support or cover to the emergence of reactionary authoritarian regimes. And far too often in our times people have been sacrificed to 'the nation', as has already begun to happen, in its own way, in this country too. One has only to listen to our rulers' rhetoric about 'unity and integrity of the nation' and look at their practice on the ground!

Thus in the Indian context today, a struggle against commuhalism from the standpoint of nationalism is, if not entirely misleading, highly inadequate and problematic. It is certainly not going to be effective unless it is at the same time a part of the struggle to rescue the 'nation' from its ruling classes, if I may put it that way.

◆

THE third issue concerns religion and religious identity which do provide a certain irreducible basis for communalism in India, and in understanding and taking care of communalism, we need to understand and take care of religion and the problems of religious identity also. Religion as such is not my concern at the moment. Here it is only necessary to reiterate the need for a critical but sophisticated treatment of the question of religion insofar as it feeds or is manipulated to feed communalism. To this I shall add a specific argument on the question of religious identity.

Discussion or treatment of religion in our country is generally much too simplistic and cliché-ridden, even in its more sublime metaphysical or philosophically esoteric passages; typically there is its idealisation and defence as simply a spiritual phenomenon that caters to high human values and aspirations, or, far less often, its criticism and rejection as simply an erroneous view of things that is waiting to yield to a rational or scientific understanding—and almost always a shared ahistorical approach, a substantive denial of any *genuine* basis for religion in social reality. What is needed is a radically different, deeper understanding which, aware of the social basis of religion and religious phenomena, gives due recognition, at one level, to their essential socio-psychological nature and, at another, to their complex and powerful historical presence in human affairs, in India as elsewhere. Here Karl Marx's fragmentary observations on religion (or criticism of religion) still remain most relevant.

He wrote:

> The foundation of irreligious criticism is: *Man makes religion*, religion does not make man. Religion is indeed the self-consciousness and self-esteem of man who has either not yet won through to himself or has already lost himself again. But *man* is no abstract being squatting outside the world. Man is the *world of man*, state, society. This state and this society produce religion, which is *inverted consciousness of the world*, because they are *an inverted world*. Religion is the general theory of this world, its encyclopedic compendium, its logic in popular form, its spiritual *point d'honneur*, its enthusiasm, its moral sanction, its solemn complement and its universal basis of consolation and justification. It is the *fantastic realisation* of the human essence since the human essence has not acquired any true reality. The struggle against religion is therefore indirectly the struggle against *that world* whose spiritual *aroma* is religion.
>
> *Religious* suffering is at one and the same time the *expression* of real suffering and a protest against real suffering. Religion is the sign of the oppressed creature, the heart of a heartless world and the soul of soulless conditions. It is the *opium* of the people.
>
> The abolition of religion as the *illusory* happiness of the people is the demand for their *real* happiness. To call on them to give up their illusions about their condition is *to call on them to give up a condition that requires illusions*. The criticism of religion is therefore in *embryo* the *criticism of that vale of tears* of which religion is the *halo*. Criticism has plucked the imaginary flowers on the chain not in order but so that he shall throw off the chain and pluck the living flower. The criticism of religion disillusions man, so that he will think, act and fashion his reality like a man who has discarded his illusions and regained his senses, so that he will move around himself as his own true sun. Religion is only the illusory sun which revolves around man as long as he does not revolve around himself.
>
> It is therefore the *task of history*, once the *otherworld of truth* has vanished, to establish the *truth of this world*. It is the immediate *task of philosophy*, which is in the service of history, to unmask self-estrangement in its *unholy forms* once the *holy form* of human self-estrangement has been unmasked. Thus the criticism of heaven turns into the criticism of earth, the *criticism of religion* into the *criticism of law* and the *criticism of theology* into the *criticism of law* and the *criticism of theology* into the *criticism of politics*...

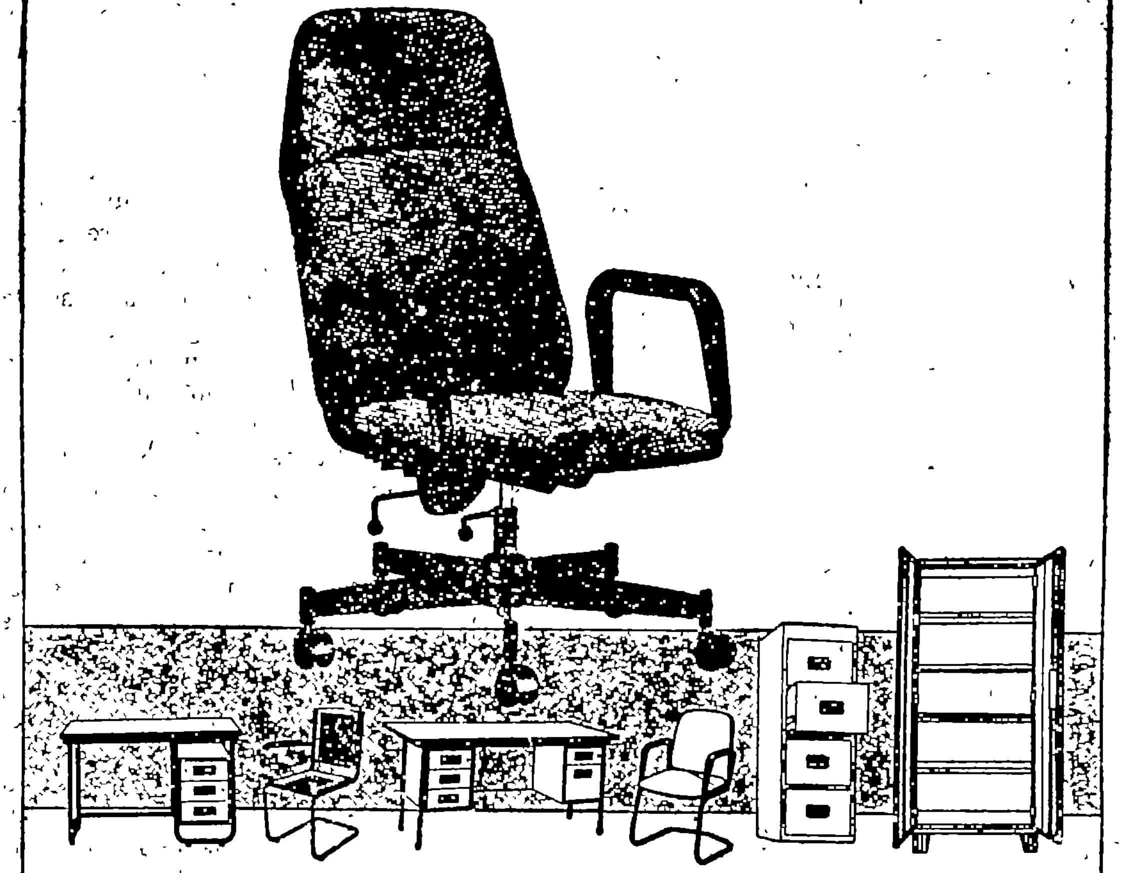
◆

THE most important conclusion for purpose of my argument is that the criticism of religion and the inter-related phenomena of revivalism and fundamentalism, and communalism, especially as it is also an escape into or aggressive assertion of an identity based on religion, must become the criticism of society that makes religion and the rest of them both necessary and possible.

We also need to recognise that in the history of humankind religion often arose as the ideology and practice of powerful progressive social movements (Buddhism, Christianity, Islam, Sikhism, etc). That given their religious character and other class-history limitations, these movements in due course lost their positive momentum and that religion, organised or otherwise, increasingly comes to be a conservative, even reactionary factor in social life, manipulated by the ruling classes for their own ends and socialising the common people into a more or less passive acceptance of different oppressive and iniquitous social orders—all this and worse should not lead us to ignore the radical traditions or positive potentialities within religion even today—witness for example, 'the liberation theology' in Latin America and elsewhere. Though, one must add, the recovery and realisation of these traditions or potentialities raises a host of difficult and delicate issues for contemporary radical or revolutionary people's movements, and for good historical reasons religion *as such* can no longer play its earlier progressive role, much less provide the basic resources, theoretical or practical, for any revolutionary reconstruction of society in our times—it can at best only help.

Be that as it may, we must not underestimate the importance of religion as a social force; it has,

Godrej Office Furniture gives you...



The widest range of office equipment. Each specifically designed to bring out the best from your people. With superior quality that only Godrej can offer.

Everything you require under one roof.

for good or ill, a continuing reality and rhythm of its own in our society. It persists as a significant element not only in personal identity, but even more so in the cultures of especially the so-called 'Third World'. Quite often it is a crucial element in the culture of the poor and the oppressed. All this suggests the need for a sophisticated, deeper understanding of religion and related matters than is commonly available with the currently fashionable anti-communalism and secularism. A Voltairean instrumental or even genuine enlightenment rationalism, or the seemingly more modern 'scientific temper' view, happy working with its simple dichotomies of 'true' and 'false', or an abstract, essentially ahistorical attitude that mechanistically separates the religious from the secular (including even the social and the cultural) and is inclined to be cavalier or dismissive about issues of religion and religious identity, this will simply not do—however scientific or secular all this may appear to be!

Insofar as religion is an issue, it is this critical but sympathetic and sophisticated understanding of religion which should inform our struggle for secularism in India. It is a long haul, but there is no other choice. In this, as in so many other things, we must have faith in our people's interest and ability to understand. Tactical resilience is necessary but populist cliché-ridden pragmatism will not do any longer. An almost opportunist evasion of real and difficult issues here has already proved disastrous for our people.

I am not here concerned with the problems arising out of the characteristic diversity or plurality of India's extraordinarily rich social and cultural life, or with the emerging, highly visible and valid struggles of the long oppressed and more disadvantaged sections of the Indian people, 'identities' as they have come to be called: minor nationalities or ethnic groups, religious minorities, Dalits, tribals, women, and so on, all impelled to action by an iniquitous economic development, all struggles against an oppressive, homogenising Indian state and India's equally oppressive social structures, and all of them seeking their rights and a place of dignity and honour among the Indian people—a development that drawing attention to the multiform social oppressions prevalent in our society, as against the conventional focus on the economic oppression, has given rise to a virtual 'identitarianism' which is such a significant but problematic feature of contemporary social scientific concerns as well as social activism. I am only concerned with making a brief comment on the question of religious identity.

◆

THERE is no denying the importance or value of religious identity as a form of community, for the sense of belonging it gives to its members, the social, cultural and psychological support it provides, especially in times of personal stress and social crisis. Man is indeed a social being—and this is not to be understood in the vulgar bourgeois manner but in the profound sense in which Plato argued for it against the Sophists, or, in our times, Marx asserted it as a principle of materialist humanism against bourgeois individualism. Man reaches his humanity and continues to *be*, ever more human, as a cooperative, communitarian being—each 'I' is, as Marx said, 'an intermediary between you and human species'. Community is inside man just as man is in side community. His very individuality is acquired by him from it and 'his life is an expression and confirmation of social life'. Before there is a man, there are men. Or as Marx put it:

> Since he comes into the world neither with a looking glass in his hand, nor as a Fichtean philosopher, to whom 'I am I' is sufficient, man first sees and recognises himself in other men...

The bond this recognition reflects is not something metaphysical or spiritual or even, in the first instance, psychological. It is practical—based on the need to be, to live and to survive. From community human beings receive the atmosphere and sustenance for their short flight on this earth, and through it alone they have an opportunity for whatever immortality is genuinely possible for them. Community, thus, is a positive value. And this is very true of a religious community as an identity, as a histroically-constituted 'recognition', that is, of cooperation and fellowship with other human beings.

But it needs to be immediately added that the range of this 'recognition' is neither pre-given nor frozen or exclusive at a particular point of time. On the contrary, it is always, as already suggested, a historical product. A family or tribe, caste or class, religion or nation, or even gender—it may, one day, well come to encompass, not rhetorically, but in a meaningful sense, the entire humankind in an enriching lap over the invariably overlapping primary or intermediate identities we now have. In the meantime, however, it is well to recognise that precisely because these identities are historically constituted, they carry a whole load of history's

burdensome baggage also, the mud of their times as it were—they *have* their negative features. A religious identity is no exception—a good example is the status and treatment of women in virtually all religious identities.

In other words, an identity as such is not something sacred, a value in itself—its real-life situation may have all kinds of ugly features *within* that limit or diminish human beings, struggle against which has to be a part of the larger struggle *without* for a more just and democratic social order. A concern for the rights and interests of identities does not mean condoning or perpetuation of these nagative or ugly features: their own injustices, discrimination and denial of rights, inequalities or class divisions, superstitious or otherwise oppressive social peractices and, almost invariably, a vision which is a barrier to seeing things the way they really are, etc. etc.

Democratisation within is in fact necessary if the democratic rights struggle without is to be really effective in the interests of the identity concerned as well as the requisite democratic advance in society, and not remain only an ineffectual holding operation that simultaneously strengthens the hold of the internal vested interests. Equally, it will remain essentially a holding operation, again benefitting primarily the vested interests within, if this struggle, the struggle of any oppressed identity, is not articulated with *class struggle*, if it is conducted in oblivion of the basic economic-structural contradictions of Indian society. For these contradictions even as they determine the basic class oppressions in our society, also condition, most decisively, the working out of the identity-specific oppressions; and their resolution is a necessary, though by no means sufficient condition for the elimination of these latter oppressions also. Such a resolution, however, calls for an united revolutionary movement of *all* oppressed and exploited people, which is not possible without the requisite revolutionary consciousness among them. It should be obvious that it is impossible to develop such a consciousness without a prior and persistent critique of 'the identity-consciousness' which is in so many ways a much corrupted consciousness. All this applies with added force to religious identities, for by their very nature, here more than anywhere else, 'the tradition of all the dead generations weighs like a nightmare on the brain of the living', as Marx once put it in another context.

These general observations apart, in the context of communalism, there is one aspect of religious identity which requires specific mention. It is of the very nature of an identity that in marking itself out as distinct or different, it divides itself from others. So does every religious identity. In fact all organised religion is essentially divisive of humankind, and more so for the high stakes involved, even if most of them are illusory. But important for the purpose of my argument is not this fact of divisiveness, which is quite natural and obvious, and which many be fed, over time, by all sorts of other factors, including historically produced discriminations, contentions or antagonisms and true or false perceptions of history and contemporary social reality. Really important is what happens to this divisiveness in specific historical conjunctures. Peaceful and coexistent, tolerant, accommodating and even fraternal in one context, it can become explosive and quite murderous in another.

Notwithstanding clichés about religion being about love, and not hatred, or the loud-mouthed *bhai bhai* business, history is witness to unparalleled intolerance, fighting, killing and hating, in the name of religion.* That is why we do not seek the cause of recent explosive emergence of communalism primarily in religion or religious revivalism and fundamentalism, or in religious identities, their history or inherent divisiveness and its sundry ideological manifestations—though all these certainly feed or are manipulated to feed this communalism. We seek this cause in the concrete historical conjuncture, the economic and political matrix of contemporary India.

◆

THIS brings me to the important issue of the socio-economic matrix of India in its highly significant relation to contemporary communalism—and this matrix is the historically specific form of capitalist development in India. We need to notice its essential logic as a *capitalist* development. Just as, before 1947, the structural logic of British imperialism meant the accumulation of wealth in England and poverty in India, the structural logic of Indian capitalism is most manifest today, as already mentioned, in the creation of 'two nations' in this country in only 'forty years of freedom'. Its historical specificity has given it a strong lumpen or compradore character, presided over as it is by a bourgeoisie born old without ever having known youth, with none of the possible virutes of youth and all the vices of old age. Here all the evils of belated capitalist development, semi-feudalism, bureaucratisation and bloated bourgeois politics daily enter into and reinforce each other. Romesh Thapar once described it as 'some strange kind of corrupted capitalist growth', where, we might add in the words of Marx, 'we suffer not only from the living but from the dead' also.

---

*Always more honest than the many who invoke him or speak in his name, Gandhi recognised the grim fact of 'wars in the name of religion', and pointing out that 'these are not confined to Hindus and Mussalmans alone, wrote: 'The pages of world history are soiled with the bloody accounts of these religious wars.' But wedded as he was to a religious-idealist worldview, he did not have the slightest clue to the real historical causation of these wars. He could only urge upon us, once again, 'to discover an underlying unity among all religions', and insist: 'When you look at these religions as so many leaves of a tree they seem so different, but at the trunk they are one.' Thus it has been before Gandhi and thus after him with the votaries of religion—their argumentation always has its quota of such Gandhi-like urging and insistence but, I may add, without Gandhi's honesty and sincerity and, above all, his abiding love and concern for the common Indian people.

Today, every aspect of social life in India bears the signature of this historically specific Indian form of capitalist development—its mark is there on our morality, our culture, our politics, on everything, everywhere. It is there, for example, on our 'national integration', or the so-called 'mainstream' which, bearing the impress of India's corrupt and corrupting, somewhat lumpen capitalist development, is increasingly a dirty mainstream—corrupt, communal and criminalised, a repressively homogenising mainstream. The fact to be deplored is not that we are integrated but that we are integrated the *capitalist* way, which has meant not only general exploitation and oppression of the people but also, and necessarily, an unequal and uneven, development in the country, clearly visible, for example, in the emergence of 'two nations' in India and a certain 'internal colonialism' as well. Such 'integration' therefore carries within it strong disintegrative tendencies. It is not without reason that today, especially in the absence of class-based people's politics, all the identities, all the divides and fissures of Indian society, including the religious, have simultaneously become significant and *explosive*.

What is more, Indian economic development with its structural logic of inequality and unevenness has produced not only 'two Indias' and an ever-widening gulf between the two, with all its disintegrative consequences, but also, together with poverty and hunger and heart-breaking inhuman conditions of life for the vast masses of our people, a society of myriad old and new oppressions, insecurities and alienations, with no jobs or ideals for its youth or vision and values for the people, a society in deep social and moral crisis indeed—*thus providing a continuing social-material basis for the production and reproduction, sustenance and reinforcement of all sorts of religiosity or dharmikta, revivalism, fundamentalism and obscurantism, and also ideologies and practices like communalism.*

(Apropos 'the Punjab problem', for example, it is well to remember that the green revolution, as an integral part of Indian capitalist development, has meant not only 'economic growth' but also sharpened economic disparities, class divisions and social tensions. And in its progress it turned Punjab into a 'chicken-and-whisky-land', giving rise to an extraordinary corruption and vulgarity of life and culture in the State. This, in the absence of a strong countervailing democratic or socialist culture, should explain a great deal about the compensatory appeal of religious fundamentalism, with its harking back to the puritanical traditions of early Sikhism, etc.)

Scholarship on communalism has certainly gained for us a great deal of 'retail sanity' about communalism in contemporary India. But given its strong empiricistic orientation, it has failed to see the 'wholesale madness' which has today come to characterise the Indian society as a whole—its economy, politics, ideology, culture and so on—in which communalism, and 'insanity' itself, has become explosively functional at the present historical conjucture. And it has become so functional today, above all, by virtue of the politics practised by the Indian ruling classes through their diverse political formations in recent years. This is the last issue that I would like to deal with.

◆

THE Indian ruling classes have always found religion, religiosity or *dharmikta* most useful for reinforcing their hegemony, their ideological dominance and social control over the common people, making easier the latter's continued acceptance of an unjust and iniquitous social order. This usefulness has been well-secured through the typically Indian concept of secularism, defined as *sarva dharma sambhava* (equal respect for all religions), which is in fact no secularism at all—it is far more a celebration of all kinds of religion and religiosity, ignorance, obscurantism and social oppression. Also their political parties have never been averse to the exploitation of religion, or communalism, to a greater or lesser degree, in their struggle for power at different levels in the Indian state.

But even as communalism as also religion and revivalism are there among the people and the Indian society continues to produce and reproduce these in a rich variety of form, expression and use depending upon particular, historically specific causes conjunctures*, the most significant recent development has been the shift of the Congress-I, the major political formation of the Indian ruling classes, to an openly communalist politics under the leadership of Indira Gandhi during her last phase and later of Rajiv Gandhi, the consequent emergence of state-sponsored or condoned communalism, religious revivalism, superstition and obscurantism, particularly the varieties associated with the majority Hindu religion, and the growing identity of Hindu chauvinist ideology with Indian nationalism—all of which has been since, far more naturally, taken advantage of and reinforced by the other, openly communal ruling class political formation, the BJP. Obviously, it is here that the somewhat shaky Indian ruling classes have been seeking, through their different political formations, to a greater or lesser degree, a newer basis of hegemony for their class rule.

The heightening of communalism today is simultaneously the product of social, moral and political crisis in society and the response, of the ruling classes to this crisis. With the older bases of their power and hegemony weakening, they are increasingly turning to communalism in general and to Hindu communalism in particular, to win votes, fragment and divide the people and, above all, secure their continued political and ideological dominance over them. Faced with a worsening economic situation for the people and mounting discontent, widespread violence, disruption and disorder in civil society, and their deepest-ever crisis of legitimacy since independence, the ruling classes are seeking increasingly authoritarian, even fascist, answers to their problems. It is in this overall context, essentially a context of classes and class struggle, open or hidden, actual or potential, that communalism as ideology and practice has become functional, more than ever before, in contemporary India.

This heightened importance of communalism in the politics of the Indian ruling classes may even betoken a certain weakness of character, almost a failure of nerve on their part. For while there are problems galore, an increasing loss of credibility and even significant revolutionary developments in certain parts of the country, there is as yet no real or present threat from below to their political power or class domination. If these ruling classes, or their political representatives, are yet betraying a strong tendencey to scuttle even formal secularism for communalism and religious obscurantism, or,

---

*Here is an illustration. Apropos 'Hindu chauvinism', in his introduction to *Anatomy of a Confrontation: The Babri Masjid-Ram Janmabhoomi Issue*, S.Gopal writes:

> Hindu chauvinism is an unsurprising counter to the Islamic fundamentalism that is spreading in India and various other parts of the world. Seeking to confront throw-backs to medievalism by modern secular attitudes is a difficult endeavour, far easier to take up similar, backward-looking postures in dealing with the menace. Also, just as the Jews were denounced in Nazi Germany as a threat to the economic prosperity of the nation as a whole, so in India Muslims are today being made the scapegoats of impending decline, particularly of retail and small-scale business, in the Indian countryside. In the riots in Kota in September 1989, those killed were mostly the Muslims who had been once poor but now roused envy because they had been enriched by money from the Gulf. Tamil Nadu has been relatively free of antagonism between Hindus and Muslims; but this record was tarnished by communal rioting in Madras city in September 1990, and it is said that Marwari traders rewarded the hooligans who burnt shops owned by Muslims. In the clashes in the Bhagalpur area in October 1990, not a single Muslim weaver family was spared in the Champanagar and Nathnagar localities, famous for their silk textile production. Nor is it without significance that many of the disputed religious sites constitute valuable urban property. The craving for plunder has not departed with Mahmud of Ghazni.
>
> Such economic greed, rivalry and exploitation draw sustenance from other sources as well. Fundamentalism is an umbrella providing shade to smuggling, drug-peddling and other dubious, anti-social activities. Indians settled abroad, clinging to obscurantist versions of their religion in an effort to salvage their identity in an alien context, have thrown their weight—and funds—on the side of reaction in their home country.....

Needless to add, the form, expression or use of minority communalism or chauvinism is subject to a similar historical specificity. And, the obviously important differences in their situation notwithstanding, the two communalisms regularly feed each other and are equally divisive and harmful to the interest of the common people everywhere, in every community. They need to be struggled against in an equally determined manner. Besides, it is well to remember that the minorities have a greater stake in the secular character of the Indian polity.

It is on the Kashmir soil, that Islam and Hinduism are being weighed now. If both pull their weight correctly and in the same direction, the chief actors will cover themselves with glory and nothing can move them from their joint credit. My sole hope and prayer is that Kashmir should become a beacon light to this benighted subcontinent.

for that matter, even formal democracy for an increasingly authoritarian rule, this is indicative not only of a certain degeneration at the core of the Indian political system in recent years, but also of the feudal-colonial inheritance of the new rulers of India, of a certain compradore strain inherent in the character of the dominant sections of the Indian ruling classes, including the Indian bourgeoisie as a whole.

To state the issue in a slightly different, more specific manner: Following independence, throughout the Nehru era, what dominated the scene was politics of the ruling classes, as conducted by their political formations, the dominant Congress-I and the rest, more or less as a 'consensus', a balance of power and interests among them, the beneficiaries of the system as a whole. But after the economic crisis of the mid-sixties, and subject to the continuing constraints of the economic situation since then, this 'consensus' of 'balance' has been lost, that beneficiaries, ever more greedy and grasping, have been violating the rules of their own political game, inside the Parliament or legislatures and outside—and 'democratic politics', insofar as it also provides a basis for the hegemony of the ruling classes and serves as an impersonal, non-arbitrary device for resolving their internal conflict of interests while articulating and promoting these interests as a whole, has been seriously undermined. Ruling class politics, especially because it faces, as yet, no significant revolutionary threat from below, has in fact increasingly acquired a no-holds-barred quality and with its corruption, criminality and lumpenism, its philandering ways and utter unscrupulousness, become a potent threat to Indian democracy as we have known it and a deadly exercise for our people, producing one tragedy after another for them. Here in this 'politicians' politics' (*la politique politicienne*) as Malraux once phrased it, it is truly the end justifying the means—any means including the use of every form of religious revivalism, fundamentalism and obscurantism, and, of course, communalism.

◆

LET me conclude with a tentative definition of contemporary communalism, even though a definition at best, can be no more than barely suggestive of an understanding:

> Communalism in contemporary India, as ideology and practice, is above all an aspect of the politics of the ruling classes in a society with a massive feudal-colonial inheritance, deep religious divisions, and undergoing its own, historically specific form of capitalist development.

The understanding underlying this definition seeks to grasp communalism in all its complex interconnections, above all the more basic economic-structural and political interconnection that decisively condition the dynamics of contemporary communalism in the interrelated areas of personal life, politics, ideology, culture, etc. And the most important implication, the 'value slope', of this understanding is that to be really effective the struggle against communalism has to be a struggle against *more* than communalism, just as a struggle for secularism has to be a struggle for *more* than only secularism in India.

Our struggle, counterposing people's politics to 'politicians' politics' of the ruling classes, even as it confronts communalism on its each and every specific terrain, has to be a part of the Indian people's revolutionary struggle *against* India's state-supported or more market-friendly *capitalist* development and *for* a just and equitable, people-oriented socio-economic order in India, which in our times can only be socialism, or in more precise historical and theoretical terms a *society in transition to socialism/communism.*

A Note on Concept of 'Hindu-fascism'

It needs to be noticed that communalism is *aspect*, and not the whole of even ruling class politics. Thus its is open to the impact of not only the inevitable shifts within this politics but the ebb and, flow of the country's politics in general, more particularly the people's struggle against communalism and against ruling class politics itself. Here, on the basis of our historical experience, it is possible to hazard the generalisation that the spread or heightening of communalism and related phenomena like religious revivalism, fundamentalism, or obscurantism, is in direct proporation to the depth of the crisis in Indian polity and politics of the ruling classes on the one hand and in inverse proportion to the presence or power of the Left or class-based people's politics on the other.

This generalisation, even as it indicates the correct path of struggle against communalism, is also suggestive of an entirely different kind of possibility. With the deepening socio-economic and moral crisis which has sharpened all the conflicts and contradictions within, and the increasing

We do not believe in a rigid autarchy, but we do want to make India self-sufficient in regard to her needs as far as this is possible. We want to develop international trade, importing articles which we cannot easily produce and exporting such articles as the rest of the world wants from us. We do not propose to submit to the economic imperialism of any other country or to impose our own on others. We believe that the nations of the world can co-operate together in building a world economy which is advantageous for all and in this work we shall gladly co-operate. But this economy cannot be based on the individual profit motive, nor can it subsist within the framework of imperialist system. It means a new world order, both politically and economically, and free nations co-operating together for their own as well as the larger good.

Jawaharlal Nehru

ineptitude of the rulers whose opportunist practice only ends up creating new problems while turning the old ones into running sores, Indian society and politics are steadily sliding into anarchy and authoritarian or mafia ways. In such a situation, communalism may well come to contribute to the rise of a specifically Indian form of fascism. Years ago Nehru had feared such a possibility and warned against it. Today the possibility is being recognised as a real threat by an increasing number of thoughtful people. We must not be alarmist about it but we do need to have a better understanding of such a possibility. For, almost invariably, this threatening authoritarianism is being misinterpreted: the concept which has gained currency in this regard is 'Hindu-fascism'; at other times it is 'Hindu communalism' which is spoken of as 'nascent' or 'impending' fascism in India.

Such conceptualisation or linguistic practice is not only misleading, it is also harmful to the cause of struggle against both communalism and the possible emergence of fascist authoritarianism in India.

◆

AT an obvious empirical level, 'Hindu fascism' as a concept ignores the role of communalism *as a whole* in the growing fascisation of Indian society. This is not to deny 'the major threat' that comes from 'majority communalism', or the reality of discrimination the minorities suffer and the need to fight it, or their obviously greater stake in the secular character of Indian polity, etc, etc. But all this does not justify overlooking the very real contribution 'minority communalism' of various hues is making to the daily deteriorating situation in our country.

Furthermore, with its implicit treatment of Hindus as one undifferentiated mass, this concept virtually makes a gift of all those who regard themselves as Hindus to the communal politics of the ruling classes. It certainly makes it that much more difficult to help these Hindus understand—and vast masses of our poor and oppressed are among them—not only that Hinduism, like any other religion today, has no answers to the myriad problems they daily face and share with the rest of the common Indian people, but also that, if and when such a fascism arrives, while it will certainly mean an added oppression for the minorities, they, as Hindus, will not be its beneficiaries they—too will be, like most other ordinary Indians, its victims, only their number, as Hindus, will be the largest among them.

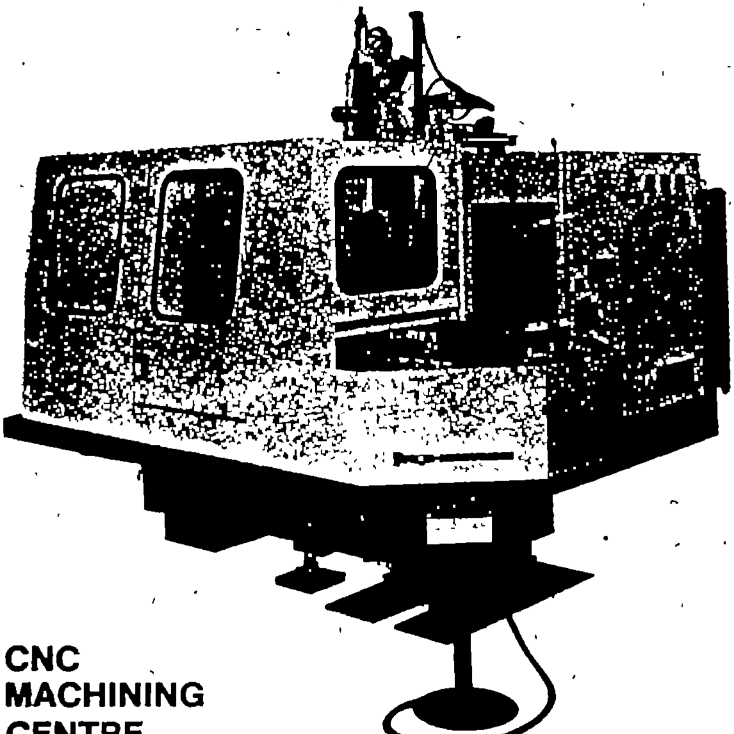
It should also not be forgotten that if there will be something 'Hindu' about Indian fascism, it is likely to have a great deal more of 'nationalism' about it to give it the necessary thrust and legitimacy. Not 'Hindu communalism' but Hinduised nationalism is going to be part of its ideological mask. In our times fascism has often arrived in a typical alliance with chauvinistic nationalism and there is no dearth of such nationalism in our country today. Its rhetoric has already become almost unbearable. To speak of 'Hindu fascism' is to prevent recognition of this extremely significant ideological dimension of the developing fascisation of life and politics in contemporary India.

◆

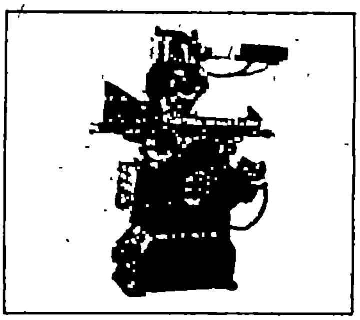
THE most important problem with this concept however is that utterly empiricist in registering what is apparent or most visible, it misses out on all the significant interconnections involved and has no explanatory value at all. Privileging 'Hindu communalism' for almost exclusive attention or analysis, as fact, ideology or anything else, it completely obscures what is most important in understanding or explaining any possible rise of fascism in India—its class-basis, the system of class-relations within which it is likely to develop and function, the class role it will be called upon toe perform, etc. etc. As a product of the crisis in Indian polity and ruling class politics, fas cism in India, whenever it comes and whatever the ideological mask, will be another, explicitly authoritarian, form of the rule of the dominant, expoliting classes, just as, in another setting, 'democratic-secular' is the preferred form. It will be a new method to realise the old policies, centred on maintaining the existing class exploitative structure of Indian society. The concept of 'Hindu fascism' simply fails to grasp this vital truth.

Needless to add, such a denouement of ruling class politics in India would indeed be a tragedy for the Indian people—the worst in a long list so far. It needs to be opposed and fought against by all means and at all costs. It can and must be averted. ■

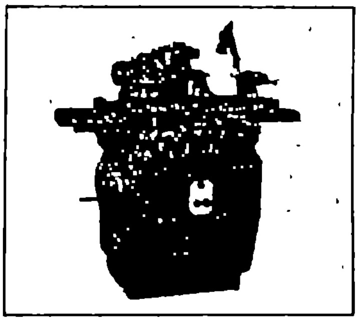
To earn worldwide acceptance, Praga has broken its own records ... year after year



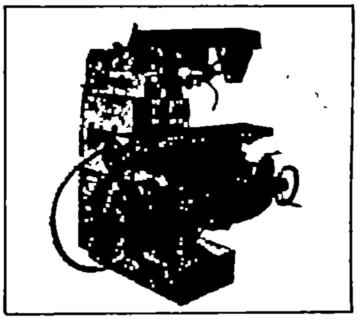
CNC MACHINING CENTRE



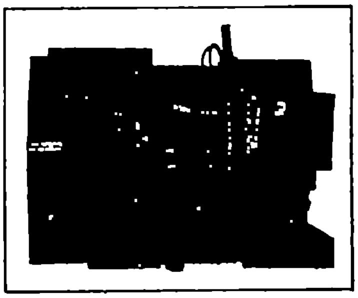
SURFACE GRINDER



CUTTER & TOOL GRINDER



UNIVERSAL MILLING M/C



CNC LATHE

Praga's technological capabilities have never been in doubt. With the finest R&D professionals and expertise, and forty nine years of experience. Praga has always had an edge in the machine tools industry in India. Praga's reputation for consistent accuracy and precision is built-in with every high quality machine tools. Besides, collaborations with internationally acclaimed machine tool manufacturers, have given Praga a much higher profile than ever before. Praga machines match international standards. And this has only been reinforced by the fact that the International market has open its doors to Praga. Praga exported it products to UK, Canada, France, USSR, W. Germany, Malaysia, Hong Kong, Bulgaria, Holland, Iran, Saudi Arabia, Kuwait etc...

But that's not to say that Praga has outgrown its commitment to India. L&T, Kirloskar, GKW, Sandvik, Telco, Bajaj, LML, Hindustan Motors, Mico, Escorts, Phillips, Siemens, Eicher, BHEL, HAL, ITI, BEL, ECIL, BDL, Railways, Defence are some of the clients.

Praga. A soundly managed company that has expanded its production capacity by over 100% to meet the growing demand for its machines. Provides prompt after-sales-service to cut the downtime that drains away profits. It's this kind of customer-relations that makes its clients put their complete faith in Praga ... and, it's this faith that helps Praga grow from strength to strength.

Science and Secularism

A RAHMAN

Nowadays everyone has become a soldier of God; consequently the secularists are a threatened species. And soldiers of God talk in a manner as if they were really God themselves, hence any meaningful discussion on a rational plane has become almost impossible. I would, however, make an effort to convey how science and secularism are linked together.

In India secularism means different things to different people. It is explained and defined to suit the occasion, often the same person defines it differently on different occasions. Despite these problems, some of our historians have done a creditable job in interpreting history in a manner which brings out the concept of secularism as it should be. My approach would be similar.

In my discussion on science and secularism, I propose to discuss three dimensions. First, how knowledge, even when acquired for religious purposes, becomes secular and comes to serve secular purposes. Secondly, common beliefs about such things as certain diseases, certain practices and explanations about natural phenomena which have come to be associated with one or the other religion, can be explained through scientific knowledge, or the latter could be acquired through research, to give humans the necessary understanding to avoid deleterious effects. Lastly, secular knowledge in the areas of historical, social, political, and cultural fields when developed can give new insights and provide a better understanding of processes and help humans to overcome problems created by narrow and limited approaches conditioned by customs, traditions, and conceptual frameworks generated earlier, and which have come to be associated with different religions.

My own serious effort to understand the nature of and the need for secularism started in the early fifties, when I came across the sayings of two medieval scientists—one an astronomer from Central Asia and another a mathematician from India. Mirza Ulugh Beg, 1443, who was killed by his own son at the behest of the mullahs had said: "Kingdoms disintegrate, religions disappear but the work of scientists remain forever."

The author, who was Founder-Director of the National Institute of Science, Technology and Development Studies (under the Council of Scientific and Industrial Research), is currently the President of the International Science Policy Foundation (Asia Branch). This article is based on a lecture he delivered sometime back at a meeting held under the joint auspices of the Forum for Secularism and the India International Centre, New Delhi.

Haji Abdul Hamid Dehlavi (1413) writes in his text book of mathematics: "Matters of religion are subject to debate and controversy while mathematics is beyond controversy and dispute."

The medieval period was dominated by religious thinking, centred around different religions. The question arises as to why these two scientists asserted what they did? What was their purpose or objective? Both were themselves religious persons and one was a Haji.

The need for assertion in both cases arose, in my opinion, in order to establish the distinctive character of science, outside the framework of religion. The many sects within Islam were all the time disputing each other's claims, and serious controversies dominated the intellectual scene of the period. In the case of Abdul Hamid, India had many religions, and a number of sects disputing amongst themselves and with others, about each other's claims and beliefs.

Further, the argument could be further developed, as was the case with Ulugh Beg, that by regular astronomical observation one could know precisely the movement of heavenly bodies and could on that basis predict, for instance, the rising of the moon, eclipses and other phenomena and build a secular calendar, and develop laws of nature. Such an approach is dangerous, as is evident from the fact the Ulugh Beg was murdered. Why is it dangerous? It is so since it makes people knowledgeable, does not allow those in power to frighten and through fear, subdue people.

Religious Needs and Growth of Secular Knowledge

This is my understanding of secularism, and this is the point which I wish to develop. Let me begin first with the need of Muslims from Algeria to Indonesia and China to find the direction of Ka'aba and develop the lunar calendar to fix the dates of the festivals. It is necessary to develop for the former geography and to know exactly the latitude and the longitudes of the cities. Consequently, we notice during the period of ascendancy of Islam, a major development of geography. But once geography was developed, it was increasingly used for non-religious purposes as well. In fact, the religious motivation was soon superseded by a knowledge function, that is, the spirit of enquiry. The religious use became only marginal to the other uses. In other words, it became a secular area—that is, people belonging to different religions could use it for their own purposes.

What applies to geography also applies to astronomy. In the case of astronomy we have an excellent example of secular effort in India in the eighteenth century by Sawai Jai Singh-II. During his period three calendars were in use, and each one was associated with a religion. They were considered and named as Islamic, Hindu and Christian. Sawai Jai Singh noted the discrepancies of the "Islamic" and "Hindu" calendars and also the developments of European astronomy and endeavoured to improve the calendar so that the observed and calculated dates could tally. Natually you could not associate this calendar with any one religious tradition but a synthesis of the three—in other words, secular.

Incidentally, when India became free, one of the first efforts made by the government was to reform the calendar the Saka Calendar—again a secular effort which took into account the tradition also.

It would be worthwhile, having given examples from natural sciences, to give an example from social sciences. The tradition of collecting the sayings of the Prophet—the *Hadees*—requires that the place and the persons before whom the sayings were uttered should be correctly recorded. Consequently, after the death of the Prophet, his associate, the *sahabis* recorded the whole chain of people before whom the sayings were uttered, and those who related them to others, and those who passed them on to the others. And the record had to be analysed, shifted and veracity indicated. This also led to the development of the science of history and historiography in the Islamic world. This was secular knowledge and provides us with an understanding of social, political and cultural development of the society of the period.

Old Concepts and New Understanding

Let me take a few concepts, for instance, contamination or pollution or the 'concept of purity'. According to Islamic tradition, running water is pure (*pak*) and can be used for cleaning yourself for the purpose of offering prayers. The rivers or rivulets in the earlier times may have been clean and perhaps were good for cleaning oneself. But this certainly cannot be said of an industrial society. The rivers and rivulets are now contaminated, that is, polluted from industrial waste and sewage and one can use their water at one's cost.

The Hindu tradition suggests the pouring quantities of milk with chanting of vedic hymns would purify the water. In fact, this has often been done, according to press reports, for the river Jamuna. This practice cannot be justified on the basis of available knowledge. Pouring of milk is a waste and not desirable when a large number of children, who need the milk most, have no access to it. In order to "purify" or "depollute" the river, one has to know the pollutant—it can be hot water, waste from industrial units, or sewage. One has to know the composition of waste, and the sewage, and for depolluting the type of pollutant, specific action would be required, from prevention to counter-measures. Here once again scientific knowledge becomes the basis of both understanding and as well as action to be taken. This is secular knowledge and used for secular purposes. In other words, under a set of different conditions old knowledge may not be of much use, one has to develop new knowledge and use it for specific purposes.

Let us take another example from medicine. Certain diseases, like leprosy, were considered an infliction of divine wrath for the sins committed by the person and the afflicted persons were outcastes and left to themselves, to slowly waste away and die. It was only the painstaking effort of the scientists which led to the discovery of the cause of infection, and finally the cure. But it took considerable effort by the social reformers to remove the social prejudices against the people which led to their rehabilitation. One could give a large number of such examples, when ignorance, superstition and erroneous beliefs, were removed and corrected through scientific knowledge.

Nearly all the religions consider natural diasters as the punishment of God for the sinners. Droughts and floods are partly man-made and partly due to natural factors. If they were punishments of God for the sins of man, then it is rather strange that, for instance, those who destroy forests are generally upstream and those who suffer are downstream. In other words, those who commit sin are spared and those who are innocent are punished. But how would one explain such natural disasters as earthquakes or cyclonic devastation? There is an interesting story which was narrated by the late D.D. Kosambi. When a part of coastal Saurashtra was devastated during the reign of Rudra Daman, the pandits advised him to undertake *praischit* and perform *yawans* and to feed the Brahmans. The King, however, perhaps thinking the causes to be natural, decided to build breakers to check the tidal wave.

Today on the basis of available scientific knowledge and the communication system, one can roughly predict the event. It is more in the case of cyclones—their intensity, the possible affected area and the time when they would strike a particular area and the duration of the cyclone. This enables those who have the knowledge and the necessary infrastructure and the will, to minimise the impact and the consequences to the people. Our knowledge about earthquake is not as precise as about the cyclones, even here the area prone to earthquakes are known and one could even make an effort to predict.

However, if one goes by the sinner theory then the Bangladeshi's are the greatest sinners because they suffer from major devastations due to floods and cyclones every year and Iranians also as their devastation is through earthquakes. The question remains: why are Bangladeshis punished by floods and cyclones and Iranians by earthquakes? The point is clear—one has to look for natural causes and develop secular knowledge. Further, if the so-called explanations, given by those who consider natural disasters as the punishment of God for their sins then Europeans and Americans are the least sinners, since they are able to minimise the scale of the disasters through predictions and by taking appropriate measures thereafter.

If one looks for secular reasoning for such a phenomenon, then one would realise that the degree of scientific knowledge possessed by a nation or country gives them the necesary power to avoid or minimise the consequences of disasters to human beings. Those who are underdeveloped in science and technology do not have the necessary means and hence suffer. India is better placed in comparison to Bangladesh as far as the cyclonic effects are concerned and Japan is in a better position than Iran in the case of earthquakes.

Secularism and Social and Political Issues

Having given examples from the area of sciences, the question may be raised that secularism being a political, social and cultural concept in contrast to or in place of using religious concept and values, how would one operate and apply it in practice? The latter, particularly in a multi-religious society, where the majority of people are guided by their religious beliefs. In my opinion, this is vital for such a society. This would be evident from a few examples, which I present before you.

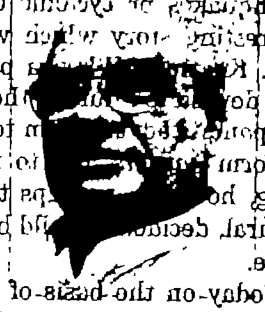
Since the word 'secular' is used in relation to religious tradition, it may be worth mentioning here that religion has two dimensions. First, personal experience and belief; and secondly, social engineering. The belief is personal and its nature and facets are not a matter which could be discussed and debated. The second dimension is part of customs and traditions. These may vary amongst the believers of the same religion and from one country to another, and from one period to another. It is this dimension which is subject to debate and discussion. Customs and traditions are built around the knowledge base of a society in a particular period and linked with the vision of the society, which the ruling elite promotes. The latter are able to organise society on the basis of production and human relations and these in turn form the basis of customs and traditions. Different sections of society may have different customs and traditions. This may be evident, for instance, in India where the role of Brahmans, Khashtriyas, Vaishyas and Shudras was well-marked. A change in the knowledge base and the vision of society may bring about a change—as has happened in India. This change is subject to controversy. The proponents of change base their views and arguments on new knowledge which is secular, while the opponents of change advance religious customs and traditions as a part of their argument.

This is an area which is covered primarily by four branches of knowledge:

i. Political theory, ideology and institutions;
ii. Social and economic structures and institutions;
iii History, its understanding and interpretations; and
iv Culture, including customs and traditions.

These area of study which are now categorised as social sciences, they themselves undergo changes in the course of time in perception, theoretical framework, and in content on the basis of pool of knowledge, tools of investigation, analytical techniques. Consequently, each succeeding generation, which is able to stand on the shoulders of the previous one, reinterprets the past, develops new techniques and methods of judgement and values, standards and norms and this brings about

HARYANA BEARS A NEW LOOK



Haryana's present is glorious. Future holds promise of brighter and more cheerful prospects for the people. Today, a silent revolution has emerged in its development scenario. Economic freedom, social security, communal harmony, peace with development prevail all around.

The following facts present a vivid picture of the inspiring saga of social and economic transformation:

- Now Haryana is contributing about 36 lakh tonnes of foodgrains to the Central Pool
- Under diversification of agriculture an area of [illegible] hectares has been brought under sunflower cultivation during 1991-92 as against 18,000 hectares in the corresponding season.
- Haryana is the first State in the country to pay [illegible] Rs [illegible] per [illegible] 1992-93.
- Number of small and rural industries has gone up from 4,619 in 1966 to 1,10,000 and the large and medium scale industrial units have risen from 162 in 1966 to [illegible]
- About two-third area of the State has been declared as industrially backward for the grant of financial incentives to the rural industrial units
- To create more employment opportunities in the rural areas the State is developing small industrial estates known as Udyog Kunj in focal villages.
- Haryana is one of the fore-runner states in the country to provide drinking water facility to all its 6,746 villages by March 31, 1992.
- The daily average availability of power during the current year, upto September 1992 has been 298 lakh units against 269 lakh units in the previous year
- An all-time record supply of 360 lakh units was made on September 24, 1992 as against 351 lakh units in 1991.
- Haryana would get 334 MW from the proposed 840MW Yamunanagar Thermal Power Project on its completion.
- Monthly repair of transformers will be increased from 1,200 to 1,600 by the end of 1992-93
- Education upto graduation level and technical education have been made free for girls in Haryana.
- The incentive of free uniform has been extended to 63,500 girls belonging to economically weaker sections of society involving an expenditure of Rs 88.75 lakh.
- The incentive of free stationery has been provided to 86,600 girl students belonging to Scheduled Castes and Backward Classes on which Rs 40.40 lakh are being spent during 1992-93
- A monthly pension of Rs 100 is being paid to 7.60 lakh senior citizens, 1.64 lakh widows and 37,000 handicapped under the Old Age, Widow and Handicapped [illegible] during 1992-93.
- The number of beneficiaries belonging to Scheduled Castes has increased from 19.68 per cent to 24.38 per cent with the implementation of the new liberalised Old Age Pension Scheme.
- A new Directorate of Women and Child Development has been created to assure dignity of women and quality of life to children for which a sum of Rs 28.42 crore has been provided for the year 1992-93.
- The per capita expenditure on medical care has gone up from Rs 1.90 in 1966 to Rs 69.50 in the year 1991-92.
- The Haryana Government will give job opportunities to 5 lakh youth under the "One Family One Job" programme during the next four years.
- Haryana Roadways is operating 2,000 intra and inter-State routes from 18 depots and 18 sub-depots with a fleet of 3,700 buses covering over 11 lakh kms and carrying more than 19 lakh passengers per day

I extend my heartiest greetings to the people of Haryana on the auspicious occasion of the Haryana Day and appeal them to join hands with the Government and offer their unstinted support in the gigantic task of building up a more happier and prosperous Haryana.

Bhajan Lal
Chief Minister Haryana

Issued by D.P.R. Haryana

a change.

It may be worthwhile to give a few examples as to how the evolution of knowledge can give us new insights and help us to organise a better society, in a multi-religious state, that is, a secular society, based on the understanding and available knowledge.

LET me take the case of women, the most exploited section of the population: let us take the practice of female infanticide, early marriage and *sati*. All the three features are connected with the biological-social understanding of women. Historically speaking, the agricultural revolution was brought about by women, by the knowledge they acquired about seeds and their germination and domestication of animals, while men were engaged in hunting. Their slavery began when due to over-hunting animals became few and men formed groups and organised raids on settlements which had deveoped agriculture and had stored food. They, apart from carrying away the food, also carried away women to do the work for them. Thus began the captivity of women to do the work of men. The post-agricultural society and the feudal society became a man's society, the position of women was one of captivity, to do domestic work and to produce children—preferably male. Larger number of males were required for the armies—to undertake fighting, and to capture the resources of others. Further, since the casualties were quite high due to almost continuous wars, a certain supply of well-bodied males was required. The birth of a female child was considered a reflection on the manliness of man and hence the female child was to be done away with. This has taken now a modern form.

The practice of *sati* was, most probably, part of the earlier practice when men died their property was buried with them, as in Egypt which included the queens, attendants and animals—when men were burnt on funeral pyre, women were also burnt, being the property of men. Or this may have been to avoid giving any property to wife.

Child marriage may be connected with the menstrual cycle in women which in hot climates may start early, and with the incidence of high death rate of children at birth or soon afterwards, due to lack of knowledge and means of preventing child mortality; early marriage may have been started to have the statistical probability of certain number of survivors.

have given simplistic explanations, probable explanations, but the phenomena is complex and requires in depth study, integration of many fields of knowledge, linkage of natural and social sciences and as a result of the effort one may get many scenarios, and possibilities and all these are subject to change, once broad conclusions are arrived at and studies are carried out on the basis of this framework, new light may be thrown on the phenomenon and which in turn may lead to changing of ideas, concepts and so on and so forth.

LET me take another example. The sudden rise and spread of Islam is often explained in very simplistic terms, that is, the appeal of the faith. But if one examines it historically, other factors also seem to have played an important role. A comparative study of religions would reveal that all the religions were:

i. a revolt against the then existing cults and practices prevalent of the then society;

ii. also a revolt against exploitation and injustices;

iii. attracted downtrodden people, people who were marginalised and exploited and provided them a better future.

Islam appealed to the peasants who were burdened by taxes levied on them by the luxurious life of kings, nobility and clergy. This led to mass conversion of peasants in a number of countries. By providing equality and a status in society to artisans and craftsmen it released their social energies. It is, therefore, not an accident that in many countries the peasants and artisans are Muslims and aristocracy may belong to another religion. However, Islam which provided brotherhood and equality for all men, underwent a major change with the conquest of Persia. Islamic society in the early stages of its development had the concept of *majlis* for decision-making, as is evident from the life and times of four Caliphs. After the occupation of Iran, and the conversion of Persians to Islam, Islamic society adopted to Persian tradition of Kings, with all its pomp and exhibition of power, and society was divided with haves and have-nots.

Secondly, in a society where the major source of energy was human labour, the Arabs who espoused Islam became very largely slave traders, supplying slaves for the domestic work, for mines, *karkhanas* and for the army. In fact, the slave aristocracy was built up in the army and occasionally they came to power. In India, for instance, we had a slave dynasty.

In India, the same phenomena had taken place earlier. According to the late Dr. Kosambi, large-scale conversion from Hinduism to Buddhism had similar basis, apart from other factors. Later, when, the Buddist clergy increased in number and also their luxuries, this overburdened the peasantry, and one dimension of their revolt was reconversion to Hinduism.

The point I am trying to make from these examples is that those who practice a particular religion, due to political factors, social needs or economic considerations may adopt practices which, though not part of religion, come to be associated with religion and became a part of the culture and traditions of the followers of a religion. It is these which require change and modification, but create conflict when an effort in made to do so.

The reason for the latter is that those who are against any change, since they have a vested interest in the existing situation or fear that change would adversely affect them, use religion as a shield, and fight against any change in the name of relgion.

This would be also be evident in the case of the fight against untouchability, entry of Harijans into temples or the fight of Muslim women for equal rights.

◆

THE question which arises is this: why should one change the situation? Why not let things be as they are? The need is generated by the development of knowledge which throws new light and provides a different understanding of issues, problems and things, than what is prevalent. This may be due to physical or biological or political needs. In addition, technological innovations lead to the establishment of new industries, which in turn bring about change in humans and need for new value system, institutions and other relations. For instance, this would be evident from the Indian struggle for freedom. Europeans in the nineteenth century considered themselves superior, and called Africans and Asians as inferior races, colonised them and exploited them. Consequenlty, the freedom movement being directed against this concept and exploitation, showed, on the basis of available knowledge, even though it was generated by the Europeans, that these were invalid and developed alternative concept and endeavoured to promote values aimed at a more harmonious and better society. In all this the base was the use of knowledge as it had evolved and it was used for a well-defined purpose. And knowledge as I endeavoured to show is secular, that is, it cuts across religious or geographical boundaries.

The caste system in India developed a number of social practices. The untouchables were an outcaste group, doing menial work, or scavenging and other dirty work, even the shadow of the untouchable on a Brahman would pollute the latter. Susrut, in his advice to the physicians, advises the latter not to go and see a patient in the *bustee* of *chandals* or receive a messenger who comes from them. The sanitation technology which has been developed in contemporary period has done away with the need of people who do the menial and dirty work. This is now being done with machines and systems developed for the purpose, giving a new opportunity to this group of people and opened up new possibilities for them as a result of scientific knowledge and technology based on it. The common, large scale transportation system has put the Brahman and the untouchables in the same class. The new difference is that rich Brahmans and rich untouchables would travel together. Further, as a result of these possibilities and technologies our concept has also changed. We have discarded the concept as well as the need, thus providing a secular base to society.

◆

SECULARISM breaks down the apartheid which is created by and practiced by people in the name of religion. In my childhood at stations there used to be *Hindu Pani* and *Muslim Pani*, *Hindu Chai* and *Muslim chai*. This is replaced by clean or unclean water, well made tea, or badly made tea. However, the technology of storing and supplying water to people, through the city water system not only supplies reasonably clean water, but has also secularised it. Further, the people who would be manning the city water system in all probability maybe former untouchables. But nobody now raises this question and Brahmans as well as others used the same water.

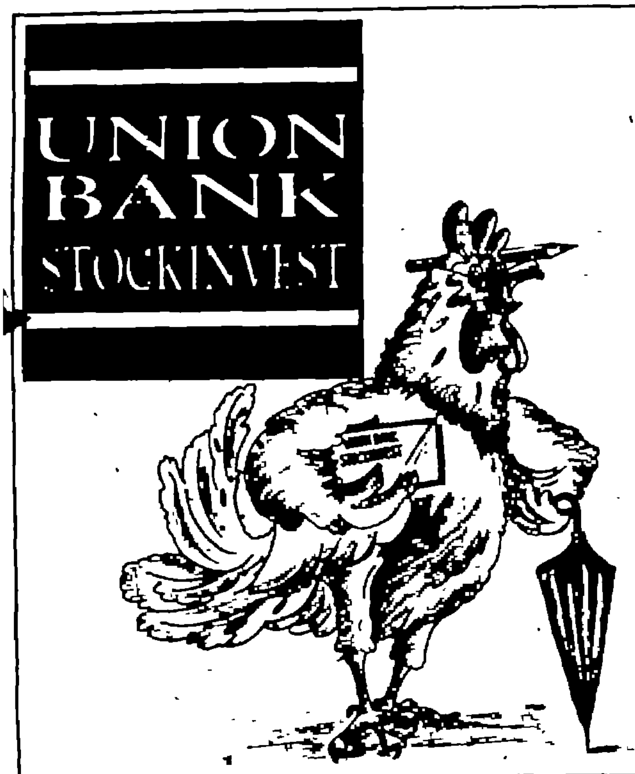
How the lack of observation and sticking to the oral word and the traditional practices associated with the followers of one religion on the other is well illustrated by the story told by William Jones, the founder of the Royal Asiatic Society of Bengal. He enquired from a Sanskrit scholar and an Arabic-Persian scholar about Spikenard, whether Jatamansi and Sumbul-i-Hindi were the same plant. Both emphatically denied and gave lengthy discourses, about their being different, till Jones produced the plant and asked them to identify, which both claimed in different names. Of course, Jones', objectives was different, but it does clearly indicate what the absence of observation can do—ossifies the knowledge as well as the traditions built on it. This example brings out one feature of human thinking and behaviour, that is, often people form opinion and develop prejuidices against people outside their community, without observing or collecting facts—a scientific attitude based on knowledge can break the barrier and can bring together people who follow different religions or belong to different communities, on the basis of verifiable observation or verifiable facts.

The British rulers in India had termed a number of tribes as criminal. Their perception of these tribes was based on superficial observation, limited understanding and their political considerations. A study of these tribes has now provided a new insight into their origin, organisation, their capabilities and behaviour.

I could add more examples, but the few examples which I have given and explained, rather cursorily, show that people can have different religious beliefs, ideologies or philosophies, but as far as the conduct of human relations, dealing with political and social problems and issues and natural phenomena are concerned one need not ignore contemporary knowledge. In fact, one can use it effectively to interact with each other on the basis of verifiable observations and facts to widen human horizon and to bring about social change and a dynamic culture.

In this context science which is a powerful tool and a major method of understanding nature as well as social phenomena, can be effectively used to cut across apartheids, created by ossified traditions and customs, and bring people together for a common purpose. The role of science cannot but be secular.

In saying so I may also mention that science should be differentiated from scientism—mechanical approach to problems and logical positivist philosophy. Further, the use of knowledge should not exclude compassion, love and affection, sympathy, clarity and other human values. In fact, it is the integration secular scientific approach and these human values which will make science a powerful force, which Hali, the nineteenth century poet, described: It has the power of the hand of God. ■



COUNT YOUR INTEREST BEFORE YOUR INVESTMENTS HATCH

Investing in Shares / Debentures could be a wise decision, though fraught with uncertainty.
What will the basis of allotment be? When will you know about it ? How much time will your money be locked up, lying idle ?
Now, Union Bank of India's Stockinvest offers you the certainty of a good return, even before your Shares / Debentures are alloted.
Just open a Union Bank Stockinvest account with your Share / Debenture application money. Send the receipt along with your Share / Debenture application, and watch your money start working for you immediately.
Earn 12 % interest on your Union Bank Stockinvest account (on deposits for 46 days & above), and bridge the investment gap profitably.

Future Prospects of Urdu in India

ATHER FAROUQUI

There has been an extended discussion regarding Urdu as a language and the prospects and potential for its future development in India. A great deal of this discussion has suffered from the general weakness that the issue of Urdu language has been debated in isolation from the wider socio-political and cultural context within which the present status and future development of the language must be decided. On the one hand, some scholars have confined themselves to tracing the history of Urdu and suggesting that as a language Urdu has typical Indian roots and moorings which render its future prospects extremely bright and encouraging. On the other hand, other scholars suggest that Urdu has been a victim of an invidios discrimination which virtually renders its future prospects dismal. No serious attempt has been made to try to place the discussion of the current status and future development of Urdu within the overall context of the changes taking place in the wider society and the changing situation of the Muslim community with which for one reason or another Urdu has come to be associated and identified since independence.

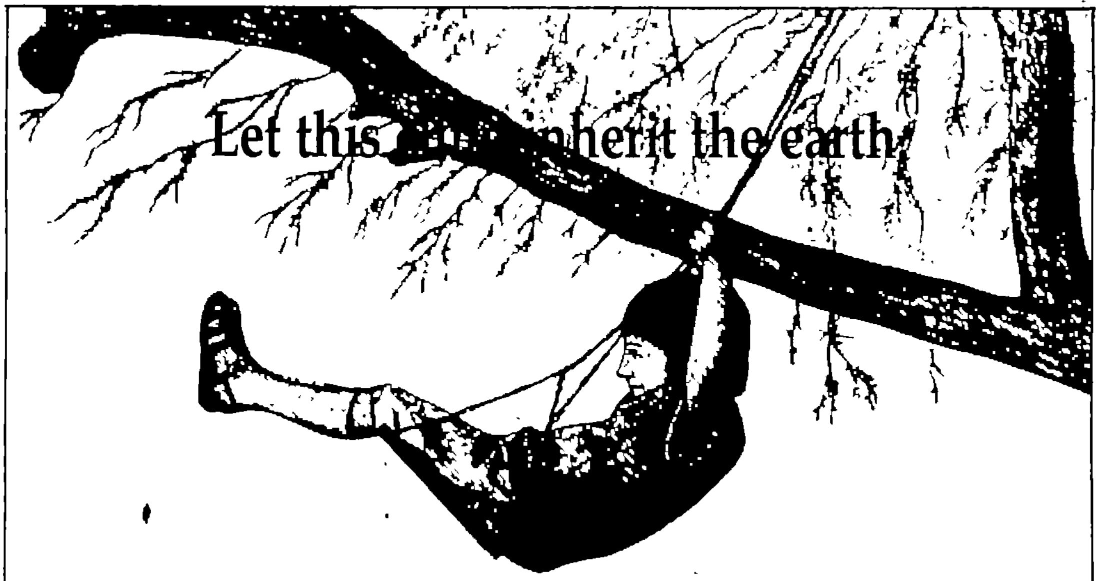
Life and language, including its growth and future prospects are closely intertwined. Languages grow and advance in response to socio-political and cultural changes as well as developments in the field of technology. The impact of socio-political changes in shaping the course of developments and future prospects of a language is ever greater where a language becomes closely identified with a particular social, cutural or religious community and there prevail in society certain prejudices or strong reactions about or towards that community. In such a situation, the development and future prospects of the language cannot be understood satisfactorily without reference to the socio-political and cultural situation of the particular community with which the language is associated in popular perception.

The author is a pioneer-scholar in the field of Urdu education and language in India. At present he is writing his doctoral dissertation on the socio-political aspect of the Urdu language in free India, as a student of the Centre of Indian Languages, School of Languages, Jawaharlal Nehru University, New Delhi. The author's work on this score is the first of its kind at the university level in post-independence India. This paper was presented at an international conference recently held in Doha, Qatar.

From the time of its origin till independence, Urdu cannot be said to be the language of Muslims alone. Particuarly, after its descent from the military cantonments where it was first spoken, Urdu became the *lingua franca* and was spoken by people of diverse cultural, social and religious affiliations. Even though as a literary language it may have been cultivated and patronised by those who were Muslims by religious affiliation, the fact is that as a spoken language the popularity and acceptance of Urdu cut across barriers of cultural, religious and status considerations. It was only in the latter part of the nineteenth century, after the advent of what has in historical writings been described as the Hindi-Urdu controversy, that one comes across the early and nebulous attempts to associate and identify Urdu with Muslims, conceived as a homogeneous religious community.

After partition the Urdu minority has become more or less the same as the Muslim minority. Even otherwise the problem of the Urdu language is a significant part of the problems of a very large section of Muslim minority in the country. Therefore, while studying the socio-political conditions of Urdu in India it becomes necessary to study the socio-political conditions of Muslims too. While pondering over the problems of Urdu, we shall have to keep in mind that the Muslims are in the majority within the Urdu linguistic minority. Today the Urdu linguistic minority consists also of a very small number of non-Muslims who otherwise belong to the majority community of the country. These non-Muslims studied Urdu in the pre-independence days when Urdu was the status symbol. This small number of the majority community in the midst of the Urdu linguistic minority is ample evidence of the secular and national charcter of Urdu in spite of which it has been victim of injustice and cultural deprivation.

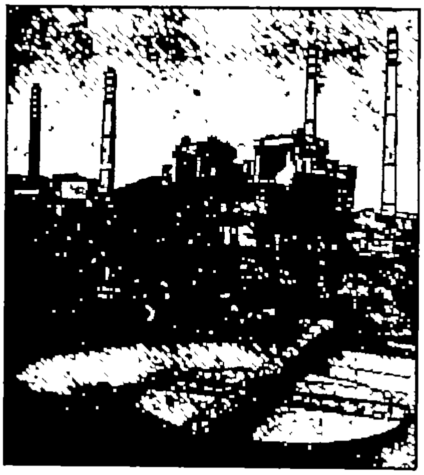
There is a genenral tendency in our country to label as communalist those who talk of the genuine problems of minorities especially Muslims. Many of



Let this [illegible] inherit the earth.

And the gold that is green.

Who wants to let the last echoes of children perish in the dark graves of pollution? As a part of world-wide concern for balanced ecology, NTPC contributes to the resplendent greens of India - now a living testimony with horizons of trees. To minimise pollution, highly efficient Electrostatic Precipitators and towering chimneys are structured for wider emission and dispersal.



NTPC has conducted a comprehensive Environment Impact Assessment Study of the Singrauli area in association with the World Bank. NTPC has already established large capacities in both coal-based and gas-based power generation and is poised to add more megawatts in the years to come.

(A Government of India Enterprise)

NAA/NTPC/92

NTPC: in harmony with man and nature

our political pundits describe such a rational approach towards the problems of minorities as a minority prejudice. Quite a number of documents prepared so far over the problems of Urdu are lying in cold storage. This is because of the fact that the problems of Urdu have never been looked into in a just and scholarly manner in the broader perpsective of the problems of Muslims.

Today, the condition of Urdu is not only very desperate but is deteriorating day by day, though the economic conditions of the Muslims has been improving compared to the past. Here we do not want to indulge in the debate as to why Urdu has been adjudged the language of Muslims alone. But when we look at the partiality committed against Muslims at every stage in independent India, the dispute certainly does not remain complicated and difficult to comprehend. That is why, I feel no hesitation in saying that Urdu and Urdu education may be observed only with reference to Muslims in post-independence India.

Today most of the students getting Urdu education at the primary or secondary level or taking it as an optional subject are Muslims across the country. The discussion of Urdu's association with the question of bread and butter is also connected to this very topic. As we go ahead, the first difficult question comes before us: why is Urdu going downwards in spite of the improving conditions of the Muslims? We have no satisfactory answer to this question till now.

As far as the educational conditions of the Muslims are concerned they may not be satisfactory but are certainly better than those in the past; though the Muslim is a victim of extreme backwardness in every walk of life. There may be objections to the concept of higher education but it cannot be denied that the backwardness of the Muslims in the field of education plays an important role in this regard. Although there are other causes for their backwardness, this point also cannot be ignored. The backwardness of the Muslims in society has a decisive role behind their setbacks in every field. That is why great importance is being laid on the need of arranging Urdu education at all costs. So the problem of educational backwardness of the Muslims is drawing top priority consideration.

As far as Urdu education among Muslims is concerned, the situation is that the middle and upper middle class Muslims are not sending their children to schools imparting education in Urdu medium. The majority of the children in such schools come from poor and backward class which cannot afford high standard education. Perhaps, this is the very reason why the ratio of dropouts in the Urdu medium schools is about 98 per cent in a city like Delhi in which opportunities for Urdu education are comparatively greater. But no conclusion can be drawn on this basis too, because the students going to the *madaris* (schools for religious education) belong to the more backward classes of Muslims and the dropout rates there are not high. The students of these *madaris* leave them only after completing their education in spite of the knowledge that there are hardly any possibility of getting a place in civilised society even after being educated for ten or twleve years in them.

◆

DESPITE these obvious realities there is no gainsaying that increasingly since independence, at least in the popular mind and perception, Urdu has come to be associated and identified with Muslims and is seen as a language of Muslims exclusively. This singular fact has been a significant determinant of both how Urdu is viewed and what prospects of its future growth and development exist or are likely to exist. For in a sense, what has happened is that a good many prejudices to which Muslims have been subjected in this country against the backdrop of the political history of the last hundred years or more have also been responsible for shaping the prospects and possibilities for the development of Urdu as a language. Given this peculiar, even if unfortunate, objective reality, any systematic assessment of the contemporary status and situation of Urdu language is not possible except by placing it in the context of the changing situation of Muslims in contemporary India. Indeed, the analysis of both the aspects must go hand in hand if the comtemporary status and future prospects of the language are to be understood systematically and comprehensively.

Then the conclusion may easily be drawn that one reason for the complex and multi-layered conditions of Urdu is that the conditions of the Muslims themselves are also complex and multilayered. One interesting aspect of this most complicated situation is that the condition of Urdu in UP is worse, while in Maharashtra and southern India it is comparatively encouraging.

THE•NEW•FRONTIERS•OF Triveni

From a grain of sugar to a drop of oil

Triveni is one of India's fastest growing Groups. After decades of leadership in the sugar industry, the Group is repeating the success story in several other challenging areas.

TRIVENI IN SUGAR...
- Leadership in India with an experience of over 60 years in sugar & 30 years in sugar plants & machinery
- A modern sugar factory at Khatauli (West U.P.) with cane crushing capacity of 6000 Tonnes per day.
- Over 45 turnkey sugar projects executed worldwide.
- And a recent foray into Agri-complexes utilising by-products like molasses and bagasse.

TRIVENI IN POWER...
- Over 1300 steam turbines operational in India.
- Modernised manufacturing facilities with a massive capacity to produce 200 steam turbines per annum.
- Engaged in execution of Mini & Micro Hydel Turbine projects.
- Offers industrial gas turbines as energy saving power solutions

TRIVENI IN POLLUTION CONTROL...
- Offers turnkey solutions for Water Pollution control & effluent treatment.
- World renowned technology for water conditioning, wastewater/ groundwater & hazardous water treatment, water reuse etc.

TRIVENI IN OIL & GAS...
- A fore-runner in the country, in this field
- Triveni Plenty Engg. Ltd. is a joint venture offering equipment & services for oil & gas production and handling and treatment for gas turbine feedstock.
- Triveni Oil Field Services Ltd., with seven land rigs in operation provides complete range of drilling completion, workover, maintenance & oil & gas drilling services.
- Triveni NL Ltd., is engaged in mud-logging, mud engineering, surveying & other oil field services and equipment.
- Has plans to manufacture complete range of rigs & rig components with world class technology.

TRIVENI IN TECHNOLOGY...
- Bringing the world's finest technology to the country:
  Power - Dresser Rand, European Gas Turbines (part of GEC - Alsthom), Societe ESAC, Elektrim.
  Pollution Control - Envirex, General Filter Company,
  Mineral/Coal Beneficiation
  Denver Process Equipment Ltd. Fives Cail Babcock, Separator, Hepworth Minerals & Chemicals Ltd.
  Oil & Gas - Plenty Ltd , RI Intl. Corp., Baroid Corp....
  and many more.

TRIVENI IN FUTURE...
- A group that is poised to increase its turnover to Rs. 350 crores by 1994
- A group that is always looking ahead
- A group that is committed to offer India better products, services and ideas
- A group that is diversifying into software, captive power projects and garments exports.

Urdu was based on the change of Urdu script which has not the least relation to the actual problem of Urdu, that is, its degradation. The most despairing fact is that the advocacy to change the present Persian script of Urdu was most vociferously made by the parties which were not tired of dubbing the Muslims as traitors and consequently this neglected language was further affected in an adverse manner. The populist Muslim leaders took advantage of this trend for the fulfilment of their political interests. Things have come to such a pass that the demand to change the Urdu script invites a sharp reaction from the Muslim community and they feel as if they were being asked to leave their hearths and homes.

In relation to the new social and language perspective of Urdu, no article during the 45 years of freedom has been written to give an honest explanation about the Urdu script. There is only one demand projected in most of the articles writiten about the Urdu script and that is that the Urdu advocates should change the alien Persian script. On the other side, the protagonists of the Persian script also adopt a completely populist policy and give unacademic arguments.

After independence, there have taken place a number of important changes at every level in the Urdu language and literature as well. But it is regrettable that no academic thought has yet been given to them. Under the circumstances, the principal dividing line between Urdu and Hindi remain that of the script. If at any future point of time Urdu were to come to be written in the Devnagari script, the distinction between Urdu and Hindi will virtually disappear. Over the short-run, nevertheless, the question of script remains central to the position of Urdu as a distinct language.

Urdu and Hindi have come close to one another on the literary plane since independence and the earlier tradition of translating and finding Persian and Arabic equivalents of Hindi words and expressions has considerable waned. For example, contemporary Urdu journalistic writings take large number of Hindi words and expressions wholesale and use them as if they were a part of Urdu vocabulary, whereas earlier they would have used equalents derived from Persian or Arabic. Urdu is also read widely in Punjab where the circulation of Urdu newspapers is the highest.

◆

NO significant study of the complex situation of Urdu has been made till now. Though several scholars of sociology have worked on the problems of the Muslims, they have not laid emphasis on the problems of Urdu which cover a considerable part of the overall problems of the Muslims in India. Therefore, a meaningful analysis of the problems of Urdu is possible only when it is made largely in the perspective of the socio-political problems of the Muslims. The problem of Urdu is typical in its nature because of the fact that it is not confined to the Muslim minority alone. However only superficial studies have been made in this direction which lead us nowhere.

To ascertain the present status and future prospects of Urdu as a language, the present author carried out a survey in north India. This survey was concerned with UP and northern India, but its broad objective was to attempt to study the problems of Urdu in the entire country. As part of this survey the author met about 200 well-known Urdu scholars. Most of them were either teachers in Urdu faculties of different universities, well-known poets or writers associated with distinguished Urdu institutions. The author was astonished to find that, barring a few, those interviewed had no idea of the real problems and their demand for facilities for the progress of Urdu was no better than the thoughtless demands for the Prime Minister's resignation by third rate politicians for every incident occuring far away from the capital. The main point of the survey was to discern whether Urdu had not come to be the language of Muslims alone in the present changed circumstances (may be political) and whether the Muslims would not have to do something to preserve Urdu as they had been preserving Islam in India. It is interesting to note that most of the intlligentsia whom I interviewed were not prepared to accept that Urdu is the language of Only Muslims. On the contrary they said that Urdu had a secular history. Urdu and Hindi are sister languages, and both are languages of India, and so on.

As mentioned earlier, most of them failed to understand the point and those who had an understanding talked as if they had never given serious thought to the problem. The scholars who did grasp the point to some extent only blamed the people responsible for the decline of Urdu. Nearly everyone pointed out one fact in UP: people only waited for the fulfilfment of the government's promise after independence and they themselves did nothing. Criticising the people for doing nothing, most of the intelligentia complained that even the Urdu-speaking public do not educate their children

in Urdu and regard it below their dignity to purchase and read Urdu papers and magazines. Here two things are worth considering: First, the problem of not educating the children in Urdu is not limited in UP. Such people are found in the whole country. Second, the large mass of the Urdu public consists of people who studied Urdu before freedom only because of its being a status symbol.

One significant question which every Urdu writer has avoided is: whose language is Urdu and what do we mean by the Urdu public? These questions find no frank and free answers in any of the articles written after partition, although there is no denying the fact that all those who have written on the subject know quite well to whom Urdu belongs.

The harsh and bitterest truth generated by political circumstances is that after independence there was not born perhaps any non-Muslim whose mother tongue is Urdu. Political circumstances made this simple question so compicated that it became a never solving knot of philosophy. Things went to such an extent that when the question was discussed to include Urdu in the Constitution, Seth Gobind Dass, a senior Congressman and a member of the Constituent Assembly, put a question as to what was the propreity of including Urdu in the Constitution, and who was the citizen of India who held Urdu as his language?

Pandit Nehru, with voice choked with emotions, gave a politically inspired reply that it was the tongue of his mother and mother's mother. If Pandit Nehru's mother's tongue was Urdu, because her mother's (Nehru's grandmother's) tongue was also Urdu, then what should be Nehru's mother tongue? But the political circumstances of the time had rendered Pandit Nehru helpless to give a direct answer to this simple question. The formation of Pakistan had engaged the attention of the patriotic Indian Muslim to the moral aspect where he found himself guilty in spite of being guiltless. His very existence was in danger. An Indian Muslim dared not to call Urdu his language as it had been blamed for the division of India. Then, how could the Premier of India have courage to take a different stand? Urdu is today recognised as one of the languages in the Indian Constitution but the Constitution recognises one particular Urdu region.

As a matter of fact, Urdu has practically been reduced to be a language of Muslims alone after independence. It is a fact that Punjabis coming from Lahore and other parts of Punjab after partition gave great patronage to Urdu. However, Punjabi and not Urdu was the mother tongue of each one of them. Indeed, they did not educate their children in Urdu as educating the children in Urdu was no longer a paying proposition in the changed context of secular India. Punjabi was the mother tongue of Iqbal and Faiz, the two great poets of Pakistan. But if the mother tongue of Ram Lubhaya Khushtar Girami was Punjabi and he got it indicated in the census, then it is a fact which should be accepted without scruple. After the attainment of freedom only Muslims studied Urdu in spite of knowing well that it will not help them seek jobs but may bring them the blame of being anti-India.

The reason why Urdu is almost dead in UP today, is that it was from UP that most of the Muslims (and elite class Muslims among them) migrated to Pakistan and those who were left here did not count among the educated people. Before independence, the poor Muslims, who were studying Urdu in *madaris*, are doing this even today in the same way.

It is also a bitter truth that when we use the term 'Urdu public', a term popular with all, we have Muslims in our mind deliberately or otherwise. The character of Urdu may be secular. It may or may not be responsible for the division of India. All the elements of its origin including its linguistic structure are Indian. Hindus and to some extent Christians may have contributed to the prosperity of Urdu. Even so, the fact is that in the generation born and borught up after freedom there are few Urdu-knowing people except among the Muslims. When it is rightly or wrongly said that Bihar and south India have kept Urdu alive what is clearly meant is that the Muslims of these region have kept Urdu alive because these regions have Urdu schools established and run by Muslims. In Bihar Urdu has been kept alive by religious institutions which impart knowledge of Islam. If the situation is different in UP it is because Bihar has thousands of such small institutions while the situation in UP is quite contrary, although the students of those institutions after passing their oriental examinations begin to wander unemployed on the roads. As a result the problem became so serious that Urdu had to be given the status of second official language with many legal complications by the UP and Bihar governments. The Bihar experience also made it clear that in the present social conditions of Indian society, the status of second language means nothing but employment to a few because Muslims are backward in every field of life and even the knowledge of the national language is not a guarantee of employment.

During the survey the next question posed to the intelligentsia was whether the Muslims would apply the same methods to preserve Urdu as they had been doing to preserve Islam. Most of the intelligentsia did not want to give answer to this question as it amounted to accepting that Urdu was the language of the Muslims. They blamed the Urdu public for indifference towards Urdu. They cited the examples of South India where there are hundreads of Urdu medium recognised schools although South India has never been the centre of Urdu. In Maharashtra alone, where Muslims have never regarded Urdu as their mother tongue, there are about five hundred rich junior high schools and high schools.

Several other issues are associated with the question: Is Urdu the language of Muslims alone? The most important of them is whether Urdu will have a life of more than a decade or so. If we accept Urdu as the language of Muslims, there will hardly be ten per cent educated young men who may have studied Urdu as an optional subject. Throughout the length and breadth of UP, there is not even a single Urdu medium junior high school or high school (except the Alighar Muslim University's two H.S. schools). The plight of even these ten per cent is worse because no college or university's Urdu Department in UP holds regular Urdu classes. BA standard students of Urdu literature prepare class notes in Hindi. The condition of research in Urdu is worse.

Most Indian universities have opened their doors for research in Urdu. Authentic and standard collections of poems of great poets including Mir and Ghalib are impossible to get, as they have never been published. All the government institutes established for the progress of Urdu are only places of irregularities of every kind and the so-called Urdu intelligentsia go on competing for their membership. The condition of committees fighting for the cause of Urdu is not different from those fighting for Muslim welfare. The sole purpose of these committees is to bargain with the government. The result is that the common man is not ready to cooperate with the committees established for the promotion of Urdu. He has seen the veteran Muslim stalwarts sold at their own fixed price.

Excepting Punjab, the circulation of papers and magazines published in Urdu has come down from millions to thousands and several great magazines are on the verge of collapse and some have already collapsed. Books in Urdu are published by government aided libraries, they are locked up in almirahs beyond the reach of Urdu students.

The struggle for Urdu has neither ended nor is it worthwhile to follow the policies which have constituted to that struggle after independence. The Congress forced Urdu to reach such a sorry state in which it is today and now it is being granted the status of a second language at a time when Urdu language and culture are almost extinct. I am using the word Congress instead of party in power as being responsible for the death of Urdu because the Congress has dominated the field most of the time in free India. As the Congress was well-acquainted with the conditions of Urdu because of its being related to freedom struggle, it succeeded in murdering Urdu. Moreover, the Muslims who opted to live on the promises of the Congress that their religion and culture would be safeguarded, were deceived.

◆

WHAT then is the solution? The first solution is that Muslims shall have to undertake a complete change in the syllabus and policies of the *madaris*. The contractors of religion who get startled at the talk of reform in the *madaris* while living on donations and alms will have to reorient *madarsa* education so that those who study in them can acquire a degree or proficiency to live in the contemporary changing world and lead a worthwhile secular existence while at the same time ensuring a place in the world beyond.

The Aligarh Muslim University, which has done nothing in the real sense to promote Urdu except open an Urdu Department, shall have to arrange courses in B.Ed. and M.Ed., etc. with Urdu as the medium as is done by Jamia Millia. Throwing away the shell of empty slogans of the so-called greatness of Urdu, the University should be bold enough to face the reality and promote courses of study in a way that Urdu gets its due place in society. Urdu is taught there as a compulsory subject even today, but only on paper. There is no place for Urdu in the life of the University.

The Muslims of UP must keep in mind that Urdu was being granted the status of a second language not as a token of affection for Muslims but for some compulsions facing the then Prime Minister in the general elections. Muslims should also understand well that Urdu is getting its due on account of the changing social circumstances. The generation that has come forward in educational and social life since independence is no longer prepared to carry the burden of blame for the formation of Pakistan and is keen to demand its cultural rights. Thus the government or semi-government institutions set up to promote Urdu cannot be said to be responsible for the latest development in the sphere of Urdu.

Under the circumstances, as far as the question of the future prospects of Urdu is concerned we can conclude with a reasonable degree of certainty that it is precarious. For, after becoming associated and identified with the Muslims in India, the responsibility for keeping Urdu alive has come on the shoulders of the Muslims, and the community's capacity to play a creative role in this connection has been greatly circumscribed. Because of the ambivalent attitude of the Muslim leadership the situation of Muslims in the country is itself fraught with complexities, what to speak of the situation of Urdu. The future of Urdu to a larger extent, is likely to depend upon the attitude of Muslim religious organisations, the South Indian States and the Muslims of Bihar. Personally, I do not see a bright future for Urdu in South India, Bihar and those regions which are today regarded as the new linguistic and cultural centres of Urdu. Except for a few large cities of South India which are the traditional centres of Urdu, it would be unwise to mortgage the future of Urdu to South India and Muslims of Bihar. Urdu intellectuals are often inclined to assert, while discussing the future of Urdu, that North Indian Muslims have dug the grave for Urdu and now it will survive either in Bihar or in South India. The matter is not quite so simple. Urdu has been spoken in South India only to a limited extent and that too in a few select big cities. Therefore, the question of its gaining popularity beyond these traiditional centres will remain an open one.

As a language associated with the Muslims, Urdu has been a victim of the same step-motherly treatment by the government to which Muslims in India have been subjected. One of the consequences of this has been that in comparison with the other minority communities, Muslims have been rendered backward and Urdu is virtually on its way out. Yet another misfortune of Urdu has been that after independence Muslims in India could not develop the courage to wage a struggle for Urdu or Urdu occupied a low priority among the issues raised by the Muslims after independence. For a long time the Muslims kept indulging in self-deception that Urdu will be protected by the secular pre-independence born non-Muslims and the Punjabi migrants from across the border.

As this self-deception also began to be shattered, the Muslims in India now live with the hope that Urdu will live on in South India and Bihar. How fake is this anticipation can be gauged from the fact that the Muslim missionary organisations like the Jamaat-e-Islami have adopted the policy of rendering religious books for North Indian post-independence born Muslims in Hindi and as far as possible in regional languages in South India. Where the local dialects are not advanced adequately for religious literature to be published in them, and this includes Bihar, Urdu is depended upon for publishing religious literature. In other words, even in South India, Muslims are not willing to adopt Urdu as the language of religious propagation. Thus, the use of Urdu even for missionary purposes is restricted to only those areas where its use involves no possibility of a language controversy.

The situation today is different. Hyderabad and other States are no longer there to patronise Urdu. Further, what will be the linguistic scenario of South India and what linguistic issues will emerge difficult to say at present. Religion, language and regional identity have taken many turns and twists during the last half a century. East Bengal was separated from India on the basis of religion, but after the emergence of linguistic and regional conflict the break-up of Pakistan is not more than two decades old. Equally, to expect a predominantly rural and backward State like Bihar dominated by an elite ethos to perpetuate and protect Urdu would be unwise.

Through reorganisation of religious educational institutions (*madaris*) which are present even today in substantial numbers in North India not only can Urdu be saved but the pace of spread of education among Muslims can be accelerated. This process of reorganisation can also be extended to other parts of India. By linking the system of *madrasas* to an influential all-India religious movment like Tableeghi Jamat the network of such schools can be utilised for promotion of Urdu. However, this would call for great courage because linking Urdu education to the *madrasas* would also not call for substantial resource the mobilisation and it would also be easy to relate the large majority of backward Muslims to education in the name of relgion. The problem of reorganisation of *madrasa* education has been a subject of discussion among Musims at all levels for nearly a century and the efforts are unlikely to meet with resistance. On the whole, thus, in today's secular India the guarantee of Urdu's future survival paradoxically depends upon its ability to rely on religion and religious institutions. ■

IN SEARCH OF INDIA'S RENAISSANCE

Volume I

The summary of the discussions at the National Seminar on Nation-Building, Development Process and Communication in Search of India's Renaissance provides a comprehensive insight into the problems facing India today, and highlights some of the possible ways of working towards solutions. In a sense it is the quintessence of the thinking of Indian intellectuals from different disciplines. The Seminar was jointly organised by a number of institutions and was inspired by the eminent thinker, P.N. Haksar. This volume contains the precis of nearly 80 papers presented at this five-day seminar and the interventions of a few hundred participants from all over the country. These papers are being published in the second volume.

The contemporary situation in India has been viewed by the participants from a historical perspective. Every aspect of the human condition in India has been covered in great depth: society, economy, polity, law, education, culture, communication, and science and technology.

Captured in these pages is a unique experience of an intellectual exchange among academics, scientists, political and social activists, journalists, literateurs, performing artistes, law-makers and legal luminaries, everyone, despite different perceptions and attitudes, brought together by a common concern for this land of ours.

On the issues arising out of the National Seminar, 35 grassroots seminars have been held in 20 States of India. More than 3500 social and political activists, school teachers, academics, social and natural scientists, lawyers, physicians, journalists and public servants participated in these seminars. An equal number attended as observers. Various grassroots organisations as part of hundreds of voluntary agencies organised these seminars. Rashpal Malhotra, Director, Centre for Research in Rural and Industrial Development, Chandigarh, coordinated them. A status paper has been prepared on the basis of the discussions of these grassroots seminars highlighting the felt concerns of common people all over the country. This status paper alongwith this volume will now constitute material for a national debate in a forthcoming seminar.

Garib Must Go, Not Garibi

NIKHIL CHAKRAVARTTY

A decision of utmost significance has been taken by the government to ban beggary in the capital of India. Beggars would be rounded up and pushed out of the Union Territory of Delhi. So, the beggar has to be out of sight of those who rule this country—our President and his Ministers, our parliamentarians and our judges. All the three appurtenances of state power—the executive, the legislature and the judiciary—are to be quarantined from the ugly sight that is discomforting.

Not that this is something unique and unprecedented. In Marcos' heydays in the capital of the Philippines, beggars were out of bounds on the orders of Imelda, who was the real boss of Metro Manila. Because, Imelda was anxious to put up the best possible appearance before the outsiders, particularly the American overlord and to show him, how beautifully the dictator and his consort were managing the affairs of the Filipinos. It is indeed necessary to doll oneself up to be acceptable to the patron.

The sight of the beggar disturbs us, for he reminds us of the poor and the dispossessed who happen to be the majority in our country. The beggar, after all, reminds us about the burden of unfulfilled promises made so lavishly at the time of the elections. That ruffles our temper, upsets our mood and so spoils the good life that is being planned for the upper set in our society with the funds borrowed so lavishly from the super-moneylender abroad. What a shame would it be if after lending us millions and billions, the money-lender finds that we have not banished the beggar—at least from our immediate view. It is like the dirty figure in tatters hovering round the grand feast of the affluent. That apparition must go: it has to be removed—because its presence brings back into memory what we have long tried to get rid of—and that's a thing called conscience. For we are out to design a society divested of conscience.

No doubt many important arguments would be forthcoming why the beggar has to be banned—many of them are guilty of stealing; they carry disease and so their presence poses a health hazard; they are hired by racketeers who make money out of their begging. In one word, they are what we conveniently term, anti-social. Don't all these make a good case for their banning? Once the police cracks a whip on them, they will not come, and this way will be stopped the streams of migrants trekking out of the countryside in search of food and job.

And such a clamp-down is urgently called for because the government knows more than anybody else that the prices would neither go down nor stabilised but will continuously go up, and that sets into motion the migration from the village to the city. So, if their passage to the city—the capital in the first instance—is blocked, we shall be able to force them to stay where they are and not come and disturb us in our nice and clean cities. And for the radical critic, the government's answer is that by paying a tip to the beggar you don't help to change the system. Fight inequities in seminars and conferences, let it not invade our paradise islands of good life that our structural adjustment programme is seeking to build so faithfully.

◆

THROWING the beggar out of the precincts of power is a significant pointer to the new edifice of culture we are trying to build. We do not intend to ban lavish parties and money thrown away recklessly in what's officially called, conspicuous consumption. And who are the people who indulge in such profligacies? The *nouveau riche* and not the established high society who wallow in such vulgarity—the contractor who thrives on bribing his way to big money, the speculator, the smuggler and their kins. These are the conduits who are destroying decency in our public life. But there is not even the remote intention of our rulers to ban them from the capital. Rather they have become the fearsome denizens of this beautiful city. The beggar must go, but the blackmarketeer must stay. This is the new order we are setting up.

Fortyfive years ago, when the country became independent, our new rulers pledged in all solemnity that they would strive to wipe off every tear from every eye in this land of plenty. They did strive to build a new mansion, which helped the wealth to grow. But the poor and the underprivileged did not get their due share of that wealth. Which was cornered by the rich and the powerful—whether in the city or in the village. And as a result, the gap between the rich and the poor has widened so much so that we have instead of integrating our society have helped it to disintegrate into two compartments altogether—two worlds with differing outlooks, perceptions and problems. Here is a classic case of wealth mishandled led to dissonance and not an integrated society.

The rulers became a bit disturbed, because such disparity might lead to tensions which might threaten their throne. So, an elaborate exercise has been gone into to pacify the dispossessed. On one side we have got the scores of the so-called anti-poverty programmes, and on the other our rulers at election times would go to the villages, promising to ban poverty. *Garibi Hatao* became the election battle cry. But the *Garibi* did not go. Rather beggars became more numerous on the downtown streets of our metropolitan centres.

And today we are engaged in bringing in a new set of reforms—our new economic strategy borrowed from the armoury of History's biggest moneylender, which will intensify this division in our society. The rich, at least a section of them, will become super-rich, with their own standards of good life, an outlook as wide as the sky TV will enjoin and a degree of insensitivity towards poverty which shatters any social conscience. At the other end, the non-rich will become poor and the poor will join the dispossessed in millions upon millions. In such a society, what else can one expect but the physical pushing of the beggar out of one's sight? Hoping that anything out of sight would help to keep it out of mind.

No, the removal of the beggar from the streets of Delhi would not help to remove the curse of poverty. It is a peculiar curse, this curse of poverty. It hits not only the one who is its target but also the one who pronounces it.

Twenty years ago, a shrewd politician coined the slogan *Garibi Hatao* to win votes she desperately needed. Today, twenty years later we find that *Garibi* has not gone away—it has come to stay put and threatens to come nearer and nearer. Hence, instead of *Garibi Hatao*, our rulers are now calling for *Garib Hatao*.

■

An Old Ghost's Grouse

"Academician dead", said a headline above a short news item in a major newspaper in the second half of September. The report referred to the death of a Calcutta historian, Professor Deba Prasad Ghosh.

Professor Ghosh, said the report, was a brilliant scholar. Evidently his brilliance had made itself apparent early, for he had been selected as a Premchand Roychand Scholar of Calcutta University—which is like being picked as a Junior Fellow at Harvard or MIT.

But let us look a little more closely at the word "academician". We find it used rather loosely. The right word for a college or university teacher or scholarly person is "academic" (used as a noun; it is also an adjective, of course). There is a great deal of difference between an academic and an academician. An academician is a member of the Royal Academy of Arts in Britain, or the Academie Francaise in France or the (former) USSR Academy of Sciences. In terms of achievement an academician is only a rung or two below a Nobel laureate. In France an Academician is referred to as an Immortal. In the erstwhile Soviet Union an Academician was entitled to the privileges of a minister but commanded certainly greater respect.

Thus any teacher of Ramjas College or Bhagalpur University, while being an academic, cannot be called an academician, any more than a municipal councillor of Meerut or Mehsana can be described as a statesman.

The orginal Academy is the school where Plato taught. It brings to mind Raphael's great painting "The School of Athens". By a strange quirk of fate so many girls' schools and coaching shops today are academies!

Anyway, for journalistic purposes, "academic" has an advantage over "academician". Apart from being correct, it saves three letters.

H.Y.S.

Contours of Change

SUMIT CHAKRAVARTTY

Nine months ago, at the beginning of February this correspondent was engaged in an absorbing discussion with a Western journalist in the picturesque Swiss resort of Davos where he had gone to cover the Indian Prime Minister's participation at the annual international symposium organised there by the World Economic Forum. The topic under scrutiny was the tragic break-up of Yugoslavia accompanied by the heavy loss of life and property in the seemingly unending hostilities along ethnic lines. The journalist presented a comprehensive account of the background to the unfortunate happenings in that country and then pointed to the irrefutable fact that the breath-taking changes that had shaken the world in the last three years culminating in the collapse of totalitarian regimes in Eastern Europe and the former Soviet Union, while being highly welcome on account of the triumph of the democratic spirit over medieval autocratic repression, was, nevertheless, characterised by the ascendancy of the far Right across the globe.

At that point of time that indeed was the case. The sudden return to power of John Major's Conservative Government in the UK upsetting all the initial poll forecasts and thereby writing the political obituary of the Labour leader, Neil Kinnock, was indicative of the persistent surge of the far Right the world over. However, things have definitely changed since then if recent events are any indicator on this score.

That the failure of Jonas Savimbi, the rebel UNITA leader (for long years generously helped by the Right-wing Western Governments, besides South Africa, in their bid to oust the Marxists from power in Luanda), to dislodge the Angolan Government at the hustings was not a flash in the pan was quite evident from other developments in other corners of the globe. In Lithuania the former Communists (who, however, have left much of their ideological baggage and can hardly be described as Stalinist by any stretch of imagination; they have nothing in common with some of the active neo-Stalinist 'Communist' groups led by Victor Anpilov and Nina Andreyeva in Russia) have staged an unexpected comeback through the ballot—and in the process completely baffled, humiliated and snubbed the Western oriented anti-Russian Lithuanian leader, Landsbergis—on a social democratic platform resisting the calls for instant snapping of all economic links with Moscow. In a completely different setting the victory of Bill Clinton over George Bush must also be viewed as the assertion of liberalism over the conservative far Right view manifest in Reagan's theatrical acrobatics and Bush's odious "moralist" overtones barely hiding narrow hegemonic designs of the US Administration.

If the economic factor was most crucial in Clinton's spectacular success—and the new occupant of the White House has openly announced that improving the domestic economy for the benefit of the ordinary Americans would be his primary task—then there is every justification in endorsing the view of Arvind N. Das (brilliantly underscored in his article in *The Times of India* on November 4), that Clinton cannot but conclude after the verdict that "people are at the centre of the economy and, therefore, employment and quality of life, security and health care, education and the arts are all legitimate, and indeed necessary, areas of state activity".

A year ago the far Right had felt reassured by Boris Yeltsin's reinforcement of power and the exit of Mikhail Gorbachev from the centre-stage of politics in Russia after the Soviet disintegration. Today there is a definite shift in the attitude of the Russian people. Perceptive observers in Moscow have, while interpreting Yeltsin's panicky responses to Opposition activity (the latest being the banning of the National Salvation Front, an unholy alliance of Russophile chauvinist-fascists and neo-Stalinist orthodox Communist forces), pointed out that there is no public alternative to Yeltsin as yet and that is the card which he can still effectively play against all his adversaries; but that he is on a far weaker wicket today than ever before is undeniable.

◆

A brief visit to Moscow following a media seminar in Alma Ata, the capital of Kazakhstan, convinced one of this distinct shift in the temperament of the people. "We, Russians, usually oscillate from one extreme to another. Now it appears that the first steps are being taken towards restoring the balance," a Russian journalist remarked in Alma Ata while exchanging views and information with this correspondent. The validity of this observation was borne out by what one saw and heard in the Russian capital.

In a considerable measure this shift in public mood has been brought about by the phenomenal economic hardships forced on the people at large by the Yeltsin-Gaidar "shock therapy" that has been marked by freeing prices and full scale efforts at privatisation (which, however, has not been proceeding smoothly on account of a variety of factors) resulting in hyper-inflation. Nevertheless, what needs to be realised is that unlike last year (this correspondent was in Moscow in November 1991) when practically nothing was available in the shops, today everything is available in roadside kiosks—at exorbitant prices no doubt, but not absolutely prohibitive since the clientele of buyers is not insignificant. This does not, however, mean that impoverishment on account of the so-called "shock therapy" is invisible: it is clearly manifest in the sizeable number of beggars lining the underground passages leading to or inside the metro system (although their number has not grown substantially more than the beggars one found a year ago). But it needs to be underlined that because of their legendary stoicism and resilience the Russians are still able to conceal the extent of backbreaking burden they are forced to endure.

As Boris Kagarlitsky, a key figure of the Left and noted anti-Stalinist Marxist intellectual functioning as one of the most articulate leaders of the Party of Labour (whose founding conference took place in Moscow a month ago, on October 10), informed, "there is a growing anti-Americanism among the people now" and that is taking place simultaneous with the mounting mass opposition to the IMF. "Just walk along the streets and you will find more and more anti-American graffitis on the walls. Even in the city centre you find these graffitis. About half a year or a year ago these would be immediately wiped out spontaneously by people who did not agree with them. Not anymore. The people were very pro-American a year ago. But not anymore. Because the Americans did everything to generate anti-American feelings around the country," he asserted.

Elaborating further he said:

> They (the Americans) appeared with dollars not respecting local habits, not respecting the way people really live and so on. They are rich and mostly very ignorant of the way of life of our people. They are also very arrogant.
>
> The point is that the Russian people feel: We were a superpower. Now nobody respects us anymore. People feel bad, feel awful about that. They don't want once again to be a superpower. But they want at least to be respected once again by the rest of the world. That's a growing feeling and that's one of the reasons for the increasing sense of anti-Americanism in the country today. Because the Americans behave like the winners and that is what the people do not want to swallow.

Kagarlitsky did not hide the fact that the public approach was not shared by the government whose different wings, especially the Russian Foreign Ministry, were totally subservient to the West in general and the US in particular as was transparent in the Russian voting in the UN in favour of disqualification of Yugoslavia from the world body. Historically Russians have never been against the Serbs and vice versa. Today that history was being forgotten by the Russian Government, he lamented.

Kagarlitsky's view that public opposition to the IMF was on the rise was corroborated by the fact that even Yeltsin in an interview (carried in *Frontline* on July 3, 1992) had stated:

> We are easing on the reforms somewhat, even at the expense of some of the pace. We cannot agree to a number of demands of the International Monetary Fund first and foremost because we do not want to jeopardise the economic reforms. This also concerns the lifting of all controls on fuel and energy prices in one go. We cannot simply agree to that and turn the other way.
>
> There is a certain limit to the decline in living standards. It cannot be crossed in any way unless we want to suffer disastrous social and political consequences.

When his attention was drawn to that statement Kagarlitsky said:

> That was done in the wake of the first wave of anti-IMF feeling in the country. As a demagogue Yeltsin immediately realised what he had to do and he was just reflecting the popular mood in Russia. But, nevertheless, he carried out all the IMF sponsored policies.

Asked to illustrate the anti-IMF feeling among the people, he replied:

> It's very easy for anyone to get spontaneous applause in a rally: you just have to blame the IMF for all the follies on the economic front and immediately the audience starts applauding. This is the scenario at least in Moscow.

◆

KAGARLITSKY spoke at length about the role of the national bourgeoisie, that is, the local entrepreneurs producing goods for the domestic market, who were feeling left out and threatened by the onslaught of foreign capital, who wanted the public sector to grow as they felt that then they too could hope to grow under the umbrella of the public sector; the declining strength of the neo-Stalinists and chauvinists (who could hold rallies ten times bigger than the Russian Federation of Trade

Unions—with which he is associated—a year ago; but not so now) whose mobilising capacity showed at best eight to ten per cent public support (for example, Kagarlitsky predicted a 10,000 strong neo-Stalinist rally in Moscow on October 24—but in reality 5000 odd people turned out according to press reports); the increasing strength of the Russian Federation of Trade Unions and Party of Labour; the prospects of the Civic Union (of Alexander Rutskoi Arkady Volsky and Nikolai Travkin) coming to power with Volsky as the Prime Minister through trade union support [for which intense bargaining is going on based on three conditions: (i) holding elections to Parliament in three months of formation of government; (ii) limiting privatisation and renationalising some industries and concerns dealing with raw materials and high-tech; (iii) adopting an anti-IMF international orientation with the objective of launching a global struggle against the IMF with Third World support; and the Civic Union, according to him, was finding it difficult to accept the third condition].

On ties with India Kagarlitsky said:

> While the Indian Government is becoming more and more pro-US in many respects, at the same time we know that Indians and the Indian Government would like to have more cooperation with Russia. That would be an objective factor of more independence from the West for both our countries.
>
> That is exactly why the Americans are so hostile to the cooperation between India and Russia. You are well aware of the US reaction to the Indo-Russian rocket deal. That is just one case. It happens any time somebody here wants to have more cooperation with any Third World state of any real importance. The Americans always come out against it because they know that it makes Russia more independent from them and also their other partners more independent. So in that sense we have to encourage economic cooperation with a country like India and give a call: "Look South" in terms of economic expansion.

Kagarlitsky's statements were by and large tinged with a sense of realism.

> How much do we count? For one thing, we are getting more and more support among the public opinion; on the other side to a very limited extent from the political establishment of Russia because the whole political establishment here is Right-wing and as far as the Left is concerned it is very marginal.
>
> But one of the reasons why we insist on the new elections also is because ... in this case there would be a definite shift to the Left :... in Parliament and the society as a whole .... Almost everybody agrees on that. Even the observers who are hostile to us say that we have some chance of getting important positions if there are any elections or democratic processes. Without the democratic processes the Left is going to be marginalised. We thus have a chance of allying with the forces which are definitely interested in promoting the democratic processes. So in that sense the issue of democracy is very much becoming the issue of the Left.

He also provided a significant revelation about the people's changing attitude to events. "An opinion poll survey by a very Right-wing Russian TV newsprogramme *Viesti* conducted about a month ago showed that about 67 per cent of the people surveyed were positive about socialism and 18 per cent were negative about socialism while 15 per cent were undecided. Since *Viesti* is very anti-socialist this was most striking. And *Viesti* was very negative about the result of the survey, saying that the Russian people don't deserve freedom. But this too is a reflection of the public mind in Russia."

◆

SEVERAL of Boris Kagarlitsky's opinions were hotly contested and disputed by democrats but on substantive issues they were not. Alexander Alexandrovich Evlakhov, a distinguished observer in the journal *Rossiya*, who had exposed the CPSU's financial transactions and material support to other Communist Parties (including those in India) and furnished documentary evidence to that effect, claimed that the CPSU's financial assets had all been transferred to the Communist Party of Greece (recently at a CPG Congress two participants from Russia—Victor Anpilov and Nina Andreyeva—had been given 500 dollars each as allowance, he alleged).

But what he said about the IMF was most interesting:

> There is a growing awareness now that it (the IMF) cannot be a life-saving device—it could help a lot but it is only through our own efforts that things would be actually done.
>
> Even if the IMF would give us hundred times more assistance, it can't possibly restore our industries—we have to do that on our own.

Evlakhov was fully supportive of the present government. "We wanted a government of younger people, we wanted *a government caring for national interests*, and we want the government to create conditions in this country that would attract foreign investment." (emphasis added).

In this context he referred to the cancellation of Yeltsin's visit to Japan and said the step was taken "because he (Yeltsin) couldn't ignore the section of opinion that exists in Parliament".

◆

THE scenario is undoubtedly confusing with several friends of India—notably Sergei Strokan of *Moscow News* and Tatyana Shaumiyan of the Russian

Institute of Oriental Studies—strongly criticising the government for the total lack of Russia's foreign policy with different people speaking in different—that is, diammetrically opposite—voices. They also sharply attacked Prime Minister Igor Gaidar for saying that Russia was a partner of the US. Such statements ignored the importance of Russia's ties with the Third World and India, they insisted.

Yet one found a balanced approach in the words of Alexei Pushkov, Deputy Editor-in-Chief of *Moscow News*. While assailing the Communists in Russia for not striving for "another form of democratic society like, for instance, the Italian Communists do since they are much closer to the Social Democrats and Labour Parties" and calling for "seizure of power and organisation of the society under the old model", he said like the Italian and Indian Communists functioning within the constitutional framework, "Communists should be a part of the system to correct its malfunctioning because they are strongly in favour of social issues as well as ecological issues in some countries and I think they play an important role in this. Because the capitalist society cannot be left without a Left Opposition since then, like any monopoly, it creates a situation of corruption."

He then added:

> I think it was Lord Ester who said: "Power corrupts and absolute power corrupts absolutely." That being the case if the capital holds everything in its hands and there is no counter-balance it would be absolutely corrupted. So in this context the Communists have a role to play.

Asked if India occupied the lowest rank in terms of priority since *Moscow News'* orientation was pro-West, Pushkov said:

> Our orientation is pro-West to the extent that the former Soviet Union was anti-West .... We want to correct this, we want to strike the right balance. We don't say that Russia should limit itself only to its ties with the West. And we don't think Russia should play only the Western card in its foreign policy. ... *Moscow News*, in my opinion, has been consistent on this point: without taking any anti-Third World stand we say that Russia should have a balanced international position. The West should be a very important part of it but the Asiatic component of this position should be very important too.

Moscow News was not consistent in its attitude to the Third World. Pushkov was on the defensive when asked about an article that appeared sometime ago attacking the liberation movement in South Africa. But it is true that of late the publication is giving unbiased reports on foreign (African) students and has even criticised the West (the US in particular) for supplying substandard products in the name of humanitarian assistance to Russia.

◆

THE future is daunting. Kagarlitsky forecasts that 1993 will be the worst year of recession. He also predicts that Gaidar's ruinous strategy on the economic front could lead to the country's (Russia's) disintegration which is why he wants a change and a Civic Union Government headed by Volsky, a former party bureaucrat close to Gorbachev, interested in slowing the pace of reforms in order to protect the vulnerable sections of society. Dr Algis Prazauskas, who has studied the ethnic problems in Russia and India in depth to make a comparative assessment of the two (he had in 1989 predicted the break-up of the USSR), is also quite pessimistic though he refrained from issuing alarmist signals.

Mariam Salganik, a noted writer-intellectual, openly charged the inhuman barbarity of the Stalinist state structure with having resulted in the present-day sick society in Russia, and highlighted the importance of Yeltsin's decree extending to the prisoners of Hitler's concentration camps the same status and facilities as war veterans thus making belated amends for yet another of Stalin's sadistic crimes. She was certain that it would take years for Russians to come out of that past.

Yet in their own way all the three were hopeful of a reasonably bright future. It is the reassertion of the democratic spirit, despite all the pitfalls, that stands at the basis of that hope. And notwithstanding the mounting economic hardships.

Mariam (or Mira as she is known widely) was confident that "this country will never go capitalist in the old Marxian sense". Why? Because first such capitalism was non-existent today and secondly the "old Russian ideas of collective psyche of the people will eventually produce social democracy along the lines of Germany, Austria, Sweden". She pointed to a danger: "it could peter out into a version of Columbia". And then hastened to add: "But Columbia never had this kind of intellectual potential we have in this country."

In the ultimate analysis, she was convinced, the "new thinking" of Gorbachev will be restored in place of Yeltsin's narrow, subjective, personalised idiosyncrasies. She was delighted to know that Nursultan Nazarbayev, the Kazakh President, had on his own and unwarrantedly hailed Gorbachev as a "historic figure" when Yeltsin was seeking to attack and corner the former Soviet President.

All these bear testimony to the fact that in the overall context Russia (and the former Soviet Union) with all its tribulations is gradually moving towards a new balance in step with the latest trends in the other parts of the world. ■

India's Self-imposed Isolation in GATT

SUMAN SAHAI

The government's most frequent refrain when explaining its inability to protect India's interests in international negotiations has been that we are so isolated on this or the other issue that we cannot fight the developed countries who are attempting to impose unjust, unreasonable conditions on us.

Whether it is the issue of intellectual property rights or investment measures or any other field where Indian interests are being jeopardised, the government cowers behind the plea that it cannot fight since no one else will fight on its side. This isolation is not only a shameful foreign policy failure, it is to a large extent self-induced.

The Indians have managed to stick the knife in their guts through sustained negligence and bungling. While the rest of the Third World looks to India for leadership to withstand the assault of the North, the Indians with their formidable scientific-industrial base, viable economy and stable political structure are content to fritter away chance after chance to defend their interests and those of the Third World.

My experience with the government's attitude has been through the 'Gene Campaign', the group fighting to protect the the Third World's genetic resources and the rights of the Third World people over these resources. The Gene Campaign's position is that the government must reject every form of intellectual property protection on genetic resources that will infringe on the rights of farmers and scientists; that innovations through genetic engineering can only be rewarded in some way if the labour and innovations of the Third World farmers is also compensated and that access to genes must be linked automatically with access to technologies that will be based on them.

These are by no means unreasonable positions. They not only find resonance in other developing countries, but have also been supported by all kinds of groups in the industrialised countries, like academics and students, environmentalists, lawyers, voluntary organisations, politicians and political activists. The entire Green movement including all Green parties vehemently oppose patents on life. Large sections of the Social Democrats and even Conservatives have expressed reservations about the patenting of genes and life forms. It is worthwhile asking why the Indian Government has done nothing to build support amongst these groups. Why it has never entered into dialogue with the local pressure groups who on their own were fighting against gene patents.

I have lived in Heidelberg for many years. Now I return every summer semester to teach genetics, in order to fulfil the requirements of my faculty position at the University there. This time during the three months spent in Europe and the US, I devoted considerable time to lobby support for the Gene Campaign's position and trying to make people understand the reasons why patent claims on the genetic resources that belong to the Third World amount to theft and cannot be sanctioned by a civilised society.

While in Heidelberg, I was invited to address the members of the European Parliament. I spoke there of the inviolable rights of the Third World farmers over the resources they have created and that the effort of multinational companies to monopolise these resources cannot be allowed since it constitutes institutionalised theft.

In later discussions with members of the various committees dealing with the patent question, I found that many were against patents in this domain and fully agreed with the South's position. Several members said they failed to understand why the Indian Government was not resisiting such an obviously exploitative move, despite being in a strong position. It would have been logical for India to seek support in countries like Canada, Mexico and the European Community, all of who have strong pockets of anti-patent feeling, instead of wringing its hands and wailing about being isolated.

In addition to my lecturing at some universities in the US and Germany on patents and the exploitation of the South, we also conducted signature campaigns at these universities. Scientists in Heidelberg, Bonn and Berlin in Germany as well as academics and students at the universities of Columbia, Harvard, Madison, Yale and Chicago in the US, supported our stand against patents in this area.

Although there was sometimes a lack of awareness about the deeper nature of the problem and its implications, once people were told about the rights and claims of the South, there was understanding for our position. Protagonists of patenting in the North have been gaining public approval for their position by saying that if industry could not protect

Dr Sahai is the Convener of the 'Gene Campaign', the group set up to defend the Third World's rights over genetic resources.

its investments by the guarantee of patents on their products, it would be unwilling to make these investments, implying that development would suffer.

I made it my task to inform people about the South's viewpoint. That there was another side to the story. That the raw materials of the investment in agriculture and biotechnology, namely, the genes, are being misappropriated without compensation, from the South who are its actual owners. Once that came through, support for the South's position swelled.

Support for patents on life forms was fragmented at best, even in the US where opposition is less vociferous than in Europe. In most places, strong ethical objection is an important component of the debate. Almost all religions and cultures in the North acknowledge that God alone can own life. The concept of granting ownership over life-forms through patents, to companies or people is an idea that most people find reprehensible. This again is a card we would have played effectively, linking an ethical/moral objection based on our deeply conservative ethos and our religious-cultural heritage, with the current of ethical objection existing in the industrialised countries.

Indian missions in all industrialised countries should have been instructed to engage in a propoganda blitz, hammering home through all available media, why we oppose gene patents. Pro-Khalistan terrorists have used this method so effectively in developed countries that in their heyday it was the Indian Government, not the terrorists, who were seen as perpetrators of atrocities and violators of human rights. Instead of using their special privileged position to exploit the print and electronic media to make their point, Indian missions are poorly informed about major policy documents or negotiations and are ignorant about the people who organise and head protest in areas of interest to us.

It is indeed regrettable that successive Indian Governments have made incompetence their hallmark with respect to most aspects of the GATT negotiations. Nor is it right to fault just the present government. The brief episodes of V.P. Singh's and Chandra Shekhar's flirtation with governance, as well as Rajiv Gandhi's tenure since the opening of the Uruguay Round in 1986, have all contributed to India being isolated when there was no overwhelming reason for this to happen.

Had India done the only sensible thing and cultivated the strong streams of sympathy existing in the North, it would not be in its self-proclaimed and self-engineered isolation, at least not in areas where it has a strong, undeniable moral claim, like with genetic resources. The point is that if a small organisation like the Gene Campaign can mobilise support in defence of Indian interests, the government with its massive resources and infrastructure could have done it on a ten times larger scale, had it wanted to.

The future of the Uruguay Round is uncertain once again. An outcome could be postponed indefinitely if the European Community and the US fail to reach an understanding on the nature and volume of agricultural subsidies, the dispute over which is the single largest impediment to the conclusion of the Uruguay Round. The Americans will be ready to resume negotiations after their Presidential election is over.

The Europeans, however, are in a state of turmoil over the uncertainty surrounding the fate of the Maastricht Treaty and the recent shock of the narrow French "Yes" to a unified Europe. Matters are not helped by recalcitrant French farmers who are not prepared to accept subsidy cuts. It is unlikely that in this uncertain and hostile political climate and with the clout of the farm lobby, the Europeans would be able to slash agriculture subsidies. All this could mean postponement if not collapse of the GATT talks.

Should that be the case, India gets a new lease to do some of the things it should have done since the beginning. Since foreign policy cannot be based on unexpected windfalls however, the government should register its intention to renegotiate controversial clauses right away. The Gene Campaign had submitted a report to the government prepared after detailed and intensive discussions with the policy-makers and experts. The report titled "Dunkel Draft: Suggestions for Minimum Must for Renegotiation" indicates the clauses most detrimental to Indian interests that should be reopened.

A recent development in Europe has given a fillip to the patents on life controversy. In May this year, the European Patent Office extended patent protection to a special mouse developed by the Harvard University, despite Article 53 of the European Patent Convention which forbids the patenting of plants and animals. With this ruling, protest has flared up in a renewed and more vigorous form. Old groups have become more vocal and new groups have come up. A "Munich Declaration" initiated by a group of patent lawyers and supported by voluntary groups and political activists, has called for a ban on patents on life.

The mood is ripe in Europe for India to open renegotiation on this issue and register its protest. Not everyone will want to oppose the Americans, the protagonists of patenting, but the current mood is most favourable. In this atmosphere, it is likely that other developing countries would overcome their fear of the US and join. India has a new opportunity to forge a flank against patents on life forms, from which it stands to lose so much. Let it make up for lost opportunities by siezing this one.■

A TREASURE OF IMPORTANT BOOKS

- **Scams in India - from ancient times to 1992 Mega Bank Scam** /*M. Halayya* **Rs. 175**
  Based on a mass of data. This study on corruption suggests constructive measures to eradicate it. Since you can help in stopping the rot the book is primarily addressed to you.
- **Adi Sankara and Sri Aurobindo/** *V. Narayan Karan Reddy* **Rs. 70**
  A study in contrast of two great Indian thinkers—Adi Sankara and Sri Aurobindo. Sankara showed the path of liberation and Sri Aurobindo that of transformation and total change.
- **An Analytical Approach to Problems of Indian Agriculture: A Theoretical and System Approach/** *B.H. Joshi* **Rs.995**
  Discusses the issues face Indian agriculture and delineates changes that took place in agriculture since 1947. Analyses most of the agricultural problems in theoretical framework with system approach.
- **British Parliamentary Papers Relating to India 1662-1947 in 3 Vols.**/*Adrian Sever*
  A complete listing of British parliamentary papers and acts of parliament relating to British involvement on the sub-continent of India. In three volumes.
- **Ecology, Development and Population Problem: Perspectives From India, China and Australia/** *K. Mahadevan, Chi-Hsien Tuan and V. Balakrishnan Nair (Eds.)* **Rs. 490**
  Highlights inter-relationship between eco-system, rapid population growth and economic-cum-technological development of society. Indispensable for those who believe in better quality of life. Contributions by eminent scholars of the world.
- **Economics of Child-Labour and Fertility: Study of Peninsular India/***M. Sumangala & B.S. Nagarajan* **Rs. 190**
  A micro-level study of child labour in a developing country like India. Underlines causal relationship between child labour and fertility behaviour.
- **The Elderly Population in Developed and Developing World: Policies, Problems and Perspectives /** *P.Krishnan & K. Mahadevan (Eds.)* **Rs. 395**
  Suggests ways and means of promoting proper rehabilitation of senior (elderly) citizens. Throws light on the positive life-styles of the elderly in China, Japan and India (Kurichia tribe).
- **The ELT Curriculum: Emerging Issues/** *S Ramadevi & Others (Ed.)* **Rs. 175**
  Result of an international seminar held in Februray 1988. Reflects development in ELT during the 1980s. Includes some valuable papers presented at the seminar.
- **Fashion Styles of Ancient India: A Study of Kalinga from Earliest times to 16th Century A.D./** *R.P. Mohapatra* **Rs. 950**
  A study of Orissa's costumes and coiffures from First century to the beginning of 16th century based on archaeological and literary evidence. New light on a hitherto neglected subject.
- **Iconography of Siva: With Special Reference to Select Temples in Northern Andhra/** *A. Kamala Vasini* **Rs. 950**
  A study of Siva Iconography as it obtained in the northern districts of Andhra Pradesh. Pertains to twenty-five select temples. Reveals facts which did not come to light before.
- **Infant Mortality of Indian Muslims: determinants and implications/***M. Omer Bajkhaif & K. Mahadevan* **Rs. 130**
  A pioneering study of the two Muslim sub-sects of Central India-Sunni and Dudekula-to identify major determinants of infat mortality. Valuable for policy-formulators and sociologists.
- **Readings in Population Research: Policy, Methodology and Perspectives/***P.Krishnan, Chi-Hsien Tuan and K. Mahadevan (Eds.)* **Rs. 450**
  A deep look at the status of population research in China and India, conducted during 1970-90. Valuable reference source for researchers. Contributions by some eminent scholars from different countries..
- **World Health Statistics Annual 1991: B.R. Authorised Reprint Series-28/***W.H.O.* **Rs. 450**
  A global view of the changing trends in health status and the causes of death.

All these books are readily available at:

The following are a few articles by eminent public figures published in Mainstream *over the years.*

Kashmir and National Integration

SHEIKH MOHMAD ABDULLAH

The State of Jammu and Kashmir is the symbol of the lofty ideals of secularism, democracy and socialism to which India is wedded.

We made our choice in 1947 and took the momentous decision to throw our lot with India for the preservation and growth of the values we cherished. We demonstrated our unstinted, deep-rooted and unflinching faith in these values nourished by the sacred blood of our martyrs, in the hour of trial when the entire subcontinent was engulfed in the flames of fratricidal communal strife.

We staked everything and our people stood like a granite rock to face the onslaught of the ferocious storm of communal frenzy. We fought courageously and with a death-defying abandon for the survival of the glorious heritage of human brotherhood, communal harmony and tolerance handed down to us as a valuable legacy by our ancestors.

We won the battle with laurels. Mahatma Gandhi, whose martyrdom will continue to inspire successive generations to uphold the banner of secularism and the cause of the emancipation of the oppressed and the downtrodden, saw a ray of hope only in Kashmir when his soul was tortured by the spectacle of unprecedented brutality and insanity elsewhere. Our people can never forget the Mahatma who preferred to lay down his life to allowing himself to acquiesce, without protest, in the desecration of values which alone lent a meaning and a purpose to his life of dedication to the noblest of all causes.

Bapu is immortal and continues to live in our hearts and guide us in our journey to our destination. History will bear testimony to the fact that our people have not betrayed the trust he reposed in them. We have carried out his behests and redeemed the pledges we made to him creditably and with utmost devotion and loyalty. We salute his memory with the reverence that the great and fearless crusader in the cause of truth deserved.

Kashmir belied the hopes, expectations and calculations of those who had thought that terrorisation, vandalism, arson, loot and naked aggression would succeed in coercing us into submission. The fortress of secularism proved invincible. It could not be stormed and destroyed by either the propounders of the pernicious two-nation theory, or the forces of aggressive Hindu communalism.

The bastion that was further fortified by the blood of martyrs like Mohmed Maqbool Sherwani, Master Abdul Aziz, Soom Nath Bira, Pushkar Nath Zadu and hundreds of others—most of them anonymous—is impregnable. This reality dawned on the protagonists of the cult of hate too late when they had already paid a very heavy price for their misadventure aimed at imposing on us by force what was repugnant to us and what we had repudiated and rejected earlier so clearly and unmistakably as to leave no scope for any doubt.

History has vindicated us. The principles which formed the cornerstone on which the edifice of our mass movement stood have emerged triumphant. The two-nation theory which we had opposed tooth and nail as something quite alien to the revolutionary and progressive concepts that evolved during the course of the advance of the organised movement of the toilers, the exploited and the have-nots in our State, has suffered a colossal scuttle.

The perversity and the intellectual bankruptcy of those who suffered from delusions and, perhaps, naively believed that they could defy the inexorable laws of social development and history stand unmasked. The fallacy and hollowness of their logic have been laid bare by the experience of life and the events which do not admit of any distortion to suit the pathological obstinacy of cramped minds which refuse to learn from the life or which do not have the capacity to see through their mistaken beliefs and notions.

It is not my aim to narrate the history of the people's movement in our State in this short article. This is a long story marked by many milestones which are of decisive importance and historic significance. Our people have gone through the mill of a protracted struggle and tread a path full of thorns, ravines and stretches of deserts, sometimes without any visible traces of oases. They have seen moments of triumph and glory as well as those of dismal failure, despondency and rough weather, with no perceptible silver-lining on the horizon. But they have never lost their heart. They have continued to adhere to the chosen path with remarkable tenacity, patience and the conviction born out of a deep faith in the infallability of the values that have acted as the pathfinder in phases of darkness and gloom.

We are determined to combat communalism of all varieties and complexions. We are convinced that the complete rout of communal forces alone will ensure the achievement of the objective of national integration.

The political and economic values we formulated and the objectives and aims of our movement we enunciated are enshrined in our political Bible—the programme of

"New Kashmir". It is a socialist programme, envisaging the establishment of a just and equitable social order in which there is no scope for the exploitation of man by man or for parasitism and for the appropriation of the resources and wealth of the land by a privileged class to itself.

This programme inspired millions of our people irrespective of their religious affiliations and beliefs, to rally round the banner of revolt against a decrepit, decadent and callous autocratic regime sustaining itself with the might of guns and bayonets.

Partition of the country took place when we were still withering away in the dungeons and jails of the autocratic regime and our struggle for our freedom was continuing. We tested the alternatives open to us on the anvil of our political and economic values and decided to join hands with the secular, democratic and progressive forces in India in order to be able to successfully implement the socialist programme to which we were deeply and irrevocably committed.

By virtue of Article 370 of the Constitution of India, our State got the right to convene its own Constituent Assembly and to frame its own Constitution. Our own elected legislative organs were authorised to frame laws suited to our conditions. This particular Article in the Constitution of India pertained to and had relevance with regard to our State alone. The psychological factors that made themselves worthy of consideraton as a result of the horrifying experience of the partition of India and its aftermath were not lost sight of by the framers of the Constitution. The instrument of Accession had conceded only three subjects, that is, Defence, Foreign Affairs and Communications to the Centre.

The experiment of the functioning of Indian democracy was to be put to test in a region with a predominantly Muslim population and so situated that it was constantly vulnerable to the political-ideological offensive, propaganda and influence of Pakistan as well as to that of Hindu chauvinistic trends in India, which did raise their ugly head again and again, and created difficulties for us by polluting and poisoning the political atmosphere in the country. Apart from this, it was a strategic area surrounded by some neighbours whose interests did not coincide and who could not be expected to ignore its geographical importance from the point of view of their own national interests.

Many other considerations of an important nature weighted with the experts when Article 370, which is inseparably linked with the accession of our State to India, was incorporated in the Constitution of the country. We had to face challenges which perhaps no other part of the country had to, in view of the fact that a State which had come into existence as a result of the partition of India was laying a claim to our terrotory on the basis of the application of the two-nation theory.

Our movement, though a part of the mainstream of the anti-imperialist national liberation struggle, had certain distinct features and peculiarities of its own.

What did we gain by having a special status inside the Union of India? We convened a Constituent Assembly to give our people a democratic Constitution reflecting their urges and aspirations as embodied in "New Kashmir".

The Constituent Assembly abolished the institution of hereditary rulership and substituted it by the principle that the head of our State be elected by the legislature of the State. The Constituent Assembly also abolished parastic landlordism without compensation, thus dealing a big blow to feudalism. These were great achievements and all the progressive and democratic elements in the country hailed these revolutionary measures. The popular government in the State headed by me, freed the poor and the downtrodden peasantry from the stranglehold of vicious parasites by putting an end to the evil system of usury.

Many other progressive measures were taken and we were steadily moving in the direction of the implementation of our socio-economic programme. The reforms of far-reaching significance we had introduced could not be set at naught by invoking articles of the Indian Constitution pertaining to property rights.

Our Constituent Assembly was sovereign and, hence, even the highest judicial organs in the country could not be moved for relief by the expropriated landlords and other exploiting classes who had hitherto enjoyed positions of vantage in our political and economic life. Where such remedies were sought, these were not available, as the decisions of our Constituent Assembly could not attract the relevant provisions in the Constitution of India. The Fundamental Law framed by a sovereign body could not be called into question as violative or *ultra vires* of the Constitution of India.

This was a big gain in the positive direction of bringing about fundamental changes in our socio-economic structure. We had the unique distinction of being the first and the only State in India to boldly embark on the revolutionary path of social transformation.

Our special status and our ability to initiate the process of implementation of the pledges we had given to our people further strengthened the bonds of fraternity between the people of our State and those in the rest of the country, already cemented in the fire of common struggle. It fortified the process of the emotional integration of the people in this part with the rest of the country despite the sentimental and religious appeals of the rulers of Pakistan who had geared their propaganda machinery and put it into constant operation to spread the virus of communalism in our State.

Our values stood the test of time and the integration of our people with the rest of the country came to stay as an indestructible phenomenon.

The radical measures we adopted for the uplift of the weaker sections of our society earned us the wrath of the vested interests and the arch-reactionaries in the State and the country as a whole.

The Jammu Praja Parishad agitation was the result of the conspiracy of those elements who were desperately trying to torpedo our radical measures so as to ensure the perpetuation of the *status quo*. They were fighting to rescue the institutions of hereditary rulership and landlordism. Their sentimental slogans of full integration of the State with India were only a smokescreen to cover up their reactionary aims.

In reality, their vicious designs, masked under chauvinistic phrases, were meant to undermine the faith of the Muslim population of the State in Indian democracy by fostering a sense of insecurity among them. They were thus acting as the avowed enemies of national integration.

They are even now engaged in the nefarious activity of sowing suspicion and doubt in the minds of the people of India and creating a scare among the elements which occupy positions of power at the moment in our State, in order to defeat the purpose of our dialogue with the Prime Minister of India.

What happened in 1953 when I was unceremoniously deposed as the Prime Minister of Jammu and Kashmir State with cynical disregard for constitutional propriety, and incarcerated, is a tragic event which is past history now. I would refrain from commenting on this and other events that followed it. Now that we have opened a new chapter in our political life, thanks to the sincerity of purpose on the part of Smt Indira Gandhi, subjective attitudes, feelings of rancour and injured sentiments should not be allowed to act as a retarding factor in the process of reparing the damage that the cause of national integration has unfortunately suffered as a result of certain mistakes and errors of judgement.

SHIPRA PUBLICATIONS
115-A, VIKAS MARG, SHAKARPUR,
DELHI - 110092 PHONE 2200954

I have been trying to promote a new congenial atmosphere free from all bitterness so as to instil fresh confidence and faith in our people in the values that formed the basis for the linking of our destiny with the mainstream of the national life.

Experience has proved that the mere enactment of laws by questionable methods constituting the very negation of established democratic processes and norms, and their incorporation in the Statute Book, is no substitute for the union of hearts and the spontaneity of feelings of comradeship and brotherhood.

Ours is not a parochial or regional chauvinistic approach. There should be no difficulty in comprehending the fact that the denial of democratic rights to a people whose sense of pride and dignity was rudely hurt and the prepetuation of the technique of repression combined with doles and bribes has not been able to achieve the objective of national integration.

I had earned the love and adoration of millions of my countrymen in abundant measure. This was a glowing tribute to the political maturity, sagacity and the high level of consciousness of the people of our State.

I have also gone through the experience of a systematic campaign of character assassination being organised against me and my name being associated with treason, treachery, and betrayal. I was denounced as an enemy of national integration, a secessionist and a separatist. An objective appraisal of events would easily convince any genuine patriot or democrat that the allegations and accusations levelled against me were all motivated by animus and malice and were baseless.

Tragically enough, my detractors did not seem to understand that they were actually working against the cause of national integration which they apparently professed to uphold. Let us forget and bury this sad chapter now.

I have declared time and again in unambiguous terms that the cause of national integration is so dear to my heart that I am prepared, without the least hesitation, to make the supreme sacrifice for it. My whole life is an open book and bears testimony to the fact that I and the people of our State have unwaveringly and steadfasty held aloft the banner of secularism and national integration even in face of the gravest provocations.

What must, however, be appreciated and understood is that national integration is a voluntary process and it can have a firm and unshakable foundation when there is a restoration of values common to all our countrymen and the regeneration of an atmosphere of mutual confidence which flows from the full satisfaction of the legitimate aspirations and urges of the people of our State.

All apprehensions and misgivings will be allayed and will get evaporated, yielding place to enthusiastic and active participation of our people in the democratic processes of the country and their identification with the forces of progress, once the barriers of prejudice and suspicion get demolished and we are determined to further deepen the understanding we had arrived at in 1947.

The assurance of a status of dignity and honour to our people inside the Union of India in terms of the principles fortified by the Constitution of the country will strengthen national integration which we have jealously guarded as the apple of our eye against the onslaught of aggressive communalism, chauvinism and Reaction.

Let us all make our humble contribution to expedite the accomplishment of the task of forging full national integration and defeating the disruptive forces of all hues and shades and fissiparous tendencies that undermine the cause of the unity and integrity of our great country.

(Annual 1974)

Politics of Succession

RAM MANOHAR LOHIA

Barring us, Socialists, all Opposition politics in the country today have degenerated into succession politics.

Opposition parties seem to have decided that the task of changing the attitudes of the people is far too difficult for them; or will at any rate take a lot more time than they think they can spare. The Prime Minister, according to them, is old and the Congress Party will soon have to find a successor to him. Who this successor will be is an open question—at least, so it appears.

Opposition parties seem to have made this internal problem of the Congress Party their own. They think they will be able to direct the country's affairs their own way if they had a Congressman at the top who would be their man or at least allied to them.

The Communist Party and similar other groups are therefore backing a nominee of what they would call Left Congressmen—whoever that might be—but for the moment the person appears to be Mr Krishna Memon. They would not, however, be chary of supporting Mrs Indira Gandhi, should that choice become inevitable.

Summit Politics

The Praja Socialist, Swatantra Party and presumably also the Jan Sangh are backing someone from among what they would call right-minded Congressmen, or whom I would, for the purpose of this classification, call Right Congressmen. At the moment, this choice is so entirely open that the name of Mr Morarji Desai alternates with, let us say, such a name as Mr Kamaraj Nadar, almost every other day.

This, according to me, is a most disgraceful situation. It is particularly disgraceful for those who have so long believed in radical and revolutionary politics. Summit politics is politics of intriguing and manoeuvring or getting on top somehow. Such politics is perhaps inevitable in a country like France or England, where the people are firmly set in their political convictions, almost as they are set in their religion. The Indian people are still new to their political convictions and open to change. For Opposition parties to have given up the task of stimulating change in the attitudes of the people is therefore an ignoble surrender.

Succession Gossip

Furthermore, where is the base for summit politics? Whenever I come to Delhi, a sense of overwhelming despair seizes me. There is no fundamental question of theory or even of enduring politics. One has nothing but gossip about succession, interlaced with spicy stories of what the Other Side has been doing in connection with money, women, or foreign relations. The worm is eating into Delhi's heart.

I had foretold several years ago that the likeliest successor to Mr Nehru would be Mrs Indira Gandhi. That was on the basis of what I knew of the Prime Minister—who, I regret to say, at one time was my leader and teacher—and also of what was actually happening in the country and inside the Congress. The reports I have with me since then, particularly of how Mrs Gandhi came to be the Congress President, have only confirmed my prophecy. At that time I had only known the actors in the drama rather well and not how they actually conducted themselves backstage. I may add my personal reaction to it. I would prefer Mrs Gandhi to anyone else in the Congress Party, if for no other reason than this, that my morning paper would give me a pretty face to behold.

I daresay there are sections in all the parties that I have named—Communist, Praja Socialist, Jan Sangh, perhaps also Swatantra—which are distressed at this situation. They would perhaps like to do something about it and take politics to the people. But they just do not know how to go about doing it. I can talk a little definitely of the Praja Socialists, for I know them very well. Large sections of them are distressed and unhappy. But they have skated on the thin ice of opportunism and compromise so long with their leaders that any bold decision has become almost impossible for them. I guess that a somewhat similar disease has taken hold of the radical wing of the Communist Party.

Ungainly Mirror

The Indian Parliament has become a perfect, although a very ungainly, mirror of this situation. Without meaning the least offence to its position, I have to say that it hardly grapples with things of vital importance to the people. Call-Attention Notices or Adjournment Motions come up, so it seems, with a view to providing the government, and particularly the Prime Minister, with an opportunity to demonstrate how brave and wise the government is. Continued motions on the Chinese or Pakistani aggression, without the slightest move this way or that, appear to have become endemic in Parliament. A few Socialists there are who try to raise fundamental issues, but I must admit that our party is yet ineffective—I hope only for the time being.

I have already roused a lot of anger and earned the displeasure of friends by raising the issue of the Prime Minister's personal expenditure. Some people think that I have personal animus against the Prime Minister. That is wholly untrue. If there is one man who wishes a long life for him, that is me, although my grounds would be none too palatable to many in power today: I would want democracy in India to become so strong and compelling as one day to catch him by the scruff of the neck and throw him out of office. I have used a phrase of Mr Winston Churchill lest somebody should once again unknowingly assert that I lacked decorum: It was Mr Churchill's classic phrase to show how the British Prime Minister is only a servant of the House.

Heavy Spending

I may have sounded fantastic to some people when I declared that the Prime Minister of this, the poorest country in the world, costs Rs 25,000 a day. But it is extraordinary that the government has so far not come out with figures spent on the Prime Minister to refute my charge. If it thinks that my allegation is monstrous, why can't it come out with facts and figures to demolish my point? I would have welcomed that as more dignified and honest on the part of the government than to keep quiet over it. In that enormous jungle that is the Indian Government's Budget—consisting of more than 4000 pages almost 20 lines on each page—it is almost impossible to fish out all the items, but I would give here two sample items: The 1960-61 Demands for Grants No. 135 under the head 'Delhi Capital Outlay' records an item: "Replacing worn-out carpets in the Prime Minister's House", expenditure to the end of 1956-57 is Rs 1,05,710. Probable outlay for 1957-58 was Rs 50,000. Total expenses already made amounted to Rs 1,55,710. The demand for 1958-59 is Rs 50,000. Another item, pertaining to replacement of two air-conditioning units in the Prime Minister's House—mind you, replacement—is Rs 20,000 for 1957-58. The Prime Minister's kitchen is already, in a formal and legal way, part of the President's Estate. I would not be surprised if the Demands for Grant for Rashtrapati Bhavan conceal quite a chunk of what has actually been spent on the Prime Minister's household. I have only given some samples here. I can go on elaborating on this subject of waste and luxury at the top, as I have done elsewhere. If I had the strength of the Communist Party and the Jan Sangh, I would with my will and determination take out a procession of the people of Delhi to rouse public anger against such impermissible wastage. I must regretfully say that the influence of Mahatma Gandhi has made me non-violent, but reading these various items in the Budget makes my blood boil, although only for a few minutes in the traditional way.

Some people have tried to twist the purpose of this pinpointing on the Prime Minister's expenses as a move on my part to deny him, particularly in his old age, the comforts needed for him to carry out his duties as Prime Minister. Far be it for me to deny him any of the normal comforts in life. In fact, I have been raising this question of the Prime Minister's expenditure as part of our campaign to achieve good planning, right taxation, and just pricing. With such luxury expenditure, it would be impossible for India to achieve these.

On a rough estimate, I believe that Rs 2000 crores are being spent annually as super luxury expenditure by the upper classes of India, numbering around 50 lakhs. This sum of money could be easily transferred to planning or to reduction of indirect taxation on essential articles or the abolition of land revenue on uneconomic holdings, as also for the achievement of a price policy for essential articles that would fix sale price at no more than one-and-a-half times the cost price. When I try to take away Rs 2000 crores from India's upper classes, I might mention that Rs 3000 crores will still be left with them to spend as they like.

Dynamic Parties

The present Indian situation has made even a person like me somewhat of a coward and I am not therefore suggesting any revolutionary upheaval in the living standards of the upper classes. I only want them to become a little decent and in keeping with the people, but they would still retain their comfort and more than their comfort.

I have mentioned the Communist Party and the Jan Sangh together, and for that I have a reason. I consider these two somewhat dynamic parties, while the Congress, Swatantra and Praja Socialist Parties I consider static. Dynamisim is not necessarily good in all its forms. I believe that the Communist Party and the Jan Sangh are definitely misguided in many directions. But they are also somewhat dynamic, and their membership is really desirous of radical and revolutionary changes, again not necessarily nor always in the right direction. The Communists, for instance, I would consider somewhat dynamic in relation to private property. The Jan Sangh I would similarly consider dynamic in relation to the issue of language.

If only the right-minded men among Communists and from the Jan Sangh and people like me could get together, we could perhaps cure the Communists of their mistaken beliefs on issues of caste and language and internationalism and particulaly with regard to the relative sphere of privacy as against the sphere of collectivity. Without a doubt, encroachments by the state or by political parties on the privacy of the individual have become a source of concern to many sensible persons. This problem must be solved, and not by clashes alone.

Similarly, the Jan Sangh could perhaps be cured of its mistaken beliefs and practices in relation to property and the Hindu-Muslim question.

I may here add that there are two other sections which are positively harmful in their political combinations whom I still cherish for their past. They are the pre-1946 Congressmen, who have not been able to or have not wished to reach Delhi or Lucknow or Calcutta, and the Praja Socialists. I feel nearest to them in a personal way, although the Praja Socialists, for instance, in their political combinations, I detest more than any other group.

Why cannot all these various groups come together, for purposes of achieving politics of the people in place of the present politics of the summit? I must make it clear that a united front would be positively evil, for it becomes an inevitable source of dishonesty and mutual sniping among apparent friends. What I have in mind is a single party, and if necessary during the transition period, such combinations as the Price-Fix conference or the End-Caste conference or the Banish-English conference, which are non-party rather than all-party. I would also stress the importance of an intellectual reawakening among the people, starting with arousing the curiosity of the people. But I would reserve that for some other occasion, although I believe that to be the most important single point in any political activity.

Socialism in Indian Context

JAGJIVAN RAM

Labels are generally helpful in broadly indicating the objects or concepts one has in mind. But sometimes they can be very misleading because they gloss over the differences in shades of meaning which may be of profound importance in terms of the world-view and life-outlook of a people.

For instance, when we envisage a socialistic pattern for the old yet young republic of ours, there can be ambiguities hidden in the use of the broad label of socialism. And it may be dangerous for us to let these ambiguities lurk in the background without being brought out into the open, discussed and eliminated.

The recent history of socialism has tended to make it a doctrine of pure economism. Economics deals with the satisfaction of the material wants of man through the intervening mechanism of a market economy which would divert the scarce means of production in those directions where they will fetch the most returns in terms of money.

But there is no particular reason why anyone should accept the economic criterion as the ultimate criterion for the ordering of the life of the individual and the life of society. For instance, a runaway expansion of economic activity in terms of wants artificially generated by the manipulation of mass communication media may reveal nothing basically unsound if looked at from the perspective of pure economism. But if one views the whole issue from the point of view of man, who has other needs besides the material though these latter are basic, one may justly come to the conclusion that progress does not necessarily lie in endlessly and artificially multiplying wants. Economics would now become the problem of meeting the minimal requirements. Once these are guaranteed man would be able to grow towards a fuller life, the demands of which are not always demands for material things.

Cruel Mockery

If it is legitimate thus to deflate the concept of man as a purely economic being governed by material needs, we should not go to the other extreme of demanding that men should concentrate on their spiritual existence and ignore the physical. Actually, the distinction is often unreal. Man has to live first before his spirit can yield its finer fruits, and in the context of any community where the economy does not provide the basic and minimal requirements of the large mass of its population, it can be cruel mockery to talk about the life of the spirit and ignore the demands of a decent existence.

What I want to make clear is that socialism can have many roots and in our tradition at least it has more humanistic roots rather than economic. Our socialism can accommodate many great traditions indigneous to the soil: the religious movements which rebelled against the inhuman stratification of society into groups which had the monopoly of light and those which were condemned to live in the dark; the enlightened humanism of Vivekananda who affirmed that the service of the poor and the downtrodden was the best way of serving God and the profound insight of Gandhiji who said that to a hungry man God can appear only in the form of bread.

Since our socialism is not rooted in any purely economic dogma, it envisages no victory of one class over another, whereas this is a feature which seems to have become intrinsic to the concept of socialism as it has evolved in recent decades in the West. So, all our programmes can be drawn up in the light of two basic aims.

The first is the reduction of tension arising out of social and economic inequalities and discriminations and the establishment of social peace. The second is the growth towards social harmony. The latter of course is the more positive and comprehensive concept, implying as it does understanding, cooperation and the sense of partnership among all groups.

But in the historic context in which we find ourselves, we cannot afford to underrate the first objective in spite of the fact that it is somewhat negative. The reason is that in a country with a relatively low gross national product, competition between groups for monopolistic possession of the low marginal increase in production is likely to be keener and more frequent. Therefore, safeguards have to be introduced, to ensure that all groups benefit equally from the general economic progress of the country, the rate of which is slow now, but certainly can be accelerated.

That the imperatives of production and of social justice can converge is easily demonstrated by a study of the problems of the small farmer. About 62 per cent of the holdings in the country are less than five acres and they account for about 19 per cent of the cultivated area. It should be very clear that modern agriculture has to spread to these holdings also if the increase in production is to be maximised. But scientific agriculture needs substantial investment. The bigger farmer can get financial assistance from institutional sources. The small farmer, however, is under serious handicaps here. If he is not given any special help he will be left completely behind, the gap between the small and rich farmer will widen and both production as well as social justice will suffer. This is why it is desirable to introduce an integrated scheme to help the small farmers by establishing development agencies. These agencies will provide grants to central cooperative banks, agricultural credit societies and cooperative land development banks to cover their loaning risks in financing small farmers, arrange custom service in agricultural machinery and render assistance for developing animal husbandry and poultry to add to the income of the small farmers. About 50,000 small farmers in each district are likely to be covered during the Fourth Plan.

Banking System

Since our socialist theory is not doctrinaire, the practical programmes also need not be abruptly radical. But we must ensure that they deliver the goods. The reasonableness of our approach is demonstrated by our efforts in adapting the banking system to the needs of production as well as social justice. The banking system inherited by independent India was moulded by the British catered primarily to the industrialists and was more particular about what the money was lent against rather than what it was lent for. We tried to eliminate its traditional bias through social control and it is only when it was found that this measure was not enough that we thought of nationalisation.

This gradualness, I am sure, will temper the other programmes to be evolved in the near future. But the absolute minimum required from them will be that they actually deliver the goods. As the Prime Minister said, "We cannot continue to ignore the impatience and frustration with which the underprivileged look at our efforts to help them stand on their feet."

(Annual 1969)

Marxism and Aggression

S.A. DANGE

Mainstream has put to me the question: How is it that a socialist country can commit aggression? The question is quite natural and legitimate. It arises from the fact of history itself.

Way back in 1959 when we were confronted with the beginnings of the India-China border clashes, the Central Executive Committee of the Communist Party of India at its Calcutta meeting held the opinion that a socialist country, like China, cannot commit aggression, and a free democratic India does not want to launch a war.

Now, three years after that, the National Council of our Party states that China has committed aggression. Does this not show that the theory of Marxism-Leninism has gone wrong?

Some people, in fact, take special pleasure in saying that in the present clash between India and China, Marxism-Leninism has become a casualty.

Some people might ask whether in such strenuous times, it is necessary to raise questions of abstract theory.

I think it is necessary. Problems of war stimulate problems of theory in all fields and become its testing ground.

Testing Ground

With Communists, as everyone knows, everything has to proceed on the basis of theory and its application. Even our opposites, the bourgeoisie, has also its theory of development. Without theory, practice becomes blind. But sometimes even with correct theory, practice goes wrong.

A socialist system does not require aggression for its growth and for solving its problems of social reconstruction. Why? Because the abolition of capitalism and the transfer of the means of production like factories to social ownership and land to cooperative ownership enable it to do away with those problems, which are part of the capitalist system—problems of markets, overproduction, unemployment, rising prices, etc., which are inherent in the capitalist system. These problems force capitalism to undertake conquests of colonies, markets, etc., that is, to resort to aggression. A socialist system does not need such solutions and hence aggression is not in its nature. That is the theory.

-But in practice, aggression has taken place. Why? If the theory is right, why has practice gone wrong? If practice is at fault, why is it so?

This is a question which really requires a longer discussion. But a few things can be said.

The Chinese theoreticians seem to hold that it is the duty of a socialist state to claim every inch of land which any of its preceding rulers may have held or laid claim to, as part of their domain! It does not matter whether the predecessor was a slave-owning or feudal emperor or a warlord. They seem to hold that it is the inherent duty of a socialist state to inherit or complete the geographical national form of the state which history enabled it to possess. Hence the Chinese insistence on the old maps of all its old emperors. Excessive obsession with past national glory and history and a fanatic ambition to restore what it considers its historical geographical national-state form, irrespective of its feudal-imperialist origins and trappings, have led the Chinese leadership to ignore the other aspects of socialist theory of the present epoch—such as peaceful coexistence of states with different social systems, the anti-imperialist role of newly-liberated countries, the problems of preserving peace and preventing war.

A Few Days More

FAIZ AHMAD FAIZ

Only a few days, dear one, a few days more.
Under oppression's shadows condemned to breathe,
Still for a time we must bear them, and tears, and endure
What our forefathers, not our own faults, bequeath:
Fettered limbs, each impulse held on a chain,
Minds in bondage, our words all watched and set down
Courage still nerves us, or how should we still exist,
Now with existence only a beggar's gown,
Tattered, and patched every hour with new rags of pain?

Yes, but to tyranny not many hours are left now;
Patience a little, few hours of lamenting remain.
In this parched air of an age that desert sends choke
We must stay now—not for ever and ever stay!
Under this load beyond words of a foreign yoke
We must submit for a while—not for ever submit!
Dust of affliction that clings to your beauty today,
Crosses unnumbered that mar our few mornings of youth,
Torment of silver nights, a pain with no cure,
Heartache unanswered, the body's long cry of despair—
Only a few days, dear one, a few days more.

(Translated from the original Urdu by Victor Kiernan. Published in Mainstream, *December 25, 1971.)*

Knowing that they are guilty of falling into the clutches of chauvinism (not patriotism), they want to satisfy their socialist conscience and that of others by creating a terrific din over the "imperialist", "illegal", origin of the McMahon Line; then another din, alleging that India is "pro-imperialist", "expansionist" and hence "aggressive" against peaceful China. The "aggressor" must be fought, hence the march over the Himalayas and threatening the plains of NEFA and Assam. The disputed border lines are left far behind.

The theory of Marxism-Leninism, in the initial stages after the Chinese revolution, in which our whole country rejoiced, brought them to the positions of "*Panch-sheel*", which constitute the essence of what state relations should be between states with different social systems, particularly between a socialist state and a newly independent bourgeois-democratic state.

Theory and Chauvinism

But practice went severely wrong and now threatens even world peace, by the theory being overcome by sentiments and emotions of chauvinism, something of Bonapartism, which is incompatible with socialism. That happens when a proletariat is not strong enough in the social forces of a country that is just stepping out of feudalism and bureaucratic capital. Even in bourgeois theory and practice, bureaucratic capital never shows the wider visions of anti-imperialist thinking of national industrial capital. Hence the representatives of the Chinese bourgeoisie and the Indian bourgeoisie have been many times poles apart in their attitudes in the anti-imperialist period. This is a line of argument worth looking into when time and circumstances permit.

I have raised this subject because both India and China have developed theory over the ages and different periods of history. Man, anywhere, any time, cannot live without theory, that is, philosophy. That is why Nehru is described as a philosopher-politician while some are only politicians.

Hence the Marxist-Leninists of Socialism, however much abused today, have to think in terms of philosophy. And war and war-tensions make men think more of philosopy, if not while it is on, surely after it is over. Asoka found his great humanism after the carnage of the Kalinga War and corrected himself even on his Emperor's throne. Attila and Asoka looked at war differently. so does our socialism of the new epoch, when preserving peace and preventing world war, become the paramount duty. But Socialism of the Chinese leadership does not thing that way. Hence, I think, their wrong practice, so harmful to the working class of the whole world.

(November 24, 1962)

THIRTY YEARS OF *Mainstream*

Main Parameters of Technology

P.V. NARASIMHA RAO

We stand today at the crossroads of human destiny where so much is being achieved on the material and intellectual plane.

Knowledge and information are growing at an exponential pace. There seems to be nothing which is beyond man's will to innovate. Great rivers have been harnessed, the galaxies have been exposed in the mirrors of telescopes, the frontiers of space have crumbled, knowledge itself is being packed in miniscule electronic chips. Specialisation and pursuit of excellence have become the order of the day. One is overwhelmed by the power of knowledge that surrounds us.

However, in our endeavour to climb the ladder of scientific truth, it is the human perspective which is sometimes lost. Science and technology are not an end in themselves, but tools through which life in all its aspects has to be enriched. This is where the scientist or the technologist is confronted with a phenomenon which transcends pure research of the laboratory or the frenzied activity of a factory. Science cannot exist by itself. The telescope or the microscope are merely extensions of our senses. They help us to observe physical or biochemical phenomena more minutely and lead to greater understanding—more precisely, to that part of understanding which emanates from observation. This understanding does not amount to total knowledge of the phenomena, but constitutes an important part thereof. Now the power of this partial knowledge can be both destructive or creative, while the scientific method helps in achieving both efficiently and effectively. Between the two, however, the choice is entirely ours; science is quite neutral there.

Quite a few thinking individuals are asking the question: If the choice between creation and destruction is entirely ours, what shall it be? What should it be? It does sound rather self-evident apparently. But is this question unrealistic? Has it been answered? We only know that every living being tends to cling to life. But that does not necessarily amount to a value judgement on life itself as something worth clinging to. If a large number of persons want to smoke or drink, it does not follow that smoking and drinking are good. Desire does not *ipso facto* imply desirability of what is desired. Making life worthwhile is, in essence, the role of all human endeavour, including technology. At least, it ought to be so.

When we say that technology should be oriented to our needs, we should also ask ourselves what our needs should be oriented to. The fact of the matter is that both are bound to change with mutual interaction. But what would be desirable is that the change comes as a co-ordinated package whose contents are clearly spelt out. These contents could be just what we normally understand as need—physical, social, economic, psychological and spiritual. But the first important question that arises is—whose need?

Second, a very critical question about each of these needs—whether there is a need for that need. This is a very basic aspect and cannot be brushed aside.

Third, to what extent do we think that a given need deserves priority, compared to other competing needs?

Fourth, what is the technology which we can afford, in the sense that it enables the corresponding need of the greatest possible number to be fulfilled within the means available?

I am reasonably certain that unless a nation finds the answers to these questions, its technology policy cannot be accurately spelt out. The framework gets blurred all the time and we are always chasing phantasies.

I am trying to get down to basics—what may be called layman's basics, since I cannot speak with authority on highbrow aspects of technology and also happen to hold the oft-repeated yet not always realised view that technology ought to be man's salve and his master. The first question I have raised about need is, whose needs? It contains within itself a wide range of considerations impinging on ecology, nature's justice and the eternal race between need and greed. This is in the realm of man vis-a-vis all that is outside man. Whatever man has thought about his own absolute primacy through time, it appears clear that he can exist only if he is willing to co-exist with many others besides himself, animate and inanimate. Any effort to over-rate his own primacy to the extent of destroying everything else in nature has now been established as being suicidal to man himself. Inevitably, therefore, for man's survival, or co-survival, as described above, the parameters of technology are thus determined to a certain extent. In other words, technology shall be essentially creative, not destructive, except to the extent destruction itself is needed for over-all survival.

This brings us to the next question, namely, the need for a given need. It is not open to any one species, human or non-human, to imagine a need arbitrarily and proceed to fulfil it, unmindful of the needs of others. Need, therefore, becomes a matter of rational determination and not of any flight of fancy. Technology, therefore, at once comes within the ambit of rationality. There can be no such thing as technology for technology's sake.

This is taken from the author's convocation address before the IIT, Delhi (December 29, 1986) as the Union Minister for Human Resource Development.

The question of prioritisation among needs *inter se* is eternal. Even in the context of co-survival, priority becomes crucial within what should survive. Obviously, this is not a choice between survival and extinction, but between survival and survival. From this standpoint, it is much more complex. In a broad sense, it could be observed that priority should be sequential as well as consequential. The earlier should lead to the latter rather than each standing independent of the other. This alone could ensure that the future is constantly built on the achievements of the present and there is no wastage in the process. This is particularly important where resources are limited.

The four main parameters of technology, therefore, could be summed up as follows:

(a) Technology should be need-based, the needs being those of the overall creation, human and non-human, with no exclusive and excessive primacy being attached to any one entity;

(b) Technology should eschew the tendency to serve the so-called needs that are arbitrarily or artifically created or attributed. For instance, in a civilised society there ought to be no need of war for any purpose. Therefore, technology to further the aims and process of war, of any kind, nuclear or non-nuclear, should be suppressed. Scientists should be able to analyse the so-called dual purpose or multipurpose technology and sift the beneficial from the fatal. Wherever there is doubt, the normal rule should be to reject that technology and do without it;

(c) Technology should clearly lay down its target priorities based on the common good. Taking humanity as a whole, the basic needs namely, food, clothing, shelter, health, education, culture could perhaps be acceptable on all hands. In my view, culture is undoubtedly a basic need; in fact, it distinguishes man from other species. Even this statement may not be hundred per cent correct, since each species in creation is known to have its own way of life, in other words, its own culture; and

(d) Technology should be equity-based. Any technology which heightens disparities, tensions and antagonisms, between man and man and between human and non-human entities in creation, should be rejected as inimical to the survival of creation and therefore counter-productive and self-defeating. The outcome of any technology should be harmony and humanism. If man is the master of technology, he should effectively orient it on these lines.

I do not presume to claim my finality or infallibility to these parameters, but I do submit that they are useful and valid, at least illustratively. While the global aspects of war and peace are not entirely within our competence, the domestic parameters could certainly be considered on merit. What applies to technology applies equally to technical education. It is here that the higher institutions of technology as the trail-blazers in technical education, need to look within and assess their utility, in addition to excellence; in the ultimate analysis, I do not find any contradiction between the two.

Now that we have a clear-cut policy approved by the nation, we have to plan the educational process, particularly on the technical side, in such a way that the needs of society are assessed, systems and linkages are provided and the calibre of technical education is oriented to the specifications I have attempted to describe. All these aspects need to be kept in view while the National Policy on Education is translated in specific programmes of action.

◆

COMING from the general to the specific there are some areas of concern especially in the field of higher learning and technical education which must be spelt more specifically:

The ever accelerating pace of change of technologies poses a challenge to the system of technical education.

A large number of technological developments are being attempted all over the world. Some of these turn out to have major potential for change and development (for example, computers). Some more time could be needed to express the merging potential through specific products or processes or improving productivity by adoption of new technology. Once the decision to use a particular technology is made, based on the overall considerations indicated above, the educational planner would then work out the skill development task and would organise an educational system for generating this skill. This would involve preparing teachers, developing a curricular framework, organising instruction, developing learning resource material, organising examination and certification systems, and finally establishing linkages with the user system.

All this takes time. Finally the duration of the education programme determines the gap between admitting students to a particular educational programme and the outturn of requisite manpower. The total time taken in this process can easily be 5-10 years depending on specific situations. In this period, however, technology does not remain static. It has either moved on to another level or evolved into something altogether different. The education system, therefore, ends up chasing some past technology, which often appears to be obsolescent in the glamour of what is termed latest at a given time. This is perhaps the most serious technological problem especially faced by developing countries. To date, I am not sure that we are ready with a final solution. Indeed I am not quite clear about the exact point where a given technology could be called obsolescent and deserves to be changed lock, stock and barrel; despite all the waste and the effort of readjustment and re-orientation involved in adopting a totally new technology. All I can think of as a layman is that the solution to obsolecence could lie only in the direction of self-reliance in technological innovation and development, not necessarily behind or ahead of developed countries, but essentially different, so as to suit our own situations of need and capacity. With this as the basis, strong and reliable systems for technology and manpower forecasting should be set up and the organisational structure of the educational set up made sufficiently flexible so as to reduce reaction-time, adapt to our imperatives and to develop a reasonable resource between the articulation and fulfilment of skill needs through the educational system. I would like to specially emphasise, at this point, that of all the skill[illegible] the educational sytem seeks to give to young student[illegible]d trainees, the skill of upgradation is extremely imp[illegible] perhaps as important, as the skill of innovation.

With the large intellectual capital available within the IITs, with their scientists, engineers and technologists working at the frontiers of knowledge in their respective disciplines, it is only natural to expect that the task of technology forecasting will be pursued earnestly by the IITs and other premier institutions of technology. What is important however is that this is not a sporadic *ad hoc* activity but is systematically pursued through suitable organisation and vigorous, indigenous and continuous effort. Another extremely important point to remember is that this forecasting is not just an exercise in arithmetical computing. It has to be comprehensive, multidisciplinary not only as between technical disciplines but fully interacting with humanities so that the end result is holistic. We are not aiming at creating an expert simpliciter; we want to create a better expertise. To me as a layman, the difference is crystal clear. The Prime Minister called this activity Human Resource Development. We are trying our best, ever since, to spell out the concept in clear-cut terms, to enable it to survive through an impenetrable wall of highbrow cynicism and finally, to save it from the ever-present and real danger of sloganisation and banalisation.

Effort in technology forecasting and manpower forecasting should not be viewed by the institutions as external to their role or as a marginal role. It is indeed very central to maintaining the institution's pre-eminence and to remaining in the forefront. This would bring about a futuristic orientation and keep institutions dynamic and relevant. Let us hope that IIT Delhi would play its due role in this task.

◆

SINCE the dawn of civilisation the world has witnessed three major phases of change. The first was brought about by the agricultural revolution and dominated until the eighteenth century. Since then the industrial revolution picked up and dominated the advanced countries. Very recently these countries in particular started experiencing the third major phase, the post-industrial phase which is being shaped by new knowledge generated in electronics, space sciences, ocean sciences, microbiology, ecology and behavioural and social sciences.

The future would have been easy to see if only one of these were to dominate. But when the society is struck by two or more waves of change, great upheavals occur. India today is experiencing the impact of all the three waves, that is, agricultural, industrial as well as the post-industrial revolution. Each makes a different impact on the techno-social and information spheres and generates different and often conflicting demands. It is possible to view this complexity and difficulty of task with dismay; but it is also possible to perceive in all this, enormous opprtunities for change and development, to skip intermediate stages and leapfrog directly to the desired future. Much would depend on the ability of our educational system to understand the nature and mechanisms of change and to generate the ability to manage change through creating a manpower base capable of imaginative and futuristic thinking, system-planning, system development and acting as change agents. These skills are required in addition to skills in specific technologies. The technical education system generally and the IITs in particular as its leading edge, should therefore take on these challenges.

At this point, I would like to indicate the scenario that is emerging today. Rural areas are marked by the dominance of agriculture with small industries and handicrafts producing goods and services for a limited number of consumers. The rural scene is, however, beginning to feel the impact of industrial technology and changing its social pattern. For example, the introduction of tractors, electricity, chemical fertilisers and changed methods of farming have subjected the agricultural system to mass production and mass distribution. This has changed the pattern of land holdings, concentrated economic power in a few hands and rendered a large number into landless labourers. In the manufacturing sector also machines have made locally available skills in handicrafts obsolete, again rendering a large number of people jobless. This has caused migration of rural folk into the urban areas in search of jobs. They need new skills which will fit them into the industrial system of production and distribution. In the urban areas too, the production system is being managed by small, medium and large industrial organisations each using its intermediate and high technologies. At present, the system of technical education is designed primarily for the large organised sectors. There is little which caters to the technological and manpower needs of the unorganised, small and medium manufacturing units. This is why the new National Policy on Education states that "the infrastructure and service sectors as well, as the unorganised rural sector also need a greater induction of improved technologies and a supply of technical and managerial manpower".

The technical education system has the responsibility to look after this need. There is a widespread impression that these are simple tasks, or that simpler or inferior technologies are needed for these other sectors, and are not the concern of premier institutions of technology which work in frontier sophisticated areas. It is important to dispel this notion and remind ourselves of the many instances in which the appropriate technologies for these sectors have to be, if anything made sophisticated if the intention is to make them viable. They are also much more difficult and challenging for the simple reason that the known Meccahs of sophistication have not tackled such problems of small magnitude coupled with great complexity. Therefore, there appears to be no use for us and other developing countries to look up to them for solving our problems.

Modern communication technologies including satellite communication, for instance, have been used for generating literacy and functional skills. We have to pursue this time of action and evaluate the results regularly and meaningfully. Furthermore, the task of serving unorganised and rural sectors involves creating organisations, systems, technologies and skills at various levels, coping with a variety of attitudes and capabilities. Either we ourselves can do this, or we cannot. No one else will take the trouble of bailing us out, since no high profits seems to be involved. This task is both large and complex and there is a role for every level of institutions in this, from the IITs to the ITIs.

◆

HIGH energy input technologies based on non-renewable resources, mass production and consumption systems are, however, playing havoc with the environment. Forests are being rapidly denuded and raw materials are getting depleted, the store of fossil oils is expected to last just another 50 years. Given the pollution levels, indefinite continuation of industrial civilisation does not seem to be possible and environmental constraints are going to limit our technological options. We seem to be approaching the post-industrial era whose salient factors are:

(i) change in the nature of energy base;

(ii) emergence of new sciences, namely, quantum electronics, information theory, molecular biology, ecology, space sciences, behavioural and social sciences;

(iii) emergence of related industries, namely, electronics and computer industry, space industry, ocean industry and gene industry;

[illegible] demanification and diversification of information systems.

[illegible] view of the depletion of fossil oils in the near [illegible] we have to search for renewable sources of energy, for example, sun, tide and wind. Even energy from coal and nuclear fusion is not going to solve all our problems. R & D effort would have to be focussed on non-conventional energy sources: photovoltaic conversion of solar energy, solar thermal systems for process heat and power generation; low cost high efficiency digesters for biogas generation, development of species for biomass production in wastelands; integrated rural energy systems using solary energy, wind energy and biomass, techniques for generation, storage and utilisation of hydrogen, etc.

I could go on cataloguing these areas. The only layman's point that strikes me as noteworthy is that in these new areas peculiar to our conditions, no one else has already gained any great head start ove us. We can also deliver, if we have the will and penchant for indigenous effort.

We thus have a vast agenda for research, skill development and indigenous effort. It is an agenda for generating scientific and technolgocial tools which will enable our society to cope with the future effectively in its own way.

(Republic Day, 1987)

Towards Common Civil Code

E.M.S. NAMBOODIRIPAD

It is almost a century and a half since the then British rulers thought it proper to concede the demand, made by a group of social reformers in Hindu society, to put an end to the atrocious but long-existing practice of *sati*. The pioneers of social reform who prevailed upon the foreign rulers to bring about that reform in Hindu society were the torch-bearers of social upsurge for modernising Hindu society.

Although confined, in the beginning, to the work of restructuring the ancient society and culture of the Hindu community, taking to it the modern values and social practices of the growing capitalist system, the advance of the movement as it developed turned Indian society upside down. Modernisation of education, culture and social practices raised, before long, the idea of economic regeneration along the lines of industrialisation and, finally, the demand for such administrative and political changes as confer on the Indian people the same institutions of political democracy as obtain in the homeland of the British rulers. The demand of putting an end to *sati* was thus the starting point of a process which culminated, after successive stages, in the raising of the political demand for complete independence.

Over a century elapsed since the first act of reforming Hindu society was finished before the idea of a Common Civil Code embracing the marriage, divorce, inheritance and other civil laws of Indian society came to be incorporated into the Directive Principles chapter of the newly-adopted republican Constitution of free India. A few years later, the idea of a Common Civil Code was partly put into practice by the first elected Parliament enacting what was given the name of the Hindu Code. Although keeping the non-Hindu religious communities out of its purview, the Hindu Code brought about, for the first time in the history of this ancient land, the unification of the various "personal laws" of Hindu castes and communities.

Illustrative of the "multiplicity of personal laws" operating in pre-independence India, this writer recalls a series of legislations brought forward in the first half of this century in the Malabar, Cochin and Travancore parts of the present State of Kerala. Calculated to break up the patriarchal and matriarchal joint families, restrict polygamous marriages, put an end to several forms of archaic customs of marriage and family life, etc., these were called the Nair regulation, the Namboodiri Bill, the Ezhava Bill and so on. The various customs and laws of marriage and family relations were sought to be "reformed" but the "personal law" character of each caste's relations was maintained as a "reformed personal law".

An end was being put to this state of affairs when the first Parliament of free India enacted the Hindu Code. Like the earlier adoption of a Common Civil Code as a "Directive Principle of State Policy", the enactment of the Hindu Code was indicative of the fact that free India was surely though slowly moving towards the bourgeois type of marital and property relations. Love marriages instead of arranged marriages, easy divorce but with the responsibility of the male partner to maintain the divorced wife and children, the smaller (man-wife) family in place of large joint families—these are the directions in which society was moving. The idea of a Common Civil Code and the enactment of the Hindu Code were the two pillars on which rested the new society that was coming up.

But, by the time the Constitution with the Common Civil Code as one of the Directive Principles of State Policy was adopted, the British rulers had left the Indian shores. While leaving, however, they divided the country into a Hindu India, or the Indian Union, and a Muslim India, or Pakistan. The social reforms initiated with the abolition of *sati* came to be confined to Hindu society in the Indian Union, the Muslims and Christians being kept out of it. Why? Was it because the two non-Hindu communities did not throw up a group of social reformers as the Hindus did? Certainly not. For, although lagging behind the Hindus, non-Hindus too were moved by the process of modernisation. Particularly is this true of the Muslims who had their socio-cultural renaissance whose outstanding leader was the founder of the well-known educational institution which developed into the present-day Aligarh Muslim University. The leader of the Muslim community were warned that, if they failed to keep pace with the process of modernisation, they would fall behind the rest of Indian society in economic as well as politicial life. Those who initiated the movement for socio-cultural renaissance among the Muslims associated themselves also with the developing movement for political reforms: although a little behind their non-Muslim brethren, the Muslim intelligentsia and the professionals joined the movement for political emancipation or freedom for the country.

These developments naturally alarmed the British rulers. They thought that, although couched in moderate language, the demand was being made that the British rulers should gradually divest themselves of the administrative and political authority wielded by them, handing it over to the representatives of the people. However, representing as they did a country which had become known throughout the world as having the oldest of elected parliament system, a system in which the executive is responsible to Parliament, they could not deny their subjects in India the right to have the same system established here. They therefore resorted to the method adopted by the foreign rulers of every country in world history since the days of ancient Rome—"divide and rule".

Making clever use of the traditional antipathy between Hindus and Muslims, they whipped up the feelings of pride in the "glorious empires of old" lorded over by the Hindu and Muslim emperors respectively. Manipulating the "study" of the history and culture of ancient and mediaeval India, they helped the growth of the idea that the Maurya and other emperors of ancient India were Hindus, while the Delhi Sultanate and the Mughal Empire showed Islamic rule in all its glory. It was on the basis of this Hindu and Islamic revivalism that the British rulers hatched their plans of dividing on communal lines the popular movements for political freedom and socio-cultural renaissance.

◆

THE growth of Hindu and Islamic revivalism was of course not an uninterrupted process. It had to contend with the radical forces at the ideological and political levels. Rationalism, atheism, the radical restructuring of social life and culture—these were contending with the Hindu and the Muslim as any other form of revivalism and obscurantism. There was however one big difference in that revivalism and obscurantism were stronger, and radicalism weaker, among the Muslims than among the Hindus. The development of a definite trend of Islamic politics which flowered into the demand for dividing India along the lines of the two major religious communities made even sections of the progressive elements adopt revivalist and obscurantist positions.

The demand that a distinctly Islamic state should be carved out of India gave rise to the preservation and protection of all that is Islamic in social life, culture, personal behaviour, etc. The framers of the first Constitution of free India had to take this into account when writing into the Constitution the principle of a

Common Civil Code. While stating in no unmistakable terms the principle that Indian citizens regardless of their castes, religions, etc. should be governed by the same civil as well as criminal law, they left it to the future—a time when the Muslims, Christians, etc. would voluntarily accept it—the implementation of the principle through appropriate legislation.

The coming into force of the Hindu Code thus constituted the strength as well as the weakness of the process of modernisation. The antiquated customs of Hindu society manifested in polygamy, child marriage, enforced widowhood, etc. which oppress women as a whole, as well as the outmoded systems of property rights and inheritance have been abolished so far as the Hindu segment of the society is concerned. While this may be considered as the logical culmination of the process begun with the abolition of *sati*, the entire process was confined only to the Hindus. The minority religious communities, particularly the Muslims, were out of the purview of the social reforms. The Muslims as a community were made to believe that the social and family relations handed down to them from the epoch of the Prophet are the best in the world, cannot be departed from. Any effort to bring about even the smallest reforms in that system is denounced as an attack on the freedom of conscience—a fundamental right of religious minorities.

This of course is nothing new nor confined to this particular minority community. Every step forward to the modernisation of society, including that of the Hindu majority, was attacked by the conservatives within that community as an attack on their religion and culture. Banning child marriages, prohibiting the practice of untouchability, allowing the Harijans to enter the temples along with the high caste Hindu, permitting widows to have re-marriage—every one of these reforms met with tough resistance organised by the reactionary elements in the Hindu community. President Rajendra Prasad clashed with Prime Minister Nehru even regarding the Hindu Code legislation; this in fact was the last act of resistance from the Hindus. Within the Muslim community too, there was and is naturally a big fight between the conservatives and the radicals.

◆

IN the struggle between the conservatives and the radicals, the former could strengthen themselves in the last 25 years because, with the increasing isolation of the Congress Party among the people, particularly in view of the fact that the non-Congress Opposition in some regions is led by the Left-wing forces, the leaders of that party are obliged more and more to pander to the backward sentiments of religious obscurantism and caste separatism. Seen for the first time in the Congress alliance with the Muslim League, Christian hierarchy and caste leaders of both the 'forward' and 'backward' castes in Kerala in the anti-Communist front of Kerala in 1960, it has since then now extended itself to several other States and regions. The present ruling coalition in Kerala in fact consists of the Congress as the leader, the once-again-reunited Muslim League and the Christian-Church-dominated Kerala Congress as the two next biggest parties in the coalition. It therefore depends for its survival on surrender by the Congress to every blackmail and threat put forward by the communal and caste leaders.

This has emboldened the Muslim League leaders to demand that (a) the Common Civil Code written into the Constitution as a Directive Principle of State Policy should be abrogated; (b) the provision in the Indian Penal Code that the divorced woman is entitled to receive, from her ex-husband, maintenance allowance till she remarries or dies should be made inapplicable to Muslims. The League MPs from Kerala where that party is an electoral ally of the Congress has moved a non-official bill making these demands on the government.

This however is not all. The President of the Indian Union Muslim League, Sulaiman Sait, went on record with the suggestion that the local Muslim Jamaats be entrusted with the power to dispense with criminal justice in accordance with the Islamic Criminal Law. That, he claims, will be of great benefit to society, reducing crimes! An example of this type of Islamic "justice" was provided in Kerala where a *jamaat* tried an elderly lady with children and grandchildren, found her guilty and 'awarded' a 'punishment' of 101 lashes on the buttocks besides her head being shaved off. It is the power to 'award' such 'punishment' under the Islamic Shariat law that the League President demands should be conferred on the local *jamaats*!

◆

THE fundamentalists and obscurantists however cannot do as they please. For, public opinion is building up in the Muslim community itself—not the least among the Muslim women who have come out in large numbers in all parts of the country in defence of the Supreme Court verdict and against the opposition of the obscurantists. A large number of public figures in the Muslim community, including clergymen, have come out in denuciation of the vested interests who are misinterpreting the human principles of Islam. There are others who have no hesitation to insist that, even if some elements of the Islamic code of conduct whch do not benefit modern society require modifications in the hallowed traditions of Islam, making such charge is not contrary to the principles of the Prophet's teachings. Even those who come as the determined champions of what they call Shariat do admit that there are large-scale distortions and abuses in present-day practice. All these are bound to help weakening the forces of obscurantism and socio-cultural reaction.

(Annual 1985)

THIRTY YEARS OF *Mainstream*

Decline of Rajiv Government

L.K. ADVANI

The present Rajiv Government has without doubt proved the worst since independence. Its performance on all fronts—domestic, foreign, political and economic—has been as dismal as the hopes it aroused had been high.

We had been critical of Indira Gandhi's Government on various counts but our criticism essentially was that it was pursuing a wrong direction. In the case of Rajiv Gandhi, whether it is economic policy or whether it is political policy on issues like Punjab or Sri Lanka, the burden of our criticism is that it has no policy, no direction.

Much has been made of Deoras' reference to the Rajiv Government. Let me clarify it. Deoras' speech at Nagpur on Vijayadashami Day in 1986—two years ago—contained two points. First, that the Congress Party was riven with factionalism and it was fast disintegrating. Even Congressmen admit that it would never be the same again. And unfortunately there is no other party in the country with a wide enough base to be an alternative to the Congress.

The headlines given to his speech were: "No alternative to the Congress: says Deoras". This seemed to be a value judgment in favour of the Congress.

But to me, a member of an Opposition party which has been trying to educate the people that the present Congress Government has proved a disaster for the country, Deoras' speech came only as an exhortation to exert ourselves to be able to fill the vacuum created by the disintegrating Congress. And after that I have had so many discussions, I met him so many times.

Indira Gandhi played the Hindu card in the J & K elections in 1983. However, Rajiv Gandhi played not a Hindu card but an anti-Sikh card in the Lok Sabha elections in 1984.

In the light of what is being described as Rajiv Gandhi's Hindu appeal or the Hindu card I must say that in his three and a half years in power, Rajiv Gandhi's decision in favour of the Muslim Women's Bill is an unabashed pandering to the communal appeal which has, generally speaking, not only destroyed his credentials as a modern, forward-looking, secular leader but has also angered large sections of Hindu society.

Let me make some observations about the Opposition. Too much attention on summit level meetings of the Opposition parties detracts from party activities at the grassroots. Our advice to our party units has been that decisions in respect of adjustments and alliances would take place, crystallise shortly before the elections are held. As for the BJP, its party units, in the meantime, should concentrate on mobilising public opinion, organising them for mass struggles on people's issues, particularly those related to farmers and Harijans, and leave this business of inter-party dialogue to a few persons at the top.

At the top level it has been our conviction that leaders of the other Opposition parties are less concerned with Opposition credibility than they are with Opposition unity and these unending talks about unity laced intermittently with bitter recriminatory statements against one another have gravely impaired the credibility of the Opposition parties.

In fact in the last couple of months activity in the Opposition camp had given to Rajiv a measure of undeserved credibility. The Opposition, however, should be thankful to him that in this last week of Parliament, he has, first by his rude attitude to Andhra legislators and next by his Defamation Bill, shifted the spotlight of public attention from Opposition wrangles to his own arrogance and incompetence and served the Opposition better than they could themselves.

Opposition parties should demonstrate to the people a capacity to work together despite differences. They could work together on specific issues. They could forge an alliance in case of an election but on the basis of a specific, well-directed programme. There seems less concern about these two matters and much more concern with having a common symbol, with having a common flag and parcelling out posts and offices. This does not enhance the credibility of the Oppossition.

My relations with other Opposition parties and groups would be governed by considerations of reciprocity. We have had a very bitter experience only recently in the by-elections. Shortly after the by-elections, the Jamshedpur meeting of the BJP National Executive in early July emphasised that our relations with other Opposition parties insofar as elections are concerned would be governed by considerations of reciprocity.

Let me conclude by focussing on a case of disinformation claculatedly perpertrated by the Rajiv Gandhi Government as it throws light on its care for truth.

During the Lok Sabha debate on the Defamation Bill 1988, Minister of State, Chidambaram, had stated that the Bill was similar to the one that had been passed by the Rajya Sabha in 1978 (and which had lapsed because of the dissolution of the Lok Sabha). At first I could not make out what Bill he had been referring to, though I was absolutely sure that during the Janata's tenure in office there was no legislation of any kind whatsoever which abridged press freedom, whereas the Bill that was introduced in the Lok Sabha was unabashedly an assault on press freedom.

On going through the records of the Rajya Sabha debate in 1978, I discovered that Chidambaram was a consummate expert in disinformation. The Bill that he was referring to (of 1978) was not a Defamation Bill, it was an IPC Amendment Bill and the original bill had been introduced by Indira Gandhi's Government in 1972. It had been referred to a Joint Select Committee of Parliament in 1973 which had submitted its report in 1976. On the basis of the report of the Joint Select Committee, an IPC Amendment Bill was brought before the Rajya Sabha and passed. I examined the provisions minutely. After all till now there has been no separate law on defamation in the country. Offences pertaining to defamation are covered by four provisions of the Indian Penal Code—Sections 499, 500, 501 and 502.

The Bill passed in 1978 was an IPC Amendment Bill. It was a comprehensive bill. It had around 204 clauses. Of these four related to defamation. And these four clauses incorporated some minor amendments suggested by the Law Commission in its 42nd Report of 1971.

Thus the Law Commission had been given a suggestion by others: the provision relating to punishment for defamation provides that a person found guilty (of defamation) would be sentenced to two years imprisonment. The suggestion was that this punishment be enhanced. The Law Commission rejected the suggestion and said that it found no justification for enhancing the sentence.

However, the Law Commission stated that instead of simple imprisonment the law could be changed to provide for two years imprisonment of legal description so that depending upon the gravity of the case the imprisonment could be simple or rigorous.

Another recommendation of the Law Commission which had been incorporated was about covering proceedings in a law court. Presently if a newspaper gives a fair or accurate report of the proceedings in a court, it is immune from any action for defamation. The Law Commission said that this immunity should be in respect of trials in open court.

Such minor and innocuous amendments of the provisions relating to defamation were incorporated in that 1978 bill which Chidambaramji mentioned in order to justify the outrageous piece of legislation that he had sprung upon Parliament in the last week of the monsoon session.

To me it appears that the abrupt change in mood of the press—starting with admiration and adulation in the first year of Rajiv Gandhi's rule, changing to scepticism and mild criticism in the second year, and thereafter changing very sharply to severe denunciation of his performance and actions, and exposure of a string of scandals over the last one and a half year—has made Rajiv Gandhi extremely angry with the press. It is this anger which reflects itself in the Defamation Bill.

Of course, there are provisions in this Bill which are based upon the recommendations of the Law Commission and some recommendations of the Press Commission. But they seem to be essentially a camouflage to conceal the main intentions of the Bill which come up very sharply in more than a dozen provisions of the Bill, and these have nothing to do with the recommendations of either of these two bodies.

In particular, Chapter III of the Defamation Bill 1988 under the title "Criminal Imputation" is the most obnoxious. After all, in all the exposures that have taken place in the last one and a half year imputations have been made without doubt against the Prime Minister, against the Bachchans, against the Win Chadhas, against the Hindujas, against the Lalit Suris, that they have been violating certain laws of the land. It is this "criminal imputation" which the Bill seeks to punish.

The basic canon of jurisprudence, namely that the accused is innocent until proved guilty, has been stood upon its head by this new law in which the accused would be presumed to be guilty unless he is able to prove his innocence.

The Law Commission had rejected proposals for enhancement of punishment for defamation whereas this new Bill provides for five years imprisonment. Changes have been effected even in the Criminal Procedure Code insofar as cases of defamation are concerned. Provisions for day-to-day summary trials, empowering rejection of pleas for dispensation of personal appearances—all these add up to a definite and determined bid to harass and pressurise the press into conformity and to put a firm brake on investigative journalism.

Chidambaram picked provisions from the notorious PPOMA of the Emergency days and took some provisions from the infamous Bihar Press Bill and added some of his original ideas to these and came forth with a piece of legislation which is totally subversive of press freedom. No wonder the entire press fraternity—from Goenka to Girilal, from Arun to Akbar, from Nikhil to N.Ram—the entire press fraternity was up in arms against it.

The Defamation Bill episode has another fact. It has become a practice with this government to spring upon Parliament, towards the end of a session, unpopular and anti-people measures of this kind. They did it in the case of the Fiftyninth Amendment, they did it in the case of the Direct Taxation Laws Amendment Bill, they did it in the case of the Special Protection Group Bill and they tried to do it in the case of the Defamation Bill. These laws are the outcome of a mentality which is essentially authoritarian and intolerant of any democratic constraints.

So it is not only the content of these laws but even the manner of rushing them through Parliament which has been invariably undemocratic.

In the case of this Defamation Bill, as I have already stated, I regard it more as an expression of Rajiv's anger and displeasure with the press than anything else.

(Annual 1988)

THIRTY YEARS OF *Mainstream*

Karyanand Sharma

A Respected Memory

P.C. JOSHI

When a dearly loved and deeply respected comrade is no longer, the question spontaneously arises in one's mind: What distinguished the departed comrade as to leave this sorrowful void in the heart? This is just what happened to me as I learnt of the sad news of the demise of Comrade Karyanand Sharma.

Sharmaji, as we all his comrades affectionately and adoringly called him, was associated in our memory for his high moral character. For honesty, selflessness and devotion to the cause, he ranked amongst the peerless; and even his political opponents dared not dispute this. The Party recognised these high qualities of his by electing him more than once, from its highest forum, the Party Congress, to the Central Control Commission, something like the Supreme Court to judge the erring, the corrupt, the disruptive and alien elements inside the Party ranks.

His character was an admirable blend of the simplicity of an honest Gandhite and the fire of a good loyal Leninist.

Sharmaji came to the Party from the very bosom of the national movement and after he had already acquired the status of a top national leader of the Congress in Bihar. The State Party leaders in those early days were former student leaders and they posed the question: how shall we digest him? Those very comrades are the head of the Party now and I am confident if they remember their trepidation of those early days they will readily admit that Sharmaji never became a problem to the Party and always proved himself an asset, in weathers, fair or foul.

Sharmaji was a national veteran of the early twenties. He was a school teacher when the Mahatma gave the call for his first non-cooperation movement. Our Sharmaji was among the very first Biharis to respond to his call. He gave up his job and joined the ranks of the anti-British fighters under the tri-colour. He never looked back. From that day over four decades ago his only job became to serve the people and fight for national liberation.

During the first civil disobedience movement the British rulers did not ban the Congress as an organisation but its volunteers wing, the Seva Dal, which recruited, trained and organised the *satyagrahis*. It was these volunteers who went from village to village in *jathas* for political campaign, who organised and activised the people through meetings and demonstrations and themselves filled the jails to overflowing.

Congress Volunteer

Readers will rememember that even leaders like Jawaharlal Nehru donned the Congress volunteer's uniform those days. To become a Congress volunteer was the much sought after way for the honour to function as a national activist. More, to get enrolled as a Congress volunteer and become vigorously active was the surest way to come into police notice and get arrested soon after. And the jail-*yatra* was the highest honour one could cover in those exhilarating days.

Sharmaji was among the top four responsible Congressmen who was entrusted with the task of organising the *satyagrahi* volunteers. He did job so well that he not only became known and respected among Bihar's patriotic circles but was classed by them among the chief lieutenants of Rajendra Babu, like Sri Krishna Sinha, Anugraha Narayan Sinha and Bibhuti Misra whose comrade-in-arms he was in those days.

Along with the rest he had to serve his terms in jail. Once I asked him: "How many times have you been in jail?" His answer with a smile was: "Can't remember and it is not worth bothering about."

After *swaraj* could not be won within one year as the Mahatma had forecast, Sharmaji concentrated his political and mass work in is home district, Monghyr, which was also Sri Krishna Sinha's home and the two were close collaborators. In the civil disobedience movement of the thirties, Monghyr did very well. Sharmaji was again arrested.

Earnest Rethinking

With the experience of the Mahatma-led movement failing a second time, earnest rethinking began in the national ranks and at all levels.

Jawaharlal Nehru's Leftward moving '*Whither India*' articles appeared, the Communists joined the Congress inside which the Congress Socialist group emerged, and the two began functioning together to give the Congress a consistent anti-imperialist and really mass-wards orientation. Trade union unity was achieved, the All-India Students' Federation started its meteoric rise and serious efforts began to organise the peasants in every province under the banner of the All-India Kisan Sabha.

A sincere and experienced patriot and so close to the peasantry as Sharmaji was, could not but become an ardent and active advocate of this new energising trend in the national movement.

Alongwith Swami Sahajanand, Yadunandan Sharma and other anti-feudal Congress leaders, Sharmaji threw himself heart and soul into the task of organising the Kisan Sabha in the districts of Bihar and making his own a kisan stronghold.

Bihar of those days was honey-combed with big feudals. A good and influential section of the landlords were inside the Congress and the mass of peasants were also under its influence. In fact the peasantry took the Kisan Sabha as the pro-peasant wing of the Congress and they were not wrong!

Patna, Gaya and Monghyr, contained the heart-land of old Magadh, and constituted one cultural-economic pattern. These Kisan leaders came from these very districts which abounded in feudal exploitation and oppression. The struggle against these became the basis of the famous peasant Bakasht struggle which was fought long and heroically and ended only when a settlement in favour of the peasantry was reached.

Sharmaji was the cool, calm and tireless organiser of the Bakasht struggle and the key front was at Barhaiyatal. I remeber my visit to Patna those days as JP's guest (we were real good comrades-in-arms in those days) and the pride with which he recounted the stories of heroism in the anti-feudal struggle. There was competition among the Left Congress Kisanites, the Congress Socialists and the Communists to be sent to Barhaiyatal as *satyagrahis*. The point of honour was to go to jail as a *satyagrahi* and come back wounded at the hands of the zamindar goondas or police lathis, to be admitted to the hospital.

I got to know Sharmaji well when I went to Gaya in 1938 to attend the All-India Kisan Sabha. It was the peak year of anti-feudal peasant struggles and not only in Bihar though the real stormcentre was here. The landlords, operating both from within the Congress and outside and with their control of the Patna press and influence over the Calcutta dailies which also came to Bihar, were itching for and planning a bloodbath. The Congress Ministry, again under feudal pressure, was indulging in fiddle-play. The kisan leaders were angry beyond words and eager to assume the Parashuram posture.

Tactics of Unity

The danger of desparate provocation was real. The wise and sober Acharya Narendra Dev had come to preside over the session, JP and myself were present as fraternal delegates or observers, the kisan leaders assembled were Left Congressmen, Congress Socialists and Communists. We collectively discussed the Bakasht experience and worked out a tactical line that led not only the Bakasht struggle out of the impasse but the victory of peasant struggle in the other provinces as well. The Bakasht struggle was the epic example which enabled the Indian kisan movement to work out its tactics of united kisan struggle based on broad popular support achieving a fair and just settlement within the framework of the anti-feudal and anti-imperialist front.

After this Bakasht struggle, Sharmaji became a kisan leader par excellence. Whenever the zamindars located any trouble or the peasants felt strong enough to fight, Sharmaji was inevitably summoned to advise and guide the *morcha*.

When the Second World War broke out and the anti-imperialist tide swept over the land, Sharmaji found himself a detenu in Hazaribagh jail with Communists and Lefts of all trends. Communist-Socialist differences had begun and there was nothing else in jail to do except discuss and fight to defend ones own viewpoint. Sharmaji was a silent but eager listener to the long and quite often very acrimonious debate. This debate, with his own whole life's experience, impelled him to apply for the membership of our Party. We felt proud to welcome him in our ranks.

1942 Crossfire

On coming out of jail, Sharmaji had to work literally under crossfire during the 1942 days, the wanton atrocities of the British police military from one side, and the maddening fury of his erstwhile comrades of the Congress, the Congress Socialists and the Forward Blockists. Sharmaji later told me several times that those were the saddest days of his life. I used to cheer him up with: why, it was a great national experience, of imperialist bestiality on the one hand and mad patriotic indignation on the other, the Congressmen suffered from the same political disease in 1942 that we Communists did in 1948-50 under the Ranadive leadership! He used to smile and quietly add: "Comrade Joshi, you can't imagine what it was like to live through." I got a taste of it myself and in Sharmaji's Monghyr itself.

During the 1946 general elections, the Party put up Sharmaji against the former and future Chief Minister, Sri Krishna Sinha. They both came from the same constituency and were old colleagues. We were out to assert our patriotic bonafides and they were all set to damn and sweep us out as '1942 *ghaddars*'. The debate was fiery and furious. The mass mobilisation on both sides went stronger and stronger. I went to address the election eve rally at Lakhisarai, the hub of the area. It was a mammoth crowd, not only of our followers, but of neutral elements and Congressmen as well. Sharmaji was presiding and I was speaking. I minced no words in defence of the Party policy and I have never been and can never be offensive towards the National Congress, the mother of us all. There was pindrop silence, but before I could conclude, the meeting was, according to a predetermined plan, attacked from all sides simultaneously, with lathis, spears and like either instruments. A gang came advancing towards the rostrum.

In Charge

Sharmaji asked me to hurry up and leave with some volunteers to guide. I refused to go leaving him behind. That is the only occasion I ever saw Sharmaji angry and he burst out: "Comrade Joshi, you have taught us discipline all our times and now you won't obersve discipline! Who is in charge here, you or I?" He just passed me on to a few tough volunteers whose lathis led me to safety, darkness and the shelter of the paddy-fields behind, from where we crawled to a poor peasant's hut nearby.

I beseeched the volunteer comrades to rush back and look after Sharmaji. They needed no prompting.

I waited anxiously and after some hours the shocking news came that Sharmaji had been severely wounded, in the head, the arms and the hands badly broken, and was lying in hospital.

A few days later the voting took place, the same *goondagiri* was indulged in, our booths were attacked, our supporters terrorised and so on. Sharmaji lost and Sri Babu won, but it did not last long.

During the 1957 general elections, the same Sharmaji won from the same constituency and became the leader of the Opposition to the Ministry headed by the same Sri Babu. And when Sharmaji used to speak in the Bihar Assembly, whether exposing the evils of the regime or making constructive proposals in people's interest, Sri Babu was present on the Treasury Benches to listen to Sharmaji's truthful and wise words.

Struggle-Demagogy

The poisonous seed of Leftism had become deeply planted inside our Party, its thought and organisation both. The stock-in trade was struggle-demagogy. Sharmaji had devoted his whole life to organising peasant struggles. He knew from bitter personal experience how Left dogmatism isolates and disrupts the peasantry and is in practice the line of negating and liquidating struggles. Ever since 1947 I have shut all my time and thought fighting Leftism inside the Party. We had thus plenty in common, and were one in spirit. I respected him for his mass experience and he respected me for what he called my "learning".

I always insisted that he stayed behind after every meeting of the all-India Party leadership and he readily used to agree. I used to make him talk and talk about the situation on the kisan front and new developments in rural life, and he used to make me talk on international and national developments and read up all that I gave him. We were very much unlike each other but became very closely attached to each other in comradely bonds.

Despite changes and improvements in the Party line the kisan front remained bogged. My favourite theme became: let us re-examine our understanding of the agrarian problem by restudying Leninist teaching and applying them to Indian conditions, not through the prison of our pre-conceived notions not only on the basis of data from official books but by conducting independent field research at the village level and discover for ourselves how the rural set-up is changing. The leading kisan comrades used to easily agree and accept topics for field research. As the Editor of the Party organ I used to pester them with reminders but drew blank when I used to meet them at meetings of leading Party bodies and remind them. I only got a smile in return. I was old and senior enough to take liberties with most comrades and scream that the poison of sectarianism had sucked their brains dry and left them capable of nothing more than routine work.

First Rate Piece

In sheer desperation I turned to Sharmaji and beseeched him to set an example. He argued that he was no intellectual, not learned in Marxism-Leninism, how could he meet my demand and successfully do research? The reader can easily guess my answer. Within a few months Sharmaji produced a study on the conditions of landless labourers of Bihar, based on his personal investigations with the help of local comrades concerned. I published it in the Party's theoretical monthly. It was a first-rate piece of scientific work and a very moving documentary.

Sharmaji was becoming older, not only ageing but losing in health. Good friends that we were I asked him what he ate, etc. He came from poor peasant stock and the Party wage was not enough to keep the family going. He was literally starved of nutrition and with the hard fieldwork he was doing. I requested some comrades working in the medical profession to give me some nourishing stuff for the old man. I passed these on to him, and told him in all solemnity that I had consulted the experts and these were the 'medicines' which he must take without fail.

Next time when he came he looked better and attributed it all to the 'medicines' he had taken away last time. I then revealed the secret to him that they were no medicines at all but just vitamins and other food values.

We discussed his case and decided to send him to Poland for rest and cure. It did him a lot of good. But it did not last long. His was a life of suffering and starvation. He was again sent to the USSR this time. News came that he was improving but then came the fatal heart-stroke and we Communists lost one of our worthy comrades and Bihaar one of its most upright and loyal popular leaders.

When the coffin was received at the Palam airport it was not only we Communists who were present but also his Socialist and Congress comrades. Congressmen, Socialists and Communists unite in homage to the dead. Why can't we unite in the service of the living for whose cause the dear departed died? ■

The Song of the Juniors

BISHNU DEY

Our early years had been scalding pain,
Our times hung heavy all the while,
What calamities, what disasters to pass through!
On the wide wilderness of hugetime
I see your hand beckoning under your banyon shade
With the boon of your thousand roots—
And our dead boyhood and youth come to life.

Not to the enchantress, it was of man's own making,
Of men of the earth, in man's homage to man!
In pin-pointed eyes and ever-alert work,
That ever-quick heart, Lenin's mind and life
Gave wings to youth, high up in the skies.

And so we all hear that music of the stars
And see Volga imaged in Ganga!
Yes, we admit our nights and days are our own,
No magic gift, but sons of the same great mother,
  we bring
With folded hands, into your hands our late-born youth.

Elder! You built up the archetype,
So, on the shoals of our Ganga,
On the peak of Meghna's current we build up history
Over the floods of the dream, of the new life on our
  burnt-up wilderness,
However eaten-up and impoverished be the present,
One blue sky sings over both the lands.
Bind our youth with the *rakhi* of friendship.

(Translated from the original Bengali by the poet himself. Published in Mainstream, *December 25, 1971.)*

To the Mother of a Martyr

SHAHEEDULLA QAISER

(Bangladesh journalist and Communist, Shaheedulla Qaiser, was murdered by Yahya's hordes on the night of December 14 at Dacca, just before the liberation of his motherland. This poem is taken from the anthology, Poems from Bangladesh, *translated from original Bengali by Pritish Nandy and published by the Perspective Publications, New Delhi)*

Your son
is obsessed with music—
how can you
restrain him any more?

Mother,
do you not realise
that there are no barriers
on the path of music?
That afternoon
there was a storm in the river of music;
all your sons and daughters
had joined together
to sing.
Ours were many voices
but we sang a common song;
ours were different words
and diverse tunes
but our music was the same.

Our songs
set the skies smiling,
the children of light came down,
the dust of the earth became our anklets,
a storm rose in the river of music
that afternoon.
Slowly the river of music
was flooded with blood
and then
our songs became birds
and flew away.

Mother,
your children
are now the birds of songs.

With the songs of these birds
a storm will come again to the river:

wait
and you shall see the storm
when your children
return to your arms.

My Mother, My Motherland

SUBHAS MUKHOPADHYAY

I used to be fiercely in love with my mother,
But I could never tell her of my love
In so many words.
With coppers saved from pocket-money
From where she lay in her bed
Her eyes welled up with tears,
But I could never tell her of my love,
Not in so many words.

How could I then utter those words to you
My mother, my motherland!

Both my hands
And my ten fingers
Hold the memory of the time
Your soil helped me to stand up, mother.

Wheresoever I lay my hands
I touch you,
And my heart-strings sing
Whenever you touch me, mother

Believe me mother,
We are not afraid of those
That extend their aggressive claws
Towards your soil.
We shall take them by the scruff of their neck
And throw them out of your borders.

That done, we shall order our life
Our own way.

Believe me mother
We are not afraid of them,
We are only annoyed that the demons should disturb us
When we are engaged in our sacred rites.

Tight-lipped but untiring of you,
O my mother, my motherland!

(Translated from the original Bengali by Kshitis Roy. Published in Mainstream, *December 25, 1971.)*

THIRTY YEARS OF *Mainstream*

The following is the editorial that appeared in the first issue of Mainstream *(September 1, 1962).*

Demolishing the Wall

Dear Reader,

The other day a letter arrived at our desk from a senior leader of the Indian National Trade Union Congress. Referring to our request for a contribution to our columns, he put a blunt question: "Is your journal affiliated to any political party directly or indirectly?" We had no reason for a hesitant answer: *Mainstream* owes allegiance to no political party or group. Its loyalty is wholly and unreservedly to India and socialism.

Faith in the people of India is our shield and armour; determination to resist all attempts to withhold the fruits of freedom from them our only weapon. It shall be our endeavour to try relentlessly to demolish the wall of misunderstanding, mutual suspicion and even personal pique that divides progressive sections in the country one from another.

Mainstream is meant to provide a common platform for all of them to exchange views on the many thorny and pressing problems confronting the nation, so that the right solutions may emerge.

Our long-range purpose is to try to prevent temporary and unimportant differences from making us lose sight of the goal of Socialism enshrined in our Constitution; to try to create the right atmosphere for a mighty joint effort to break the conspiracy to drag India away from the path of progress; to check secessionist, anti-national forces from gaining strength and endangering democracy and freedom itself.

A big and forbidding task, undertaken by humble people. The sponsors of this venture are no VIPs. They come from the ranks of research scholars and working journalists, lawyers and scientists, men from the common walks of life.

This being our strength, is also our weakness, at least from the point of view of resources. Since Big Money has no place in our scheme of things, our financial resources are very limited, while intellectual resources are ample. Most of those who have taken up full-time work for *Mainstream* have given up safe and lucrative positions to serve the cause dear to them. Despite handicaps, *Mainstream* has been launched in the moral certainty that the common people, whose interests it shall faithfully and unswervingly serve, will in turn help it to survive and grow. The response so far has indeed been heartening, as will be evident on a perusal of the contents of even this inaugural number.

While the nation grows in economic strength, disparities in income grow as a result of the free play of vested interests. The protests against new taxes in various States are a result of this. Dr V.K.R.V. Rao, the noted economist, discusses the limitations and scope of taxation in a developing economy.

This week, as we greet Nagaland as the sixteenth State of the Union, our thoughts turn to the South where the secessionist DMK has gained strength with the help of communal elements and entrenched economic interests. Chief Minister Kamaraj has called for a national front to fight this menace. In this issue the well-known Communist leader, Mohan Kumaramangalam, analyses the origins and aims of the DMK.

Symbolic of the stranglehold monopolistic interests have over our economy is the phenomenal growth in concentration of ownership in the newspaper industry. J.P. Chaturvedi, one of the founders of the working journalists' movement in India, presents the trends in the last eight years in this context.

In our agricultural economy new trends are seen which may well retard the nation's progress. Bhowani Sen, well-known kisan leader, turns the spotlight on these.

From week to week, *Mainstream* shall strive to bring to your table varied, informative and instructive fare, neither sensational nor dull but honest and objective in presentation. There will be no glossing over friends' defects for fear of hurting, even as no quarter will be given in exposing whatever is rotten and harmful in society. In this difficult task, dear reader, we seek your support, material and intellectual.

Finally, the traditional note of caution: the views expressed by the various contributors in the pages of *Mainstream* are not necessarily those of *Mainstream*.

THE EDITOR

The following is a Mainstream *editorial that remains memorable to this day.*

Tagore for Today

Somewhere in the excitement of National Emergency, the editor has lost his notebook. However, Rabindranath Tagore has, in the abundance of his generosity, lent him his own notebook:

> Freedom from fear is the freedom I claim for you, my Motherland!—fear, the phantom demon, shaped by your own distorted dreams;
>
> Freedom from the burden of ages, bending your head, breaking your back, blinding your eyes to the beckoning call of the future;
>
> Freedom from shackles of slumber wherewith you fasten yourself to night's stillness, mistrusting the star that speaks of truth's adventurous path;
>
> Freedom from the anarchy of a destiny, whose sails are weakly yielded to blind uncertain winds, and the helm to a hand ever rigid and cold as Death;
>
> Freedom from the insult of the dwelling in a puppet's world, where movements are started through brainless wires, repeated through mindless habits; where figures wait with patient obedience for a master of show to be stirred into a moment's mimicry of life.

June 27 *N.C.*

(June 28, 1975)

The following are a few editorials published in Mainstream *over the years.*

Do We Need Nehru Today?

Twelve years ago Jawaharlal Nehru died in harness on May 27. Inevitably, much has changed in these twelve years among his people and in the humanity at large. He was not the man who would have preferred the status quo to change; and if the landscape and the skyline of his country have changed—at places beyond recognition—Nehru, had he been alive, would have tried to understand them, accelerate the process of change.

What we who belong to the generations after him have to ponder over is whether the legacy left behind by Jawaharlal Nehru is of any relevance at all for the Indian people, or, can we afford to disown it with impunity?

There are many edifices in India's political, economic and social life that are indissolubly linked with the name of Nehru. From the unfettered functioning of parliamentary democracy to the building of the public sector, from the rearing of non-alignment in world affaris to solidarity with the progressive forces abroad, from the strengthening of a free press to social reforms by consent—there are many aspects of Nehru's India which today claim our serious attention. And it would be legitimate to pose the question to ourselves if these are mere luxuries which we can ill-afford to maintain in the fastchanging world of today.

In times of emergency, extraordinary measures are naturally sanctioned. They are however taken as temporary arrangements and are not expected to be dovetailed into the system as facets of a permanent structure. Because, new habits tend to grow and new theories propounded which may run counter to the time-tested democratic norms.

Jawaharlal Nehru personally never claimed to be a revolutionary. But by his precepts and practice he tried to instil into the unlettered millions of this great country the democratic temper of a modern parliamentary system, and with it also he tried, in his own way, to bestir them with the vision of building a new India of hope and promise.

Forty years ago when he urged upon a subject nation the need to commit itself to socialism, Jawaharlal Nehru was not indulging in airy-fairy do-goodism. From the platform of the Lucknow session of the Congress, he, as its President, enunciated his understanding of socialism which has become classic for every democrat in this country:

"I see no way of ending the poverty, the vast unemployment, the degradation and the subjection of the Indian people except through socialism. That involves vast and revolutionary changes in our political and social structure, the ending of vested interests in land and industry, as well as the feudal and autocratic Indian states system. That means the ending of private property, except in a restricted sense, and the replacement of the present profit system by a higher ideal of co-operative service. It means ultimately a change in our instincts and habits and desires. In short, it means a new civilisation, radically different from the present capitalist order."

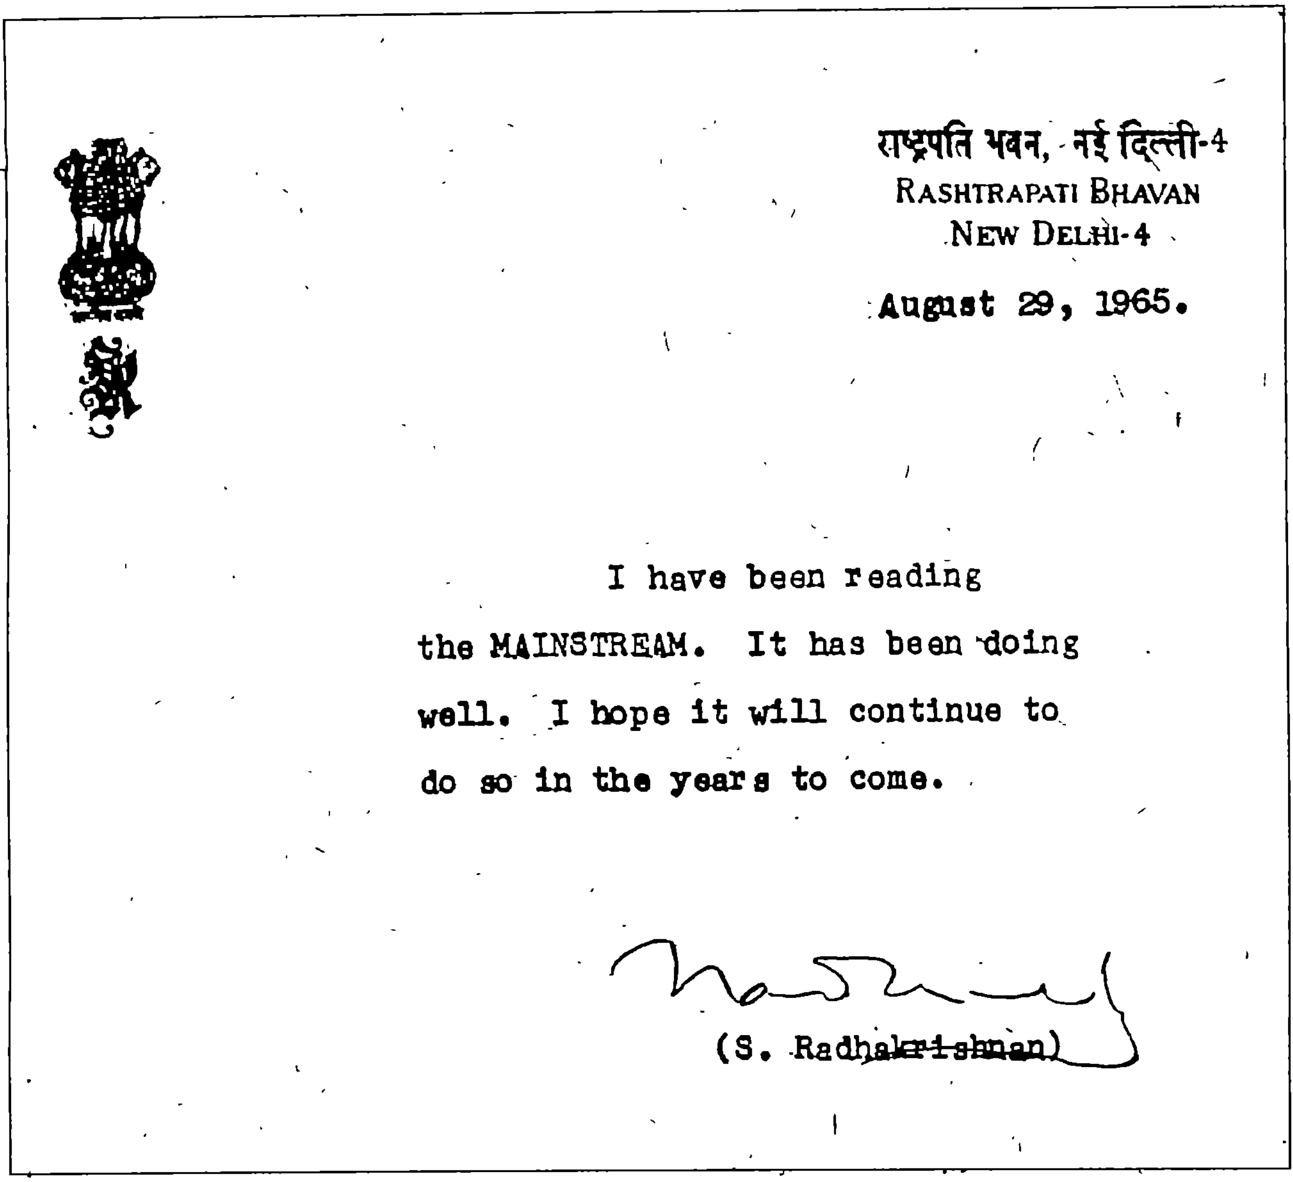
Nehru was no doctrinaire but he was no opportunist either. Socialism for him, was not just a case of "serving the poor" as is being made out by a lot of infantile sermonising today. It is worth recalling how he berated such vulgarisation:

"A strange way of dealing with the subject of socialism is to use the word, which has a clearly defined meaning in the English language, in a totally different sense. For individuals to use words in a sense peculiar to themselves is not helpful in the commerce of ideas. A person who declares himself to be an engine-driver and then adds that his engine is of wood and is drawn by bullocks is misusing the word, engine-driver."

The realities of present-day politics, Nehru never ceased to attempt analysing them. It was he, more than anybody else in position of authority, who educated the political workers as also the masses at large, the inevitability of ideological divergence between the status-quoist Right and the forward-looking Left. In a report to the AICC at Haripura in 1938, Nehru warned: "An attempt to drive out the Left, if successful, would be fatal, for it represents a vital part of the movement without which it would lose much of its flair and become increasingly wedded to petty reformist activities. It would spread confusion in the mass mind, more especially among the peasantry, and thus weaken the Congress. I feel that some such attempt has been made during recent months and it has created considerable bitterness."

Thirtyeight years later, as the members of the AICC meet this week, they need to be reminded of this warning born of wisdom because of the emerging phenomenon of mod-politics which denies this reality—a politics that can only undermine the fibre of the national will for building a new social order.

Many of the institutions that have come up in our



राष्ट्रपति भवन, नई दिल्ली-4

I have been reading the MAINSTREAM. It has been doing well. I hope it will continue to do so in the years to come.

(S. Radhakrishnan)

country during the nearly three decades of independence need to be thoroughly examined so that we may assess how they, each one of them, help or hinder the process of democracy and social change. Side by side, new ventures have to be boldly undertaken so that the down-trodden may not only get a better deal but also have a sense of belonging, and with it our independence can be strengthened.

In this context we cannot help remembering a noble son of India who also gave his life while in harness this week three years ago. To Mohan Kumaramangalam, the need to translate the behest of Nehru in terms of social advance was the highest form of patriotism, and it was this conviction that inspired him to undertake, even during his brief span in office, such courageous measures as the nationalisation of coal-mines, libeating thereby from virtually bonded labour over five lakhs of miners. It is a matter of shame that such a measure of far-reaching national benefit is not defended by Congressmen today from attacks by juvenile politicos, prodded by ignorance or misled by propaganda of the vested interests.

It is no truism to say that this nation faces today the most formidable challenge from political philistinism since the one that faced Jawaharlal Nehru before Lucknow forty years ago. As we pay our humble homage to his undying memory, we are tempted to use the words that one poet wrote two hundred years ago, about another, a fearless crusader: *Thou shouldst be living at this hour: India hath need of thee.*

May 27, 1976 *N.C.*
(May 29, 1976)

Good-bye to all that

There comes a moment in the life of a paper, as in the life of many an individual, when the sense of purpose is in danger of being lost by the constraints of circumstances. Such a moment has come today for *Mainstream*, after more than fourteen years of toil and tribulations, of successes as well as setbacks.

Throughout these fourteen years, there has never been any questioning of the cherished values, the ideals and principles, born out of the struggle of this nation for freedom, democracy and a new social order. To strive for such an objective, the unity of forward-looking forces has been and shall be the essential pre-requisite. As it has grown over the years, *Mainstream* has, in its modest way, endeavoured to bring about such a unity without fear or favour. It has faced many an ordeal and it can humbly claim that it has never deviated from the path of fearless and independent journalism.

Times have changed, and with them, the values. The political process, its semantics and its very style and purpose, pose questions which Time alone can answer. And to face such an extraordinary situation requires courage—courage not of the foolhardy but of the patient and the silently alert. Battles may be lost but wars are won by firm adherence to clear perspective. In this week of the birth of Christ, it is well to remember his words:

> *Wide is the gate, and broad is the way that leadeth to destruction, and many there be that go in thereat.*
> *Strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it.*

If the changed landscape of today nips the prospect for *Mainstream* to continue, there is no regret on the part of those who have served it as also of those who have helped it. The labour itself has had its own reward. To those who have stood by us through many a storm, we acknowledge their support and affection with unreserved gratitude. Today, *Mainstream* closes its present chapter with the proud satisfaction of having tried to serve the right cause in the right spirit and with no dearth of dedication.

There is no room for depression. As winter has come, spring cannot be far behind. And with the first sproutings of spring shall *Mainstream* reappear.

We shall overcome.

Nikhil Chakravartty

(December 26, 1976)

Left and Long March

From West Bengal's historic Tebhaga movement and the massive peasant agitation in Telengana in the forties to the current wave of farmers' assertive agitations led by the landed gentry in the rural areas in Maharashtra, Karnataka, Tamil Nadu and elsewhere—that not only marks a distance of three decades but provides a sad commentary on the slide-back of the Leftist forces which, getting flabby through preoccupation with parliamentary politics to the exclusion of mass politics, have allowed the initiative to pass into hands that can hardly be considered progressive or representative of the toiling millions in the countryside.

It is necessary in the current context to recall the leadership and organisation the Left was able to provide to the rural havenots in those distant days and to take note of the failure to utilise the long interval between then and now to widen, deepen and strengthen the rural base which alone could have provided a radical direction to the socio-economic advance of the country. It is not as if the sudden emergence of a Sharad Joshi in Nasik as some kind of a hero of the farmer lobby was a total surprise that caught the progressive parties and sections unawares. It is rather that by consistent and unpardonable failure to unite the middle and small farmers with the landless agricultural workers on a common platform against the unwaveringly pro-rich policies and actions of the powers that be, the Left parties have offered the countryside, full of revolutionary potential, on a platter to the well-to-do farmers who have always been in a position to thwart radical ideas and measures inimical to vested interests and also corner all gains.

That successive Governments at the Centre and in practically all States, whatever their proclaimed objectives, have been promoters of the interests of the urban as well as rural rich, is not a matter for debate; it is a matter of record, as evidenced, for instance, by the fate of the much-talked-about land reform measures piously placed on the statute book, or by the atrocities perpetrated systematically against the poorest sections. The growth of power of the farm lobby can be traced back to the pre-independence decades, but in free India the scuttling of Nehru's plan for the introduction of cooperative farming by the Charan Singhs both in and outside the Congress may perhaps be seen as a watershed, and the violent agitation by Tamil Nadu farmers under Narayanaswami Naidu's leadership in the late sixties and thereafter as a landmark. What followed in Karnataka recently and the continuing events in different parts of the country are too fresh to need recounting here now.

It can hardly be disputed that the farmers have a case, as Finance Minister Venkataraman after much cogitation has thought fit to concede this week. The urban monopolists—the large industrial houses and traders with political patronage—have been pampered much more than the better-off farmers, while the middle peasants and the small peasants have always received a raw deal at the hands of the Central and State Governments. Resources for fighting elections, including mobilisation of "vote banks", have been the major consideration, and the so-called vote banks provide proof of the total absence of effort to bring the weaker sections in the rural areas together, including the middle, small and marginal peasants, many in the last two categories having been reduced to a new kind of serfdom because of the cornering of developmental benefits by the few to the detriment of the many. The lessons of the Green Revolution were not learnt by those who should have learnt them and prepared themselves in advance.

Leaving aside the concessions made from time to time by the parties in power, especially before each election, to help the urban as well as the rural rich to strengthen themselves and wield more and more political "clout", to use an expression that has become popular now, it cannot be denied that the big industrialists and the affluent traders have been the chief beneficiaries of political freedom and economic development in the last three decades. The farm sector, despite being the solid base of the national pyramid, has received stepmotherly treatment; the demand for economic prices for farm produce has only to be stated to be seen to be justified. But the claim that the farmers' agitation led by Naidus and Joshis is for the benefit of the entire rural population is patently phoney, for the majority of the rural population, precariously placed as or below the poverty line, have never gained from these agitations, as seen in the last twelve years in different States.

Lifting the rural poor out of the morass of deprivation, social and economic, has not been part of the farmers' demands which, after some initial resistance, are always conceded step by step. In the case of the leadership of Tamil Nadu farmers, or Karnataka farmers, or Maharashtra farmers, the miserable wages and level of living of the bulk of those who work on land and depend on it for keeping body and soul together have not figured, except as an occasional and casual after-thought. In a word, there is little to differentiate Charan Singh's "Asli Bharat" and Sharad Ioshi's "Our Bharat" and "Their India". They mean the same thing, even if one of them claims to be non-political or apolitical.

Even with this serious limitation, however, no one concerned about India's overall progress can countenance the disdain with which industrialists and their mouthpieces try to dismiss the agitations now gripping rural India. It is perhaps gratifying that some of them at least realise that the demand for better prices for farm produce is one in which even the middle and small peasants who need to sell some part of their produce are interested. But then it is also true that if the trend of the agitation as well as the attitude of the government does not change, the conflict of interest between the prosperous farmers on the one hand and the landless and the deprived classes on the other is bound to get intensified. Many of us may not mind such polarisation, but the rulers had better be alive to the potentialities of the developing situation.

The attempt to condemn the farmers agitation as "politically motivated" need not be taken seriously; there is hardly any thing that cannot be so described, including Central Ministers" condescending pronouncements or the Government's proclaimed policies and perverted implementation of them.

Even if belated, the six-party front's entry into the agitation should enable the Left, even at this late hour, to give the movement a proper direction. At the time the Left and Democratic Front-sponsored Long March to Nagpur is on. Whether it can give the needed turn to the nation is to be seen; the task is no less than to move from the tail end to the vanguard position in a new movement of the rural masses. It must be noted that those participating in the Long March are demanding among other things a decent minimum wage for the agricultural labourer, with automatic adjustment in relation to the cost of living index, and a weekly holiday—points that naturally do not figure in the of demands of the Nasik-inspired sections. Elimination of middlemen and dalals is another major demand.

But the central point, is organisation of the rural poor—something that has been neglected for three decades, to the immense advantage of the well-to-do who wield real power in the rural set-up.

The Long March can be a new starting point for radical, if not revolutionary, change only if it also leads to self-introspection by the Left so that this becomes the starting-point of a massive nationwide effort to organise these sections which constitute the hard core of Our Bharat or Our India or whatever you call it in the language of imported eloquence.

December 17 C.N.C.

(December 20, 1980)

Wisdom in Short Supply

The security environment in which the Republic of India steps into the thrity-eight year of its eventful career this week, is, to say the least, disturbing indeed. While one earnestly hopes that the Pakistani arms build-up along our frontier may not escalate into one more tragic war between the two neighbours, the climate of confrontation seems to have already set in. This by itself is an extremely unsettling development which not only threatens to vitiate normal relations between two important countries of South Asia—thereby undermining the very foundations of SAARC—but also to disrupt the entire foreign policy projection of India, with its priority concern for world campaigns for nuclear disarmament and for the dismantling of the apartheid. The holding of the AFRICA Fund summit in New Delhi this week is a tribute to the confidence reposed in India's leadership by the entire non-aligned movement. The tension along the Indo-Pak frontier threatens to disrupt this focus of our foreign policy perspective, apart from adding one more tension spot in the trouble-tossed continent of Asia.

More serious is the impact of any Indo-Pak tension on the internal situation in India. A warlike fever in Indo-Pak relations poses a threat to our national integrity. Placed as we have been, this may grievously affect Hindu-Muslim relationship, vitiated in recent years by the phenomenal mushrooming of communal organisations while the government has so far failed to move in the matter beyond the precincts of pious platitudes. A new dimension to the Indo-Pak animosity is the backing that the Khalistani secessionists in Punjab have been getting from Pakistan, which, in the event of heightened tension, will be a matter of serious concern for our security apart from embittering Hindu-Sikh relations.

Despite the Prime Minister's rather glib assertion at his recent press conference that "the economy on the whole is looking very good", careful observers realise how difficult is the economic situation where resource raising has practically come to a standstill, while the so-called liberalisation of the economy under the present government has not brought the expected benefits: on the contrary, the foreign exchange reserve has been badly depleted. In such a precarious situation, the high cost of any military conflict can be back-breaking indeed as the burden of the previous wars in the sixties and seventies could be felt for years afterwards.

In such a far-from-reassuring scenario, what strikes one as perhaps the most disturbing is the amazingly juvenile manner that the governance of this country is being conducted today. From the pronouncements and functioning of the Prime Minister himself one senses an extraordinary lack of serious application to complex problems. Ad-hocism seems to be running riot. This could be seen in the handling of such formidable problems as the continuing crisis in Punjab and the mounting communal violence in different parts of this country; whether it is the Gorkhaland or managing the economy, there is a conspicuous lack of any long range thinking. This is equally true in foreign policy, whether it is in the handling of the Tamil question in Sri Lanka or working out a realistic approach towards China; or examining in depth the perspective for Indo-US relations or about the future of SAARC. The persistent impulse for quick effect betrays a singular reluctance or incapacity to evolve a serious policy approach.

Such a frightening political vacuity is sought to be filled up by shibboleths and exhortations which neither stir nor convince. While the Prime Minister's cohorts are engaged in projecting his image in the style of a PR exercise for marketing a consumer item, Rajiv Gandhi himself has been displaying an unbelievable aversion to sustained and serious examination of issues and problems confronting his government. He has chosen to distance himself from his political colleagues to a measure unthinkable for the leader of a government entrusted with the responsibility of such a vast country as ours. As one closely watches the New Delhi scene, one cannot help getting worried at the spectacle of a Prime Minister choosing to be cut off from his ministerial colleagues to an extent that no political leader of even a small country would risk to go in for.

A political leader to be effective needs a well-run party at his or her command. Without a party worth the name a political leader, however eminent he or she may be, becomes paralysed while the living links between the leader and the masses get withered away. Whatever be the ideological pursuits of a leader, he or she can hardly afford to neglect party building excecpt at his or her peril. In the two years of his being the President of the Congress-I, Rajiv Gandhi has virtually dismantled whatever party organisation was left behind by his mother. His periodic announcements of measures to gear up the party has ceased to be taken seriously. In fact, his supreme inaction on this score has become a matter of ridicule among senior Congressmen. Many of them were taken by surprise when Rajiv at his recent press conference blandly said he did not ask for the resignation of office-bearers of the AICC, for they had to send in their resignations to the party President when it had been conveyed to them that he wanted them to do so. Nor were they amused by Rajiv's remark: "I am watching their performance", because they have felt that all the sudden changes in the past two years have come in fits and starts without any evaluation by the party President. The state of the Congress-I party organisation is such that it can hardly be in a position to withstand any crisis at the national level and the party organs have been so badly emasculated that in any critical development, they cannot save the party President himself.

Sometimes one comes across in history and in the contemporary world, a political leader having a weak party set-up to back him, nurturing the bureaurcary and building it up as his or her bulwark. What is Rajiv Gandhi's record on this score? There has been a lot of talk in the last two years about streamlining the administration to make it efficient and accountable. But actually it has ended up in plenty of smart talk, flourish of supercilious air and astonishing resistance at going to the root of the problems that beset the administration in the context of our times and in the setting of our country. What is perhaps the most disconcerting is the display of arrogance in dealing with officers in his government. One had thought that after his headline-hitting angry outburst against Anjaiah, the then Andhra Chief Minister—which had cost the Congress-I party dearly in Andhra Pradesh—Rajiv Gandhi had perhaps got over such display of temper of his greenhorn days. But a series of recent incidents have belied that expectation. In fact, the new year score of the Prime Minister on this count threatens to be distressingly impressive. The public display of temper against an officer over a trivial matter during his Andaman holidaying, leading to his instant removal from his assignment, has been widely noticed.

More serious was the Prime Minister's conduct in humiliating two senior officers—Bandhopadhyay and

Shastri—during a recent session of a parliamentary consultative committee, caused considerable embarrassment for the Ministers and MPs present. If one were to examine the details of this incident, it becomes clear that the Prime Minister was totally in the wrong in insulting his officers. Notwithstanding the touching defence of the Prime Minister in the press by Dr Najma Heptullah, there is no gainsaying that there was a singular lack of propriety and fairplay in his conduct on that occasion. Much in the same style has come the report of high-handed conduct of his Railway Minister in dealing with a Vigilance Officer in course of a conference.

What has transgressed all bounds is Rajiv Gandhi's shocking behaviour towards Foreign Secretary Venkateswaran. Details of this episode are now public property thanks to the enormity of the scandal. At his press conference on January 20, when a Pakistani correspondent quoted the Foreign Secretary having said that the Prime Minister would be visiting Pakistan as the SAARC Chairman, Rajiv Gandhi replied with a smirk: "You will talk with the *new* Foreign Secretary soon." Venkateswaran who was present at the press conference had no foreknowlege of his going to be replaced, for the Prime Minister did not care to inform him about it. As was to be expected of a person of integrity and self-respect, Venkateswaran promptly resigned from government service.

The episode has actually hurt the Prime Minister and his government more than the Foreign Secretary. In an unprecedented sweep, the media reactions condemned the Prime Minister's petulance with almost striking unanimity. His Ministers were dumb-struck; in course of the next thirty hours, the present writer met five Cabinet Ministers and three Ministers of State none of whom could find a word of explanation for their leader's conduct, while most of them expressed concern over his style of functioning. Equally significant is the instant support for Venkateswaran by the Foreign Service Officers' Association, a move without precedent in its record stretching over three decades. What is perhaps more serious is the repercussion of the episode on the diplomatic world. India has a long record of sobriety in the conduct of foreign affairs: against such a background, it would not be surprising if many of the chanceries of the world begin to wonder if things had gone haywire in New Delhi where the Prime Minister is found to be blissfully unaware of the consequences of discrediting and publicly humiliating the head of his Foreign Office.

Nobody questions the right of the Prime Minister to discipline his officers if they go astray from their briefs but nobody would grant him the prerogative to humiliate them in public. The Caligula style functioning did not help the Roman Empire, and would certainly not be relished in a vibrant democracy like ours.

The fact of the matter is that at least in Venkateswaran's case, there was no brief at all. Not only with regard to Pakistan but China and other crucial spheres of foreign policy, the Prime Minister himself has been indulging in statements which are often contradictory and betray a conspicuous absence of any serious thinking. One is inclined to believe that a coterie having the Prime Minister's ear—neither his Foreign Minister nor his Ministerial colleagues—is interested in getting rid of persons of integrity and putting their own chums in key posts.

From these and other incidents one is worried at the Prime Minister's incapacity to evaluate the personnel in his own government. There are quite a few laggards and intriguers thriving under his benign protection, while on the plea of gearing up his administration, Rajiv Gandhi picks up as the target of his attack some of the ablest of officers in the government. D. Bandhopadhyay who had to face the Prime Minister's wrath has a legendary reputation of a dedicated officer with a calibre which any governemnt anywhere in the world would be proud of. Venkateswaran's *outstanding* abilities, sharp intellect and sterling patroitism bring out the qualities of leadership in him which a government worth the name cannot fail to recognise. But in the hothouse of Rajiv's establishment super-smart Alecs seem to be preferred to solid intellect.

The hauteur displayed in these cases that have of late attracted wide negative public response is not confined to officials as part of a drive against bureaucracy—as some of the Prime Minister's cronies have mumbled lately in his defence—but could be noticed even when Rajiv Gandhi recently addressed the Science Congress delivering the homily to the eminent gathering to abjure "mediocrity". The scientists, of course, were too polite and honourable to retort that the physician could as well heal himself first.

Rajiv Gandhi has to realise that with all the image-building via TV does not make a leader, not certainly the leader of a nation. The officers and professionals are public servants and not his domestic staff. The government is not the private enterprise of any Prime Minister: whether he likes it or not, there can be no privatisation at least in this area.

Although history seems to be at a discount in the Rajiv establishment, he would do well to read and ponder over what his gradfather wrote to the Chief Ministers thirtyfive years ago just after the opening of the Parliament elected for the first time under adult suffrage: "The governance of any country in the world today is no easy matter; the governance of a great and varied country like India is perhaps as hard a task as any in the world today. Any person who is associated with this governance must approach this great task with humility as well as with a measure of faith."

The edifice of this great Republic was built upon the foundation laid down by such great minds. Rajiv Gandhi is expected to protect and preserve and not squander this precious heirloom—precious to the entire humanity that is India. It's time for him to grow up in maturity and be guided by the tenets of wisdom.

The Blood and The Seed

AGOSTINHO NETO

We
from far-flung Africa
and above the treachery of man,
across the majestic and unconquered forests
across the flow of life,
which runs anxious, eager and abundant in the rivers' roar,
through the melodious sound of muted drums
through the eyes of youthful multitudes,
multitudes of arms, of pain and hope
from far-flung Africa
beneath the claw
we bleed from grief and hope, from sorrows and from strength,
bleeding on this earth disembowelled by hoes,
bleeding with the sweat of forced labour in the cotton fields,
bleeding hunger, ignorance, despair and death
in the wounds on the black back of a child, on a mother, on honesty
the blood and the seed
from far-flung Africa
black
and bright like mornings of friendship
desirous and strong like the steps of liberty.
Our cries
are drums heralding desire
in the tumultuous voices, music of nations,
our cries are hymns of love that hearts
might flourish on the earth like seeds in the sun
the cries of Africa
cries of mornings when the dead grew from the seas
chained
the blood and the seed
—see, here are our hands
open to the brotherhood of man
united in certainty
for the future of man
for right, for peace, for friendship.

From our toes, roses grow,
perfumed with the river Zaire's tenacity
and the grandeur of Maiombe's trees.
In our minds
is the road of friendship for Africa,
for the world.

Our eyes the life-blood
are turned towards hands beckoning love in all the world
hands in future—inspiring faith in the vitality
of Africa, the human land of Africa
of far-flung Africa
regenerating under the sun of hope
creating bonds of brotherhood in freedom from want
from the yearning for peace,
the blood and the seed.

For the future—here are our eyes
for peace—our voices
for peace—our hands

from Africa, united in love.

(This poem by Dr Neto, the late President of the People's Republic of Angola, was reproduced from Sechaba, *quarterly organ of the African National Congress,* South *Africa. Published in* Mainstream, *April 3, 1976.)*

GARDEN FRESH ASSAM

TEA

India is the world's largest producer, exporter and consumer of tea. The country produces from the ordinary to the best teas, yet the Indian consumer does not get to drink the best. That is why APEEJAY, which is the 4th largest tea producer in the country, has decided to introduce its selectively picked high quality pure Assam tea direct to the consumers.

This is pure Assam tea from our own tea gardens. Make it the way you normally make your tea and it will give you a superb flavour and liquor. Drink this tea for 3 months and you will never want your old brand again.

Calcutta
An experience touched by magic

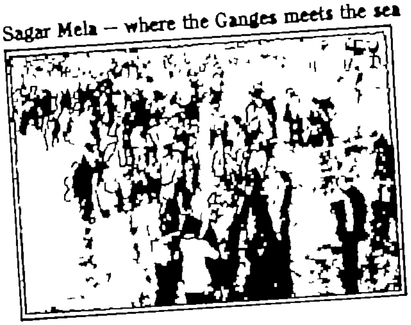
Calcutta — an enigma. She means different things to different people. She is traditional and she is modern. She is tough and she is gentle. People from all over the world have been fascinated by her mystique.

300 years ago, Calcutta was founded by Job Charnock on the banks of the Hooghly. Today she is the nerve centre of Eastern India.

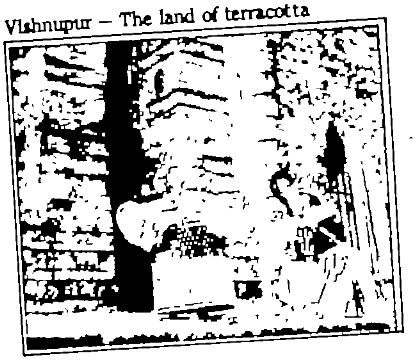
Basanta Utsab, Santiniketan

There is so much to experience here. The Annual Book Fair, the open air folk theatre 'Jatra', the revelry during Durga Puja, the Christmas festivities and the frenzied soccer matches. So much to see. The Alipore Zoological Gardens with its prized collection of birds and animals. The 175 years old Indian Museum, the unique National Library, the unforgettable Victoria Memorial and the stately Marble Palace. From Calcutta, you can visit a variety of places in West Bengal.

Sagar Mela — where the Ganges meets the sea



Vishnupur — The land of terracotta



The sea of Digha and Bakkhali. The Himalayan mountains. The forests of Doarse. The ancient ramparts of Gour, Pandua and Murshidabad. Santiniketan, the poet's abode of peace. The terracotta of Bishnupur and many other wonders. West Bengal is a land of incredible variety and festivity. From the hills to the bay, the story unfolds at every step. Round the year, the air is filled with festive spirit!

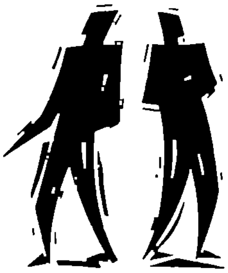
CAN YOU IMAGINE WHAT THE WORLD WOULD BE LIKE IF PEOPLE DIDN'T SPEAK OR LISTEN TO EACH OTHER?



No voices. No laughter. No messages. No information No telephone calls.

It's unimaginable and thanks to companies like Fujitsu its impossible as well.

Take a closer look.

In the heart of Punjab, at Eltop, is the beginning of one of the most advanced telecommunications manufacturing facilities in the world.

A Rs 110 crore joint venture between Fujitsu of Japan, and PSEDPC of Punjab, the facility will build the advanced FETEX-150 Digital Electronic Switching Systems.

Complete with 2,40,000 subscriber lines, 60,000 trunks, 24,000 traffic (Erlangs), 12,00,000 calls (BHCA), and 780 operator positions, the FETEX-150 is everything a state of the art switching system should be

Yet despite using the most advanced technology available, the FETEX-150 is very simple to operate, maintain and expand, as your requirments grow.

(After all, what good is advanced technology if it's difficult to use?)

Which brings us to what Fujitsu technology stands for worldwide: 'What mankind can dream, technology can achieve'.

It's a belief that makes the FETEX-150 a pathbreaking system.

It's a belief that will make Fujitsu India Telecom Limited a pathbreaking company

And it's a belief that will never allow people to stop speaking or listening to each other

KAGARLITSKY'S INTERVIEWS

POLITICAL NOTEBOOK

Not Sorrow but Atonement

The vandalism that brought down the Babri Masjid structure on December 6 will remain a Black Sunday in the annals of independent India. Like the insensate violence of fratricidal communalism of the partition days that culminated in Gandhiji's killing fortyfour years ago, the demolition of the Babri Masjid will remain a symbol of shame for the nation, and particularly for the majority community which permitted a bunch of blackguards to pose as its guardian and get recognised as such.

While anger and anguish over this ghastly incident have overwhelmed millions in this country, there is no escape for certain elements in public life from being held responsible for this despicable act. The BJP and the RSS leaders who backed the so-called *Dharma Sansad* issuing the *fatwa* for the *kar seva* have to unequivocally own up the guilt for having collected such a huge number of people around the disputed area by whipping up raging frenzy which was beyond control. And the BJP bosses who had been campaigning in support of the *kar seva* were found to have beaten a retreat when the mob was actually demolishing the mosque—an ignominious commentary on both their capacity and courage. Those who incite a crowd and lack the guts to face and halt it are unworthy of claiming to be leaders. Their moral posture which they flaunt as part of their *Hindutva* should have the honesty to offer public apology for this shocking abdication of responsibility on their part.

The BJP leadership is accountable for the grave misconduct on the part of the Uttar Pradesh Government which the party was running. Chief Minister Kalyan Singh was giving assurances to the Central Government and the Supreme Court which turned out to be thoroughly bogus. If he had any idea about the importance of the commitments he had made to the Supreme Court, he should have anticipated the grave risk he was taking in handling an unmanageably massive crowd, which by its very nature was beyond any discipline. Instead of asking for more Central force, Kalyan Singh was protesting against the despatch of whatever the Union Home Ministry had despatched as a matter of precaution.

The point to note is that the BJP Government in UP, like the rest of the BJP-VHP-RSS combine was trying to run with the hare and hunt with the hound. They were stoking the frenzy for *kar seva* all over Uttar Pradesh and beyond, while at the same time, assuring the judiciary, the Parliament and the public that the disputed areas would not be touched as per the Supreme Court directive.

Not only that. In the critical days after the National Integration Council meeting on November 23, the senior BJP-RSS leaders were working out some settlement terms with the Central Government. The terms of these negotiations, which the present writer can vouch for, were, firstly, the Babri

Masjid disputed structure complex would be adequately protected until the dispute is settled by dialogue or due process of law, and the UP Government would invite the Centre, if it is so desired, to send its force to reinforce the State Government's security arrangements. Secondly, there would be no *kar seva* in violation of law. Thirdly, the Centre would make a one-point reference to the Supreme Court under Article 143 and the Court's opinion would be accepted as binding by both the Centre and the UP Government as also the BJP-RSS combine. Fourthly, the Centre would express its support for expeditious disposal of the case about the disputed plot now pending before the High Court. As these terms were hammered out, an impression prevailed on the eve of December 6 that perhaps the crisis was on the way of being defused. In fact, the BJP-RSS leaders were expected to persuade the *Dharma Sansad* not to precipitate the crisis.

The question now arises whether the BJP-RSS leaders were diabolically agreeing to these terms while preparing for the demolition of the Babri Masjid; or, were they themselves outstripped by the blitz attack of the mob? The fact that Advani resigned from the post of the Leader of the Opposition in the Lok Sabha, coupled with the RSS leader Rajendra Singh's statement that the vandalism on December 6 was a "grievous" setback for the Ram temple cause, might be put up by them in their defence that they were themselves overtaken by the developments. Be that as it may, there is no doubt that before the bar of public opinion in India and abroad, the BJP-RSS combine has no option today but to acknowledge their guilt for the heinous act of violent destruction. It is not just a question of owning up moral responsibility, but substantive responsibility for whipping up frenzy and then giving in to mob-violence and thereby desecrating their commitment before the highest court of law and the supreme tribune, that is, Parliament.

The BJP leaders have to bear in mind that the rule of law has to be respected if they do not want to put their party outside the pale of law and the Constitution. More than once during these crisis days, the BJP spokesmen have talked about "the majesty of law", and now they themselves connived, if not actively involved, in the blatant defiance of the Constitution. The pulling down of the Babri Masjid structure is not just a matter of religious frenzy, but the blatant assault on the rule of law and civilised conduct of public affairs. Here is the essence of their guilt.

In the history of contemporary India, this is how terrorism has crept into politics. Whether it is the Akali Party or the Asom Gana Parishad, one finds the moderate parliamentary leaders using the rowdy terrorist groups as their battering ram against the adversary and in course of time, they themselves become the captive of the militants, as many of the distinguished Akali leaders have become today in Punjab politics. What has happened at Ayodhya looks like the curtain raiser of the very same type of political adventurism coming over to the BJP. The RSS leaders may have survived the stigma that stuck to them after Gandhiji's assassination, but there is grave doubt whether they can come out of the present crisis intact. The more mature among them would soon have to make their choice here and now.

In the Aftermath

S.C.

The mosque was eloquent History,
Everything else was shrouded in mythology.

Yet they, under the spell of fiery oratory,
Chose to chase the mirage of a myth,
Pull down the building
And build hatred in their hearts

When I, a citizen of this vast land
With the pulsating impulse of History behind me,
Watched helplessly in speechless agony.

My dreams lie shattered,
My country split
And its future back to the tribal past.

I know not how to atone for my immoral silence
For History shall not forgive me.

◆

LOOKING at the predicament facing the Congress and its government today, there is little doubt that public opinion has already marked out those in power as being guilty of dereliction of duty. There is no room for passing the buck to the UP Government, since it was as much the Centre's solemn charge to protect the Babri Masjid structure.

It was all the time given out that the Centre was on the alert even while the talks for a settlement were continuing. When para-military forces were sent, one can very well ask, why these were not sent in adequate strength, at least to guard the disputed structure? Even if a fully equipped Army unit had been posted to guard the disputed structure, it would have acted as a deterrent, and the shame of the Indian state not protecting a place of worship of its citizens would not have come upon our country. This is the simple charge of any government claiming to rule from New Delhi as the guardian of a secular state. The Prime Minister himself had made the solemn commitment on August 15 in his Red Fort speech saying that the mosque would be protected as much as the government would like the proposed temple coming up.

In this context, this writer needs to acknowledge in all honesty the validity of the criticism voiced by some observers that the Centre dithered in imposing the President's Rule in UP immediately after the NIC meeting when the *kar sevaks* were yet to gather. Hindsight makes it clear that such a pre-emptive strike might have averted the tragedy of December 6. At the same time, such an action of dismissing an elected government could have been misconstrued at that stage as a partisan move with poor legitimacy.

The exploitation of religious sentiments for political purpose has become the bane of Indian politics over the years. The opening of the lock at the Babri mosque complex and the subsequent permission of *shilanyas* on the disputed spot were done by the Congress under Rajiv Gandhi to collect Hindu votes. The passing of the Muslim Women's Bill in the wake of the Shah Bano case was done by the Congress to gather Muslim votes. If the Janata Dal took the help of the BJP to form its government at the Centre, the Congress too did not hesitate to vote along with the BJP to oust the same Janata Government at a moment when the Janata Dal fell out with the BJP's clamour over the same Babri Masjid issue. Even the Left in the late sixties did not have any qualms to form coalition governments with the Jan Sangh at the State level. The cumulative effect of this exploiting religious faith for electoral gains today is that the BJP leadership at this moment, instead of being branded as having violated the tenets of the Constitution, is regarded by a large body of Hindus, particularly in North India, as being heroes who have dared to defy the law to uphold the urge for Ram's temple.

With nobody having a clean hand on the issue of pampering to communalism, the BJP-RSS combine has been able to go so far in initiating a totalitarian communal approach as could be seen from their moves to change names of places and rewrite text books apart from the ghastly deed at Ayodhya. This multipronged communal approach can hardly be halted by mere seminars on secularism, but only by launching a nationwide mass movement for Hindu-Muslim amity, which alone can provide the surest guarantee for genuine secularism in the country. While swift administrative action to halt communal violence is imperative at the moment, the building of communal amity on sound footing can come only through relentless mass campaign. All parties will have to unequivocally abjure the slightest communal bias in political life with relentless vigilance.

Assault on Rule of Law

The following is a statement issued by Prof Upendra Baxi, the Vice-Chancellor of Delhi University, in his capacity as a Professor of Law, Delhi University on December 8, 1992 after the Babri Masjid was pulled down:

As a citizen of India, I join the national lamentation at the destruction of Babri Masjid by those who believe that might is right India stands diminished before history and the world by this vandalism

The wreckers of the shrine have dealt a mortal blow to the integrity of judicial process, the rule of law and the Indian Constitution.

This new barbarism of Indian politics must be interrogated and arrested by conscientious citizen effort. Citizens must demand a national atonement in this hour of national shame, they must contribute a new sense of solidarity by vigilant insistence on exemplary punishment of those found guilty, and mobilise community efforts to assist all victims of strife which has now so tragically begun Not merely must the Masjid be rebuilt but also enduring citizen endeavour should divest all communal forces of even minimal legitimacy.

Our common future lies in constitutional secularism; it should not be allowed anymore to be a plaything of power

This applies equally to all communities, as is brought out by the ugly demonstrations in the Jamia Millia over the secular stand of a distinguished scholar. Hollow men do not make History, but unmake it.

Indian nationalism shall not endure by preaching hatred and deceit and disdain between brother and brother. Out of the ruins of the Babri mosque must rise the shining mansion of communal harmony. We, each one of us, have to pledge ourselves as our brother's keeper. What we need today is not sorrow but atonement.

December 9 N.C.

Reflections on Ayodhya Tragedy

BAREN RAY

Massive events unrolling in quick succession and telescoped within a few days have changed the political visage of the country. There came the well-planned action by the *kar sevaks* comprising of selected and well-trained cadres of the *Sangh Parivar* in their hundred thousands first in assembling in the disputed Ram Janmabhoomi-Babri Masjid site in Ayodhya and then their precipitate action against the nearly 500-year old structure of the mosque while the forces of law and order were kept at bay at a distance utterly unable or unwilling to intervene.

The protection of the religious structure had been vouched by the centuries-old tradition of the country, by the secular structure of independent India, specifically spelled out in the Constitution and repeatedly reassured by the highest judiciary of the state. All that was brought down together with the stone structure with the help of the blatant lies and deceit in which all the involved parties, the Ministry in Uttar Pradesh, the BJP leadership both in Parliament and outside, the spokesmen of the

VHP and the RSS, and many of the religious leaders had all, separately and collectively, made their contribution in deception by way of assuring the Central Government that the *kar seva* would be peaceful and symbolic and no forcible demolition will be attempted. It is now evident that there was a detailed plan, how exactly the structure would be brought down, by how many people and using what implements, while the milling crowds would provide an impenetrable human shield to let the operation continue for some six hours. Even if every single spokesman who had made those statements did not know all the details, cumulatively they were all lying, consciously and deliberately.

The Central Government was indeed on a very difficult wicket right from the beginning which was certainly not the making of the present Prime Minister and his Cabinet. One of the central facts of the political scene since the 1991 general elections was the massive increase in the strength of the BJP—both seat-wise in the Lok Sabha and in so many State legislatures as well as in the overall vote tally. This was a tangible political reality—a negative development—which could not be denied. Fundamentalism is not a plague which visits only other bad countries, it can afflict ours too. Social scientists may investigate as to which sins of omission or commission during the long rule of the premier party of the country (unrelieved by any effective counteraction on the part of the Left and democratic forces) had brought this about, but since the beginning of 1991 that was the stark reality which could not be wished away by closing one's eyes. With such an unusual swing in people's opinion in a fundamentalist direction the problem certainly could not be tackled by mere recourse to the forces of law and order. The BJP had swelled its votes precisely by promising something about the Ram Janmabhoomi.

Attack On Media on Black Sunday

The media was the target of the protagonists of Hindutva *who pulled down the Babri Masjid at Ayodhya on December 6. The following reports in* The Statesman *and* The Pioneer, *filed by eyewitnesses and those subjected to the attacks by the* kar sevaks, *expose the real character of the miscreants who stormed into the Babri Masjid and razed it to the ground. The first report, by* The Statesman's *Staff Correspondent, appeared in the December 7 issue of the daily; while the second, by Praveen Jain, was published in* The Pioneer *(December 8).*

—Editor

Taste of Kar Sevaks' Fury

With policemen reduced to the role of bystanders, and occasionally acting as cheerleaders, the media bore the brunt of the *kar sevaks'* fury in Ayodhya on Sunday. Photographers, in particular, were at the receiving end with many having been beaten up, some ending up badly injured. Photographic equipment was snatched, damaged and thrown on the ground, and reels exposed. It was almost as if the BJP-VHP-RSS-Bajrang Dal cadres knew they had done something the world was better off not seeing.

Signs of the media being a likely target were available the previous day itself. A senior leader of the Hindu combine, Paramhans Ramchandra Das, announced at a public meeting that "*patrakaron ko apne chashme badalne honge*" (the media will have to change its perception). Ashok Singhal of the Vishwa Hindu Parishad had gone a step further in accusing some media organisations of "misreporting".

Others who have been making provocative statements against the media include Vinay Katiyar and Acharya Dharmendra.

Ramesh Chand of *Visnews* was hit on the head and had to get 16 stitches. Pablo Bartholomew, representing a French agency, received serious head injuries and had to be rushed to hospital.

Several reporters, including the representatives of *The Statesman*, were the target of attack of *kar sevaks* on a roof-top who tried to hit them with stones and even boulders. The refrain of the *kar sevaks* was that journalists should stop reporting.

Mark Tully of the BBC was taken to a room and threatened he would be killed if he persisted with "making false broadcasts" about the Ayodhya situation. Tully had to seek police protection. Peter Heinlein of the Voice of America was similarly roughed up.

When the stoning began at 11.50 AM, a group of eight reporters and all the photographers were at the spot where the *kar sevaks* were assembled. Other media representatives were on the roof of the Manas Bhawan, the headquarters of the VHP situated next to the scene of action.

As the mob surged forward, the *kar sevaks* turned on photographers with almost the same degree of ferocity they were to show soon at the mosque. In the first wave of assaults, the team of *Parakh*, a Doordarshan programme, were picked upon. Both the reporter and cameraman were hit with lathis.

Then it was the turn of other photographers. Among those who were assaulted or had photographic equipment snatched or damaged were Praveen Jain, Pramod Pushkarna Thapa, Nitin Rai, Sanjay Sharma, T. Narayan and Alok Mitra.

Seeing the police unresponsive and the *kar sevaks* unmanageable, many journalists had to seek refuge in a small temple behind the mosque.

Those at Manas Bhawan fared little better. The RSS volunteers posted there were openly contemptuous of the media, making jeering remarks and quite evidently enjoying the discomfiture being caused by the rampaging mob. When journalists tried to leave the spot, they were jostled and pushed. Some of the volunteers were heard remarking that journalists should be lynched.

There were reports of an attempt by some RSS men to push a local photographer off the ledge of a building.■

(Courtesy. *The Statesman*)

'I am Ashamed'

PRAVEEN JAIN

If you think the demolition of the Babri Masjid was a spontaneous one, then hear this: On Saturday afternoon a BJP Member of Parliament forewarned me of the events to follow on Sunday.

He smiled as he directed me to the spot where the *kar sevaks* were rehearsing how to bring down the 465 year old structure. The *kar sevaks*, with ropes and rods, had roped a rock pile and were tugging at it from different directions. As events turned out later, this was the very manner in which three domes of the mosque were brought down the next day.

Near the mosque, a concrete dais had been erected. Hordes of *kar sevaks* from several directions were periodically racing towards the dais. This was the run-up to Sunday afternoon.

December 6

Early on Sunday we made our way to the spot where the BJP-VHP combine was expected to carry out the "symbolic" *kar seva*. All photographers, journalists and cameramen were directed to a *dharmashala* (Manas Bhawan). The terrace had been cleared for us.

As events moved forward the Bajrang Dal activists scampered onto the terrace. Their numbers increased till we were outnumbered. Sensing trouble, I slipped away.

It was a sensible move, as I realised later. The journalists and camera crew who stayed back were pulled and jostled around, their movie cameras were snatched away and flung down from the terrace five floors above the ground.

On the ground there were thousands of people milling around. They were all chanting "*Jai Siya Ram*" They converged on me. Even though I was caught unawares I managed to get away from the spot. Someone in the mob snatched at my open bag. Later I realised that the *kar sevak* had made off with Rs 2500.

Even as the crowd chased me, its attention was caught by another hapless photographer who was literally shooting from the hip as he ran. The mob set upon him giving me a fleeting opportunity to move towards the dais where the BJP-VHP leaders were seated. On the way I met two other photographers—Nitin Rai and Pablo Bartholomew. On the spur of the moment we decided there might be safety in numbers and were glued together in fear.

By then the hordes had swarmed up the domes and they fell upon it with *trishuls* and whatever else they had in their hands.

It would have been unthinkable not to get this on film, even if this was the last thing we did. Out came our cameras and we got clicking. This focussed attention on us. *Kar sevaks* armed with *trishuls* and daggers chased us. I was luckier than the other two who were nabbed, stabbed and beaten.

Later that night journalists who managed to get away from the site told us the mosque had been turned to rubble.

December 7

Early in the day, sporting a saffron bandana, printed entirely with the word 'Ram' and wearing saffron sweaters and carrying only a minimum of photo equipment in our pockets we made our way stealthily to the complex.

Kar sevaks were clearing the rubble to make way for some sort of a structure. To take pictures from so near would have been suicidal. Through a small window of a house in the vicinity I squeezed the shutter six times.

I breathed freely. Not outside the house. Not in Faizabad—12 kilometres away. Not on the flight back. But at the office when the prints came out fine.

They were the pictures of Hindus giving Hinduism a bad name. I am ashamed. ■

(Courtesy: *The Pioneer*)

World Economy: The Larger Perspective

JOHN KENNETH GALBRAITH

The following is the text of the lecture delivered by the distinguished economist and former US Ambassador to India at a meeting organised under the aegis of the Rajiv Gandhi Institute for Contemporary Studies in New Delhi on November 18, 1992

—Editor

There comes a time when one should step back and seek to envisage the larger world scene. In concentrating on detail, we, on occasion, lose sight of the larger picture. When, as now, we live in a time of marked economic change, even of recent revolution, this larger view is especially to be sought.

As was Gaul, the modern economic world is divided into three parts. There are, first, the poor lands of the planet—those variously characterised as the undeveloped countries, more optimistically as the developing countries and, with intense economic neutrality, as the South.

There are, next, the relatively advanced countries that are now emerging to a market system from comprehensive socialism, commonly called Communism. These are the countries of Eastern Europe that were once behind the now vanished Iron Curtain and the republics of the former Soviet Union.

And, finally, there are the fortunate lands, those that have escaped from the poverty and stagnation that, without much change, afflicted all the people of the world until a couple of centuries ago. They include Western Europe, the United States and the English-speaking countries in general, and Japan, Taiwan and the other developing lands of the Pacific Basin. In this company, in arriving but not yet arrived, I place India.

◆

IN looking at the larger world and its present problems, I seek to do so without the constraints of ideology. This is not the age of great theoretical systems. Those who so believe are in escape from thought—and all past experience. This pre-eminently, is the age of intelligent pragmatism. The economic problem must be examined and judged not for its conformance to theoretical pattern but for its efficacy in the particular time and context. I urge against the frequent retreat from thought to a presumed controlling doctrine.

The poor lands—the so-called South—are the most difficult case. Suddenly released from colonial authority, they were left with the most demanding task of our time. That was putting in place efficient, effective, non-corrupt and stable democratic government, this being the essential basis of economic development and human contentment. Nothing so destroys all hope for economic well-being as corrupt and/or totalitarian governments that are concerned, inevitably, not with economic and social progress but with consolidating and holding their own authority. This, one notes, can be the burden of governments ostensibly of the Left and the Right. And nothing so destroys both people and progress as internal conflict.

One cites here the sad experience of much of Africa and of other ex-colonial lands. There was a major mistake in the process of decolonisation: time and effort should have been committed, perhaps under the auspices of the United Nations, to helping guide former colonial governments to a stabel democratic alternative. Only those countries that have had a stable democratic alternative to colonial rule—Singapore, Costa Rica, India, a few others—have had a reliable rate of economic development and an otherwise tolerable existence.

There was another error. Far too much emphasis was placed on industrial investment and development, far too little on education and human investment. Once it was understood: an educated populace is the first requirement for economic progress. That essential fact was forgotten; impressive steel mills, great hydroelectric dams, glistening airports, were too often sited amid ignorant people. I have previously made the point: in this world there is no literate population that is poor, no illiterate population that is other than poor.

Finally, in many cases there was too much attention to urban development and well-being at the expense of agriculture. In some instances, prices were kept low to serve the presumed interest of an urban proletariat. This, too, was a prime error ending in food insufficiency and hunger. Of all economic needs, that for food is the first. Here, India was a brilliant exception. It gave agriculture the technical attention and the economic support so vital for salvation.

If we are to talk effectively about economic development now and in the years to come, the emphasis must be on political stability, on human investment and on sound, sensible agricultural policy. These, we now know, are the prime requirements of progress.

I come to a different matter, happily not relevant here in India but sadly relevant to the world at large. This is internal conflict and death common in our time.

In the worst cases of internal disorder and cruelty, we must have a new and internationally sanctioned suspension of sovereignty. Where, as recently for long years in Lebanon, Mozambique and Ethiopia, now disastrously in Somalia and Bosnia, there has been human cruelty and slaughter, there must be effective action to arrest it. There must be a United Nations mandate for governing countries that do not and cannot govern themselves. International law outlaws attack by one country on another; such attack is not within the accepted rights of sovereign power. No longer can domestic conflict and the associated starvation and death be protected by sovereign authority. Sovereignty must be suspended until peace is restored. This involves no slight change in public attitudes. The change is now overdue.

◆

TURNING to Eastern Europe and the republics of the former Soviet Union, one sees here an intensely difficult and, in some respects, the most dangerous transition in economic history—the movement from comprehensive socialism to the market economy. It will also stand as one of the most misguided of social actions. It has, for the moment, come close to the exchange of a poorly working economic system for none at all.

In the early days of this change, some—I was one—pleaded for gradualism, for a considered release of economic life to the market. First should have come services, less urgent consumer goods and, as possible, agriculture. Then larger industry, when effective alternatives to the price-controlled and command economy had been brought into being, including the requisite financial and marketing structures.

Instead there was a sudden plunge toward what was thought the capitalist miracle. It has turned out to be no miracle; rather, there has come a period of grave economic deprivation and hardship. Those who urged this course of action, including the International Monetary Fund and not a few ideologically motivated scholars from the United States, could not have had a better design for giving capitalism and democracy a bad name. And from the United States, as also from Japan and other countries, adequate economic help was not forthcoming, help that might have eased the transition. Future generations will marvel at how financial assistance that might have saved democracy and the market system was kept committed instead to no-longer-needed military expenditure. No one should have doubt as to the danger. It is that capitalism and democracy having been seen as synonymous with grave hardship, there will be escape into some new form of totalitarian rule. Or, as now in Lithuania, back to some new form of Communism.

I would urge help to the former Soviet republics as well as to the Eastern European countries. And I would urge that this not be conditional on specified market reforms. Here, above all, the case for pragmatic accommodation to circumstance. Perhaps, indeed, the opportunity has been lost. But the

Books of Substance

1. STRUCTURAL ADJUSTMENT: Who Really Pays?
   A popular booklet on the structural adjustment programme (SAP) in India. Taking experiences of the effects of the SAP on many countries, this booklet deals with the impact of the SAP on social welfare, living conditions, women, agriculture, environment, industry and sovereignty of India.

forces containing democracy and independence of expression and action are not slight in our time. I hope we can now see how great is our stake in democracy and social tranquillity in what was the Communist world and how deeply these depend on economic success.

I turn now to the fortunate countries of the world. We, too, have economic problems; they are central to any consistent and compelling discussion. Let us also have them in perspective; they are small as compared with those I have just adumbrated. Two—one relatively unimportant, one urgent—now capture our attention.

The smaller problem, seemingly vital in Europe but of worldwide concern, involves capital movements, currency relationships and the marked instability in the foreign exchanges. This, I think, will be recalled, one day, as a minor blip in the larger economic history of our time.

It owes much to the belief that where money is involved, the issues must be deeply important and that the individuals associated therewith are both economically powerful and decisively intelligent. In fact, monetary matters can be derivative and in themselves passive; the great financial operator and sometime financial genius is often merely a mentally adaptable passenger on the great ship of circumstance.

The circumstance is that monetary goals—stable exchange rates—can be achieved only after there is an alignment of internal social and economic policies, including, in particular, fiscal, budget and employment policy. As long as these are individually variant—and, as now, often radically so—stable exchange rates are quite impossible. In Europe a common unit of exchange is superficially a very attractive idea; that it can come before alignment of the controlling internal policies will stand as one of the major economic miscalculations of the age.

The broad thrust toward closer economic relations and to economic unification, notable in Europe, will, I think, continue; modern capitalism with its massive trade and travel, its extensive capital movements, its close communications and its transnational corporate enterprises is by its nature (and unlike one-time feudal and peasant agriculture or early industrialism) an international system. From it comes the basic thrust to a civilised internationalism—this despite the fact that regressive nationalism still accords a greatly welcomed voice to the politically articulate but mentally bereft. As this great economic thrust proceeds, there could one day be the unity in domestic policies that will allow of stability in exchanges and in Europe a common medium of exchange. The results of the premature efforts, the consequences of which have been so recently evident, will stand as the minor historical blip I have already mentioned.

◆

THE far more serious matter is the current depression in economic activity. This has persisted in the United States for two long years and more. And while we must accept our role as to the origin, depression is now a painful fact in the other English-speaking countries and a threat to the industrially developed world at large. We must, as an exercise in common everyday caution and good sense, accept in the larger world the proposition that Keynes articulated, the modern economy does not necessarily find its equilibrium at full employment; it is perfectly possible for it to enter upon and stabilise itself at an underemployment equilibrium. After two long years this possibility must be recognised, and especially by the new Administration in the United States.

There must also be reflection on the causes of this continuing depression. They, notably in the United States, include the speculative splurge of the 1980s—the mergers-and-acquisitions and leveraged-buyout mania that left corporations with the heavy burden of debt under which they now struggle and which they service at the expense of new investment. There was also the real property boom and collapse with its counterpart in other countries, including Canada, Britain and notably Japan. From the above, especially in the United States, came weakness in the banking system that negated central-bank efforts to expand bank borrowing and associated economic activity. We are now seeing, as often before, that monetary policy, while it can have an effect on inflation, is nearly useless against deflation and depression. One cites again the relevant metaphor; there is a great difference between pulling on a string and shoving on a string.

Finally, in the Reagan years there was a major transfer of income from the poor to the rich. The upper one per cent of American families captured 70 per cent of the growth in average family income in the years 1977 to 1988. The share going to the poor declined. Income going to the rich is not reliably spent; it may be saved, and savings, given the caution of the time, are not reliably invested. A reasonably equitable distribution of income is socially just and a contribution to political tranquillity. It is also economically functional.

As this is written, as I have noted, a new Administration is about to come to office in the United States. It has only one major choice as to policy. That is either to allow the underemployment equilibrium to stand, with the barren hope that time will somehow work a cure, or to move aggressively to reduce unemployment and renew economic growth. For the latter result there is only one sure course of action. That is to set aside for the time concern as to the deficit in the federal budget and, by government action and expenditure, put people to work. In the United States, our roads, bridges, schools, railroads, urban transport, airports and housing stock, particularly the latter, are all in poor and sometime even dangerous condition. And our states and cities are spreading fear and hardship by curtailing essential services, including, notably, for education and welfare support to the poor. The only way to break the depressive equilibrium that does not depend on theoretical formulation is to move strongly on these needs.

This, in the short run, will increase the US Government deficit and the public debt, attitudes on both of which have now reached paranoiac proportions. These attitudes must, for the time, be ignored.

When prosperity returns, the deficit should be reduced. Among the errors of the past years was the running of a large such deficit when its supporting effect on the economy was not needed. All countries must have a disciplined will to adjust taxation and expenditure to the prevailing economic condition. For now, to repeat, the deficit must be accepted. The economic activity and employment so provided is the only design for dealing with the depressive equilibrium that, as I have said, does not depend on fragile theory. It goes directly to the needed result.

In the United States some gain in employment can be had from a shift of expenditure from military to civilian employment. Expenditure on exotic weaponry, now devoid of any justification, is a very inefficient way of creating employment. I would also urge, as did Governor Clinton as a candidate, an increase of taxes on the rich. This does not seriously reduce aggregate demand and has a benign social aspect. Taxation is in accordance with ability to pay. Maybe— a fugitive thought—the resulting effort to maintain after-tax income by the very affluent could have an affirmative incentive effect. Certainly this is as probable as the erstwhile supply-side argument that the rich needed the incentive effect of more income.

In the longer run, this course of action will increase public wealth—there are both the things built and the expansive effect on economic output in general. The Japanese have recently announced such a programme. In Canada a conservative government has let it be known that it is thinking along these lines. In any case, I come back to the main point; there is nothing else of equally certain effect.

◆

IN the great sweep of modern capitalism, there is a further change which we experience, which is evident where I speak and which some despair. That is the movement of older, established labour-intensive industry from the old countries to the new. The history of the last one hundred and fifty years and more has been of the movement of such industry, old and new, from Britain to the Continent, on to the United States, then to Japan, then to other countries of the Pacific Basin and notably to Korea and Taiwan. The movement now continues to Thailand, Malaysia and with potentially perhaps the greatest consequence here to India. This we join today to welcome.

The basis of this movement is clear: mass industry is constantly in pursuit of a fresh and eager labour force, one that is eagerly in escape from the true oppressions of primitive peasant agriculture and from order, bureaucratic management to the leaner, fresher, often more innovative managements of the new countries.

This movement is a fixed source of concern and even despair in the older countries. There can be no question that for some in those countries it is a cause of dislocation and hardship. It must be recognised, however, as one of the great and inescapable features of modern industrial captialism. It does not leave the older countries devoid. The higher ranges of technology, of deisgn, of entertainment and of education remain with them. It is important, however, that this great process be understood and not be the occasion for ill-considered preventives as protective action. Let us see that there is a broad international division of labour in the modern economic world. I wish here to make clear my commitment to this division of labour as between the old and the new; we should all wish to see it continue. It is part of a great process that is benign in its larger effect and in which we must all be content to participate. ■

Issues, Non-Issues and Charades

ARUN GHOSH

In two weeks of the winter session of Parliament, no debate has yet taken place on any major economic issue. Are such issues likely to find a place in parliamentary debtates during the rest of the winter session? Judging from the experience of the monsoon session of Parliament, "non-issues" could again take up all the time (and the energy) of the chosen representatives of the people for the remaining weeks of the winter session. Judging from recent events, "charades" are likely to play a more important role in the behavioural pattern of the major political parties, than serious debate on vital issues.

What are the burning economic issues before the country today? Inflation is the most important one, for the impact of inflation is always the hardest of the poor. The widening gap in the trade balance during the current financial year (1992-93), after the policy changes introduced in February 1992, and the mounting burden of external debt, is the second most important issue today. Steadily increasing unemployment (not only of new entrants to the workforce but, in addition, the loss of jobs by people already employed) is another urgent problem. The failure to bring about any "structural change" in the economy—by way of improving the education, health and skills of the people—is the fourth important (and totally neglected) issue; for productivity changes depend, in the final analysis, on the ability of the workforce to participate in the production process.

There are, of course, many other problems, especially in the realm of politics and of governance. But let us stick to economic issues which could make or mar India by the turn of the century. Have we really got over the balance of payments crisis which afflicted the economy in 1990-91? If not, what are the immediate priorities? Is inflow of foreign capital likely to solve our problems? How do we avert a balance of crisis by the end of 1994, when the (rescheduled EFF) loans from the IMF fall due for repayment? How do we avert a balance of crisis by the end of 1994, when the (rescheduled EFF) loans from the IMF fall due for repayment? How do we avert a Latin American type debt trap which may lead to the (enforced) exchange of equity for debt, implying the handing over of prize assets (owned by the government) like the IPCL, the IOC, the ONGC, the NALCO, the BHEL (and other giants in the public sector) to our foreign lenders, when we are unable to meet our external liabilities from 1995 onwards? There are ominous news reports already about discussions with Alsthone GEC for the sale of the BHEL. Is that our answer to the present economic problems of India? Finally, how do we tame inflation, since we refuse to tax the rich? How do we avoid the spiral of devaluation-increased costs-further devaluation-loss in ther terms of trade-increasing deficits in the balance of payments-further devaluation-steady erosion in incomes and levels of living of the people of this country? How do we get a spurt in the productivity of workers in the infrastructure and key intermediates industries, which is an essential ingredient for increasing productivity in the economy in general?

The author, a noted economist, is a former Member of the Planning Commission.

But the portents are that none of these issues is likely to be debated in the remaining weeks of the present winter session of Parliament. What happened during the monsoon session is likely to be repeated. True, there were then important national and constitutional issues at stake. Ayodhya was then the centrepiece of discussion, as it has again turned out to be, during the winter session of Parliament. (There appears to be a design in the periodic resurgence, or a climactic turn of events on Ayodhya, before and during every session of Parliament.) During the monsoon session, there was also the important constitutional issue of which (dissident) members of parliament should be seated where. (This time, the Supreme Court verdict on the Mandal Commission report is likely to provide the necessary fireworks.) Not a single economic issue got debated during the monsoon session of parliament; even the Question Hour was blanked out. And we are witness to repetition of this performance so far in the winter session of Parliament.

What are the current obsessions of the major Opposition parties? The BJP is obviously determined to keep alive the Mandir issue, in order to stay alive politically. After all, notwithstanding the protestations of the leadership, the BJP-VHP support base is that of small shopkeepers who love inflation, and who—under the pretext of freedom from "Inspector Raj"—like to see income tax officers off their backs. The present regimen suits the tax evader.

The Left parties, genuinely confused after recent events in the USSR and China, are correctly of the view that pandering to religious issues poses the greatest threat to India's unity in diversity. However, their disdain for economic issues remains inexplicable and surprising. How can the Left parties remain insensitive to the interests of the working classes, of the rural landless labourers, of the small and marginal farmers, of the urban construction workers, of other unorganised labour?

That brings us to the motley group in the Janata Dal (and its breakaway groups). One understands their basic concern for the backward sections of society, for the Scheduled Castes, Scheduled Tribes, for the OBCs. One must point out, however, that the economic salvation of the OBCs is not likely to be achieved by the reservation of government jobs—which are likely, in future, to be fewer and fewer—but through better educational opportunities. Tamil Nadu realised this several decades back; and as a result, the OBCs are now a powerful force in Tamil Nadu.

What one does *not* understand in the above context is the charade of highjacking of trucks carrying imported wheat, and the sale of this wheat—to passers-by (or to a mafia?) — at lower than free market prices. One may oppose, in principle, the import of wheat; but why this charade? Why the *dharna* against the import of wheat, which has already been contracted for? One can understand and appreciate the opposition to a cut in fertiliser subsidy, because such a subsidy would dampen inflation today. The farmers should not be deprived of both the fertiliser subsidy and the higher price. But the solution is not a steadily increasing procurement price; the solution lies in greater government investment in agriculture. If the public distribution system breaks down as a result of *dharna* against the import of wheat, who will be the loser? Who are likely to benefit from another hefty increase in procurement prices? What is going to be the effect on inflation?

And now we have the prospect of a more spectacular charade centering on Ayodhya insofar the as BJP—VHP alliance is concerned.

One can understand Devi Lal or Sharad Joshi or Bhanu Pratap Singh behind such moves. One cannot understand V.P. Singh or Sharad Yadav or Ram Vilas Paswan taking up only this issue selectively. Not one word has been said about the likely debt trap, about the failure of the new economic policy to stem the balance of payments of deficit. Whom does the Janata Dal purport to represent? The rich, surplus farmers, or the poor Scheduled Caste and other Backward sections of the population? How do the latter gain from a spurt in food prices which may occur if the public distribution system breaks down? We need to remember that short-term rhetoric and political expediency does not pay even in general elections. We have seen that in 1977, in 1980, in 1989 and in 1991. To whom do the weaker sections of the population turn for redressal of their problems? Once, it was the Congress party which stood for them. Today, one does not know, for it is the Congress party which has unleashed the so-called 'reform programme' which hurts the poor and benefits the rich. The Left parties have always represented the depressed, the backward sections of society. But today, the Left parties must rediscover a credible philosophy (as Mao Zedong once did in China), based on the ground realities of the Indian situation.

The Janata Dal had evoked great hopes in 1989 as the representatives of the backward sections of society. After all, the economic development of a country involves the betterment of the people of the country; and one has to first initiate the upliftment and improvement of the backward sections of the population, to achieve long-term gains in overall productivity. But now, the leaders of the Janata Dal—both the Dal and its breakaway groups—appear to be enamoured by the "globalisation" of the Indian economy. They are obviously keen to also pander to the demands of the likes of Sharad Joshi and Bhanu Pratap Singh and Mohan Singh Tikait. Their articulated demand is that procurement prices of foodgrains must be raised further and further. The leaders, however, appear to have forgotten the need for ensuring employment to all at a remunerative wage. If that be so, whose battle are they fighting? Of the rich farmers or the OBCs? One has not heard many leaders talk of the inherent dangers of the package of policies unleashed on the Indian economy, the sum total of which is likely to increase the burdens of the poor, and at the same item increase the danger of external payments imbalance and an external debt trap, with all the consequences thereof.

We need greater sincerity in political life. More than ever, one recalls Gunter Grass' reminder to the Germans in 1969—in a lecture on the sigificance of Albrecht Durer's engraving of *Melencolia I* — "Stasis in progress. Hesitation, halts between steps... Knowledge that engenders disgust. All that is applicable to us". (*From the Diary of a Snail*, 1972).

But is anybody Left-of-Centre listening? ■

Land Reforms and Kunja Babu

D. BANDYOPADHYAY

The author, the erstwhile Secretary of Rural Development and the former Executive Director of the Asian Development Bank, was intimately associated with land reforms in West Bengal and played a crucial role in the successful execution of 'Operation Barga', one of the key achievements of the Left Front Government in the State. He is now touring rural areas of the State at the request of the West Bengal Government to assess the performance of panchayati raj institutions. However, keenly interested in knowing the state of land reforms, he is always trying to get an idea of the reality on that score. The following write-up, based on actual experience, gives some insight into the situation on the ground. —Editor

We stopped at the Kranti crossing at village Jharmetiali, Lataguri Gram Panchayat in the district of Jalpaiguri. It was about 4.45 PM. We sat on a wooden bench in front of a grocery. It displayed among its merchandise packets of Britannia biscuits, matchboxes, strings of single-use shampoo pouch, toiletry alongwith food stuff. Obviously, those "urban" consumer items were being sold. It presented a radical change of inventory goods from what I noticed a decade-and-a-half ago in similar shops in similar surroundings. It indicated not only a change in the consumers' choice but also a certain degree of affluence hitherto unknown in such areas. It also reflected the effect of the all-pervasive consumer culture propagated aggressively through our electronic and print media, for good or for evil.

Gradually, a crowd collected, seeing some strangers alighting from cars escorted by a police jeep and idling on the wayside bench of a village shop. Apart from breaking the monotony of a long car journey, we also had a simple mission.

We were being told again and again at the State headquarters, at the Zilla Parishad level and even at the Panchayat Samiti (Block level) that the two legs on which the entire thrust of West Bengal's rural development rested were land reforms and the panchayati raj institution, that each reinforced the other and that the land reform programme did contribute significantly in enhancing agricultural output in the State by releasing the latent creative energy of the poor peasantry who were the beneficiaries of the programme. Not only were the beneficiaries putting in more labour per unit of land, capital was also being invested in land—a phenomenon largely absent in the pre-land reform era.

Theoretically, that was what it should be. That was the economic rationale of land reforms. But to make credit, technology, seeds, fertiliser, etc. available to the village poor would require a massive organisational effort apart from significant attitudinal change on the part of the credit institutions whether commercial banks, cooperative societies or other State or parastatal financial institutions. Thereafter, higher level of production having been achieved, did the poor farmers get remunerative price for their marketed commodities. Redistribution of ceiling surplus land to the land-poor farmers or recording the names of sharecroppers was not the end of land reforms. In fact it was the beginning of a long and arduous process of agrarian restructuring for making the non-viable farming households economically viable. In all the socialist countries, it had been the experience that in the process of socialist reconstruction the problems of the farming sector were the most intractable. Hence the glib talk of almost one-to-one causal relationship between the increase in agricultural production and land reform, that we had been hearing up and down the line made us slightly uneasy. We were too willing to believe it, but we wanted some evidence.

No one denied the fact that during the last decade-and-a-half which coincided with the formation of panchayats in West Bengal, and 'Operation Barga' which was completed between 1978 and 1982, there had been substantial increase in agricultural production in absolute terms. One hypothesis could be that such an increase was in response to market impulses and a package of programmes for agricultural improvement of the State and Central Governments. Unless it could be established that the poor peasantry—the beneficiaries of land reform—had access to credit, improved seed, fertiliser and pesticide, irrigation water, and extension services, by mere application of more labour per unit of land significant increase in production could not be achieved. Greater application of labour would certainly help increase in production upto a point but diminishing returns would set in too soon, too sharp. Hence we wanted to meet a few recorded *bargadars* and assignees of vested land to hear from them what they had to say on these issues. We took a chance of meeting a few of them without any prior notice by stopping at a small shopping centre at a crossroad at Lataguri.

When the crowd gathered we wanted to know whether there were any sharecroppers. A tall, slim, dark person in his forties with a deeply furrowed face came hesitantly before us. He was not afraid or scared. He stood before us with the dignity of a free man. His hesitancy was because he was wondering what it was all about. After the usual preliminary pleasantries we asked him whether he was a *bargadar* and if so did he record his name. His reply was that he was an "*adhiar*" (half-crop sharer) and that he had the "*barga* certificate". To our further query he told us that the average production of paddy per bigha (0.33 acre) was 10 maunds (38 kilograms, approximately). Previously it used to be six to eight maunds per bigha. Since he felt quite assured that so long as he gave share to the "*malik*" (owner) of the land, neither he nor his children would have any problem about peaceful cultivation of the "*adhiar*" land measuring about 12 bighas (4 acres), he felt encouraged to employ the labour of all his family members and he also put in as much organic manure as he could procure. He could not give adequate quantity of chemical fertiliser as the price was high and he could not get any cheap credit to buy the fertiliser. He also produced some jute but he did not get a fair price. The price that he got just covered his paid out cost and not the economic cost. He had to sell his portion of jute to a local middleman and much later, the middleman sold the jute to the Jute Corporation of India at a much higher price. He was seriously considering discontinuing cultivation of jute in the coming season if he could be told of an alternative profitable crop.

We asked him about his crop-sharing arrangement. He replied that he gave 50 per cent of his crop to the "*jotedar*". This was a bit surprising. He was a recorded *bargadar* and he was entitled to 75 per cent of the gross produce. So we asked whether he knew the law, that he was to give only 25 per cent of the produce. His reply was that he knew the law, that he was an "*adhiar*" of the old owner (now deceased) who treated him well, that when one of his bullocks died the old owner gave him a bullock and that law or no law he would not break the tradition of "*adhiari*" with his present owners (sons of the old *jotedar*) because of the fair treatment he had received so far.

By that time more onlookers had gathered. Among them we spotted an important functionary of the Malbazar Panchayat Samiti whom we had met in the same forenoon at the Malbazar Panchayat office. We requested him to come forward and to share our bench.

He looked a bit puzzled at finding us there. To allay his misgivings we told him that as it was a long drive, we needed a break and thought we might as well talk to some people to know what they felt about the present economic situation. Then we asked him, since he had heard about sharing of produce on a 50:50 basis, instead of a 75:25 basis as provided under the law, what would be his response. In the forenoon, in the Panchayat Samiti office he had told us that he had been associated with peasant movement for a long time and that the major demands of the peasantry having been fulfilled through "Operation Barga" and distribution of vested land, the movement had nothing to agitate for. Hence he and his associates were more concerned about improvement of agricultural production and productivity and diversification of the cropping pattern through better irrigation, high quality seed, better access to credit, diffusion, science and technology, proper marketing arrangement and the like. Absence and/or uneven access/opportunity to these vital elements seriously impeded the growth of agriculture in the post-land reform era.

◆

THE points he raised earlier in the day were all valid. But here was a case where assuming an average production of 10 maunds of paddy (according to the adhiar's own statement) per bigha, the *bargadar* would have got 90 maunds as his share from his 12 bigha holding; but was in fact getting 60 maunds of paddy. Every year he was being deprived of 30 maunds of paddy which, according to the law, should have been his. In monetary terms, assuming a price of Rs 100 per maund, he was losing Rs 3000 per year in one crop. A considerable loss for anybody and certainly an enormous loss for this *adhiar*! He got slightly rattled by our analysis of the situation. But a seasoned politician that he was, he quickly recovered. Very pleasantly he told us in an undertone that it was a matter of "mutual understanding" between the *adhiar* and his *jotedar* and that was why the peasant organisation did not feel the necessity to intervene to upset the equilibrium reached through mutual understanding in the post-'Operation Barga' era. What was important was to ensure security of tenure through registration of the *adhiars* name in the record of right. That was done during 'Operation Barga'.

Having made his statement, the Panchayat functionary requested a young man to come forward. He introduced this young man as a *bargadar* who inherited his father's right of *barga* cultivation on his (father's) demise. It was very reassuring to find that the inheritance provision of the Land Reforms Act relating to *bargadars* was being acted upon. The young man thereafter produced a receipted copy of his petition which he submitted to the Mal Panchayat Samiti office praying for recording his name as a *bargadar* in respect of some of the other plots which he had been cultivating in addition to his father's holding. The petition was about four months old. The Revenue Inspector who was with us was requested to note down the details of the petition for a quick follow-up.

◆

THE BDO, Malbazar who accompanied us was searching for an assignee of vested land. He found a person standing at the periphery of the gathering craning his neck to hear our discussion. The BDO knew him and requested him to come forward. He told us that he was allotted one-and-a-half bigha (0.50 acres) of vested land. That he was in possession of it and that he was regularly cultivating it. But he had a complaint. He was cultivating another holding of 10 bighas as a *bargadar* but he was not recorded as such for that holding. The BDO asked him whether he was paying the legal share of the crop regularly to the landowner. His reply was that everyone in his village knew that he was regularly and honestly delivering half the produce of the land to Kunja Babu, the owner, and that he could not be faulted for any breach of the *barga* law. This case appeared to be more serious than the other case of "mutual understanding". We looked at the Panchayat functionary for a reply. The clarification that came was astounding.

The land did belong to Kunja Babu at one point of time. Thereafter under the ceiling law it was declared surplus and vested in the State. This person was Kunja Babu's *adhiar* before vesting. He continued to cultivate after vesting and also continued to give half of the produce of the land belonging to the State to Kunja Babu, the erstwhile owner. One could not expect a more harmonious social order than what we came to know in this case. The land had vested in the State through due process of law. Whoever wanted to take credit for it would get it. Kunja Babu did not feel deprived. He got his compensation from the State which took over his land and he continued to get the usufruct thereof as before. In fact he was beholden to the land reforms process for giving him some money in lumpsum and in bond. The *bargadar* was not disturbed in anyway by such a redistributive process. The leader had no cause for any agitational programme. He could devote himself entirely to global issues like exploitation of the Third World by the First and of the periphery by the Centre.

The total number of beneficiaries of land reforms in West Bengal would be around three million (taking the recorded *bargadars* and the assignees of vested land together). Three cases that we came across by chance at a road crossing on an autumn evening by a roadside shop on the fringe of Lataguri forest were too insignificant against the vast universe of three million. Statistically one could easily ignore them.

But these three cases created a lurking doubt about the state of the land reforms process after all the dust of the 'Operation Barga' had settled down. Could it be that the landowning class having had to make major concessions in legal form were attempting to retrieve the lost ground to some extent by arriving at a new arrangement with the new power structure in rural West Bengal? One wished it was incorrect.

Darkness descended deep and fast. It was time to depart. With the hooting of the siren and twirling of the red light atop the police jeep, the convoy left for Jalpaiguri. ■

INCOME TAX SURVEY
Under Section 133B of
The Income Tax Act.

Do not forget to ask the official surveying your business premises to:

Show you his identity card

Show you the authorisation under which the survey is being carried out

Give you the telephone number and address of the concerned Assistant Director/Deputy Director/and Director of Income Tax (Investigation)

DURING THE SURVEY YOU WILL BE REQUIRED TO :-

Fill Form No. 45D

Give clarifications, if any, to the official carrying out the survey on the information furnished against the columns of Form No. 45D.

You can also collect a free copy of our publication **"Income Tax Survey-Your Rights, Your Duties"** from
the Directorate of Income-tax(RSP&PR)
6th floor, Mayur Bhawan,
Connaught Circus, New Delhi.

INTERVIEW

Rise of Democratic Left, Anti-IMF Feelings in Russia

Boris Kagarlitsky is a noted figure of the democratic Left Opposition in Russia, standing outside the pale of and sharply distinct from the Stalinists and Russian chauvinists locked in an unholy alliance at present. A leader and ideologue of the Socialist Party which has currently merged into the Party of Labour, Kagarlitsky in this wide-ranging interview—given to Sumit Chakravartty at his residence in Krasnoarmieskaya Ulitsa in Moscow on October 15, 1992—presents a picture of the contemporary scene in Russia and provides a glimpse of the growing stature of the democratic Left as well as the rising anti-IMF mood among the people there.

—Editor

SC: What I was wanting to know from you, Mr Kagarlitsky, is this: can you give me a general idea of the present state of affairs in Russia?

BK: That is very easy. It is described by one word which is 'collapse'.

You see, we have got a very interesting government here: this is a government which doesn't care about industry, about national independence including economic independence, and by the way—one of the most striking things—about the interests of the national bourgeoisie. And this for good reason. It's because the national bourgeoisie is so weak and fragmented and incompetent as well while it is socially and culturally very young, that the government even being pro-capitalist just doesn't have to care about the national bourgeoisie as any kind of important factor.

SC: But isn't the national bourgeoisie in the government?

BK: No.

SC: It's outside the government?

BK: Yes, it's outside the government.

SC: But whom would you describe as the national bourgeoisie?

BK: Well, that's a very good question. The problem is that we have the entrepreneuring community which is so much fragmented that you cannot say whether there is one national bourgeoisie or just several entrepreneurial groups. But what is the definition of national bourgeoisie? These are the groups of entrepreneurs who work for the domestic market.

SC: Just one second. These entrepreneurs whom you are calling national entrepreneurs are linked to foreign capital, aren't they?

BK: No, no. I use the words 'national entrepreneurs' to describe the people who work for the domestic market and usually produce something for the domestic market—local resources. They have a real interest in expanding the consumption of the country, for example. And they really need the expansion of production in general. For instance, they would very much like the public sector to expand for the reason that the public sector is either going to give them orders to produce something or at least the people are going to get higher wages so that they could go to them and buy certain goods from them.

SC: Why should the national bourgeoisie want the public sector to expand? They should be interested in the private sector alone.

BK: Absolutely not. I have met a number of people belonging to the national bourgeoisie. First of all, they know that they cannot get anything from the so-called big privatisation. They cannot get any real share in such privatisation.

SC: These are then small entrepreneurs?

BK: Well, small as well as not that small. Sometimes they are millionaires in dollar terms. But they know they cannot get real profit from such privatisation.

SC: What are they really engaged in?

BK: Well, people who produce spare parts for domestically produced equipment, for example, like Zhiguli cars, or people who produce consumer goods like tooth brushes, for example.

SC: But these domestically produced consumer goods are of extremely low quality.

BK: Yes, of course. That's another reason why the government doesn't care about them because they are producing low quality stuff usually.

And there are some high tech businessmen who are involved in...

SC: Computers?

BK: Yes, but not selling computers. They are involved in developing some software and some hardware. So in respect of these high tech guys even in the private sector they are very pro-public sector.

SC: Why? Do they feel that there could be good competition with the public sector?

BK: No. They don't want to be absorbed by the Western super-companies, and even if there is the public sector it could be a kind of umbrella for them to develop their own businesses. They could get orders from the public sector. But if the Western companies come in controlling the market, they could be just absorbed completely by them.

SC: Swallowed up by them in fact?

BK: Yes, swallowed up by the Western companies. So the public sector is not very dangerous for them in that sense.

SC: But what is the state of the public sector today?

BK: It is disintegrating.

So the point is that the national bourgeoisie's position in terms of the domestic market is not just importing goods from abroad but producing commodities for the domestic market. It is very weak, also quite incompetent often and fragmented—it is fragmented and divided into different groups and clans. That's why the government doesn't care about this new bourgeoisie emerging from the grassroots. They care about either the Western financial institutions like the IMF and the groups linked to the IMF strategy or they care about the bureaucratic class which wants to privatise state property because they control the state. They are just robbers—political groups which control the state property and rob it. These are the strong groups. So the government takes care of their interests because they are the strongest interest groups in the country.

In that sense Gaidar is pretty rational in his policies. You see, those who say that Gaidar goes too far or that Gaidar is a crazy monetarist or that Gaidar is just mad about his liberal ideologies are wrong. Gaidar is very pragmatic, he is not even a liberal in terms of ideology.

SC: In what sense is he pragmatic?

BK: In the sense that, as far as I know him personally, he is an absolutely cynical person who is not interested in any ideology including the liberal capitalist ideology.

SC: You have some personal experience of him?

BK: Yes. As far as I know him, he knows who is the strongest guy right now and which are the strongest interest groups at present. And he just serves the strongest. Since the strongest at the moment are the two groups I mentioned earlier, the whole policy of the government is determined by those two groups.

SC: That is?

BK: The bureaucratic bourgeoisie and the foreign capital which, of course, has its own representatives inside the country. It has its own comprador bourgeoisie inside the country by now. And this comprador bourgeoisie is mostly composed of the same old nomenclatura.

SC: So in this situation is it your purpose to strengthen the role of the public sector as well as the national bourgeoisie?

BK: Yes. In the Party of Labour we had a big discussion and everybody agrees except a small section that as of now there is no direct contradiction between the strategy to defend the public sector and extend support to the national bourgeoisie because the national bourgeoisie is not expanding at the cost of the destruction of the public sector, so there is no immediate contradiction between the two. In the long run this contradiction could emerge. But as of now the people who want to defend the public sector and the ones who want to expand the national private enterprise have their common enemies which are the comprador bourgeoisie, the IMF and the bureaucratic bourgeoisie represented by the Gaidar Government.

SC: And foreign capital?

BK: Yes, foreign capital as well. So it doesn't mean that these two segments in the population view the problems in the same way. But it just means that...

SC: They have common enemies.

BK: Yes, they have common enemies and have no direct issues to fight each other. The national bourgeoisie are not now going to take away pieces of the public sector or at least that is not their priority. Somebody else is now interested in robbing the public sector. So here there is no problem with the national bourgeoisie.

SC: But in the government is there no voice in favour of the national bourgeoisie?

BK: No. One of the most striking things is that if you speak to the small entrepreneurs or even some of the relatively large entrepreneurs who just work for the domestic market, you will find that they attack the government saying exactly the same things that we say.

SC: That is?-

BK: Well, that the government is anti-national, that it destroys the industry, that the privatisation programme is crazy, that you don't have to privatise so fast and so much, that you have to maintain a mixed economy with the public sector and that the Gaidar Government doesn't care about local production and consumption of the people.

Both of us also criticise the IMF. Because, you see, one of the elements of the government policy is to bring down the value of the rouble. For the local entrepreneurs this is a catastrophe because import inputs become very expensive and they are not exporting because they are producing for the domestic market, you see.

SC. Bringing down the value of the rouble is according to the IMF prescription, isn't it?

BK: Yes. And for the local market it is a catastrophe. So the vast segments who cannot export their goods and work for the domestic market the only chance of survival is to have the rouble at a value which is more or less stable.

SC: In political terms who are the people representing the national bourgeoisie?

BK They don't have a party.

SC: No, what I want to know is whether the Civic Union represents their interests.

BK: There are some elements in the Civic Union who would like to represent the national bourgeoisie.

SC: Like?

BK Well, they are just individuals. But the Civic Union is a very heterogeneous group and nobody knows what is going to finally emerge out of it.

In a way it is Nikolai Travkin's Democratic Party of Russia that will get the support of the national bourgeoisie. But this too is not clear because Travkin is so singularly politically incompetent that he might probably not be able to use this potential to his advantage.

If you turn to the Civic Union you will see that it is mostly represented by the oldtimers of the previous regime—the nomenclatura people, and technocrats—industrial managers who don't want the industries to collapse because they are in the industries and if the industries collapse they would be unemployed. On the one hand they want the state to pay for the losses, to continue supporting and subsidising the industries. At the same time they want everything to be privatised and they want to give their own to the privatised industries. So the result is that they want the industries to be still run by the government but all the profits to go into their personal, private pockets. If this kind of strategy were to be realised it would mean that we would have terrible inflation. Because then the government would be forced to just print money. So we would be having an inflation which is much worse than the one we have right now: probably ten, twenty or hundred times worse, I don't know.

In the long run or even in the medium-term, the Civic Union has absolutely no strategy and that is one of its main weaknesses. And it is heterogeneous.

SC: Are the comprador elements also in it?

BK: No, I think it is a technocratic coalition.

So now for the Left there was a big debate as to what to do with the Civic Union. Of course in the short-term there are some points of agreement with the Civic Union. First of all, we say 'no' to the IMF and they also do not say 'yes' to the IMF at least. We are critical of the IMF. They too are critical of the IMF. They don't want to destroy the Russian industry. We also don't want to destroy the Russian industry. So on certain issues there are similarities. But these are very limited.

Thus the position we have adopted right now is that we have to negotiate with the Civic Union and have some formal agreement with them. But we have to understand that we are two different forces, by no means is the Left going to be subordinated to the Civic Union, and by no means is the Left going to accept the role of the Left-wing of the Union or the Left-wing partner of the Union. We are going to be an independent force. On certain issues we could agree, we could probably cooperate. But still the key issue is our independence.

The same thing applies to our unions—the trade unions. I am just now working on preparing the basis of negotiations. There are going to be three sides to the negotiations: the Civic Union, the Russian Federation of Trade Unions and the Party of Labour. The trade unions are backing the Party of Labour.

SC: What is the Trade Union Federation of Russia?

BK: They represent 90 per cent of unionised labour in Russia.

SC: Do they belong to the old guard hardline Communists?

BK: No, these are just new people. To tell you the truth, some of them are terrible opportunists. But there is a strong Left-wing in this Federation which is identified with the Party of Labour.

SC: You see, in our country as well as in the West the Left in Russia—or the Right in your conditions—is associated with the hardline Communists and Russian chauvinists who are more vocal than you.

BK: Well, they are very noisy but their problem is that in terms of public support they have less public support than what we have.

SC: But that is not very clear. Because they hold large demonstrations.

BK. Okay. But in their demonstrations all the people who support them come to participate in them. Nobody among their supporters remains at home because they are active and disciplined. At the same time if you study the opinion polls as of now they have been able to muster at best only eight to 10 per cent of public support.

SC: That means their strength has been gradually declining, would you say?

BK: Yes, there has been a systematic decline in their support and all their leaders recognise this systematic decline. Let's see what happens on October 22 when the trade unions are holding a rally. The Russian Federation of Trade Unions has called the rally and we are writing the resolutions of that rally.

The Stalinists are holding a rally on the twentyfourth. Originally they made a very big propaganda saying that they were going to get one million people. And now they honestly say that it would be a big success if they get 10,000. (Actually 5000-odd turned up, according to press reports.—*SC*)

The trade union rally is expected to be a little bit smaller—but they both will be more or less the same size. But what you must note is that the sizes of the trade union rallies are increasingly growing while those of the Stalinist rallies are steadily declining. Now they are approximately of the same size whereas half-a-year ago the Communist rallies were ten times bigger, you see.

The trend is evident to everyone including the hardline Communists who recognise that they are losing ground while we are gaining ground. That's why some of the clever people among them have started to talk to us. But our problem is that we do not need them very much.

SC: But are they doing everything on their own or are they depending on the chauvinists?

BK: Actually there is no difference.

SC: This rally on the twentyfourth—who will spearhead it? Stalinists or the Russian chauvinists?

BK: It will be the same coalition that calls itself the Right-Left coalition. Actually it is the coalition of the Far Left and the Far Right.

SC: Which are the groups of the chauvinists?

BK: Well, the different brands of monarchists, Constitutional Democratic Party of Russia, Zhirinovsky's party.

SC All of them together?

BK: Yes, they are always together.

SC: Who else?

BK: The Russian Communist Workers' Party and so on.

SC: Including the party represented by Sergei Baburin?

BK: Yes, probably. I don't know personally about Baburin but his group will be there probably.

SC: What about the National Patriotic Front?

BK: Also. They all come together.

SC: But even then you don't expect them to mobilise more than 10,000 people?

BK: Well, probably they will bring 12,000. But that's all. I spoke to the organisers. They are very pessimistic and say even the most enthusiastic supporters don't come to the rallies any more.

On the other hand, the Union leaders point out that when they held a rally in the past and demanded that the government should retreat on certain issues, the government really retreated on certain issues not as much as they would like to but they got a real result immediately. And they say: we are going to still push the government further into retreat on social issues and that is the precondition for political change. That is what Union leaders like Shmakov of the Moscow Trade Union Federation say.

As far as the orthodox Communists and chauvinists are concerned, they called for restoration of the Soviet Union about a year ago, for the whole year every second week they called for the restoration of the Soviet Union. But the Soviet Union has not been restored. They are just not able to deliver the goods.

SC: And now even their strength is gradually declining.

BK: Exactly. Every two or three weeks in spring they promised that the government would be brought down within a week or two. Nothing happened. So their own supporters are very sceptical now.

SC: What is the public support to the government now?

BK: About five per cent. The actual supporters of the government are five per cent. But the supporters of Yeltsin and the government—because Yeltsin is more popular than Gaidar—is about 15-16 per cent.

SC: But Yeltsin's popularity was said to be 46 per cent while Nazarbayev's popularity in Russia was 24 per cent.

BK: In this country opinion polls are conducted such as to compare Yeltsin with, say, Baburin, Nazarbayev and Anpilov. The names are selected in a way as to make Yeltsin appear more attractive. So of course in this way he gets his 30 or 40 per cent definitely.

SC: Because he is more popular than those people?

BK: Yes, that's how they make him look better. That's the technology of opinion polls to boost Yeltsin's image. This was also done in case of Gorbachev before his final collapse.

SC: Since we last met a lot of things have changed.

BK: When did we meet last?

SC: We met in November 1991.

BK: Oh, yes. It was just before the final disintegration of the Soviet Union.

SC: Can you tell me as to how the Party of Labour has grown over the months since we last met?

BK: Well, we had our formal party conference just last Saturday—October 10—in Moscow. Some of the most important trade union leaders of Russia joined the party and that is a very big success. Now we are just in the process of building the local branches of the party. To get registered as a national party we have to build not less than 35 local branches.

SC: Which are the groups that have joined the Party of Labour?

BK: Well, some from the Federation of Trade Unions, the Anarcho-Syndicalists, most of the Socialist Party, some people from the Marxist Platform and the group that is organised around the newspaper called *Revolutsionaya Rossiya* (Revolutionary Russia).

SC: That was the newspaper of the...

BK: Narodniks.

But the most important people are those who belong to none of the groups. So we have the trade unionists, and we have those who belong to none of the groups. If you speak of the politicians they are in one or the other of the aforementioned groups. But usually the people joining the party are not in any of the groups.

SC: Do you have some ex-CPSU members?

BK: Some, but not a lot.

SC: What is the composition like? Most of them are young?

BK: Well, they are different. But most of them are in their thirties.

SC: Are most of them from the working class?

BK: It depends on the area under consideration. Well, if you go to Samara and Perm they are working class, in Moscow they are mostly intellectuals, in Leningrad they are different.

SC: What is your next programme? You spoke of the twentysecond rally.

BK: Yes. And then we will have to work hard to set up our local branches. So we will have to travel around the country, build up the local branches and at the same time organise propaganda for the party.

SC: What is the perspective before your country? Economically you are in a worse shape from what you were a year ago. So what are your projections?

BK: Well, we are in for a very bad winter and after that we will have a really bad spring.

SC: When you speak of a 'very bad winter' I am reminded of what was being said last year. Last year too a very bad winter was predicted. But then last year the prices had not grown so much as this year.

BK: Last year would appear to be very comfortable compared to this year. Let me tell you two jokes. One is that there are four kinds of problems which the Russian agriculture faces: winter, spring, autumn and summer. Four problems which we regularly face (*laughs*). And the other joke that was very common at the beginning of this year goes like this: What is expected of the New Year, that is, 1992? And everybody said: It is going to be kind of average that means worse than 1991 but definitely better than 1993 (*laughs*). I think these are very appropriate jokes.

Well, 1993 is defintely going to be very bad—it's going to be probably the worst year of recession. The situation especially in the first half of 1993 is going to deteriorate dramatically compared to even what is typical for Russia right now. So in that sense it is going to turn into a real national catastrophe. That's why the Civic Union option is still to be supported because a Civic Union Government could be a chance to avoid the total catastrophe. If the Gaidar Government stays on in power one of the options is the disintegration of the country because the regions which are better off would just try to split from the Russian Federation.

SC: And set up independent units?

BK: They would set up independent states. Say, for example, Siberia, or even Leningrad (that is, the present-day St. Petersburg) or Tatarstan could try to have independence. So the whole thing could disintegrate into pieces. That's why the Civic Union option could prevent the disintegration.

But they (the Civic Union) have only very short-term solutions.

Our position is that we could support the formation of the Civic Union Government but that definitely must be a transitional government also because the Civic Union has no strategy—not even a medium-term economic concept—they just have a package of measures which could work for a period of three to five months, not more.

The second point is that no government in this country (not even the local governments) now has a proper democratic mandate. So if Volsky's group comes to power it would do so without a proper democratic mandate. So it would not be a legitimate government. It means that we could accept the existence of this government as a temporary or transitional structure. But then they would have to go to the polls and we need the elections to form the new Parliament and the new Parliament then could establish the legitimate government which is not there now.

SC: What is the procedure? When is the Presidential election due?

BK: The Presidential election is due in 1996 but Yeltsin will definitely not survive as long as that. But I think what is clear is that the Parliament was elected with different powers and different legislations than what we have now. Every structure of government was formed and elected under different laws and with different powers than what we have now.

SC: When was the Parliament elected?

BK: In 1990. So, it has completely lost all legitimacy. So we say: if Volsky wants to form a government okay let him do, but the only legitimate way to form a government is to dissolve the Parliament—and his government can be a caretaking one for three months or half-a-year—and call for new elections. By the way, they probably agree on that because that's one of the points we are going to negotiate with them. Our main condition of support to them—critical or distant support, any kind of support—is possible only if they from the very beginning promise officially that if they come to power within, say, three months they would have new elections. They have to fix up the election schedule.

SC: Is this the first condition?

BK: Yes. They must fix the schedule saying: if we form the government tomorrow then we would have the elections in February. If we form the government in February then we would have the elections in May—that is, some kind of schedule. Otherwise there would be no space for the democratic process in the country.

We have three conditions laid down by us and the Unions we support. The first is the condition of holding the elections and having the schedule for the elections. The second condition is that they have to stop and limit privatisation and even in certain specific cases certain industries and concerns have to be renationalised. Not every but certain industries. We are not going to push forward the whole of our programme at this stage.

SC: Which are the ones you would want to be renationalised?

BK: All the raw materials must come under public property. All the high tech too. If there are some new high tech industries in the private sector that's a different story. But the public sector high tech must remain public. Everything in transportation must remain public or be renationalised. And certain key enterprises in particular sectors that are hundred per cent monopolists like Rozselmarsh must be renationalised even if they have been privatised by the government. So we are not going to demand that all projects be in the public sector because first of all, that is unacceptable, and secondly, we don't want them to be bureaucratised like now. That's an element of long-term strategy.

But there are certain key industries or enterprises which have to be kept in the public sector if they have not yet been privatised or renationalised if they have already been privatised. So we are preparing a list of enterprises and industries that are to be kept public at whatever price.

There are certain elements in the Civic Union which say 'yes' to this demand and there are others which say 'no'. So we are going to negotiate and bargain on this.

SC: You have already had negotiations with them?

BK: I know Volsky for about two years now.

SC: You have had talks?

BK: Yes, of course.

SC: Have the talks been more or less successful?

BK: With Volsky it is easier to reach agreement than with some of the people around him.

SC: Like Rutskoi and others?

BK: Rutskoi is not a political figure. I mean Vladislavyev who is a top political person around Volsky. And there are lots of people to the Right of him. But, nevertheless, this could be pushed through.

SC. Just one question here. You said Gaidar is extremely cynical in his whole approach. What do you have to say about Volsky since you know him quite well?

BK: Volsky is less cynical. He is a very old-fashioned, kind of very traditional bureaucrat.

SC: Then what distinguishes him from the traditional Communists?

BK: What do you mean by traditional Communists? Because a guy like Volsky could be an old-style bourgeois in France or something like that. He is a very conservative person in terms of life-style and in terms of mentality which means that he is completely pro-capitalist, by the way.

SC: Was he a party apparatchik?

BK: Yes, for the whole of his life.

SC: What was he actually?

BK: He was the chief of the party's Industrial Department.

SC. In Gorbachev's time?

BK: Even before.

SC: A member of the CPSU Central Committee?

BK: Oh yes, a long-standing CC member.

The third condition is our anti-IMF international orientation which is very hard for the Civic Union to swallow. Because the irony of the situation is that whereas in the context of the conditions in Russia they (the Civic Union) are anti-IMF, in the global approach they are pro-IMF.

SC: Against the Third World as well?

BK: Yes, against the Third World too. So that is another point of difference: we are pro-Third World and they are anti-Third World. They view Russia as being a part of the North. Their problem with the IMF stems from the understanding that the IMF is not treating us properly—they are treating us as a part of the South whereas we have to be treated as a part of the North. They want to be a part of the North instead of supporting the South in its struggle against the North.

This is another point of division. So we are going to discuss this issue with them. But if they don't agree with us on this issue—on our attitude to the IMF—we are not going to support them.

SC: That is, if your policy on the IMF is not accepted by them you will not support them in forming the government?

BK No, I'll explain to you why. If they are going to be pro-IMF and if they are not going to have anti-IMF international alliances then they would be forced by the IMF to return to the Gaidar kind of economic strategy. They would not be in a position to find any international backing for any kind of dispute with the IMF. That will have its effect on our internal situation as well. Not because we matter so much in the internal sphere.

SC: That's very important. Sometime back, perhaps in August this year, there was an interview of Yeltsin carried in one of our journals where he had distinctly demarcated himself from the IMF position.

BK: Yes, but that was done in the wake of the first wave of anti-IMF feeling in the country. As a demagogue Yeltsin immediately realised what he had to do and he was just reflecting the popular mood in Russia. But, nevertheless, he carried out all the IMF-sponsored policies.

SC: Was it then just a populist ploy to pacify the people?

BK. Yes, I think so.

SC: When you speak of an anti-IMF programme do you think it at all possible to have any government in Russia without the backing of the United States?

BK. It is possible.

SC: I don't accept the view that the entire operation in the transformation of the former Soviet Union was masterminded by the Americans because that would be a very simplistic interpretation of whatever has happened here.

BK: Of course, that was not the case at all.

SC: But I get the feeling now that especially after the disintegration of the Soviet Union, the Americans—particularly the Americans and not so much the Germans—have got a decisive say in the decision-making apparatus in not only Russia but also the other republics of the former USSR that are now new states. If that is the situation at the moment on what basis do you say that the Americans will not have the decisive voice to veto the removal of, say, the Gaidar Government?

BK: You see, there is a growing anti-Americanism among the people now.

SC: Can you elaborate on this, please?

BK: Just walk along the streets and you will find more and more anti-American graffitis on the walls, for example. Even in the city centre you find those graffitis. About a year or half-a-year ago, they would be immediately wiped out spontaneously by people who did not agree with them.

SC That is not happening now?

BK Not anymore.

SC What is the actual feeling among the people?

BK: The people were very pro-American a year ago. But not anymore. Because the Americans did everything to generate anti-American feelings around the country.

SC: Like? What did they do?

BK: Well, they appeared with dollars not respecting local habits, not respecting the way people really live and so on. They are rich and mostly very ignorant of the way of life of our people. They are also very arrogant.

SC What we find from afar is the total lack of self-respect of the Russian Government as far as the US is concerned. I don't want to equate the Russian people with the Russian Government.

BK: Well, the Russian people are not that bad. Of course, Russians are not noted for their self-respect.

SC. I don't agree with that at all. Russians, I am certain, possess a robust sense of self-respect. But it is the government which doesn't. At least that is what seems to us today.

BK: The point is that the Russian people feel: we were a superpower. Now nobody respects us anymore. People feel bad, feel awful about that. They don't want once again to be a superpower. But they want at least to be respected once again by the rest of the world. That's a growing feeling and that's one of the reasons for the increasing sense of anti-Americanism in the country today. Because the Americans behave like the winners and that is what the people do not want to swallow.

SC: Some Russians whom I met openly said: we behaved like prostitutes especially by voting for the Western move to disqualify Yugoslavia from the UN.

BK. Yes, that's one of the major issues on which such a strong feeling was roused among the people. In history, you see, the Serbians fought in all the wars on the side of Russia. In all the wars the Serbs and the Montenegrans fought on the side of the Russians or at least declared their support for the Russians from the seventeenth century onwards. For the Serbs, therefore, it is absolutely horrible that Russia today backs the Croats, the Muslims and the West against the Serbs, though there was a lot of violence from the side of the Croats, the Muslims and the West.

Let me give you another instance: in Bosnia in one of the Serb-controlled areas they needed more oxygen for a Child Clinic and the Muslims did not allow that to go through. So they asked the UN forces to get the transport carrying oxygen through. And the UN forces rejected it. As a result six children died. It was at Bainiluka. It became well-known inside Serbia. A leader of the Party of Labour went to Serbia, heard this story and on return to Moscow narrated this at a press conference here. But no paper reported this. People were just scandalised.

Well, of course, there was violence on both sides. But why are the sanctions against only one side?

SC: Even if you wanted to criticise Yugoslavia you could have done it without supporting the resolution disqualifying Yugoslavia from the UN.

BK: Precisely, it was done only to please the West.

I could give you another example. Russia was one the countries worst hit by the sanctions against Serbia. Because we lost most of the contracts. Russia was one of the main oil suppliers for Serbia gaining hard currency. It supplied weapons to the Yugoslav army. So we lost the contracts. The most scandalous case was that of the Galenica factory in Serbia. That factory produced medicines and the Russian Government bought from there medicines for the Russian population paying 40 million dollars and the money was already paid. The management of the Galenica factory said that it was going to send medicines for the Russian people as the money had already been paid. And the Russian Government rejected it saying that while the sanctions were in force we would not take the medicines from Yugoslavia. And the Russian people suffered. That was one of the most scandalous incidents. The Galenica management is still trying to persuade the Russian Government to take the medicines.

SC: Was the entire government involved or was it the handiwork of the Foreign Ministry?

BK: The Russian Foreign Ministry. But the rest of the government knew that, of course.

SC: What is the popular perception of such incidents? Is there any degree of resentment among the people?

BK: Of course, there is a lot of resentment among the people.

SC: But it is not yet being openly expressed?

BK: Well. it will be openly expressed in winter or during spring.

SC: And by all sections?

BK: Yes, including some of the middle strata people. In such a situation it will be very hard for the government to survive with these policies.

SC: Do you think that the Civic Union will not take such a position?

BK: No, it is going to be a little bit better. But it is not going to be pro-South or pro-Third World. And without being openly pro-Third World you cannot win in the competition with the IMF. Instead of being more critical of the IMF if they are going to be very soft that would be self-defeating. That is why we say that we cannot take your reforms or counter-reforms seriously unless you are serious in your confrontation with the IMF. If you are serious in your confrontation with the IMF then you have to take a pro-South position.

SC: Any such position would be sharply anti-American. Are they afraid of taking such a position because then the Americans would veto their coming to power?

BK: No, I think the problem is not that. The Americans couldn't veto their coming to power. They could come to power even if the Americans ten times veto that. That's because the Americans do not have that kind of a striking power as yet. This is not a banana republic where you can control everything. Even in Nicaragua the Americans could not veto the Sandinistas' coming to power. So that's not the case.

But the problem is that they have no moral courage and no social base for adopting such radical policies. So we say that our task in this situation is to try to push them further to the Left either by cooperating with them if we have an agreement or by approaching them. If they do not agree it is not necessary to fight against them directly but to quite openly attack them and mobilise people on these issues in order to try to put pressure on them.

SC: If this is the feeling among the people, both anti-American and anti-IMF, then it is a positive development on the whole.

BK: Of course.

SC: Then there is room for optimism, isn't it?

BK: Of course. Well, I am now much more optimistic. There is another point which is very important if you take into consideration the Western and international side of the crisis and that is that the West now is interested in preventing the restoration of the Union. It is clear that nobody wants restoration of the Union. It is clear that nobody wants restoration of the Union in its original form. But it is also quite clear that, for example, the Central Asian republics have their only chance to survive as real states if they form a federation of their own—a small Soviet Union for Central Asia.

SC: Should it be a federation or a confederation?

BK: It makes no difference if they form a real state with the same government, with the same currency and with the same army like India, let's say.

SC: That was expected at the Bishkek summit of the CIS. But it did not happen that way.

BK: That's because the West is vetoing that.

SC: And as far as the governments are concerned the West does have the capacity to do so, isn't it?

BK: Yes. So we want the new Union to be formed because the new Union means that we have to have an integrated army, an integrated foreign policy, the same currency all over the country, no internal borders, and of course we have to have the federal government or the confederal government like in Switzerland. Switzerland has all these things without which all talk of a new Union is just empty.

SC: Of course Ukraine will not join such a Union, will it?

BK: Well, you see, Kravchuk is not going to join such a Union. But who said that Kravchuk is going to survive this winter. Because in Ukraine there is a growing anti-Kravchuk feeling. There are three places where there is more pro-Union feeling than in Russia and these are Ukraine, Byelorussia and Kazakhstan. There you get more pro-Soviet Union nostalgia than in Russia because Russia is, nevertheless, still very big. As far as Ukraine is concerned there are more Ukrainians outside Ukraine than inside; so the separation of Ukraine from Russia is a tragedy for millions of ethnic Ukrainians much more than it is for the Russians. The Ukrainians are not only in Russia but they are also in the other republics; they are always discriminated against and while the Russian Government, at least symbolically, does something to protect its own Russian-speaking minorities (though it is mostly symbolic and the Russian Government is extremely weak on this issue), the Ukrainian Government doesn't do anything to protect the Ukrainians outside Ukraine. They are mostly protected by the Russian Government if it does anything at all. That is something which is very badly felt in Ukraine. And that is why in Ukraine—especially in the east and Kiev—you get a lot of pro-Union feeling even among the intelligentsia. Also with the Russian newspapers disappearing, the Russian TV not being taken any more—well, I think the Ukrainians do not really know Ukrainian, but they are Ukrainianised. It is very much similar to the case of the Ukrainian independence of 1918 when the nationalist Ukrainian Government collapsed because its nationalism was rejected by the local population which was mostly ethnically Ukrainian but rejected Ukrainian nationalism. In the countryside it is different but things are going to be decided by the people in the urban areas.

SC: But there is a fear of Russian nationalism-cum-imperialism in the Central Asian republics.

BK: I must tell you that as for the position of the Party of Labour, we are not in favour of the new Union incorporating all the republics of the ex-Soviet Union and probably the Central Asian republics, perhaps with the exception of Kazakhstan and Kirghizia, would do much better if they form a separate state based on a similar approach...

SC: A similar type of confederation?

BK: A similar type of but separate confederation.

SC: And what about another kind of confederation in the Caucasian republics?

BK: Well, that could be a very good idea but unfortunately they are now just killing each other.

But in Central Asia, you see, if the Russians are not involved that would be much better because there the Russians were colonisers. So it's better if the Russians are not involved. Though it looks very odd that if things somewhat go wrong they may invite the Russians. But anyway the Russians do not have any kind of moral right to mix into the local struggle the way they used to do because otherwise it would mean that if there is more Russian interference then there would be more colonial structures *de facto* reconstructed. It's something like saying: let's keep the British still in India because under the British there was still more order, or something like that which would be a wrong argument.

SC: Do you perceive that the Americans would fill the void which the Russians are leaving in Central Asia?

BK: No. They cannot.

SC: But in Kazakhstan they are trying to do so.

BK: Just wait a minute. To fill the void successfully you would have to move probably 300,000-400,000 Americans into the place. This they just cannot do. There is an infrastructure of Russian influence which cannot be replaced.

And in Kazakhstan it is a different story also because Kazakhstan is historically connected to Russia. The same thing with Kirghizia too although it is kind of different there. Kazakhstan is connected to Russia—at least some parts of it—for four or five hundred years, and also the Kazakhs fought together with the Russians in the Russian army in 1814 (in 1814 the Kazakhs and the Kalmyks were in the ranks of the Russian troops which took over Paris). So in that sense you don't expect them to be very much different from the Russians in terms of their history—I mean that part of the Russian historical experience. They are Muslims okay but there were always Muslims in Russia since the thirteenth century, they were also part of Russia—Tatars and all the others. Well, they were always somewhat discriminated against but they were part of the Russian—not ethnic—identity.

SC: But publicly they are all saying a lot of things against the Russian Government. I am speaking of the Kazakh Government here.

BK: But if you speak to the ordinary Kazakhs you will find that they are...

SC: Different?

BK: Yes. They feel that they belong to Russian history.

In Kirghizia it's different because Kirghizia is smaller, it was colonised only in the late nineteenth century and it was really colonised in a very brutal manner. In 1913 there was a real genocide of the Kirghiz people because they wanted to just eliminate the Kirghiz and move the Russian settlers in. One of the reasons why Kirghizia is different from Kazakhstan is because of their different historical experiences. Kazakhstan is connected to Russia for centuries and Kirghizia, which is ethnically not very different, the ethnic mix of Kirghizia is almost the same as in Kazakhstan, but it is a part of Kazakhstan which was conquered much later—about two centuries later—by the Russians. So that makes a great difference.

SC: One point I raised with a very senior Kazakh leader and a very sober person. I asked him: can you really call them colonisers? Was there any economic exploitation of Kazkhstan under Soviet rule? In that context what he referred to was the kind of genocide which was conducted, the artificial famines which were engineered...

BK: That was under Stalin and it was the same in Russia.

SC: Well, that is true but what he wanted to convey was the manner in which the Kazakhs were killed hurt their national and ethnic sentiments.

But this apart, that is, the repression in which both the Russians and the Kazakhs suffered and the Russians definitely suffered more than the Kazakhs, what he underscored was something else: the closing down of the Kazakh schools during the Brezhnev period.

BK: I disagree with this. I spoke to some Kazakh intellectuals, and they said that the closing down of the Kazakh schools was the response to the new demographical situation which dramatically changed in favour not only of the Russians but of the Russified Kazakhs. So the Kazakh population preferred to send their children to the Russian schools instead of sending their children to the Kazakh schools.

SC: So it was a natural process?

BK: Yes. And though there was a lot of pressure on the part of the Soviet Kazakh Government already in the seventies to keep the Kazakh schools going, still their number declined because of the reluctance of the Kazakhs to send their children to the Kazakh schools.

The nationalists among the Kazakhs may say that in 1968 we had so many Kazakh schools, in 1970 we had less and in 1980 we had even less. The question is: Why?

SC: I understand.

Let me refer to a very important recent development in Kazakhstan: the 200 billion dollar worth deal with Chevron, the US company, for oil exploitation.

BK: I think Chevron is the only exceptional case. The Americans do not have high stakes in Kazakhstan except for the Chevron.

SC: But because of the strategic location of Kazakhstan and the Chevron deal a lot of observers are saying that Kazakhstan may become an alternative source of energy for the Americans in case the Saudi Arabian Government is toppled and some other unforeseen events take place in the Gulf leading to some imbalance there. The Americans are swarming to Kazakhstan, a lot of their intelligence people are there. In this context I do not know of the people as such—though there is no visible sign of anti-Americanism among the people as of now—but the Kazakh Government seems to be more and more relying on the Americans as a counter to the Russian influence.

BK: But the government is less and less popular at the same time. And so, you see, the way the Americans back the government today that is the best means of becoming hated by the people.

SC: That's true. The more the Americans interact with the people the more would they become unpopular.

BK: I don't mean the people are necessarily against the Americans as human beings.

SC: No, no, that's not the point. The more the Americans interact with the people the more would the Americans become unpopular as has happened to them in Russia. Russians have now come to know how the Americans behave. Unless they change their entire temperament the Americans cannot but meet the same fate in Kazakhstan.

Now, you have spoken of the Third World and the growing anti-American feeling among the people. In that context, what is the position of the Party of Labour about developing more contacts with India?

BK: That's another point. Well, you see, if we are pro-South it means that we have to find the partners who could back us or at least cooperate with us in our attempt to become independent of the IMF. In this case the only potential partners are the economically strongest and traditionally more politically independent Third World or Southern countries. On the one hand, therefore, it is India, and on the other hand of course it is China. Whether you like the Chinese Communist Government or not it is another factor which is independent of Western control. So you have to cooperate with the biggest Third World countries in an attempt to get some kind of independence from the IMF.

SC: Although government-wise both the countries—India and China—are succumbing to IMF pressures.

BK: Well, but the situation could be changed inside India, China, Brazil or Mexico or Nigeria. I am just referring to the most important Third World countries. And the changes in Russia and an active Russian foreign policy could be a factor of positive change in the Third World if there is a real change at all.

The second point is that while the Indian Government is becoming more and more pro-US in many respects, at the same time we know that Indians and the Indian Government would like to have more cooperation with Russia. That would be an objective factor of more independence from the West.

SC: For both our countries?

BK: Yes, for both the countries. That is exactly why the Americans are so hostile to the cooperation between India and Russia. You are well aware of the US reaction to the Indo-Russian rocket deal. That is just one case. It happens anytime somebody here wants to have more cooperation with any Third World state of any real importance. The Americans always come out against it because they know that it makes Russia more independent from them and also the other partners more independent. So in that sense we have to encourage economic cooperation with a country like India and give a call "Look South" in terms of economic expansion. You see, our goods are bad for the Western market. Probably they are. But then they are so cheap that at least certain goods could well be acceptable in the Third World markets just for being so cheap. On the other hand, certain Third World goods are much better fit for our markets than for the Western markets.

So we have to look South if we have to think about consumer goods for the population, not luxury goods for the elite. Of course, for luxury goods one should better go to Paris. But if you want to get consumer goods for the great majority of the population cheap and get good economic partners then you would have to look South.

SC: I think more interaction between people like you and Indian intellectuals and political parties would be very useful, beneficial for both sides.

BK: Well, the problem is: how much do we count? For one thing, we are getting more and more support among the public opinion; on the other side, to a very limited extent from the political establishment of Russia, because the whole political establishment here is Right-wing and as far as the Left is concerned it is very marginal. But we do not care. Probably it's better to be marginal if the picture is like that. You see, the picture is quite awful. So we don't want to be part of this establishment.

But one of the reasons why we insist on the new elections also is because I am sure the new elections are going to show the new picture which is dramatically different in the balance of forces from the picture we now have in the Russian Parliament on the economic front. In this case there would be a definite shift to the Left. I don't want to say that there's going to be a triumph for the Left.

SC: Or a sweep.

BK: No, but I just mean that there would be a reasonable representation of the Left in terms of people and ideas...

SC: In Parliament?

BK: In Parliament and the society as a whole. Not just in Parliament, the Left strength is going to increase in civil society as such. Not kind of dramatically but it's going to increase. Almost everybody agrees on that. Even the observers who are hostile to us say that we have some chance of getting important positions if there are any elections or democratic procedures. Without the democratic procedures the Left is going to be marginalised. We thus have a chance of allying with forces which are definitely interested in promoting the democratic procedures. So in that sense the issue of democracy is very much becoming the issue of the Left.

SC: One small thing about the IMF: What is the indication of the anti-IMF feeling among the people?

BK: It's very easy for anyone to get spontaneous applause in a rally: you just have to blame the IMF for all the follies on the economic front and immediately the audience starts applauding. This is the scenario at least in Moscow.

An opinion poll survey by a very Right-wing Russian TV news programme, *Viesti,* conducted about a month ago showed that 67 per cent of the people surveyed were positive about socialism and 18 per cent were negative about socialism while 15 per cent were undecided. Since *Viesti* is very anti-socialist, this was most striking. And *Viesti* was very negative about the result of the survey, saying that the Russian people don't deserve freedom. But this too is a reflection of the public mind in Russia.■

NEW INDIAN BOOKS RELEASED DURING 16-31 OCTOBER

AGRICULTURE
DRYLAND AGRICULTURE IN INDIA (State of Art of Research in India) /B Venkateswarlu & K P R Vittal & L L Somani (Ed.) 700
FRUIT CROPS FOR WASTELAND /S P Singh 300
AGRICULTURE:AGRICULTURAL ECONOMICS
AGRICULTURAL MARKETING: Perspective and Issues / L P Singh & Subhash Garg (Ed.) 475
ECONOMICS OF FUELWOOD PRODUCTION IN WASTELANDS /R D Sharma 220
AGRICULTURE:ENGINEERING
DESIGN AND CONSTRUCTION OF SMALL EARTH DAMS / K D Nelson 250
DRAINAGE AND SALINITY CONTROL / Raj Vir Singh (Ed.) 400
AGRICULTURE:GEOGRAPHY
READINGS IN AGRICULTURAL GEOGRAPHY /Lusail Shukla (Ed) 350
AGRICULTURE:HORTICULTURE
ADVANCES IN OILSEEDS RESEARCH VOL.1 Rapeseed and Mustard /D Kumar & M Rai 450
DATEPALM RESEARCH IN THAR DESERT /Anju Chandra & Atul Chandra & I C Gupta 150
AGRICULTURE:IRRIGATION
IRRIGATION AND AGRICULTURAL DEVELOPMENT (IN A CADA) /Niranjan Pant 200
AGRICULTURE:PESTICIDES
PROBLEMS OF LAND SNAIL PESTS IN AGRICULTURE: A Study of the Giant African Snail (Foreword by M.S. Swaminathan) /P D Srivastava 300
AGRICULTURE:PLANTATION
ADVANCES IN OILSEEDS RESEARCH VOL.1 Rapeseed and Mustard /D Kumar & M Rai 450
ANCIENT PLANTS.BEING A SIMPLE ACCOUNT OF THE PAST VEGETARIAN OF THE EARTH & OF THE RECENT IMPORTANT DISCOVERIESS... /Marie C Stopes 265
AGRICULTURE:WATER MANAGEMENT
METHODS FOR THE CHEMICAL ANALYSIS OF GROUNDWATER /D L Miles & J M Cook 200
ANTHROPOLOGY
THE REALM OF THE SACRED (Verbal Symbolism and Ritual Structures) /Sitakant Mahapatra (Ed) 300

BOTANY
ANCIENT PLANTS.BEING A SIMPLE ACCOUNT OF THE PAST VEGETARIAN OF THE EARTH & OF THE RECENT IMPORTANT DISCOVERIESS — /Marie C Stopes 265
SEED SCIENCE AND TECHNOLOGY LABORATORY MANUAL /L O Copeland & M B McDonald 450

Indian Economic Crisis and New Economic Policy

KRIPA SHANKAR

The country has no doubt made significant progress in various fields in the post-independence period but taking into account the magnitude of the problem of poverty and unemployment the achievement cannot be said to be satisfactory. Despite tripling production of foodgrains the average per capita availability of foodgrains per day at 475 grams cannot be said to be satisfactory as the diet mainly consists of cereals. The per capita per day consumption of milk which is essential for persons of all ages is about 150 grams. The per capita consumption of cloth is round 17 metres and has remained constant over the years. It has been officially claimed that the population below poverty line has declined but the number of those living below the poverty line is formidable.

Agricultural labourer households constitute nearly one-fourth of the total households (23 per cent). They find employment for less than 180 days in a year and the wage rates are also very low as they are wholly unorganised. Besides, the farmers who employ them have also not much capacity to pay living wages in most of the cases as majority of holdings consist of marginal and small ones. Marginal holdings constitute 56 per cent of the total holdings and small holdings constitute another 16 per cent of the holdings. Thus more than 60 per cent of the cultivating households with one hectare of holdings cannot be said to be above poverty line as gross produce from an irrigated hectare may be at the most Rs 8000 to Rs 10,000 as per the Ministry of Agriculture (vide, *Indian Agriculture in Brief*, twentythird edition). The number of agricultural labourers and marginal and small farmers is constantly rising. The number of the former increased from 32 million in 1961 to 56 million in 1981 and marginal holdings increased from 45 million in 1976-77 to 50 million in 1980-81. This only shows the persistence of rural poverty and destitution.

Although the bulk of plan investment goes to industrial and service sectors and institutional credit similarly flows to these sectors, employment generation has been at a very low level. Employment in the organised private sector employing 10 or more persons was 70 lakhs in 1978. In 1989 it rose to 75 lakhs only. In other words, organised employment in the private sector is increasing by less than 50,000 annually while the labour force is increasing by 70 lakhs annually. In the public sector the picture is somewhat better where employment increased from 142 lakhs to 185 lakhs during the same period or annually by about four lakhs. The result has been that the bulk of the rising labour force has remained unemployed and underemployed thereby perpetuating poverty.

The growth in the per capita net product has been slightly more than the population growth and has almost doubled from Rs 1127 in 1950-51 to Rs 2142 in 1989-90 at constant prices (1980-81). Thus growth has been much less than what is desired and many other countries, notably China, have registered a much faster growth. The growth in national income has also been vitiated by the fact that growth in agricultural sector which supports 70 per cent of the population has been lower—almost half than the total national income growth. And a non-commodity producing sector like the service sector has recorded the fastest growth. The share of agriculture in the net national product has declined from 50 per cent in 1950-51 to 33 per cent in 1988-89 but the number of persons depending on agriculture has been constantly rising. Currently the per capita net product in the non-agricultural sector is nearly five times that of the agricultural sector and the disparity is widening with each passing year. In other words, the per capita income in rural areas is only about one-fifth of the per capita urban income. The result has been that people in large numbers are migrating from villages to towns.

The per capita income does not depict the inequality in incomes both in the rural and the urban sectors. There is vast inequality in the country..In rural areas the land owned by the top one per cent is equal to the land held by the bottom

The author is on the staff of the Govind Ballabh Pant Social Science Institute, Allahabad.

55 per cent of the land-owning households. In urban areas the disparity is all the more glaring. According to a study of National Council of Applied Economic Research, the top one per cent account for 14 per cent of the wealth in the country whereas the bottom 50 per cent account for only seven per cent of the wealth. The share of the bottom 10 per cent is only 0.1 per cent. In other words, the wealth of the top one per cent is more than the wealth of the bottom 65 per cent of the households. Such inequality is not to be found in any other country which professes democracy and socialism.

◆

THUS, the growth process has resulted in a distorted sharing of the gains which have accrued to a small minority of privileged section. This is mainly so because assets and resources are owned in a highly skewed manner; and, secondly, the financing of the Plans has been mainly done by deficit financing and borrowing, both internally and externally. The inflationary financing of government expenditure has led to windfall profits to the propertied classes while it has meant hardship for the common man. Greater reliance has been placed on indirect taxes which lead to price rise, than on direct taxes. Income tax ratio to non-agricultural Gross Domestic Product (GDP) declined from 2.2 per cent in 1974-75 to 1.5 per cent in 1987-88. The Seventh Plan document has observed, "...indirect taxes rose from 11.7 per cent of GDP at market prices in 1975-76 to 14.0 per cent in 1984-85 while direct taxes fell from 3.4 per cent to 2.3 per cent during the same period". Thinmaiah has noted that direct tax as a percentage of total tax revenue declined from 35 per cent in 1950-51 to 14.3 per cent in 1984-85 while indirect taxes as a percentage of GNP increased from 4.7 per cent to 16.9 per cent during the same period.

The inability to tax the income and consumption of the asset-owning classes has led the government to increased borrowings which, on the one hand, increased the debt burden to the government and on the other, has resulted in huge unearned income to those who lend, thus further accentuating inequality.

Internal liabilities of the Central Government increased from Rs 48,451 crores in 1980-81 to Rs 279,528 crores in 1990-91 or from 35.6 per cent of the GDP to 54.4 per cent. External debt increased from Rs 13,479 crores to Rs 66,017 crores during the same period. Gross interest payment of the Central Government increased from Rs 2604 crores in 1980-81 to Rs 21,850 crores in 1990-91 and further to Rs 32,000 crores in 1991-92. The interest payment is rising now by more than Rs 5000 crores per annum. Additional resource mobilisation by the Central Government was of the order of Rs 1790 crores through various taxes and Rs 1537 through revision of railway fare freight and postal and telecommunication tariff (vide, *Economic Survey 1990-91*, p. 106). It means that, by and large, the government repays the interest and debt obligations by still more borrowing. The annual borrowings of the Central Government is currently Rs 30,000 crores and the interest payment alone is higher than this amount. The revenue receipt is increasing annually by Rs 9000 crores hence increasing dependence on further borrowings.

If the government borrows strictly for meeting investment needs there can be little objection to it but borrowing to meet consumption expenditure and debt-servicing leads the country to a debt trap. The government resources are increasingly going to non-developmental heads which on the one hand effects the growth of the economy and on the other hand forces it to borrow even large amounts.

The non-development expenditure of the Central, State Governments, including Union Territories increased from Rs 30,564 crores in 1985-86 to Rs 68,198 crores in 1990-91. The interest payment of the Central Government alone almost doubled during the last four years. Subsidies have also contributed to the non-development expenditure which in the case of the Central Government increased from Rs 5451 crores in 1986-87 to Rs 10,487 crores in 1992-93 (BE). If the subsidies were meant to help the really poor there again could be little objection to it but these subsidies have gone to relatively better-off sections. Fertiliser subsidy of about Rs 5000 crores per annum is enjoyed by better-off farmers who are its bulk users and the food subsidy of Rs 2500 crores goes to urban population where incomes are much higher than rural incomes. The rural poor who should alone have been subsidised are completely out of its orbit.

The profligacy in non-development expenditure is visible more so as far as general services, that is, administration, pension, etc. is concerned. The expenditure on police on the part of the Central and State Governments, including Union Territories, increased from Rs 1163 crores in 1980-81 to Rs 5220 crores in 1990-91. The pension bill of the Central Government increased from Rs 629 crores in 1984-85 to Rs 2713 crores in 1992-93 (BE).

The salary bill of the Central Government is currently Rs 13,000 crores per annum and the same is rising by more than Rs 1200 crores annually. The total realisation from direct taxes is of the same order. The rising consumption expenditure eats into the capital formation out of the budgetary resources of the government which declined steeply from 40 per cent in 1984-85 to 31 per cent in 1990-91.

The inability to mobilise resources as also to cut down wasteful non-productive expenditure is also reflected in the Plan size which is wholly inadequate in view of the enormity of the problem of poverty. The average per capita Plan outlay comes to about Rs 800 annually and is not increasing in real terms.

◆

AN equally disconcerting fact is that whatever little is available for Plan investment does not take into account the natural resources and endowments of the country and the priorities which in the first instance can only mean provision of food, shelter, provision of employment for the vast under-employed and unemployed population, etc. Half of the country's population is not in a position to meet the bare cereal requirements necessary for the human organism and about two-thirds of the population is dependent on agriculture; yet agriculture accounts for only six per cent of the Plan outlay. This includes crop production, animal husbandry, forestry, fisheries and agricultural extension and education. Irrigation and flood control account for another 10 per cent of the total outlay which in percentage terms has declined over the years although about two-thirds of the agricultural area is still unirrigated. The Central Plan outlay on telecommunication is more than what has been provided for agriculture and rural development put together. On rural employment the Central Plan allocation is only four per cent of the Plan outlay and is one-third of what has been provided for petroleum. The allocation for space is four times of what has been provided for soil and water conservation; it is twice of what has been provided for dairy and fisheries. The Plan allocation for civil aviation is almost 60 per cent that of agriculture and allied activities.

It is also to be borne in mind that Plan spending is heavily staff-oriented where salary and establishment charges consume a significant portion of the outlay. An example may be cited. The total Plan outlay on agriculture and irrigation excluding rural development by Central, State Governments and Union Terrotories was more than Rs 6000 crores in 1987-88 but foodgrains production declined from 143 million tonnes in 1986-87 to 140 million tonnes in 1987-88. It only shows that not much goes to improve the productive base through Plan expenditure.

A very large part of the Plan outlay has gone to public sector enterprises but the results have not been commensurate with the quantum of investment. As these units have been operating in a wholly sheltered market there has been no attempt towards technology upgradation and cost reduction. Private sector units are also operating in the same scenario with the result that Indian exports are finding increasing competition and not even major devaluations of the Indian rupee have improved the balance of payment position. Indian foreign trade accounts for only 0.5 per cent of the world trade. In order to meet the rising consumption of the top 10 per cent of the population who have inordinately gained, imports of consumer intermediates have been freely allowed exacerbating the balance of payment problem. Imports rose from Rs 35,416 crores in 1989-90 to Rs 43,171 crores in 1990-91 while exports rose from Rs 27,681 crores to Rs 32,527 crores leading to a sharp deterioration in trade balance.

External aid also hardened and declined from Rs 13,070 crores in 1989-90 to Rs 6252 crores in 1990-91. Meanwhile, debt-servicing on foreign borrowing continued to move up. Debt-servicing charges increased from Rs 5861 crores in 1987-88 to Rs 9630 crores in 1990-91. In view of the deepening of the crisis and falling value of the Indian rupee, the NRI deposits were also withdrawn leading to a fall in external reserves.

The crisis that developed was the cumulative effect of the wrong policies which have been pursued over the last four decades. There were now two options before the government. One, to change these policies in a very determined manner which would have entailed a drastic redistribution of assets beginning with radical land reforms, a very drastic effort to mop up resources from the better-off sections, drastically cut the non-developmental expenses by abolishing subsidies enjoyed by the same section, reducing or at least putting a moratorium on salaries and allowances and cutting down all wasteful non-productive expenditure, etc. Obviously it would have meant a frontal attack on the top 10 per cent of the population—the big industrialists, traders, financiers, speculators, owners of black money, contractors, bureaucrats, professionals and the like.

The government being dominated and controlled by these very classes could not be expected to hit these classes. The other option was to give up all efforts at self-reliant development aimed at achieving growth with justice and allowing advanced countries to directly make investments in areas which they consider to be profitable. It may be mentioned that borrowings and even direct foreign investment are not undesirable provided the investment is according to the priorities of strengthening the productive base of the economy, more so in meeting the needs of the masses. But as the profit margin is lower in the wage goods sector private foreign investment goes in the luxury sector where there is a market on account of heavy concentration of wealth at the top. Foreign investment in India has been mainly in such sectors and the new economic policy that has been initiated gives a green signal to foreign companies to virtually take over the Indian economy if they so like. This is abject surrender and sounds the death knell of any progressive role that the ruling class in India might be expected to play.

The Indian bourgeoisie has its origin in the colonial economy perpetrated by the British. Their fight against foreign domination was not aimed at ending the colonial order as such. All it wanted was a greater space and having come to power and having consolidated its class rule it has now found that its interest lies not in confrontation with the erstwhile imperial countries but in coming to terms with them by allowing them to have the upper hand in the economy.

The new economic policy does not at all address the basic economic issues facing the country. All it aims is to invite foreign capital not according to our priorities but in areas where the foreign capital will have larger margins. Many other countries in Latin America have taken this route and have come to grief. The tragedy is that the ruling class in India has become such a decadent lot that it prefers servility to freedom only because it might get a few crumbs more. ■

BANGLADESH ANNIVERSARY

Down Memory Lane

P.R. CHAKRAVERTI

December 16 marks the twentyfirst anniversary of Bangladesh's liberation. We are publishing the following article to mark the occasion
—Editor

It was on December 16, 1971 that independence was won by the newly-born Bangladesh.

The intellectuals of East the Pakistani—the writers, journalists, teachers, poets and artists—were mercilessly put to death by the Pakistani armed forces and their collaborators, mostly Urdu-speaking Muslims.

The brutality of the hordes, goaded by General Yahya Khan, Tikka Khan and Rao Farman Ali, was no less demoniac and sadistic than that of the fascist forces—the Nazis led by Hitler of Germany in World War II.

Six million Jews were poisoned and put to cruel end in the gas chambers.

Three million Bengalis, living in the eastern wing of Pakistan, were slaughtered indiscriminately —children, old men and women—certainly not combatants.

I met Indiraji at a critical turn of gruesome tragedy, blatantly demeaning humanity and the values that the citizens of the world cherish above the beastly ferocity of wild animals.

The conscientious and compassionate lady took the brave decision on her own and saved the helpless millions of East Pakistan by a unique demonstration of heroism and spiritual quest. She was fully conversant with the historic letters of Romain Rolland, addressed to Rabindranath: "In every country of the world, men like us are alone. Our home is the future; for we have built our nest on the Tree of Eternity. We can defy the winds and sing our melody serenely."

As one who has spent more than fortythree years in East Bengal, studying and teaching students and fighting for freedom, I told Indiraji that villainy and ruthlessness supervened honesty, decency and spiritual values in the eastern area of Pakistan—ruthless, dominated by the neo-imperialists of West Pakistan. In her proposed visit to the USA, UK and Europe, she was expected to interpret the beastly behaviour of the Pak leadership.

It was nothing strange that the developed world, enlightened and cultured, maintained studied silence and the records show to what extent the well-known world publications and media took the initiative in exposing the brutalities of the murderous forces of the Pakistani occupation army.

Keen students of history, specially the Bengalis, will come forward with the grim resolve to unravel the mystery: how was the dreamland of Jinnah, Nazimuddin, Liaquat Ali Khan and Surhwardy converted into a veritable sepulchre of all virtues that enabled humanity to thrive?

What about the Islamic tenets of morality and divine sense of justice, love and peace?

It was in 1934 that the communal award was gifted to the Indians fighting for liberation, by the benign British Government. A new tremor, a vivid pulsation of life made itself manifest in the community life of the Bengalis.

Schism and dissensions darkened the horizon and the Muslim leaders started spreading the venom of separatism amongst the unsophisticated Muslims, the Scheduled Castes and Tribes.

On my release from Hijli Special Jail, I returned to Dhaka and met our Congress colleagues, specially the freedom fighters, who suffered for direct participation in the satyagraha initiated by Gandhiji.

The Chairman of Dhaka Municipality, a leading lawyer—Birendranath Mazumdar—a co-prisoner with me in Dum Dum Special Jail in 1932, came to my residence with prominent office-bearers of the Dhaka District Congress, with the fervent request to organise the registered graduates of the University and help him to contest the University seat in the State Legislature.

I was informed that the topmost Muslim League leader—Sir K. Nazimuddin—was intent on contesting this seat. The electorate happened to be the registered graduates—both Hindu and Muslim.

Naturally, I accepted the challenge and went round a few districts of East Bengal, contacting the graduates and collecting application forms for

The author, an ex-MP, is a former Secretary of the AICC.

registration.

My classmate—Faizlr Rahman—came to me with Sultan Ahmed—the trusted lieutenant of Sir K. Nazimuddin and Nawab Bahadur Habibullah.

Fazlur Rahman was with me in the MA class in Economics and also Law. A young advocate, he had changed a lot sporting a Turkish Fez on his head and he spoke in a language that made me aghast and sorely unhappy.

I sensed something sinister and unholy. A new menace seemed to creep into our body politic.

How could we possibly maintain genuine interest in community life tainted as it was with communal vice?

The two stalwarts departed: I was depressed. Yet, I worked hard and collected forms for registration, duly signed by the Hindu graduates.

But soon the political climate took a new turn. I don't know if fate and omnipotent chance toyed with man.

Sir Nazimuddin responded to the challenge of Fazlul Haq, leader of the Krishak Praja Party, and decided to contest from Patuakhali, Barisal and lost.

It was a fresh turn for Fazlur Rahman to meet me again and I learnt that he was the Muslim League nominee for the Dhaka University seat. No Congressman was willing to contest from the University seat. The Congress leader, Birendra N. Mazumdar, contested from the Dhaka Urban seat.

I worked four months or so and hectic visits to a few districts gave me fresh knowledge about the dark spell of communal bickerings, fomented by the feudal nawabs, the landlords and their henchmen.

The Congress leadership adopted a role of passivity, seemingly impervious to the gathering storm, that left workers like us caught up in an impasse.

Communal bickerings slowly and imperceptibly assumed a character that could demolish all the moral prescriptions that sustained us from 1920-21, when Gandhiji laid special emphasis on truth, removal of the century-old vice of untouchability and fostering Hindu-Muslim unity.

◆

THE Dhaka University contest was no mild affair. Fazlur Rahman was helped by the wily League leadership and the efficient machinery brought into operation by the renowned "Ashan Manzil", the spacious and splendid Nawab Palace in the city itself.

My uncle, Dhiresh Chakraverti, contested the Rural seat against the most crafty Congress leader—a member of the Big Five—Kiran Shankar Ray, unsuccessfully.

My preoccupation with my uncle's contest forced me to leave the city. Fazlur Rahman won the seat by a small margin and smilingly told me, how he collected the ballot papers, duly signed and sealed by some non-Muslim graduates, registered ingenuously by me. My absence counted.

The elation was all-pervasive and the vain MLA, representing the University, was appointed the Chief Whip of the Muslim League party. This newly gained prominence made him arrogant all the more. But he and his cohrts failed to take into account the disastrous and dissolute forces that were appearing on the scene. Once the true motto of service was allowed to be submerged in clandestine self-aggrandisement and craze for power and pelf, the social life got contaminated and vitiated.

In 1940 I experienced the rudest shock of my life,' when a small Ford car, carrying me and the renowned historian, Dr R.C. Mazumdar, the Vice-Chancellor of Dhaka University, was surrounded by a small batch of Muslim students—residents in Salimullah Hall, within a short distance of the Vice-Chancellors House, with angry slogans—*"Blood for Blood"*.

Awestruck for half a minute, I strongly urged on the Vice-Chancellor not to move from his seat and try to get down from the car. Fury and insensate restiveness had turned the agitated band of young boys wild and it was useless to argue with them.

I asked the Nepali driver—Bahadur—to turn the car swiftly back to the Vice-Chancellor's residence.

We learnt from the loud talks of the students that one Muslim student had been stabbed to death by an unknown assailant in front of the adjacent Jagannath Hall. It was the phone call of Prof Haridas Bhattacharya—the Provost—that brought us two out of the Vice-Chancellor's residence, in the small car.

It was undoubtedly an act of indiscretion on my part to persuade the Vice-Chancellor to leave his own car, guarded by armed police, and take his seat in the vehicle that brought me to his house.

Those were the days of virulent communal riots in Dhaka city. It was most sordid, heinous and suicidal for university students to rouse themselves to such frenzied feelings of hatred and murderous reprisals—*"Blood for Blood"*.

As a teacher in Feni College, Noakhali, and B.M. College, Barisal, I taught hundreds of Muslim

An Old Ghost's Grouse

I am taking a holiday from newspapers today and turning to books.

Books are edited, just as journals are. That is, the manuscript is prepared for the press. The first step in doing so is to clean up grammar and spelling and ensure uniformity. Then the facts, names and dates are to be checked. But the larger part of book editing consists of taking care of the argument and the sequence.

Often, without the author realising it, the manuscript contains some absurdity. The editor also lets it pass but the sharper kind of reader detects it and bursts out laughing.

One such example occurs in a biography of Ramananda Chatterjee, the great editor, which came out years ago but which I read recently:

> Under his (Jagdish Chandra Bose's) influence Ramananda developed a keen and abiding interest in scientific experiments and inventions. While a student he was married to Manorama Devi in December 1886.

Ramananda Chatterjee would not have let that pass.

H.Y.S.

students, including sons of feudal nawabs and rich zaminders.

They showed unreserved respect in classes and outside and often came to my residence for guidance and helpful suggestions.

In 1940 I was a teacher in Barisal College, the biggest college outside Calcutta.

Naturally, I felt immensely pained to observe the sordid signs of debased psychic metamorphosis, the virus of communalism seeking to corrode our nationalistic urges and aspirations. During World War II, I was detained as a security prisoner in the Barisal district Jail for a period of three years and Fazlul Haq, Minister of Education, discontinued the government grant to the College on that score.

To save the College from ruin, I resigned. After my release from jail, by the end of 1945, I came to Calcutta and met the Congress leaders. Sarat C. Bose, leader of the Congress Legislature Party in New Delhi, persuaded me to accompany him to the Capital and function as his Political Secretary.

I met Mahatma Gandhi in Bhangi Colony, New Delhi and told him frankly about my psychic reactions to the proposed partition of Bengal, the province with the largest population in the country.

I had my premonitions about the fate of seventyfive million of Muslims, if Bengal was divided into two.

The caste Hindus were sure to leave their hearths, homes and landed properties and the newly designated East Pakistan would be treated as the colony of West Pakistan.

Gandhiji advised me to meet Pandit Nehru. I had detailed talks about the new political developments and the most prominent leader placed me in a responsible position in the AICC headquarters, then stationed in Swaraj Bhavan, Allahabad.

It was shifted to New Delhi in 1948, and the saintly leader, Gandhiji, was no more.

I knew how he strove hard to convince Jinnah that the Congress and the Muslim League must work together in the task of building a new India once the 'Quit India' proposal was accepted by the British imperialists.

But his repeated meetings with Jinnah were not fruitful.

It was in September 1947 that Jinnah spoke in the Constituent Assembly of the newly born Pakistan:

> Now, if we want to make this great state of Pakistan happy and prosperous, we should fully concentrate on the well-being of the people and, specially, of the masses and the poor.
>
> If you change your past, and work in a new spirit, no matter which community you belong to, you will get equal rights and privileges.

It was obvious that Jinnah had abandoned his pet two-nation theory before his death due to leukaemia.

The avalanche of partition meant colossal suffering for the Muslims, left in the eastern sector—several thousands of miles away from the seat of power. Twentyfour years elapsed and it was on December 16, 1971 after the ignominious surrender of the proud Pakistani forces that Bangladesh was born with fresh fervour and fragrance, resplendent with a divine lustre.

We join the free citizens of Bangladesh in offering our warmest salutations for the martyrs—the intellectuals, the artists and engineers and three million kindred Bengalis—mercilessly slaughtered by the mercenaries and stooges of West Pakistan. ■

BARREN RAY: Reflections on Ayodhya

(Continued from page 4)

To meet that situation with the forces of law and order alone would precisely be tantamount to rubbing the political beast the wrong way. Let us imagine the most extreme scenario: were the Central Government to forcibly prevent the arrival of the *kar sevaks* to Ayodhya a few weeks ago, had taken over the disputed area by the Rapid Action Force or the Army, and removed the UP Ministry by Article 356, and then in order to put a lid on the consequent turmoil had to declare a state of Emergency with the NF-LF supporting, the most likely result of all that would have been that the mass following of the *Hindutva* camp would have jumped up four-fold and the Central Government together with all its allies would have been brought to a position like that of the Congress Government before the 1977 elections. (Precisely such developments have taken place in so many Afro-Asian countries in the last few years.)

Advisedly, the Prime Minister did not attempt such a course and instead sought to defuse the near-the-brink confrontation by pushing through several rounds of negotiations which obliged the *Hindutva* camp too to declare that they would abide by a peaceful process and respect the judiciary. That they were either lying and deceiving all along or subsequently changed their plot cannot be the justification for blaming the Prime Minister. What was needed was a political process that would bring about an opposite swing in Hindu opinion, that would accept a reasonable and mutually acceptable compromise solution on the basis of give and take and not remain hell bent to "score a historic Hindu victory over the alien Muslim". This, above all, needed time and that was the Prime Minister's objective. For the same reasons the BJP camp sought to cut short the process and brought about their precipitate action. But the allround sense of shock and revulsion with which almost all sections of our people have reacted to this development is the single net gain out of this entire tragic development.

One must remember that the same punitive measure following the commission of a crime which is hailed by the people, had it been taken as a preventive measure before the act would have antagonised the people and lionised the would-be criminals as martyrs. This is a price one has to pay for running a democratic polity especially when the crime in question is mixed up with political frenzy and religious passion. There is a paradoxical law about democratic polity, political opinion swings against the side which is seen as acting unilaterally taking the precipitate step to forcibly change the existing balance.

After the agonising developments last Sunday (December 6), which were rightly characterised by so many as the Black Day of our time, the Central Government has come out with a four-point immediate programme: (1) rebuilding the mosque; (2) prohibiting the communalist organisations; (3) due punishment for all who committed legally cognisable offences including members of the bureaucracy for any derelection of duty; and (4) the question of constructing a Ram temple to be finalised after the Court's decisions are announced. These are very bold and most welcome decisions. They constitute items that would help the country move back to a position of sanity and peaceful coexistence on the basis of mutual respect.

But these are not easy to implement. They certainly cannot be implemented merely with governmental fiat and material means. Bureaucrats and policemen and contractors cannot implement them. *The Statesman* Editor, C.R. Irani, was the first to call for the rebuilding of the mosque and reminded us that had Mahatma Gandhi been faced with the problem he would have insisted upon the Hindus to carry it out. To implement all that, to undertake such a venture, nothing less than the concerted efforts of all the non-BJP parties together with the Central Government is called forth. A good beginning has been made by the Congress-I supporting the all-India *bandh* call given by the NF-LF combine. That the *bandh* on Tuesday still fell short of a total and absolute success would show that the task before the country is not easy. To swing the people back from fundamentalism towards secularism and an abiding national integration would require sustained long-term joint efforts by all the democratic and patriotic elements of our long-suffering and ancient land. ■
